8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

The screenshot shows a Zoom meeting interface. On the left, a presentation slide is displayed with the following text:

**MULTİPL SKLEROZ HASTALARINDA
YENİ ALT EKSTREMİTE BECERİ DEĞERLENDİRMESİNİN
GÜVENİLİRLİĞİNİN VE GEÇERLİLİĞİNİN İNCELENMESİ**

Numan Yavuz, Fatih Söke, İsmail Uysal, Canan Yücesan

On the right, a grid of participants is visible. The top row shows a participant named 'observer hall 2' and another named 'HALL 2 - Aslı Yıl...'. The bottom row shows 'HALL-2, Öznu...'. The Windows taskbar at the bottom indicates the time is 14:34 on 3.12.2024.

The screenshot shows a Zoom meeting interface. On the left, a presentation slide titled 'Amaç' is displayed. The slide content is as follows:

Amaç

• Bu çalışmanın amacı, portakal kabuklarının değerlendirilecek portakal suyu üretiminin gerçekleştirilmesidir. Gıda israfını azaltma ve mutfaklarda sıfır atık yaklaşımını destekleme amacıyla gerçekleştirilecek bu çalışmada, portakal kabuklarının elde edilen en kaliteliyle mayalı ve mayasız ürünler hazırlanmıştır. Hazırlanan ürünlerin duyusal analizleri ile tüketici beğenisini belirlemek, mikrobiyolojik analizleri ile ise ürünlerin güvenliğini ve dayanıklılığını incelemek hedeflenmektedir. Çalışma, gıda atıklarının yeniden değerlendirilmesine yönelik yenilikçi bir çözüm sunarken, aynı mamullerde alternatif hammaddelerin kullanılmasına dair bir farkındalık oluşturma amaçlanmaktadır.

On the right, a grid of participants is visible. The top row shows a participant named 'observer hall 2' and another named 'HALL 2 - Aslı Yıl...'. The bottom row shows 'HALL 2 - Abdullah KOSEDOĞLU'. The Windows taskbar at the bottom indicates the time is 17:14 on 3.12.2024.

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

This screenshot shows a Zoom meeting interface with three participants: H4,S1 Hawkar Omar Ali, H4-ABBAS DAKHIL, and Hall-4, Harold Jan R... The main content is a PowerPoint slide with a light beige background and a decorative border. The slide title is "Language as a Tool of Colonial Power" in a large, bold, black font. Below the title is the subtitle "Analyzing Fanon's Perspective on Linguistic Alienation" in a smaller black font. The slide also features several blue geometric shapes (triangles and stars) scattered around the text.

This screenshot shows a Zoom meeting interface with four participants: Mohamed, Khanh Giang Le, Subhashish Dey, and Hall-4, Suyash Sagare. The main content is a PowerPoint slide with a white background. The slide title is "EXAMINING THE EFFECTS OF IMPROPER DISPOSAL OF SOLID WASTE ON URBAN FLOODING IN KADUNA CITY, NIGERIA" in a blue, serif font. Below the title is the author's name "BY ALIYU HASSAN" in a smaller blue font. At the bottom of the slide, the affiliation is listed: "CIVIL AND ENVIRONMENTAL ENGINEERING DEPARTMENT AIR FORCE INSTITUTE OF TECHNOLOGY, KADUNA NIGERIA" in a blue font.

This screenshot shows a Zoom meeting interface with three participants: Observer Hall-4, Hall 4 Alejo Ayokunle= p..., and Kim-Anh Tran. The main content is a PowerPoint slide with a white background. The slide title is "IMPACT OF BEEWAX AND ESSENTIAL OIL COATINGS ON SHELF LIFE AND QUALITY OF MANGO FRUITS" in a bold, black font. Below the title is the presenter's name "Presented by: By Alejo, Ayokunle O." in a red font. On the left side of the slide, there is a circular logo for "MANGA STORED PRODUCE LTD" with a bee and a mango illustration. The slide also features a decorative border with a yellow and orange gradient.

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

The screenshot shows a Zoom meeting interface. At the top, there are several video thumbnails for participants: Observer Hall-4, Javid Ahmadzada, Sani, B.S Hall-4, Hall-4, Session-4 Gan..., and Hall-4, olajuwon oladeji. The main content area displays a presentation slide with the following text:

Energy Diplomacy in the Caspian Region
A NEW ERA OF COOPERATION AND COMPETITION

The slide also features the logo of Hamzanavi University and a background image of a rocky coastline with waves. Below the slide, there are more video thumbnails: Javid Ahmadzada, Hall-4, olajuw..., Hall-4, olajuwon oladeji, Hall-4, Session-4 Gan..., Zainab Sulaiman Hall 4, and Rabab ALLILI.

EFFECTS OF PHENOLIC CONTENTS FROM THE RHIZOMES OF *CURCUMA LONGA* AND STALKS OF *SOGHUM BICOLOR* ON TEXTILES

By

OLADEJI, Abdulhakeem Olajuwon

**DEPARTEMENT OF CHEMISTRY

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

The screenshot shows a Zoom meeting interface. The main window displays a presentation slide with the following text:

8. ULUSLARARASI HALIÇ SEMPOZYUMU

**YAPAY ZEKA ALGORİTMALARI İLE DİJİTAL
MANİPÜLASYON: OTOMATİK PROPAGANDA VE
KİTLELERİ ETKİLEME STRATEJİLERİ**

Hazırlayan
Mustafa Değnekçi BAŞALAN

The slide also features the logo of the Halich Congress on the left side. The Zoom interface includes a top bar with participant names, a right sidebar with a list of participants, and a bottom toolbar with various meeting controls.

The screenshot shows a Zoom meeting interface. The main window displays a presentation slide with the following text:

**Micro:Bit Kartların
Programlama
Eğitiminde Kullanımı**

Micro:Bit kartları, özellikle eğitim alanında kodlama ve programlama becerilerini geliştirmek için harika bir araçtır. Küçük boyutları, kullanıcı arayüzleri ve çok yönlü özellikleri, hem çocuklar hem de yetişkinler için ilgi çekici programlama deneyimleri sunar.

3 slaytımız katılımcı

The slide includes an image of a Micro:Bit board connected to a laptop and a small robot car. The Zoom interface shows a top bar with participant names, a right sidebar, and a bottom toolbar.

The screenshot shows a Zoom meeting interface. The main window displays a presentation slide with the following text:

**Minecraft'ın Eğitsel ve
Bilimsel Bir Öğrenme
Araç Olarak Kullanılması**

Minecraft, sanal bir dünya oluşturma ve keşfetme imkanı sunan popüler bir video oyunudur. Oyunun açık uçlu doğası, özgün fikirler üretme, problem çözme ve işbirliği becerilerini geliştirmeye olanak tanır. Bu sunum, Minecraft'ın eğitim ve bilimsel öğrenmede kullanılabileceği farklı yöntemlere odaklanmaktadır.

4 slaytımız katılımcı

The slide includes an image of a Minecraft character standing in a landscape. The Zoom interface shows a top bar with participant names, a right sidebar, and a bottom toolbar.

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

The image displays three sequential screenshots of a Zoom meeting interface. The top screenshot shows a presentation slide titled "FARKLI KURAKLIK DOZLARININ *IN VITRO* KOŞULLARDA ROKANIN (*Eruca sativa* L.) GELİŞİMİ ÜZERİNE ETKİSİ" by Arş. Gör. Dr. Ecem Kara, Prof. Dr. Hatıra Taşkın, and Doç. Dr. Gökhan Baktemur. The middle screenshot shows a presentation slide titled "KURAKLIK KOŞULLARINDA HASSAS SULAMA TEKNOLOJİLERİNİN UYGULANABİLİRLİĞİ" by Arş. Gör. Dr. Gözde Hafize YILDIRIM from Recep Tayyip Erdoğan Üniversitesi Ziraat Fakültesi Tarla Bitkileri Bölümü, Rize/Türkiye. The bottom screenshot shows a presentation slide titled "TARIMDA SU YÖNETİMİ VE AZALAN SU KAYNAKLARINA ÇÖZÜM ÖNERİLERİ" by Arş. Gör. Dr. Gözde Hafize YILDIRIM from the same institution. Each screenshot includes the Zoom meeting controls at the bottom and a list of participants on the right side of the interface.

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

The image displays three sequential screenshots of a Zoom meeting interface for a session titled "Zoom Toplantı - HALL 1". Each screenshot shows a grid of participants in a dark-themed interface. The top bar includes the meeting title, a "Kaydediliyor..." (Recording...) indicator, and a "Görünüm" (View) icon. The bottom bar contains various controls: "Sesi aç" (Unmute), "Videoya Başlat" (Start Video), "Katılımcılar" (Participants), "Sohbet" (Chat), "Ekranı paylaş" (Share Screen), "Kaydı Duraklat/Durdur" (Pause/Stop Recording), "Alt Yazıları Göster" (Show Subtitles), "Ara Odalar" (Breakout Rooms), "Reaksiyonlar" (Reactions), "Uygulamalar" (Apps), "Beşer Tahtalar" (Whiteboards), and an "Odanın Çık" (Leave Meeting) button. The system tray at the bottom right shows the time as 12:13, 4:12, 2024.

Screenshot 1 (Top): The grid shows participants: Cennet Tunç (top-left, active), Observer Hall-1 (top-middle), Erkan Fidan (top-right), H-1, S-2 Süleyman Ozan Özalli (middle-left), Hall-1 Session 2 Yunus Ayaz (middle-middle, image), Taha Yılmaz (middle-right), and H 1 Gulshan Aliyeva (bottom-middle). The time is 12:13, 4:12, 2024.

Screenshot 2 (Middle): The grid shows participants: Gulshan Aliyeva (top-left, active), Observer Hall-1 (top-middle), Erkan Fidan (top-right), Cennet Tunç (middle-left), H-1, S-2 Süleyman Ozan Özalli (middle-middle), Hall-1 Session 2 Yunus Ayaz (middle-right), and Taha Yılmaz (bottom-middle). The time is 12:19, 4:12, 2024.

Screenshot 3 (Bottom): The grid shows participants: Hall-1 Melik ŞİMŞEK (top-left, active), Observer Hall-1 (top-middle), Hall-1 DİLEK ÇAĞIRGAN (top-right), Hall-1 Rümeyza Cevahir Erolat (middle-left), Doç.Dr.Ebru Güvelli (middle-middle), Demet Baran Bulut (middle-right), Hall-1 Ayşe Nur BAK (bottom-left), Muhammet Serdar İlaçlı-Hall-1-Session3 (bottom-middle), and Hall1 Dursun Demiroz (bottom-right). The time is 14:26, 4:12, 2024.

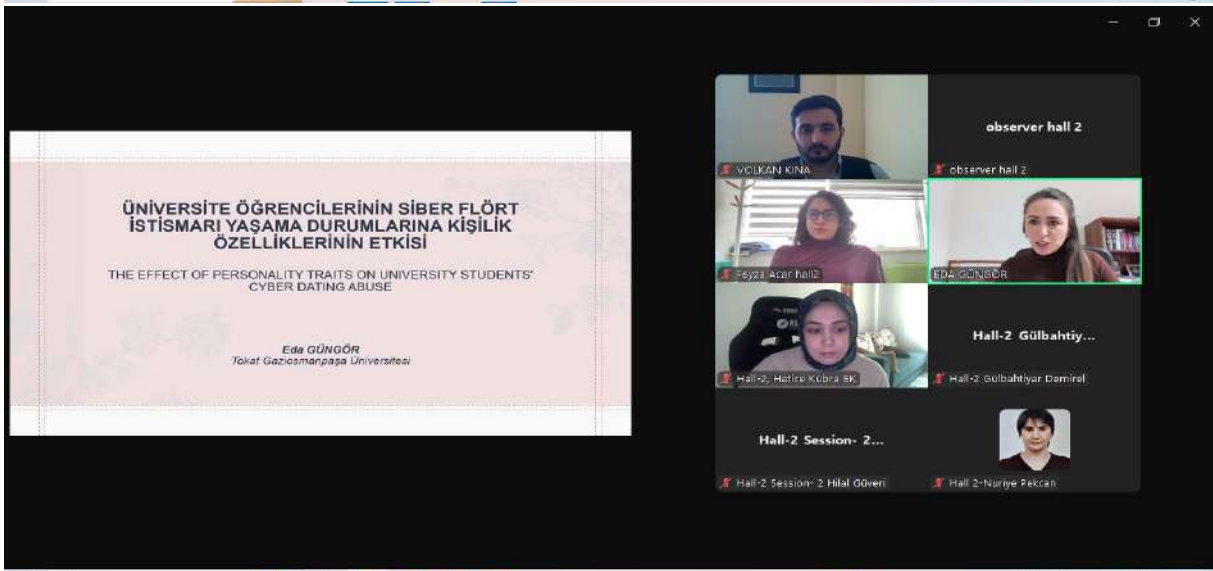

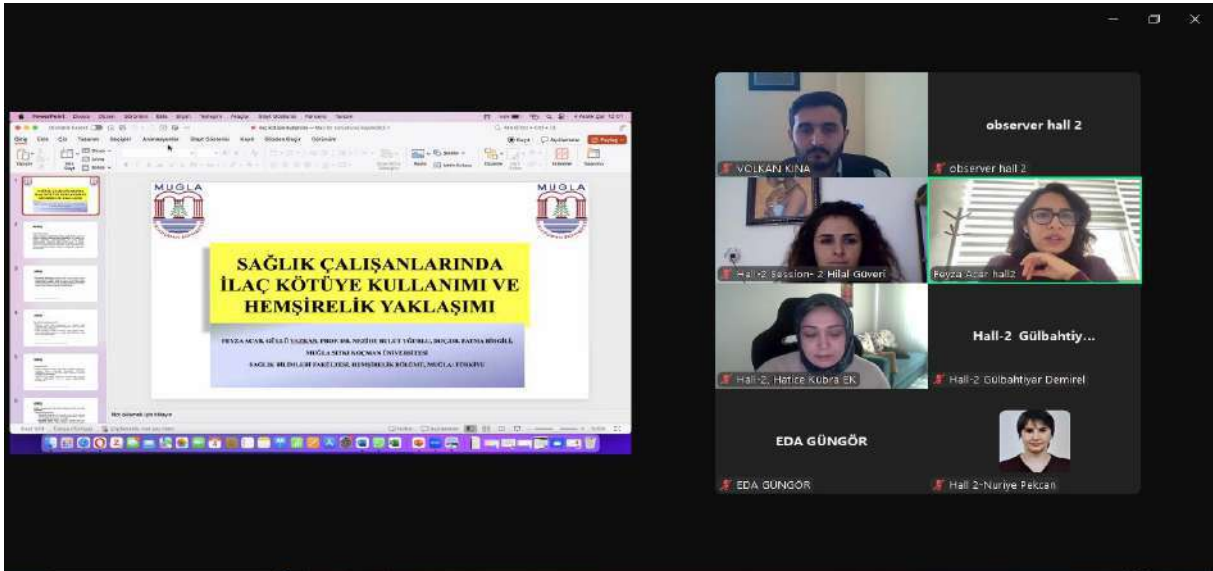

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

The image displays a Zoom meeting interface. The top portion shows a presentation slide from Istanbul University-Cerrahpaşa. The slide title is "MATEMATİK ÖĞRETMEN ADAYLARININ ÇOKTAN SEÇMELİ SORULARI HAZIRLAMADA ÇELDIRICILERI TERCİH SEBEPLERİNİN DEĞERLENDİRİLMESİ". The authors listed are Prof. Dr. Dilek ÇAĞIRGAN and Arş. Gör. Rümeyza CEVAHİR BOLAT. The slide is part of the 8. Uluslararası Haliç Multidisipliner Bilimsel Araştırmalar Kongresi.

The bottom portion of the image shows a gallery view of participants in the Zoom meeting. The participants are arranged in a grid, with some names visible: Observer Hall-1, Hall-1 Ezzel Sahin SEVGI, Hall-1 M. Ferit YANARDOĞU, Hall-1 J. Julie Gül ÇORUK, Hall-1 Sevin Arslan, Hall-1 S333012, muhittin eliaçık..., Abdullah Zalim, Hall-1 Arda Anılan, observer hall 2, Feyza Acar hall2, Hall-2, Hatice K..., Hall-2 Session-..., Hall-2 Gülbahtiy..., Hall-2 Hatice Kübra EK, Hall-2 Session- 2 Hilal Güverci, Hall-2 Gülbahtiyar Demirel, and Volkan KINA.

The Zoom interface includes a top bar with "Kaydediliyor..." and "Seçenekleri Gösterile", a bottom bar with "Sesi aç", "Videoyu Başlat", "Katılımcılar", "Sohbet", "Ekran paylaş", "Kayıt Duraklat/Durdur", "Alt Yazıları Göster", "Ara Odalar", "Rekordiyolar", "Uygulamalar", "Boşalt Tahtalar", and "Odanın Çık". The system tray at the bottom shows the time as 16:55 on 4.12.2024 and the temperature as 7°C Güneşli.

ADVANCING PHONETIC CLASSIFICATION WITH A HYBRID EVOLUTIONARY NEURAL NETWORK MODEL

This presentation explores the innovative application of Population-Based Incremental Learning (PBIL) to enhance phonetic classification within neural networks. We will delve into the intricacies of PBIL, its advantages over traditional algorithms, and the promising results achieved in our research.

FOMO VE KAYIPTAN KAÇINMA DAVRANIŞLARININ
PAZARLAMA VE FİNANSAL BOYUTTA BENZERLİKLERİ VE
BAŞA ÇIKMA YÖNTEMLERİ

Bu çalışma, FoMo (Fear of Missing Out) ve kayıptan kaçınma önyargısının pazarlama ve finansal karar verme üzerindeki etkilerini ele almaktadır. Ayrıca, bu davranışlarla başa çıkma yollarının ve bu olumsuz duyguların yaratabileceği olumsuz sonuçların da irdeleneceği sunumda, bu önyarguların finans ve pazarlama alanlarındaki varlığı ortaya konmaya çalışılacaktır.

FİNANSAL YATIRIM
DANIŞMANLIĞININ AHLAKİ
BOYUTU

Finansal yatırım danışmanları, müşterilerinin mali refahını koruma sorumluluğuna sahiptir. Bu sorumluluk, yalnızca yetenek ve uzmanlıklarını kullanmakla kalmaz, aynı zamanda etik prensiplere uygun davranmayı da gerektirir. Bu çalışma, finansal yatırım danışmanlığının ahlaki boyutunu, etik davranışın önemini ve müşteri ilişkilerine nasıl uygulandığını ele alacaktır.

CONGRESS PROGRAM

Online (with ZOOM Conference)

Meeting ID: 860 5266 6988

Passcode: 030405

<https://us02web.zoom.us/j/86052666988?pwd=ONfgab3v17PSQYNb5XPwUvG6D7JTnP.1>

IMPORTANT, PLEASE READ CAREFULLY

- ❖ To be able to attend a meeting online, login via <https://zoom.us/join> site, enter ID "Meeting ID or Personal Link Name" and solidify the session.
- ❖ The Zoom application is free and no need to create an account.
- ❖ The Zoom application can be used without registration.
- ❖ The application works on tablets, phones and PCs.
- ❖ The participant must be connected to the session 5 minutes before the presentation time.
- ❖ All congress participants can connect live and listen to all sessions.
- ❖ Moderator is responsible for the presentation and scientific discussion (question-answer) section of the session.

Points to Take into Consideration - TECHNICAL INFORMATION

- ◆ Make sure your computer has a microphone and is working.
- ◆ You should be able to use screen sharing feature in Zoom.
- ◆ Attendance certificates will be sent to you as pdf at the end of the congress.
- ◆ Requests such as change of place and time will not be taken into consideration in the congress program.

Before you login to Zoom please indicate your name_surname and HALL number:

exp. Hall-1, Shalini JAISWAL

ABSTRACT

Background & objectives:This study investigates the phytochemical profile and bioactive compounds present in the n-hexane extracts of the leaves of *Boerhavia diffusa* Linn against schistosomal species.

.Methods: by qualitative and quantitative phytochemical screening, which was further complemented with GC-MS analysis. Phytochemical screening showed that the plant contains phenols, flavonoids, tannins, saponins, alkaloids, terpenoids, and cardiac glycosides; however, phenols (458.98 mg/100 g) and flavonoids (94.96 mg/100 g) were found in significant amounts, which give the plant antioxidant and anti-inflammatory properties.

Results: GC-MS analysis revealed a complex mixture of volatile compounds, including prominent fatty acids such as pentadecanoic and oleic acid, known for their medicinal and antiscistosomal properties.

Interpretation & conclusion:The results validated the traditional uses of *Boerhavia diffusa* and highlighted its importance as a source of bioactive agents with a potential value warranting further research into its pharmacological applications in herbal medicine. Such research is important since traditional knowledge needs to be combined with modern scientific approaches so as to improve the understanding and usage of medicinal plants.

KEY WORDS: n-hexane, Bioactive, Phytochemica, *Boerhavia diffusa*

INTRODUCTION

Phytochemical evaluation forms an important part of pharmacognosy wherein attempts are made to identify the various chemical constituents present in plant material (Daniel and Mammen, 2016). These constituents, collectively known as phytochemicals, decide finally the medicinal value of the plant (Dragos and Gilca, 2018). *Boerhavia diffusa* Linn., commonly known as punarnava, is a perennial herbaceous plant of wide recognition in traditional systems of medicine, particularly Ayurveda (Sravani *et al.*, 2024). It has leaves, roots, and stems that are claimed for their medicinal properties: anti-inflammation, diuretic, and hepatoprotective action (Sawhney *et al.*, 2020). The current interest in natural products for drug discovery has been able to spur intense research in the area of phytochemical composition related to *Boerhavia diffusa* (Thomford *et al.*, 2018). It may also be of importance for the discovery of

new bioactive leads that can serve as templates for pharmaceutical drug development (Peng *et al.* 2017). Phytochemicals like alkaloids, flavonoids, saponins, and terpenoids have been reported to possess various kinds of biological activities such as antioxidant, antimicrobial, and anticancer activities (Chanda and Ramachandra, 2019). Systematic screening of these compounds is validating the traditional uses of the plant and is opening new avenues for therapeutic applications (Thomford *et al.*, 2018). Similarly, phytochemical screenings include both qualitative and quantitative analyses (Hashmi *et al.*, 2021). Advanced analytic techniques, such as GC-MS, provide deeper knowledge of the chemical profile of a plant extract (Waris *et al.*, 2022). GC-MS has been a very essential tool in the separation and identification of volatile and semi-volatile compounds, enabling scientists to analyze complex mixtures with accuracy (Ieda and Hashimoto, 2023). This would provide valuable information on the essential oil constituents and other lipophilic compounds present in the n-hexane extracts of *Boerhavia diffusa* leaves using GC-MS, so as to understand its pharmacological potential better (Boniface *et al.*, 2016). Of interest is the n-hexane extract, given its ability to solubilize non-polar compounds that might be responsible for major biological activities (Mukherjee *et al.*, 2024). The extract may, therefore, contain a variety of fatty acids, hydrocarbons, and other lipophilic phytochemicals that might contribute to the therapeutic efficacy of the plant (Altemimi *et al.*, 2017). The present research study tries to develop a profile of active principles of *Boerhavia diffusa* leaves through a combination of phytochemical screening and GC-MS analysis (Ahmad *et al.*, 2020). This is, therefore, very important and timely in view of the increasing interest in natural products and their applications in modern medicines (Tiwari *et al.*, 2018). This study attempts not only to document the phytochemical constituents of *Boerhavia diffusa* but also to relate these findings to its traditional uses (Nayak and Thirunavoukkarasu, 2016). Understanding the chemical basis of a plant's action may open further research avenues using the formulation of herbal medicine to develop effective treatment for various health conditions (Vaou *et al.*, 2021).

Thus, in a nutshell, the phytochemical profile and the in-depth analysis by GC-MS of n-hexane extracts from leaves of *Boerhavia diffusa* will contribute important data to the literature of natural product chemistry (Bisht *et al.*, 2021). This kind of research respects traditional knowledge but simultaneously inaugurates scientific methodologies for validation of results and further exploitation of this precious medicinal plant in modern health care (Longino, 2020).

MATERIALS AND METHODS

Collection of the plant

The fresh sample of the leaves *Boerhavia diffusa* Linn was collected from different parts of Salem University, Lokoja, Kogi State, Nigeria. The plant was then identified and authenticated by a taxonomist of Department of Plant Biology and Biotechnology, Herbarium Unit, Faculty of Life Sciences, University of Benin, Benin City, Edo State, Nigeria. Voucher specimen of this plant was deposited at the Herbarium Unit under the accession number UBH-B543 for *Boerhavia diffusa*.

Preparation of Plant Extracts

At first, the fresh plant sample (*Boerhavia diffusa* leaves) was cut severally into small pieces. It was ensured that the samples were cleaned properly (Dwivedi, 2023). Freshly collected leaves at first were air dried at room temperature for several days under the shade and then powdered in the grinder to a coarse powder (Dhande *et al.*, 2024). Then the powdered sample was soaked with n-hexane at room temperature (Nurilmala *et al.*, 2017). The extract was subjected to qualitative and quantitative phytochemical screening and also undergo GC-MS analysis (Madhavan *et al.*, 2020).

Methodology of Phytochemical Screening

Standard qualitative and quantitative phytochemical screening of methods were used to indicate the presence of various plant metabolites in the n-hexane extract of the leaves *Boerhavia diffusa*

by using the following procedures (Gautam *et al.*, 2016). The results of this experiment is presented in table 1 and 2.

Qualitative Phytochemical Screening Method

Test for Phenols

A few drops of Ferric Chloride solution were added to the extract. A change in color to blue indicates the presence of phenols (Maria *et al.*, 2018).

Test for Flavonoids

A small quantity of extract was mixed with a few drops of dilute hydrochloric acid and magnesium ribbon. A pink color indicates the presence of flavonoids (Sadia *et al.*, 2022).

Test for Tannins

The extract was treated with a few drops of 1% Lead Acetate solution. A white precipitate indicates the presence of tannins (Abdel *et al.*, 2020).

Test for Saponins

A small amount of extract was shaken vigorously with water. The formation of stable froth indicates the presence of saponins (Mir *et al.*, 2016).

Test for Alkaloids

The extract was treated with a few drops of Dragendorff's reagent. A reddish-brown precipitate indicates the presence of alkaloids (Muhammad *et al.*, 2019).

Test for Terpenoids

The extract was mixed with 2 ml of chloroform, followed by the addition of concentrated sulfuric acid. A reddish-brown ring at the interface indicates the presence of terpenoids (Maheshwaran *et al.*, 2024).

Test for Cardiac Glycosides

A small quantity of extract was mixed with a few drops of concentrated sulfuric acid and a few drops of glacial acetic acid. A brown ring at the interface indicates the presence of cardiac glycosides (Alamgir and Alamgir, 2018).

Test for Steroides

The extract was dissolved in chloroform and treated with concentrated sulfuric acid. A reddish-brown coloration indicates the presence of steroids (Ranaweera *et al.*, 2024).

Quantitative Phytochemical Screening Method

Test for Phenols

The Folen-Ciocalteu Method

The extract was mixed with the reagent, and absorbance was measured at 765 nm (Siddiqui *et al.*, 2017).

Test for Flavonoids

Aluminum Chloride Colorimetric Method

Absorbance was measured at 430 nm after the reaction with the reagent (Ghlyssi *et al.*, 2016)

Test for Tannins

Vanillin-Hcl Method

Absorbance was measured at 500 nm following the reaction (Lamuella-Raventios, 2018).

Test for Saponins

Forming Index Test

Absorbance was measured at appropriate wavelength (Yao *et al.*, 2021).

Test for Alkaloids

Acid base Extraction Method

This was followed by Dragendorff's reagent, which identified and quantified the alkaloids (Muhammad *et al.*, 2019).

Instrumentation and methodology of GC-MS analysis

GC-MS is a unique analysis technique used for identification and quantification which is limited to analytes that are not only volatile and thermally labile but can also withstand the

harsh partitioning conditions of the gas chromatograph (Kyle, 2017). A representative spectral output of all the ascertainable compounds from the empirical sample is displayed by this technique (Adebiyi *et al.*, 2023). The Gas-chromatography device has an injection port from where the process is initiated by injecting the sample to that port (Donval *et al.*, 2020). After this, evaporation and separation of the components take place one by one and finally this equipment identifies the components present in the corresponding sample (Divitini *et al.*, 2016). A specific spectral pick is produced for each component which is recorded on a paper chart electronically (Li *et al.*, 2020). In our present study, the n-hexane extract of the leaves *Boerhavia diffusa* was analyzed by Electron Impact Ionization (EI) method on a GC-17A gas chromatograph which was coupled to a MS 2010 plus mass spectrometer (Ali *et al.*, 2022). The GC-MS analysis allowed identification and quantification of n-hexane soluble compounds from the leaves of the plant *Boerhavia diffusa* (Kaur, 2019). Interpretation of mass spectrum in GC-MS instrument was conducted using data base of National Institute Standard and Technology (NIST) (Wallace and Moorthy, 2023). The retention time and molecular weight of the sample materials of *Boerhavia diffusa* were recorded and presented in Figure-1 and Table-3.

RESULT AND DISCUSSIONS

Analysis of Phytochemical Constituents by Qualitative phytochemical Screening

The results provide a clear picture of the presence of valuable phytochemicals such as phenols, flavonoids, tannins, saponins, alkaloids, terpenoids, and cardiac glycosides in the n-hexane extract of the leaves of *Boerhavia diffusa*; steroids were not detected (Sravani *et al.*, 2024). Phenols and flavonoids reveal their potentials toward antioxidant and anti-inflammatory activities, respectively, supporting traditional claims of this medication (Nile *et al.*, 2018). Tannins possess antimicrobial and astringent effects, and saponins help in the absorption of nutrients; they are well known for their immunomodulatory activities (Brindha, 2016). The detection of alkaloids is very important, as they have pharmacological advantages in analgesic and anticancer activities (Thawabteh *et al.*, 2019). The lack of steroids may make some therapeutic uses limited, but in consideration of all the phytochemical attributes, *Boerhavia diffusa* seems to be an invaluable source of bioactive agents that deserve further research on its medicinal efficacy and applications in herbal medicine (Marahatha *et al.*, 2021).

Table 1: The result of Qualitative Phytochemical Screening of n-hexane extract of the leaves of plant of *Boerhavia diffusa*

Phytochemical	<i>Boerhavia diffusa</i> n-hexane extract

Saponins	+
Alkaloids	+
Terpenoids	+
Cardiac glycosides	+
Steroids	-

Analysis of Phytochemical Constituents by Quantitative phytochemical Screening

The results of the quantitative analysis of phytochemical constituents in the n-hexane extract of *Boerhavia diffusa* expressed in mg per 100 g of the extract (ALRaddadi *et al.*, 2024). Similarly, phenols constitute the highest with a concentration of 458.98 ± 1.32 mg/100 g, which is very important to contribute to the antioxidant properties of the plant (Gautam *et al.*, 2016). Flavonoids also played a major role in anti-inflammatory activities at 94.96 ± 0.62 mg/100 g,

which supported the traditional uses of the plant (Huynh *et al.*, 2023). The presence of tannins at 108.88 ± 1.46 mg/100 g may indicate antimicrobial and astringent effects, while the saponin content, at 75.81 ± 0.57 mg/100 g, has well-known immunomodulatory effects and acts to enhance nutrient absorption (Mitra *et al.*, 2022). This is striking, considering that the concentration of alkaloids was recorded as 29.55 ± 0.45 mg/100 g, since such compounds are of pharmacological importance for their analgesic and anticancer activities (Bednarz *et al.*, 2019). The results underline the therapeutic value of *Boerhavia diffusa* as a rich source of bioactive compounds; however, the lower values of the alkaloids may predict limitations in some therapeutic applications compared with other phytochemicals (Bhattarai *et al.* 2024). Taken together, the quantitative results are supporting the importance of this plant in herbal medicine and certainly justify further exploration into its medicinal efficacy and possible applications (Zhou *et al.*, 2016)

Table 2: The result of Quantitative Phytochemical Screening of n-hexane extract of the leaves of plant of *Boerhavia diffusa*

Phytochemical	<i>Boerhavia diffusa</i> n-hexane extract (mg/100 g)
Phenols	458.98 ± 1.32^a
Flavonoids	94.96 ± 0.62^b
Tannins	108.88 ± 1.46^c
Saponins	75.81 ± 0.57^d
Alkaloids	29.55 ± 0.45^e

GC-MS analysis of the plant extract

The Total Ion Chromatogram of n-hexane extract of *Boerhavia diffusa* is highly complex in nature, as far as the chemical constituents are concerned (Shimu *et al.*, 2023). A lot of peaks correspond to different volatile compounds, showing a heterogeneous phytochemical composition (Lubes and Goodarzi, 2017). It suggests that there are many significant peaks, which may correspond to important bioactive compounds responsible for its medicinal value (Kellogg *et al.*, 2016). The present analysis thus opens up further exploration of these constituents in therapeutic applications in validating traditional uses and supporting drug discovery efforts (Anand *et al.* 2019).

Figure 1: TIC of the n-hexane extract of the leaves of the plant *Boerhavia diffusa* (GC-MS)

Table 3: GC-MS analysis of the n-hexane extract of leaves of the plant *Boerhavia diffusa*

Sample No.	Retention time	Name of the Compound	Molecular weight	Molecular formular
PH-1	11.32	1,3-Propanediol	151	C ₄ H ₉ NO ₅
PH-2	16.872	Pentadecanoic acid	270	C ₁₇ H ₃₄ O ₂
PH-3	17.973	n-Hexadecanoic acid	256	C ₁₆ H ₃₂ O ₂
PH-4	19.89	9,12-Octadecadienoic acid	294	C ₁₉ H ₃₄ O ₂
PH-5	19.99	11-Octadecenoic acid	296	C ₁₉ H ₃₆ O ₂
PH-6	20.344	Octadecanoic acid	298	C ₁₉ H ₃₈ O ₂
PH-7	20.835	Oleic acid	338	C ₁₈ H ₃₄ O ₂
PH-8	21.063	Octadecanoic acid	284	C ₁₈ H ₃₆ O ₂
PH-9	22.449	Hexadecanoic acid	691	C ₃₇ H ₇₄ NO _{8P}
PH-10	24.265	2-methyl-z,z-3,1,3-Octadecadienol	280	C ₁₉ H ₃₆ O
PH-11	24.725	Docosanoic acid	354	C ₂₃ H ₄₆ O ₂
PH12	26.389	Octadecenoic acid	356	C ₂₁ H ₄₂ O

From the GC-MS results on n-hexane extract of *Boerhavia diffusa*. The retention times, compound names, molecular weights, and formulas are specified. Of these compounds, the most dominant were the fatty acids, especially pentadecanoic and oleic acid, which are known bioactive compounds and presumably may be the contributors to the medicinal efficacy of this plant (To *et al.*, 2020). The diversity of the identified compounds, therefore, underlines the phytochemical richness of *Boerhavia diffusa* and its therapeutic potential; hence, these constituents are warranted to be further investigated toward possible applications in herbal medicine (Ayyappan *et al.*, 2016)

Table 4: Structure of the major components identified from the crude n-hexane extract of leaves of the plant *Boerhavia diffusa*

Name and Sample No. of the compound	Chemical Structure
n-Hexadecanoic acid	
Oleic acid	
Octadecanoic acid	
11-Octadecenoic acid	

CONCLUSION

This research on *Boerhavia diffusa* contributes significantly to the knowledge of the phytochemical profile of this species, exposing main constituents such as phenols, flavonoids, and fatty acids through both qualitative and quantitative screening and GC-MS analysis. These compounds give credence to the traditional medicinal claims and display possible therapeutic applications in antioxidant and anti-inflammatory activities. The results have established that *Boerhavia diffusa* is a valuable source of bioactive agents, which should be further explored at confirming its medicinal value and increasing its application in herbal medicine.

Conflict-of-Interest Disclosure

I declaration there was no conflicts of interest encountered during the research study.

LANGUAGE AS A TOOL OF COLONIAL POWER: ANALYZING FANON'S PERSPECTIVE ON LINGUISTIC ALIENATION

Abbas Dakhil Abd

Jamia Millia Islamia University, Department of English, Delhi, India

Abstract

While the colonial subject is often subjugated and oppressed in a myriad of ways—exploited, brutalized, or discriminated against—the role that language plays in the colonial encounter is sometimes overlooked. The analysis of the psychological effects colonial languages had on the colonized African seeks to uncover the myriad of ways in which language serves as a tool of oppression. In this paper, we analyze the work on the topics of native alienation and language. By examining the various ways in which the colonial language is used as a weapon of power and violence against the colonized subject, it becomes clear exactly how beneficial the "possession" of this language can be: amongst other things, it often constitutes the difference between life and death, personal autonomy versus subjugation and, on a broader scale, serves to reincarnate the entire history of the oppressor and their race.

The colonial experience, with its use of a foreign language as the main means of communication, serves to alienate and dehumanize the colonial subject, a situation which not only causes mental illness and psychosis in the individual, but also drives the national liberation movement as a whole. The act of writing a text in the dominant language is in of itself a colonial enterprise, and any translation or reiteration of colonial discourses involving the use of such language can only serve to perpetuate this unequal power dynamic. To carry out this enterprise, it is suggested that the colonized, given his lack of means and agency, seek recourse in the writing of the national liberation movement and attempt to build from there a new language to serve as the dialect, and eventually the language, of the newly decolonized nation.

Keywords: Colonialism, Language and Power, Linguistic Alienation, Frantz Fanon, Colonial Subject, Oppression, Colonial Encounter

1. Introduction

By its very nature, language has the ability to shape power dynamics and determine in-group versus out-group ontological identities, and is therefore perfectly suited for imposing social hierarchies in a colonial context. Right from the stage of laying the footprints of a colony, the colonial rulers undertook local language documentation exercises so that they and their subjects could communicate in each other's language in record-keeping, trade, and commerce. The oral tradition of the colonized was sidelined in the due process. For postcolonial authors, the fact that the colonial language of the metropolitan usurps and replaces the autochthonous language of the colonized is more than an incident; it is an unspecific "moment" in the colonial strategy. In this context, the relevance of the works of postcolonial authors cannot be overlooked. Their engagement with the concepts of consciousness, social identity, and cultural affiliation explored the production of subject positions within systems of domination. They move beyond the mere role of language in interpersonal communication to argue that the oppressed will always be characterized by their language, and demonstrate that language is an instrument of colonial power. Contemporary research on postcolonialism broadens the term to include social and political change and organizations in former colonies, including not only social actors in the colonies but also the colonial powers and the colonial society as a whole. Discussions of postcolonialism necessarily raise questions on colonial rule and its practices at multiple levels. They also introduce into the conference literature the notion of linguistic identity, which

significantly distinguishes a dominant or a noble language from a discouraged or disparaged one.

1.1. Background and Significance

The colonial invasion of indigenous territories included the domination of the colonized through a systematic abuse of their language and culture. Key to the cultural invasion and subjugation was the systematic imposition of the language of the colonizer. The colonized were not only forced to use English, French, Spanish, Portuguese, or Dutch under colonial rule but also to assimilate themselves to the cultural expectations of the ruling class. Linguistic manipulation became an integral part of the colonizer's strategic colonial practice starting from the moment of the invasions.

The way language has been utilized by the colonial powers has crucial implications for understanding the process of formation of identity among the colonized subjects. The impact of language is such in post-colonial societies that even the descendants adopt the language of the colonizers as a case in point where neither the colonizer nor the colonized exist anymore. It illustrates how the process of colonialism created a new reality of socio-cultural dominance. The outcome of the linguistic imposition of colonial languages creates a far-reaching alienation from the original socio-cultural ontological reality. This is the significance of linguistic alienation beyond the narrow definition derived from infusing existentialist thought. The obvious consequences of language alienation are the loss of self-identity and loss of memory, which are inherent in this view.

The significance of language as a tool of colonial power becomes quite relevant to the understanding of the diagnosis and treatment for accomplishing decolonization. One can see very seldom the linkage of language and colonialism with systematic analysis. Conceptual analysis of language is not only confined to existentialist philosophy, but there are studies in sociolinguistics that do address the core issues of socio-colonial alienation and its consequences. However, the systematic analysis related to imperialism and colonialism, taking language as a tool of social subversion, is not widely accounted for.

1.2. Thesis Statement

The thesis of this essay is that language is one of the chief instruments of colonial power, and linguistic alienation is not a sociocultural outcome but a conscious strategy of dominators to maintain and reproduce their dominance. The imposition of the colonizer's language and its subsequent use to perpetuate and legitimate colonialism by colonized individuals operates to alienate the colonized individual from their cultural roots or their place in a social context. A person is not only who they think and want to be in the real sense, but also who they are thought of and willed, a person alienated as a colonized subject from their culture, history, and unique way of life. In this sense, language is the most effective indicator of this process of alienation and, interestingly enough, the first mechanism of resistance because language signifies more than a mere expressing agent; it signifies the identity of the individual. No exploration of this linguistic process of alienation can afford to ignore the purview of those who have very explicitly articulated this phenomenon with a deep understanding of the mechanisms of alienation, which is mostly developed by viewing the question of language in a very intricate relation to broader questions of alienation such as subjectivity, identity, and resistance. The works in this field are a monument for unearthing the essential problems faced by the wretched of the earth.

2. Theoretical Framework

To discuss the connections between language and colonialism, it is essential to acknowledge the theoretical frameworks. These theoretical underpinnings guide and illuminate the relationships between language, on the one hand, as a tool of colonial power, and imperialism, cultural hierarchy, and differentiation, on the other.

Language, thus, is not only a means of communication facilitating human interaction, but the classificatory effect of communication between people informs the room in which creatures of the colonized society are kept. Literature employing the intersections between language and power has predominantly emerged in various fields such as post-colonial studies, cultural studies, linguistics, and language studies. The theories of decolonization and psychic alienation analyze the relationship between power and language, exploring the emotional implications of linguistic alienation.

Drawing from these multifaceted theories, this paper discusses the use of language as a medium through which colonial power is exerted. Through the systematic analysis of one specific aspect of linguistic consequence, that of language and linguistic alienation, a dynamic perspective is created through which this idea can be identified. The focus of this paper is on providing the theoretical underpinning of language and colonialism to contextualize the importance of the aforementioned theoretical fields. As a result, the paper situates this perspective on a larger scale of contemporary theories of language and colonialism in order to highlight the specifics of the view on language and identity.

2.1. Colonialism and Language

Language has always been one of the most dominant tools of colonial power. Colonial powers have often imposed their languages on colonized societies using various kinds of strategies, having understood that knowledge lacks authenticity until it is expressed in the colonial language. The imposition of colonial language creates structures of control in which subjugated knowledge and identities can be manipulated, scattered, and repressed. The colonizer's alien language is propagated to control and discipline the colonized and to generate surplus value. Whether they come dirty and ill-shaped or clean from the minting presses of our state, they are made to take a positive direction towards and through our language.

The imposition of colonial language is also seen to have more psychological implications. It creates a sense of alienation. This problem is illustrated by pointing out the resultant fragmentation of the personality and the chaos which issues from the differing thought-forms, molded by the conditions of the two linguistic communities. This fragmentation and alienation from language is the reason why the spread of English produces a shift in language. Whole areas of life are controlled by this creeping paralysis, this baffling impotence just as whole areas are possessed or infected by a spoken foreign tongue. The erosion of minority languages in nations dominated by English erodes more than the language itself; it helped set the very selves of minority members on the slippery slope of cultural incompetence and eventual disappearance, whether culturally as well as politically. In the face of linguistic erosion, all issues of social, economic, political, and even cultural subjugation are ultimately dwarfed.

3. Frantz Fanon: A Brief Overview

Born in the French colony of Martinique in 1925, Frantz Fanon participated in national and anti-colonial movements during the formative periods of his life. Later appointed to a position in psychiatry in the French colony of Algeria, Fanon became personally involved in the Algerian revolutionary war against France. In his early writing, Fanon emphasized the internal complexity of colonial people, of the colonized "subject" who possessed political, economic, and social layers, and who did not exist in a relation of mere duality with his colonizer oppressor. However, Fanon also wrote about his experiences and insights as a person living in a colonial situation, and the insights he offered in these works caught the attention of post-colonial studies. His importance for post-colonial studies arises powerfully from years of experience exploring the colonial situation from the perspective of both a hired servant of colonial officials and as a thinker and political activist.

Fanon's writings explore psychological forms of "alienation" under colonial rule structured around race, but they also link the experience of living under the color line to broader issues of "otherness" and the political problem of how to address certain dimensions of the self. Some

critics resent the significant attention paid to Fanon in our day, but it is hard to ignore the fact that, during the 1960s and 1970s, such a person seemed to best embody a picture of the new interest in anti-colonial movements. Of equal significance, many of the nation-states whose leaders and peoples were inspired by Fanon's calls for political liberation emerged during this time. Key texts borrowing from Fanon's methods and ideas have also been published, including works that deal with social and psychological alienation, the anti-colonial struggle, and the prospect of "return to oneself" following decolonization. In addition, the continuing implications of Fanon's work for the political philosophy of the 20th century are incalculable. Crucially, and as we shall see, amongst many other things, in these texts, Fanon speaks at length about the political uses of language.

3.1. Life and Works

Frantz Omar Fanon was born on the French colonial island of Martinique in 1925 and studied medicine in France in 1943. After finishing his medical degree, Fanon specialized in psychiatry, eventually working at a hospital in the French colony of Algeria. During his time in the country, Fanon became an active member of the Algerian independence movement, aiding the National Liberation Front. This involvement led to Fanon's expulsion from Algeria in 1956, and he moved to Tunisia. During this time, practicing medicine, Fanon became disillusioned with the entrenched nature of racism and colonialism in society, believing that psychoanalysis and psychiatry could do little to help effect revolutionary change. The violence and destruction he experienced informed much of his published philosophy, arguing that "decolonization is the creation of new men." Fanon died in 1961.

In his first book, *Black Skin, White Masks*, published in 1952, Fanon examined the effects of colonialism and the omnipresent racism on the psyche of colonized people. While Europeans "transmogrify the black man into a monkey," he argued, the black man must suffer the psychological effects. European education works only to alienate the native Algerian, divorcing him from his own people and their culture. Fanon's writings have explored the emergence of a national consciousness among the people of colonized countries and how this notion of 'Nation' must be established against people who systematically deny their people a 'history, tradition, civilization.' The national culture is a mixture of already developed cultures and identities of the citizens that belong to the newly formed nation. Language is of crucial importance according to Fanon, as suppression of language further alienates the citizens from who they are; he goes on to say that in decolonization, language will return to being the spoken word, gesture, or the cry of distress.

4. Linguistic Alienation in Colonial Contexts

The idea of linguistic alienation in the colonial framework is entrenched in the disconnection that individuals in colonized areas feel from their native languages, families, and culture due to the adverse influence of colonialism. This presents major implications for colonized subjects, who have to adopt the colonizers' language. Linguistic alienation epitomizes how individuals' internal repressions, through colonialism, preempt a play of desire that would support their own forms of resistance. This essay presents a critical perspective, shedding light on the ideological dualism that is inherent in 'race' and language: the sense of disunity or duality that comes from the individual's or the group's identification with, or towards, the Other.

Linguistic alienation compels one to suffer a conscious division, as language is the foremost medium through which individuals identify, communicate, and create meaning. On the psychological front, to give up one's original language and adopt the language of the colonizer generates cognitive and emotional dissonance. The socio-cultural ramifications involve loss of heritage, as individuals no longer directly inherit the moral norms, customs, mores, and traditions of their forefathers. It may also lead to a loss of legitimacy of authority of the local chieftains, legal experts, interpreters, and clergy who spoke the native language. In essence, the loss of language disintegrates the culture. In each of these four illustrative cases - India before

the War of Liberation, the United States, Algeria, and Indochina - linguistic alienation was forced upon the natives by the colonial powers.

4.1. Definition and Concept

In Fanon's perspective, linguistic alienation is the result of a multivalency process in which language is above all a tool of colonial power. This author understands language as a basic element of being and culture, allowing the development of identity. Fanon approached linguistic alienation as a psychic resistance to the culture of the colonizer, where the main link of each person with their motherland was the same mother tongue. Losing the capacity to freely speak the mother language forces the alienated to adopt the new culture. Language is not neutral; as a result, it inexorably orients a person's way of thinking, behaviors, or psyche. In other words, it is not the same being called "mad" in one language as it is in another. Words have different meanings and nuances. This is the reason why renouncing words of power in the form of a mother tongue entails significant pain. The state of "infantilization" or non-maturity experienced by an alienated person is particularly important.

Linguistic alienation can demotivate parents, who are already alienated, from passing on their mother tongue to their descendants to avoid them suffering the same fate. It is important to emphasize that linguistic alienation and linguistic dysfunction are different processes. Language dysfunction occurs when it leaves a person without the capacity to express themselves. In linguistics, linguistic alienation is often confused with language shift. The relationship with the mother tongue and the whole cultural heritage is reinterpreted, marked, or relegated to the background to embrace a foreign national culture.

5. Fanon's Perspective on Language and Power

In such a complex analysis, the view on the complex interplay of power dynamics and language in the process of colonization is offered. In this philosophy, language is perceived both as a tool of oppression and a potential source of liberation. The most important function of language is the question of ownership. Owning a language means having a core of self, and a way through which to express one's own language creates cultural identity. In the process of colonization, language, including speech, reaches social and psychological levels, and colonizers alienate the people. In doing so, they are expelling people from themselves, thus setting up conflicts and struggles. Language is a way of making culture circulate.

Colonization is about building structures that alienate the subject from the land, and from a place that cannot be fully utilized. The nature of colonialism is revealed in the context of colonial exploitation. In addition to analyzing exploitation, the effects of alienation are delved into. Alienation is explained in the context of the production of knowledge and it is stated that the colonized are in a state of alienation, and that their physical absence is externalized in the absence of culture, language, and cognitive structures. It will even be said that the alienated element is not in the essence of the colonial product, but in its very existence. In order to objectify and ensure the dominance of the alienated social elements with the least effort and risk of disappearance, it is imperative that it be represented as an object. As a result, the objectification process begins after colonization, and the colonized are dehumanized in this context, so that it is not possible to alienate them. It is again said, "We had agreed to go there in order to be able to assert our humanity through slavery."

5.1. Key Concepts and Theories

In *The Wretched of the Earth*, Frantz Fanon introduces several key concepts and theories regarding language as a tool of colonial power. Fanon conceptualizes the colonized world as containing two different types of language: the colonizer's official language and native vernacular. He argues that the indigenous population usually ascribes intrinsic value to their linguistic heritage because they invest their culture, heritage, and identity into their language, which is essential and integral in relating their world to themselves. Therefore, possession of one's language is conceptualized as more than just a system of signification; rather, language is

imbued with those emotions and principles that establish one's identity and selfhood. Also, language cannot be fully learned and utilized unless it reflects the psychological and cultural realities of individuals as a group. Thus, language serves as a clear marker of one's identity. Fanon employs two concepts that are relatively contemporary in sociolinguistics: 'linguistic nationalism' and committed literature. He describes a future point in which the colonized subject will replace the colonizer in the hierarchical economic and governmental sphere. Fanon identifies linguistic nationalism as the cornerstone of the decolonization and decolonial project. Most specifically, he identifies literature as a crucial instrument in reappropriating language and, as such, identity. For Fanon, possessing a language is a violent psychological struggle because reality and common cultural understandings are fundamentally wired into language. As a psychological phenomenon, for individuals to lose their language system is for those same individuals to endure a crisis of the existential; the loss of language is a loss of self. Accordingly, in his recognition of the universal rights of people to selfhood and self-determination, Fanon understands that decolonization must incorporate this reappropriation. A purely political effort to replace the colonizer in official government structures and modernity is devoid of truth and will not solve the ultimate problem of colonialism: that of power. The indigenous best-selling novel or avant-garde play is the federal characteristic of those societies that are in the process of disappearing. Colonialism thrives on either the dehumanization of the indigenous or the assimilation of the indigenous into a more civilized and modern European way of bureaucratically managed resources. In much the same way, provisional and revolutionary colonialism—that is what Fanon calls the governments that will emerge from decolonization and the specific political systems they will create—will thrive on the dehumanization of the European settler.

6. Conclusion

The central framework of this essay centered on the colonial authority's use of language to divide, discard, and distinguish subjected people, rendering them voiceless and tangibly alienated from their surroundings. This alienation filters into much more than identity construction, influencing culture, social dynamics of the colonized peoples and their diaspora, and even impinging upon scholarly consciousness in anthropological discussions of culture or otherness. However, the writings have proven extraordinarily resilient and eminently appropriate for drawing out how the colonized individual's experiences of identity and alienation are expressed linguistically. The constructs encourage academics, post-colonial intellectuals, and indeed, any human, to consider introspectively their own relationships to language and the cultures they predicate. The ideas presented have wide-ranging implications today, showing that late-colonial perturbations of unconscious coloniality in language caused psychological damage, real psychological alienation overcoming paradigms of rational sovereignty.

Altogether, contemporary considerations regarding the psychoaffective dimensions, embodied trauma, and the symbolic force of language necessitate a recognition of the destructive impact of language as a tool of colonial might. This, in turn, illustrates the urgency of linguistic preservation and revitalization efforts in post-colonial communities; cultural decolonization is dependent upon the recovery of their linguistic resources. Therefore, if language has been 'murdered' and a return to pre-colonial roots is impossible, the situation of linguistic alienation is not fatal or absolute for the potential of cultural reclamation. Although a wealth of qualitative studies is required to further develop these premises, this paper offers an outline for contemporary post-colonial research. In conclusion, insights regarding alienation and ontological insecurity borne of linguistic violence assume increasing relevance in discussions of language, identity, and authority. The reflections have since inspired innumerable traversals of linguistic and post-colonial discourse, both complicating and expanding upon legacies.

6.1. Summary of Findings

Linguistic alienation plays a destructive role in shaping the identity of colonized people. The effect of linguistic alienation is multilayered and permeates the whole training of the native in the colonial world. The loss of language impacts the world of the native through psychological ramifications such as feelings of insufficiency, being cursed, serving as the man of other languages, or bearing the fractures in the mother tongue.

For an ethnic group or a culture, language is the expression of their self-identity, and losing that language means losing themselves. The native conjures different strategies in coping with the loss of languages—ranging from the military elite who have to learn the language of the colonizers for the purpose of subduing them to those adopting Western manners in appearance while preserving African traditions. This shows that their self-identification deterministically corresponds with their language. Resistance, in turn, means for the native to rescue the original language of the colonized to the greatest extent possible, now echoing the force of words of their nationality. The account of the impact of linguistic alienation on the colonized people is a compelling contribution to colonial and post-colonial studies. The findings of the analysis are also valid in revealing some aspects of the mechanism of language's power in shaping national identity and determining the dialectical relationship between language and power, language and culture.

6.2. Implications and Future Research

This paper serves several larger implications. The study recognizes the significance of understanding the relationship between language and colonial power. Several directions for future research are possible from the findings of this study. Research in this area would likely have implications for post-colonial community identity. These studies could be used to shape policy in the reclamation of culture. Some of the problems faced by the Ojibwe and the implications that might come from their work are summarized in a recommendation for future research. This direction of research would likely involve combinations of expertise in linguistics, psychology, and cultural studies.

There are implications in a broader context examining the role of language in cultural maintenance and reclamation. In Canada, it is clear that limited or no access to the home language can lead to serious cultural upheaval and a legacy of alienation for some individuals. Strong research to this end will provide clear and useful strategies to ensure that the health and integrity of a community are not undermined as a result of language and culture loss. In the present era, it is suggested that people from Western-based countries are particularly burdened with linguistic alienation, particularly with regard to English.

Although there is little research on the claims being advanced here, we argue that this theory may hold truer than ever before. This area may quite profitably be opened up for future analysis that moves out from a single colonial context to analyze parallels and divergences in other contexts of linguistic subjugation. There has been minimal research on how linguistic alienation impacts the populations and communities within a post-colonial environment. This suggests a seam of research usually omitted by those who adopt a post-colonial analysis. Further research could potentially also examine instances where the alienation of the colonizers' language may not be experienced in such a negative way; indeed, two possible directions for research are examining the range of mechanisms that can be used to distinguish and resist the alienating effects of one's use of the language of others while not rejecting it, and also being able to document community-led initiatives that have sought to more effectively integrate the imposed language into the lives of individuals and the community than the dehumanizing practices of the colonizers. Within a global context, there may also be ways in which being alienated from dominant global languages can result in forms of exclusion or exploitation. This is another direction in which the argument might be extended by further research.

ÖZET

Arılar tarafından üretilen veya arı kaynaklı doğal ürünler arı ürünleri olarak adlandırılmaktadır. Başlıca arı ürünleri bal, polen, propolis, apilarnil (erkek arı larvası), arı zehri, arı havası ve arı sütüdür. Antioksidanlar birçok hastalığın tedavisinde öncülük görevi görmektedir. Serbest radikalleri gidermesi, oksidatif stresi azaltması ve kendilerinin radikal oluşturmaması antioksidanları değerli kılmaktadır. Sentetik ve doğal antioksidan sınıflandırması yapılmaktadır. Sentetiklerin zararlı etkilerinden dolayı doğal olanlara ilgi yoğunudur. Arı ürünlerinin doğal ürün olması ve antioksidan özellik göstermesi onları değerli kılmaktadır. Birçok gıda ürünü antioksidan özellik göstermektedir ancak bunlar içinde daha yüksek antioksidan aktivite gösterenler daha değerlidir. Antioksidan özelliğin temel nedenleri arasında ise sekonder metabolitler yer almaktadır. Arı ürünleri de birçok sekonder metabolit içermektedir. Sekonder metabolitler arasında fenolik bileşikler, flavonoid bileşikler, tanenler, terpenler, organik asitler yer almaktadır.

Bu derlemede arı ürünlerinin antioksidan metabolizmasından sorumlu olan sekonder metabolitlerin belirlendiği güncel çalışmalar incelenmiştir. Hangi biyoaktif sekonder metabolitlerin var olduğu ve bu bileşenlerin antioksidan aktivite mekanizmasındaki rolleri araştırılıp yorumlanmıştır. Güncel çalışmalarda birçok farklı indekste arı ürünleri, sekonder metabolitler, LC-MS/MS, HPLC ve antioksidan kelimeleri ile taratılmıştır. Arı ürünlerinin sekonder metabolit içeriğinin farklı coğrafya, iklim, flora ve arı çeşidine göre değiştiği ve bu nedenle antioksidan aktivitelerinin de değiştiği belirlendi. Arı ürünlerinin standardizasyonunun zor olduğu görülmektedir. Bu nedenle arı ürünlerinin belirli periyotlar ile analizlerinin düzenli şekilde yapılması gerekmektedir.

Anahtar Kelimeler: Arı ürünleri, bal, propolis, polen, arı sütü, amino asit

ABSTRACT

Natural products produced by bees or originating from bees are called bee products. The main bee products are honey, pollen, propolis, apilarnil (drone larvae), bee venom, bee air and royal jelly. Antioxidants play a leading role in the treatment of many diseases. The fact that they remove free radicals, reduce oxidative stress and do not form radicals themselves makes antioxidants valuable. Synthetic and natural antioxidants are classified. Due to the harmful effects of synthetics, interest in natural ones is intense. The fact that bee products are natural products and have antioxidant properties makes them valuable. Many food products show antioxidant properties, but those with higher antioxidant activity are more valuable. Secondary metabolites are among the main causes of antioxidant properties. Bee products also contain

many secondary metabolites. Secondary metabolites include phenolic compounds, flavonoids, tannins, terpenes, alkaloids, and organic acids.

In this review, recent studies on the identification of secondary metabolites responsible for the antioxidant metabolism of bee products were analyzed. Which bioactive secondary metabolites are present and the roles of these components in the mechanism of antioxidant activity are investigated and interpreted. Bee products, secondary metabolites, LC-MS/MS, HPLC and antioxidant words were searched in many different indexes in current studies. It was determined that the secondary metabolite content of bee products varies according to different geography, climate, flora and bee variety and therefore antioxidant activities also vary. It is seen that the standardization of bee products is difficult. For this reason, bee products should be analyzed regularly in certain periods.

Keywords: Bee products, honey, propolis, pollen, royal jelly, sekonder metabolits

INTRODUCTION

Bee products consist of various biological compounds produced by bees that can be beneficial to human health. These products are influenced not only by the biological activities of bees but also by their interactions with the environment, plants, and the ecosystem. The main products produced by bees include honey, pollen, beeswax, propolis, royal jelly, apilarnil, and bee venom. These products also contain a large number of secondary metabolites.

1. Honey and Secondary Metabolites

Honey is a sweet substance produced by bees by collecting flower nectar and processing it through the digestive system and contains many secondary metabolites (3-5). Secondary metabolites in honey are usually compounds originating from plants and flowers and may exhibit antibacterial, antifungal and antioxidant properties (5-8).

Phenolic Compounds: Honey contains phenolic compounds such as flavonoids, acidic phenols and tannins. These compounds have antioxidant properties and can reduce cellular damage by neutralizing free radicals in the body (9).

Enzymes: Honey contains enzymes such as diastase (amylase) and invertase. These enzymes regulate the effect of honey on the digestive system (10).

Acidic Compounds: Organic acids in honey (e.g., gluconic acid) show antibacterial properties and keep honey fresh for a long time (11).

Aromatic Compounds: Volatile compounds from various flowers form the aromatic structure of honey. These aromatic compounds can cause important biological activities (12).

2. Pollen and Secondary Metabolites

Bee pollen is small, nutritious granules collected from the male organs (petals) of plants. In addition to being a rich source of protein, pollen contains a number of secondary metabolites (13).

Flavonoids: Flavonoids are important secondary metabolites found in pollen and show antioxidant properties (14).

Carotenoids: Carotenoids (especially lutein and zeaxanthin), which are transferred from plants to pollen, provide antioxidant activity and support eye health (15).

Alkaloids and Saponins: Some types of pollen may contain alkaloids and saponins that pass through medicinal plants. These compounds have properties that support the immune system (16, 17).

3. Propolis and Secondary Metabolites

Propolis is a resin-free substance formed by bees by mixing the resins collected from plants with their own secretions and protects beehives against microorganisms (18, 19). Propolis is very rich in secondary metabolites and mostly contains flavonoids, phenolic acids, alkaloids, and terpenoids (20).

Flavonoids and Phenolic Acids: Propolis contains high amounts of flavonoids such as cavernosol, quercetin, and pinocembrin. These compounds have strong antibacterial and antioxidant properties (21).

Terpenoids: Some terpenoids in propolis show antiviral and antifungal activity in the body (22).

Aromatic Compounds: Aromatic compounds are also present in propolis, and these compounds show protective effects against microbes (23).

4. Royal Jelly and Secondary Metabolites

Royal jelly is a nutritious liquid secreted by the hypopharyngeal glands of worker bees and is used especially in the feeding of the queen bee. Royal jelly contains secondary metabolites that provide many biological effects (24).

Acidic Compounds: The acidic components of royal jelly are substances such as glucose, fructose, and gluconic acid. These acids show antibacterial effects (25).

Peptides and Proteins: Royal jelly contains special proteins such as royalactin. Royalactin is a biological compound that directs the development of bees and also strengthens the immune system.

Phenolic Compounds: Phenolic compounds show antioxidant effects in royal jelly and can prevent damage at the cellular level (26, 27).

5. Bee Venom and Secondary Metabolites

Bee venom is a compound that bees use as part of their defense mechanism and inject into the body when stinging with their stingers. Bee venom usually contains peptides and enzymes (28).

Melittin: It is the main biologically active compound of bee venom. Melittin shows strong anti-inflammatory and antibacterial properties and can help kill microbes by damaging cell membranes (29).

Apamin: Apamin is a compound that acts on nerve cells and may have an effect on nerve conduction. It also has an immunostimulatory effect (30).

Phospholipase A2: This enzyme can increase inflammation by breaking down cell membranes, which is why bee venom is used in some therapeutic applications (31).

Health Effects of Secondary Metabolites

These secondary metabolites found in bee products can provide many health benefits:

1. Antibacterial and Antiviral Effects: Flavonoids, terpenoids, and phenolic acids found in bee products show protective effects against pathogens (32).

2. Antioxidant Effect: Products such as honey, propolis, and pollen contain antioxidant compounds that neutralize free radicals that cause cellular damage (33).

3. Immune System Support: Products such as royal jelly and propolis contain compounds that strengthen the immune system (27).

4. Anti-inflammatory Effects: Bee venom and some types of pollen have anti-inflammatory properties and may help in the treatment of pain and inflammatory diseases (8, 28).

Bee products and their secondary metabolites are not only nutritious but can also have many biological effects and have positive effects on health. These products have been used in many fields, from traditional medicine to modern research, and their potential health benefits have been discovered. However, the use of these products should be done with caution, taking into account potential side effects such as allergic reactions (27).

Secondary metabolites are chemical compounds that are not directly necessary for organisms to maintain normal vital functions but play important roles in the organism's environmental interactions. These compounds are produced by plants, microorganisms, fungi, and some animals, but often these compounds are not involved in the basic metabolic processes of organisms. The most important characteristic of secondary metabolites is that they are usually not directly essential for the growth and development of the organism. However, they can provide protection against environmental stresses, pests, pathogens, or competition (27).

General Properties of Secondary Metabolites

Environmental Protection: Secondary metabolites provide defense mechanisms for plants and other organisms against adverse effects such as environmental stress, competition with pests, microorganisms, and other organisms.

Low Volume Production: Secondary metabolites are not produced in large quantities by organisms because they often have more specific and targeted functions.

Diversity: Secondary metabolites exhibit very different chemical structures and functions. These diversify depending on the evolutionary history, environment, and survival strategies of the organism (34).

Secondary Metabolite Species

Secondary metabolites can be divided into three main classes:

1. Alkaloids

Alkaloids are organic compounds, usually containing nitrogen, found mainly in plants and some microorganisms. Alkaloids are often psychoactive (affecting brain function) and can be toxic. These compounds are used as defense mechanisms of plants to combat herbivorous animals and microorganisms (34).

Examples:

Morphine (opium plant): Has a pain-relieving effect.

Caffeine (coffee, tea, cocoa): Has a stimulant effect.

Nicotine (tobacco plant): Has a stimulant effect.

Cocaine (coca plant): Addictive with stimulant effects.

2. Terpenoids (Isoprenoids)

Terpenoids are derivatives of organic compounds called terpenes. These compounds are often found as essential oils in plants and are known for their aromatic properties. Terpenoids help plants fight diseases and pests and can also be attractive to pollinators (27).

Examples:

Menthol (peppermint): Has a cooling effect.

Limonene (citrus peels): Used in perfumes and cleaning agents, it also has antiseptic properties.

Squalene (olive oil): shows antioxidant properties.

Carvacrol (thyme): Known for its antibacterial properties.

3. Phenolic Compounds

Phenolic compounds are compounds containing aromatic rings and are generally known to have antioxidant properties. These compounds help protect plants against microorganisms and environmental stresses. Phenolic compounds are also the substances that determine the color of plants and preserve their nutrients (27).

Examples:

Flavonoids (e.g., quercetin, kemferol): They are powerful antioxidants and have antibacterial and anti-inflammatory effects.

Tannins: They have acidic properties in plants and show antibacterial and antifungal effects. They also help to protect the plants.

Resveratrol (grape skin): It is known for its antioxidant properties and may support heart health.

4. Saponins

Saponins are compounds with detergent-like properties, found mainly in plants. These substances are produced by microorganisms and some animals to prevent damage to plants. Saponins can also enhance the action of some alkaloids and show some health benefits (35).

Examples:

Soja saponins (soybeans): They have the potential to strengthen the immune system.

Ginsenoside (ginseng): Has energy-boosting, immune-boosting and antioxidant properties

5. Glucosinolates

Glucosinolates are chemicals found in plants belonging to the cruciferous family (Brassicaceae) and composed of components such as sinigrin and glucoraphanin. These compounds act as defense mechanisms for plants and are thought to have anti-cancer properties for human health (36).

Examples: Isothiocyanates (e.g., sulforaphane): recognized for their anti-carcinogenic properties.

6. Polyketides

Polyketides are compounds containing carbonyl groups and having a polyketone structure. Produced by microorganisms and fungi, these compounds generally show antibacterial, antifungal, and antiviral effects (37).

Examples:

Antibiotics (e.g., streptomycin, tetracycline): defensive against microorganisms.

Mycotoxins (e.g., aflatoxins): Provide defense against fungal infections but are toxic to humans.

Health Effects of Secondary Metabolites

Secondary metabolites are not only defensive for organisms but can also have significant effects on the health of humans. Some of these compounds are used medicinally or are involved in natural treatment methods (27). For example:

Fighting cancer: glucosinolates, phenolic compounds, and some alkaloids can inhibit the growth of cancer cells (38).

Strengthening the immune system: polyphenols, flavonoids, and saponins show immune-boosting properties (39).

Antibacterial and antifungal effects: Terpenoids, alkaloids, and some polyketides can inhibit the growth of microorganisms (40).

Antioxidant effects: Antioxidants play an active role in the treatment of more than 100 diseases (41, 42). They prevent cellular damage by removing free radicals and do not form radicals themselves (43, 44). Therefore, they are very important. In addition, their ability to eliminate oxidative stress also makes them important (45, 46). The interest in natural antioxidants is continuously increasing, and these are originated from medicinal aromatic plants, bee products, and other natural foods (47, 48). Secondary metabolites are particularly responsible for antioxidant properties, and polyphenols are important among them. Phenolic compounds and terpenoids can inhibit cellular oxidation and show anti-aging effects (49, 50).

Secondary Metabolites Identified in Bee Products

In a study conducted in 2023, quantitative analysis of 53 different secondary metabolite components in apilarnil was performed by LC-MS/MS. 23 different bioactive secondary metabolites were identified. The major ones among these components are as follows: Quinic acid, Fumaric acid, aconitic acid, kaempferol, quercetin, 4-OH benzoic acid, p-Coumaric acid, quercetin, luteolin, hesperetin, nicotiflorin, caffeic acid, vanillin and acacetin. In the same study, the antioxidant property of apilarnil was also determined in vitro by different methods and it was stated that the antioxidant property may be due to secondary metabolites (51).

In a study conducted in 2024, secondary metabolites of propolis samples from four different provinces of Turkey were investigated. 53 different phytochemicals were screened, and a total of 35 bioactive components were identified. The highest concentrations of acacetin, p-coumaric acid, caffeic acid, ferulic acid, isoquercitrin, quercetin, naringenin, chrysin, apigenin, luteolin, quinic, kaempferol, quercetin, and vanillic acid were detected in propolis samples (52).

In another study conducted in 2024, propolis samples from Bitlis province of Turkey were studied. In the study, where 53 different secondary metabolites were screened, 31 bioactive components were identified. Acacetin was found in the highest concentration. Other major components were found to be naringenin, quinic acid, ferulic acid, chrysin, p-coumaric acid,

caffeic acid, and kaempferol. In the study in which antioxidant properties were determined, it was stated that the reason why propolis showed high antioxidant properties may be due to the secondary metabolites in its content (18).

In a different study, secondary metabolites in bee products were examined. It was determined that the most commonly determined secondary metabolites in bee pollen were quercetin, kaempferol, luteolin, naringenin, rutin, acacetin, caffeic acid, p-coumaric acid, ferulic acid, gallic acid, vanillic acid, benzoic acid, rosmarinic acid, abscisic acid, and chlorogenic acid. The most commonly determined secondary metabolites in propolis were daidzein, pinocembrin, sacuranetin, fisetin, galangin, acacetin, chrysin, and liquiritigenin (53).

CONCLUSION

Secondary metabolites, although not vital for organisms, provide protection against environmental stresses, pathogens, and pests. Plants, fungi, and microorganisms produce these compounds mostly for defense purposes. In terms of human health, many secondary metabolites are used as medicines, food supplements, and therapeutics. Therefore, secondary metabolites are extremely important both for their ecological function and their medicinal potential. The broad biological activities of bee products are also realized by secondary metabolites. Therefore, secondary components are very important in determining biological activities. It has been determined by studies that there are different secondary components in bee products.

Abstract

This study investigates the financial implications of Iran's missile development on regional security and economic stability in the Middle East. Focusing on key missile systems such as the Shahab-3, Ghadr-110, and Fateh-313, the research explores the broader economic consequences of Iran's military capabilities, particularly in the context of geopolitical tensions. Iran's missile program, driven by strategic defense needs, has had significant economic ramifications both domestically and regionally. The analysis covers how missile advancements impact Iran's defense budget, exacerbate economic sanctions, and influence global oil prices and financial markets. Furthermore, the study examines how these developments affect investor confidence and economic security in neighboring states. By exploring the intersection of military power and economic outcomes, this paper highlights the ongoing trade-offs between national security and economic growth in Iran, offering insights into the broader regional security dynamics shaped by missile deployment.

Keywords: Iranian missile development, regional security, economic stability, military expenditure, oil prices, geopolitical tensions

1. Introduction

Iran's missile development program has grown significantly since its inception in the late 20th century, positioning it as one of the most formidable missile arsenals in the Middle East. The Iranian missile program was initially motivated by the need for deterrence and self-defense, especially following the Iran-Iraq War in the 1980s. Over the years, Iran has invested heavily in ballistic and cruise missile technology, with a particular focus on medium- and long-range ballistic missiles. These systems provide Iran with the ability to project power across the region, reaching targets in neighboring Gulf states, Israel, and even parts of Europe.

The **Shahab series**, particularly the **Shahab-3**, represents a major milestone in Iran's ballistic missile development. This missile has a range of approximately 2,000 kilometers, allowing Iran to target key strategic locations across the Middle East (Taleblu & Behnam, 2020).

Additionally, advancements in solid-fuel missiles, such as the **Fateh-313** and **Ghadr-110**, have enhanced the accuracy, mobility, and operational readiness of Iran's missile forces (Cordesman & Toukan, 2014).

The geopolitical context of the Middle East is deeply intertwined with the development and deployment of Iranian missiles. The region, characterized by long-standing rivalries, sectarian divisions, and competition for dominance, has seen Iran's missile capabilities as both a symbol of national strength and a tool for deterrence. Iran's missile program is a key component of its asymmetric warfare strategy, compensating for its relatively limited air force capabilities.

Moreover, Iran's missile development has not occurred in isolation; it has influenced, and been influenced by, broader geopolitical dynamics. For instance, the missile program has exacerbated tensions between Iran and its regional rivals, particularly Saudi Arabia and Israel. These nations perceive Iran's missile capabilities as a direct threat to their security, leading to a regional arms race (Katzman, 2021).

Economically, Iran's missile program has been both a burden and a tool of leverage. On the one hand, international sanctions, particularly from the United States and its allies, have severely impacted Iran's economy. The development and proliferation of missile technology, in defiance of international pressure, have led to additional sanctions, further isolating Iran from global financial markets (Gordon, 2019). On the other hand, Iran's missile capabilities allow it to exert influence over the global oil supply, particularly through threats to close the Strait of Hormuz, a critical chokepoint for global oil shipments (Erdbrink, 2018).

This study aims to explore the financial and economic implications of Iran's missile development on both its domestic economy and the broader Middle East. Specifically, it seeks to examine how Iran's missile capabilities influence defense spending, foreign policy, and the economic security of neighboring states. Additionally, the study will investigate the impact of Iranian missile development on global financial markets, particularly with respect to oil prices and energy security.

The scope of the study will include an analysis of Iran's missile arsenal, the economic trade-offs associated with military spending, and the reactions of regional and global actors to Iran's missile advancements. Through this lens, the study will offer insights into the complex interplay between military power, economic stability, and geopolitical strategy in one of the world's most volatile regions.

2. Iran's Missile Arsenal: Range, Capabilities, and Implications

Types of Missiles (Ballistic, Cruise, Short-Range, etc.)

Iran has developed a diverse missile arsenal over the years, consisting of ballistic missiles, cruise missiles, and short-range tactical systems. These missile types serve different strategic and tactical purposes within Iran's military doctrine, enabling Tehran to enhance its defensive and offensive capabilities.

Ballistic Missiles: The backbone of Iran's missile forces is its arsenal of ballistic missiles. These include short-range, medium-range, and intermediate-range ballistic missiles (SRBMs, MRBMs, and IRBMs). The **Shahab** series, particularly the **Shahab-3**, is one of the most prominent MRBMs, with a range of up to 2,000 kilometers, allowing it to target locations across the Middle East, including Israel and parts of Europe (Hosseini, 2019). Iran has also developed the **Sejjil** missile, a solid-fueled MRBM with greater mobility and faster launch capabilities than its liquid-fueled counterparts (Eisenstadt, 2016).

Cruise Missiles: Iran has also invested heavily in developing cruise missile technology, which offers greater flexibility in targeting. Cruise missiles, such as the **Soumar**, have a range of approximately 2,500 kilometers, providing Iran with the ability to launch precision strikes against both naval and land-based targets (Elleman, 2020). These missiles are low-flying and highly maneuverable, making them harder to detect and intercept compared to ballistic missiles.

Short-Range Missiles: In addition to long-range systems, Iran maintains a substantial inventory of short-range missiles, such as the **Fateh-110** and its variants. These missiles are primarily designed for tactical use in regional conflicts and have been used by Iran's allies and proxies in the region, including Hezbollah in Lebanon and the Houthi rebels in Yemen (Jones, 2021). The **Fateh-110** has a range of up to 300 kilometers and is known for its accuracy and quick deployment capabilities.

Technological Advancements in Iranian Missiles

Iran's missile technology has evolved significantly, particularly in terms of range, accuracy, and payload capacity. Initially reliant on foreign assistance, especially from North Korea and China, Iran has now developed a largely indigenous missile production capability (Eisenstadt, 2016). This self-sufficiency in missile production has allowed Iran to circumvent international arms embargoes and sanctions, maintaining and expanding its missile arsenal despite external pressures.

A key advancement in Iran's missile program has been the shift from liquid-fueled to **solid-fueled** missiles. Solid-fueled missiles, such as the **Sejjil-2** and **Fateh-313**, offer several advantages, including faster launch times, greater mobility, and less vulnerability to preemptive strikes. This makes Iran's missile forces more flexible and resilient in a conflict scenario (Jones, 2021).

Another significant development is the improvement in missile **guidance systems**. Iran has made strides in increasing the accuracy of its missiles, transitioning from systems with rudimentary targeting to those capable of hitting targets with precision. This is particularly important for Iran's cruise missiles, which are designed to strike high-value targets, such as military bases and critical infrastructure (Elleman, 2020). The integration of advanced guidance systems into Iran's ballistic and cruise missiles represents a major leap in its military capabilities.

Strategic Importance of Iran's Missile Program

The strategic importance of Iran's missile program lies in its role as a **deterrent** and a tool for **asymmetric warfare**. Lacking a strong conventional air force, Iran relies on its missile capabilities to deter regional adversaries, including Israel, Saudi Arabia, and the United States. The ability to strike distant targets with ballistic and cruise missiles enhances Iran's strategic reach, providing a counterbalance to the superior airpower of its rivals (Hosseini, 2019).

Moreover, Iran's missile program is closely tied to its regional influence, particularly through its support of non-state actors. Iran has supplied short-range missiles and rocket systems to groups such as Hezbollah, Hamas, and the Houthis, extending its influence across the Middle East and threatening adversaries through proxy forces (Jones, 2021). This network of allied groups armed with Iranian missile technology presents a significant challenge to the stability of the region.

The missile program also gives Iran the ability to threaten critical infrastructure, particularly in the energy sector. The **Strait of Hormuz**, through which a large portion of the world's oil supply flows, is vulnerable to Iranian missile strikes. In times of heightened tension, Iran has leveraged this threat to deter foreign intervention and influence global oil markets (Elleman, 2020).

In summary, Iran's missile arsenal is a crucial component of its national defense and foreign policy strategy. The technological advancements in its missile systems, combined with the strategic importance of these capabilities, make Iran a formidable player in the Middle East's security landscape.

3. Economic Impact of Missile Development on Iran's Domestic and Foreign Policy Military Expenditure and Defense Budget

Iran's missile development program is a significant component of its overall defense strategy, which is reflected in the country's military expenditure. Over the years, Iran's defense budget has fluctuated, influenced by external pressures, economic sanctions, and changing geopolitical realities. According to data from Macrotrends, Iran's military spending reached **\$6.85 billion** in 2022, accounting for **2.59%** of the country's Gross Domestic Product (GDP) (Macrotrends, 2024).

Historically, Iran's defense budget has seen significant variation. For instance, in **2017**, military spending peaked at **\$13.93 billion**, representing **2.84%** of GDP. This high level of expenditure coincided with increased regional tensions and a renewed focus on missile development in the face of international isolation (Hosseini, 2019). However, economic challenges, including sanctions and domestic financial strains, forced Iran to reduce military expenditure in subsequent years, with spending dropping to **\$5.39 billion** in 2021, or **2.19%** of GDP.

Iran's investment in missile technology, despite economic constraints, underscores its prioritization of defense and deterrence capabilities. Ballistic and cruise missiles offer Iran a relatively cost-effective means of maintaining strategic leverage, particularly against adversaries like Israel and Saudi Arabia. This focus on missile development reflects the country's reliance on asymmetric warfare strategies, where conventional military inferiority is compensated by missile threats (Elleman, 2020).

The Role of Sanctions and Economic Pressures

International sanctions, particularly those imposed by the United States, have profoundly impacted Iran's economy, affecting both its military capabilities and civilian sectors. Following the U.S. withdrawal from the Joint Comprehensive Plan of Action (JCPOA) in 2018, renewed sanctions targeted Iran's oil exports and financial transactions, which significantly reduced government revenues. The economic pressures have had a direct effect on Iran's defense budget and its ability to fund missile development (Erdbrink, 2018).

Despite these sanctions, Iran has managed to continue developing its missile capabilities, primarily by relying on domestic expertise and circumventing international restrictions through

illicit channels (Eisenstadt, 2016). The missile program is seen by Tehran as a crucial component of its defense strategy, particularly as sanctions weaken other areas of the military, such as its conventional air force. The ongoing development of missile systems, even under financial constraints, illustrates Iran's commitment to maintaining a credible deterrent against foreign intervention.

Sanctions have also shaped Iran's foreign policy by pushing it closer to non-Western powers such as Russia and China. These alliances have provided Iran with technical assistance and equipment, enabling continued advancements in missile technology. Moreover, Iran's military exports to proxy groups in the region, including Hezbollah and the Houthis, have increased, allowing Tehran to project influence without directly engaging in conflict (Jones, 2021).

Trade-Offs Between Military Spending and Economic Growth

The heavy emphasis on military spending, particularly on missile development, has created significant trade-offs for Iran's domestic economy. Resources allocated to defense reduce the funds available for crucial sectors such as healthcare, education, and infrastructure. This imbalance is particularly evident during periods of economic downturn, such as those caused by sanctions or fluctuations in global oil prices (Gordon, 2019).

Iran's economic growth has been hampered by the need to prioritize military expenditures over domestic investment. The defense budget's share of GDP has remained relatively high, even during times of economic hardship, indicating that the regime places a higher priority on security and deterrence than on immediate economic stability. For example, during the 2010s, as sanctions intensified and the economy contracted, Iran maintained substantial defense spending, with **\$12.26 billion** allocated in **2016** (Macrotrends, 2024).

While the missile program bolsters Iran's strategic position, it also contributes to a cycle of economic stagnation, where military spending diverts resources from productive sectors of the economy. This trade-off has long-term implications for Iran's ability to modernize its economy and improve the quality of life for its population.

In conclusion, Iran's missile development has had profound economic impacts, both domestically and in the context of its foreign policy. The substantial military expenditure, despite economic constraints and sanctions, highlights the regime's commitment to maintaining its strategic capabilities. However, this prioritization comes at a significant cost to economic growth and domestic welfare, raising questions about the sustainability of such an approach in the long term.

4. Financial Markets, Oil Prices, and Regional Security

Impact of Iranian Missiles on Regional Financial Stability

The Iranian ballistic missile attack on Israel has far-reaching implications for regional financial stability. Military conflicts in the Middle East, particularly between key regional powers like Iran and Israel, create heightened investor uncertainty. The October 1 missile attack intensified concerns about regional security, prompting shifts in financial markets as investors anticipated potential escalations in conflict. Stock markets across the Middle East saw short-term volatility as the attack raised fears of broader instability, especially in countries reliant on foreign investments and exports. Investors tend to adopt a risk-averse stance during such periods, reallocating assets away from emerging markets, particularly those within conflict zones, toward safer options like U.S. treasuries and gold (CNN, 2024). Additionally, the financial systems of neighboring countries are affected by disrupted trade routes, increased military spending, and heightened inflationary pressures as governments brace for possible broader economic repercussions.

Influence on Oil Prices and Global Energy Markets

Iran's missile attacks immediately impacted oil prices, given the country's strategic position as a major oil producer and its influence over critical shipping routes like the Strait of Hormuz. When conflict threatens energy supply chains, oil prices tend to surge in response to fears of

production disruptions or military blockades. Following the attack, Brent crude oil prices rose as markets speculated on the risk of further conflict that could disrupt the global supply of oil. Historically, tensions in the Middle East have significant ripple effects on global energy markets, leading to price hikes and supply shocks (Axios, 2024). This is particularly true when major oil-producing nations are involved, as their ability to maintain regular output is jeopardized. Increased prices exacerbate inflationary pressures worldwide, particularly in energy-dependent regions such as Europe and Asia.

Responses from Middle Eastern Economies and International Investors

Middle Eastern economies responded to the missile attack with a mixture of caution and diplomatic efforts aimed at preventing further destabilization of the region. Gulf countries, which maintain economic ties with both Western nations and Iran, were notably concerned about the potential for expanded military conflict, as this could disrupt their own energy sectors and financial markets. In particular, economies like the United Arab Emirates and Saudi Arabia, which rely heavily on oil exports, sought to ensure continuity in energy supply to maintain investor confidence and prevent economic downturns (IISS, 2024).

On a global scale, international investors monitored the situation closely, with some divesting from Middle Eastern assets as a precaution. Countries with significant trade relationships with Israel and Iran, such as China and Russia, urged diplomatic resolutions to avoid prolonged conflict. The reactions from financial markets and investors reflected broader concerns about geopolitical risks associated with military actions in the region, especially in an environment where energy markets are already facing pressures from other global events like the war in Ukraine (The Guardian, 2024).

5. Visual Representation of Iranian Missile Systems

a. Detailed Diagrams and Technical Breakdown of Key Missiles

Below are the diagrams and technical details of three key Iranian missile systems: **Shahab-3**, **Ghadr-110**, and **Fateh-313**.

Shahab-3

- **Range:** 1,280 - 1,930 km (796 - 1,199 miles)
- **Payload Capacity:** 760 - 1,200 kg
- **Launch Platform:** Mobile launchers

The Shahab-3, a medium-range ballistic missile (MRBM), is one of Iran's longest-serving missile systems.

Ghadr-110

- **Range:** 2,000 - 2,500 km (1,243 - 1,553 miles)
- **Payload Capacity:** 700 - 1,000 kg
- **Launch Platform:** Mobile platforms (can be launched from various terrains)

Ghadr-110 is a development of the Shahab series and represents Iran's advances in MRBM technology. With an increased range and improved accuracy, it is capable of reaching distant targets, including Israel and parts of Europe.

Fateh-313

- **Range:** 500 km (311 miles)
- **Payload Capacity:** 450 kg
- **Launch Platform:** Mobile launchers, compatible with road-mobile systems

The Fateh-313 is a solid-fuel short-range ballistic missile (SRBM) that Iran uses for precision strikes in regional conflicts. It's known for its quick deployment capabilities and enhanced accuracy compared to older systems.

b. Analysis of Missile Range, Payload Capacity, and Launch Platforms

1. **Shahab-3:**

- Its medium-range capability allows it to reach strategic targets in Israel, Saudi Arabia, and other Gulf nations.
- The missile can carry a heavy payload, making it versatile for both conventional and unconventional warheads.
- Its mobility increases survivability, as it can be launched from multiple locations and is harder to detect.

2. **Ghadr-110:**

- With its extended range, Ghadr-110 poses a threat to regional stability, capable of striking targets deep within enemy territory.
- The missile's payload flexibility allows it to deliver conventional and potentially nuclear warheads, which elevates its strategic importance.
- Ghadr-110's road-mobile launch platform enhances its operational readiness, allowing it to be quickly deployed in response to threats.

3. **Fateh-313:**

- The Fateh-313's shorter range limits its reach to more immediate targets in the region, such as U.S. bases in the Persian Gulf or neighboring Arab countries.
- Its lighter payload is suited for precision strikes rather than massive destruction, but it provides critical tactical advantages in local conflicts.
- This missile's mobility allows it to be used in rapid, short-notice deployments, enhancing Iran's tactical missile strike capabilities.

c. Strategic Implications of Missile Deployments

The deployment of these missile systems has significant strategic implications for regional security and military balances:

- **Shahab-3** and **Ghadr-110** represent Iran's ability to project power beyond its borders, particularly towards Israel and Gulf Cooperation Council (GCC) countries, thereby enhancing its deterrence and offensive capabilities.
- The increased precision of **Fateh-313** strengthens Iran's ability to conduct targeted strikes against military installations or infrastructure in nearby nations, including U.S. bases.
- These systems collectively form part of Iran's broader asymmetric warfare strategy, where missile capability compensates for other military deficiencies, serving both as a deterrent and as a tool for power projection in conflicts with adversaries.

ÖZET

Gastronomi, bir destinasyonun kültürel kimliğinin önemli bir parçasıdır ve son yıllarda kültürel değerleri tanıtmaya ve ekonomik katkı yaratmada önemli bir araç haline gelmiştir. Gastronomi turizmi, yerel mutfak kültürlerinin tanıtılması ve bu kültürel değerlerin turistik çekicilik haline gelmesi üzerine kuruludur. Yiyecek ve içeceklerin hazırlanması, sunumu ve tüketimi, o kültürün geleneklerini yansıtırken turistlere de benzersiz deneyimler sunar. Bu bağlamda, turistlerin deneyimledikleri önemli gastronomi unsurlarından birisi de sokak lezzetleridir. Sokaklarda sunulan geleneksel ve etnik yiyecek ve içecekler, şehrin dokusunu yansıtan kültürel öğeler olarak dikkat çekmektedir. Turistleri benzersiz kültürel deneyimlere ulaşmasını sağlayan sokak lezzetleri, destinasyonların cazibesini artırmakta ve turistlerin yerel halkla iç içe, canlı bir atmosferde otantik bir yemek deneyimi yaşatmaktadır. Bu çalışmada, literatür taraması yöntemi kullanılarak sokak lezzetleri, gastronomi turizmi, mutfak ve kültür üzerine yapılan araştırmalar incelenecektir. Çeşitli kaynakların değerlendirilmesi sonucunda, sokak lezzetlerinin turistik destinasyonlarda otantik deneyimler sunarak turistlerin ilgisini çektiği ve yerel halk için önemli bir gelir kaynağı olduğu belirlenmiştir. Ayrıca, incelenen çalışmalardan elde edilen bilgiler doğrultusunda; gastronomi turizmi, kültürel miras ve sürdürülebilirlik arasındaki ilişkide sokak lezzetlerinin nasıl bir bağlayıcı rol oynadığı da ortaya konulmaktadır. **Anahtar Kelimeler:** Sokak Lezzetleri, Yöresel Lezzetler, Gastronomi Turizmi

ABSTRACT

Gastronomy is an integral part of a destination's cultural identity and, in recent years, has become an essential tool for promoting cultural values and creating economic contributions. Gastronomy tourism is based on promoting local culinary cultures and transforming these cultural values into tourist attractions. The preparation, presentation, and consumption of food and beverages reflect the traditions of that culture and offer unique experiences to tourists. In this context, street food is one of the essential gastronomy elements that tourists experience. Traditional and ethnic foods and beverages served on the streets draw attention as cultural elements that reflect the texture of the city. Street food offers tourists unique cultural experiences, enhances the appeal of destinations, and offers tourists an authentic dining experience in a lively atmosphere where locals mingle. This study will examine research on street food, gastronomy tourism, cuisine, and culture using the literature review method. The evaluation of various sources has determined that street food attracts tourists by providing authentic experiences in touristic destinations and serves as an essential source of income for

local people. Furthermore, the data from the scrutinized studies indicates that street food interconnects gastronomy tourism, cultural heritage, and sustainability.

Key Words: Street Foods, Local Flavor, Gastronomy Tourism

GİRİŞ

Yeme-içme olgusu insanoğlunun varoluşu kadar eski ve temel bir ihtiyaçtır (Oğuz, 2020). Yemek insanlar için temel bir ihtiyaç olmasının yanı sıra (Ateş vd., 2024; Cardoso vd., 2014) misafirperverliğe teşvik eder, sohbete zemin hazırlar ve duyularımızı bir yerin kimliğini tanımaya yönelik harekete geçirir (Moe & Shurance, 2018; Svendsdotter vd., 2021;). İnsanoğlunun varoluş ile özdeşleştirilen yemek, zamanla temel gereksinimleri gidermenin de ötesine geçerek kültürel bir olgu haline almıştır (Eker, 2018; Ekinci, 2018; Lupton, 2020; Özçil, 2023). Bu bağlamda yemek, geçmişi, sembolleri, hikâyeleri ve söylemleri ile bir bölgenin kültürünün ve kimliğinin temel unsurlarından biri şeklinde ifade edilebilir (Dixit, 2021; Smith, 1995). Yemeğin nerede, ne kadar, ne özellikte yendiği ve hazırlandığı da yine kültürel olarak belirlenir; bu durumla ilişkili olarak tüm bu süreçleri kapsayan gastronomi turizmi de kültürün bir parçası olarak kabul edilir (Çalışkan & Yılmaz, Kowalczyk, 2015; Santich, 2004). Bu açıdan bakıldığında, gastronomi yalnızca gıdaların hazırlanışı, işlenmesi ve yenme biçimlerini kapsamakla kalmaz, aynı zamanda gıda kültürüne dair geniş ve kapsamlı bir çalışma alanı da sunar (Çavuşoğlu & Çavuşoğlu, 2018; Çevik & Saçlık, 2011; Maberly & Reid, 2014).

İnsanlar, sıradanlıktan uzaklaşarak unutulmaz deneyimler yaşamak için yeni yiyecekler ve yemek yenecek yerler keşfetmek gibi çeşitli sebeplerle seyahat ederler (Chompupor, 2024; World Food Travel Association, 2018) bundan dolayıdır ki son yıllarda gastronomi (yemek) turizmi turistlerin ilgi alanlarında yemeğe karşı bir eğilim oluşturmuştur (Choe & Kim, 2018; Jeaheng & Han, 2020). Turizm harcamalarının üçte birini yemek harcamalarının oluşturduğu düşünüldüğünde ise (Henderson vd., 2012; Jeaheng & Han, 2020; Mnguni & Giampiccoli, 2022) yemeğin seyahatin önemli bir bileşeni ve parçası olduğu ifade etmek yanlış olmayacaktır (Jeaheng & Han, 2020; Lai, 2020; Lee vd., 2020; Lee, vd., 2020). Yemek ve seyahatin döngüsel bir bağıntısı vardır bu açıdan yemek, seyahat deneyimini doğrudan etkileyen ve gerçekleştirilen seyahatin hatırlanabilirliğine katkı sağlayan gastronomi turizminin ürünü olarak karşımıza çıkmaktadır (Stone vd., 2019; Yıldırım & Yılmaz, 2019). Kültürel kimliğin bir parçası olan gastronomi turizmi bugün şehirlerde ve kırsal bölgelerde mutfak deneyimini kültürel keşfe dönüştüren önemli bir çalışma alanı olarak karşımıza çıkmaktadır (Mongollón vd., 2015; Pérez vd., 2024). Kökeni büyük medeniyetlere dayanan gastronomi geniş kapsamlı bilgi birikimi sunuyor olsa da turizm bilimi için yeni bir çalışma alanıdır (Kivela & Crotts, 2006).

Bahsedilmiş olduğu üzere gastronomi ve yemek, beslenme ihtiyacını karşılamaktan öte; toplumların kültürel kimliğinin önemli bir parçasıdır ve sahip olduğu bu kimliğin önemli çıktılarında biri de sokak lezzetleridir (Özçil, 2023; Smith & Brown, 2021). "Sokak lezzetleri", dışarıda satılan, anında tüketilen ve/veya tüketim için iş yerlerine veya evlere teslim edilen işlenmiş gıdalar olarak tanımlanmaktadır (Abrahale, 2019; Ferrari vd., 2021; Food and Agriculture Organization, 1989; Gupta vd., 2020; Keeble vd., 2015; Özkaya & Ceylan, 2022; Steyn vd., 2013; World Health Organization, 1996). Sokak lezzetleri, küresel, bölgesel ve etnik kökenlerle bağlantılıdır (Abrahale, 2019; Marras, 2014; Mnguni & Giampiccoli, 2022; Privitera & Nesci, 2014) bu bağlamda bugün çoğu şehirde görülen sosyal ve ekonomik bir olgu haline almıştır (Abrahale, 2019; Fellows & Hilmi, 2012; Gelormini vd., 2015). Bu durumla ilişkili olarak maliyeti düşük ve cezbedici yemek tabağı olarak insanlar tarafından da kabul görmüştür (Gupta vd., 2018; Namugumya vd., 2011). Sokaklarda üretimi, sunumu ve tüketimi gerçekleşen bu lezzetler önceleri gelişmekte olan ülkelerin beslenme biçimleriyle ilişkilendirilirken bugün yaklaşık olarak 2.6 milyar insan tarafından tüketilen bir ürünü haline dönüşmüştür (Addo-Tham vd., 2020; Fusté-Forné, 2021; Kraig & Sein, 2013; Mnguni & Giampiccoli, 2022; Özkaya & Ceylan, 2022). Buradan yol çıkarak çalışmanın amacı doğrultusunda sokak lezzetlerinin

gastronomi turizmi açısından taşıdığı önem ile ilişkili olarak çalışmanın bir sonraki kısmında sistematik literatür incelemesi yöntemi benimsenerek, PRISMA akış modeli çerçevesinde alan yazında konuyla ilişkili yapılmış olan yayınlar incelenecektir.

YÖNTEM

İnceleme Yaklaşımı

Sistematik literatür incelemeleri, bir alandaki çalışmaları değerlendirme ve gelecekteki araştırma eğilimlerini belirleme açısından önemli bir yöntemdir. Bu yöntem, araştırmacılara belirli bir konuda yapılan çalışmaları tespit etme, analiz etme, uygunluklarını değerlendirme, sentezleme ve yorumlama süreçlerinde kapsamlı bir perspektif sunar. Akademik araştırmaları teşvik etmek, mevcut bilgiyi organize etmek ve yeni araştırma soruları oluşturmak amacıyla geliştirilmiş olan bu yaklaşım, başlangıçta tıp alanında kullanılmak üzere geliştirilmiş olmasına rağmen, zamanla sosyal bilimler dahil olmak üzere birçok disipline yayılmıştır. (Andreini & Bettinelli, 2017; Davis vd.,2014; Frank & Hatak, 2014; Moher vd., 2010; Denyer & Neely 2004; Şahin Yılmaz, 2023; Tranfield vd., 2003). Bu çalışmada ise sistematik literatür incelemesi kapsamında PRISMA akış modeli kullanılmıştır. PRISMA modeli, "Sistematik İncelemeler ve Meta-Analizler için Tercih Edilen Raporlama Öğeleri" olarak tanımlanmakta ve bu modele ait kontrol listesindeki kriterler doğrultusunda incelemeler gerçekleştirilmektedir (Moher vd., 2010; Page vd., 2021; Şahin Yılmaz, 2023).

Şekil 1. PRISMA Modeli

Kaynak: Page vd., 2021

Şekil 1’de verilmiş olduğu üzere PRISMA modeli; sistematik literatür taraması çalışmalarının hazırlanmasında süreci adım adım takip etmeyi ve sağlıklı bir şekilde analiz yapmayı mümkün kılan bir literatür araştırması modeli şeklinde de ifade edilebilir.

Veri Toplama Süreci

Sistematik inceleme yapılan çalışmalarda literatürü belirlemek ve verileri elde etmek amacıyla veri tabanlarından yararlanılır (Liu & Li, 2021; Şahin Yılmaz,2023; Şahin & Yılmaz, 2022). Bu çalışmada, literatüre ilişkin incelemenin sağlıklı bir şekilde yapılabilmesi amacıyla WOS veri tabanı kullanılmıştır. WOS'un tercih edilmesinin temel nedeni, akademik ilerlemeyi büyük ölçüde yansıtan birinci sınıf akademik dergileri içermesi ve sistematik literatür araştırmalarında temsil yeteneğinin bibliyometrik çalışmalarla doğrulanmış olmasıdır. Bu bağlamda, aralarına "and" bağlacı eklenerek "street food" ve "gastronomy tourism" kelimeleri ile yapılan tarama sonucunda 58 yayına ulaşılmıştır. Elde edilen bu yayınlar, PRISMA akış şeması doğrultusunda belirli dahil etme kriterleri dikkate alınarak değerlendirilmiştir. Değerlendirme sürecinde, araştırma ve değerlendirme makalesi olması, İngilizce yazılmış olması, SSCI, SCI-Expanded, ESCI endekslerinde taranan dergilerde yayınlanmış olması gibi kriterlere uygun olan yayınlar analize dahil edilmiş, bu özellikleri taşımayan yayınlar ise analiz sürecine alınmamıştır (Sunar vd., 2024; Şahin Yılmaz, 2023). PRISMA akış şeması doğrultusunda yapılan değerlendirme sonucunda Wos veri tabanında 58 yayına ulaşılmış bunlardan 16 tanesi analiz sürecine dâhil edilmiştir. Gerçekleştirilen sürece ilişkin PRISMA akış şeması detayları Şekil 2’de sunulmaktadır.

Şekil 2. Prisma Akış Şeması

Kaynak: Page vd., 2021

BULGULAR

Çalışmanın bu kısmı, ilgili çalışmaların araştırma konuları, yöntemleri ve kavramsal çerçevelerine ilişkin verilerin detaylandırıldığı konuları içermektedir.

"Sokak Lezzetleri" ve "Gastronomi Turizmi" konulu çalışmaların araştırma konuları

Tablo 1’ de verilmiş olan çalışmalar incelendiğinde; sokak yemeklerinin otantiklik, çeşitlilik ve sürdürülebilirlik boyutlarıyla turist deneyimlerine etkilerini, destinasyonların yemek imajının kültürel ve ekonomik açıdan nasıl etkilediği konuları üzerine durulduğu görülmektedir. İncelenen çalışmalarda; gastronomi mekân markalaşması, otel restoranlarının rolü, yerel mutfakların küresel çapta bilinirliği, turist tutumları ve yemek deneyimleri konularının işlendiği görülmektedir. Vaka analizine dayalı araştırmalar, yaratıcı ve yenilikçi gastronomi stratejilerinin destinasyon çekiciliğine katkısını analiz ederken; yapay zeka, bibliyometrik analiz ve yapısal modelleme gibi yöntemler kullanılan araştırmalar ise gastronomi turizmine katılan turistlerin profilleri ve eğilimlerini analiz etmektedir. Genel hatları ile sokak yemekleri, kültürel miras, niş pazarlar ve üçüncü yaş grubu turistler vb. konular üzerine gerçekleştirilen bu çalışmalarda gastronominin turizmdeki kültürel, ekonomik ve yaratıcı potansiyelini ortaya konulmaya çalışılmıştır.

Tablo 1. Çalışmalara İlişkin Genel Bilgiler

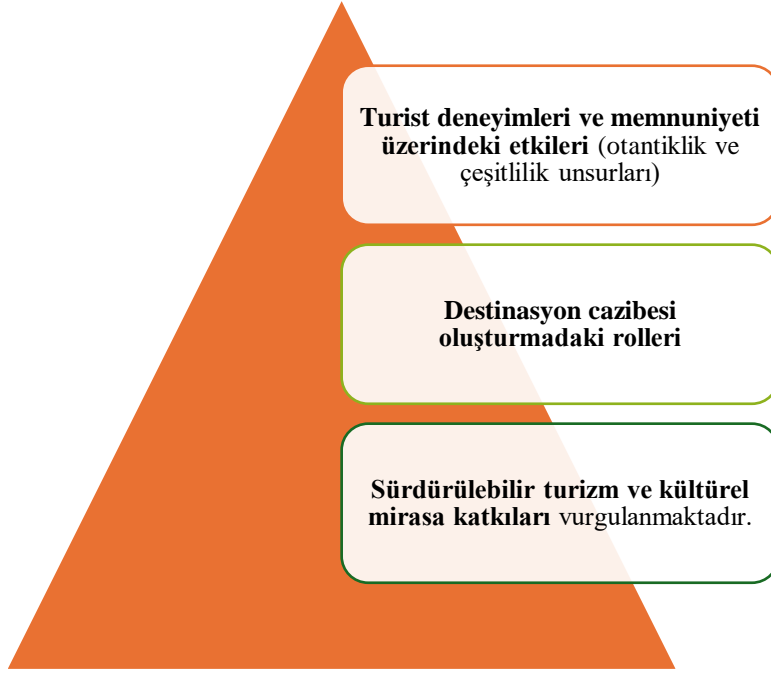

Çalışma Başlıkları		Çalışmalara İlişkin Bazı Bilgiler
1	From Gastronomy Tourism to Creative and Sustainable Tourism of Gastronomy Case Study: 30 Tir Street Food in Tehran (Gastronomi Turizminden Yaratıcı ve Sürdürülebilir Gastronomi Turizmine: Tahran Sokak Yemekleri Örneği)	Konu: Tahran'ın 30 Tir bölgesinde sokak yemeklerinin yaratıcı ve sürdürülebilir gastronomi turizmüne katkısı. Amaç: Sokak yemeklerinin sürdürülebilir turizmdeki etkisi ve yerel gastronomi deneyimlerini analiz etmek.
2	Street foods: contemporary preference of tourists and its role as a destination attraction in India (Sokak Yemekleri: Turistlerin Çağdaş Tercihi ve Hindistan'da Bir Destinasyon Çekiciliği Olarak Rolü)	Konu: Hindistan'daki sokak yemeklerinin destinasyon cazibesi olarak turistlerin ilgisini nasıl çektiği. Amaç: Sokak yemeklerinin turist tercihleri üzerindeki etkisini incelemek.
3	An Analysis of International Tourist Motivations Towards Phuket Food Attractiveness (Phuket Yemeklerinin Çekiciliğine Yönelik Uluslararası Turist Motivasyonlarının Analizi)	Konu: Phuket'in gastronomi cazibesinin uluslararası turistleri nasıl çektiği. Amaç: Turistlerin Phuket yemeklerine karşı tutumlarını incelemek.
4	How does a destination's food image serve the common targets of the UNESCO creative cities network? (Bir Destinasyonun Yiyecek İmajı UNESCO Yaratıcı Şehirler Ağı'nın Ortak Hedeflerine Nasıl Hizmet Eder?)	Konu: Yemek imajı ile UNESCO'nun yaratıcı şehirler ağı hedefleri arasındaki ilişki. Amaç: Gastronominin, kültürel sürdürülebilirlik ve şehir markalaşmasındaki rolünü incelemek.
5	A study on the influence of street food authenticity and degree of their variations on the tourists' overall destination experiences (Sokak Yemeklerinin Otantikliği ve Çeşitliliğinin Turistlerin Genel Destinasyon Deneyimleri Üzerindeki Etkisi)	Konu: Sokak yemeklerinin otantikliğinin ve çeşitliliğinin turistlerin destinasyon deneyimlerine etkisi. Amaç: Sokak yemeklerinin turist memnuniyetindeki rolünü incelemek.
6	Innovation and creativity in gastronomic tourism: A bibliometric analysis (Gastronomi Turizminde Yenilik ve Yaratıcılık: Bibliyometrik Bir Analiz)	Konu: Gastronomi turizmi araştırmalarındaki yenilikçi ve yaratıcı temalar. Amaç: Literatürdeki eğilimleri ve araştırma boşluklarını belirlemek.
7	The land of milk and honey: Biblical foods, heritage and Holy Land tourism (Süt ve Bal Diyarı: İncil Yiyecekleri, Miras ve Kutsal Toprak Turizmi)	Konu: Kutsal Topraklar'ın dini yemek mirasının turizmdeki önemi. Amaç: İncil yemeklerinin miras turizmi bağlamında nasıl değerlendirildiğini analiz etmek.
8	Sustainability in street food: Elaboration likelihood model (ELM) and image theory perspective (Sokak Yemeklerinde Sürdürülebilirlik: Ayrıntılı Olasılık Modeli (ELM) ve İmaj Teorisi Perspektifi)	Konu: Sokak yemeklerinin sürdürülebilirliği ve turist algısı. Amaç: Sokak yemeklerinin sürdürülebilir turizm üzerindeki etkisini anlamak.
9	Towards a structural model of the tourist experience: An illustration from food experiences in tourism (Turist deneyimine ilişkin yapısal bir model: Turizmdeki yiyecek deneyimlerinden bir örnek)	Konu: Yemek deneyimlerinin turistlerin genel deneyimlerine olan etkisi. Amaç: Gastronomi odaklı turist deneyimlerine ilişkin yapısal bir modelin geliştirmek.
10	Determining food attributes for measuring and evaluating a gastronomic destination's appeal to visitors (Bir gastronomi destinasyonunun ziyaretçiler açısından çekiciliğini ölçmek ve değerlendirmek için gıda özelliklerinin belirlenmesi)	Konu: Gastronomi destinasyonlarının cazibesini oluşturan özelliklerin analizi. Amaç: Gastronomik destinasyon çekicilik ölçütlerini belirlemek.
11	Senior Foodies: A developing niche market in gastronomic tourism (Üçüncü Yaş Grubu Yemek Tutkunları: Gastronomi Turizminde Gelişen Bir Niş Pazar)	Konu: Yaşlı bireylerin gastronomi turizmüne yönelik davranışları. Amaç: Gastronomi turizminde niş pazar olarak yaşlı turistlerin algılarını ortaya çıkarmak.

12	The transference of Asian hospitality through food: Chef's inspirations taken from Asian cuisines to capture the essence of Asian culture and hospitality (Asya Misafirperverliğinin Yemek Yoluyla Aktarımı: Şeflerin Asya Mutfağından İlham Alarak Asya Kültürü ve Misafirperverliğinin Özünü Yakalama Çabaları)	Konu: Asya mutfaklarının kültürel ve gastronomik etkileri. Amaç: Yemeklerin Asya misafirperverliğini yansıtmadaki rolünü ortaya çıkarmak.
13	Discovering gastronomic tourists' profiles through artificial neural networks: analysis, opinions and attitudes (Yapay Sinir Ağları ile Gastronomi Turistlerinin Profillerinin Keşfi: Analiz, Görüşler ve Tutumlar)	Konu: Gastronomi turistlerinin profillerinin ve tercihlerinin yapay zeka ile incelenmesi. Amaç: Dijital teknolojilerin gastronomi turizmi araştırmalarında kullanılabilirliğini ortaya çıkarmak.
14	Food enthusiasts: A behavioral typology (Yemek Meraklıları: Davranışsal Bir Tipoloji)	Konu: Yemek tutkunlarının davranışsal özelliklerinin tipolojisi. Amaç: Yemek tutkunlarının turizm davranışlarına yönelik bir tipoloji oluşturmak.
15	The art of creative food experiences: A dimension-based typology (Yaratıcı Yemek Deneyimlerinin Sanatı: Boyuta Dayalı Bir Tipoloji)	Konu: Yaratıcı gastronomi deneyimlerinin boyutları ve çeşitleri. Amaç: Yaratıcı gastronomi deneyimlerinin turistler üzerindeki etkisini anlamak.
16	The role of hotel restaurants in gastronomic place branding (Otel Restoranlarının Gastronomi Destinasyonu Markalaşmasındaki Rolü)	Konu: Otel restoranlarının gastronomi mekân markalaşmasındaki rolü. Amaç: Otel restoranlarının destinasyonun gastronomi kimliğini güçlendirme potansiyelini incelemek.

Kaynak: Yazarlar tarafından çalışmalara ait bilgiler derlenerek oluşturulmuştur.

Tablo 1’de bazı bilgileri verilen ve yukarıda da konu bağlamında değinilen bu çalışmalarda genellikle sokak yemekleri ve turizm üzerine etkileri konularında çalışılmış olduğu görülmektedir. Çalışmalarda, sokak yemeklerinin:

Şekil 2. Çalışmalarda Genellikle İşlenen Konular

Kaynak: Yazarlar tarafından çalışmalara ait bilgiler derlenerek oluşturulmuştur.

Şekil 2’de yer alan konular incelendiğinde, sokak yemeklerinin gastronomi turizminde hem ekonomik hem de kültürel bir değer taşıdığı bunun yanı sıra destinasyon markalaşmasında da etkili bir araç olduğu ifade edilebilir.

"Sokak Lezzetleri" ve "Gastronomi Turizmi" Konulu Çalışmalarda Kullanılan Yöntemler

Tablo 2 incelendiğinde konuya ilişkin yapılmış olan çalışmaların; %43,75’inin nitel; %37,5’inin nicel; 18,75’inin karma yöntem ile gerçekleştirilmiş olduğu görülür. Bu bağlamda çalışmalarda nitel araştırma yönteminin sıklıkla kullanıldığı ifade edilebilir (Bayraktar, 2024; Phakdee-Auksorn vd., 2023; Gupta vd., 2020; Gupta & Sajani, 2020; Moral-Cuadra vd., 2021; Viljoen & Kruger, 2020; Yılmaz vd., 2020).

Tablo 2. Çalışmalarda Kullanılan Yöntemler

Nitel Yöntem Kullanılan Çalışmalar	Nitel Yöntem Kullanılan Çalışmalar	Karma Yöntem Kullanılan Çalışmalar
*Çalışma 1 Gastronomi Turizminden Yaratıcı ve Sürdürülebilir Gastronomi Turizmine: Tahran Sokak Yemekleri Örneği	*Çalışma 2 Sokak Yemekleri: Turistlerin Çağdaş Tercihi ve Hindistan’da Bir Destinasyon Çekiciliği Olarak Rolü	*Çalışma 10 Bir gastronomi destinasyonunun ziyaretçiler açısından çekiciliğini ölçmek ve değerlendirmek için gıda özelliklerinin belirlenmesi

Kaynak: Yazarlar tarafından çalışmalara ait bilgiler derlenerek oluşturulmuştur.

Yine çalışmalar incelendiğinde veri toplama aracı olarak en fazla kullanılan tekniğin ise %37,5 oranıyla anket tekniği olduğu bulgusuna ulaşılmıştır. Yapılan inceleme sonucunda anket tekniği haricinde kullanım oranı yüksek olan diğer veri toplama yöntemlerinin ise sırasıyla mülakatlar/görüşmeler (%25) ve içerik analizi (%18,75) yöntemleri olduğu sonucuna varılmıştır.

"Sokak Lezzetleri" ve "Gastronomi Turizmi" Konulu Çalışmaların Kavramsal Çerçevesi
Gastronomi turizmi bağlamında sokak lezzetleri üzerine literatüründe en sık değinilen konular arasında; destinasyon yönetimi ve markalaşma, otantiklik ve turist deneyimi, sürdürülebilirlik ve yaratıcı şehirler, sokak yemeklerinin sosyoekonomik etkileri, yaşlı turistlerin gastronomi tercihleri, yenilikçilik ve yaratıcılıkla destinasyon rekabetçiliği, turist profilleri ve tüketici davranışlarının olduğu görülmektedir. Yapılan çalışmalarda ayrıca sokak lezzetlerinin yerel ekonomilere, kültürel mirasa ve turistlerin destinasyon tercihlerine olan katkısı üzerinde de durulmuştur.

Şekil.3 Yazarların Çalışmalarında Kullandıkları Anahtar Kelimelerin Dar Kapsamlı Görseli**Kaynak:** Sinclair & Rockwell, 2024

Şekil 3'te çalışmalarda kullanılan anahtar kelimelerin dar kapsamlı kelime bulutu görseli yer almaktadır. Anahtar kelimeler yayınların konularını yansıtır ayrıca çalışmaların temalarını da kısaca özetler (Sunar vd., 2024). Çalışmaya dâhil edilen araştırmalarda toplamda 75 anahtar kelime bulunmaktadır. 75 anahtar kelime içerisinde en sık kullanılan anahtar kelimeler sırasıyla; sokak lezzetleri 3 kez (street food), mutfak turizmi 2 kez (culinary tourism), gastronomi 2 kez (gastronomy), gastronomi turizmi 1 kez (gastronomy tourism) ve yiyecek turizmi 1 kez (food tourism) şeklinde sıralanmaktadır.

SONUÇ ve ÖNERİLER

Sokak lezzetleri ve gastronomi turizmi üzerine yapılan bu çalışma, literatürde yapılmış olan bazı çalışmaları PRISMA modeli ile inceleyerek ilgili alana dair kısmi bir bakış sunmayı hedeflemektedir. Hedeflenen düşünce bağlamında çalışmada, yemek ve gastronomi turizminin kültürel kimlik, sosyal etkileşim ve ekonomik etkiler üzerindeki rolü ele alınmış; sokak lezzetlerinin küresel, bölgesel ve yerel bağlamları, sosyal ve ekonomik boyutları ile bu lezzetlerin gastronomi turizm açısından önemi değerlendirilmeye çalışılmıştır. Akabinde incelenen yayınların sonuçları ile ilişkili olarak araştırmanın sonuç ve öneriler kısmı geliştirilmeye çalışılmıştır. Çalışmaya dahil edilen araştırmaların bazılarının sonuçları şöyledir: Balderas-Cejudo, Patterson ve Leeson (2019) yapmış olduğu çalışmada: yaşlı turistlerin gastronomi turizmine artan ilgisini ve bu turist grubunun ekonomik potansiyelini ortaya koymuştur. Ayrıca çalışmada, bu turist grubu pazarı için otantik ve yenilikçi gastronomi deneyimleri sunma, yerel ürünleri tanıtmaya ve yaşlı turistlerin ihtiyaçlarına uygun stratejiler geliştirmesi gerektiği de önerilmiştir.

Baldwin (2017) çalışmasında: Asya misafirperverliğinin yemek kültürü aracılığıyla küresel ölçekte nasıl aktarıldığını incelemiştir. Sokak yemekleri, otantik tatları ve kültürel zenginlikleriyle Asya mutfağını yansıtan güçlü bir araç olduğunu ifade etmiştir. Çalışmada ayrıca Asya sokak yemeklerinin tanıtımının desteklenmesi ve bu kültürel mirasın gastronomi turizminde etkin bir şekilde kullanılması gerektiği de önerilmiştir.

Bastenegar (2020) yapmış olduğu çalışmada: Tahran'daki 30 Tır Sokak Yemekleri'nin yaratıcı ve sürdürülebilir gastronomi turizmi potansiyelini değerlendirmiştir. Bölgenin kültürel ve tarihi dokusuna uyumlu şekilde gastronomi destinasyonu haline gelmesi için 77 faaliyetten oluşan bir yol haritası sunmuştur; gastronomi festivalleri, yaratıcı eğitim programları, çevre dostu uygulamalar, yeşil alanların geliştirilmesi ve akıllı turizm teknolojilerinin entegrasyonu gibi konular özelinde sonuçlara ulaşmış ve bu bağlamda öneriler getirmiştir. Ayrıca, yerel halk ve işletmelerle iş birliğinin önemi vurgulanmıştır.

Gordin, Trabskaya ve Zelenskaya (2016) yapmış oldukları çalışmada: otel restoranlarının gastronomi destinasyonu markalaşmasındaki rolünü incelemiş ve yerel mutfakın tanıtımında önemli bir aktör olduğunu ortaya koymuştur. Ayrıca çalışmada, otel restoranlarının yaratıcı ve yenilikçi yerel mutfak sunumlarıyla turistlere otantik gastronomi deneyimi sunarak destinasyon markalaşmasına etki edebileceği yönünde öneri getirilmiştir.

Gupta, Sajnani ve Gupta (2020) yapmış oldukları çalışmada: sokak yemeği satıcılığının destinasyon imajını yeniden şekillendirebileceği ve Hindistan gibi gastronomik açıdan zengin bir destinasyona yönelik turist hareketlerini destekleyebilecek stratejik bir yönetim aracı olarak kullanılabilirliği sonucuna ulaşmışlardır. Ayrıca araştırmanın sonucunda, Hindistan genelindeki sokak yemeği işletmelerinin Hindistan'ın gastronomik mirasını küresel platformda tanıtmaları için stratejiler geliştirilebileceğine de değinilmiştir.

Gupta ve Sajnani (2019) yapmış oldukları çalışmada: Hindistan'daki turistlerin sokak yemeği deneyimlerinde otantiklik ve kültürel farklılıkların önemli olduğunu ortaya koymuştur. Otantik yemekler unutulmaz deneyimler yaratırken, uyarlamalar otantiklik algısını zayıflatmaktadır, kültürel farklılıklar ise deneyimi zenginleştirip turistlerin yeniden ziyaret ve tavsiye niyetlerini artırmaktadır şeklinde sonuçlara ulaşmışlardır.

Moreo, Traynor ve Beldona (2022) yapmış oldukları çalışmada: yemek tutkunlarının davranışlarını inceleyerek tüketicileri dört gruba ayırmışlardır. Yemek tutkusu ise; yemekle ilgilenme, yenilik arayışı, evde yemek yapma ve yemekle ilgili medya tüketimi boyutlarında değerlendirilmiştir. Çalışmada, farklı tüketici gruplarına yönelik özelleştirilmiş gastronomi deneyimlerinin sektör başarısını artırabileceğine yönelik önerilerde getirilmiştir.

Phakdee-Auksorn, Sastre, Pattaro, Soonsan ve Dachum (2023), yapmış oldukları çalışmada: Phuket yemek turizminin geliştirilmesi ve uluslararası turistlerin ilgisinin sürdürülebilmesi için öneriler sunulmuştur. Özellikle, fiyatlandırma politikalarının gözden geçirilmesi ve yemeklerin baharatlılık düzeyine yönelik düzenlemelerin yapılması gerektiği vurgulanmıştır. Sonuç olarak, Phuket yemeklerinin turistler için çekici olduğu ancak bazı sorunların çözülmesinin gerekliliği belirtilmiştir.

Ron ve Timothy (2014) yapmış oldukları çalışmada: İncil yemeklerinin Hristiyan hacılar için manevi deneyimleri güçlendirdiğini ve İsrail'in dini turizmdeki cazibesini artırdığını ortaya koymuştur. Özellikle "Son Akşam Yemeği" gibi otantik yeniden canlandırmaların, hacılara eğitici ve manevi bir deneyim sunduğu sonucuna ulaşmışlardır. Ancak, otantikliği sağlamanın maliyetlerinin yüksek olduğuna da değinmişlerdir. Çalışmada öneri olarak, otantik dini yemek deneyimlerinin korunarak destinasyonun manevi çekiciliğinin artırılması ve maliyetlerin düşürülmesi için ekonomik çözümler geliştirilmesi gerektiği vurgulanmıştır.

Quan ve Wang (2004) çalışmalarını turist deneyiminin zirve deneyimler (benzersiz ve unutulmaz aktiviteler) ve destekleyici deneyimler (yemek, konaklama gibi temel tüketim ihtiyaçları) olmak üzere iki temel boyutta şekillendirmiştir. Çalışmada, yemek deneyiminin turistlerin günlük alışkanlıklarını sürdüren bir destekleyici deneyim olabileceği gibi, yenilik ve çeşitlilik sunarak zirve deneyime de dönüştürebileceği ifade edilmiştir. Çalışmada, destinasyonların yerel yiyecekleri gastronomi festivalleri gibi etkinliklerle zenginleştirerek turist memnuniyetinin artırılabilirliği ve destinasyon kimliğini güçlendirebileceği de vurgulanmıştır.

Soonsan, Phakdee-auksorn ve Suksirisopon (2023) çalışmalarında: Phuket'in gastronomi şehri olarak cazibesini artıran yerel yemek özelliklerini sekiz boyutta tanımlamış ve bir ölçek geliştirmişlerdir. Yemek kalitesi, otantiklik, hijyen, yenilik ve katma değer gibi boyutlar, destinasyon yönetimi ve tanıtım stratejileri için rehberlik edebileceği sonucuna ulaşmışlardır.

Viljoen ve Kruger (2020) yapmış oldukları çalışmada: Güney Afrika'daki ulusal sanat festivallerinde gastronomi deneyimlerini incelemiş ve ziyaretçileri: Tamamlayıcı Deneyim Arayanlar, Rahat Deneyim Arayanlar ve Kapsamlı Deneyim Arayanlar şeklinde üç segmente ayırmıştır. Çalışmada, ziyaretçiler için duyuşsal olanaklar, eğitici-eğlendirici içerikler ve eşsizlik en önemli boyutlar olarak öne çıkmıştır. Yerel mutfağın kültürel kimliği güçlendirdiği vurgulanmış, festival organizatörlerine ziyaretçilerin ihtiyaçlarına uygun özelleştirilmiş gastronomi deneyimleri sunma önerisi getirilmiştir.

Yılmaz Kılıçarslan ve Caber (2020) yapmış oldukları çalışmada: Gaziantep'in gastronomi turizmi potansiyelini artırmak için tutarlı bir pazarlama stratejisi geliştirilmesi, yerel halkın katılımının artırılması ve geleneksel gastronomi değerlerinin korunması gerektiği ifade etmişlerdir. Bunun yanı sıra çalışmanın sonuçları arasında, Gaziantep'in gastronomi turizmiyle ulusal ve uluslararası alanda tanıtımını güçlendirecek stratejik bir yol haritası da sunulmuştur.

Sonuç olarak, gastronomi ve yemek turizmi, kültürel kimliğin korunması, sosyal etkileşimlerin güçlendirilmesi ve ekonomik kalkınmaya katkı sağlama açısından önemli bir rol üstlenmektedir. Sokak lezzetleri, otantik deneyimler yaratma, destinasyon kimliğini güçlendirme ve turist memnuniyetini artırma potansiyeliyle gastronomi turizminin dikkat çeken unsurları arasında yer alır. İncelenen çalışmalarda dahil olmak üzere alan yazında genel olarak sürdürülebilirlik sağlamak için otantik tatların korunmasını, çevre dostu ve yenilikçi uygulamaların benimsenmesini, yerel halk ve işletmelerin süreçlere daha aktif şekilde dahil edilmesi konuları üzerinde durulmuş ve bu bağlamda öneriler getirilmiştir. Yapılacak olan yeni çalışmalarda, turist memnuniyeti ve deneyim, sürdürülebilirlik, destinasyon markalaşması vb. konular ile gastronomi ve turizm alanında "aşırılık, teknoloji, dijitalleşme, meta alanlar" gibi güncel konular eşleştirilerek farklı disiplinlerle birlikte çalışmalar yapılabilir ve bu sayede literatürde gastronomi turizmi açısından yeni kavramların farklı disiplinlerde yer alması sağlanabilir. Yapılan bu çalışmanın sistematik literatür çalışmalarına katkı sağlayacağı ve yapılacak yeni çalışmalar da kullanılan yöntem açısından destekleyici olacağı düşünülmektedir.

ÖZET

Atıklar modern dünyanın en büyük problemlerinden birisidir. Malların ve hizmetlerin üretimi ve tüketimi sonucu ortaya çıkan atıkların, insanlığa ve doğaya olumsuz birçok etkileri vardır. Bu etkilere yönelik alınan önlemlerden bir tanesi de, atıkların geri dönüştürülerek yeni ürün üretiminde girdi olarak kullanılmasıdır. Bu yaklaşım Dünya geneline yayılan ve sıfır atık şeklinde ifade edilen yeni bir süreç başlatmıştır. Bu yeni süreçte, üretim ve tüketim şekillerini değiştirmesinin yanı sıra geride daha yaşanılabilir bir dünya bırakılması da önem arz etmektedir. Atık yönetiminin önemli bir bileşeni olan sıfır atık süreci açlık konusunun gündemde olduğu son yıllarda gıda israfının azaltılması ve sürdürülebilirliğe katkı sağlanması açısından restoranlar tarafından da uygulanmaya başlanmıştır. Bu çalışmada, alan yazın taraması yöntemi kullanılarak gastronomi turizmi ve restoranlar bağlamında sıfır atık konusu üzerine yapılmış olan araştırmalar incelenecektir. Alan yazında ulaşılabilen kaynakların incelenmesi sonucu sıfır atık uygulamalarının sanayi devrimi sonrası önem kazandığı ve sürecin tüm alanlarda uygulanabilirliğinin olduğu belirlenmiştir. Araştırma bulguları, sıfır atık yaklaşımının uygulandığı restoranlara ve diğer turizm işletmelerine sağladığı finansal katkıları ve müşteri çekmedeki rolünün ne olduğunu da ortaya koymaya çalışmıştır.

Anahtar Kelimeler: Sıfır Atık, Gastronomi Turizmi, Restoranlar

ABSTRACT

Waste is one of the biggest problems of the modern world. The waste generated from producing and consuming goods and services has numerous negative impacts on humanity and the environment. One of the measures taken to address these impacts is to recycle waste and use it as input in producing new products. This approach has gained global traction and initiated a new process known as zero waste. In this new process, leaving behind a more livable world and changing production and consumption patterns is essential. Restaurants have begun implementing the zero-waste process, a vital waste management component, to reduce food waste and contribute to sustainability in recent years, particularly when hunger has become a pressing issue. In this study, studies on zero waste in the context of gastronomy tourism and restaurants will be examined using the literature review method. The literature review revealed that zero waste practices gained importance after the Industrial Revolution and their applicability in all areas. The research findings also revealed the financial contributions of the zero-waste approach to restaurants and other tourism businesses and its role in attracting customers.

Key Words: Zero Waste, Gastronomy Tourism, Restaurants

GİRİŞ

Sıfır atık, kaynakların etkin kullanımı, geri dönüşüm ve yeniden kullanım yoluyla atıkların en aza indirgenmesini amaçlayan bir yaklaşımdır. Bu yaklaşım, atıkları birer kaynak olarak değerlendirerek döngüsel bir ekonomi yaratmayı hedefler (Chandrappa & Das, 2012; Economic Commission for Europe, 2021:15; Kairatkyzy & Kozhakova, 2023; Murray, 2021a; Murray, 2002b; Renfors, 2024). Sıfır atık, döngüsel ekonomi yaklaşımıyla bağlantılı bir yönetim sürecidir bu durumla ilişkili olarak yalnızca atıkların yönetimi değil, aynı zamanda yeniden üretim süreçleri tasarımı da kapsar (Murray, 2021a; Murray, 2002b). Sıfır atık yaklaşımında ekonomik ve çevresel sürdürülebilirlik temel hedefler arasında yer alır. Ancak, sıfır atık sürecine bağlı olarak belirlenen net sıfır hedeflerine ulaşmak sadece bireysel çabalarla mümkün olmaz bireysel çabaların yanı sıra işletmelerinde tedarik zinciri ve operasyonel süreçlerini yeniden tasarlaması gerekmektedir (Hawkins, 2023). Kavramsal olarak 1970'lerde kullanılmaya başlayan, doğal süreçlerden ilham alan; çevre ve insan sağlığına zarar vermeden atık yönetimini hedefleyen sıfır atık anlayışına: (Bilgili, 2021) endüstriyel atıkların katma değerli ürünlere dönüştürülmesi ve gıda atığının azaltılması örnek olarak verilebilir (BioCycle, 2011; Chandrappa & Das, 2012).

Açlık ve yetersiz beslenmenin küresel boyutta ulaştığı günümüzde, her yıl dünya üzerindeki gıdanın %33,33'ü (1,3 Trilyon Ton) israf olmaktadır (Giaccherini vd., 2021; Gustavson vd., 2013; Martin-Rios vd., 2018; Muliarta, 2023) ve bu kaybın: 2030 yılında 2,1 milyar ton gıda israfı ile 1,5 milyar dolara ulaşabileceği öngörülmektedir (Boston Consulting Group, 2022; Temizel vd., 2024). Dünya genelinde tahmini 800 milyon insanın (Aamir, 2018; Delgado vd., 2023; Food and Agriculture Organization, 2015; Kasavan vd., 2022; Von vd., 2022) yeteri kadar yiyecek bulamamalarından kaynaklı yeterli beslenemedikleri ifade edilmektedir. İnsan sağlığı açısından risk oluşturan bu durumla ilişkili olarak (Aamir, 2018; FAO, 2015) gıda atıkları, günümüzde hem insan sağlığı hem de turizm sektörü özellikle de restoranlar açısından önemli bir sorun olarak karşımıza çıkmaktadır (Ahmed & Nadir, 2021; Huang vd., 2021; Junkrachang, 2024; Kairatkyzy & Kozhakova, 2023; Kim vd., 2020). Artan nüfus ve ekonomik gelişmede yaşanan bu sorunu tetiklemekte ve oteller, restoranlar, dinlenme tesisleri gibi işletmelerde daha fazla gıda atığı ortaya çıkmaktadır (Tufaner, 2021).

Yiyeceklerin işlenmesi ve hazırlanışı süreci atık oluşmasına sebep olur ve restoranlar atıkları en aza indirgeyerek bir güne yetecek kadar yemek hazırlama konusunda zorluklarla karşılaşlar (Sehnm vd., 2022). Ancak, restoranlarda meydana gelen gıda israfının en büyük bileşenlerinden biri: tüketicilerin tabaklarında kalan artıklardır (Giaccherini vd., 2021; Partiff vd., 2013). Bloom (2011), yaptığı çalışmada restoranlardaki tüm atıklar hesaba katıldığında servis edilen her öğünde 226 gram (0.5 pound) atık oluştuğunu ifade etmiştir. ReFed (2023), 6,1 milyon gıda atığında oluşmasında restoranların rolünün %34 olduğunu vurgulamıştır. Silvennoinen vd. (2015), çalışmalarında restoranlarda meydana gelen gıda israfının başlıca sebebinin tüketicilerin yemediği gıdalar olduğunu ifade etmişlerdir. Akademik yayınlarda farklı yönleriyle ele alınan bu sorunlarla başa çıkmada asıl zorluk ise genellikle nereden başlanılacağına bilinmemesidir (Nixon, 2015; Okumuş vd., 2020). Her ne kadar farklı yönlerden ele alınıyor olsa da küresel boyuta ulaşan ve toplumsal sorun olarak kabul gören atık sorununun (Filimonau vd., 2020; Partiff vd., 2010) restoranlar ile ilgili alan yazındaki durumu incelendiğinde: Sıfır atık ve restoranlar konusunu işleyen akademik araştırmaların genel olarak restoranın büyüklüğü ile israf edilen yiyecek miktarı arasında doğrudan ilişkilendirildiği (Filimonua, 2023; McAdams vd., 2019) ve yine alan yazın incelendiğinde konuya ilişkin fazlasıyla çalışma yapıldığı: yapılan çalışmaların ise genellikle kavramsal/inceleme çalışmaları olduğu görülür (Dhir vd., 2020; Dolnicar, 2020; Higgins-Desbiolles & Wijesinghe, 2019; Vizzoto vd., 2021; Wansink & Love, 2014) bu durumla ilişkili olarak konuyu sınırlarını belirlemek ve sağlıklı bir derleme çalışması yapabilmek adına çalışmanın bir sonraki aşamasında PRISMA akış modeli ile sistematik literatür incelemesi yapılacaktır.

YÖNTEM

Sistemik literatür taraması (SLT), belirli bir araştırma sorusuna yanıt ararken mevcut literatürü değerlendirmek, birleştirmek ve yorumlamak için kullanılan yapılandırılmış bir yöntemdir (Pati & Lorusso, 2017). Geleneksel literatür taramalarından farklı olarak, SLT, titizlikle tasarlanmış ve tekrarlanabilir bir süreç sunar (Jesson vd., 2011). Bu yöntem, yalnızca bilgiyi toplamakla kalmaz, aynı zamanda araştırma süreçlerini daha şeffaf hale getirir (Purssell & McCrae, 2020). SLT'nin temel amacı, seçilen bir konuda mevcut çalışmaların kapsamını belirlemek, bilgi boşluklarını tespit etmek ve güçlü bilimsel kanıtlara ulaşmaktır (Jahan vd., 2016). Bu süreç, özellikle sağlık, sosyal bilimler ve işletme gibi alanlarda yaygın olarak kullanılmaktadır (Andreini & Bettinelli, 2017). Literatür taraması yaparken, belirli dahil etme ve dışlama kriterlerinin oluşturulması, verilerin sistemik bir şekilde analiz edilmesi ve sonuçların net bir şekilde raporlanması önem taşır (Bettany-Saltikov, 2012). Bu yöntemin uygulanmasında PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses) gibi standartlar öne çıkmaktadır. PRISMA, araştırmacılara metodolojik yönden kolaylık sağlarken, sistemik taramaların şeffaflığını artırır (Pati & Lorusso, 2017). Çalışmaların sonuçlarını birleştirme imkânı sunan meta-analiz gibi istatistiksel yöntemler, daha güçlü ve genellenebilir bulgular elde edilmesine katkı sağlar (Jesson vd., 2011). SLT, araştırmacılara literatürü eleştirel bir bakış açısıyla değerlendirme ve bilimsel bilgiye sistemik bir şekilde erişim sağlama fırsatı sunar. Aynı zamanda gelecekteki çalışmalara yön verebilecek alan yazındaki boşlukları da ortaya çıkarır (Purssell & McCrae, 2020).

Veri Toplama Süreci

Sistemik literatür taramasında veri tabanlarının doğru ve etkili bir şekilde kullanılması önemlidir. PubMed, Scopus, Web of Science ve Cochrane Library gibi büyük akademik veri tabanları, araştırmacıların kapsamlı bir literatüre erişmesini sağlar. PRISMA modeli ise, bu veri tabanlarının nasıl kullanılacağını yapılandırır:

Anahtar Kelime Seçimi ve Arama Stratejisi: Araştırma sorusuna uygun anahtar kelimelerin seçilmesi, literatür taramasının temel adımlarından biridir. Anahtar kelimeler ve eş anlamlıları belirlenerek, Boolean operatörleri (AND, OR, NOT) gibi tekniklerle aramalar genişletilebilir veya daraltılabilir (Winchester & Salji, 2016). Örneğin, "sistemik literatür taraması" ve "PRISMA" terimleri birlikte kullanılarak daha spesifik sonuçlara ulaşılabilir.

Dahil Etme ve Hariç Tutma Kriterleri: Literatürdeki çalışmalar, önceden belirlenmiş dahil etme ve hariç tutma kriterlerine göre seçilir. Bu kriterler; yayın yılı, dil, çalışma türü (ör. meta-analiz, randomize kontrollü çalışma) ve metodolojik kalite gibi faktörlere dayanır (Toker, 2022; Hatipoğlu, 2021).

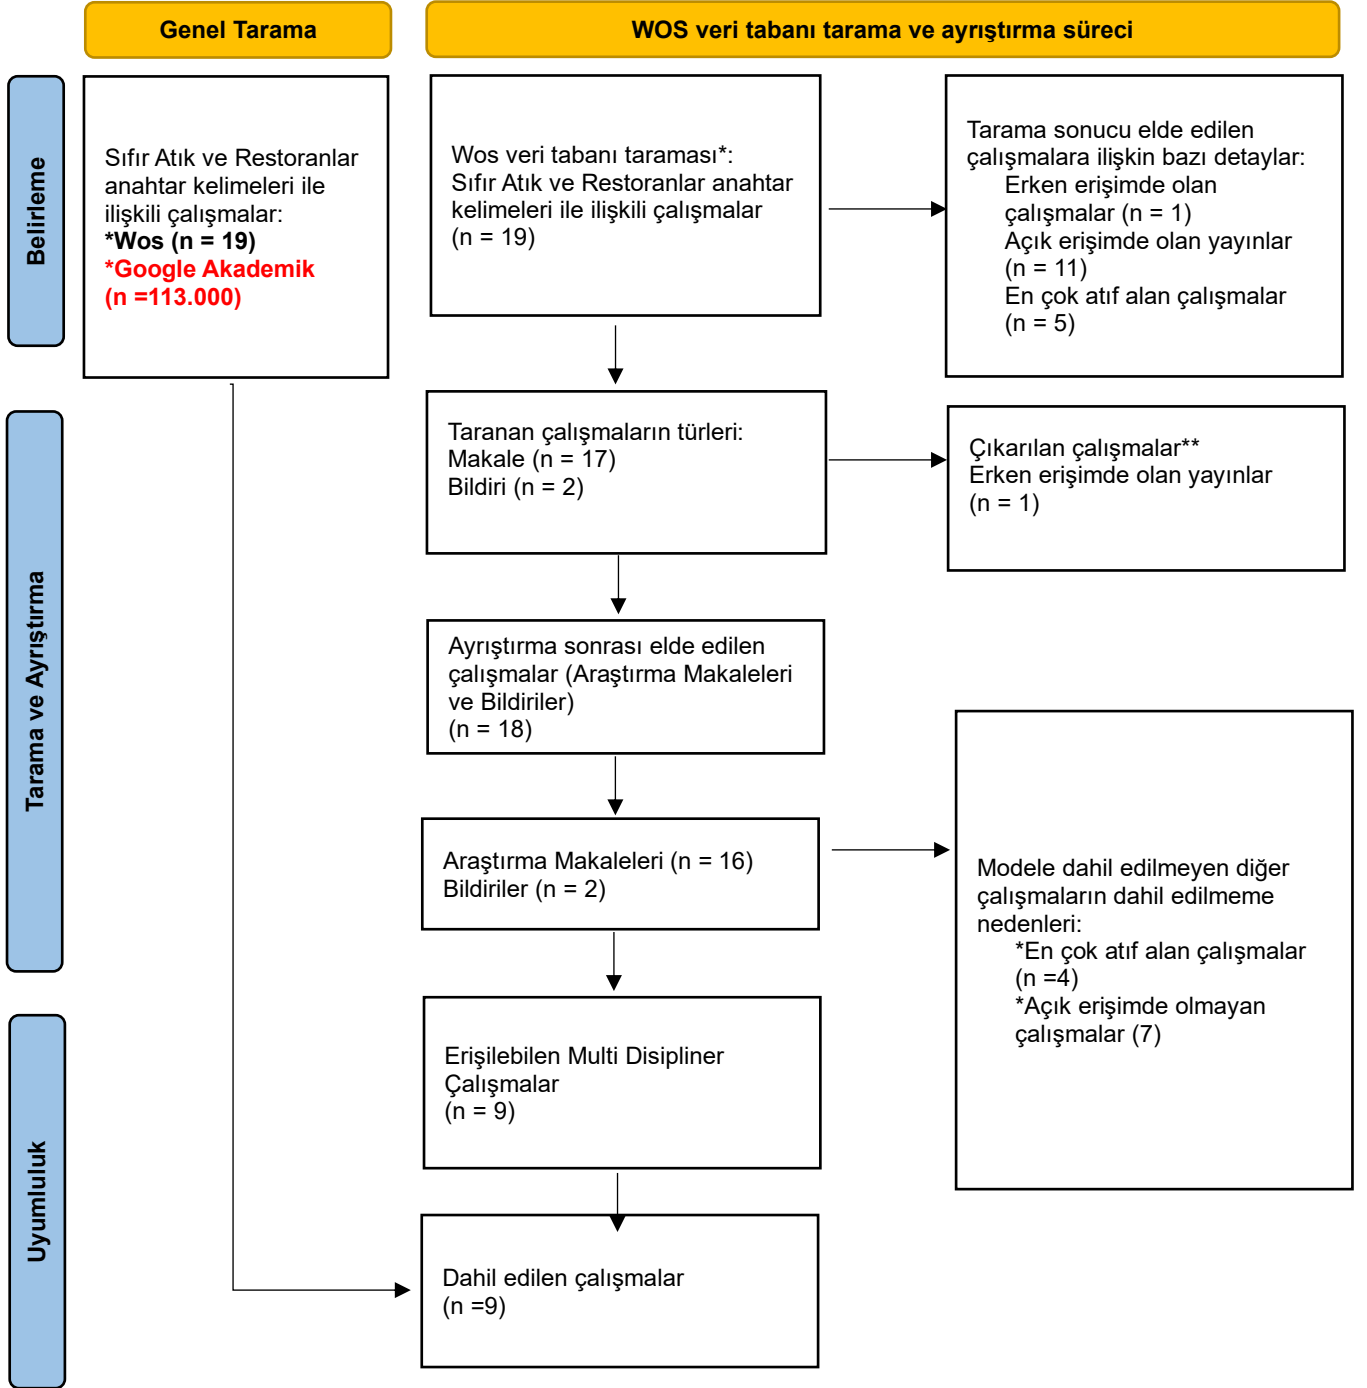

Veri Çıkarma ve Değerlendirme: Dahil edilen çalışmaların metodolojik kalitesi değerlendirildikten sonra, çalışma verileri standart formlar kullanılarak çıkarılır. Bu süreç, çalışmanın türü, örneklem büyüklüğü, sonuç ölçütleri gibi bilgileri içerir ve metodolojik açıdan zayıf çalışmaların hariç tutulmasına olanak tanır (Yavuz, 2022).

Sonuçların Sunulması: PRISMA akış diyagramı, tarama sürecini ve seçilen çalışmaların detaylarını görselleştirerek raporlamayı şeffaf hale getirir. Veriler ayrıca tablo ve grafiklerle desteklenerek okuyucunun süreç hakkında net bilgi edinmesini sağlar (Winchester & Salji, 2016).

PRISMA modeli ve veri tabanlarının entegrasyonu, literatür taramasında metodolojik standartların belirlenmesine yardımcı olur. Veri tabanlarının geniş kapsamlı veri sunma kapasitesi, araştırmacıların geniş bir perspektif kazanmasına ve literatürdeki bilgi boşluklarını tespit etmesine yardımcı olurken aynı zamanda bu süreç yanlılığı azaltır ve çalışmaların tekrarlanabilirliğini artırır (Karaçam, 2013; Hatipoğlu, 2021). Bu bağlamda yapılan bu çalışmada veri tabanı olarak WOS tercih edilmiştir bu seçimin temel nedeni, akademik ilerlemeyi büyük ölçüde yansıtan birinci sınıf akademik dergileri içermesi ve sistemik literatür araştırmalarında temsil yeteneğinin bibliyometrik çalışmalarla doğrulanmış olmasıdır.

Bahsedilmiş olduğu üzere, aralarına "and" bağlacı eklenerek "zero-waste" ve "restaurants" kelimeleri ile yapılan tarama sonucunda 19 yayına ulaşılmıştır. Elde edilen bu yayınlar, PRISMA akış şeması doğrultusunda belirli dahil etme kriterleri dikkate alınarak değerlendirilmiştir (Sunar vd., 2024). PRISMA akış şeması doğrultusunda yapılan değerlendirme sonucu 19 yayından 9 tanesi analiz sürecine dâhil edilmiştir. Gerçekleştirilen sürece ilişkin PRISMA akış şeması detayları Şekil 1’de sunulmaktadır.

Şekil 1. Prisma Akış Şeması

Kaynak: Page vd., 2021

BULGULAR

Şekil 1’de sunulmuş olan PRISMA akış şeması incelendiğinde genel taramada WOS ve Google Akademik veri tabanı kayıtlarının yer aldığı görülür. Elde edilen sonuçlarda da görüleceği üzere araştırma sayısı oldukça fazladır (Google Akademik 113.000). Bundan dolayı çalışmanın bu kısmında WOS veri tabanından elde edilen ve PRISMA akış şemasına göre şekillendirilen bazı çalışmaların detaylarına değinilecektir.

Çalışmaların araştırma konuları**Tablo 1.** Çalışmalara İlişkin Genel Bilgiler

Çalışma Başlıkları		Çalışmalara İlişkin Bazı Bilgiler
Çalışma 1	A Zero Waste Interior Architecture Studio Project	Konu: İç mekân tasarımında sıfır atık restoran projesi. Amaç: Öğrencilere çevreye duyarlı ve disiplinler arası tasarım bilinci kazandırmak.
Çalışma 2	The Relationship between Zero Waste and Food: Insights from Social Media Trends	Konu: Sosyal medyada sıfır atık ve gıda iletişimi. Amaç: Twitter’da sıfır atık ve gıda konularındaki kullanıcı etkileşimlerini analiz etmek.
Çalışma 3	Towards Zero Waste: An Exploratory Study on Restaurant Managers	Konu: Restoranlarda gıda atığı ve yönetimsel faktörler. Amaç: Gıda atığının nedenlerini ve yönetimsel etkilerini incelemek.
Çalışma 4	Utilization of Black Soldier Flies to Reduce Grease Waste and Support Zero Waste	Konu: Kara asker sineği larvalarının atık yönetimi. Amaç: Larvaların yağ atıklarını azaltmadaki etkisini araştırmak.
Çalışma 5	Investigating Guest Reactions to Plate Waste Reduction Strategies	Konu: Restoranlarda gıda atığı azaltma stratejileri. Amaç: Kültürel ve rekabet faktörlerinin atık üzerindeki etkilerini belirlemek.
Çalışma 6	Less Red Meat to Be Greener?	Konu: Fransız şeflerin sürdürülebilir mutfak yaklaşımları. Amaç: Şeflerin sürdürülebilirlik konusundaki algılarını ve uygulamalarını incelemek.
Çalışma 7	A Model to Establish a Zero Food Waste Competence Scale	Konu: Sıfır gıda atığı yetkinlik ölçeği geliştirilmesi. Amaç: Öğrencilerin bilgi, tutum ve becerilerini ölçen bir ölçek oluşturmak.
Çalışma 8	Tackling Food Waste in the Tourism Sector	Konu: Turizm sektörünün gıda atığı üzerindeki etkisi. Amaç: Turizmin gıda atığına etkilerini ve sürdürülebilirlik potansiyelini değerlendirmek.
Çalışma 9	Representations of Food Waste in Reality Food Television	Konu: Televizyon programlarında gıda atığı sunumu. Amaç: Gıda atığı konusunun televizyon programlarında nasıl temsil edildiğini incelemek.

Kaynak: Yazarlar tarafından çalışmalara ait bilgiler derlenerek oluşturulmuştur.

Tablo 1’de genel bilgileri sunulan çalışmalarda kavramsal olarak en sık işlenen konu, gıda atığı olarak öne çıkmaktadır. Çalışmaların büyük bir kısmı, gıda atığının nedenleri, yönetimi ve azaltılmasına odaklanmaktadır. Özellikle restoranlar, turizm sektörü ve sürdürülebilir mutfak uygulamaları bağlamında gıda atığı konusu üzerinde durulduğu görülmektedir. Bununla birlikte, sıfır atık uygulamaları ve tüketici davranışları konularının da gıda atığı ile birlikte sıkça işlenen alt konular arasında yer aldığı tespit edilmiştir.

Çalışmalarda Kullanılan Yöntemler

Tablo 2. Çalışmalarda Kullanılan Yöntemler

Çalışmanın Sıra Numarası	Yöntemi
Çalışma-1	Nitel
Çalışma-2	Nicel
Çalışma-3	Nitel
Çalışma-4	Nicel
Çalışma-5	Nicel
Çalışma-6	Nitel
Çalışma-7	Nicel
Çalışma-8	Karma
Çalışma-9	Nitel

Kaynak: Yazarlar tarafından çalışmalara ait bilgiler derlenerek oluşturulmuştur.

Tablo 2 incelendiğinde konuya ilişkin yapılmış olan çalışmaların; %44,44’ünün nitel (4 adet); %44,44’ünün nicel (4 adet); %11.11’inin (1 adet) ise karma yöntem ile gerçekleştirilmiş olduğu görülür. Bu bağlamda çalışmalarda nitel ve nicel yöntemlerin benzer sıklıklarla kullanıldığı ancak karma yöntem çalışmalarının nadir yapıldığı ifade edilebilir.

Çalışmaların Kavramsal Çerçevesi

Bu çalışmalar, sürdürülebilirlik ve sıfır atık konularında gıda israfının ekonomik, çevresel, sosyal ve kültürel boyutlarını ele almakta; restoran yönetimi, biyolojik dönüşüm, medya ve turizm sektöründeki uygulamalarla çözüm önerileri sunmaktadır. Aynı zamanda sıfır atık restoran tasarımları, sürdürülebilir gastronomi uygulamaları ve disiplinler arası eğitim projeleriyle bireysel ve kurumsal yetkinliklerin geliştirilmesi hedeflenmiştir. Çalışmaların, teorik temellerle pratik uygulamaları birleştirerek hem sektörel dönüşüme hem de toplumsal farkındalığa katkı sağlamaya çalıştığı tespit edilmiştir.

Şekil.1 Çalışmalarda Kullanılan Anahtar Kelimelerin Dar Kapsamlı Görseli

Kaynak: Sinclair & Rockwell, 2024

Anahtar kelime seçimi, PRISMA sürecinin önemli bir adımını oluşturur ve taramanın etkinliğini doğrudan etkiler. Literatür taramasında doğru anahtar kelimelerin kullanılması, ilgili çalışmaların belirlenmesi ve veri tabanlarında etkili bir arama stratejisinin oluşturulması açısından kritik öneme sahiptir (Winchester & Salji, 2016). Anahtar kelimelerin özellikleri ve yansıttıkları gereğince incelenen çalışmaların anahtar kelimeleri analiz edilmiştir. Çalışmalarda toplamda 55 anahtar kelime kullanıldığı tespit edilmiştir. Bu anahtar kelimeler arasında en sık kullanılanları ise; yiyecek israfı 4 kez (food waste), sıfır atık 2 kez (zero waste), restoran 2 kez (restaurant), iklim değişikliği 2 kez (climate change), gıda sıfır atığı 1 kez (zero food waste) şeklinde sıralanmıştır.

SONUÇ ve ÖNERİLER

Günümüzde, çevresel sürdürülebilirlik ve bilinçli tüketim anlayışları, turizm sektörünün pek çok alanında olduğu gibi gastronomi turizmi kapsamında da önemli bir yere sahiptir. Özellikle sıfır atık yaklaşımı, doğaya olan olumsuz etkileri azaltarak daha yaşanabilir bir çevre oluşturmayı hedefleyen yenilikçi bir yönetim modeli olarak dikkat çekmektedir. Bu model, gastronomi turizminin temel unsurlarından biri olan restoran işletmelerinde, kaynakların verimli kullanımı ve gıda israfının önlenmesi bağlamında benimsenmektedir. Sıfır atık restoranlar, hem çevresel sorumluluklarını yerine getirerek sürdürülebilirlik hedeflerine katkıda bulunmakta hem de bu anlayışın bir parçası olmak isteyen bilinçli turistler için çekici bir tercih haline gelmektedir.

Delgado, Rodriguez ve Staszewska (2023) yaptıkları çalışmada turizm sektörünün, gıda israfında önemli rol oynadığını; sürdürülebilirliğin teşvik edilmesi, gıda okuryazarlığının artırılması ve sıfır atık restoran uygulamalarının yaygınlaştırılmasının israfı azaltmada etkili yöntemler olduğunu ifade etmişlerdir.

Hasirci, Edes ve Anal (2019) çalışmalarında: öğrencilerin tasarımda çevresel sorumluluk, yerel bağlam farkındalığı ve sürdürülebilir yaklaşımlar üzerine düşüncelerini sağlarken, disiplinlerarası çalışmanın yaratıcı süreçlere katkısını ortaya koymuştur. Holistik yaklaşımın, öğrencilerin mesleki gelişimlerine ve tasarım anlayışlarına önemli bir zemin oluşturduğu sonucuna varmışlardır.

Junkrachang, Butcher ve Yodsuwan (2024) tüketicinin tabak israfının, kültürel normlar ve hedefe yönelik iletişim mesajları ile azaltılabileceğini; israfın azaltılmasının da kültüre özgü yaklaşımlar kullanılabileceği sonucuna ulaşmışlardır.

Kov ve Lu (2023) Aşçılık öğrencilerinin sıfır atık bilincini; bilgi, tutum ve beceri boyutlarında değerlendirilmiştir. Yaptıkları değerlendirme sonucunda eğitim müfredatına sürdürülebilirlik konularının entegrasyonu önerisinde bulunmuşlardır (Ko & Lu, 2023).

Lamy, Costa, Sirieix ve Michaud (2023) çalışmalarında Fransız şeflerin sürdürülebilir mutfak uygulamalarını, yerel tedarik ve mevsimsel ürün kullanımını ön planda tutarak incelemiş; et tüketimini azaltmaktan ziyade daha verimli kullanım yollarına odaklanılması gerektiği sonucuna ulaşmışlardır.

Principato, Pratesi ve Secondi (2018) restoran yöneticilerinin tutumlarını, menü tipleri ve restoran büyüklüğünü gıda israfını etkileyen faktörler olduğu sonucuna ulaşmışlardır bu bağlamda yapmış oldukları çalışmada "Doggy bag" (artan yemeklerin paket yapılması) kullanımını ve porsiyon kontrolünü israfı önleyici yöntemler olarak önermişlerdir.

Sari, Mumtaz, Irawan, Nursetyowati ve Djamaris (2023) ise çalışmalarında siyah asker sineği larvalarının organik atıkların dönüştürülmesinde etkili bir biyoteknoloji olarak kullanılabileceğini ifade etmişler ve yapmış oldukları uygulama ile özellikle 16 günlük larvalarla maksimum düzeyde atık azaltımı sağlandığı sonucuna ulaşmışlardır.

Šáľková, Maierová, Stanislavská ve Pilař (2023) çalışmalarında sosyal medya analizleri ile sıfır atık konusunun gıda olan ilişkisi üzerinde durmuşlardır. Elde ettikleri sonuçlar bağlamında kompostlamayı israfı önlemede etkili yöntem olarak önermişlerdir.

Thompson ve Haig (2017), yaptıkları çalışmada gıda israfını kültürel ve etik açıdan ele almışlardır. Gıda israfının işlenmesi konusundaki yetersizliklerin israfın temel nedeni olduğunu sonucuna ulaşmışlardır.

Gastronomi turizmi bağlamında sıfır atık konusu, çevresel sürdürülebilirlik ve ekonomik verimlilik açısından büyük bir öneme sahiptir. Yapılan araştırmalar, turizm sektöründe gıda israfının önemli bir sorun olduğunu ve bu sorunun sürdürülebilirlik teşvikleri, gıda okuryazarlığının artırılması ve sıfır atık restoran uygulamalarıyla azaltılabileceğini göstermektedir (Delgado vd., 2023; Thompson & Haigh, 2017). Ayrıca, disiplinlerarası iş birliği ve eğitim programlarının, öğrencilerin çevresel sorumluluk bilinci ve sürdürülebilir tasarım yaklaşımları geliştirmelerinde etkili olduğu görülmüştür (Hasırcı vd., 2019; Ko & Lu, 2023). Yerel bağlam ve kültürel dinamikler de bu sürecin önemli bir parçasıdır; yerel tedarik, mevsimsel ürün kullanımı ve kültüre özgü yaklaşımlar hem tabak israfını azaltmakta hem de gastronomi turizminin kültürel kimliğini desteklemektedir (Lamy vd., 2023; Junkrachang vd., 2024). Bunun yanı sıra, yenilikçi çözümler, özellikle siyah asker sineği larvalarının organik atıkların dönüştürülmesindeki etkisi, sıfır atık hedefleri doğrultusunda umut vadeden bir yöntem olarak öne çıkmaktadır (Sari vd., 2023). Sosyal medya ve farkındalık kampanyaları ise tüketici bilincini artırarak sürdürülebilir uygulamaların yaygınlaşmasını desteklemektedir (Šalková vd., 2023; Principato vd., 2018). Tüm bu bulgular, gastronomi turizmi işletmelerinin sıfır atık politikalarını benimseyerek çevresel ve ekonomik sürdürülebilirliğe katkıda bulunabileceğini ve bu süreçte disiplinlerarası ve yenilikçi yaklaşımların kilit rol oynadığını göstermektedir.

Alan yazında ve analiz edilen çalışmalarda, konunun teorik boyutunun oldukça kapsamlı bir şekilde ele alındığı, ancak uygulamaya yönelik araştırmaların yetersiz kaldığı dikkat çekmektedir. Bu durum, gelecekte yapılacak çalışmaların, teorik temelleri desteklemek adına daha fazla uygulamaya yönelik araştırmalarla zenginleştirilmesi gerektiğini ortaya koymaktadır. Yapılan bu çalışmanın, daha geniş kapsamlı veri tabanları kullanılarak yapılacak karşılaştırmalı analizler ve uygulama odaklı yeni araştırmalarla desteklenmesi, ayrıca sistematik inceleme yöntemlerini temel alan çalışmalara da katkı sağlayacağı öngörülmektedir.

Fatigue-induced edge cracks, one of the most common failure mechanisms in mechanical systems subjected to cyclic loading, can result in catastrophic failures. Understanding the vibration properties of a structure with edge cracks is beneficial for early crack detection and diagnosis. Vibration analysis is a process that studies the vibration behavior of machines and structures. This analysis is used to assess the health of systems, detect faults, and determine maintenance needs. Vibration measurements are usually made using accelerometers or vibration sensors. These sensors collect information about vibration frequencies, amplitudes, and phases. The collected data is converted into frequency spectra using techniques such as Fourier transforms. These spectra provide information about the health of the components in the machine. The obtained data is interpreted by analyzing specific frequencies and amplitudes. In this study, free modal analysis of a circular cross-section cantilever beam with and without crack was carried out experimentally. An experimental setup was designed in which a cantilever beam with and without crack was subjected to force with a hammer and the responses were recorded using an accelerometer attached to the free end of the beam. The effects of the location and depth of the crack on the natural frequencies were investigated and the numerical results obtained were presented with graphs and tables. Signals obtained from non-cracked and cracked beams were compared in the frequency domain. It was shown that the presence of crack significantly changes the dynamic characteristics of the beam.

Keywords: Crack, circular cross-section, experimental method, free vibration analysis

1. Introduction

Vibration analysis is used in many sectors such as industry, automotive, aviation and more. It is widely applied in systems such as wind turbines, motors and pumps. Many studies on vibration analysis of cracked beams, columns, and frame structures are in the literature [1-7]. Haskul and Kisa [8, 9] used the finite element method and component mode synthesis to calculate the dynamic characteristics of variable cross-section beams with a crack. Aggumus et al. [10] investigated the effects of cracks in columns of a single degree of freedom (SDOF) steel structure model on system responses due to the decrease in the equivalent spring coefficient. Jagdale and Chakrabarti [11] presented a model for free vibration analysis of a beam with an open-sided crack. The results obtained by experiments in previous studies were compared with the results obtained by finite element analysis. Prokić et al. [12] presented a numerical method for solving the free vibration of beams governed by a set of second-order ordinary differential equations with variable coefficients and arbitrary boundary conditions. Quila et al. [13] presented a model for free vibration analysis of a fixed and open-sided beam. All theoretical

values were analyzed by numerical method using ANSYS software and the theoretical values were related to the numerical values to find the percentage error between them. Orhan [14] investigated the free and forced vibration analysis of cracked beams using a finite element program to determine the crack in a cantilever beam. In the study, single and double-sided crack conditions were evaluated. Memory et al. [15] investigated the natural frequencies and mode shapes of bridge superstructures. They developed a simplified method to estimate the natural frequency of vibration and compared the effects of using static and dynamic elasticity modulus of concrete in estimating the natural frequency of vibration. [16] presented a new cracked cantilever beam model to study the vibration of a cantilever beam with a slant edge crack. In this study, the natural frequencies of the circular cross-section beam were obtained by performing experimental vibration analysis.

2. Experimental Model

In this study, the uniform cross-section circular beam shown in Figure 1 was used with one end fixed and the other end free. In the figure, x , y , b and L represent the crack location, crack depth, beam diameter and beam length, respectively.

Fig.1. Steel beam used in experimental analysis

In the experimental analysis; two beams with dimensions length and diameter of the beam $L=500$ mm and $b=14$ mm, uncracked and cracked, were used. The material properties of the beams used; the density of the material is 7850 kg/m³ and the modulus of elasticity is 210 GPa. Hammer tests were performed with different parameters for the crack depth of 3 mm and different crack locations.

In the experimental setup, one end of the beam was fixed with a vice while the other end was left free and a single-axis accelerometer (model Kistler 8640A10) was attached to the free end. The accelerometer and the Kistler 9722A2000 modal hammer were connected to a charge amplifier with a 4-channel data acquisition card (model Kistler 5165A4KH00) via cables. Data were collected in real time via an interface program on a computer and analyzed in Matlab/Simulink. The sampling frequency was set to 1 kHz, the sampling period was set to 0.001 s, and each experiment lasted 10 s. The obtained experimental frequency was calculated according to the average of at least three measurements for each case. The experimental setup used for the obtained natural frequencies is shown in Figure 2.

Fig.2. Experimental set-up

Table 1 shows the acceleration data depending on the applied force for different crack ratios. In addition, FFT (Fast Fourier Transform) values at maximum amplitude derived from the acceleration values were obtained for evaluations in the frequency domain. Crack ratios were taken as 0.03, 0.15 and 0.24 and the crack depth was 3 mm.

Table.1. Input and Output Data of a Circular Cross-Section Cantilever Beam

Crack ratio (x)	Crack Depth (y)	Maximum Force (N)	Maximum Acceleration (m/s ²)	Frequency (hz)
0.03	Non cracked	44.8	6.1	60.7
	3	46.1	6.2	59.1
0.15	Non cracked	29.9	3.6	48
	3	28.5	2.4	47.7
0.24	Non cracked	33.5	5.1	38.8
	3	22.6	2.6	38.4

Figure 3 shows the FFT curves of the cracked cases of the beam with different crack locations and the uncracked cases of the same length. It was observed that the presence of the crack caused a decrease in the frequency values in all cases.

Fig.3. FFT curves of the beam

Fig.4. Acceleration responses of the beam

Figure 4 shows the comparison of acceleration curves obtained by normalising the applied force. In all cases where the maximum accelerations are analysed, the acceleration of the cracked beam is lower than the acceleration of the noncracked beam. Except for the maximum values, an increase in acceleration values was observed in the case of $x = 0.2391$.

Conclusion

The free vibration analysis of the circular cross-section beam was experimentally investigated. The cases with and without cracks in the beam were compared. The acceleration data obtained from the hammer tests and the FFT curves obtained from these data were used to analyse the changes in the beam. When the data obtained from the experiments were examined, it was seen that the frequency drop was greater when the crack was close to the support of the beam. This is due to the moment energy occurring where it was closer to the support.

ÖZET

Beton teknolojisinin en önemli konularından biri yüksek performanslı betonlardır. Bu nedenle son yıllarda yüksek performanslı beton tasarımı ve üretimi üzerine yapılan araştırmalar giderek artmaktadır. Kalsiyum alüminat çimentosu, hızlı sertleşme ve agresif ortamlara karşı üstün dayanıklılık özellikleri nedeniyle yüksek performanslı beton üretiminde kullanılan bir bağlayıcıdır. Özellikle yüksek sıcaklık altında portland çimentolu betonlara kıyasla daha üstün performans gösterdiği yakın zamanda yapılan çalışmalarda ispat edilmiştir. Ancak kararsız yapısı nedeniyle yapısal uygulamalarda kullanımı sınırlı kalmaktadır. Portland çimentosunun aksine hidratasyon ürünleri sıcaklık, zaman ve nemden büyük ölçüde etkilenir ve belli dönüşümlere uğrar. Bu dönüşümler genel olarak betonun mikro yapısında boşluk oluşumuna neden olur kalsiyum alüminat çimentolu betonun dayanımını azaltabilir. Bu nedenle hidratasyon ürünlerinin dönüşüme uğramasına neden olabilecek parametrelerin incelenmesi önemlidir. Kalsiyum alüminat çimentolu betonun mekanik özelliklerine etki edebilecek parametrelerden birisi de karışıma giren malzemelerin oranlarıdır. Bu çalışmada, farklı agrega ve uçucu kül oranları kullanılarak kalsiyum alüminat çimentolu betonun normal sıcaklıklardaki mekanik özellikleri ve işlenebilirlik durumları incelenmiştir. Bu kapsamda agrega oranları ve uçucu kül oranları bir birinden farklı 3 set hazırlanmış ve numunelerin özgül ağırlıkları, elastisite modülleri, basınç dayanımları, yarmada çekme dayanımları ve slump değerleri tespit edilmiştir. Çalışma sonucunda B grubu olarak isimlendirilen karışım oranının hem mekanik özellikler hem de işlenebilirlik özellikleri açısından en uygun karışım olduğu değerlendirilmiştir.

Anahtar kelimeler: Kalsiyum alüminat çimentosu, uçucu kül, agrega

INVESTIGATION OF THE EFFECT OF DIFFERENT AGGREGATE AND FLY ASH RATIOS ON THE MECHANICAL PROPERTIES OF CALCIUM ALUMINATE CEMENT CONCRETE

ABSTRACT

In recent years, studies on the production of high performance concrete have been increasing. Calcium aluminate cement is a binder used in the production of high performance concrete due to its rapid hardening and superior resistance to aggressive environments. It has been proven in recent studies that it shows superior performance compared to Portland cement concrete especially under high temperature. However, its use in structural applications is limited due to its unstable structure. Unlike Portland cement, hydration products are greatly affected by temperature, time and humidity and undergo certain transformations. These transformations generally cause the formation of voids in the microstructure of concrete and may reduce the strength of calcium aluminate cement concrete. Therefore, it is important to investigate the parameters that may cause the transformation of hydration products. One of

the parameters that may affect the mechanical properties of calcium aluminate cement concrete is the proportions of the materials entering the mixture. In this study, mechanical properties and workability of calcium aluminate cement concrete at normal temperatures were investigated by using different aggregate and fly ash ratios. In this context, 3 sets with different aggregate and fly ash ratios were prepared and specific gravity, modulus of elasticity, compressive strength, tensile strength at splitting and slump values were determined. As a result of the study, it was evaluated that the mixture ratio named as group B was the most suitable mixture in terms of both mechanical properties and workability properties.

Keywords: Calcium aluminate cement, fly ash, aggregate

GİRİŞ

Yüksek performanslı beton üretimi ile ilgili çalışmalar son yıllarda beton teknolojisinin popüler konularından biridir. Yüksek performanslı beton konseptinde sadece dayanım özelliklerinin değil aynı zamanda dayanıklılık özelliklerinin de üstün olması beklenir. Kalsiyum Alüminat Çimentosu hem hızlı sertleşme kabiliyeti hem de agresif ortamlara karşı üstün performansı nedeniyle yüksek performanslı beton üretiminde kullanılabilir [1]. Özellikle yüksek ısılar altındaki performansı portland çimentosuna kıyasla oldukça yüksektir [2]. Ancak kararsız yapısı nedeniyle yapısal uygulamalarda kullanımı sınırlıdır. Hatta bazı ülkelerde kullanımı yasaklanmıştır [3]. Kalsiyum alüminat çimentosunun hidrasyon süreci portland çimentosundan oldukça farklı bir yapıdadır. Portland çimentosunun aksine kalsiyum alüminat çimentolu betonların hidrasyon ürünleri sıcaklık, nem ve zamandan büyük ölçüde etkilenir ve belirli dönüşümlere uğrarlar. Bu dönüşüm reaksiyonları neticesinde kalsiyum alüminat çimentosunun mikro yapısı değişime uğrar. Bu dönüşümler genel olarak düşük yoğunluklu ve yarı kararlı CAH_{10} ve C_2AH_8 bileşiklerinin yüksek yoğunluklu ve kararlı C_3AH_6 ve AH_3 birleşiklerine dönüşmesinden ibarettir. Bu dönüşümler sırasında hidratlar yoğunlaştıkça betona su verirler ve betonda gözeneklilik oluştururlar. Bu durum betonun mekanik özelliklerini olumsuz yönde etkiler [2]. Bu nedenle, kalsiyum alüminat çimentosunun yapısal uygulamalarda kullanılabilmesi için kararsız yapısının kontrol altına alınması gerekir. Bu bağlamda kararsız duruma neden olabilecek parametrelerin araştırılması oldukça önemlidir. Beton teknolojisi açısından henüz yeni sayılabilecek bir bağlayıcı türü olan kalsiyum alüminat çimentolu betonun karışım oranları ve karışıma giren malzemeler üzerine yapılacak çalışmalar bu noktada büyük önem arz eder.

Bu çalışmada farklı agrega ve uçucu kül oranları kullanılan kalsiyum alüminat çimentolu betonların mekanik özellikleri ve işlenebilirlik durumları incelenmiştir. Bu kapsamda kalsiyum alüminat çimentolu betonların özgül ağırlık, basınç dayanımı, yarmada çekme, elastisite modülü testi ve kıvam testleri yapılmıştır.

MATERYAL VE METOT

Mevcut çalışmada, farklı agrega ve uçucu kül oranlarının kalsiyum alüminat çimentolu betonun mekanik özelliklerine etkilerinin araştırılabilmesi için 3 farklı reçete kullanılmıştır. Kalsiyum alüminat çimentosu için hazırlanan karışım oranları Tablo 1’de gösterilmiştir.

Tablo 1. 1 m³ beton için kullanılan karışım oranları

Numune	Çimento	Uçucu Kül	Su	İnce agregası	Kaba agregası	SP	S/Ç
A	9.25	2.00	5.02	16.75	0	25.00	0.45
B	10.55	0	4.25	12.00	4.75	12.00	0.40
C	9.05	1.00	4.50	13.50	3.25	20.00	0.45

Karışımlarda KAÇ-40 tipi çimento kullanılmıştır. Kullanılan çimentonun özgül ağırlığı 3.30'dur. Kalsiyum alüminat çimentosundaki önemli bileşimler Tablo 2'de belirtilmiştir. Agregası olarak kalker esaslı kırma taş kullanılmıştır. İnce agregası olarak 0-4 mm, kaba agregası olarak 4-8 mm agregası kullanılmıştır. Kullanılan agregaların tane çapı dağılımı TS 706 EN 12620 standardına uygundur. Karışımda kullanılan agregalar kuru yüzey doygun halde kullanılmışlardır. Kullanılan agreganın özgül ağırlığı 2.69 olarak tespit edilmiştir. Uçucu kül olarak Afşin- Elbistan termik santralinden alınan uçucu kül kullanılmıştır. Akışkanlaştırıcı olarak Glenyum 51 kullanılmıştır.

Tablo 2. Kalsiyum Alüminat Çimentosundaki önemli bileşimler

Bileşimler	Al ₂ O ₃	CaO	SiO ₂	Fe ₂ O ₃
Oranlar (%)	39.92	34.10	3.23	15.44

Mekanik testler için her gruptan 9'ar adet Ø100mmx200mm ebatlarında silindir numune hazırlanmıştır. Beton dökümü frekans ayarlı 100 lt kapasiteli beton mikseri ile yapılmıştır. Döküm prosedürü tüm karışımlarda aynı olup kontrol dışı parametrelerin minimize edilmesine gayret edilmiştir. Bu kapsamda aynı sette olan numuneler aynı anda dökülmüşlerdir. Döküm sonrası numuneler 28 gün oda sıcaklığındaki suda kürlenmişlerdir. 28 günün kürün ardından mekanik testler yapılmıştır. Numunelerin oda sıcaklığı üstünde bir sıcaklığa maruz kalmamasına dikkat edilmiştir. Bu sayede sıcaklığa bağlı bazı dönüşüm reaksiyonlarının tetiklenmesinin önüne geçilmiştir. Basınç dayanımı testi 2000 kN kapasiteli test presinde 0.25 MPa/s yükleme hızı ile TS-EN12390-3 standartlarına uygun bir biçimde yapılmıştır. Elastisite modülünün tespiti ASTM C469/C469M, yarmada çekme testi ise TS-EN12390-3 standartlarına uygun bir biçimde gerçekleştirilmiştir.

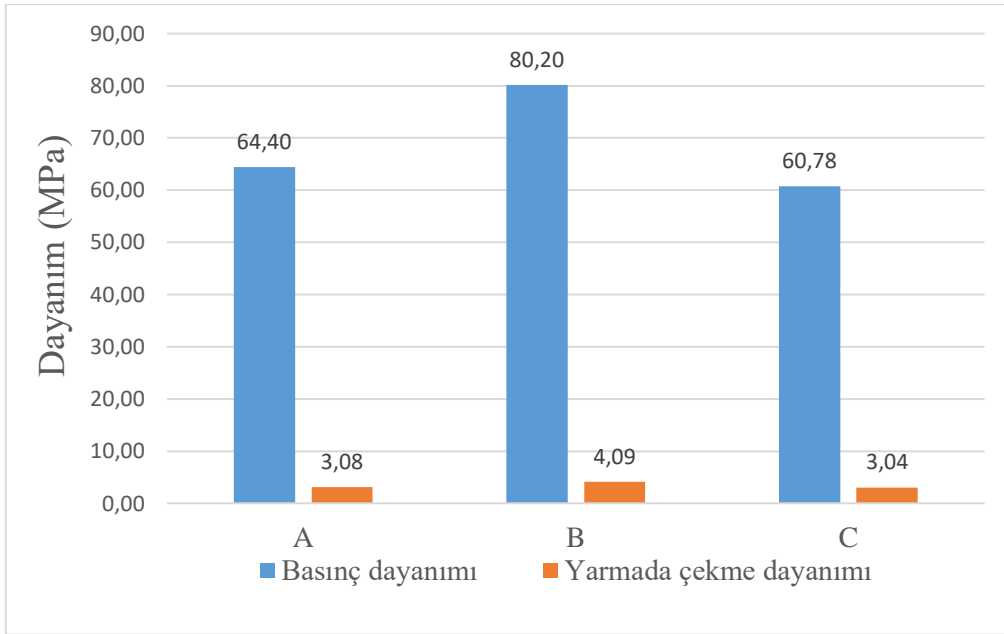

BULGULAR

Deney sonuçları Tablo 3'te özet olarak sunulmuştur. Dayanım değerlerinin karışımdaki çimento miktarı ile doğru orantılı olarak arttığı tespit edilmiştir. Buna paralel olarak Elastisite modülü değerleri de benzer bir davranış göstermiştir. En yüksek çimento oranına sahip B numunesinin basınç dayanımı A numunesinden %24.53, C numunesinden %31.95 oranında fazladır. Benzer şekilde, B numunesinin yarmada çekme dayanımı A numunesinden %32.27, C numunesinden %34.53 oranında fazladır. Elastisite modülü değerleri birbirine yakın olmakla beraber diğer dayanım değerlerine paralel bir dağılım göstermektedirler. Özgül ağırlık değerleri de çimento miktarına paralel olarak artış göstermiştir. Çökme değerleri açısından incelediğimizde çimento miktarı artışının işlenbilirliği bir miktar azalttığı değerlendirilebilir. Yapılan çalışma neticesinde B numunesinde kullanılan karışım oranlarının hem dayanım değerleri açısından hem de işlenebilirlik açısından en uygun karışım oranına sahip olduğu değerlendirilebilir. Basınç dayanımına etki eden parametrelerden biri olan S/Ç oranının etkisi de çalışmada açıkça görülmüştür. S/Ç oranı

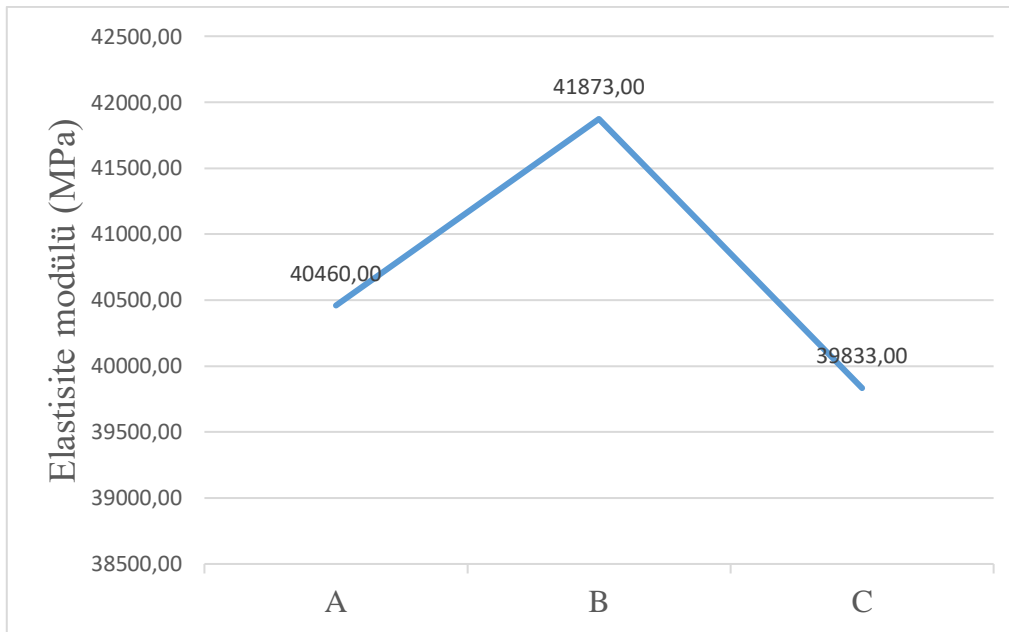

diğer karışımlara göre düşük olan B numunesinin dayanım değerleri beklenildiği gibi diğer numunelerden yüksek çıkmıştır. Bununla birlikte işlenebilirliği de bir miktar azalmıştır. Şekil 2 ve 3'te numunelerin dayanım ve elastisite modülleri arasındaki ilişki grafik olarak gösterilmiştir.

Tablo 3. Numunelerin deney sonuçları

Numune	Basınç dayanımı (MPa)	Yarmada çekme dayanımı (MPa)	Elastisite modülü (MPa)	Özgül ağırlık	Slump değeri (mm)
A	64.40	3.08	40460	2.22	70
B	80.20	4.09	41873	2.35	55
C	60.78	3.04	39833	2.20	71

Şekil 2. Numunelerin basınç ve yarmada çekme dayanımı değerleri

Şekil 3. Numunelerin Elastisite modülleri arasındaki ilişki

SONUÇ

Mevcut çalışmada farklı karışım oranlarına sahip kalsiyum alüminat çimentolu betonların dayanım ve işlenebilirlik özellikleri incelenmiştir. Bu kapsamda basınç dayanımı, yarmada çekme dayanımı, elastisite modülü, özgül ağırlık ve çökme değerleri tespit edilmiştir. Çalışma sonucunda çimento oranının artmasıyla birlikte basınç dayanımının ve yarmada çekme dayanımlarının arttığı tespit edilmiştir. Dayanım değerlerinin artışına paralel olarak elastisite modüllerinin de arttığı görülmüştür. Çimento oranının artışı ile birlikte işlenebilirlik değerinin bir miktar azaldığı ancak makul sınırlar içinde kaldığı görülmüştür. Buna göre su/çimento oranı en düşük olan B numunesinin hem dayanım özellikleri açısından hem de işlenebilirlik açısından en uygun karışım olduğu değerlendirilebilir.

ÖZET

Tıp disiplinde genel olarak tüm toksik metaller ağır metal olarak tanımlansa da, yoğunluğu 5 g cm⁻³'ten daha fazla olan metallere veya sudan en az 5 kat daha fazla yoğun olan metallere ağır metal denmektedir. Ağır metaller volkanik patlamalar, kayaların çözünmesi, tarımsal ve endüstriyel faaliyetler gibi durumlardan dolayı farklı çevrelere geçiş yapmaktadır. Bu durumdan dolayı ağır metaller çevre kirleticiler sınıfında yer almaktadır. Ağır metaller, çevresel problemlerin yanı sıra ayrıca sağlık açısından da ciddi riskler teşkil etmektedir. Topraktaki ağır metaller bitkilerin yapısına zarar verip ürünlerin verimliliğini düşürdüğü gibi insanlar için de karsinojenik etkilerin yanı sıra cilt ve solunum problemlerine de sebep olmaktadır. Ağır metallerin düşük konsantrasyonlarının bile bu tarz negatif etkileri göz önünde bulundurulduğunda canlı sistemlere alımından kaçınılması ortaya çıkmaktadır. Analitik yöntemler, farklı örneklerin analizi sayesinde örnek bileşenlerinin derişimlerinin hakkında bilgi verdiği gibi, bu bileşenlerle ilgili referans değerlerin oluşturmasına da katkı sağlamaktadır. Bu sayede belirli bileşenlerin sebep olduğu zararlar da minimize edilmektedir. Ağır metaller birçok örnek grubunda yer almaktadır. Bu örnek gruplarının fiziksel ve kimyasal özellikleri birbirinden farklı olsa da çoğu oldukça karmaşık yapıdadır. Ağır metallerin tayin edilmesi için çoğu zaman bu karmaşık yapıdan ayrılması gerekmektedir. Uygulanması basit, kimyasal maruziyetini en aza indirgeyen ve yüksek zenginleştirme faktörleri sunan mikroekstraksiyon teknikleri ağır metal tayininde birçok avantaj sağlamaktadır. Manyetik derin ötektik çözücüler düşük toksisiteli olmaları ve enerjiden tasarruf sağlamaları açısından ağır metal ekstraksiyonuna yeşil bir profil oluşturmaktadır. Analitik parametrelerin istatistiksel ve matematiksel optimizasyon teknikleriyle optimize edilmesi bu yeşil profili daha ileri taşımaktadır. Bu tekniklerin uygulanmasıyla, yapılan deney sayısı azaldığı için maliyet ve zamandan da tasarruf sağlanmış olunur. Yapılan bu çalışmada ağır metallerin tayini sürecinde yer alan modern ve yeşil prosedürlerin bileşenleri hakkında teorik bilgi verilmiştir. Ayrıca bu çalışmanın yazarları tarafından kaleme alınan bilimsel araştırmalardan ve literatürdeki diğer çalışmalardan örnekler verilmiştir. Bu çalışmalardaki deneysel süreçler okuyucuya aktarılmış ve karşılaştırmalı literatür tablosu oluşturulmuştur.

Anahtar kelimeler: Ağır Metaller, Yeşil Mikroekstraksiyon Teknikleri, Örnek Hazırlama, Eser Analiz, Çok Değişkenli Optimizasyon

ABSTRACT

Although all toxic metals are generally defined as heavy metals in the medical discipline, metals with a density greater than 5 g cm^{-3} or metals at least 5 times more dense than water are called heavy metals. Heavy metals migrate to different environments due to volcanic eruptions, rock dissolution, agricultural and industrial activities. For this reason, heavy metals are included in the environmental pollutant class. Heavy metals pose serious risks to health as well as environmental problems. Heavy metals in the soil damage the structure of plants and reduce the productivity of products, as well as causing carcinogenic effects for humans, as well as skin and respiratory problems. Considering such negative effects of even low concentrations of heavy metals, it becomes clear that their intake into living systems should be avoided. Analytical methods provide information about the concentrations of sample components through the analysis of different samples, as well as contributing to the establishment of reference values related to these components. In this way, the damage caused by certain components is minimized. Heavy metals are included in many sample groups. Although the physical and chemical properties of these sample groups are different from each other, most of them are quite complex. In order to determine heavy metals, they often need to be separated from this complex structure. Microextraction techniques, which are simple to apply, minimize chemical exposure and offer high enrichment factors, provide many advantages in heavy metal determination. Magnetic deep eutectic solvents create a green profile for heavy metal extraction in terms of their low toxicity and energy saving. Optimizing analytical parameters with statistical and mathematical optimization techniques carries this green profile further. By applying these techniques, cost and time are also saved since the number of experiments is reduced. In this study, theoretical information is given about the components of modern and green procedures in the determination of heavy metals. In addition, examples are given from scientific researches written by the authors of this study and other studies in the literature. The experimental processes in these studies are conveyed to the reader and a comparative literature table is created.

Keywords: Heavy Metals, Green Microextraction Techniques, Sample Preparation, Trace Analysis, Multivariate Optimization

GİRİŞ

Artan insan nüfusu birçok endişeyi beraberinde getirmektedir. Çevre ve sağlık problemleri günden güne artarken farklı bilimsel disiplinler tarafından bu problemlerin çözümleri için çeşitli yaklaşımlar önerilmektedir. Bu sorunların çözümüne ilişkin yaklaşımların tam anlamıyla çözüm sağlayabilmesi için bu yaklaşımların problemi ortaya çıkaran sebeplerin hiçbirini içermemesi gerekmektedir. Kimyasal analiz birçok değişkene sahip bir süreç olup avantajlarının yanında belirli dezavantajlar da ortaya çıkarabilmektedir. Kimyasal analiz sürecinde çevre ve sağlık problemi doğuracak temel sebepler kimyasal reaktiflerin türü ve bunların miktarlarıdır. Ayrıca aşırı miktarda enerji tüketimi, yoğun iş gücü ve yüksek maliyet de bir bakıma kaynakların verimsiz kullanımı olarak sayılabileceğinden bunlar kimyasal analizde istenmeyen durumlardır. Yeşil Analitik Kimya yaklaşımı bahsi geçen olumsuz durumları ortadan kaldırmayı amaçlayan ve önerdiği kriterlerle analizcilere çevreci ve zararsız bir yol çizen önemli bir yaklaşımdır. Özellikle ağır metaller söz konusu olduğunda bu yaklaşım ve sahip olduğu 12 ilke daha çok gündeme gelmektedir. Ağır metallerle yapılan yüzlerce çalışma bu analitik türlerin zararlarının tanımlanması ve en aza indirgenmesi ile ilgilidir. Dolayısıyla sağlık ve çevre endişeleri uyandıran bu sorunun çözümü için yapılan çalışmalar çevreci olup sağlık sorunu teşkil etmeyen çalışmalar olmalıdır. Ağır metallerin tayini

kapsamında yapılan çalışmaların yeşil profile sahip olması tercih edilecek prosedürlerin niteliği doğrultusunda mümkündür. Literatür çalışmalarından da görüleceği gibi ağır metaller toprak, su ve çeşitli gıdalarda yer aldığı için sıklıkla bu grup örnekler analizlenmektedir. Ancak bu örnekler ağır metaller haricinde birçok kimyasal türü de bünyesinde barındırmaktadır. Bu tip örneklerden hedef analitin doğrudan tayini bu durumdan dolayı zor olmaktadır. Çoğu analitik prosedür hedeflenen ağır metal türünün tayininden önce bu analitin numune ortamından ayrılmasını ve zenginleştirilmesini içermektedir. Ayırma ve zenginleştirme teknikleri olarak birçok teknik sayılabilir de son zamanlarda özellikle Yeşil Analitik Kimya'nın ilkelerini karşılamaları açısından karşımıza sıklıkla çıkan mikroekstraksiyon teknikleri birçok avantaja sahiptir. Bu tekniklerde kullanılan çözücünün mikrolitre düzeyinde olması, analizlenecek örnek miktarlarının düşük olması, basit ve hızlı olması gibi sebepler araştırmacıları bu tekniklerin kullanımına motive etmektedir. Ayrıca bu tekniklerde çevre dostu çözücüler kullanılabilir. Yeşil çözücüler başlığı altında toplanan bu çözücülerin belki de en çok kullanılanı ise derin ötektik çözücülerdir. Çalışmanın ilerleyen sayfalarında da görüleceği gibi klasik ekstraksiyon çözücülerine kıyasla mikroekstraksiyon çözücülerini hem çevre hem de sağlık açısından neredeyse hiçbir olumsuz durum oluşturmamaktadır. Derin ötektik çözücülerin farklı özellik ve avantajlar barındıran türleri de mevcuttur. Bunlardan biri de manyetik derin ötektik çözücülerdir (MDES). Derin ötek çözümler sahip olduğu yeşil doğasıyla mikroekstraksiyon teknikleri için önemli bir yere sahiptir. Mikroekstraksiyon tekniklerinde farklı parametrelerin optimizasyonu en verimli sonucu elde etmek için olmazsa olmazdır. Optimizasyon yaklaşımları ise tek değişkenli ve çok değişkenli optimizasyon stratejileri olmak üzere ikiye ayrılmaktadır. Çok değişkenli yaklaşımlar deneysel parametrelerin daha detaylı incelemesini sağladığı gibi özellikle deney sayısını azaltması açısından da önemlidir. Deney sayısının azaltılması analitik prosedürün çevreci olmasını sağlamaktadır. Bu çalışmada ağır metal tayini için yapılan analitik prosedürler daha çok yeşillik özellikleri bağlamında ele alınmıştır. Geliştirilen farklı analitik yöntemler ve mikroekstraksiyon prosedürlerinin sürecinde yer alan dinamikler hakkında bilgi verilmiş ve literatürdeki çalışmalar incelenmiştir.

Ağır metaller ve Toksikolojileri

Tarımsal endüstriyel ve volkanik faaliyetler ve kentleşme, toprak erozyonu, madencilik gibi süreçler sonucunda ağır metaller toprak yapısına katılmaktadır. Bu durum toprak kalitesini etkileyip bitkilere zarar verdiği gibi ağır metallerin besin zinciri yoluyla insanların biyolojik sistemine geçiş yapmasına sebebiyet vermektedir. Sonuçta insanlar için de birçok tehlikeli durum oluşmaktadır [1, 2]. Yoğunlukları 5 g cm^{-3} 'ün üzerinde olan mealler olarak tanımlanan ağır metaller çoğunlukla esansiyel ve esansiyel olmayan toksik ağır metaller olarak sınıflandırılmaktadır. Çinko, demir, mangan ve bakır gibi ağır metaller esansiyel olup canlı sistemi için faydaları da bulunmaktadır. Fakat daha çok gündeme gelenler ise esansiyel olmayan toksik ağır metallerdir. İlk sınıf belirli derişimlerin üzerinde toksik etki yaparken ikinci yani esansiyel olmayan toksik ağır metaller (Cd, Ni, As, Hg, Pb, Cr) ise çok düşük derişimlerde bile ciddi bozukluklara sebep veren ağır metallerdir [3, 4].

Kurşun: Deri, solunum ve sindirim sistemi tarafından emilen kurşun vücutta oksidan-antioksidan dengesini bozarak inflamasyonlara sebep olabilmektedir. Düşük miktarlarda bile nörolojik, üriner ve kardiyovasküler bozukluklara sebebiyet vermektedir.

Arsenik: Arsenik düşük seviyelerde kusma, mide bulantısı, kırmızı ve beyaz kan hücrelerinin üretiminde azalma, kalp ritminin bozulmasına ve cilt koyuluğuna sebebiyet verirken. Daha yüksek seviyeleri ölümle sonuçlanabilmektedir.

Kadmiyum: Kadmiyum ve bileşikleri karsinojenik olarak bilinmektedir. Yüksek miktarlarda alımları midde tahribatına ve ishale yol açarken düşük miktarlarının uzun süreli alımı böbrek hastalıklarına ve akciğer hasarına sebep olmaktadır.

Cıva: Sinir sistemi cıvanın tüm formlarına karşı oldukça hassastır. Düşük seviyeleri bile beyin, böbrek ve gelişmekte olan fetüslere kalıcı hasar verebilmektedir. Metalik cıva buharlarına maruziyet akciğer hasarı, göz tahrişi ve kalp rahatsızlıklarına sebep olabilmektedir.

Krom: Krom (III) esansiyel temel bir besin iken krom (VI) toksik ve insanlar için karsinojendir. Yüksek düzeylerinin solunması burun ülseri ve astım gibi sorunlara yol açmaktadır. Ciltle teması alerjik reaksiyonlara sebebiyet vermektedir. Uzun süreli maruziyet karaciğer, böbrek ve sinir sistemine zararlıdır [5-7]. Birleşik Devletler Çevre Koruma Ajansı (US EPA) kadmiyum, krom, arsenik, kurşun, cıva, bakır gibi ağır metalleri öncelik kontrollü kirleticiler olarak tanımlamıştır [8]. Tablo 1’ de bazı ağır metal kaynakları verilmiştir. Tablo 2’de ise belirli ağır metallerin alımı için önerilen sınır değerler verilmiştir.

Tablo 1. Bazı ağır metal kaynakları [9]

Ağır metal kaynakları	Cd	Cu	Pb	Zn	Ni	Mn	Fe	Hg	Se	As
Cevher mostraları	+	+	+	+	+					
Metal eritme tesisleri	+	+	+	+	+					
Yüksek fırınlar				+		+	+			
Elektroliz								+		
Atık su arıtma çamuru	+	+	+	+	+					
High tension lines		+		+						

Tablo 2. Bazı ağır metallerin alımı için önerilen sınır değerler [10]

Ağır metaller	Kabul edilebilir maksimum derişim (WHO)	İçme sularında kabul edilebilir maksimum derişim (EPA)
Cd	0.003 ppm	0.005 ppm
Ni	–	2–4.3 ppb
As	0.01 ppm	0.01 ppm
Hg	0.001 ppm	2 ppb
Pb	0.01 ppm	50 ppb

Görüldüğü üzere her bir ağır metal birçok sağlık problemine sebebiyet vermektedir. Bu sağlık sorunlarının ortadan kaldırılması kaynakların ağır metal içerikleri tespit edilmeli ve bu kaynakların alımlarının kontrol edilmesi gerekmektedir. Ağır metal tayini için yüksek performanslı sıvı kromatografisi (HPLC), indüktif eşleşmiş plazma-kütle spektrometresi (ICP-MS), mor ötesi-görünür bölge spektrofotometrisi (UV-Vis), elektrokimyasal teknikler, alevli atomik absorpsiyon spektrofotometrisi (FAAS) gibi farklı teknikler sıklıkla kullanılmaktadır. Bu teknikler oldukça kompleks ve seçici olmalarına rağmen özellikle ağır metallerin bulunduğu örneklerde matris etkisinden dolayı bu teknikler ayırma ve zenginleştirme teknikleriyle kombine edilmektedir.

Yeşil Analitik Kimya

Özellikle geçmiş yıllarda analitik kimyada kullanılan yöntemlerin kalitesi daha çok validasyon parametreleri ile alakalıydı ve bu yöntemlerin değerini temel olarak elde edilen analitik sonuçlar belirlemekteydi. Bunlar hiç şüphesiz hala bir analitik yöntemin olmazsa olmazı olarak ifade edilebilir. Fakat artık yeni trendler oluşmuş ve bu trendleri yakalamak da analitik yöntemin geçerliliği üzerinde belirleyici rol oynamaktadır. Analitik kimyanın ve kimyacının tüm sorunlara karşı çözümü bütüncül olmalıdır. Günümüzde analiz edilen numuneler için geçmişte de farklı yöntemler geliştirilmiştir. Geçmişte farklı numune türleri analizlenirken çevre ve insan sağlığı gibi oldukça önemli konular ikinci planda bırakılarak bu konudaki endişeler daha az gündeme gelmiştir. Dahası bazı toksik türler için geliştirilen analitik yöntemlerin kendileri de oldukça toksik bir yapıya sahipti. Çoğu analitik proses çevre için zararlı atık yan ürün oluşturmaktaydı. Tüm bu durumlar 1990'lı yılların sonrasında çevre ve insan sağlığı açısından duyulan endişeyi yükseltmiş ve geniş çevrelerce bir etki oluşturmuştur. Yeşil Analitik Kimya yaklaşımı bu yıllarda ortaya çıkmış ve büyük ilgi toplamıştır. Yeşil Analitik Kimya geliştirilen analitik yöntemlerin çevre ve sağlık açısından sergilediği olumsuz etkileri en aza indirmeyi amaçlamaktadır. İnsan sağlığına ve çevreye zararlı hammaddelerin, ürünlerin, reaktiflerin ve çözücülerin kullanımını azaltan, ortadan kaldıran analitik tekniklerin kullanımı ve geliştirilmesi teşvik edilir [11, 12]. Buna göre, yeşil analitik kimyanın genel prensiplerini karşılayacak analitik prosedürler kısaca şu ilkeleri karşılamalı;

- Örnek hazırlamada kullanılan çözücü hacimleri azaltılmalı,
- Otomasyona uygun, minyatürize tekniklerin kullanımı sağlanmalı. Böylece çözücü, reaktif ve numune miktarları azaltılarak birçok açıdan tasarruf sağlanabilir.
- Çözücü ve reaktif gerektirmeyen doğrudan analitik yöntemlerin kullanılması [13]

Artan insan nüfusu ve bilimsel gelişmeler dikkate alındığında özellikle kaynakların kullanımından tasarruf, insan sağlığı ve çevresel sorunların ortadan kaldırılmasına katkı anlamında Yeşil Analitik Kimya'nın ilkelerini karşılamak analitik prosedürler için temel amaç olmalıdır.

Önceki satırlarda ağır metallerin tayininde karşılaşılan zorlukların analitik prosedürlerde ayırma ve zenginleştirme tekniklerini gerekli kıldığından bahsetmiştik. Mikroekstraksiyon teknikleri hem analitik olarak hem de Yeşil Analitik Kimya bağlamında ele alındığında oldukça avantajlı durumlar sergilemektedir.

Mikroekstraksiyon Teknikleri

Hedef analitin tayini öncesinde örneğin hazırlanmasını amaçlayan ayırma ve zenginleştirme tekniklerinin farklı türleri olsa da geçmişte sıklıkla klasik ekstraksiyon teknikleri kullanılmaktaydı. Klasik ekstraksiyon teknikleri zaman alıcı ve uğraştırıcı olmasının yanı sıra ihtiyaç duyulan çözücüler hem toksik hem de büyük miktarlarda kullanılmaktaydı. Çevre ve sağlık endişeleri birçok çevrede yankı bulunca klasik ekstraksiyon tekniklerinin kullanımı azalarak bu teknikler yerini mikroekstraksiyon tekniklerine bırakmıştır. Mikroekstraksiyon teknikleri birçok açıdan avantajlıdır. Çözücülerin toksisiteleri çok az veya hiç yoktur. Ayrıca bu çözücüler mikrolitre seviyesindeki hacimlerde kullanılmaktadır. Analizlenecek örneklerin de miktarları oldukça düşüktür. Yüksek çözme gücüne sahip çözücülerin ayarlanabilerek ayırma verimleri artırılabilir. Tüm bu avantajların yanında mikroekstraksiyon teknikleri yüksek zenginleştirme faktörleri sunan uygulanması basit tekniklerdir. Çoğunlukla atık ve yan ürün oluşumu gerçekleşmeyen bu teknikler Yeşil Analitik Kimya'nın şartlarını karşılamaları açısından da mükemmeldir. Mikroekstraksiyon teknikleri sıvı faz mikroekstraksiyonu (LPME) ve katı faz mikroekstraksiyonu (SPME) olmak üzere ikiye ayrılmaktadır [14-17]. Ağır metal tayini için yüzen katı organik damla mikroekstraksiyonu (SFODME) [18], dağıtıcı sıvı-sıvı mikroekstraksiyonu (DLLME) [19], oyuk fiber sıvı faz mikroekstraksiyonu (HF-LPME) [20], tepe boşluk katı faz mikroekstraksiyonu [21] gibi teknikler sıklıkla kullanılmaktadır. Mikroekstraksiyon tekniklerinin analitik ve yeşil özelliklerini belirlemede rol oynayan en önemli parametre kullanılan çözücülerdir. Bu sebeple mikroekstraksiyon çözücülerine ayrı bir parantez açmak gerekmektedir.

Yeşil Mikroekstraksiyon Çözücüler

Özellikle sıvı faza dayalı mikroekstraksiyon tekniklerinde hedef analitin ekstraksiyon verimi çözücü molekülleri ve analit etkileşiminin gücüne bağlıdır. Ekstraksiyon verimi için gereken moleküller arası etkileşimler göz önünde bulundurduktan sonra diğer bir amaç da yeşil kriterin karşılanmasıdır. Mikroekstraksiyon çözücüler bu iki kriteri de karşılamaktadır. Bu çözücü sınıfında yer alan derin ötektik çözücülerin (DES'ler) son zamanlarda kullanımlarıyla dikkat çekicidir. DES'ler hidrojen bağı alıcısı (HBA) ve hidrojen bağı vericisi (HBD) olarak adlandırılan bileşenlerinin belirli molar oranda genellikle 80°C civarında karıştırılmasıyla berrak bir sıvı olarak elde edilirler [22]. DES bileşenleri ayarlanabilir özellikte olup DES oluşumu aşamasında herhangi bir yan ürün oluşmaz. Bu bileşenler kватerner amonyum tuzları (HBA), alkoller, şekerler, karboksilik asitler (HBD) olarak özetlenebilmektedir. Bileşenlerinin bu kadar çeşitli oluşu araştırmacılar için geniş bir seçim alan bırakmaktadır. DES'lerin toksik olmayan, biyobozunur, düşük maliyetli ve kolay hazırlanabilir olma gibi özelliklerinin yanı sıra farklı türlerinin de hazırlanıyor olması avantajlarını maksimize etmektedir. Bu farklı türlerden biri de manyetik derin ötektik çözücülerdir (MDES) [23-26]. MDES'ler derin ötektik çözücülerin $FeCl_3$, $MnCl_2$, $NiCl_2$, $ZnCl_2$, $CoCl_2$ gibi paramanyetik bileşenlerin kombinasyonu ile elde edilmektedir. Bu şekilde paramanyetik özellik kazanan DES'ler dış kaynaklı bir manyetik alana tepki verme özelliğine sahip olup MDES olarak adlandırılırlar. Bu çözücüler ağır metal tayininde yüksek verim sergilemektedir [27].

Elik ve ark. [28] pirinç numunelerinden arsenik (As) ve selenyumun (Se) hidrür sistemli atomik absorpsiyon spektrometrisi (HG-AAS) ile tayininden önce ekstraksiyonu için yeşil, basit ve düşük maliyetli yeni bir prosedür geliştirmiştir. Doğal derin ötektik çözücü temelli ultrason destekli mikroekstraksiyon (NADES-UAME) olarak adlandırılan bu prosedür, pH 6,5'te celestine mavisi ile As (III) ve Se (IV) iyonlarının kompleksinin ultrason desteğiyle DES fazına ekstraksiyonuna dayanmaktadır. Ekstraksiyonu etkileyen faktörler (DES tipi ve hacmi, ultrasonik koşullar, pH, kompleksleştirici madde miktarı, girişim etkisi) ayrıntılı olarak incelendikten sonra optimize edilmiştir. Optimum koşullarda Se(IV) için doğrusal aralık, tespit sınırı ve hassasiyet iyileştirme faktörü sırasıyla 10–450 ng L⁻¹, 3,0 ng L⁻¹ ve 84 iken, As(III) için aynı analitik parametreler sırasıyla 5–330 ng L⁻¹, 1,7 ng L⁻¹ ve 97 olarak hesaplanmıştır. Yöntemin kalitesi sertifikalı referans maddelerin analizlenmesiyle ortaya konmuş ve iyi bir doğruluk elde edilmiştir.

Altunay ve ark [29] çevresel sular, bal ve pirinçten HG-AAS ile As ve Sb tayini için yeni bir yöntem geliştirmiştir. Bu yöntemde analitik tayin öncesi As ve Sb'nin DES temelli vorteks destekli mikroekstraksiyonu gerçekleştirilmiştir. Deneysel parametrelerin optimizasyonu ile As ve Sb için tespit sınırı (LOD), hassasiyet (% RSD olarak), geri kazanımlar ve iyileştirme faktörü sırasıyla 7,5 ng L⁻¹/15,6 ng L⁻¹, % 2,1 / % 2,7, % 93,5 / % 96,2 ve 104/85 olarak hesaplandı. Yöntem sertifikalı referans materyallerin analiziyle doğrulandıktan sonra gerçek örneklerle başarıyla uygulanmıştır.

Çok Değişkenli Optimizasyon Yaklaşımı

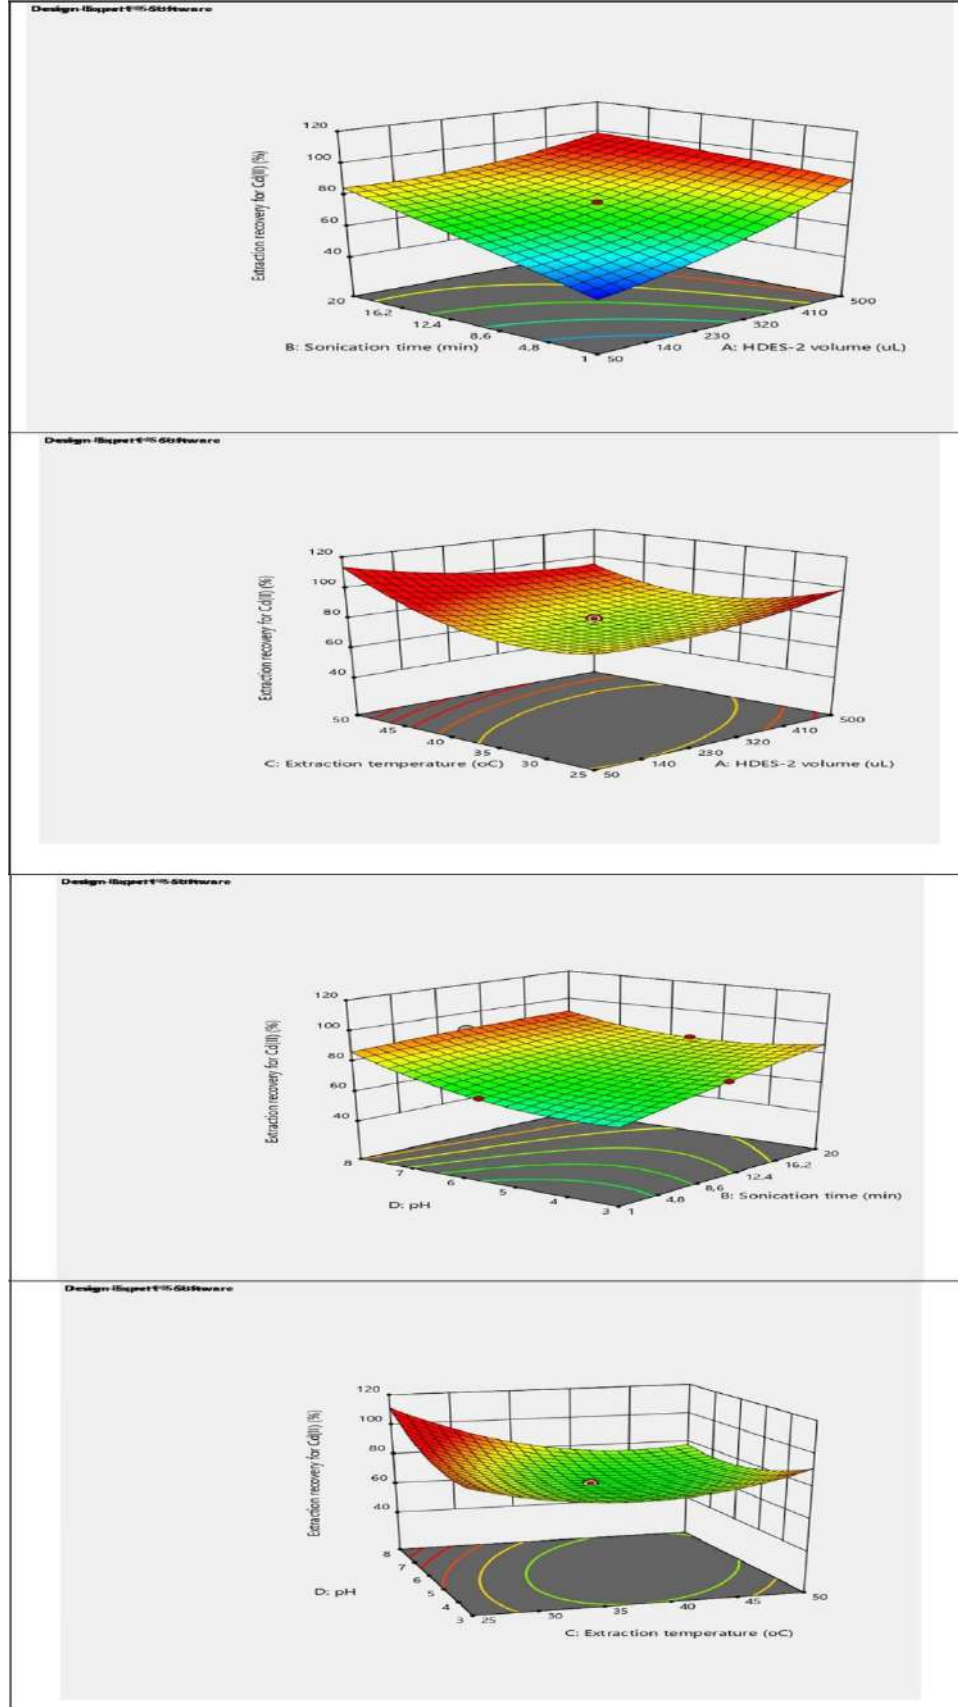

Analitik bir yöntemden elde edilen sonuçlar bu yöntemin içerdiği parametrelerin seviyelerine bağlıdır. Optimizasyon ise en iyi analitik sinyali sağlayacak en uygun seviyelerin araştırılması ve belirlenmesidir. Bu yolla yöntem en iyi şartlarla kullanıma hazır hale getirilmiş olur. Genellikle tek değişkenli optimizasyon yaklaşımı kullanılsa da optimizasyon tek değişkenli ve çok değişkenli yaklaşımlar olmak üzere iki farklı yöntemle karşımıza çıkmaktadır. Tek değişkenli yaklaşımda, adından da anlaşılacağı üzere, tek bir değişkenin seviyeleri değiştirilirken diğerleri sabit tutulmaktadır. Ancak gerçekte her bir değişkenin seviyelerinin farklı kombinasyonlarla değiştiği ve bu değişikliklerin analitik sinyal üzerinde belirleyici olduğu göz önünde bulundurulmalıdır. Tek değişkenli optimizasyon deneysel tasarım prosedürlerini içermediğinden yapılan deney sayısı çoktur. Buradan anlaşılacağı üzere harcanan zaman, kimyasal miktarı ve sarfedilen enerji de artmaktadır. Yeşil Analitik Kimya göz önünde bulundurulduğunda çok değişkenli optimizasyon yaklaşımlarının kullanımı daha avantajlıdır. Çok değişkenli yaklaşımlarda belirli bir deney tasarım yöntemi kullanılarak değerlendirme yapılır. Burada yapılan deney sayısı az olduğu için tek değişkenli yaklaşımlardan hem daha yeşil hem de analitik olarak daha verimli ve avantajlıdır. Deneysel tasarım yöntemlerinin tercihi deneysel koşullara bağlı olarak değişmektedir. Genellikle değişkenlerin üç seviyeli olarak ele alındığı Box-Behnken Tasarımı (BBD), Merkezi Kompozit Tasarımı (CCD), Doehlert tasarımı gibi farklı teknikler kullanılmaktadır. Uygun bir tasarım yöntemi seçildikten sonra deneysel parametrelerin seviyelerindeki değişimlerin deneysel verilerin işlenmesinden yola çıkılarak tahmin edildiği bir optimizasyon stratejisi kullanılır. Bu strateji genellikle Yanıt yüzey metodolojisidir (RSM). RSM'de yapılan tahmin, analitik sinyalin deneysel değişkenlere ve bunların seviyelerine bağlı olduğu bir polinom denklemle verilmektedir [30, 31].

Elik ve ark. [32] su ve gıdalardan toksik Pb (II) ve Cd (II) belirlenmesi için hidrofobik derin ötektik çözücülerin kullanıldığı ligandsız sonikasyon destekli sıvı faz mikroekstraksiyonuna (SA-LPME-HDES) dayalı doğru, basit ve verimli bir teknik geliştirmiştir. Prosedürün optimizasyonu BBD ile yapılmıştır. Optimum koşullar altında, Pb(II) ve Cd(II) için doğrusal aralıklar sırasıyla 0,8–350 (r²: 0,9962) ve 1,5–500 µg L⁻¹ (r²: 0,9937) idi. Bağlı standart sapmalar (N = 5, 10 µg L⁻¹) Pb (II) için %1,4 ve Cd (II) için %1,6 idi. Ayrıca tespit sınırları

(LOD) sırasıyla 0,24 ve 0,46 $\mu\text{g L}^{-1}$ olarak hesaplanmıştır. Optimizasyona ilişkin detaylar aşağıda verilmiştir.

Tablo 3. Pb(II) ve Cd(II)'nin ekstraksiyon geri kazanımı için Box-Behnken tasarımında değişkenlerinin sembolü ve seviyeleri

Değişkenler	Birim		Sembol	Seviyeler

SONUÇ

Artan nüfusla beraber gıda güvenliğinin ve kalitesinin sağlanması ve tüketici bilincinin oluşturulmasının yanı sıra, çevre ve sağlık endişelerini azaltmak için analitik prosedürlere duyulan ihtiyaç da artmaktadır. Fakat daha önceden de bahsettiğimiz gibi geliştirilen analitik prosedürler birtakım sorunları ortadan kaldırmayı amaçlarken çevre ve sağlık sorunu oluşturmamalıdır. Dolayısıyla, farklı kategorilerde çeşitli sorunlar teşkil eden ağır metallerin çözümü için Yeşil Analitik Kimya yaklaşımı oldukça önemlidir. Literatür çalışmalarından da görüldüğü gibi mikroekstraksiyon teknikleri klasik ekstraksiyon tekniklerinin yerini almış, başarılı ve avantajlı tekniklerdir. Kullanılan çözücü türü ve prosedürün genel bileşenleri hem analitik yöntemin verimini hem de yeşil doğasını belirlemede çok önemlidir. Özellikle yeşil karakteri artırması açısından çok değişkenli optimizasyon tekniklerinin rolü de büyüktür. Bu çalışmada ağır metallerin çevre ve sağlık üzerindeki zararlarından bahsederek, bu zararları minimize etmek için geliştirilecek analitik prosedürlerde kullanılan yöntemlerden bahsedilmiştir. Kullanılan bu yöntemlerle ilgili verilen bilgileri literatürdeki çoğu çalışmada dikkate alınan hususlarla ilgili olduğu için önemlidir. Bu bilgiler doğrultusunda okuyucular analitik kimyada ‘yeşil’ kavramı hakkında bilgi sahibi olabileceği gibi farklı analitlerin tayini için de bu bilgilerle genel değerlendirmeler yapabilecektir. Tüketici bilinci ve gıda güvenliği gibi önemli sorunlara çözüm bulmanın yanı sıra çalışmada ele alınan hususlar, yeni prosedürler geliştirecek araştırmacılara ışık tutması açısından da oldukça değerlidir.

TEŞEKKÜR

Mevcut çalışma, F-2024-717 kodlu araştırma projesi kapsamında Sivas Cumhuriyet Üniversitesi Bilimsel Araştırma Projeleri Komisyonu tarafından finansal olarak desteklenmiştir.

ÖZET

Kimyasal analizin en önemli aşamalarından biri örnek hazırlama aşamasıdır. Kompleks numune matrisleri analitin tayinine girişim yapabilecek türler içermektedir. Bu girişimi ortadan kaldırmak için analitin farklı bir ortama ayrılması ve zenginleştirilmesi gerekmektedir. Klasik ekstraksiyon tekniklerinde kullanılan yüksek miktardaki çözücüler ve numune miktarları, bilhassa çevre, sağlık ve maliyet açısından sorun teşkil etmektedir. Bu sorunlar daha minimal, çözücü ve örnek miktarlarının azaltıldığı, daha az toksik ve etkinliği yüksek mikroekstraksiyon teknikleriyle aşılmaktadır. Bu sayede daha yeşil analitik yöntemlerin geliştirilmesi de mümkün olmaktadır. Mikroekstraksiyon teknikleri sıvı faz mikroekstraksiyonu (LPME) ve katı faz mikroekstraksiyonu (SPME) olmak üzere iki başlık altında incelenmektedir. Bu mevcut çalışmada farklı mikroekstraksiyon teknikleri ilgili bilgiler okuyucuya aktarılacak ve farklı mikroekstraksiyon tekniklerinin kullanımını içeren literatürdeki çalışmalardan örnekler verilecektir.

Anahtar kelimeler: Mikroekstraksiyon Teknikleri, Yeşil Analitik Kimya, Örnek Hazırlama, Ayırma ve Zenginleştirme

ABSTRACT

One of the most important steps in chemical analysis is sample preparation. Complex sample matrices contain species that may interfere with the determination of the analyte. To eliminate this interference, the analyte must be separated and enriched in a different medium. The large amounts of solvents and sample quantities used in conventional extraction techniques are particularly problematic in terms of environment, health and cost. These problems can be overcome with more minimal, less toxic and highly efficient microextraction techniques that reduce the amount of solvent and sample. This makes it possible to develop greener analytical methods. Microextraction techniques are categorized under two headings: liquid phase microextraction (LPME) and solid phase microextraction (SPME). In this current study, information about different microextraction techniques will be provided to the reader and examples of studies in the literature involving the use of different microextraction techniques will be given.

Keywords: Microextraction Techniques, Green Analytical Chemistry, Sample Preparation, Separation and Enrichment

GİRİŞ

Analitik kimyada tayin etme süreci çok aşamalıdır. Temel amaç hedef analiti doğru ve güvenilir bir şekilde tayin etmek olsa da bu amaç birçok faktöre bağlıdır. Farklı örnek grupları çeşitli bileşenleri bünyelerinde barındırmaktadır. Her analitik kimyacının bildiği üzere bu örneklerin matrisleri genellikle kompleks yapıda ve oldukça karmaşıktır. Günümüzde çok gelişmiş analitik enstrümanların bulunmasına rağmen matris etkisini en aza indirmek için yine de bir miktar çaba içerisine girmek gerekmektedir. Bu çaba örnek hazırlama olarak adlandırılmakta ve genellikle hedef analitin matristen ayrılıp daha düşük bir hacme zenginleştirilmesini içermektedir. Ayırma ve zenginleştirme yöntemleri klasik ekstraksiyon teknikleri ve mikroekstraksiyon teknikleri olarak ikiye ayrılabilir. Mikroekstraksiyon teknikleri, klasik tekniklerin çok miktarda çözücü gerektirmesi, uygulanmalarının zor ve harcanması gereken enerji ihtiyacının fazla olması gibi dezavantajlarını ortadan kaldırmak amacıyla kullanılmaya başlanmış ve günümüzde de kullanımı revaçtadır. Mikroekstraksiyon teknikleri minimalist doğasıyla birçok avantaj sunmaktadır. Bu çalışmada farklı mikroekstraksiyon teknikleri incelenecek ve sağladıkları avantaj ve dezavantajlar okuyucuya sunulacaktır.

Mikroekstraksiyon Teknikleri

1990 yılında Arthur ve çalışma arkadaşı Pawliszyn tarafından araştırmacılarla buluşan katı faz mikroekstraksiyonu (SPME) [1] mikroekstraksiyon çalışmalarının önünü açmış ve ardından 1996'da Liu ve Daasgupta tarafından mikro damlacıklar kullanılarak yapılan sıvı faz mikroekstraksiyonu (LPME) araştırmacıların mikroekstraksiyon çalışmalarına eğilimi daha da artmıştır [2]. Mikroekstraksiyon tekniklerinde kullanılan çözücülerin hacimleri genelde mikrolitre seviyesindedir. Bu durum örnek miktarının da önemli miktarda azalmış olması demektir. Dolayısıyla, mikroekstraksiyon teknikleri daha kolay, minimal, enerjiden, zamandan ve maliyetten tasarruf sağlayan ve yüksek zenginleştirme kabiliyetine sahip yöntemler olarak karşımıza çıkmaktadır [3, 4].

Katı Faz Mikroekstraksiyonu

Katı faz mikroekstraksiyonu (SPME) basitçe, SPME enjektörü kullanılarak uygulanan bir tekniktir. Bu enjektör sabit faz kaplı bir erimiş silika fiberden oluşmaktadır. Enjektörün içerisinde yer alan bu fiber, enjektörün örnek ortamına yerleştirilmesi sonrası iğne ucundan dışarı çıkarılarak analiti ekstrakte eder. Ekstraksiyon sonrası analitlerin desorpsiyonu aşamasına geçilir. Bu aşamada analitler çözücü kullanarak manuel olarak elüe edilebileceği gibi, enjektör GC veya HPLC gibi analitik cihazların belirli bölmelerine yerleştirilerek de desorpsiyon gerçekleştirilebilir (Şekil 1.) [5, 6]. SPME'de fiber ticari olarak polidimetilsiloksan (PDMS), carbowax, polidivinilbenzen gibi farklı yapılar da üretilmektedir [7]. SPME, örnek hazırlamanın tüm adımlarını içerdiği gibi tayin etme adımıyla da birleştirilebilir. Bu anlamda kolaylık ve çabukluk anlamında oldukça avantajlıdır. Ayrıca çözücü içermemesi, HPLC ve GC gibi analitik cihazlarla uyumu ve birçok örnek gurubuna (çevresel, gıda, biyolojik) uygulanması gibi avantajları da mevcuttur. Fakat bazı fiber türleri kararsız yapıları, yüksek maliyetleri ve düşük tekrarlanabilirlikleriyle dezavantaj oluşturabilir [8, 9]. SPME tekniği Şekil 1'de gösterilmiştir.

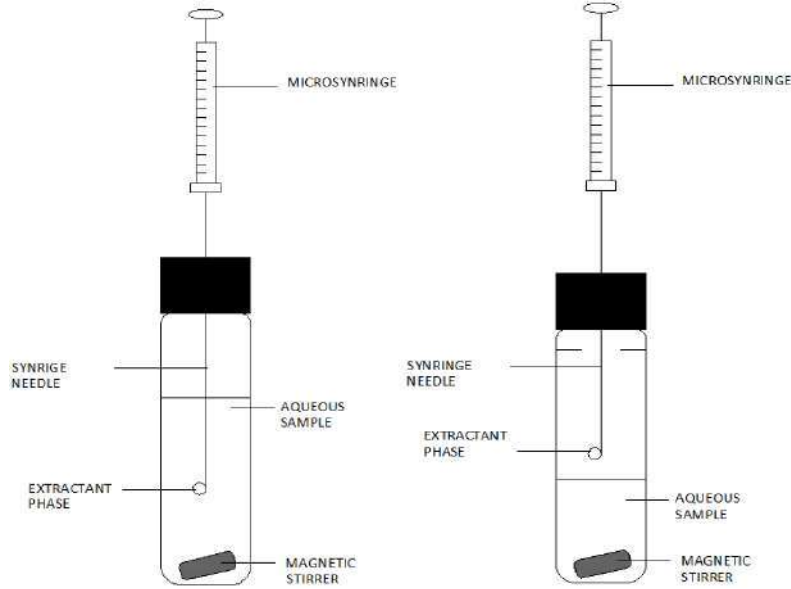

Şekil 1. SPME tekniği [10]

Sıvı Faz Mikroekstraksiyonu

Katı faz mikroekstraksiyonunun dezavantajlarını ortadan kaldırmak için alternatif olarak sıvı faz mikroekstraksiyonu (LPME) geliştirilmiştir. Sıvı-sıvı ekstraksiyondaki gibi büyük hacimlerdeki çözücülerin yerine burada mikrolitre düzeyinde çözücü kullanılmaktadır. LPME'nin temeli, analitlerin örnek matrisinden su ile karışmayan diğer bir faza alınarak ekstraksiyonun ve zenginleştirmenin gerçekleştirilmesidir. LPME genel olarak, tek damla mikroekstraksiyonu (SDME), dağıtıcı sıvı-sıvı mikroekstraksiyonu (DLLME), oyuk fiber sıvı faz mikroekstraksiyonu (HF-LPME) olmak üzere üç ana başlık altında incelenebilir.

Tek Damla Mikroekstraksiyonu

Tek damla mikroekstraksiyonunda (SDME) bu tekniğin adından da anlaşılacağı üzere, hedef analitler bir damla üzerine ekstrakte olurlar. Bu damla bir şırınganın ucunda oluşturulur ve sulu çözeltiliye daldırılır. SDME basit ekipmanlar gerektirdiğinden oldukça düşük maliyetli ve uygulanması kolay bir yöntemdir. Ayrıca ekstraksiyon çözücüsünün hacmi oldukça azdır. Bu bağlamda çevre ve sağlık açısından da olumludur. Ancak asılı kalan damla kolayca çözeltiliye düşebilir [1, 11]. SDME'de ekstrakte edilen analit HPLC ve GC gibi cihazlar yardımıyla tayin edilebilir [12]. SDME'de örnek çözeltisinin karıştırıldığı ve çözücü damlasının örnek içerisinde askıda bekletildiği teknik "doğrudan daldırma-asılı damla mikroekstraksiyonu (DI-SDME)" olarak, örnek çözeltisinin üstünde bir boşlukta asılı duran damlaya örnek çözeltisinin buharlaşmasıyla analitlerin ekstraksiyonuna dayanan yöntem ise tepede-asılı damla mikroekstraksiyonu (HS-SDME) adı verilir (Şekil 2.) [11, 13, 14].

Şekil 2. DI-SDME ve HS-SDME teknikleri [15]

Dağıtıcı Sıvı-Sıvı Mikroekstraksiyonu

Dağıtıcı sıvı-sıvı mikroekstraksiyonu (DLLME), örnek çözeltisi içerisine dağıtıcı çözücü ve bir ekstraksiyon çözücüsünün hızlı bir şekilde enjekte edildiği mikroekstraksiyon tekniğidir. Dağıtıcı çözücünün görevi ekstraksiyon çözücüsünü küçük damlacıklar halinde örnek çözeltisi içerisinde geniş bir alanda dağıtmaktır. Bu, analit ve ekstraksiyon çözücüsünün molekülleri için geniş bir etkileşim alanı sağlar ve sonuçta bulutlu bir çözelti meydana gelir. Bu çözelti santrifüjlendiğinde damlacıklar tüpün dibinde toplanır. Dipte toplanan ekstraksiyon fazı bir mikroenjektör yardımıyla toplanır ve uygun bir analitik teknik kullanılarak analit tayin edilir (Şekil 3). DLLME’de ekstraksiyon çözücüsü olarak sudan yoğun, su ile karışmayan çözücüler kullanılırken dağıtıcı çözücü olarak su ile karışabilen polar çözücüler kullanılır [16-19].

Şekil 3. DLLME yönteminin uygulaması [19]

Oyuk Fiber Sıvı Faz Mikroekstraksiyonu

Oyuk fiber sıvı faz mikroekstraksiyonu (HF-LPME), bir mikroenjektöre bağlı olan içi boş (oyuk) propilen fiberin içerisine düşük polariteli ekstraksiyon çözücüsünün (alıcı faz)

doldurulması ve bu fiberin örnek çözeltisine daldırılmasıyla uygulanmaktadır (Şekil 4). Hedef analitler fiberin içindeki alıcı faza ekstrakte edilir ve daha sonra analitler GC, HPLC gibi cihazlar kullanılarak tayin edilir. HF-LPME’de alıcı faz organik çözücünün kendisiyle doldurulursa ikili faz sistem, asidik veya bazik çözelti ile doldurulursa üçlü faz sistem olarak adlandırılır. HF-LPME basit, ucuz ve yüksek zenginleştirme faktörüne sahip bir tekniktir. Fiberin tek seferlik kullanımı deneyler arası kirliliğin önüne geçer. Fakat bazı biyolojik örneklerde matriksin fiberi tıkayabilmesi ve fiber yüzeyinde hava kabarcıklarının oluşmasıyla ekstraksiyon veriminin düşmesi gibi dezavantajlar söz konusu olabilir [19-22].

Şekil 4. HF-LPME tekniği

Mikroekstraksiyon Tekniklerinin Uygulamaları

SONUÇLAR

Bu çalışmada görüldüğü üzere, mikroekstraksiyon teknikleri kimyacılar için birçok açıdan avantaj sağlamaktadır. Çevre ve insan sağlığı üzerine duyulan endişeleri ortadan kaldırmak için gıda, ilaç, kozmetik ve çevresel numuneler gibi birçok numune analiz edilmekte ve bu numunelerden hedef analit tayin edilmektedir. Çevre ve insan sağlığı, analitik tayin sürecinde de gözetilmeli ve dikkat edilmelidir. Bu amaçla, kimyasal maruziyeti, maliyeti, çevresel riskleri ve harcanan zamanı minimize etmek için mikroekstraksiyon tekniklerinin kullanımına araştırmacılar tarafından yoğun ilgi oluşmuştur. Analitik tayin süreci dinamik yapıda olup süreklilik arz ettiği için mikroekstraksiyon tekniklerinin kullanımı, bu yöntemlerin daha da geliştirilmesiyle ve yeni yöntemlerin oluşturulmasıyla devam edecektir. Dolayısıyla, mevcut çalışmada genel

bağlamıyla yer alan bilgiler, analitik sürece katkı sağlamak, okuyucuyu bu konuyla ilgili aydınlatmak açısından oldukça önemlidir. Ayrıca verilen literatür örnekleri ve açıklamalar araştırmacılara için genel bir yol haritası oluşturması açısından önemli görülmektedir.

ABSTRACT

This study investigates the impact of adjusted savings, particularly in education expenditure (SAG), on adjusted net national income per capita (NNI). It also examines the influence of tax revenue (TAX) and rural population growth (RPG) on NNI and SAG, employing the Two-Stage Least Squares (2SLS) methodology to address potential endogeneity issues and draw causal inferences. The research utilizes yearly data from Thailand between 1972 and 2020, sourced from the World Bank database. The 2SLS approach, known for mitigating endogeneity problems in simultaneous equations, provides a robust framework for analyzing the complex relationships between the variables. The findings reveal that SAG does not directly impact NNI, but when instrumented to address endogeneity, it positively affects NNI. In addition, it found that RPG negatively affects SAG, suggesting that demographic changes influence national saving patterns. The results emphasize the need for policymakers to consider the multifaceted relationships between education expenditure, population dynamics, and economic growth when formulating development strategies.

Keywords: Education, net national income, Population Growth, Simultaneous Equations, Two-Stage Least Squares

INTRODUCTION

Introduction National income is a fundamental economic indicator that reflects the aggregate value of goods and services produced by a nation's residents over a specified period, typically a year. Expressed as Gross National Income (GNI) per capita, national income serves as a reliable metric for evaluating the economic health, living standards, and development level of a country (Bernabeé & Hobdell, 2010; Nolan, 2020). It plays a crucial role in economic planning and policy formulation, offering insights into a country's economic performance and acting as a benchmark for comparing living standards across countries (Helmy et al., 2016; Zubizarreta et al., 2016). GNI per capita is used by global institutions like the World Bank to classify countries into income groups, providing a framework for development strategies and policy decisions. The significance of national income extends beyond economic indicators. It acts as a pivotal measure in research, serving as an analytical tool that policymakers and economists rely on to understand economic dynamics.

Despite its utility, measuring national income has limitations, notably that it might not fully capture the welfare and well-being aspects of a population. For instance, GDP alone may inadequately reflect income distribution changes and public health implications across regions (Aitken, 2019). Researchers like Nolan (2020) emphasize that higher national incomes in wealthier countries do not necessarily correlate with improved household income levels or

sustainability. Moreover, GDP fails to account for environmental impacts or income inequalities that significantly affect societal health outcomes (Biggs et al., 2010). Thus, understanding these intricacies necessitates a comprehensive approach that combines multiple data dimensions and methodologies.

Understanding national income determinants presents numerous benefits. For policymakers, it allows for strategic allocation of resources and development of effective economic policies. For example, knowledge about how agricultural livelihoods impact rural household incomes significantly can guide resource distribution to support these communities (Dovie et al., 2005). Given the complexities inherent in an economy, an in-depth comprehension of national income determinants allows for a targeted approach to enhancing economic policies to support growth and development. These determinants include, e.g., consumption, investment, government spending, and net exports—integral components that govern economic functionality. The dynamics of these factors, seen through the lenses of different economic conditions and policies, elucidate how national income can be optimized to achieve broader socio-economic objectives (Aitken, 2019). Scholars have studied these determinants using various methodologies. Traditional methods like Keynesian economic theories emphasize demand-side factors, while classical approaches focus on supply-side elements. Contemporary research employs sophisticated econometric models, panel data analysis, input-output models, and computational simulations to explore these complex relationships (Biggs et al., 2010; Kohli, 2003). Studies, for instance, have shown how elements like health expenditure significantly affect GDP growth forecasts using models like the Adaptive Neuro-Fuzzy Inference System (Jakovljevic et al., 2016).

The motivation for this study stems from the need to explore alternative methodologies that address the limitations noted in traditional national income studies. The current research seeks to explore a more comprehensive model by employing the Two-Stage Least Squares (2SLS) methodology, renowned for mitigating endogeneity issues typical in regression models. This research focuses on Thailand's economy between 1972 and 2020. By integrating social determinants with economic indicators, this study provides a nuanced approach to analyzing economic complexities. Organization of the Remaining Sections are as follows. The Literature Review further elaborates on existing theoretical and empirical studies regarding national income determinants, setting the contextual background for this research. Following this, the Methodology section expounds on the Two-Stage Least Squares (2SLS) approach. This leads to the Results section. Thereafter, the paper presents Policy Implications, suggesting actionable strategies based on the study's insights, and Possible Areas for Future Research.

LITERATURE REVIEWS

Human Capital Theory is a key economic framework suggesting that investments in human beings, particularly through education and training, enhance productive capacities and contribute to increased economic output. This theory, developed by economists like Gary Becker and Theodore Schultz, posits that education cultivates skills, knowledge, and competencies, thereby improving an individual's productivity and mirroring how investments in physical capital, such as machinery, enhance industrial output (Hayek et al., 2015; Tan, 2014). Viewing education as an investment in future productivity and earnings potential, the theory underscores that higher levels of education typically result in improved employment opportunities and higher salaries (Sweetland, 1996). The theory emphasizes skill acquisition, enhancing contributions to economic activities, innovation, and societal development, suggesting a more educated workforce can elevate national economic performance through technological advancement and efficient management (Josan, 2019). Despite its influential role in shaping policies regarding education funding, workforce development, and labor market strategies, Human Capital Theory has faced criticisms. Some question the assumption that

human capital development directly correlates to increased pay due to enhanced performance, particularly in non-Western contexts (Hayek et al., 2015). Additionally, criticisms point to its narrow focus on economic goals, ignoring broader educational, social, and moral values (Gillies, 2011). Despite these challenges, Human Capital Theory remains relevant for exploring wage determination and career success (Preston, 1997), influencing organizational strategies and the development of knowledge economies (Bruderl et al., 1992; Josan, 2019). It remains crucial, however, to recognize its limitations, addressing social inequalities and fostering more responsibly motivated educational practices (Baptiste, 2001). By situating these investments within a broader societal context, Human Capital Theory continues to offer important insights into how education and skill development spur economic growth.

Endogenous Growth Theory is a pivotal economic model emphasizing the role of internal factors, particularly technological progress and human capital, in driving long-term economic growth (Barbier, 1999; Martin & Sunley, 1998). Unlike neoclassical growth models, which consider technological change as an exogenous factor, endogenous growth theory asserts that economic growth is primarily generated internally through deliberate investments in knowledge, innovation, and human capital. The theory highlights market imperfections and technological progress, framing their impact as a growth effect rather than just a level effect (Fine, 2000). A crucial aspect of Endogenous Growth Theory is the focus on knowledge spillovers, fostering innovation and entrepreneurship, where entrepreneurs convert knowledge into economically relevant applications that drive growth (Acs et al., 2008; Braunerhjelm et al., 2009). This internal generation of growth relies heavily on continuous investments in human capital and the strategic development of policies that bolster education, infrastructure, and innovation incentives, allowing economies to progress without significant impacts from diminishing returns (Audretsch & Keilbach, 2004). However, the theory has faced criticisms. Some argue that it has limited effectiveness in explaining global income disparities (Parente, 2001), and despite its theoretical insights, empirical confirmation remains constrained (Pack, 1994). Nonetheless, endogenous growth theory continues to influence economic policy significantly, encouraging governments to invest in research and development while creating environments supportive of innovation and entrepreneurship (Sredojević et al., 2016). Through strategic investment and policy choices, the theory provides a comprehensive framework for understanding sustainable economic development strategies within economies.

Public Finance Theory is a critical branch of economics that examines how government revenue collection and expenditure impact the economy, focusing on resource allocation and income distribution. Emerging as a distinct field in the late 19th century, the theory covers various aspects of public sector economics, including taxation, public expenditure, and fiscal federalism (Medema, 2023). Key components include the analysis of government revenue and taxation, exploring the structure and impact of different tax types on economic behavior, efficiency, and equity. The theory also delves into government expenditure and its influence on economic growth, resource distribution, and societal welfare. A foundational contribution to modern public finance came from Richard Musgrave, whose normative theory of the public household incorporated welfare theory to address market failures (Medema, 2023). This was complemented by James Buchanan's emphasis on the importance of expenditure theory, the benefit principle, and voluntary exchange, influenced by the Chicago School (Johnson, 2014). Public Finance Theory further examines public expenditure determinants and optimal public spending amidst unemployment, considering factors like the unemployment gap and multiplier effects (Michaillat & Saez, 2018; Ukwueze, 2015). Additionally, the theory explores public goods and externalities, emphasizing efficient resource allocation where private markets might fail and addressing externalities through regulation and incentives. It includes the analysis of income redistribution policies, aiming for societal equity through welfare programs and progressive taxation. The framework provided by Public Finance Theory is essential for

understanding governmental fiscal policies and addressing market failures, enhancing social welfare, and achieving equitable resource distribution (Jha, 2002). The theory continuously evolves to meet challenges, such as global public goods and the complexities of corporate taxation in a globalized economy, underscoring its relevance in contemporary economic policymaking (Abbott & Jones, 2011; Dissou et al., 2016).

National income is a multifaceted concept influenced by a variety of interconnected factors impacting economic performance at both macro and micro levels. A key determinant of national income is economic growth, often measured by Gross Domestic Product (GDP). Studies by Dempere et al. (2023) indicate that innovation substantially contributes to GDP, highlighting the critical role of technological advancements in boosting economic productivity. Similarly, Beylik et al. (2022) reveal a positive relationship between health expenditures and economic growth in OECD countries, demonstrating that investments in healthcare can enhance workforce productivity, thereby influencing national income positively. However, the relationship between national income and its influencing factors is not always linear. As illustrated by Seenivasan et al. (2023), there exists an inverted-U shaped link between GDP per capita and the double burden of malnutrition (DBM) in national adult populations, suggesting complexity in economic and health dynamics. This relationship indicates that as countries' income levels grow, they might initially encounter increasing DBM levels, which subsequently decrease with further economic development. Beyond innovation and healthcare, national income is affected by trade openness, foreign direct investment, and labor force participation. These elements underscore the importance of global interconnectedness and human capital in shaping economic outcomes (Beylik et al., 2022; Dempere et al., 2023; Gonzalez et al., 2022). Additionally, environmental factors, such as CO₂ emissions and energy consumption patterns, also contribute to national income, influencing both economic sustainability and environmental health (Chen, 2022; Yumashev et al., 2020). The interplay of these factors necessitates a comprehensive understanding for policymakers aiming to craft strategies for sustained economic growth and sustainable development. Balancing economic objectives with social and environmental responsibilities becomes crucial in advancing national income while ensuring long-term economic sustainability and societal welfare.

National saving is a complex phenomenon influenced by an intricate interplay of economic, demographic, and psychological factors. The demographic composition of a nation, particularly the age structure, significantly affects saving rates. For example, Japan's demographic trend demonstrates how an increasing ratio of aged individuals to the working-age population can result in a sharp decline in saving rates (Horioka, 2007). This highlights the importance of understanding population dynamics when assessing national saving behaviors. Economic variables equally play a critical role in determining saving rates. Factors such as income level, growth rate, wealth, unemployment rate, and inflation shape individual and collective saving behaviors (Horioka, 2007). A higher income level and economic growth typically enhance individuals' ability to save, whereas high unemployment and inflation may impede saving capacity due to economic instability and reduced purchasing power. Government policies further influence national saving, though their effects can be dual-faceted. For instance, while tax-favored savings accounts like Individual Retirement Accounts (IRAs) might not significantly boost national saving (Attanasio & Deleire, 2002), policies promoting energy-saving behaviors, supported by government subsidies, can indirectly enhance national saving (Hong et al., 2019). Such policies illustrate the complex interaction between fiscal measures and personal saving behavior, where both direct and indirect impacts must be considered. Moreover, external factors like the quality of energy-saving products and individual values shape energy-saving behaviors, which subsequently affect national saving levels (Zhang et al., 2018). This suggests that subjective factors and consumer preferences are crucial elements in the discussion on national saving, particularly concerning sustainable and responsible

consumption patterns. National saving is influenced by a multifaceted array of factors, including population demographics, economic conditions, government policies, and individual behaviors. Policymakers aiming to promote sustainable development and economic growth must recognize these determinants. Future research should delve deeper into understanding the intricate relationships among these factors and their collective impact on national saving rates (Hess, 2010; Lunt & Livingstone, 1991). This comprehensive approach is essential for crafting effective policies that support robust national saving strategies essential for long-term economic stability and growth.

METHODOLOGY

Two-Stage Least Squares (2SLS) is an instrumental variable estimation technique commonly used in econometrics to address endogeneity issues in regression models. It is particularly useful when dealing with simultaneous equations or when there are concerns about reverse causality or omitted variable bias. The 2SLS method involves two stages of estimation. In the first stage, the endogenous variable is regressed on the instrumental variables and other exogenous variables. In the second stage, the predicted values from the first stage are used as instruments in the main regression equation. This approach helps to isolate the exogenous variation in the endogenous variable, allowing for consistent estimation of the causal effects (Mogstad et al., 2021). 2SLS has been applied in various fields of research. For instance, it has been used to study the relationship between air pollution and female labor supply in China (Gu et al., 2020), the impact of board gender diversity on firms' carbon performance in European companies (Nuber & Velte, 2021), and the effects of Environmental, Social, and Governance (ESG) factors on firm performance in Pakistan (Rahman et al., 2023). To apply this 2SLS, this study proposes following simultaneous equation model:

$$\text{NNI} = a_1 + a_2\text{SAG} + a_3\text{TAX}$$

$$\text{SAG} = a_4 + a_5\text{RPG} + a_6\text{URP} + a_7\text{TAX}$$

where NNI is Adjusted net national income per capita. SAG denotes Adjusted savings, education expenditure (% of GNI). RPG represent Rural population growth (annual %). URP is Urban population (% of total population). TAX stand for Tax revenue (current LCU). This research utilizes Thailand yearly data between 1972 and 2020 download from World Bank database and analyze by Two-Stage Least Squares method.

RESULT

This section presents the key findings from the correlation analysis and regression models by OLS and 2SLS methods. Table 1 shows descriptive statistics.

Table 1 Descriptive statistics

Variable	Mean	Std. dev.	Min	Max
NNI	2,169.0140	1,705.5400	191.5786	6,082.0000
SAG	3.2181	0.9033	1.6000	4.7900
RPG	0.2616	1.2925	- 1.8221	2.1238
TAX	8,605.2330	8,102.7780	187.8100	24,751.7300
URP	34.0300	8.7201	22.0060	51.4300

Table 2 Correlation analysis

	NNI	SAG	RPG	TAX	URP
NNI	1.0000				
SAG	0.6166	1.0000			
RPG	- 0.8294	- 0.8048	1.0000		
TAX	0.9844	0.6738	- 0.8687	1.0000	
URP	0.9760	0.6847	- 0.8880	0.9875	1.0000

Table 2 show, e.g., that the correlation between NNI and SAG is a moderate positive correlation of 0.6166. In contrast, NNI exhibits a strong negative correlation with RPG at -0.8294 and a very strong positive correlation with TAX (0.9844) and URP (0.9760). SAG also shows a substantial negative correlation with RPG (-0.8048), indicating an inverse relationship. Figure 1 shows time series data of variables.

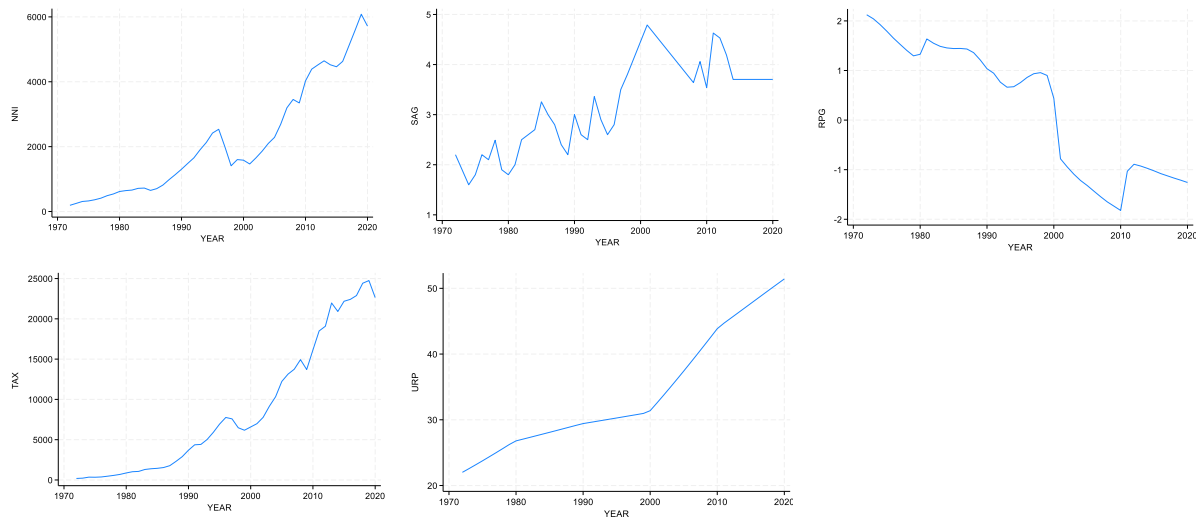

Figure 1 Time series data of variables

Table 3 Full regression model estimation of factors affect NNI

Variable	Coefficient	Std. err.	t	P> t	95% LB	95% UB
SAG	- 114.7770	75.8252	- 1.5100	0.1370	- 267.5927	38.0387
RPG	117.5330	84.5205	1.3900	0.1710	- 52.8069	287.8730
TAX	0.1668	0.0318	5.2500	0.0000	- 0.1028	0.2309
URP	61.4237	31.8963	1.9300	0.0610	- 2.8591	125.7066
_cons	-1,018.2810	901.8410	- 1.1300	0.2650	-2,835.8220	799.2606
F (4, 44)	435.9400		Adj R ²	0.9732		
Prob > F	0.0000		Root MSE	279.4700		
R ²	0.9754					

Table 3 reveals that the impact of adjusted savings education expenditure (SAG) on adjusted net national income per capita (NNI) is not statistically significant. This means that changes in SAG do not appear to reliably predict changes in NNI within this model. However, tax revenue (TAX) does show a significant positive relationship to NNI, indicating that increases in tax revenue are associated with increases in per capita national income. While the effect of rural population growth (RPG) and urban population (URP) are not statistically significant.

Table 4 Regression model estimation of factors affect SAG

Variable	Coefficient	Std. err.	t	P> t	95% LB	95% UB
TAX	0.0000	0.0001	0.3800	0.7030	- 0.0001	0.0001

_cons	4.4577	1.6438	2.7100	0.0090	1.1470	7.7684
F(3, 45)	28.2500		Adj R ²	0.6300		
Prob > F	0.0000		RMSE	0.5494		
R ²	0.6531					

Table 5 Simultaneous model estimation of factors affect NNI by 2SLS

Variable	Coefficient	Std. err.	t	P> t	95% LB	95% UB
SAG_hat1	0.6655	0.2553	2.6100	0.0120	0.1515	1.1795
TAX	0.0693	0.0532	1.3000	0.1990	-0.0377	0.1763
_cons	129.1178	115.3723	1.1200	0.2690	-03.1146	361.3503
F(2, 46)	829.0600		Adj R ²	0.9718		
Prob > F	0.0000		RMSE	286.2400		
R ²	0.9730					

Table 4 illustrates the SAG regression model, featuring coefficients for TAX, RPG, and URP. TAX demonstrates no significant impact (coefficient = 0.0000, p = 0.7030), while RPG has a significant negative effect (coefficient = -0.6563, p < 0.0001).

Table 5 presents a simultaneous model estimation using two-stage least squares (2SLS). SAG_hat1 is significantly positively impact on NNI (coefficient = 0.6655, p = 0.0120). TAX’s impact is insignificant (coefficient = 0.0693, p = 0.1990).

When comparing between Table 5 to Table 3, it found that Table 3 shows insignificant impact of SAG on NNI, while Table 6 highlights a significant effect of SAG_hat1. Therefore, it can be conclude based on the result from TSLS that RPG negatively affect SAG which in turn positively affect NNI.

DISCUSSION

The full regression model analysis reveals that adjusted savings education expenditure (SAG) does not have a statistically significant impact on NNI within this model, which is somewhat surprising given the critical role education and human capital play in promoting economic productivity. However, using two-stage least squares (2SLS) regression, the findings suggest that SAG, when adjusted for potential endogenous factors (SAG_hat1), significantly impacts NNI. This outcome aligns with Human Capital Theory, as highlighted by scholars such as Becker and Schultz, who have long advocated the view that investments in education increase

human capital, thereby boosting economic productivity (Hayek et al., 2015). This illustrates that, while initial analyses may not detect these effects, more nuanced econometric techniques can reveal the underlying significance, thus supporting the broader theories of human capital's impact on economic outcomes. Additionally, the findings indicate a negative impact of rural population growth (RPG) on SAG, which, in turn, positively affects NNI. This negative relationship between RPG and SAG is consistent with literature suggesting that demographic changes, such as rural-urban migration, can influence national saving patterns and economic outcomes, as discussed by Horioka (2007). Understanding this dynamic is crucial for policymakers when considering sustainable development strategies and the role of demographic shifts in shaping economic growth.

POLICY IMPLEMENTATION

The findings from this study carry vital policy implications, particularly emphasizing the intricacies of adjusted savings in education expenditure (SAG) in economic growth. Policymakers should prioritize aligning educational funding with broader economic development strategies, recognizing the latent potential revealed through nuanced econometric analysis. The significant relationship between SAG and national income underscores the need for targeted investments in human capital that directly contribute to enhancing productivity and economic outcomes. Additionally, the observed negative impact of rural population growth on SAG suggests a need for demographic-based policy planning, addressing the economic implications of rural-urban migration.

CONCLUSION

Gross National Income offering insight into a nation's economic performance and living standards. Recognizing the importance of traditional national income measurements, the study aimed to investigate its determinants by employing the Two-Stage Least Squares (2SLS) regression approach and Thailand's economic data from 1972 to 2020, sourced from the World Bank. Results revealed that while adjusted savings education expenditure (SAG) did not initially show a statistically significant impact on net national income (NNI) when analyzed through ordinary regression techniques, the application of 2SLS uncovered a significant impact of SAG when adjusted for endogeneity. This affirms Human Capital Theory's assertion of the transformative potential of investments in education on economic productivity. Additionally, findings identified a negative influence of rural population growth on SAG, which subsequently impacts national income positively. Building from these findings, policymakers should consider aligning educational investments with economic development strategies, maximizing the productive capacity of human capital. The nuanced relation between demographic changes and economic outcomes also calls for strategic planning to manage rural-urban migration effectively, ensuring balanced regional development and economic growth.

ABSTRACT

This study investigates the interaction of terms of trade adjustments among four Southeast Asian economies, namely Indonesia, Singapore, Malaysia, and Thailand. The objective is to analyze the interdependencies using a Bayesian Vector Autoregression (BVAR) model. We use World Bank data spanning 1972–2020 to examine how trade terms influence each other across these nations. Our findings reveal significant cross-border effects, suggesting strong interdependencies in their trade relationships. The analysis highlights the substantial impact of external shocks, particularly highlighting Singapore's influence on Thailand's economic structure. This recognition is vital for policymakers seeking to enhance Thailand's trade resilience and economic stability.

Keywords: Terms of Trade, BVAR, Southeast Asia, Thailand

INTRODUCTION

Terms of Trade (ToT) serve as a pivotal concept in international economics, representing the ratio of the prices at which a country sells its exports to the prices it pays for its imports. This measure is fundamental as it directly influences a nation's economic welfare, impacting its ability to participate advantageously in global markets. A favorable terms of trade means that a country can import more for a given quantity of exports, thereby enhancing its standard of living and economic health. The importance of ToT extends to various macroeconomic outcomes, including real exchange rates, trade balances, and economic growth, as evidenced in numerous studies. For example, Mendoza (1995) highlighted that terms-of-trade shocks can account for nearly half of the actual GDP variability in certain economies. Similarly, Diboğlu and Aleisa (2004) demonstrated how these shocks affect critical economic indicators such as price levels and real exchange rates, which can, in turn, influence output levels.

The understanding of ToT is further complicated by findings like those of Mendoza (1995), who observed relatively weak correlations between net exports and terms of trade. This phenomenon, referred to as the Harberger, Laursen, and Metzler effect, suggests that traditional models may not fully capture the nuanced dynamics at play. Thus, sophisticated models such as the gravity model of international trade have been advanced to explore these complexities, emphasizing economic size and distance between trading partners as key determinants (Bergeijk, 2010). This model underscores the necessity of understanding ToT in explaining and predicting bilateral trade flows and economic adjustments.

Recognizing the factors that influence ToT provides several advantages. For policymakers, businesses, and economists, this understanding enables enhanced economic planning, risk management, and adaptation to technological and environmental changes. Insights from ToT can improve forecasting and strategic decision-making. For instance, Nguyen et al. (2024) highlighted how climate change, a major determinant of agricultural productivity, can alter trade positions. Such knowledge aids in formulating trade policies and economic strategies to navigate anticipated changes. Risk management is another crucial area. Firms can better manage international trade risks by understanding ToT determinants.

Scholars have employed diverse methodologies to explore the determinants of ToT. Ketenci and Uz (2010) used the autoregressive distributive lag (ARDL) approach to examine the effects of currency depreciation and income on bilateral trade. Xu (2002) adopted a two-country, two-factor, continuum-good model to investigate tariff impacts on factor prices via the boundary between traded and non-traded goods, demonstrating that tariff reductions predominantly drive export expansion, thus influencing relative factor demand. These approaches emphasize the multifaceted nature of ToT and its intricate connection to trade dynamics, underscoring the necessity of nuanced models to fully understand and predict these economic phenomena.

Existing research often highlights the complexity and multifaceted nature of ToT influences, however practical challenges and unresolved questions remain, particularly regarding the comprehensive integration of various macroeconomic and microeconomic factors and their dynamic interactions over time. These gaps necessitate a robust methodological framework capable of incorporating prior knowledge and uncertainty, to enhance the predictive accuracy and explanatory power of trade models. The current research seeks to address the complexities and gaps identified in understanding the factors affecting Terms of Trade by employing a Bayesian Vector Autoregression (BVAR) methodology. By utilizing a model that can incorporate historical data and probabilistic forecasts, this research advances the understanding of terms of trade dynamics and adds to the existing body of work by demonstrating the BVAR model's effectiveness in a novel context. The remaining sections of this research paper are organized as follows. The Literature Review will explore relevant studies on Terms of Trade, delineating the theoretical and empirical advancements in the field. Following this, the Data and Methodology section will detail the data sources, variables, and BVAR modeling approach. This leads to the Results section. Thereafter, the paper presents Policy Implications, suggesting actionable strategies based on the study's insights, and Possible Areas for Future Research.

LITERATURE REVIEW

The Theory of Absolute Advantage, introduced by Adam Smith in "The Wealth of Nations" (1776), marks a significant departure from the mercantilist practices of his time, which emphasized the accumulation of precious metals and maintaining trade surpluses. Smith proposed that nations benefit from trade by focusing on producing goods more efficiently than others, thereby maximizing production resources and enhancing global output (Dore et al., 2004). He articulated that a country holds an absolute advantage if it can produce a good using fewer inputs or at a lower cost than other countries, advocating for specialization in such industries to improve productivity and innovation. Smith's insights underscore the benefits of open markets and competition, pressing for trade governed by natural efficiencies rather than protectionist policies. However, Schumacher (2012) notes that modern textbooks often misinterpret Smith's original theory, casting him inaccurately as a precursor to neoclassical trade theory. This highlights the necessity of revisiting original sources for a true understanding of historical economic theories. While the Theory of Absolute Advantage remains a cornerstone in international trade, its modern application has evolved. Present-day theories, such as the resource-advantage theory, integrate Smith's principles with considerations of resource allocation and competitive dynamics within social structures (Hunt & Arnett, 2003; Hunt,

1995). These advancements reflect the continued pertinence of Smith's ideas, stressing the need for a nuanced understanding of competitive advantage in the contemporary global economy.

The Theory of Comparative Advantage, introduced by David Ricardo in the early 19th century, remains a foundational pillar of international trade economics. Ricardo's theory builds upon Adam Smith's concept of Absolute Advantage by explaining that countries can benefit from trade even if they are less efficient in producing all goods. This is due to comparative advantage, which occurs when a country can produce a good at a lower opportunity cost relative to other countries (Deardorff, 2005). The opportunity cost refers to the value of the best alternative forgone to produce an additional unit of a given product. Ricardo illustrated this with an example where even if a country is less efficient at producing both wheat and wine compared to another, it should still specialize in the good for which it has the lowest opportunity cost and trade for the other good, thereby enhancing total global production and fostering beneficial trade relationships. The theory has been expanded to include multiple goods, countries, and factors of production. It extends beyond technological differences to consider factors such as endowments, wealth, and financial market imperfections in explaining trade patterns (Findlay, 1970; Wynne, 2005). Despite its central role in modern trade policy, the theory faces critiques, particularly concerning its applicability to developing economies that aim to acquire future advantages in high-tech sectors (Redding, 1999). Furthermore, it has been integrated with concepts of competitive advantage to provide a more rounded framework for analyzing international market success (Gupta, 2014). While some studies suggest limitations in specializing solely according to existing comparative advantages, particularly for long-term strategic economic positioning, the theory remains a crucial tool for understanding international trade dynamics and policy implications. Its insights continue to influence economic curricula and policy-making discussions, underpinning why nations engage in trade and how they derive benefits from such engagements (Costinot, 2009; Deardorff, 2005).

Terms of trade, a vital concept in international economics, refer to the relative prices of a country's exports compared to its imports. A favorable term of trade implies that a country can purchase more imports for a given quantity of exports, thus enhancing its economic welfare. Various factors, as highlighted in the literature, play a significant role in shaping these terms. The imposition of tariffs and changes in trade policies can substantially affect a country's terms of trade. For instance, economic crises can constrain trade finance, sharply contracting export and import volumes and deteriorating terms of trade (Ronci, 2004). Trade liberalization, through tariff reductions and simplification of non-tariff measures, usually expands trade sets (Xu, 2002; Hoque & Yusop, 2009). Geopolitical events can disrupt energy trade, affecting prices and terms of trade. For instance, geopolitical risks have a pronounced negative impact on energy exports and imports, altering trade dynamics (Li et al., 2021). Also, strong institutional quality can mitigate adverse impacts of import trade, enhancing the economic growth derived from export trade (Omoke & Opuala-Charles, 2021). Structural dynamics, like a country's position in the industry chain and production capabilities, also affect the terms of trade. For example, countries with advanced positions in the production chain may wield greater pricing power in international markets (Zheng et al., 2022). In addition, exchange rate volatility significantly impacts trade flows and terms of trade by altering relative prices and competitiveness (Iqbal et al., 2023). Furthermore, the rise of digital service trade presents new dynamics; with exports in this sector positively influencing labor income share, indicating an improvement in terms of trade for countries with robust digital infrastructures (Yeerken & Deng, 2023). Increased tariffs can lead to reduced trade volumes and economic growth, as seen in the US-China trade tensions (Nantembelele et al., 2023).

The terms of trade are determined by a complex interplay of trade policies, geopolitical risks, exchange rate fluctuations, digital trade expansion, and structural as well as institutional factors.

Policymakers must consider these dynamics to formulate strategies that enhance a nation's economic position and manage fluctuations in global trade environments effectively.

METHODOLOGY

Bayesian Vector Autoregression (BVAR) is an advanced statistical technique used for economic forecasting and analysis. It combines the Vector Autoregression (VAR) approach with Bayesian methods, allowing for the incorporation of prior knowledge and uncertainty in the model (Litterman, 1986; Litterman, 1986). BVAR has demonstrated considerable success in forecasting macroeconomic and regional economic variables, proving to be as accurate as forecasts produced by leading commercial services (Litterman, 1986; Spencer, 1993). BVAR models have been applied to various economic forecasting scenarios. They have been used to predict unemployment rates, nonagricultural employment, real personal income, and housing permits (Dua & Ray, 1995). In regional economics, BVAR has shown promise in forecasting state-level economic variables, often outperforming other techniques like ARIMA and transfer function models (Kinal & Ratner, 1986). Additionally, BVAR has been employed to forecast energy demand and supply, with the inclusion of global Economic Policy Uncertainty (EPU) index enhancing its predictive power for energy demand (Rakpho & Yamaka, 2021). In this study this model can be expressed as follows:

$$\begin{pmatrix} IDN \\ SGP \\ MYS \\ M \\ THA \end{pmatrix} = \begin{pmatrix} a_{0,1} \\ a_{0,2} \\ a_{0,3} \\ a_{0,4} \end{pmatrix} + \begin{pmatrix} a_{1,11} & a_{1,12} & a_{1,13} & a_{1,14} \\ a_{1,21} & a_{1,22} & a_{1,23} & a_{1,24} \\ a_{1,31} & a_{1,32} & a_{1,33} & a_{1,34} \\ a_{1,41} & a_{1,42} & a_{1,43} & a_{1,44} \end{pmatrix} \begin{pmatrix} IDN_{t-1} \\ SGP_{t-1} \\ MYS_{t-1} \\ THA_{t-1} \end{pmatrix} + \begin{pmatrix} u_{IDN,t} \\ u_{SGP,t} \\ u_{MYS,t} \\ u_{THA,t} \end{pmatrix}$$

Each equation within this model can be expanded to show the individual relationships:

$$\begin{aligned} IDN_t &= a_{0,1} + a_{1,11}IDN_{t-1} + a_{1,12}SGP_{t-1} + a_{1,13}MYS_{t-1} + a_{1,14}THA_{t-1} + u_{IDN,t} \\ SGP_t &= a_{0,2} + a_{1,21}IDN_{t-1} + a_{1,22}SGP_{t-1} + a_{1,23}MYS_{t-1} + a_{1,24}THA_{t-1} + u_{SGP,t} \\ MYS_t &= a_{0,3} + a_{1,31}IDN_{t-1} + a_{1,32}SGP_{t-1} + a_{1,33}MYS_{t-1} + a_{1,34}THA_{t-1} + u_{MYS,t} \\ THA_t &= a_{0,4} + a_{1,41}IDN_{t-1} + a_{1,42}SGP_{t-1} + a_{1,43}MYS_{t-1} + a_{1,44}THA_{t-1} + u_{THA,t} \end{aligned}$$

where IDN(X1) is Indonesia Terms of trade adjustment (constant LCU), SGP(X2) denotes Singapore Terms of trade adjustment (constant LCU). MYS(X3) represents Malaysia Terms of trade adjustment (constant LCU). THA(X4) stands for Thailand Terms of trade adjustment (constant LCU). The analysis uses yearly data from 1972 to 2020, downloaded from the World Bank database, for model estimation.

RESULT AND DISCUSSION

This section presents the findings, analyzing the interrelationships among key economic sectors in Thailand. Table 1 shows descriptive statistics, and Figure 1 expresses the time Series of variables

Table 1 Descriptive statistics

Variable	Mean	Std. dev.	Min	Max
IDN	3.56E+12	1.25E+14	-2.8E+14	2.6E+14
SGP	-5.2E+08	5.33E+09	-1.5E+10	1.51E+10
MYS	-1.4E+10	2.04E+10	-5.4E+10	3.04E+10
THA	1.26E+11	1.8E+11	-1.4E+11	6.71E+11

Table 2 Correlation matrix

	IDN	SGP	MYS	THA
IDN	1.0000			
SGP	-0.0365 (p=0.8034)	1.0000		
MYS	-0.5548 (p=0.0000)	-0.1410 (p=0.3337)	1.0000	
THA	-0.3010 (p=0.0356)	0.6693 (p=0.0000)	0.0624 (p=0.6703)	1.0000

Table 2 displays the correlation matrix for trade variables among Indonesia (IDN), Singapore (SGP), Malaysia (MYS), and Thailand (THA). The correlation coefficients range from -0.5548 between MYS and IDN, indicating a strong negative relationship, to 0.6693 between SGP and THA, suggesting a strong positive correlation. For SGP, the correlation with IDN is negligible at -0.0365, while the p-value indicates it's not statistically significant ($p = 0.8034$). The relationship between MYS and SGP is also not significant ($p = 0.3337$). THA exhibits a significant negative correlation with both IDN (-0.3010 , $p = 0.0356$) and a strong positive correlation with SGP. Overall, the correlations illustrate varying degrees of interdependence among the countries, with MYS and IDN displaying the most pronounced negative correlation. Figure 1 shows Correlation matrix and Figure 2 shows Time Series of variables.

Figure 2 Time Series of variables

Table 3 Model summary

Metric	Value
MCMC iterations	12,500
Burn-in	2,500
MCMC sample size	10,000
Acceptance rate	1
Efficiency (min)	.9523
Efficiency (avg)	.9954
Efficiency (max)	1

Table 3 provides a summary of the model metrics related to the Markov Chain Monte Carlo (MCMC) analysis. A total of 12,500 MCMC iterations were conducted, with a burn-in period of 2,500 iterations to ensure the model's convergence. The MCMC sample size was determined to be 10,000. The model achieved an acceptance rate of 1, indicating that all proposed samples were accepted, which is optimal for ensuring the reliability of results. Efficiency metrics highlight the model's performance, with a minimum efficiency of 0.9523, an average efficiency of 0.9954, and a maximum efficiency of 1.

Table 4 shows that for Indonesia (IDN), the first lag (L1) has a mean of 0.8801 and a standard deviation of 0.1502, indicating a strong positive influence, while the second lag (L2) has a mean of -0.1653 with a standard deviation of 0.1550, suggesting a negative impact. The median for IDN L1 aligns closely with its mean, while IDN L2 shows slight deviation. The 95% confidence intervals highlight the potential value ranges, reinforcing IDN L1's significant role. Singapore (SGP) L1 has a mean of -4.4679 and a broader confidence interval, indicating greater uncertainty in its estimates. In contrast, Malaysia (MYS) L1 exhibits a mean of 2.4760, suggesting a strong positive correlation. Thailand (THA) shows positive predictive power with mean estimates of 0.8425 for THA L1 and 0.2128 for THA L2. Table 5 summarizes the stability analysis.

Figure 3 Impulse response analysis

Table 6 Variance decomposition

Step	impulse IDN, and response THA	impulse SGP, and response THA	impulse MYS, and response THA
0	0.0000	0.0000	0.0000
1	- 0.0001	-12.0108	3.0819
2	- 0.0007	-10.5277	3.5765
3	- 0.0006	-15.4060	- 0.2138
4	- 0.0002	-23.5159	- 1.2701
5	- 0.0002	-22.4420	- 2.5875
6	- 0.0001	-16.1687	- 3.0647
7	0.0000	- 8.1010	- 0.7853
8	0.0000	2.6524	1.8025

Table 6 presents the variance decomposition results for the impulse responses of Thailand (THA) to shocks from Indonesia (IDN), Singapore (SGP), and Malaysia (MYS) over eight steps. At step 0, all impulses register at 0.0000, indicating no initial influence. By step 1, the impulse from SGP shows a considerable response of -12.0108 in THA, highlighting a significant negative effect. As the steps progress, the impulse from SGP continues to fluctuate, reaching its lowest impact at -23.5159 by step 4, before slightly recovering to -16.1687 by step 7. Conversely, the impulse from IDN remains relatively minor throughout, with responses mostly hovering around -0.0001 to -0.0002, reflecting limited influence on THA's variance. MYS's impact shows variability as well, with a maximum response of 3.0819 at step 1, decreasing to 0.7853 by step 8. The findings indicate that SGP has the most pronounced effect on THA's variance over time, while IDN and MYS show considerably less influence. Figure 4 shows Forecast of THA.

Figure 4 Forecast THA

The insights offered by analyzing the BVAR model estimation results, particularly regarding the influence of lagged variables. For instance, the positive and significant lagged values of Indonesian trade variables suggest robust predictive power and support the notion of stable economic influence. The variance decomposition reinforces the complexity of global trade dynamics in Thailand’s context. The study finds that the impulses from Singapore considerably impact Thailand’s economic structure, fluctuating significantly over the analysis period. This aligns with the scholarly work by Schumacher (2012) and others who emphasize the interconnectedness of national economies in a globalized world. The variance decomposition

analysis indicates that external shocks play a substantial role in shaping Thailand's trade outcomes, which is consistent with the theories underlining the susceptibility of terms of trade to geopolitical events and global market conditions (Li et al., 2021).

POLICY IMPLEMENTATION

The analysis of the BVAR highlights the substantial impact that external shocks, particularly from Singapore. Recognizing this interdependence is crucial for policymakers aiming to enhance Thailand's trade resilience and economic stability. Policymakers should consider strengthening bilateral trade agreements and expanding economic partnerships with key regional players. Additionally, diversifying Thailand's export markets and enhancing domestic production capacities could mitigate the risks associated with excessive reliance on specific trade partners.

CONCLUSION

This research examined the terms of trade interaction within four Southeast Asian economies, namely Indonesia, Singapore, Malaysia, and Thailand, utilizing World Bank data from 1972 to 2020. Through Bayesian Vector Autoregression (BVAR) analysis, we investigated how trade terms interact across these nations. Our findings revealed that while the individual impacts of terms of trade adjustments vary, there are significant cross-border effects among these countries, suggesting interdependencies in their trade relationships. Our analysis highlighted the substantial impact of external shocks, particularly those originating from Singapore, on Thailand's terms of trade. Recognizing this interdependence is crucial for policymakers seeking to enhance Thailand's trade resilience and economic stability. Policymakers should consider strengthening bilateral trade agreements, expanding economic partnerships with key regional players, diversifying Thailand's export markets, and enhancing domestic production capacities to mitigate the risks associated with excessive reliance on specific trade partners.

Thailand

Abstract

This study explores the factors affecting inflation in Thailand, with a focus on analyzing the impact of the Crop Production Index, Food Production Index, Government Final Consumption Expenditure, and Interest Payments on the Consumer Price Index, which is a vital gauge of inflation. This study utilize data from 1972 to 2020 obtained from the World Bank and Bayesian Regression analysis to examine their connections. The findings reveal that Interest Payments and government spending are negatively related with inflation, whereas production activities display a positive relationship. Consequently, enhancing agricultural productivity and adopting a balanced monetary policy approach are recommended for managing inflation effectively.

Keywords: inflation, crop production index, food production index, government final consumption expenditure, interest payments, Bayesian Regression

Introduction

Inflation is a phenomenon that describes the sustained increase in the price level of goods and services in an economy, leading to a decline in the purchasing power of money. This economic variable has significant implications both at a micro and macroeconomic level, impacting everything from individual household budgets to national fiscal policies. Its pervasive nature makes understanding inflation crucial not only for government policymakers but also for businesses and consumers, who must navigate the changing economic landscape.

The significance of inflation lies in its ability to influence economic activity. Rising inflation can erode consumer purchasing power, leading individuals to adjust their spending behaviors, which in turn affects demand for goods and services. This dynamic eventually influences production, employment, and investment decisions. Moreover, inflationary environments can complicate monetary policy implementation, as central banks must balance between curbing inflation and fostering economic growth. Inflation also has the potential to affect the valuation of financial assets, whereby changes in the price level influence interest rates, and by extension, the cost of borrowing and the valuation of stocks and bonds.

Understanding the drivers of inflation offers several benefits. It equips policymakers with the knowledge to design effective monetary policies aimed at controlling excessive inflation or deflation. Also, it allows investors to develop mitigation strategies to protect the value of their portfolios against inflationary pressures. The capacity to anticipate inflationary trends can also provide businesses with a competitive advantage, enabling them to make informed pricing, sourcing, and investment decisions.

Numerous scholars have dedicated their research efforts towards unraveling the complexities of inflation, applying diverse methodologies that range from theoretical modeling to empirical

analyses. For instance, Égert (2010) explored the impact of economic convergence on inflation rates in the European context using econometric modeling techniques. Similarly, Weber & Wasner (2023) investigated the microeconomic dimensions of inflation, focusing on pricing behaviors at the firm level. These studies employ methodologies such as dynamic least squares, unbalanced panel data analysis, and cointegration techniques to capture the diverse factors that influence inflation.

To further enhance our understanding of inflation, the present study explores its dynamics in the specific context of Thailand. The methodology applied in this study is Bayesian linear regression model, which provides a probabilistic framework for understanding the relationship between inflation and various economic indicators. The study addresses gaps within the existing literature regarding the multifaceted influences on inflation in middle-income countries like Thailand. Although previous studies have acknowledged the importance of diverse economic indicators, many have not fully explored how these interact within a Bayesian inferential framework. Furthermore, the geographical focus on Thailand offers fresh insights into an emerging market context, where inflationary pressures may differ in nature and degree from advanced economies. The study is organized as follows. After this introduction, The Literature Review will explore relevant studies on inflation. Then the methodology section will outline the research design and the Bayesian linear regression approach used for analysis. The results section presents findings on the interrelationships between inflation and relevant variables in Thailand, supported by descriptive statistics and correlation analyses. Finally, discussions and recommendations are made based on these findings, alongside conclusions about the broader implications for economic policy.

Literature reviews

This section discusses on some theories and empirical findings related to the economic factors influencing inflation, with a particular focus on agricultural productivity, government spending, and monetary policies. The literature review can be structured around several key areas.

Supply-side economics, articulated by Arthur Laffer in 1981 (Laffer, 1981), is centered around the belief that economic growth can best be fostered by enhancing the ability of supply (producers) to create goods and services. According to Laffer, the way to achieve this is by diminishing barriers such as high taxes and stringent regulations that might deter businesses and individuals from investing in production capacities. The theory outlines several key strategies to stimulate economic output: cutting taxes to increase the disposable income and investment potential of businesses and individuals, deregulating to lower the cost and complexity of compliance, promoting capital investment to boost productivity, and implementing monetary policies aimed at maintaining low inflation to ensure a stable economic environment. Laffer's theory posits that such measures will not only increase production but also lead to job creation, higher economic prosperity, and ultimately, more goods and services being available at lower prices. He suggests that there exists an optimal tax rate that maximizes revenue without stifling economic growth, a concept illustrated by the famous "Laffer Curve." Critics of supply-side economics, however, argue that it can result in higher deficits and widen income inequality, as its benefits tend to accrue disproportionately to wealthier individuals and corporations. Cost-push inflation (Hall et al., 2012) occurs when there is an increase in the cost of production inputs, such as raw materials, labor, or capital, which leads to higher prices for finished goods and services. This type of inflation is typically triggered by rising costs in key economic sectors like agriculture, manufacturing, or services. For instance, if the price of agricultural inputs like seeds, fertilizers, or labor increases, or if agricultural output is reduced due to adverse weather conditions or other disruptions, it can lead to higher food prices. Similarly, increases in the crop and food production indices reflecting higher production costs can result in elevated price levels across the economy. This rise in production costs can push

overall price levels higher, affecting inflation rates as producers pass on the higher costs to consumers. Cost-push inflation is distinct from demand-pull inflation, which is caused by an increase in demand across the economy. Instead, cost-push inflation stems from supply-side constraints and increased costs of production inputs.

In the demand-side economics, demand-pull inflation (Blanchard et al., 2012) can occur when the demand for goods and services in an economy outstrips the supply. Government final consumption expenditure, which includes all government spending on goods and services, can be a significant factor in triggering this type of inflation. When the government increases its spending, it directly boosts economic demand. If this increase is rapid and substantial, and if the economy is near or at full capacity, it can lead to higher prices as businesses raise prices in response to the increased demand. This mechanism is particularly evident during periods of economic stimulus, where government spending is used deliberately to boost economic activity. However, if not matched by an increase in production, the result can be inflationary pressure. The excess demand generated by increased government spending leads businesses to increase prices, contributing to demand-pull inflation.

Monetary policy (Mishkin, 2007), executed by central banks, primarily involves managing the economy through the manipulation of interest rates to control inflation. High interest rates typically lead to reduced borrowing and spending. This decrease in economic activity can suppress inflation, as lower demand for goods and services tends to moderate price increases. Conversely, low interest rates generally encourage borrowing and spending. Increased economic activity from lower borrowing costs can lead to higher inflation, especially if demand outstrips the supply of goods and services. Interest payments on debt are directly influenced by these interest rate adjustments. Higher interest rates increase the cost of servicing debt for both corporations and governments, leading to potentially higher expenses that can impact financial stability and spending decisions. For corporations, higher interest costs can reduce profitability and the amount of cash available for reinvestment. For governments, it can increase the cost of public debt, which might affect fiscal policy and spending priorities.

In empirical investigation, it found that the relationship between government economic policies and agricultural investment behavior is complex and varies significantly across different global contexts. In the United States, government payments and economic variables such as depreciation and inflation play a crucial role in shaping investment behaviors in the agriculture sector, which is key to sustainable economic growth and stability (Ariyaratne & Featherstone, 2009). Similarly, in Nigeria, macroeconomic policies including government expenditure and interest rates significantly influence agricultural output and food security, showcasing how economic policies are intricately linked to agricultural productivity and broader economic indicators (Muftaudeen & Hussainatu, 2014). In Iran, the focus is on the impact of government monetary policies and budget deficits on inflation, indicating a critical role of fiscal policies in inflation management, though the effects vary depending on the local economic conditions (Farahanifard & Feshari, 2015). This variation is further illustrated in studies across Asia, where the relationship between government spending and inflation differs by country. For instance, in India and Indonesia, increased government spending tends to correlate positively with inflation, while in China, an inverse relationship is observed in the short run (T. D. Nguyen, 2019). The importance of fiscal and monetary policies in controlling inflation is also emphasized in Vietnam, where government expenditure significantly impacts inflation, highlighting the necessity for effective budgetary management (T. T. Nguyen et al., 2022). This theme extends to the broader impacts of fiscal policies on the agricultural sector, as seen in a study by (Gholizade et al., 2022), which notes a positive effect of government spending on the agricultural price index in the short term. A comparative study involving Germany, Japan, and New Zealand reveals that the influence of macroeconomic factors on inflation can vary greatly due to different economic structures and policies, stressing the need for context-specific

analyses (Khan & Imran, 2023). Similarly, a study in India by (Sinha, 2023) shows that government expenditure not only affects inflation but also has broader implications for economic growth and consumption patterns, suggesting that increased government spending can stimulate economic growth, employment, and public consumption levels.

Methodology

Bayesian linear regression is a statistical approach that combines linear regression with Bayesian inference to model the relationship between variables. It provides a probabilistic framework for estimating model parameters and making predictions, incorporating prior knowledge and uncertainty (Chen & Martin, 2008; Permai & Tanty, 2018). In Bayesian linear regression, model parameters are treated as random variables with prior distributions, rather than fixed values as in frequentist approaches. This allows for the integration of prior knowledge and the quantification of uncertainty in parameter estimates (Permai & Tanty, 2018; Sereno, 2015). The method uses Bayes' theorem to update prior beliefs about parameters based on observed data, resulting in posterior distributions that reflect both prior knowledge and empirical evidence (Klaunberg et al., 2015). One of the key advantages of Bayesian linear regression is its ability to handle various complexities in data, such as heteroscedastic and correlated measurement errors, intrinsic scatter, and non-linear relationships (Sereno, 2015). This regression model can be expressed as follows:

$$INF = \beta_0 + \beta_1 \times CPI + \beta_2 \times FPI + \beta_3 \times GFE + \beta_4 \times IPE + \delta,$$

where INF, CPI, FPI, GFE, IPE represent the inflation measure by the consumer price index, the crop production index, the food production index, the government final consumption expenditure, the interest payments. $\beta_0, \beta_1, \beta_2, \beta_3, \beta_4$ are the coefficients of the model, δ is the error term, representing random fluctuations in inflation not explained by the model. This study estimates the model by using the yearly data spanning from 1972 to 2020 downloaded from World Bank databases.

Results

This section examines the factors influencing inflation in Thailand. Figure 1 provides a time series analysis of variables and Table 1 shows descriptive statistics. Table 2 shows, e.g., that INF correlates with CPI at 0.9868 and with FPI at 0.9889.

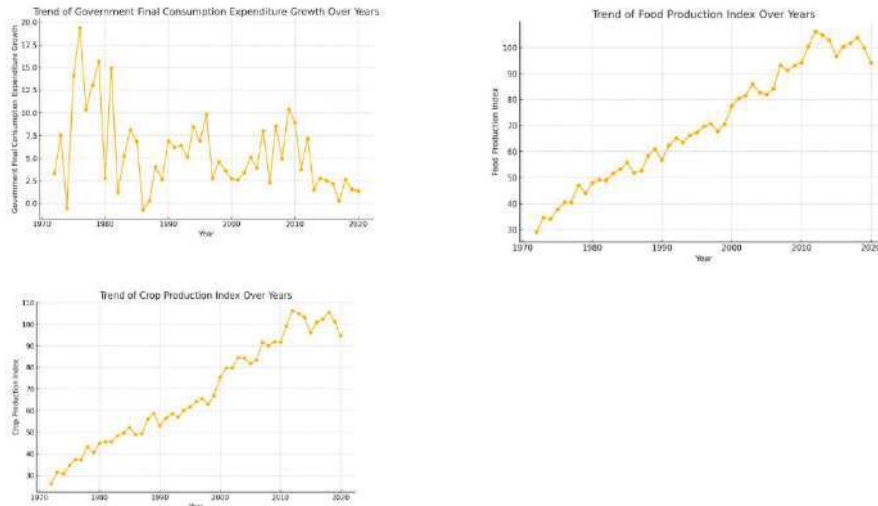

Figure 1 Data series of variables

Table 1 Descriptive statistics

	Mean	Std	Min	25%	50%	75%	max	Shapiro-Wilk p-value
CPI	68.082	24.049	26.180	48.910	62.990	91.700	106.290	0.012
FPI	70.555	22.610	29.090	51.800	67.830	93.220	106.140	0.031
GFE	5.627	4.424	- 0.690	2.624	4.607	7.994	19.383	0.002
IPE	8.717	4.675	1.123	5.486	7.788	10.624	19.652	0.001
INF	4.630	4.879	- 0.900	1.804	3.809	5.626	24.314	0.000

Table 2 Correlation matrix

	INF	CPI	FPI	GFE	IPE
INF	1				
CPI	0.9868	1			
FPI	0.9889	0.9977	1		
GFE	-0.3945	-0.3593	-0.3503	1	
IPE	-0.575	-0.5237	-0.5421	-0.0553	1
	0.0000	0.0001	0.0001	0.7058	

Figures 2 to 5 present the Bayesian diagnostics for the relationships between inflation (INF) and each variable, i.e., Crop Production Index (CPI), Food Production Index (FPI), Government Final Consumption Expenditure (GFE), and Interest Payments as a Percentage of Expense (IPE). Each trace plot shows well-mixed iterations, indicating good convergence across all variables. The histograms suggest a normal or normal-like distribution for the parameter estimates, confirmed by corresponding density plots that show consistent estimation uncertainty. Autocorrelation plots for each variable reveal decreasing correlation with increased lag, implying sample independence.

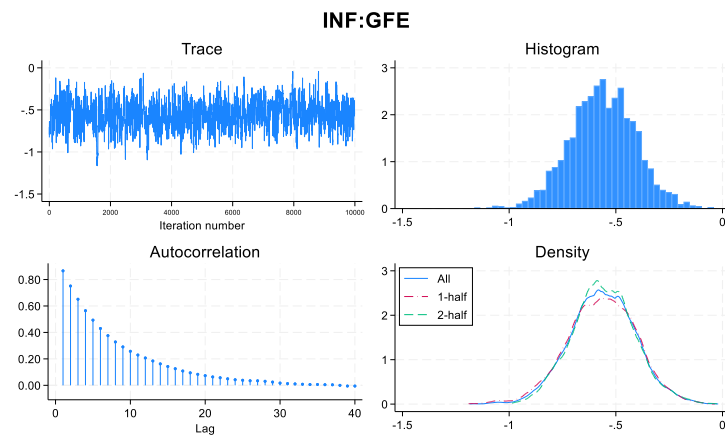

Figure 4 Bayesian Diagnostics for Inflation and GFE Analysis

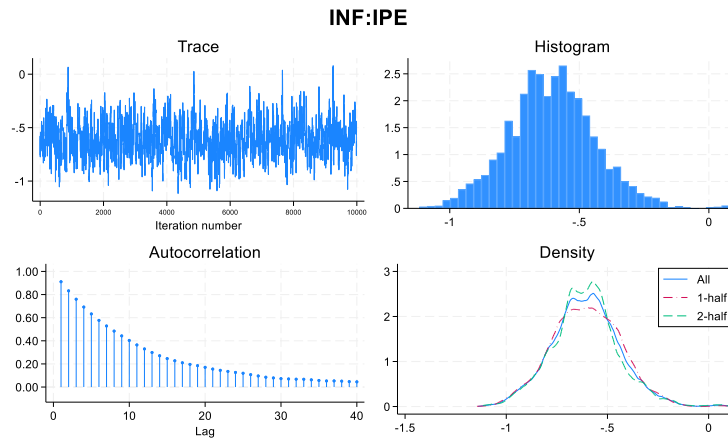

Figure 5 Bayesian Diagnostics for Inflation and IPE Analysis

Table 3 Bayesian linear regression model summary

MCMC iterations	12,500.0000
Burn-in	2,500.0000
MCMC sample size	10,000.0000
Number of obs	49.0000
Acceptance rate	0.3437
Efficiency: min	0.0189
avg	0.0471
max	0.1104
Log marginal-likelihood	- 173.2209

Table 3 summarizes a Bayesian linear regression model. It utilized 12,500 MCMC iterations, with 2,500 as burn-in, resulting in a sample size of 10,000. The dataset comprised 49 observations. The acceptance rate was 0.3437, with efficiency ranging from 0.0189 to 0.1104, and an average of 0.0471. The log marginal likelihood was -173.2209, indicating the model's fit to the data.

Table 4 Bayesian linear regression model estimation of INF

	Mean	Std. dev.	MCSE	Median	95% LB	95% UB
CPI	0.27964	0.3842473	0.027826	0.260246	-0.4736	1.06556
FPI	1.003423	0.4158109	0.030289	1.020472	0.160763	1.801105
GFE	-0.56202	0.1537206	0.005888	-0.55812	-0.86762	-0.26004
IPE	-0.60677	0.1668683	0.008385	-0.60739	-0.93318	-0.26323
_cons	-14.8708	5.358152	0.328635	-14.8595	-25.4104	-4.20005
sigma2	17.56412	3.866755	0.116399	17.08048	11.47902	26.71746

Table 4 provides the Bayesian linear regression estimates of INF. The positive mean estimates for CPI (0.27964) and FPI (1.003423) suggest an increase in INF, with 95% credible intervals ranging from -0.4736 to 1.06556 and 0.160763 to 1.801105, respectively. GFE and IPE show negative mean estimates (-0.56202 and -0.60677), indicating a potential decrease in INF, with intervals from -0.86762 to -0.26004 and -0.93318 to -0.26323. The constant term is -14.8708, with a wide interval between -25.4104 and -4.20005. The model's variance, sigma2, is 17.56412, demonstrating considerable variability in INF predictions.

Discussion

From the analysis, it is evident that the CPI and FPI both have strong positive correlations with inflation (INF), indicating that as crop and food production increase, so does inflation. These findings align with the supply-side economics framework posited by Laffer (1981), which suggests that boosting production capabilities can lead to increased economic outputs, although higher production costs, as indicated by cost-push inflation, can also elevate price levels (Hall et al., 2012). The negative correlation of GFE with inflation highlights the potential for government spending to moderate inflationary pressures, which is somewhat contrary to the demand-pull inflation theory that argues increased government expenditure can boost inflation by raising demand, particularly when economic capacity is stretched (Blanchard et al., 2012). However, the negative association in this context might imply that government spending in Thailand is being utilized in areas that do not directly increase demand pressures, or the spending might be leading to efficient enhancements in production capabilities that counteract potential inflationary trends. Interest Payments as a Percentage of Expense (IPE) also negatively correlate with inflation, confirming the insights from Mishkin (2007), who found that higher interest rates typically reduce borrowing and spending, thereby damping inflation. This finding underscores the critical role of monetary policy in controlling inflation through interest rate management, which is consistent with the prevailing economic theories on inflation dynamics.

The study's Bayesian analysis further supports these correlations, emphasizing the significance of FPI, which has the strongest effect on inflation. These findings underline agricultural productivity's crucial role in shaping price levels, thus reflecting empirical observations from studies that cite the essential role of government economic policies and environmental conditions in influencing agricultural sectors (Muftaudeen & Hussainatu, 2014). Furthermore, the results resonate with the argument by Farahanifard and Feshari (2015) that monetary policies and fiscal deficits are pivotal in inflation management. However, the observed positive correlation between crop and food production with inflation suggests that in contexts like Thailand, increasing agricultural outputs alone may not suffice to control inflation without addressing other economic sectors' inefficiencies. The regional focus also reaffirms insights from T. D. Nguyen (2019), who articulated how fiscal and monetary policies' influences on inflation could vary significantly across different countries and economic practices.

Policy Implications

The analysis reveals significant policy implications for managing inflation in Thailand. With strong positive correlations observed between both the Crop Production Index (CPI) and Food Production Index (FPI) with inflation, it becomes imperative for policymakers to address inefficiencies in agricultural sectors. Strengthening agricultural productivity should be coupled with broader economic reforms, ensuring diverse sectoral advancements to stabilize inflation. The negative correlation of Government Final Consumption Expenditure (GFE) with inflation suggests that targeted government spending could efficiently moderate inflationary pressures without exacerbating demand-pull inflations. This underscores the importance of strategic investment in infrastructure and production capabilities. Furthermore, the role of Interest Payments as a Percentage of Expense (IPE) in controlling inflation through monetary policy highlights the need for a balanced approach, where interest rates are managed to maintain economic stability. As such, coordinated fiscal and monetary policies are essential to sustain economic growth while keeping inflation in check, accommodating both regional and sector-specific contexts.

Future Research

Future research should aim to investigate the intricate interactions between inflation and other macroeconomic variables within Thailand's unique economic landscape. Expanding the scope to include additional economic indicators, such as foreign exchange rates and export-import balances, could provide a more holistic understanding. Additionally, longitudinal studies incorporating diverse data sets could offer insights into whether the observed correlations hold over longer periods.

Conclusion

This study examined factors influencing Thailand's inflation rate, focusing on the impacts of the crop production index, food production index, government final consumption expenditure, and interest payments. We used Bayesian Regression analysis on data from 1972 to 2020, sourced from the World Bank. Our findings diverge from the demand-pull inflation theory, which suggests that increased government expenditure can boost inflation. We found a negative correlation between government spending and inflation, suggesting that the Thai government's spending does not directly increase demand pressures. It also found the negative correlation between Interest Payments and inflation which underlines monetary policy's role in controlling inflation through interest rate management. Therefore, strengthening agricultural productivity and a balanced monetary policy approach are recommend for controlling inflation.

ABSTRACT

This research investigates how changes in AFV influence and are influenced by key economic indicators in Thailand's economy. We use a Bayesian Vector Autoregression (BVAR) model and annual data from 1972 to 2020, encompassing AFV, GDI, fertilizer usage, and natural resource rents. Our findings reveal that that AFV has a modest impact on economic indicators, while natural resource rents substantially influence AFV. These findings recommend that policymakers should enhance agricultural productivity and economic growth.

Keywords: agriculture value added, GDP, fertilizer consumption, natural resources rents, Bayesian Vector Autoregression

INTRODUCTION

Agriculture Value Added (AVA) refers to the economic contribution of the agricultural sector to a nation's economy, encapsulating the net output after accounting for all inputs in agricultural processes. This concept goes beyond mere economic metrics, encompassing sustainability and community engagement, as highlighted in various scholarly works (Ozdemir, 2023; Raihan et al., 2023; Clark et al., 2020). AVA includes crop production, livestock, forestry, and fisheries outputs, offering a comprehensive measure of the sector's efficiency and economic performance. Understanding the dynamics of AVA is crucial, as it represents a significant portion of a country's GDP and acts as a driver for economic development, particularly in developing nations (Valdés & Foster, 2010).

The importance of AVA arises from its potential to fuel economic growth and poverty reduction. It often holds the potential for greater impact than its GDP share suggests, especially in agrarian economies. For instance, Morocco's agricultural sector contributes significantly to its GDP and exports, demonstrating agriculture's robust potential for economic influence (Lichtenberg, 1999). With its multifaceted impact, AVA also presents interactions with environmental factors. For example, in China, increased agricultural value-added activities have been linked with a reduction in CO₂ emissions, underlining the dual potential for advancing sustainability while promoting growth (Raihan et al., 2023). It is, therefore, imperative for policymakers to consider such dual potentials while formulating strategies for agricultural development.

Factor identification affecting AVA is vital, and numerous studies have highlighted its necessity. For instance, Gelgo et al. (2023) and Sansika et al. (2023) have discussed the

influence of institutional quality and economic globalization, respectively, on AVA. Such studies emphasize the complexity of AVA's role in economic ecosystems, requiring a multi-pronged approach to fully understand and harness its benefits. The complexity is further illustrated by varied scholarly methodologies employed in analyzing factors influencing AVA—ranging from econometric models and vector error-correction models to Bayesian Vector Autoregression (BVAR), demonstrating not only the complexity but also the multifaceted nature of agricultural productivity measurement (Jebli & Youssef, 2019; Giannakis & Bruggeman, 2015).

Researchers such as Nugroho et al. (2024) have shown how macroeconomic factors like inflation, exchange rates, and human capital significantly affect agricultural prices in Asian countries, further buttressing the essential role AVA plays in economic planning and policy-making. This is crucial not only for economic productivity but also for creating comprehensive development strategies that address rural empowerment and environmental concerns, elucidated by studies in Brazil (Jebli & Youssef, 2019).

The emerging research gap necessitates a focus on AVA's nuanced effects within the context of regional economic policies and their interplay with global issues like climate change and economic globalization. This paper aims to address such gaps by applying BVAR in analyzing Thailand's economic data from 1972 to 2020. The unique methodological approach provides a robust framework to unravel the interdependencies between key economic variables, thereby contributing novel insights to ongoing scholarly debates around AVA. The motivation behind this research is rooted in the gaps and challenges identified in existing literary works regarding AVA. Despite its established importance, intricate dynamics remain underexplored, particularly regarding its relationship with national economic indices like GDI, FEC, and TNR, along with the resulting implications for policy formulation. Following this introduction, The Literature Review will explore relevant studies on Agriculture Value Added. Then the methodology section will outline the research design and BVAR approach used for analysis. The results section presents findings. Finally, discussions and recommendations are made based on these findings, alongside conclusions about the broader implications for economic policy.

LITERATURE REVIEW

This section indicates that agriculture is paramount in the national and regional economies with the help of various research. Breisinger et al. (2019) investigated the effects of a large agricultural value chain expansion in Egypt on the economy. Their research discovered that productivity-driven agricultural expansion could catalyse general economic and agri-food system development, thus drawing attention to the poverty-alleviating nature of agricultural growth and its role in nutrition improvement. They also found that an increase in certain sectors, e.g. livestock, may not be favourable; this raised a need for taking a systemic approach while working on an agriculture sector development. N. Baryshnikov et al. (2020) looked into investment-related activities conducted by Russian agribusinesses. The inflow of capital did promote some economic growth but did not lead to any technological breakthroughs. They recommended applying Western financial management methods as they could help attract more additional capital, leading to better economic results. Nugroho et al., 2021 evaluated globalization impacts on value added from agriculture in developing countries worldwide. Their outcomes specified that FDI inflows and agricultural export values show a considerable increase in agricultural value added, which needed to be focused on human capital and technology for sustainability purposes. A second study issued by N.G.Baryshnikov et al. In the year 2021, it was clearly brought out that a better investment climate is necessary for the enhancement of profitability by the agribusiness. Their research also shed light on the various economic and financial incentives that can be triggered by investment in agriculture under different market conditions. Lim & Kim (2022) gives proof to this effect that there is creation

of employment opportunities as a result of expanding agricultural global value chains. According to their survey AGVCs participation led to increased agricultural sector employment, especially in processed food industries, with more visible effects in LMICs and HICs. Sansika et al. (2023) looked at how the economic globalization affected agriculture that creates value-added products globally. They discovered that elements such as use of fertilizers, employment in agriculture and FDI are significant factors which affect agricultural value added at different income levels. Their study also highlighted that an increased number of jobs in agricultural sector has a positive effect on exchange rates as well as FDIs which in turn promotes growth of agricultural value added globally.

With the advancement of the research, experts have dug into the sector-specific effects and the impact of technology evolution. Shireesha, K. et al. (2024) introduced us to the fact that business opportunities exist in rural areas and how agricultural entrepreneurship can boost rural economies through vertical and horizontal integration in microenterprises and diversification into non-traditional agricultural products. This article clearly highlighted the importance of adding value to transforming rural economies and creating paths for sustainable development. Neto et al. (2024) engaged in an overall analysis of the Brazilian economy, emphasizing how technology's intensity in agriculture could affect its trading position globally. They illustrated that more significant economic growth was achieved by sectors with higher technological incorporation, thus indicating the key role of innovation in this industry. Chen et al. (2024) analyzed the reuse of waste generated during food processing industries, focusing on utilizing agro-byproducts to produce value-added goods, which is advantageous to both the environment and the economy. Their research drew attention to the two benefits of implementing innovative agricultural practices; environmental sustainability and economic viability/progress/development were given prominence here. Ravi Kumar et al. (2024) employed dynamic panel data methodology to investigate India's agricultural export determinants. They discovered that progress made in value addition/manufacturing sector as well as processing facilities are very crucial for boosting export quantities which resulted into positive contribution to general economy performance system. Carrillo et al. (2024) studied the agricultural and agro-industrial development of Penipe, Ecuador. The results of their research showed that agri-business sector was an important one when it comes to creation of employment and generation of income at the local level which finally upgraded the socio-economic status in that area. Figurek et al. (2024) portrayed the farm economic indicators in the EU which were such as farm net value added and productivity measures. Their work did so on one hand reveal the big components that affected the economic performance of cereals production sub-sector with a strong focus on agricultural efficiency and sustainability. Ward (2024) performed a feasibility study on regenerative agriculture in Madeira Island showing that these practices are environmentally sustainable and have positive economic and social effects. The study gives insights on how advanced farming systems can tackle challenges related to climate change while promoting sustainable development. In the survey regarding the role of mechanized marketing services for wheat producers in Diyala Province, Iraq economy Al-Tamimi et al. (2024) took the findings of such kind of services that clearly pushed up profitability production of this crop are perfectly enough proof that these market-oriented services can be a great instrument in enhancement agricultural productivity as well as economic benefits system.

METHODOLOGY

Bayesian Vector Autoregression (BVAR) is an advanced statistical technique used for economic forecasting. It combines the Vector Autoregression (VAR) approach with Bayesian methods, allowing for more accurate and robust predictions. BVAR has demonstrated considerable success in forecasting macroeconomic and regional economic variables (Spencer, 1993). The application of BVAR is diverse and widespread in economic forecasting. It has been

used to predict various economic indicators, including unemployment rates, nonagricultural employment, real personal income, and housing permits (Dua & Ray, 1995). BVAR models have also been employed to forecast energy demand and supply, with studies showing that incorporating global Economic Policy Uncertainty (EPU) index can enhance the accuracy of energy demand predictions (Rakpho & Yamaka, 2021). In regional economics, BVAR has been applied to forecast state-level economic variables, often outperforming other techniques such as ARIMA and transfer function models (Kinal & Ratner, 1986).

Consider a BVAR model with four variables: AFV = Agriculture, forestry, and fishing value added (current US\$), GDI = Gross domestic income (constant LCU), FEC = Fertilizer consumption (kilograms per hectare of arable land), and TNR = Total natural resources rents (% of GDP). A standard BVAR model can be written as:

$$Y_t = c + A_1 Y_{t-1} + A_2 Y_{t-2} + \dots + A_p Y_{t-p} + \varepsilon_t$$

where Y_t is a vector of the variables at time t :

$$Y_t = \begin{pmatrix} AFV_t \\ GDP_t \\ FEC_t \\ TNR_t \end{pmatrix}$$

c is a vector of constants (intercepts):

$$c = \begin{pmatrix} c_1 \\ c_2 \\ c_3 \\ c_4 \end{pmatrix}$$

A_i are matrices of coefficients for each lag i , i.e., A_1, A_2, \dots, A_p

$$A_1 = \begin{pmatrix} a_{11,1} & a_{12,1} & a_{13,1} & a_{14,1} \\ a_{21,1} & a_{22,1} & a_{23,1} & a_{24,1} \\ a_{31,1} & a_{32,1} & a_{33,1} & a_{34,1} \\ a_{41,1} & a_{42,1} & a_{43,1} & a_{44,1} \end{pmatrix}$$

ε_t is a vector of error terms:

$$\varepsilon_t = \begin{pmatrix} \varepsilon_{1,t} \\ \varepsilon_{2,t} \\ \varepsilon_{3,t} \\ \varepsilon_{4,t} \end{pmatrix}$$

Each variable in the system is regressed on the lagged values of all variables in the system. For instance, the equations for AFV, GDP, FEC, and TNR can be written as:

$$\begin{aligned}
 AFV_t &= c_1 + a_{11,1}AFV_{t-1} + a_{12,1}GDP_{t-1} + a_{13,1}FEC_{t-1} + a_{14,1}TNR_{t-1} + \dots + a_{11,p}AFV_{t-p} \\
 &\quad + a_{12,p}GDP_{t-p} + a_{13,p}FEC_{t-p} + a_{14,p}TNR_{t-p} + \varepsilon_{1,t} \\
 GDP_t &= c_2 + a_{21,1}AFV_{t-1} + a_{22,1}GDP_{t-1} + a_{23,1}FEC_{t-1} + a_{24,1}TNR_{t-1} + \dots \\
 &\quad + a_{21,p}AFV_{t-p} + a_{22,p}GDP_{t-p} + a_{23,p}FEC_{t-p} + a_{24,p}TNR_{t-p} + \varepsilon_{2,t} \\
 FEC_t &= c_3 + a_{31,1}AFV_{t-1} + a_{32,1}GDP_{t-1} + a_{33,1}FEC_{t-1} + a_{34,1}TNR_{t-1} + \dots + a_{31,p}AFV_{t-p} \\
 &\quad + a_{32,p}GDP_{t-p} + a_{33,p}FEC_{t-p} + a_{34,p}TNR_{t-p} + \varepsilon_{3,t} \\
 TNR_t &= c_4 + a_{41,1}AFV_{t-1} + a_{42,1}GDP_{t-1} + a_{43,1}FEC_{t-1} + a_{44,1}TNR_{t-1} + \dots \\
 &\quad + a_{41,p}AFV_{t-p} + a_{42,p}GDP_{t-p} + a_{43,p}FEC_{t-p} + a_{44,p}TNR_{t-p} + \varepsilon_{4,t}
 \end{aligned}$$

For the analysis, this study employs annual data of Thailand spanning from 1972 to 2020, which was sourced from the World Bank database.

RESULT AND DISCUSSION

This section presents the findings, analyzing the interrelationships among key economic sectors in Thailand. Table 1 shows descriptive statistics, and Figure 1 expresses the time Series of variables

Table 1 Descriptive statistics

Variable	Mean	Std. dev.	Min	Max
AFV	178.8346	139.3801	20.7212	475.9103
FEC	84.2033	54.2444	10.7893	166.6805
GDI	51.8890	32.5212	9.6901	114.4892
TNR	1.7468	0.7880	0.5462	3.7169

Figure 1 Time Series of variables

Table 2 Correlation matrix

	AFV	FEC	GDI	TNR
AFV	1			
FEC	0.8522 0.0000	1		
GDI	0.9259 0.0000	0.9422 0.0000	1	
TNR	0.4736 0.0006	0.3616 0.0107	0.3378 0.0176	1

The correlation matrix in Table 2 highlights the relationships between AFV, FEC, GDI, and TNR. AFV and FEC have a strong correlation of 0.8522, with a p-value of 0.0000, indicating high significance. GDI shows an even stronger correlation with AFV (0.9259) and FEC (0.9422), both with p-values of 0.0000, denoting statistical significance. TNR has weaker correlations with AFV (0.4736), FEC (0.3616), and GDI (0.3378), with respective p-values of 0.0006, 0.0107, and 0.0176, suggesting varying levels of significance. These figures underscore the different degrees of association among the variables. Figure 1 shows Correlation matrix. Figure 2 shows Time Series of variables. Figure 2 shows correlation matrix.

Table 3 Model summary

MCMC iterations	12,500
Burn-in	2,500
MCMC sample size	10,000
Acceptance rate	1
Efficiency: min	0.9027
avg	0.9953
max	1
Log marginal-likelihood	-585.2874

Table 3 presents a model summary indicating that 12,500 MCMC iterations were performed, with a burn-in of 2,500, resulting in a sample size of 10,000. The acceptance rate is recorded at 1. Efficiency varies with a minimum of 0.9027, an average of 0.9953, and a maximum of 1. The log marginal-likelihood is noted as -585.2874.

Table 4 presents the BVAR model estimation results. For AFV, the first lag (L1) shows a mean of 0.9306 with a median of 0.9307, demonstrating a significant positive effect, whereas the second lag (L2) is slightly negative. FEC's L1 mean is 0.0359, with L2 being -0.0375, indicating weaker effects. GDI reflects more substantial variation, with L1 at 0.5961 and L2 at -0.0472, suggesting moderate past influence. TNR's L1 and L2 mean values are 4.2700 and 2.1023, respectively, showing strong past impacts. The constant term (_cons) is -8.6880, indicating model adjustments. These statistics illustrate the dynamics and influence of past values on current measures. Table 5 shows stability analysis and Figure 3 expresses impulse response analysis.

Table 5 stability

Eigenvalue: modulus	Mean	Std. dev.	MCSE	Median	95% LB	95% UB
1	1.0070	0.0240	0.0002	1.0065	0.9609	1.0586

8	0.0322	0.0215	0.0002	0.0296	0.0015	0.0801

Figure 3 Impulse response analysis

Table 6 Variance decomposition

Step	impulse FEC, and response AFV	impulse GDI, and response AFV	impulse TNR, and response AFV
0	-	-	-
1	0.0428	0.6203	3.8837
2	0.0626	1.1672	9.2789
3	0.1025	1.6758	14.6346
4	0.1804	2.0696	18.8424
5	0.2852	2.3583	21.8936
6	0.4065	2.5605	23.9107
7	0.5360	2.6949	25.0170
8	0.6670	2.7764	25.3308

Table 6 illustrates the variance decomposition of AFV in response to impulses from FEC, GDI, and TNR over different steps. Initially at step 0, there is no impact. By step 1, the influence from FEC, GDI, and TNR becomes evident, with TNR having the highest effect at 3.8837. As steps progress to 8, the influence grows: FEC reaches 0.6670, GDI 2.7764, and TNR 25.3308. This shows that TNR exerts a significantly larger impact on AFV over time compared to FEC and GDI.

The intricate interrelationships among AFV, FEC, GDI, and TNR, confirming and expanding upon findings from existing literature. Breisinger et al. (2019) highlighted the multifaceted impact of agricultural expansion on economic and agri-food system development, emphasizing the vital role agriculture plays in poverty alleviation and nutrition improvement. This study's findings resonate with their assertion, particularly through the strong correlations observed between AFV, FEC, and GDI, each exhibiting significant statistical values, which underscores similar systemic interdependencies within Thailand's context. Also, the outcomes discussed by Nugroho et al. (2021) concerning globalization's impact on the agricultural sector through FDI in developing countries parallel our observations on the positive quantitative influences from FEC, GDI, and TNR on AFV. The variance decomposition in AFV's response further aligning with Chen et al. (2024), who had previously outlined the dual advantages of innovative agricultural practices. As seen in their findings, the socioeconomic benefits tied to increased agricultural value-added resonate with the incremental impacts AFV experiences in response to fiscal changes, such as initial stimuli from GDI and TNR.

POLICY IMPLEMENTATION

Policymakers should focus on strengthening agricultural value chains by promoting sustainable agricultural practices and integrating advanced technologies. The strong correlations between AFV, FEC, and GDI underline the necessity for investments that catalyze systemic growth,

fostering poverty alleviation. Encouraging foreign direct investment (FDI) in the agricultural sector could significantly amplify agricultural productivity and value addition.

FUTURE RESEARCH

Future research should investigate the effects of Agriculture Value Added and other influencing factors within different countries while examining its interaction with international macroeconomic variables. This approach will help uncover and address the less explored dynamics of AVA, offering a broader understanding of its role in diverse economic contexts.

CONCLUSION

Agriculture Value Added reflects the net output of the agricultural sector, including crop production, livestock, forestry, and fisheries, serving as a comprehensive indicator of the sector's economic performance. Understanding its dynamics is crucial, as AVA significantly contributes to GDP and drives economic development, especially in developing countries. This research aimed to explore how changes in AFV influence and are influenced by key economic indicators in Thailand's economy, utilizing a Bayesian Vector Autoregression (BVAR) model and analyzing data from 1972 to 2020. The BVAR model was employed to examine the interrelationships between AFV, GDI, fertilizer usage, and natural resource rents. The findings revealed that AFV has a modest impact on economic indicators, while natural resource rents substantially influence AFV. Based on these insights, the study recommends policy interventions to enhance agricultural productivity and economic growth.

ÖZET

Küfür; sözlükte, örtmek, gizlemek ve nankörlük etmek anlamlarına gelir. Allah (cc.) tarafından insanlar en temelde inanç bakımından Mü'min ve Kâfir olarak ikiye ayrıldığı göz önüne alınırsa küfür kelimesinin ne kadar önemli olduğu anlaşılır. K-f-r kökünden türeyen kelimeler Kur'an da toplam da 525 kere geçmektedir. Kur'an-ı Kerimde daha çok imanın zıddı olarak inkâr anlamında kullanılır. Bakara süresinin 84. ve 85. ayetlerine baktığımızda bildiğimiz anlamda yani inkâr anlamında bir küfür söz konusu değildir. Buradaki durum, kitaba aykırı bir tutum hakkındadır. Buna rağmen Allah (cc.) *“Yoksa siz kitabın bir kısmına inanıp bir kısmını inkâr mı ediyorsunuz?”* diyerek yapılan davranışı küfür olarak nitelemektedir. Fakat İslam inancında amelî terk etmek ya da büyük günah işlemek insanı iman dairesinin dışına çıkarmaz. Allah (cc.)'ın mezkûr ayetle bildirdiği ile İslam inancının prensibi arasında, birbirine tezat gibi duran bu iki duruma baktığımızda; küfür kavramının îtikâdî boyutunun yanında amelî boyutu olduğunu da fark ederiz. Birçok farklılığın yanında küfür kelimesinin inanç ve amel boyutunda ki en temel fark; inanç boyutunda küfür kişiyi iman dairesinin dışına çıkarırken, amel boyutunda küfür kişiyi iman dairesinin içinde tutar. İnanç boyutunda küfür, “kâfir” olarak adlandırılmaya sebep olurken, amelî boyutta küfür “fâsık” olarak adlandırılmanın sebebidir. Küfrün amelî boyutunu anlamak için kelimenin sözlük anlamında olan “örtmek, gizlemek” anlamının göz önünde bulundurulması gerekir.

Anahtar Kelimeler: İlahiyat, Tefsir, Bakara Süresi, Küfür, Amel

ABSTRACT

In the dictionary, kufr means to cover, conceal and be ungrateful. Considering that Allah (swt.) divides people into two as believers and disbelievers in terms of belief, it is understood how important the word kufr is. The words derived from the root K-f-r are mentioned 525 times in the Qur'an. In the Holy Qur'an, it is mostly used in the sense of denial as the opposite of faith. When we look at the 84th and 85th verses of al-Baqarah, there is no disbelief in the sense we know, that is, in the sense of denial. The situation here is about an attitude contrary to the book. Despite this, Allah (swt.) describes the behaviour as disbelief by saying ‘Or do you believe in part of the book and disbelieve in part of it?’. However, in the Islamic faith, abandoning the deed or committing a major sin does not take a person out of the circle of faith. When we look at these two situations, which seem to be contradictory to each other between what Allah (swt.) declares with the aforementioned verse and the principle of Islamic belief, we realise that the concept of kufr has an operational dimension as well as its theological dimension. In addition to many differences, the most fundamental difference in the belief and practice dimensions of the word kufr is that while kufr in the belief dimension takes the person out of the circle of faith, kufr in the practice dimension keeps the person within the circle of faith. In the dimension of belief, disbelief is the reason for being called a disbeliever, while in the practical dimension, disbelief is the reason for being called a faasiq. In order to understand the practical dimension of kufr, the dictionary meaning of the word ‘to cover, to conceal’ should be taken into consideration.

Keywords: Theology, Tafsir, Surat al-Baqarah, Kufr, Action

GİRİŞ

İnsan, yeryüzünün en özel varlığı olarak, özel nimetlerle donatılmış ve bu çerçeve de büyük sorumluluklar içeren bir hayatın içine doğmuştur.¹ Bu hayatın içerisindeki en büyük sorumluluğu “iman” dır. Bu yüzden Allah cc. insanoğlunu iman edenler ve kâfirler diye ikiye ayırmıştır. Bu ayırım insanoğlunun yaratıcısıyla arasındaki ilişkiyi ve hukuku belirleyen önemli bir ayırmadır. Bu yüzden imanın çok iyi anlaşılması gerektiği gibi küfrün de çok iyi anlaşılması gerekir. Bundan sebep küfür kavramı üzerine çalışırken, bu kavramın farklı yönleri olduğunu tespit ettik. Kur’an da küfür kelimesi daha çok îtikâdi yönüyle imanın zıddı olarak geçer. İmanın zıddı olarak inkâr manasında kullanılır. Mezkûr ayetleri incelerken burada farklı bir durum olduğunu, küfrün ameli boyutunun olduğunu gördük. Biz de bu çalışmamızda küfrün daha iyi anlaşılmasını sağlamak adına küfrün ameli boyutunu ele alacağız. Küfür kavramını ameli boyutta anlamını, çerçevesini ve önemini ortaya koymayı hedefliyoruz.

1. KÜFRÜN KAVRAMSAL ÇERÇEVESİ

“Küfür”, كفر kökünden türemiş bir mastardır. كفر Sözlükte; Bir şeyi kapamak, örtmek, Bir şeyi yok etmek için kapamak, mallarını depoya koymak, inkâr etmek, bir şeyden uzak veya ırak olduğunu beyan etmektir. Terim anlamı ise; Peygamberlerin din adına Allah cc. dan getirdiklerini reddetmek, inanmamaktır.² Kur’an-ı Kerim de bu kökten türeyen kelimeler toplamda 525 kere geçmektedir.³ Kur’an da çoğunluklu imanın zıddı anlamın da kullanılmıştır. Burada bu fiilin ismi faili olan “kâfir” kelimesini de incelememiz konumuz açısından iyi olacaktır. Kafir, en özlü şekilde iman esaslarını inkâr eden demektir. İnsan fitratında bir inanma ihtiyacı ile yaratılmıştır. İnkâr eden bu fitratın üzerini örttüğü için ona kâfir denilmiştir.⁴ O, bu fitratın üzerini örtmese zaten iman gerçekleşecektir. Yani iman asli, inkâr ârizi bir durumdur. Küfür, itikadi olarak incelendiğinde yani iman esaslarını inkâr etmek olarak ele alındığında doğal olarak kişiyi iman dairesinin dışına çıkarır. Ama iman etmekle birlikte iman edilen hususlara muhalif davranıldığında durum nasıl olur. Daha açıkça ortaya koymak gerekirse; Kur’an’a iman eden birisi Kur’an’a muhalif davranırsa bunun durumu ne olacaktır. Bu konu, “Mürtekib-i Kebire” konusu olarak tarihte çok tartışılmıştır. Biz burada bu tartışmalara girmeyeceğiz. Ehlişünnete göre iman ettiği halde, gafletinden nefesine aldandığından vb. sebeplerden ötürü büyük günah işleyen kişi fâsıktır. Fâsık olan kişide iman dairesinin içindedir.⁵

2. BAKARA SÜRESİ 84. VE 85. AYETLERE GÖRE KÜFRÜN AMELİ BOYUTU

Bakara süresinin 84. ve 85. ayetlerini ele aldığımızda karşımıza farklı bir durum ortaya çıkmaktadır. Söz konusu ayetler de şöyle buyrulur:

“Vaktiyle sizden, birbirinizin kanlarını dökmeyeceğinize, birbirinizi yurtlarınızdan çıkarmayacağınıza dair de söz almıştık. Siz de bunu kabul ettiniz. Hâlâ da (buna) şahitlik ediyorsunuz. İşte buna rağmen sizler birbirinizi öldürüyorsunuz; içinizden bir kesimi yurtlarından sürüyor, onlara karşı kötülük ve düşmanlıkta birbirinize arka çıkıyorsunuz. Esirler olarak size geldiklerinde de fidye verip kendilerini kurtarıyorsunuz. Hâlbuki onları sürgün etmek size haram kılınmıştı. Yoksa siz kitabın bir kısmına inanıp bir kısmını inkâr mı ediyorsunuz? İçinizden bu şekilde davranan birinin dünya hayatındaki cezası ancak rezil rüsva

olmaktır; kıyamet gününde ise onlar azabın en şiddetlisine itilirler. Allah sizin yapmakta olduğunuzdan habersiz değildir.”⁶

Bu ayetlerin esbabı nüzulü olarak şunlar zikredilir: Medine sosyolojisi Evs ve Hazrec diye iki Arap kabilesi ve Kaynuka oğulları, Nadir oğulları ve Kurayza oğulları diye üç Yahudi kabilesinden oluşmaktadır. İki Arap kabilesi olan Evs ve Hazrec kendi aralarında savaşırken Yahudi kabileleri ile de ittifak yaparlar. Evs ile Kurayza oğulları, Hazrec ile Kaynuka ve Nadir oğulları ittifak ederdi. Dolayısı ile Yahudilerin inandıkları Tevrat'ta, Yahudilerin birbirlerine karşı savaşması yasak olmasına rağmen bu yasağı çiğneyerek birbirleriyle savaşıyorlardı. Savaş neticesinde esir düşenler olursa esirler için iki tarafta birleşerek esirleri kurtarmak için fidye topluyordu. Araplar, Yahudilere: “Nasıl iş böyle, hem onlarla savaşıyorsunuz hem de esirleri kurtarmak için fidye topluyorsunuz” deyince. Yahudiler: Ne yapalım, Tevrat'ın emri böyle, bunu yapmak zorundayız diyorlardı.⁷

Razi de tefsirinde bu ayetleri tefsir ederken; “*İsyankârın (günahkârın) kâfir sayılmayacağı sabit iken, Allah bu günahı niçin küfür olarak tavsif etmiştir?*” diyerek bu önemli hususu dile getirmiştir. Fakat bu soruyu ayetlerin zahirinde ve de nüzul sebebinde, hiçbir şekil de bir işaret ya da emare olmamasına rağmen, “belki de onların dindaşlarını yurtlarından çıkarmama hususundaki Tevrat'ın hükmünü reddettikleri” gibi bir ihtimal ve ima ile cevaplandırmakla iktifa etmiştir.⁸ Fakat biz bu ayetlerde ve nüzul sebeplerinde buna dair hiçbir iz ya da emare göremedik.

Ayetlerin nüzul sebebi çerçevesinde mezkûr ayetlerden konumuzla alakalı dikkat çekici bir durum ortaya çıkmaktadır. Bu ayetlere muhatap olanlar kitaplarını inkâr etmiyorlar. Yaptıkları şey kitabın emrine muhalif davranmaktır. Bu ayetlerin muhataplarının yaptıklarını Allah cc. küfür olarak nitelemektedir. *أَفَتُؤْمِنُونَ بِبَعْضِ الْكِتَابِ وَتَكْفُرُونَ بِبَعْضٍ* Yoksa siz kitabın bir kısmına inanıp bir kısmını inkâr mı ediyorsunuz? Buradaki küfür kelimesinin inkâr etmek olmadığı açıktır. İşte burada küfür kavramının ameli boyutu karşımıza çıkar. Bununla ilgili akaidi tartışmalara girmeden konuya kavramsal ve davranışsal bir çerçeve çizmeye çalışacağız.

Burada iman edilen kitabın, emirlerinin çiğnenmesinin küfür oluşu, kelimenin kök anlamıyla anlaşılabilir. Küfrün kök anlamı; Bir şeyi yok etmek üzere üzerini örtmek, gizlemektir. İman edilen bir kitaba göre amel etmek asli bir durumdur. Ona muhalif ameller yapmak ise ârizi bir durumdur. Ârizi bir durumu ortaya çıkarmak, asli bir durumun üzerini örtmek ve ortadan kaldırmaktır. İşte bu yüzden buradaki kitaba aykırı amel'e (iş'e) küfür nitelemesi yapılmıştır. Ayetlerin nüzul sebepleri üzerinden gidecek olursak. Birbirlerine karşı savaşmamak, birbirlerini öldürmemek kitabın emri ve asli durumdur. Herhangi bir eylem olmadıkça da ortada görünür vaziyettedir. Birisi bu durum da dese ki; bunlar hiç birbirlerini öldürmüyorlar, hiç birbirleriyle savaşmıyorlar. Ona “bunlar Tevrat'a inanıyorlar da ondan” diye cevap verilir. Bu cevapdan da kitabın hükmünün görünür olduğunu anlarız. İşte bu durumda biri kitaba muhalif olarak hareket eder ve ârizi bir iş yaparsa kitabın hükmünün üstünü manen örtmüş ve hükmü ortadan kaldırmış, yok etmiş olur. Böylece o amel küfür olmuş olur.

Mezkûr ayetlerde Yahudilerden bahsediliyor. Burada Müslüman bir kimse şu hataya düşmemelidir. Allah cc. burada Yahudilere hitap ediyor düşüncesiyle kendini bu meseleden soyutlamamalıdır. Çünkü Yahudiler nasıl Tevrat'a inanıyorlardıysa Müslümanlarda Kur'an'a inanmaktadır. O yüzden ayette “yoksa siz Tevrat'ın bir kısmına inanıp bir kısmını inkâr mı ediyorsunuz” değil de “*Yoksa siz kitabın bir kısmına inanıp bir kısmını inkâr mı ediyorsunuz?*” denilmiştir. Burada önemli olan kitabın hangisi olduğu değil, kitabın iman edilen kitap olmasıdır.

⁶“ Kur'an Yolu” (19 Kasım 2024), el-Bakara 2/84-85.

⁷ Elmalılı Muhammed Hamdi Yazır - Sad: Hamdi Döndüren, *Hak dini Kur'an dili*. (İstanbul : Çelik Yayınevi, 2017), 1/404-405.

⁸ Fehreddin Razi, Çev: Suat Yıldırım vd., *Tefsîri Kebir - Mefâtihu l-Gayb* (İstanbul: Huzur Yayınevi, 2002), 3/199.

Gelin Kur'an-ı Kerimden bir örnek ile konuyu daha anlaşılır kılalım. Kur'an'a göre içki içmek haramdır.⁹ Bundan dolayı içki içmeyen birisi Kur'an'ı yaşıyordur. Kur'an'ı hayatında hükümleriyle görünür kılıyordur. Şimdi bu kişi içkinin haram olduğuna inanmakla birlikte içki içerse, içki haramdır hükmünün üstünü örtmüş olur. Böylece o hüküm onun hayatından yok olur. Küfrün sözlük anlamına göre de bir şeyin üstünü örtünce ne oluyordu. El cevap; yok oluyordu. Şimdi, içki içenin hayatından, "içki içmek haramdır" hükmü ne oluyordu. Yok oluyordu. İşte içki içmek amel'i boyutta küfürdür. Bu küfrün kişiyi iman dairesi dışına çıkaran bir küfür değil, iman dairesi içerisinde olan fâsıklık durumuna soktuğunu tekrar belirtelim.

Bir Müslüman için asla kabul edilemez olan "küfür" sıfatının, kitaba aykırı davranışlar için kullanılmasının da ayrı bir önemi olduğunu düşünmekteyiz. Peygamberimizin ahlakını kendisine soranlara Hz. Ayşe annemiz "O'nun ahlakı Kur'an'dı." diye cevap vermiştir.¹⁰ Yani peygamberimiz (sav) Kur'an'ı yaşıyordu. O yaşayan Kur'an'dı. Kur'an'a göre yaşandığında Kur'an nasıl yaşayan Kur'an oluyorsa, Kur'an, yaşanmadığında da "Yaşamayan Kur'an" olur. Yaşanılsın diye gönderilen Kur'an yaşanmazsa, insanlık karanlıklar içinde acı çekmeye mahkûm olur. İnsanlığın karanlıklar içerisinde acılar çekmesi çok kötü bir durumdur. Bu durumun vahametini anlayabilmemiz için Allah (cc) kitaba aykırı yaşamayı küfür gibi korkutucu bir kavramla ifade etmiştir.

Burada ayetlerin değindiği bir diğer konuya değinmeden geçemeyeceğiz. Allah cc. Kitabın bir kısmına inanıp bir kısmana inanmayanların dünyada da ahirette de cezalandırılacaklarını bildiriyor. Yani iman kitabın tamamına iman etmektir. Kitabın bir hükmünü bile açıkça inkâr kişiyi küfre düşürür. İman mantığı açısından da bu kabul edilebilir bir durum değildir. Çünkü kutsal kitap kişinin inandığı mükemmel varlık olan, ilahî tarafından gönderilmiştir. O'nun gönderdiği kitap da ya haktır ya da değildir. Hak ise inanmadığın kısımlara neden inanmıyorsun, hak değilse inandığın kısımlarına neden inanıyorsun? Kur'an insana en güzel hayat nizamını sunar. Böyle bir hayata; ancak Kur'an'ın bir bütün halinde, ferdi ve içtimai hayatta uygulanmasıyla kavuşmak mümkündür.

SONUÇ

Kur'an da genellikle inkâr etmek anlamın da îtikâdi boyutuyla kullanılan küfür kavramı Bakara süresinin 84. ve 85. ayetleri incelendiğinde farklı bir boyutu göze çarpmaktadır. Burada îtikâdi boyutu olmaksızın yapılan bir eyleme küfür nitelemesi yapılmıştır. Bu durum da bize küfrün ameli boyutunu gösterir. Küfrün ameli boyutu îtikâdi olarak bir sonuç ortaya çıkarmaz. Fiili boyutta ise Kur'an'ın hükümlerinin üstünü örterek, Kur'an'ın hayattan çıkarılarak yok edilmesine yol açar. Kur'an'ı hayatlarından çıkarmış Müslümanlardan oluşan bir ümmetin ise günümüzde olduğu gibi esame'si okunmaz. Sayıları çok olabilir ama etkileri olmaz.

ANTIBIOTIC SUSCEPTIBILITY PROFILE OF SALMONELLA SPECIES ISOLATED FROM CHICKEN SOLD IN KURE ULTRA MODERN MARKET MINNA. NIGER STATE. NIGERIA.

Aisha, A.A.

Department of Biological Sciences, Federal Polytechnic Bida, Niger State. Nigeria,

ABSTRACT

Salmonella sp. is widespread in poultry products. Infection can arise from contact and consumption of these products. The current study was aimed at isolating and determining the antibiotic susceptibility profile of species of *Salmonella* from chicken sold at Kure ultra-modern market Minna, Niger state. A total of 100 chicken intestine samples were obtained directly from the slaughter slab. Isolation was done on Brilliant green agar medium. Preliminary identification was carried out using biochemical tests. Antibiotic susceptibility profile of identified *Salmonella* species was carried out using the Kirby bauer disk diffusion method and results of the susceptibility test were used to determine the multiple antibiotic resistance index (MARI) of *Salmonella* Isolates. Molecular techniques were employed to confirm the identity of the isolates and determine the presence of selected antibiotic resistance genes. Results of the study revealed that the prevalence of *Salmonella* was 33.0%. The species of *Salmonella* was *Salmonella enterica*. Antibiotic susceptibility test of isolated *Salmonella* species revealed high susceptibility to Streptomycin (87.9%), Ciprofloxacin (81.8%), Gentamicin (78.8%), Chloramphenicol (78.8%) and Septrin (66.7%), while significant resistance levels were observed in Ceporex (60.6%), Nalidixic acid (42.4%) and Ampicillin (39.4%). The multiple antibiotic resistance index (MARI) of isolates ranged from 0.0 to 0.7, with 66.67% of the *Salmonella* isolates having MARI above 0.2. Among the *Salmonella* isolates 21.2% were multi-drug resistant (MDR) showing high level of resistance to various antibiotics. The high MARI and presence of plasmid mediated resistance genes in the *Salmonella* isolate indicates the need for prudent use of antimicrobial agents in poultry production in order to reduce the occurrence and spread of antibiotic resistance. The field study also revealed the need for enhancing hygiene and sanitation practices in poultry facilities/processing, educating poultry handlers and consumers about safe food handling.

KEYWORDS: Antibiotic, Poultry, *Salmonella spp*, Profile and Susceptibility.

INTRODUCTION

Salmonellae are Gram-negative facultative anaerobic rod-shaped and non sporing bacteria that measure 0.7-1.5 by 2.0-5.0 μm . They are motile with long, peritrichous flagella except two serovars, *Salmonella* serovar *pullorum* and *gallinarum*. They are intestinal bacteria which give rise to enteritis and typhoid-like disease. *Salmonella* as a group of microorganisms has long been recognized as an important zoonotic pathogen of worldwide economic significance in animals, birds and man (Wang *et al.*, 2019). The early observation of the disease was made by Ebert in 1880 who described the typhoid bacillus in the tissue of a dead patient. Subsequently, in 1886, Daniel E. Salmon and colleagues isolated from swine the organism currently known as *Salmonella choleraesuis*, which was believed to be the causative agent for hog cholera (Bayu, *et al.*, 2013).

Salmonella is an important zoonotic pathogen that causes infectious diseases in animals and humans. *Salmonella* infection causes not only decrease in productivity and death in poultry, but

also contamination of the human food chain, leading to serious economic losses in the poultry business, as well as being a threat to public health. Although various prevention and control measures, including eradication programs and vaccine and drug use, have been carried out, Salmonella infection is still one of the most important problems worldwide.

AIMS

The aim of this research was to identify and determine the antibiotic susceptibility profile of the species of salmonella isolated from domestic chickens.

OBJECTIVES FOR THE REASERCH

The objectives of this research were to:

- I. Determine the Prevalence of *Salmonella species* in domestic chickens.
- II. Isolate and identify *Salmonella* from commercial layers using biochemical methods.
- III. Determine antibiotic resistance profile of organisms isolated from the fowls.

STUDY AREA

This study was conducted in Minna, Niger state Nigeria and lies between latitude 9.5836⁰ N and longitude 6.5463⁰E at an altitude of 256m above sea level and has a land area of about 88 Km² (www.minna.climatetemps.com/map.php).

MATERIALS AND METHOD

Experimental Design

- The entire study was divided into three steps.
- The first step consists of collection of samples (intestine of the birds)
- The second step was isolation, culturing, identification and characterization of *Salmonella* on the basis of their colony, gram reaction and biochemical tests.
- The third step was the antibiotic susceptibility test

Determination of sample size

- To calculate the adequate sample size for this study, the formula below was used
- $n = Z^2 P (1 - P) d^2$

Z was taken at 95% confidence level with a statistical value of 1.96, the prevalence rate for a similar research conducted by (Adesiji *et al.*, 2011) was 28% (i.e P= 0.1). the appropriate precision for prevalence of the disease between 10% and 90% is going to be 5% (i.e d = 0.05).

- Substituting these value into the above formula, the sample size (n) is 100.

Collection and transportation of samples

A total of 100 samples was collected using sterile disposable containers. Aseptic measures was taken during collection and transportation of samples.

Cultural characterization and isolation of *Salmonella Spp.*

The nutrient broth containing the samples was incubated at 37° C for 1-2 hrs and then spread onto S-S agar and XLD agar plates followed by further incubation at 37° C for overnight. Both colourless or translucent and black colour colonies were observed on S-S agar. The organisms were sub-cultured to get pure culture. Thus single pure colony were obtained. These pure isolates were used for the further study.

Gram's staining

The *Salmonellae* colonies were characterized morphologically using Gram's stain according to the method described by Merchant and Packer (2015).

Differentiation of isolated salmonella using biochemical test

For this study isolated organisms with supporting growth characteristics of *Salmonella* were subjected to sugar fermentation test, MR-VP reaction, indole reaction, citrate utilization test, oxidase test, urease, starch hydrolysis and motility test.

RESULTS AND DISCUSSION

Prevalence of *Salmonella* in chicken

Out of 100 poultry birds whose gut content were examined in this study, a total of 33 were positive for *Salmonella*, giving a prevalence of 33.0%. In studies from Nigeria, lower prevalence of *Salmonella* was reported in poultry. Babatunde *et al.* (2017) in their study on the prevalence and characterization of *Salmonella* isolates from poultries in Ilorin reported a prevalence of 4.7%.

Frequency of Occurrence of Isolated Bacteria Species

71 were isolated out of 100 samples analysed and a total of 33 (33.0%) samples were positive for *Salmonella* species. *Salmonella enterica* 29 (40.8%) was the most frequent *Salmonella* species isolated followed by *Salmonella typhi* 4 (5.6%). The frequency of occurrence of the *Salmonella* species isolated from chicken intestines is shown in Table 1

Table 1: Frequency of Occurrence of isolated Bacteria species

Isolates	Frequency	%
<i>Salmonella enterica</i>	29	40.8
<i>Salmonella typhi</i>	4	5.6
<i>Escherichia coli</i>	8	11.5
<i>Staphylococcus aureus</i>	14	19.7
<i>Klebsiella pneumoniae</i>	2	2.8
<i>Bacillus subtilis</i>	4	5.6
<i>Pseudomonas aeruginosa</i>	4	5.6
<i>Bacillus cereus</i>	1	1.4
<i>Streptococcus pneumoniae</i>	4	5.6
<i>Streptococcus pyogenes</i>	1	1.4
Total	71	100

Antimicrobial susceptibility profile of suspected *Salmonella* isolates

Isolated *Salmonella* species showed high level of susceptibility to Streptomycin 28(87.9), Ciprofloxacin 27(81.8), Gentamicin 26(78.8), Chloramphenicol 26(78.8) and Septrin 22(66.7). While significant resistance was observed in Ceporex 20(60.6), Nalidixic acid 14(42.4) and Ampicillin 13(39.4).

Table 2: Antimicrobial susceptibility profile of suspected *Salmonella* isolates

Antibiotics	Susceptible (%)	Intermediate (%)	Resistant (%)
CPX	27(81.8)	1(3.0)	5(15.2)
PN	15(45.5)	5(15.2)	13(39.4)
CN	26(78.8)	5(15.2)	2(6.1)
SXT	22(66.7)	4(12.1)	7(21.2)
S	28(87.9)	2(6.1)	3(6.1)
CH	26(78.8)	6(18.2)	1(3.0)
NA	13(39.4)	6(18.2)	14(42.4)
AU	15(45.5)	7(21.3)	11(33.3)
CEP	8(24.2)	5(15.2)	20(60.6)

CPX: Ciprofloxacin; NA: Nalidixic acid; CH: Chloramphenicol; PN: Ampicillin; AU: Augmentin; SXT: Septrin; CEP: Ceporex; S: Streptomycin; CN: Gentamicin.

Multiple antibiotic resistance index (MARI) of *Salmonella* isolates

About 54.5% of the isolates showed MAR index ranging from 0.3 to 0.5; 33.3% of the isolates had an MAR index of <0.2 (resistance to less than 2 antibiotics) and only 12.1% had MAR Index of ≥ 0.6 . The MAR index of *Salmonella* isolates is shown in Table 3. Among the 33 *Salmonella* isolates 7 (21.2%) were multi-drug resistant as presented in Table 4.

Table 3: Multiple Antibiotic Resistance index (MARI) of *Salmonella* isolates.

MARI	Number of isolates	Percentage
0	4	12.1
0.1	7	21.2
0.2	0	0.0
0.3	8	24.2
0.4	5	15.2
0.5	5	15.2

0.6	2	6.1
0.7	2	6.1
Total	33	100

Key; MARI: Multiple antibiotic resistance index

Prevalence of multidrug resistant (MDR) *Salmonella* species

The prevalence of Multidrug Resistant *Salmonella* species is presented in table 4.6 Among the 33 *Salmonella* isolates obtained 7 (21.2%) were multi-drug resistant showing high level of resistance to various antibiotics while 4 (12.1%) were susceptible to all antibiotics tested.

Table 4: Prevalence of MDR *Salmonella* species

Resistance category	No of isolate	%
Susceptible	4	12.1
Non MDR	22	66.7
MDR	7	21.2

MDR: Multidrug resistance

CONCLUSION AND RECOMMENDATIONS

In conclusion, isolated *Salmonella* species were highly susceptibility to Streptomycin 28(87.9), Ciprofloxacin 27(81.8), Gentamicin 26(78.8), Chloramphenicol 26(78.8) and Septrin 22(66.7). While significant resistance levels were observed in Ceporex 20(60.6), Nalidixic acid 14(42.4) and Ampicillin 13(39.4). The slaughterhouse observations revealed that enhancing hygiene and sanitation practices in poultry facilities/processing, educating poultry handlers and consumers about safe food handling and cooking practices will help researchers, veterinarians and policy makers to promote responsible antibiotic stewardship to prevent the development of multidrug resistant strains.

Recommendations

Based on the findings of this study, the following recommendations are made;

- i. There should be stricter regulations on antibiotics usage in poultry production and veterinary practices.
- ii. Regular surveillance on antibiotic resistance patterns among poultry should be in place.
- iii. Hygienic and sanitation practices in poultry facilities and processing should be enforced.

EVALUATION OF LEAD ACETATE-INDUCED SH-SY5Y CELL LINE AS A MODEL FOR ALZHEIMER'S DISEASE- AN IN VITRO STUDY

Ajit Karthikeyan and Vardhana Janakiraman*

Department of Biotechnology, School of Life Sciences, Vels Institute of Science, Technology and Advanced Studies, Pallavaram, Chennai- 600117, Tamil Nadu, India

Abstract

Background: Alzheimer's disease (AD) is a progressive neurodegenerative disorder characterized by the accumulation of beta-amyloid plaques and cognitive dysfunction. Environmental neurotoxins such as lead (Pb) are implicated in AD pathogenesis. This study aims to establish an in vitro model for AD using SH-SY5Y neuroblastoma cells treated with lead acetate and assess its neurotoxic effects.

Methods: SH-SY5Y cells were cultured in DMEM supplemented with 10% foetal bovine serum and antibiotics. Cells were treated with increasing concentrations of lead acetate (2–10 μM) for 24 hours. Cytotoxicity was evaluated using the MTT assay, while cell viability was assessed using the Trypan blue exclusion method. The IC 50 concentration of lead acetate was determined to assess its inhibitory effect on cell growth.

Results: Lead acetate treatment resulted in a dose-dependent reduction in cell viability. The percentage of viable cells decreased significantly from 99.08% (control) to 10.90% at the highest concentration (10 μM). The IC 50 value of lead acetate was calculated to be approximately 5 μM . The MTT assay confirmed significant cytotoxicity, with the absorbance values progressively decreasing from 0.617 at 2 μM to 0.079 at 10 μM .

Conclusion: This study demonstrates that lead acetate induces significant neurotoxic effects in SH-SY5Y cells, mimicking cellular mechanisms implicated in Alzheimer's disease. The observed decrease in cell viability and dose-dependent cytotoxicity highlights the utility of SH-SY5Y cells as a promising model for studying lead-induced neurodegeneration and its role in AD pathogenesis.

Keywords: Alzheimer's Disease; Neurotoxins; Lead Acetate; Cytotoxicity; Lead-Induced Neurodegeneration

Background

Alzheimer's disease (AD) is a neurodegenerative disorder and a prominent protein-conformational disease (PCD), [1,2] primarily caused by the aberrant processing and polymerization of normally soluble proteins [3]. It is the leading cause of dementia globally, significantly impacting public health. In the United States alone, approximately 5.3 million individuals are affected by AD, with 5.1 million aged 65 years or older and around 200,000 cases of younger-onset AD reported [4]. The strongest and best-known risk factor for dementia is age, and countries like India are experiencing an alarming increase in dementia cases due to their aging populations. In India, the prevalence of dementia among adults aged 60 and above is estimated at 7.4%, translating to about 8.8 million older adults living with this condition [5,6]. The etiology of AD is multifactorial, encompassing both genetic and environmental components. Contributing factors include aging, genetic predisposition, head injuries, and exposure to various chemicals and compounds [7]. Environmental exposures play a critical role, with potential hazards including toxic metals (e.g., aluminum and copper), pesticides (such as organochlorine and organophosphate insecticides), industrial chemicals (e.g., flame retardants), and air pollutants (e.g., particulate matter) being implicated [7]. Among these, lead (Pb^{2+}) is a

well-documented neurotoxin, with chronic exposure known to induce cognitive dysfunction and neurological impairments [8]. Research indicates a connection between lead exposure and amyloid peptide dysregulation, leading to increased beta-amyloid formation in the brain, a hallmark of Alzheimer's disease (AD) [8].

Advances in neuroscience research depend heavily on reliable neuronal models, which are vital for uncovering the molecular and cellular mechanisms underlying nervous system disorders [9]. In vitro models, such as SH-SY5Y neuroblastoma cells, are especially valuable as they offer an accessible and reproducible system for investigating the pathophysiological processes of neurodegenerative diseases, including AD. Moreover, these models are indispensable for efficiently screening potential therapeutic agents for nervous system disorders [10].

In light of these factors, this study aims to establish an in vitro model for AD using SH-SY5Y neuroblastoma cells treated with lead acetate to evaluate its neurotoxic effects. This approach seeks to enhance our understanding of lead-induced neurodegeneration and its relevance to AD pathology, providing a foundation for future research and therapeutic development.

Methodology

SH-SY5Y human neuroblastoma cells were cultured in Dulbecco's Modified Eagle Medium (DMEM), supplemented with 10% fetal bovine serum and 100 U/mL penicillin-streptomycin. The cells were maintained at 37 °C in a humidified atmosphere with 5% CO₂, with the culture medium replaced twice weekly. Morphological observations were carried out using an inverted microscope to ensure cell health and confluency before experimentation.

A stock solution of 100 µM lead acetate was prepared by dissolving the appropriate amount in dimethyl sulfoxide (DMSO). Working concentrations of 2, 4, 6, 8, and 10 µM were prepared from this stock solution. The prepared lead acetate solutions were used to treat SH-SY5Y cells to evaluate cytotoxic effects and to develop an Alzheimer's disease model.

For cell viability assessment, the Trypan blue exclusion assay was performed. SH-SY5Y cells were trypsinized and mixed with 0.25% Trypan blue solution, and the mixture was loaded onto a hemocytometer. Stained (non-viable) and unstained (viable) cells were counted, and the percentage of viable cells was calculated relative to control conditions.

To investigate the cytotoxicity of lead acetate, cells were seeded in 96-well plates at a density of 2×10^4 cells per well and allowed to adhere for 48 hours. Subsequently, cells were treated with varying concentrations of lead acetate (2–10 µM) for 24 hours. Cell viability was determined using the MTT assay. After treatment, 10 µL of MTT reagent was added to each well, and plates were incubated in the dark at 37 °C for 4 hours. Following incubation, 100 µL of DMSO was added to dissolve the formazan crystals formed by metabolically active cells. Absorbance was measured at 570 nm using a microplate reader to quantify the reduction in cell viability. The percentage of cell viability was calculated using:

$$\% \text{ of Cell Viability} = \frac{A_c - A_s}{A_c} \times 100$$

All experiments were performed in triplicate to ensure reproducibility. The IC₅₀ value, representing the concentration of lead acetate at which 50% of cell viability was inhibited, was determined based on the dose-response curve.

Results

The exposure of SH-SY5Y neuroblastoma cells to varying concentrations of lead acetate (2–10 µM) demonstrated a dose-dependent reduction in cell viability. Using the Trypan blue exclusion assay, a significant decrease in the percentage of viable cells was observed with increasing concentrations of lead acetate. Cell viability declined from 99.08% in the control group to 10.90% at the highest concentration (10 µM), with an IC₅₀ value determined to be approximately 5 µM (Table 1).

Table 1: Cytotoxicity of SH-SY5Y Cells Exposed to Lead Acetate at Different Concentrations

Concentration of Lead acetate ($\mu\text{M}/\text{mL}$)	Trial 1	Trial 2	Trial 3	Average	Standard Deviation	Cytotoxicity (%)
2 μM	0.617	0.619	0.615	0.617	0.002	84.75274725
4 μM	0.439	0.435	0.432	0.435333333	0.003511885	59.7985348
6 μM	0.354	0.359	0.353	0.355333333	0.00321455	48.80952381
8 μM	0.236	0.232	0.237	0.235	0.002645751	32.28021978
10 μM	0.078	0.081	0.079	0.079333333	0.001527525	10.8974359
Control Cells	0.721	0.72	0.723	0.721333333	0.001527525	99.08424908
Blank	0.728	0.727	0.729	0.728		

Cytotoxicity was further confirmed using the MTT assay, which revealed a marked decrease in absorbance at 570 nm as the concentration of lead acetate increased. This indicates reduced metabolic activity in SH-SY5Y cells, corresponding to decreased cell viability. The MTT assay confirmed significant cytotoxicity, with the absorbance values progressively decreasing from 0.617 at 2 μM to 0.079 at 10 μM . Representative images of the cells exposed to different concentrations of lead acetate (Figure 1) illustrate the extent of cytotoxic damage, with noticeable morphological changes and reduced cell density at higher concentrations.

Figure 1: Cytotoxicity induced by Lead acetate at different concentrations in SH-SY5Y cell lines**(A) 2 μM ; (B) 4 μM ; (C) 6 μM ; (D) 8 μM ; (E) 10 μM (F) Control**

Discussion

This study aimed to demonstrate the concentration-dependent cytotoxic effect of lead acetate on SH-SY5Y neuroblastoma cells, providing crucial insights into its neurotoxic potential. In our experiments, lead acetate exhibited a dose-dependent reduction in cell viability, with viability decreasing from 84.75% at 2 μ M to a mere 10.89% at 10 μ M (Table 1, Figure 10). These findings are consistent with prior studies that have documented the neurotoxic effects of heavy metals, including lead, through mechanisms such as oxidative stress, mitochondrial dysfunction, and calcium dysregulation.

For instance, a study utilized this cell line to investigate the formation and aggregation of amyloid-beta ($A\beta$) fibrils under conditions of toxicity induced by copper and L-DOPA [11]. The study demonstrated that exposure to $A\beta$ 42, copper, and L-DOPA led to decreased cell viability and increased oxidative and nitrosative stress, causing apoptosis. The researchers also evaluated the neuroprotective potential of olive biophenols, which attenuated cell death by reducing reactive oxygen and nitrogen species and promoting survival pathways, such as the PI3K/AKT and JNK pathways [11]. This finding underscores the applicability of SH-SY5Y cells in identifying compounds with neuroprotective properties.

Another study used SH-SY5Y cells to model lead (Pb)-induced neurotoxicity, a recognized environmental hazard affecting the nervous system [12]. The researchers found that Pb exposure caused mitochondrial fragmentation, a process linked to oxidative stress and cellular energy deficits, ultimately leading to cell death. Treatment with metformin ameliorated this damage by activating the AMPK/Nrf2 pathway, thereby preventing mitochondrial fragmentation. This study highlights the utility of SH-SY5Y cells in understanding mitochondrial dynamics and testing interventions for heavy metal-induced neurotoxicity [12]. Additionally, Abdul et al. (2019) explored SH-SY5Y cells to evaluate the effects of bioactive compounds on $A\beta$ -induced neuronal damage [13]. The study identified curcumin and piperine as promising candidates, showing a synergistic effect in protecting SH-SY5Y cells against $A\beta$ -induced toxicity. This combination effectively inhibited $A\beta$ aggregation and oxidative stress, demonstrating the potential of SH-SY5Y cells for screening therapeutic agents and understanding their mechanisms of action [13]. Together, this study highlights the role of SH-SY5Y cell line models for studying the neurotoxic mechanism and therapeutic strategies. This model serve as a better model for preclinical research.

Conclusion

This study demonstrates that lead acetate induces significant neurotoxic effects in SH-SY5Y cells, mimicking cellular mechanisms implicated in Alzheimer's disease. The observed decrease in cell viability and dose-dependent cytotoxicity highlights the utility of SH-SY5Y cells as a promising model for studying lead-induced neurodegeneration and its role in AD pathogenesis.

ABSTRACT

The purpose of this paper is to highlight the technological impact of recent years on recruitment. Due to the mass digitalization of recruitment processes in most companies, recruiters are currently accustomed to recruiting candidates through social networks.

This paper analyzes the social media platforms most frequently used in recruitment and identifies their advantages and disadvantages. Based on the theoretical concepts presented and discussed in the first part of the paper, a questionnaire was created for the companies in the Western part of Romania. Using this questionnaire, there will be determined their preference regarding the method used in recruitment: online, traditional, or mixed and map interactively the social networking sites they use for recruitment.

Finally, we will be able to gain an overview of the level of digitalization of recruitment techniques and the use of social media platforms in such processes.

Regarding the robustness of this research, the results are relevant for the Western region of Romania, but because most of the analyzed companies operates at an international level, mostly in Europe, America and Asia, it results that the conclusions of this research can be relevant in some cases for the recruitment processes on an international level as well, serving as a reference tool for future research.

KEY WORDS: *recruitment, social media, social networks, digitization, Timis County.*

1. Introduction

The whole society has recently gone through a period of digitalization, where every department in an organization has been responsible for finding a solution to continue processes, mostly online. Human Resources departments in companies have also been faced with such situations, with recruiters having to make use of digital tools, databases and different social media platforms or recruitment websites in order to find and further recruit candidates for different roles.

Over time, various research papers have been created on different ways of recruitment present in the contemporary world, discussing specialized HR websites (Hebberd, 2017) or online forms and emails sent to different companies from candidates. There are also different studies on websites used in recruitment, depending on each continent (Qurbonov, I., 2021).

This paper proposes to extend the existing studies, analyzing the Western part of Romania in terms of online recruitment.

Since social media platforms play a significant role nowadays, we have analyzed their contribution to the recruitment processes undertaken by recruiters. How much do recruiters rely on finding candidates through social networks? How easy is it to attract candidates via social media? Is online recruitment more effective than traditional methods? This paper includes

answers to these questions, as well as additional information that will ultimately lead to the awaited conclusion: is the online environment the future of recruitment?

The research is based on a case study created from a questionnaire given to companies in Timiș County, in the Western part of Romania. The purpose of the questionnaire is to map organizations in Timiș County with the social networks each uses in their recruitment processes and to find out their preferences regarding online or traditional recruitment.

2. Data and methods

This research addresses the topic of recruitment through digital tools and social media networks, aiming to highlight the most common recruitment platforms and networks used by companies in Timiș County, based on a mapping of responses received.

The purpose of this study is to identify the most common and, at the same time, effective recruitment platforms or social networks through which companies in Timiș County tend to recruit candidates for various roles. Another aspect of the research is identifying the advantages and disadvantages of recruitment via social media, gathering opinions from recruiters at companies in Timiș County on this topic. Additionally, the study seeks to identify problems that arise from online recruitment through social networking sites. Finally, it emphasizes the difference between online recruitment using digital tools and social networks and traditional recruitment without internet involvement.

The research objectives are:

- Mapping companies in Timiș County according to the social networks used in recruitment.
- Identifying the advantages and disadvantages of online recruitment, as seen by recruiters from different companies in Timiș County.
- Identifying issues caused by online recruitment.
- Understanding the preferences of companies in Timiș County regarding online versus traditional recruitment.

The research method used for this study was a survey, with the primary instrument being a questionnaire. The questionnaire was created using Google Forms and was distributed exclusively online to companies in Timiș County.

The questionnaire was sent to the human resources departments of various companies located in Timiș County, with a final respondent count of 50. Based on the responses received, a mapping of companies in Timiș County was made according to the recruitment sites and social media platforms used for recruitment. Additionally, we identified various issues arising from online recruitment via social media and determined whether recruiters preferred to return to traditional recruitment methods, remain to an online approach using digital tools and social media, or opt for a mix of both.

The questionnaire was structured into two sections: an introductory section containing information about the company, the recruitment sites and social networks used to find candidates and the types of employees recruited through social media; and a second section regarding recruiters' preferences for traditional or exclusively online recruitment methods.

3. Results

Question 1: *Does your company use social media in recruitment?*

The first questions of the questionnaire were designed to understand the respondent sample. The first question—"Does your company use social media in recruitment?"—was essential for the subject of the conducted study, reflecting the percentage of companies surveyed that utilize social networks in their recruitment activities.

All 50 companies out of a total of 50 responded affirmatively. This 100% percentage highlights the trend of businesses moving to digitalize their processes, a trend that grew significantly during the COVID-19 pandemic.

Currently, as indicated by the response to the question above, companies use social media both to promote their work and to find and recruit candidates for various roles.

Question 2: *How many employees does your company have?*

The questionnaire was distributed to various companies in Timiș County. This question was asked to track the company sizes and use the responses to filter results for certain questions. The responses are shown in Figure 1.

Fig.1 - Number of employees in the responding companies

The second question in the questionnaire refers to the size of the company. This question was included to assess whether there is a relationship between the number of employees in a company and the extent to which they use social media for online recruitment. As shown in the graph, the responses are evenly distributed, with no significant disparity. Most of the responding companies have over 500 employees, indicating that these companies recruit regularly across numerous positions. After filtering the questionnaire results, it was observed that all companies with over 500 employees use LinkedIn for recruitment, some of them also being active on Facebook.

The second largest group, representing 28% of respondents, consists of companies with 200 to 499 employees. Compared to companies with more than 500 employees, this group shows greater diversity in social media use for recruitment. While the largest companies predominantly use LinkedIn, almost all companies in the 200-499 employee range reported

using both LinkedIn and Facebook. The next category, companies with 50 to 199 employees, represent 20% of respondents, followed by companies with less than 50 employees, at 18%.

When comparing company size with recruitment channels used, it is observed that smaller companies tend to use more social media channels. This is likely because many candidates are inclined to pursue positions in well-known companies. As a result, smaller or newer companies may face challenges in finding candidates, opting to use all available recruitment channels to reach potential applicants.

Question 3: *Which social networks do you use most often for recruitment?*

Figure 2 highlights the social media platforms most frequently used for recruitment among responding companies.

Fig.2 – Social networks most used in recruitment

The third question asked companies about the social networks they most commonly use in recruitment. Respondents could select multiple options for this question. From the responses, it is evident that the majority of companies, specifically 94%, favor LinkedIn when it comes to social media recruitment. Why is this the case? LinkedIn was created to connect employees and employers globally and although it's categorized as social media, it is predominantly used for professional purposes rather than personal ones.

Thus, companies often set up a LinkedIn account when entering the market, and recruiters are accustomed to finding talent on this platform. Among the recruiters surveyed, only a very small number do not use LinkedIn, as reflected in the responses: out of the 50 companies analyzed, 47 of them use LinkedIn for recruitment.

The second most used platform for finding candidates is Facebook, with 28 out of 50 responses (56%). Facebook is constantly evolving and companies can now use a variety of tools to find talent. New tools added specifically for Facebook's business area have influenced some companies to begin recruitment processes through this network.

Though it might be considered an outdated method, email ranks third among the preferences of companies in Timiș County, with 26% of responses. While there is a significant difference between the percentages for the top two platforms and email, it's noteworthy that some companies still choose this recruitment method. Other platforms mentioned, with usage rates below 20%, include Instagram (16%), Twitter (4%), YouTube (2%) and Telegram (2%). The limited use of these platforms for recruitment may be due to their lower popularity among Romanian companies or the lack of necessary digital tools that could facilitate recruitment through these networks.

Question 4: Which recruitment websites do you use most often?

As the question suggests, Figure 3 illustrates the preferred recruitment websites of the responding companies.

Fig.3 - Most frequently used recruitment websites

To compare with the social platforms analyzed earlier, we asked respondents about their preferences for recruitment websites. Recruiters could once again select multiple options.

BestJobs ranked first, with 78% of companies (39 out of 50) using it, followed by Ejobs at 48% (24 out of 50) and Hipo at 28% (14 out of 50). These are the most popular recruitment sites in the country, both among candidates—as shown by their large user base—and among recruiters, as indicated by these responses. Other options chosen included OLX (5%), Publi24 (3%), Jooble (3%), UndeLucram (2%) and Dora (2%). Additionally, 10% of companies indicated that they do not use recruitment sites at all.

We can thus conclude that recruitment websites are somewhat less popular than social media: while all companies use social networks for recruitment, not all use recruitment sites to find candidates. One plausible reason for this difference is that people on recruitment sites are actively seeking jobs, whereas social media platforms allow recruiters to search for candidates more passively.

Question 5: How often have you found candidates using social media?

In Figure 4 we can see the frequency of finding suitable candidates through social media, from the perspective of companies located in Timiș County.

Fig. 4 - Frequency of finding candidates through social media

In order to verify whether the social media networks mentioned by companies bring results in recruiting suitable candidates, the following question was asked: "How often have you found candidates using social media?". Respondents had a linear scale response option, with answers from 1 to 5, 1 meaning "never", and 5 - "always".

Although in theory finding candidates would be quite easy through any social media site, due to filtering the results by certain keywords, in practice finding a suitable candidate is difficult, especially for certain roles.

As shown in the attached graph, 20% of recruiters always find candidates through social networks, while 40% find candidates most of the time using social media. With a combined percentage of 60%, we can state that recruiters almost always find candidates via social media—a very positive outcome.

There is also a neutral option in the responses, selected by 22% of respondents, indicating some uncertainty among employers about finding suitable candidates through social platforms. Additionally, 16% of recruiters reported "almost never" finding candidates through social media and 2% responded with "never."

Analyzing the resulting graph as a whole, we can say that not always the attempt at recruitment through social media is successful, with recruiters finding the right candidates. However, in more than half of the cases, the results of recruitment through social media are positive, which may mean a future perspective of recruitment through social networks and an expansion of this practice among more companies.

Question 6: *How often have you found candidates using recruitment sites?*

Similar to the previous question, Figure 5 highlights the frequency of finding suitable candidates following their recruitment through recruitment sites.

Fig. 5 – Frequency of finding candidates through recruitment websites

Just as we analyzed the results for social media, we will also analyze those for recruitment websites through a similar linear scale question with the same response options.

The first difference between the results for the two questions lies in how responses are distributed. The situation is similar regarding the 60% of recruiters who almost always find candidates on recruitment websites, the same percentage seen for social media. Looking at the lower half of the chart, we observe a different distribution of responses compared to social media. For the response "never," the percentage is 10%, indicating that more companies face challenges in finding candidates through recruitment websites compared to social media.

A possible reason for these challenges in finding candidates through recruitment sites could be passive recruiting, a common technique today. Since recruitment sites are typically used by those actively seeking jobs, social media allows companies to reach candidates who are not currently job hunting but might be open to a new opportunity. As a result, the chances of finding a suitable candidate through social media are higher than through recruitment websites.

Question 7: *Have you faced any problems among employees following online recruitment?*

Figure 6 represents the frequency with which companies in Timiș County have encountered problems following the hiring of a candidate recruited online.

Fig. 6 – The existence of problems arising from online recruitment

In order to investigate in more detail the success of finding a candidate through an exclusively online recruitment process, we asked the following question to the respondents: "Have you faced any problems arising among employees as a result of online recruitment?".

A very large number of respondents, represented by a percentage of 82%, answered negatively, having no situation in which a candidate recruited online would bring problems among the company, colleagues or among his work.

However, we can observe a percentage of 18% of recruiters, more precisely 9 out of a total of 50 companies, who stated that they faced certain problems or difficulties arising after recruiting a candidate through social networks or recruitment sites. With this question, the aim was not only to obtain a quantitative answer, but also to find out the reasons why recruiters encountered problems with recruited candidates, reasons that are visible in the next question.

Question 8: *If you answered yes to the previous question, can you give an example of the situation you faced?*

To delve deeper into this topic developed in the previous question and to find out some causes of the problems that arose in the online recruitment of candidates, the following question was asked: "If you answered yes to the previous question, can you give an example of the situation you faced?" where only the ones who selected an affirmative answer to the previous question were asked to answer.

The reasons listed by recruiters were: the candidate's failure to take part in the interview, the technical level difference from the one perceived during the interview, social skills present only in online interviews, not face-to-face, a long recruitment process that leads to the candidate's

desire to withdraw, lack of interest on the part of the candidate and finally the impossibility of establishing an authentic connection with the candidate.

Therefore, we note that there are also certain disadvantages of recruiting through social networks, disadvantages that can lead to the creation of problems among candidates already employed. Since during an online interview, the recruiter or manager cannot realize the entire body language of a candidate, they may omit details that could help them in making a choice. Thus, the observation of these things is somewhat limited due to the lack of a face-to-face interview.

However, a virtual interview is beneficial, especially for candidates who do not live in the same city where the headquarters of the company they want to work for are located. That is why, through online interviews, transportation costs and, ultimately, time costs are eliminated.

Question 9: *In which fields do you recruit using social networks?*

The purpose of the following question was to analyze the fields for which online recruitment is done through social networks. This question gave respondents the opportunity to choose multiple answers.

As could already be anticipated, the field where social media is most frequently used for recruitment is IT, with 54% of responses indicating this trend. Candidates in this field are the most active on social networks, especially on LinkedIn. Thus, we can conclude that neither candidates looking for a job in the IT field nor IT recruiters anymore practice physical recruitment, but use digital tools for: searching for candidates, approaching them, receiving CVs, conducting interviews. The following fields for which recruitment is carried out in the virtual space are: sales, customer service, human resources, logistics, accounting - finance and marketing. Just as we were able to make a connection between the IT field and the use of digital tools or social media in recruitment earlier, we can state this time that a reason for the appearance of the other fields among the most voted answers could be their popularity among companies in Timiș County and the need for personnel in the respective branches. These fields are also among the most sought after by recent university graduates or entry-level employees, who are the most active on social media when it comes to job searching.

Question 10: *What type of experience do candidates recruited through social media generally have?*

Responses regarding the level of experience sought by companies that use online recruitment can be seen in Figure 7.

Fig. 7 - The type of experience of candidates recruited through social media

The purpose of this question was to determine the experience level companies in Timiș County are looking for when recruiting through social media. For this question, recruiters could select multiple answers. Although one might initially assume that digital tools are mainly used to target junior-level candidates, the attached graph shows that specialists with 3 to 7 years of experience are the most sought after, representing 76% of all respondents. Junior candidates follow closely with 72% of respondents. There is, however, a notable gap when it comes to senior-level candidates, specifically those with over 7 years of experience; for these, the response rate is 50%, exactly half of all responding companies. Managers rank lowest in recruiters' preferences in Timiș County, with only 30% of respondents indicating an interest in this level of experience.

A likely explanation for the lower demand for senior and management roles is that such positions are often filled internally by employees advancing within the company. This reduces the need to seek outside candidates. For roles requiring less experience, however, there is a constant need to find new candidates as current employees in similar positions either advance, leave for various reasons or are insufficient in number due to the continuous creation of similar roles within the company.

After this introductory series of questions, which helped us gather background information on the companies that responded and provided a mapping of social media preferences for recruitment in Timiș County, the survey continued with a section called “Online Recruitment vs. Traditional Recruitment.” This section aimed to explore in detail the reasons why recruiters prefer either online or traditional recruitment. Additionally, it sought to understand the advantages and disadvantages of online recruitment, thereby uncovering various factors that might influence whether or not digital tools are used in recruitment.

It is worth mentioning that, in this context, online recruitment refers to using digital tools, social networks or job sites, with recruitment activities conducted entirely online. Traditional recruitment, on the other hand, involves in-person activities that attract candidates and manage the recruitment process. Examples of traditional recruitment activities include posting job advertisements in magazines/newspapers, participating in job fairs, job posters, conducting in-person interviews and allowing candidates to submit their CVs directly at the company office. The responses from Timiș County companies for the second part of the survey are analyzed below.

Question 11: *Would you go back to a purely traditional recruitment process? (without the use of digital tools)*

The first question in the second section of the questionnaire was related to the return to a purely traditional recruitment process. This question tested the preference and at the same time the adaptability of recruiters and the companies they work for, regarding the transition of recruitment processes to the online environment.

Most companies have embraced the change brought about by the digitalization of recruitment processes, considering them more advantageous for the company, wanting to continue these activities in the online environment. A percentage of 12% of the total respondents, more precisely 6 respondents out of 50, stated that they would like to return to an exclusively traditional recruitment process, without the use of digital tools. We noticed that the recruiters who answered "yes" to the question asked are employees of small companies in Timiș County, which denotes the fact that they do not hire with a very high frequency, thus preferring to interview candidates in physical format and carry out recruitment processes directly at the company's headquarters. At the same time, we noticed that these companies use LinkedIn as their main social networks and very rarely Facebook.

Question 12: *What is your preferred method of recruitment?*

We can see in Figure 8 the preferred method of recruiters to search for candidates.

Fig. 8- The preferred recruitment method by companies in Timiș County

Because the previous question did not yield very clear answers regarding companies' exact recruitment preferences, this question provides more details on the topic. Companies were asked: "Which recruitment method do you prefer?" with the options being exclusively online, exclusively traditional or mixed. Respondents could select only one answer.

The most popular choice among companies is the mixed recruitment method, combining both traditional and digital recruitment tools, with more than half of responses—specifically 60%—leaning toward this option. This percentage shows that most companies prefer a combined approach, selecting the most advantageous tools and activities from both recruitment methods to attract desired candidate profiles and achieve optimal results.

Of the total respondents, 38% indicated a preference for exclusively online recruitment, opting not to use traditional tools or in-person activities for candidate search and selection. This exclusively online approach suits companies operating in external markets, as they can recruit international candidates using digital tools and online interviews, regardless of the candidate's location.

Only one company indicated a preference for the exclusively traditional recruitment method, avoiding any use of the internet or online processes in their hiring approach. Upon filtering the results, it was observed that this respondent is a production company with a relatively small number of employees, which could explain its preference for traditional recruitment.

Question 13: *What advantages of recruiting through social media do you think are the most important?*

It is important to be aware of what advantages we can obtain, as a recruiter or a company, as a result of recruiting through social networks.

The respondents had to answer the question: "Which advantages of recruiting through social media do you think are the most important?", with multiple answers being possible.

With a percentage of 66%, companies in Timiș County consider the largest advantage of online recruitment through social media to be the access to large candidate pools. This is because social media platforms provide recruiters with unlimited access to a wide range of individuals, allowing them to recruit passively. Companies can also share various job announcements or posts on their pages, reaching numerous candidates quickly through targeted promotion. Larger

candidate lists enable more detailed CV screening, which is critical to a successful recruitment process.

The second most valued advantage, chosen by 56% of companies, is the reduced recruitment time. The automation of recruitment processes saves time for both candidates and recruiters. Another significant advantage of online recruitment through social media is its cost-effectiveness, noted by 50% of respondents. Additionally, the ability to target specific audiences by tailoring job posts to reach selected groups ranked high, with 52% of companies indicating this as an advantage.

Under the „other” option, where respondents could add personal input, one company mentioned: „Wider public reach, higher social media usage rates, accessible to people with limited skills or education, direct candidate attraction through official company pages, easy communication, and more personal insights into candidates' personalities.”

Question 14: *What disadvantages of social media recruitment do you think are the most problematic?*

In order to have an accurate assessment of social media recruitment, an analysis of the disadvantages is also necessary. Thus, respondents had to choose between the following disadvantages: ethical issues, incomplete information, fake news and the option others, where they could fill in their own answer.

We can observe that the most frequently selected response is “incomplete information,” with 68% of respondents indicating this as a major issue. Many companies encounter CVs from candidates that lack complete personal and professional details or even omit crucial sections. Some candidates do not update their CVs, resulting in outdated information that does not reflect their current reality. Due to such incomplete information, a candidate may be eliminated from a recruitment process, despite potentially possessing the qualifications or experience needed for the desired role.

The second most common response is “fake news,” accumulating 42% of the votes (21 out of 50 respondents). Here, “fake news” refers to false information provided by candidates in their CVs or during interviews. In a previous question, some companies reported having encountered instances where candidates' claimed experience or skills did not match what was observed once they were hired. This issue can be quite severe, especially in roles where a new hire is essential for a team or department's workflow. It can be prevented only through a rigorous recruitment process, requiring close attention from both the recruiter and the manager.

The last response option, “ethical issues,” was selected by 10 out of 50 respondents (20%). Some candidates, uncomfortable with internet use, may be reluctant to share CVs containing personal information on various company platforms or social networks. This makes them harder to locate and recruit, even if they are actively seeking a job. There were three “other” responses, where respondents could provide their own comments. Among these, there was a company that sees no disadvantages to online recruitment through social media, a company that feels social media recruitment leads to longer waiting times compared to traditional methods and a company focused on hiring unskilled workers, for whom online recruitment tools are less effective.

Question 15: *Do you usually access candidates' social media accounts?*

The responses highlighted in Figure 9 show the frequency with which responding companies access the social media accounts of candidates applying for different roles.

Fig. 9 – Accessing rate of candidates' social media accounts

One of the disadvantages mentioned earlier referred to ethical concerns. These issues can also arise when recruiters check a candidate's social media profile, with the content posted influencing the decision to end the recruitment process for that individual. To see if such ethical concerns frequently occur in online recruitment and to understand if recruiters use social media platforms without necessarily posting job ads there, we asked the following question: "Do you usually access candidates' social media accounts?"

We observe that, with a combined 60%, most companies do not check, or only very rarely check, candidates' profiles, doing so only in exceptional cases. Although the expectation might have been different, filtering the results revealed that those who answered "never" or "only very rarely" selected incomplete candidate information, rather than ethical concerns, as a disadvantage of social media.

On the opposite end, 40% of respondents indicated that they regularly or almost always check candidates' social media profiles.

Question 16: *To what extent do you consider online recruitment through social media more advantageous than traditional methods?*

The final question in the survey gauged respondents' preference between online and traditional recruitment methods. Specifically, the question asked: "To what extent do you consider online recruitment through social media more advantageous than traditional methods?", to which respondents answered on a linear scale from 1 – not advantageous at all, to 5 – very advantageous.

We observe that most responses lean toward option number 5, with a 50% share. The next most popular choice was option number 4, holding a 30% share. Thus, 80% of the responding companies in Timiș County believe that online recruitment is more advantageous than traditional recruitment methods. There was an additional 18% representing neutral responses and a 2% share, consisting of a single response, indicating a preference against online recruitment.

As mentioned earlier, based on the survey responses, we created a map showing Timiș County companies and the social media platforms they use for recruitment. For this mapping, we utilized the Timiș County map template from Maphub, which allowed us to create an interactive map of all responding companies. On the map, each company's headquarters location is displayed and by simply clicking on each icon, the company's name and the social platforms used for recruitment appear.

The interactive map can be accessed at the following link:
<https://maphub.net/AlexandraPopescu/map>

Fig. 10 - Map of Companies in Timiș County

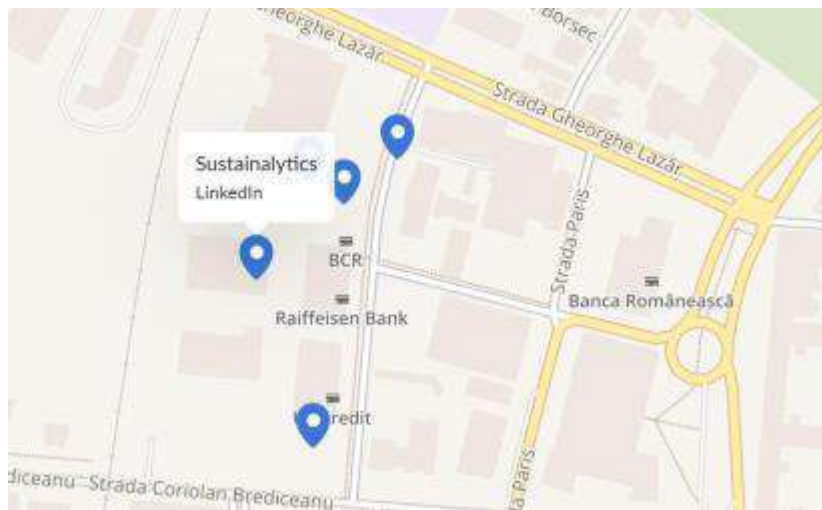

Fig. 11 - Example of a company with social media platforms used for recruitment

4. Conclusions

In this research, we addressed the topic of online recruitment through social media, focusing the case study on companies in Timiș County and mapping the social media platforms they use. The purpose and objectives of this research have been met, as outlined below:

I. Mapping Companies in Timiș County Based on the Social Media Platforms Used for Recruitment

Following this case study, we were able to map companies in Timiș County, according to the social networks used in recruitment. Thus, we can conclude that most companies use LinkedIn in recruitment, the other social media platforms not being so developed in terms of business and recruitment facilitation. A need for the future in this regard would be precisely the development of other platforms, so that recruiters can use them in recruitment processes. For example, on both Facebook and Instagram or Twitter, special filters can be added for the results

of searching for certain candidates, so that the recruiter can add his preferences, ultimately obtaining only the candidates that match their requirements. Facebook has recently developed a section dedicated especially to recruitment and pages of various companies, but for a higher degree of use of this facility, there is a need for constant improvement, by adding new online tools. The map can be seen by accessing the link mentioned above.

II. Identifying the Advantages and Disadvantages of Online Recruitment from the Perspective of Recruiters in Various Companies in Timiș County

Another important objective of this research was to identify the advantages and disadvantages of online recruitment from the perspective of recruiters in companies in Timiș County. As found in the responses received, the most important advantages of recruitment through social media are: lower costs compared to physical recruitment, reduced time, larger candidate lists, as information can reach a much larger number of potential employees and the ability to post job announcements targeted to specific groups, whose characteristics can be defined by each recruiter or company.

Although many advantages of online recruitment through social media were identified, it is also important to acknowledge that there are several disadvantages associated with this topic. Therefore, based on the responses obtained, the disadvantages observed include: ethical issues, when recruiters may eliminate a candidate from the recruitment process based on that candidate's posts on their social media accounts, which are typically private and pertain to the candidate's personal life rather than their professional one; fake news, which companies often face, for instance, in the case of ghost applicants who do not actually wish to enter the recruitment process but rather want to observe the company's recruitment practices; and finally, incomplete information, which each recruiter constantly encounters when reviewing a candidate's CV.

III. Identifying Problems Arising from Online Recruitment

As observed from the analysis of the survey results, a series of problems faced by recruiters in companies in Timiș County due to online recruitment have been identified. We have also outlined a number of ways in which such problems can be proactively addressed. By identifying the inconveniences caused by recruiting promising candidates who later prove to be unsuitable for a role or create impediments for the work team, a warning signal can be raised regarding the conduct of the recruitment process, observing what needs to be improved for each individual company.

IV. Understanding the Preferences of Companies in Timiș County Regarding Online and Traditional Recruitment

Finally, for the last objective achieved in this study, we analyzed the preferences of companies in Timiș County concerning recruitment methods. Specifically, they were asked for their opinions on how they believe the recruitment process would be more efficient: through exclusively online recruitment, exclusively traditional recruitment or a mixed approach. From the responses received upon completing the survey, it is evident that the majority of companies prefer a mixed recruitment process, meaning both online and traditional methods, with a few opting for exclusively online recruitment. These responses lead us to conclude that the future perspective of recruitment is shaped precisely by the use of digital tools. Companies that currently employ a mixed recruitment approach may increasingly move towards a fully digitized process. The other companies, which are already exclusively recruiting online at

present, are seeking to improve and enhance the efficiency of recruitment processes in this regard.

Why are online processes more efficient than those carried out in a traditional, standard format? By conducting recruitment in a virtual space, all costs related to both transportation and time are eliminated. Additionally, information can reach far more people by posting a job advertisement on social media than through a flyer or an ad in a newspaper or magazine. A significant advantage for recruiters is precisely passive recruitment, that was mentioned throughout this paper.

Because recruiters can access various profiles of potential employees through social networks, they can initiate passive recruitment processes by sending messages to them regarding open roles within the company.

From this research, we can see the impact of the pandemic context on recruitment techniques among various companies in Timiș County. Although the context was unfavorable, it pushed companies towards digitizing their recruitment and selection processes, with these techniques proving to be more effective than traditional ones.

In conclusion, we observe that the recruitment world is moving toward the digitization of candidate search, selection, and even choice processes. Recruiters still play a very important role in organizations, being the key to finding the right candidate, but digital tools greatly assist them. Over time, there is a strong possibility that social media will gain momentum in recruitment and even develop various sections dedicated to businesses.

These conclusions are based both on the responses from the research conducted regarding recruitment techniques and on forecasts from specialists regarding the development of recruitment processes.

ÖZET

Portre resimleri, tarih boyunca bireylerin kimliklerini, kişisel özelliklerini ve toplumsal konumlarını ifade etme amacıyla kullanılan önemli bir sanatsal ifade biçimi olmuştur. Sanat tarihinin her döneminde, portre sanatının bireylerin yalnızca dış görünüşlerini yansıtmakla kalmayıp, aynı zamanda kimliklerini, karakterlerini ve sosyal statülerini yansıtmaya işlevi üstlendiği görülmektedir. 20. Yüzyılın başlarında Avrupa’da kök salan Ekspresyonizm akımı ise portre sanatına yeni bir boyut kazandırarak, bireyin içsel dünyasına, ruhsal çatışmalarına ve psikolojik derinliklerine odaklanan bir yaklaşım ortaya koymuştur. Savaşlar, toplumsal kargaşalar ve hızla değişen siyasi yapılarla şekillenen bu hareket, sanatçılara fiziki betimlemelerden uzaklaşarak, bireyin içsel deneyimlerini ve ruh hallerini daha belirgin bir biçimde resmetme olanağı sağlamıştır.

Ekspresyonist sanatçılar, bireyin duygu durumu ve psikolojik halini yansıtmada yoğun renkler, dinamik fırça kullanımı ve deformasyon kullanarak portre resimlerinde kendilerine özgü bir üslup geliştirmişlerdir. Bireyin iç dünyasını, kaygılarını, korkularını ve ruhsal çatışmalarını dışavurmayı amaçlayan bu yönelim, portre sanatında bir devrim olarak nitelendirilebilir. Özellikle, bireyin görünüşünden ziyade ruh haline ve duygusal yoğunluğuna odaklanarak, izleyiciyi resmedilen kişiye dair daha derin ve öznel bir bakış açısına davet etmektedir.

Bu çalışmada portre resimleri, bireyin içsel dünyasını keşfetme çabası olarak farklı bir yaklaşım bağlamında ele alınmaktadır. Bu bağlamda Avusturyalı sanatçı Richard Gerstl’in portre ve otoportre eserleri, sanatçının psikolojik derinliği ve bireysel çatışmaları nasıl betimlediğini değerlendirmek amacıyla, eser analiz yöntemiyle incelenmektedir. Gerstl’in, portre resimlerinde bireyin psikolojik durumuna vurgu yapan özgün ifade biçimi, ekspresyonist portre sanatının ruhuna dair önemli bir örnek teşkil ederek, sanatçının bireyin içsel hezeyanlarını yansıtmaya yönelik duyarlılığını da gözler önüne sermektedir.

Anahtar Kelimeler: Portre, Ekspresif, Psikolojik, Deformasyon.

ABSTRACT

Portrait paintings have been an important form of artistic expression used throughout history to express the identities, personal characteristics and social positions of individuals. In every period of art history, it is seen that portrait art not only reflects the external appearances of individuals, but also their identities, characters and social status. The Expressionism movement which took root in Europe in the early 20th century, brought a new dimension to portrait art, and presented an approach that focused on the inner world, spiritual conflicts and psychological depths of the individual. This movement, shaped by wars, social turmoil and rapidly changing political structures, provided artists with the opportunity to move away from physical descriptions and portray the individual’s inner experiences and moods more clearly.

Expressionist artists developed a unique style in portrait paintings by using intense colors, dynamic brushwork and deformation to reflect the individual's emotional state and psychological state. This tendency, which aims to Express the individual's inner world, anxieties, fears and spiritual conflicts, can be described as a revolution in portrait art. In particular, by focusing on the individual's state of mind and emotional intensity rather than their appearance, it invites the viewer to a deeper and more subjective perspective on the person depicted.

In this study, portrait paintings are examined in a different approach context as an effort to discover the inner world of the individual. In this context, portrait and self-portrait works of Austrian artist Richard Gerstl are examined with the method of work analysis in order to evaluate how the artist depicts psychological depth and individual conflicts. Gerstl's unique form of expression, which emphasizes the psychological state of the individual in his portrait paintings, constitutes an important example of the spirit of expressionist portrait art, and also reveals the artist's sensitivity to reflect the inner delusions of the individual.

Keywords: *Portrait, Expressive, Psychological, Deformation.*

1.GİRİŞ

Portre resimleri, sanat tarihinin her döneminde bireylerin kimliklerini, kişisel özelliklerini ve toplumsal konumlarını ifade etmenin ötesine geçerek, kültürel ve estetik anlamda çok katmanlı bir sanatsal form olarak varlık göstermiştir. İnsanlık tarihi boyunca portre sanatı, yalnızca fiziksel bir betimleme aracı olarak değil, aynı zamanda bireyin ruhunu, karakterini ve sosyal statüsünü yansıtmaya aracı olarak da derin bir işlev üstlenmiştir. Bu durum, portre sanatının sadece estetik bir çerçevede değil, aynı zamanda psikolojik, sosyolojik ve kültürel bir bağlamda da ele alınması gerektiğini göstermektedir (Gombrich, 2007; Berger, 1972). Özellikle modern dönemde, portre sanatı, bireyin içsel dünyasına odaklanan yeni yaklaşımlarla zenginleşmiştir. 20. yüzyılın başlarında Avrupa'da ortaya çıkan ve kısa sürede derin bir etki yaratan ekspresyonizm akımı, portre sanatına yepyeni bir perspektif kazandırmıştır. Bu sanat hareketi, bireyin yalnızca dış görünüşüne değil, onun ruhsal derinliklerine, içsel çatışmalarına ve duygusal hezeyanlarına yoğunlaşarak, portre sanatında köklü bir dönüşümü temsil etmiştir (Schapiro, 1974). Ekspresyonist sanatçılar, savaşların, toplumsal kargaşaların ve hızla değişen siyasi yapıların etkisiyle şekillenen bu dönemde, bireyin fiziksel özelliklerini bir yana bırakarak, onun içsel deneyimlerini, korkularını, kaygılarını ve ruhsal karmaşalarını sanatlarının merkezine almışlardır. Bu bağlamda, portre sanatı bireyin dış görünüşünün ötesine geçerek, izleyiciyi daha derin ve öznel bir deneyime davet eden bir sanatsal form haline bürünmüştür.

Ekspresyonist sanatçılar, bireyin duygu durumunu ve psikolojik halini betimlemek amacıyla yoğun renkler, dinamik fırça darbeleri ve deformasyon teknikleri gibi özgün yöntemler geliştirmiştir. Bu yaklaşımlar, portre sanatında estetik sınırların ötesine geçerek, bireyin ruh halini yansıtmayı öncelik haline getirmiştir (Langhammer, 1998; Leopold Museum, 2016). Özellikle bu hareketin etkisiyle, portre sanatı, bireyin içsel dünyasını keşfetmenin ve izleyiciye onun psikolojik durumunu aktarmanın bir aracı haline gelmiştir. Ekspresyonizmin bu yönelimi, sanatçılara, bireyin duygusal ve ruhsal deneyimlerini daha güçlü bir şekilde yansıtmaya olanağı sunmuş, portre sanatına yeni bir derinlik katmıştır.

Bu bağlamda, Avustralyalı sanatçı Richard Gerstl'in eserleri, ekspresif yaklaşımla yapılmış olan portre sanatının, psikolojik ve duygusal derinliklerini incelemek için önemli bir örnek sunmaktadır. Gerstl'in portre ve otoportre çalışmaları, sanatçının yalnızca bireylerin fiziksel özelliklerini değil, aynı zamanda onların içsel dünyalarını ve ruhsal çatışmalarını betimlemedeki ustalığını ortaya koymaktadır (Kallir, 1984). Gerstl'in eserlerinde kullandığı özgün ifade biçimi, ekspresif yaklaşımın bireysel ve toplumsal çatışmalara olan duyarlılığını

anlamak açısından önemli bir zemin sunmaktadır. Sanatçının eserleri, bireyin psikolojik durumunu ve duygusal yoğunluğunu betimlemedeki başarısını gözler önüne sererken, aynı zamanda portre sanatında estetik ve tematik dönüşümleri de anlamaya yönelik değerli bir kaynak niteliği taşımaktadır.

2.ÇALIŞMANIN AMACI VE YÖNTEMİ

Çalışmanın amacı; Richard Gerstl'in portre ve otoportre eserlerini, eser-analiz yöntemi ile inceleyerek portre sanatının bireyin içsel dünyasını ifade etme bağlamındaki rolünü ortaya koymaktadır. Ekspresif bir yaklaşım bağlamında değerlendirilmiş olan eserler, bireyin duygusal ve psikolojik durumlarını sanatsal bir dil aracılığı ile aktarmada kullanılan yöntemlerin anlaşılmasına katkı sağlamaktadır.

Çalışmada, Gerstl'in portre resimleri incelenerek, portre sanatının estetik ve tematik dönüşümlerine dair farklı bir bakış açısı sunmak amaçlanmaktadır. Bu amaç doğrultusunda, biçimsel analiz ve bağlamsal yorumlama yöntemleri bir arada kullanılmaktadır. Biçimsel analiz kapsamında, Gerstl'in eserlerinde kullanılan renk, fırça darbeleri, deformasyon ve kompozisyon gibi plastik unsurlar değerlendirilmiştir. Bağlamsal yorumlama ise sanatçının eserlerinin kişisel hezeyanlarının ve dönemin sosyo-kültürel dinamikleriyle ilişkisi ele alınmaktadır. Araştırma materyalleri, sanatçının orijinal eserleri ve sanat tarihi literatürlerindeki akademik kaynaklardan oluşmaktadır. Bu yöntem, eserlerin hem bireysel hem de toplumsal çatışmaların sanatsal temsili olarak nasıl analiz edilebileceğini anlamak için geniş bir çerçeveye sunmaktadır.

3. BULGULAR

Richard Gerstl'in portre ve otoportre eserlerinin, bireyin içsel dünyasını ve psikolojik durumlarını yansıtmaya bağlamında dikkat çekici bir özgüvene sahip olduğu görülmektedir. Sanatçının eserlerinde yoğun renk kullanımı, dinamik fırça darbeleri ve deformasyon teknikleriyle bireylerin yalnızca dış görünüşlerini değil, kişisel hezeyanlarını ve duygusal derinliklerini vurguladığı tespit edilmiştir. Özellikle betimlenmiş olduğu portrelerin ifadelerine yer alan dramatik abartı ve kullanılan deformasyon, kişilerin psikolojik durumlarını görünür kılmayı destekler niteliktedir.

Portrelerinde kullanılan güçlü kontrastlar, oldukça dinamik fırça kullanımı ve karmaşık kompozisyonlar, sanatçının bireylerin ruhsal durumlarına odaklanma eğilimini belirtmektedir. Örneğin, Gerstl'in otoportrelerinde sanatçının kendi içsel karmaşasını ve hissettiği yalnızlık duygusunu açık bir şekilde renk kullanımıyla destekleyip ifade ettiği anlaşılmaktadır. Ayrıca, dönemin sosyal ve kültürel dinamikleriyle ilişkilendirildiğinde, eserlerde iç çatışmaların toplumsal etkilerle bütünleştiği görülmektedir. Bu bağlamda, sanatçının portre resimleri, ekspresif bir yaklaşımın bireysel ve kolektif duygu durumlarını yansıtmaya potansiyelini güçlü bir şekilde sergilemektedir.

3.1. RICHARD GERSTL' IN PORTRELERİNDE EKSPRESİF YAKLAŞIMLAR

Görsel 1: Richard Gerstl, *Karoline ve Pauline Fey Kardeşler*, 1905, T.Ü.Y.B., 175x150cm., Özel Koleksiyon

Richard Gerstl'in "*Karoline ve Pauline Fey Kardeşler*" adlı eseri (**Görsel 1**), ekspresif yaklaşımın karakteristik özelliklerini barındıran bir portre örneği olarak öne çıkmaktadır. Bu eser, figürlerin yalnızca görünümünü değil, onların psikolojik derinliklerini ve duygusal durumlarını da ele almaktadır. Figürlerin giysisinde kullanılan parlak beyaz ve gri tonlar, karanlık ve belirsiz bir arka planla tezat oluşturmaktadır. Bu tezatlık, figürlerin içsel dünyalarındaki izolasyonu ve yalnızlığı ifade eder biçimdedir. Figürlerin yüz ifadeleri ve son derece donuk bakışları, izleyiciye güçlü bir duygusal etkileşim sunmaktadır. Figürler arası fiziki yakınlık görülse de, bu yakınlığın duygusal bir bağ içermediğinden söz etmek mümkündür. Arka planın kasvetli ve belirsiz yapısı, figürlerin çevreden kopukluğunu ve içsel çatışmalarını belirgin hale getirmektedir.

Bu eser, ekspresif yaklaşıma uygun olarak, dış dünyadan ve görülenin aksine figürlerin iç dünyasına odaklanmaktadır. Gerstl, renklerin, ışığın ve kompozisyonun gücünü, karakterlerin psikolojik derinliklerini ve duygusal gerilimlerini yansıtmak için kullanmaktadır.

Görsel 2: Richard Gerstl, *Schönberg Ailesi*, 1908, T.Ü.Y.B., 109.7x88.8 cm., Leopold Museum, Viyana, Avusturya.

Richard Gerstl'in "*Schönberg Ailesi*" adlı eseri (**Görsel 2**), ekspresif yaklaşımı izleyiciye net bir şekilde yansıtan eserlerden birisidir. Figürlerin duygusal durumları derinlemesine yansıtılmaktadır. Sanatçı, geleneksel portre yaklaşımını reddetmiş, aile üyelerini yalnızca fiziksel özellikleri ile değil ruhsal durumları ile betimlemiştir. Eserde kullanılan yoğun fırça darbeleri ve dinamik renk paleti, figürlerin duygusal karmaşasını belirtmektedir. Betimlenen ailenin bireyleri arasındaki gergin ve mesafeli ilişki, kompozisyonun genel yapısında hissedilmektedir. Aile içindeki gerilim izleyiciye yansıtılırken, sanatçının kendi duygusal durumuna da bir ayna tuttuğu söylenebilmektedir.

Eserin arka planında soyutlamaya gidilmiş ve anatomik deformasyonlara başvurulmuştur. Arka planın belirsiz yapısı, figürlerin psikolojik izolasyonunu vurgulamaktadır. Gerstl'in koyu planlar ve düzensiz ışık kullanımı, ekspresif bir atmosferi desteklemektedir. Bu çalışma ekspresif bir grup portre örneği olmaktan ziyade, sanatçının kendi duygusal hezeyan ve gerilimlerinin bir yansıması olarak kabul edilebilmektedir.

Görsel 3: Richard Gerstl, *Anne Marie Gerstl Portresi*, 1906, T.Ü.Y.B., 96x53cm., Leopold Museum, Viyana, Avusturya.

Richard Gerstl'in "*Anne Marie Gerstl Portresi*" adlı eseri (**Görsel 3**), sanatçının annesini betimlediği bir eserini görmekteyiz. Bu eserden, sanatçı ve annesinin duygusal bağı ve dinamikleri üzerinden çıkarım yapabilmemiz mümkündür. Gerstl, yalnızca annesinin fiziksel varlığını değil, onunla arasındaki duygusal bağı ve dinamikleri betimlemiştir.

Anne Marie'nin yüzündeki melankolik ifade, sanatçının annesine duyduğu sevgiyi ve aynı zamanda çatışmalı duygularını yansıtmaktadır. Fırça kullanımının spontane, adeta hırçın bir şekilde oluşu, anne ve çocuk ilişkisinin karmaşıklığını ve gerilimini ifade eder biçimdedir. Arka planda yer verilen soyut ve belirsiz fırça kullanımı, figürün melankolik ifadesini destekler niteliktedir. Özellikle yüzün belirli planlarında sıcak ve soğuk tonların tezat kullanımı, Gerstl'in annesine karşı hem yakınlık hem de mesafe arzusunu ortaya koymaktadır. Anne figürünün belirli ölçüde deforme edilmesi ve soyutlamaya gidilmesi, geleneksel anne figürü algısını kırmak ve kendi anne algısını yansıtmaya amacı ile kullandığı çıkarımını yapmak mümkündür. Sanatçının bu eserini annesi ile olan içsel hesaplaşmasının betimlemesi olarak kabul edebiliriz.

Görsel 4: Richard Gerstl, *Mathilde Schönberg'in Yarım Boy Portresi*, 1908, T.Ü.Y.B., 81x55cm., Leopold Museum, Viyana, Avusturya.

Richard Gerstl'in "*Mathilde Schönberg'in Yarım Boy Portresi*" adlı eseri (**Görsel 4**), ekspresif yaklaşım, bir eserin oluşum sürecinde duygu ve içsel deneyimlerin biçimsel unsurlardan daha öncelikli olduğu bir tavidir. Sanatçının bu eserinde de ekspresif yaklaşım, biçimlerin önüne geçmiş ve hakimiyet sağlamıştır. Renklerin kullanımı ve kompozisyonun parçalanmış planları, Gerstl'in duygu durumlarını somutlaştırma ustalığını gözler önüne sermektedir. Arka planda kullanılan parlak sarı renk figür ve mekan arasında kontrast yaratmaktadır. Aynı zamanda noktacı bir tavır söz konusudur. Figürden mekana doğru yayılan enerjik fırça kullanımı kaotik bir iç dünya izlenimi yaratmaktadır. Schönberg'in ifadesindeki tekinsizlik, sadece bireysel bir duyguyu değil aynı zamanda Gerstl'in sosyal bağlamdaki yerini sorgulayan bir eleştiri olarak yorumlanabilir. Figür hem resmin merkezinde hem de arka planın enerjisiyle bir bütün halindedir. Bu, figürün yalnızca fiziksel olarak değil, varoluşsal olarak da sınırlarının bulanıklaştığı bir temsil biçimidir.

Görsel 5: Richard Gerstl, *Otoportre*, 1907, T.Ü.Y.B. 41.7x39.2cm., Leopold Museum, Viyana, Avusturya.

Richard Gerstl'in "*Otoportre*" adlı eseri (**Görsel 5**), sanatçının kendisini tasvir ettiği ve iç dünyasını yoğun bir şekilde yansıttığı otoportre çalışmalarından birisidir. Ekspresif yaklaşım bağlamında değerlendirilen bu eser, teknik detayları ve duygusal derinlik açısından izleyiciye zengin bir anlatım sunmaktadır. İlk olarak resmin dokusal yapısı dikkat çekmektedir. Boya katmanlı bir şekilde uygulanmış olup, yüzeyde dinamik bir etki yaratmaktadır. Sanatçının bakışlarından hissedilen yorgunluk, izleyici ile doğrudan bir etkileşim sağlamaktadır. Yüz hatlarının keskinliği, bir yandan bireysel kimliği öne çıkarırken diğer yandan içsel bir gerilim ve melankoliyi hissettirmektedir. Arka planın detaysız tutulması, figürün psikolojik derinliğini desteklemektedir. Renk paletinde kullandığı kahve tonları ve yer yer soğuk renk planları, esere ciddi bir hava kazandırmıştır.

Teknik olarak, Gerstl'in boya uygulamasındaki serbestlik, spontane bir yaratım sürecini vurgulamaktadır. Bu özgün yaklaşım, figüratif geleneğin dışına çıkarak ekspresif bir üslubu güçlendirmektedir. Genel olarak, eser, yalnızca bir otoportre olmayıp, sanatçının ruh halini ve dönemin kaygılarının bir yansıması olarak görülmektedir.

Görsel 6: Richard Gerstl, *Teğmen Alois Gerstl'in Portresi*, 1907, T.Ü.Y.B., 150x125cm., Ulusal Galeri, London.

Richard Gerstl'in "*Teğmen Alois Gerstl'in Portresi*" adlı eseri (**Görsel 6**), incelemekte olduğumuz eserde sanatçı, kardeşi Alois'i betimlemektedir. Eser hem kompozisyon, hem de ifade biçimi bağlamında dikkat çekici unsurlar içermektedir. Sanatçı, eserinde figürü, onu çevreleyen mekanla bütünleştirirken aynı zamanda psikolojik bir gerilim yaratmayı hedeflemiştir. Eserin odak noktasını oluşturan Teğmen Alois Gerstl, kapı eşiğinde durmakta ve direkt olarak izleyiciye bakmaktadır. Kapı çerçevesi, figürü çerçeveleyerek izleyiciyi figüre odaklamaktadır. Figürün kompozisyon içerisindeki konumu, bireyin iç dünyası ile dış çevresi arasında koyduğu sınırı temsil eder niteliktedir. Figürün oldukça dik görünen duruşu keskin hatlarla kontur etkisi oluşturmuştur. Bu sert çizgiler figürü güçlü bir varlık olarak yansıtmaktadır.

Ancak bu güçlü ifade, iç mekânın dağınık ve huzursuz detaylarıyla tezatlık oluşturmaktadır. Arka plana yerleştirilmiş masa, sandalye ve ayna gibi öğeler, yer yer soyutlanmış bir biçimdedir. Sandalyenin dramatik bir etki yarattığından söz edebiliriz. Gerstl'in renk kullanımı ekspresif yaklaşımını yansıtan en güçlü unsurlarından birisidir. Soğuk ve sıcak tonlar birlikte kullanılarak dinamik bir gerilim yaratılmaktadır. Mekanda yer alan sıcak ışık vurguları, figürün koyu renk üniformasıyla çarpıcı bir kontrast oluşturmaktadır. Katmanlı boya kullanımı ve fırça darbelerinin belirgin oluşu, sanatçının ekspresif ifade biçimini desteklemektedir. Figür ile çevresi arasındaki psikolojik etkileşim net bir şekilde aktarılmıştır.

Görsel 7: Richard Gerstl, *Johann Georg Prillinger*, 1907, T.Ü.Y.B., 35x25cm., Leopold Museum, Viyana, Avusturya.

Richard Gerstl'in "*Johann Georg Prillinger*" adlı eseri (**Görsel 7**), sanatçının yakın çevresinden arkadaşı olduğu düşünülen bir portre betimlemesidir. Gerstl'in ekspresif yaklaşımı belirgin bir şekilde görülmektedir. Fırça darbelerinin serbestliği ve dramatik renk kullanımı, modelin yüzündeki melankolik etkiyi desteklemektedir. Belirsiz arka plan kullanımı, izleyiciyi direkt olarak modelin ifadesine odaklamaktadır. Fırça kullanımındaki dinamizm, figürün yüzü ve giysisindeki dokusal etkiyle birleşerek, portreye ritmik bir dinamik kazandırmaktadır. Renk paletinin sıcak tonlardan oluşması, yalnızca fiziksel bir tasviri değil, aynı zamanda bireyin psikolojik durumunu ve varoluşsal anlamını da aktarmaktadır. Fırça darbelerinin belirgin dokusu ve renklerin sıcak tonlarda yoğunlaşması, resme hem bir samimiyet hem de duygusal bir yoğunluk kazandırmaktadır. Özellikle modelin yüzündeki düşünceli ifade ve boşluğa bakan gözleri, bireyin varoluşsal sorgulamalarını ve duygusal karmaşasını ortaya koymaktadır. Bu eserde Gerstl'in ekspresif yaklaşımın temel ögesi olan öznel duygu aktarımı, izleyiciyi derin bir empati kurmaya davet etmektedir.

SONUÇ

Richard Gerstl'in portre çalışmalarında benimsediği ekspresif yaklaşım, bireyin içsel dünyasını görünür kılmaya amacıyla modern sanat tarihinde dikkat çeken bir alana sahiptir. Sanatçının portre ve otoportreleri, bireylerin psikolojik derinliklerini, içsel çatışmalarını ve duygusal karmaşalarını güçlü bir sanatsal ifade ile aktarırken, aynı zamanda 20. Yüzyılın başlarında Avrupa'da şekillenen ekspresyonizm akımının temel ilkelerini de görselleştirmektedir. Gerstl'in eserleri, bireyin ruhsal durumunun yalnızca birer temsil unsuru değil, aynı zamanda estetik bir ifade biçimi olarak sanatın merkezine yerleştirilmesine öncülük etmiştir.

Bu bağlamda, sanatçının portre çalışmaları, ekspresif yaklaşımın temel özelliklerini, yoğun renk kullanımını, dramatik deformasyonları ve güçlü fırça darbelerini portre sanatı bağlamında yeniden tanımlamaktadır. Gerstl'in portre çalışmalarındaki figürler, izleyiciye sadece yüzeysel bir tasvir sunmakla kalmayıp, bireyin karmaşık yapısının ve içsel dünyasını derin bir şekilde hissettirmektedir. Özellikle bireyin psikolojik durumlarını ve duygusal yoğunluklarını yansıtmaya konusunda sergilediği başarısıyla, portre sanatında yeni bir yönelim başlamıştır.

Gerstl'in eserleri, modern portre sanatında bireysel kimlik, toplumsal bağlam ve ruhsal derinlik arasındaki ilişkileri anlamak için önemli bir zemin sunmaktadır. Bu eserler, sanatçının yalnızca ekspresif ifade biçimini geliştirmedeki yetkinliğini değil, aynı zamanda dönemin kültürel, psikolojik ve sosyal çatışmalarına sanatsal birer yanıtları olarak kabul edilebilir. Sanatçının deformasyon teknikleri ve özgün renk paleti, portre sanatının akademik ve geleneksel sınırlarını aşarak bireyin içsel dünyasını bir anlatı nesnesi haline getirmektedir. Bu durum, yalnızca estetik bir yenilik olmayıp, kavramsal bir yeniden değerlendirme olarak da ele alınabilmektedir. Gerstl'in portre sanatına ekspresif yaklaşımı ve özgün ifade biçimi, bireyin içsel dünyasını yansıtmaya ve sanatın toplumsal işlevi, bireysel anlatım olanakları arasındaki dengeyi nasıl kurabileceğini de göstermektedir. Sanatçının otoportre çalışmaları ise sadece bir öz anlatı olmayıp, aynı zamanda dönemin bireysel yalnızlık, yabancılaşma ve toplumsal kaos gibi meselelerini de ele almaktadır. Bu eserler, hem bireyin kendisiyle olan hesaplaşmasını hem de bu hesaplaşmayı sanat aracılığıyla nasıl dışa vurduğunu etkileyici bir ifade ile sunmaktadır. Sonuç olarak, Richard Gerstl'in portre çalışmaları, bireyin ruhsal deneyimlerinin sanatsal bir derinlikle ifade etme arayışında modern sanatın sınırlarını zorlamış ve portre sanatını yalnızca fiziksel bir tasvirin ötesine taşımıştır. İzleyici bu sayede derin bir anlam arayışına yönelmiştir. Sanatçının portreleri, bireysel kimliklerin ve duygusal derinliklerin sanatsal temsilinde bir dönüm noktası olarak, sanatçının yenilikçi ve duyarlı yaklaşımını ortaya koymaktadır. Bu bağlamda, sanatçının eserleri, modern sanatın birey ve toplum ilişkisini ele alış biçimine dair güçlü bir referans olarak değerlendirilebilir.

ÖZET

Ekonomik faaliyetlerin son dönemlerde bir ivme kazandığı görülmektedir. Dünya ekonomisindeki bu ivmelenmede ulaşım ve iletişim teknolojisindeki gelişmelerin etkili olduğunu söylemek mümkündür. Küreselleşme olarak ifade edilen bu süreçte önceki döneme kıyasla hem üretim hem de tüketim hacminde artışlar meydana gelmiştir. Ancak küreselleşmeye bağlı olarak toplam tüketim hacmindeki artış bütün tüketicilerin tüketim olanaklarının eşit oranda arttığı anlamına gelmemektedir. Küreselleşme sürecinde elinde sermaye bulunduran ve bu sermayeyi yatırımlara yönlendiren kesimden bireyler zenginleşirken bu süreci çeşitli nedenlerle verimli değerlendiremeyen kesimden bireyler ekonomik olarak gerilemiştir. Aynı zamanda bu süreçte finansal kaynaklar dengesiz bir şekilde dağılım göstermiştir. Bu ise doğal olarak gelir dağılımının dengesiz bir şekilde gelişim göstermesine ve bir tarafta mutlu bir azınlığın, diğer tarafta ise mutsuz bir çoğunluğun ortaya çıkmasına neden olmuştur. Her ülke ve toplum için gelir dağılımında dengenin sağlanması, toplumsal huzur ve refahın sağlanması açısından son derece önemlidir. Zira gelir dağılımında dengenin sağlanmış olması toplumu oluşturan bireylerin birbirlerine yakın bir gelir düzeyine sahip olması anlamına gelecektir ve böylelikle o toplumda yoksulluk sorunu minimize edilebilecektir. Hazırlanmış olan bu çalışma ile öncelikle küreselleşme sürecinin gelir dağılımı üzerindeki etkilerine yönelik teorik bilgilere yer verilecek, daha sonra da küreselleşme sürecinin Asya kıtasının gelişim gösteren ülkelerinden biri olan Özbekistan'daki gelir dağılımını nasıl etkilediği ve ülkedeki yoksulluk düzeyinin hangi seviyelerde olduğu ortaya konulacaktır.

Anahtar Kelimeler: Küreselleşme, Yoksulluk, Gelir Dağılımı, Özbekistan

ABSTRACT

It seems that economic activities have gained momentum in recent years. It is possible to say that the developments in transportation and communication technology are effective in this acceleration in the world economy. In this process, referred to as globalization, there have been increases in both production and consumption volumes compared to the previous period. However, the increase in total consumption volume due to globalization does not mean that the consumption opportunities of all consumers increase equally. While individuals who hold capital and direct this capital to investments have become richer during the globalization process, individuals who cannot use this process productively for various reasons have declined. At the same time, financial resources were distributed unevenly in this process. This naturally led to an unbalanced development of income distribution and the emergence of a happy minority on one side and an unhappy majority on the other. Ensuring balance in income distribution for every country and society is extremely important in terms of ensuring social peace and prosperity. Because achieving balance in income distribution will mean that the individuals who make up the society have an income level close to each other, and thus the problem of poverty in that society can be minimized. With this prepared study, firstly theoretical information will be given about the effects of the globalization process on income distribution, and then it will be revealed how the globalization process affects the income distribution in Uzbekistan, one of the developing countries of the Asian continent, and what the poverty level in the country is.

Key Words: Globalization, Poverty, Income Distribution, Uzbekistan

GİRİŞ

Günümüzde ekonomik faaliyetler büyük bir ivme kazanmış durumdadır. Bu sürecin yaşanmasında teknolojiye bağlı olarak ulaşım ve iletişim faaliyetlerinin hız kazanmasının büyük bir etkisi bulunmaktadır. Teknolojide meydana gelen olumlu gelişmeler, öncelikle iletişim kanallarının çoğalmasına, çeşitlenmesine ve daha nitelikli hale gelmesine neden olmuş, devamında da ulaşım araçlarının gelişimini olumlu yönde etkilemiş ve bütün bu gelişmeler neticesinde önce bölgesel düzeyde, daha sonra da küresel çapta ticaret hacminde artışlar meydana gelmiştir. Ticaret hacmindeki artışlar ise hem ülkenin üretim hacminde artışlar meydana getirmek suretiyle ekonomik faaliyetlerin artış göstermesine bir diğer ifadeyle ekonominin canlanmasına neden olmakta hem de ihracat gelirlerinin artmasına katkıda bulunmaktadır. Ayrıca küreselleşmenin etkisiyle ülkeler arasında var olan fiziksel sınırlar adeta ortadan kalkmakta ve ülkeler arası kültür alışverişinde bulunulmakta, farklı ülkelerde yaşayan bireylerin yaşam tarzları ve tüketim alışkanlıkları birbirine benzemeye başlamakta ve bu gelişmeler üreticiler için daha geniş bir tüketici kitlesine yönelik üretim yapabilme imkanının kavuşmalarına olanak sağlamaktadır. Ayrıca küreselleşme sayesinde tüketiciler ihtiyaçlarını farklı coğrafyalardan ve farklı üreticilerden karşılayabilme imkanına kavuştuğu için üreticiler arasında da yoğun bir rekabet yaşanacak ve üreticiler müşteri potansiyelini artırabilmek ya da en azından mevcut müşterilerini kaybetmemek için ürünlerini kalitesini artırmak zorunda kalacaklardır. Bir diğer ifadeyle küreselleşme mal ve hizmetlerin kalitesinde de iyileşmelerin meydana gelmesine olumlu yönde katkıda bulunacaktır. Aynı zamanda küreselleşmeye bağlı olarak ortaya çıkan yoğun rekabet ortamı mal ve hizmetlerin fiyatlarında da azalışların yaşanmasına neden olacak, buna bağlı olarak da tüketicilerin gelirleri reel olarak artış gösterdiği için satın alma güçleri yükselecek ve hem bireysel hem de toplumsal refah düzeyinde yükselişler meydana gelecektir. Ancak bu olumlu gelişmeler küreselleşme sürecinin doğru bir şekilde yönetilmesi durumunda mümkün olabilecektir. Burada asıl mesele küreselleşme sürecinde artış gösteren ekonomik faaliyetler sonucu elde edilen gelirlerin adil dağılımının sağlanmasıdır. Bu sayede elde edilen gelirler, toplumu oluşturan bireyler arasında dengeli bir şekilde dağılmış olacak ve sadece birey düzeyinde değil toplum düzeyinde de refah artışları meydana gelecektir. Bu da az önce ifade edildiği üzere küreselleşme sürecinin sağlıklı bir şekilde yönetilmesi ile mümkün olabilecektir. Aksi takdirde küreselleşme sürecinden beklenen faydalar sınırlı düzeyde gerçekleşmiş olacak ve gelir dağılımı adaletsizlikleri söz konusu olacaktır. Zira elde edilen ulusal gelir toplumu oluşturan bireyler arasında adil bir şekilde dağıtılmadığı için bir tarafta mutlu bir azınlığa diğer tarafta ise mutsuz bir çoğunluğa sahip bir toplum yapısı ortaya çıkacaktır. Bu ise beraberinde sosyal problemlerin ortaya çıkmasına neden olabilecektir. Bu nedenle küreselleşme sürecinde elde edilen gelirlerin dengeli ve adil dağılımının hem yoksullukla mücadele açısından hem de toplumun refah düzeyinin yükselmesi açısından son derece önemli olduğunu söylemek mümkündür.

1. KÜRESELLEŞME KAVRAMI ve EKONOMİK ÖNEMİ

Önemli iktisadi etkileri olan küreselleşme kavramına ilişkin literatürde çok sayıda tanımlama yapılmıştır. Bu tanımlamaların ortak paydasını ulus devletlerin dünya ekonomik sistemine entegre olması oluşturmaktadır. En genel haliyle küreselleşme, dünyanın farklı coğrafyalarında yaşayan bireyler, topluluklar ve devletler arasındaki iletişim ve etkileşim derecesinin sürekli olarak artması şeklinde tanımlanmaktadır (Bayar, 2008: 25). Küreselleşme sürecinde ulus devletler birbirlerine ekonomik, sosyal ve kültürel açıdan önemli ölçüde yakınsamıştır. Bu yakınsamanın ülke ekonomilerine hem olumlu hem de olumsuz etkilerinin bulunduğunu söylemek mümkündür. Küreselleşme sürecinde üretim hacminde artışların meydana geldiği gözlenmektedir. Zira zaman içerisinde ulaşım ve iletişim teknolojilerinde meydana gelen olumlu gelişmeler küreselleşme sürecinin hızlanmasına neden olmuştur. Bu süreçte ülkeler üretim

sürecinde ihtiyaç duydukları hammadde ve ara mallarını diğer ülkelerden kolaylıkla temin edebilmiş ve üretim hacminde artışlar meydana gelmiştir. Ayrıca küreselleşme sayesinde üretilen malların kolaylıkla satılabileceği geniş pazarlara ulaşabilme imkânı üretilen mal ve hizmet miktarının daha da artmasına olanak sağlamıştır. Bu ise ulusal baz da hem hızlı bir ekonomik büyümenin gerçekleşmesine hem de ihracat gelirlerinde ciddi yükselişlerin meydana gelmesine neden olmuştur. Ayrıca küreselleşme sürecinin hızlanmasıyla birlikte sermayenin serbest dolaşıma açılması özellikle 1990'lı yıllarda finansal serbestleşme hareketlerinin ve sermaye hareketliliğinin artış göstermesine neden olmuştur (Oğul, 2021: 67). Bir diğer ifadeyle küreselleşme ile birlikte ekonomik çevre hızla değişim göstermektedir ve bu da sermaye hareketlerinin artmasına neden olmaktadır (Çakmak Ziberovski, 2024: 96). Bu açıdan bakıldığında küreselleşmenin ekonomik büyümeye, dolayısıyla da toplum refahının yükselmesine olumlu katkılarda bulunduğunu söylemek mümkündür. Ayrıca küreselleşme sayesinde bireyler kendi ülkelerinde üretilmeyen ya da üretilen bile yüksek maliyetle üretimi gerçekleşen ve yüksek bedeller ödemek suretiyle temin edebildikleri mal ve hizmetlere çok daha kolay ve hızlı bir şekilde ulaşabilme imkanına kavuşmuştur. Bu tüketici refahının artış göstermesi için son derece önemli bir gelişmedir. Bu açıdan bakıldığında küreselleşmenin ülke ekonomilerine önemli ekonomik faydalar sağladığını söylemek mümkündür.

Bununla birlikte küreselleşmenin ekonomik büyüme ve refah seviyesinde artışlar sağlamasına karşılık dünya genelinde bazı önemli olumsuzluklarda neden olduğu da görülmektedir. Bu olumsuzluklardan bazılarını krizlerin etki alanının genişlemesi, nitelsiz göç olaylarının artış göstermesi, salgın hastalıkların ve terör faaliyetlerinin yaygınlaşması oluşturmaktadır (Tekbaş, 2019: 398). Ayrıca küreselleşme süreci ulus devletlerin birbirine daha bağımlı hale gelmesine neden olmaktadır. Özellikle ulaşım ve iletişim alanındaki teknolojik gelişmelere bağlı olarak uluslararası bağlantılar hızlı bir şekilde artış göstermiş ve uluslararası ekonomik faaliyetler çoğalmıştır. Bu gelişmelerden ulus-devletler de yoğun bir şekilde etkilenmiş, bu süreçte uluslararası ticaret kolaylaşmış, ayrıca uluslararası sermaye ve işçi hareketleri artmış ve finans piyasalarının genişlemesi ülkeler arası karşılıklı ekonomik bağımlılıkların artış göstermesine neden olmuştur (Polat, 2020: 493). Ayrıca küreselleşme, dünyanın herhangi bir coğrafyasında yaşanan ekonomik, siyasal, kültürel veya teknolojik gelişmeler, dünyanın bir başka coğrafyasında önemli iktisadi gelişmelere neden olmaktadır (Keyman ve Dural, 2013: 26). Zira ülkeler küreselleşme sürecinde hem birbirine hem de dünya ekonomi yapısına entegre olmaktadır. Bu ise ülke ekonomilerini daha kırılgan hale getirmektedir. Dolayısıyla ülke ekonomilerini yakından ve derinden etkileyen küreselleşme sürecinin son derece önemli olduğunu ve ülke ekonomileri üzerinde önemli etkilerinin bulunduğunu söylemek mümkündür.

2. YOKSULLUK VE GELİR DAĞILIMI İLİŞKİSİ

Ekonomik açıdan etkin bir şekilde mücadele edilesi gereken konulardan biri de yoksulluk ve gelir dağılımındaki dengesizliklerdir. Zira yoksulluğun ekonomik etkileri yanında toplum refahı üzerinde de önemli etkileri bulunmaktadır. Yoksulluk kavramı günümüzde sadece ekonomik boyutları olan bir kavram olmaktan çıkmıştır. Sosyal, siyasal ve kültürel boyutlarıyla yoksulluk, ekonomik gelişmenin merkezinde yer almaktadır (Ay ve Haydanlı, 2017: 148). Bir diğer ifadeyle yoksullaşmış olmaları nedeniyle bireylerin satın alma gücündeki azalış, ekonomik sorunlar yanında sosyal sorunların ortaya çıkmasına da neden olmaktadır. Bununla birlikte yoksulluğun asıl etkisi ekonomik faaliyetler ve gelir dağılımı üzerinde ortaya çıkmakta, yoksulluk, gelir dağılımının bozulmasına neden olabilmektedir. Özellikle, yoksul bireylerin daha düşük ücretler alması, toplumun diğer bireylerine kıyasla daha az iş fırsatlarına sahip olması ve eğitim olanaklarının daha sınırlı olması gibi faktörler, ülkede gelir dağılımının bozulmasına neden olabilmektedir. Bu nedenle, yoksulluğun azaltılmasına yönelik gayretler gelir dağılımının düzelmesine de katkıda bulunabilmektedir (Alpdoğan, 2023: 269). Yoksullukla mücadele ve gelir dağılımı eşitsizliğinin giderilmesinde ikincil gelir dağılımı vasıtasıyla uygulanan maliye politikaları önemli bir yere sahiptir. Bu maliye politikaları da

vergi politikalarından ve kamu harcamalarına ilişkin politikalardan oluşmaktadır. Farklı gelir düzeyine sahip bireylere farklı vergi oranlarının uygulanması ve kamu harcamalarından faydalanma konusunda farklı gelir gruplarına öncelik verilmesi gibi uygulamalarla bireyler arasındaki gelir eşitsizlikleri giderilmeye çalışılmaktadır. Bir diğer ifadeyle ikincil gelir dağılımı uygulamaları ile gelir dağılımındaki eşitsizliklerinin azaltılarak sosyal refahın maksimize edilmesi devletin öncelikli görevleri arasında yer almaktadır (Ay ve Haydanlı, 2017: 145-149). Bununla birlikte gelir dağılımı eşitsizliklerinin de yoksulluğun artış göstermesine neden olabileceğine yönelik görüşler bulunmaktadır Karluk ve Ünal (2017), gelir dağılımını, bir ülkede belirli bir dönemde elde edilen gelirin, bu gelirin elde edilmesinde katkısı bulunan kişiler, hane halkları veya üretim faktörleri arasında paylaşılması şeklinde tanımlamakta ve gelir dağılımındaki eşitsizliklerin yoksulların sayısının artmasına neden olabileceğini ifade etmektedir. Zira gelir düzeyi yüksek bireyler sahip oldukları gelir ve serveti çeşitli iktisadi araçları kullanmak suretiyle daha da artırabilmekte, buna karşın gelir düzeyi düşük olan bireylerin böyle bir imkânı olamamaktadır. Böyle bir ortamda da hem gelir düzeyi yüksek olan bireyler ile gelir düzeyi düşük olan bireyler arasındaki gelir farkı açılmakta hem de yoksul bireylerin sayısında artışlar meydana gelmektedir. Ayrıca gelir dağılımındaki dengesizlikler nedeniyle sermaye, sınırlı sayıdaki kişilerin ellerinde toplanmakta ve bu kişilerin gelir düzeyi yükselmeye devam etmekte buna karşın toplumun büyük bir kısmını oluşturan bireyler yoksullukla mücadele etmek durumunda kalmaktadır. Son olarak ekonomik büyüme ile yoksulluk ve gelir dağılımı arasında da önemli etkileşimlerin bulunduğunu söylemek mümkündür. Yoksulluk oranındaki artışlar, mal ve hizmetlere yönelik talebin azalmasına neden olmak suretiyle ekonomik büyümeyi olumsuz yönde etkileyebilmektedir. Tersini durumda ise ekonomik büyümenin gerçekleşmesi, iş imkanlarının artmasına ve buna bağlı olarak da istihdam ve gelir düzeyinin yükselmesine katkıda bulunmaktadır. Bu durum ise yoksul kesimlerin refahının iyileşmesine ve yoksulluğun azalmasına olanak sağlamaktadır. Bir diğer ifadeyle ekonomik büyümenin gerçekleşmesiyle birlikte ülkenin toplam üretim kapasitesi ve toplam arz miktarındaki artışlar, istihdam ve gelir artışlarına neden olmak suretiyle yoksulluk düzeyinin azalmasına katkıda bulunmaktadır. Bu bağlamda yoksulluk düzeyinin düşürülmesi açısından ekonomik büyümenin son derece önemli olduğunu söylemek mümkündür. Buna ilaveten bir ülkenin ekonomik büyümesiyle birlikte, gelir dağılımı daha dengeli hale gelecek ve yoksulluk oranı azalacaktır (Alpdoğan, 2023: 261-264). Bu bilgiler doğrultusunda yoksulluk ve gelir dağılımı arasında karşılıklı bir etkileşimin bulunduğunu, bir diğer ifadeyle yoksulluğun gelir dağılımı dengesizliklerine, gelir dağılımındaki dengesizliklerin de yoksulluğa neden olduğunu ifade etmek mümkündür.

3. KÜRESELLEŞME SÜRECİNİN ÖZBEKİSTAN GELİR DAĞILIMINA ETKİSİ

Küreselleşme kavramının doğasında var olan karmaşıklığı ve çok boyutluluğun ölçülmesi, izlenmesi ve anlatılması bakımından yararlanılan en güçlü araçlardan biri küreselleşme endeksleridir. Bu kapsam dahilinde ülkelerin küreselleşme konusundaki performanslarının ölçülmesi için kullanılan en önemli endekslerden biri de KOF Küreselleşme Endeksidir (KOFGI). KOF endeksi, eşit ağırlıklara sahip iktisadi (KOFecGI), sosyal (KOFSoGI) ve politik (KOFPoGI) küreselleşme olmak üzere üç alt endeksten oluşmaktadır. İktisadi küreselleşme endeksi, mal ve hizmet ticareti ile ticari partner çeşitliliği gibi alt kalemlerden oluşan ticari küreselleşme ile portföy yatırımları, doğrudan yabancı sermaye yatırımları, uluslararası borçlanma, uluslararası rezervler ve uluslararası gelir ödemeleri gibi alt kalemlerden oluşan finansal küreselleşme bileşenlerini içermektedir. Sosyal küreselleşme göstergesi ise kişisel küreselleşme, enformasyonel küreselleşme ve kültürel küreselleşme alt bileşenleri kapsamaktadır. Son olarak politik küreselleşme alt kalemi ise uluslararası elçilikler, Birleşmiş Milletler Barış misyonlarına katılım gibi alt bileşenlerden oluşmaktadır (Apaydın, 2020: 26).

Tablo 1. KOF Küreselleşme Endeks Değerleri

Year	KOFGI	KOFECGI	KOFSoGI	KOFPoGI
1991	25	34	32	12
1992	29	35	33	22
1993	32	42	33	24

Kaynak: KOF Globalisation Index, (Erişim tarihi : 28.11.2024).

<https://kof.ethz.ch/en/forecasts-and-indicators/indicators/kof-globalisation-index.html>

Tablo 1 incelendiğinde 1991 yılında bağımsızlığını ilan eden Özbekistan'ın küreselleşme derecesinin 1999, 2000 ve 2010 yılları hariç yıllar itibariyle sürekli olarak artış gösterdiği, 1999 ve 2000 yıllarındaki gerilemenin ise sınırlı olarak gerçekleştiği görülmektedir. 1991 yılında 25 olan Özbekistan'ın genel küreselleşme endeks (KOFGI) değerinin 1999 yılına kadar düzenli bir şekilde yükseldiği, ancak 1999 ve 2000 yıllarında 1 puan gerilediği, 2001 yılından itibaren de ülkenin küreselleşme derecesindeki artışın kaldığı yerden devam ettiği görülmektedir. Bu yükseliş 2010 yılına kadar devam etmiş ve 2010 yılı itibariye Özbekistan'ın küreselleşme derecesi bir önceki yıla kıyasla 3 puan gerileyerek 42 olmuş, sonraki yıllarda da 2020 yılı hariç düzenli olarak artış göstermiş ve 2021 yılı itibariyle 52 olarak gerçekleşmiştir. Bununla birlikte hem iktisadi (KOFECGI), hem sosyal (KOFSoGI) hem de politik (KOFPoGI) endeks değerlerinin KOF Küreselleşme Endeks değerlerine benzer bir eğilim sergilediği

görülmektedir. Bu rakamlar bize Özbekistan'ın yıllar itibariyle düzenli bir şekilde küreselleştiğini göstermektedir. Bu durum, Özbekistan'ın genel (KOFGI), iktisadi (KOFECGI), sosyal (KOFSoGI) ve politik (KOFPoGI) küreselleşme endekslerinin gösterildiği Şekil 1 üzerinde daha net bir şekilde görülebilmektedir.

Şekil 1. Özbekistan'ın Küreselleşme Endeksi (1991-2021)

Kaynak: <https://kof.ethz.ch/en/forecasts-and-indicators/indicators/kof-globalisation-index.html> adresinde yer alan KOF Globalization Index_2023 verilerinden yararlanılarak tarafımızca oluşturulmuştur.

Şekil 1 incelendiğinde KOF Küreselleşme Endeks değerlerinin (genel, iktisadi, sosyal ve politik) birbirine benzer eğilimlere sahip olduğu ve genel eğilimin artış yönünde olduğu görülmektedir. Genel küreselleşme endeks (KOFGI) değerinin göre 2021 yılı itibariyle Özbekistan, 203 ülke arasında 132. sırada yer almaktadır.

Tablo 2. Farklı Gelir Gruplarına Göre Kişi Başı Ortalama Gelir Düzeyi

Year	Kişi başı ortalama gelir Alt %50'lik Grup Sabit (2023) (Dolar)	Kişi başı ortalama gelir İlk %10'luk Grup Sabit (2023) (Dolar)	Kişi başı ortalama gelir İlk %1'lik Grup Sabit (2023) (Dolar)

https://wid.world/data/#countrytimeseries/aptinc_p90p100_z;aptinc_p0p50_z;aptinc_p99p100_z/UZ/1820/2023/us/k/p/yearly/a

Özbekistan'daki gelir eşitsizliğinin düzeyini gösteren Tablo 2'de ülkedeki gelir dağılımı eşitsizliğinin yapısını üç döneme ayırarak değerlendirmek mümkündür. Bağımsızlık ilanından 1990'lı yılların sonuna kadar olan dönemde Özbekistan'da gelir dağılımı eşitsizliğinin hızlı sayılabilecek düzeyde gerilediği görülmektedir. Bu dönemde özellikle toplumun en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyinin önemli ölçüde gerilediği ve hem toplumu oluşturan en varlıklı ilk % 10'luk dilimde hem de toplumun düşük gelir düzeyine sahip % 50'lik diliminde yer alan bireylerin gelir düzeyine yakınsamış durumdadır. İkinci alt dönem olan 1998 yılından 2004 yılına kadar olan 6 yıllık dönem, toplumun farklı kesimleri arasındaki gelir dağılımı eşitsizliğinin sabitlendiği bir dönem olmuştur. Bir diğer ifadeyle bu dönemde toplumu oluşturan bireyler arasında gelir dağılımı eşitsizliğinin yine olduğu, ancak bu eşitsizliğin istikrarlı bir şekilde gerçekleştiği, dolayısıyla da gelir dağılımı eşitsizliğine yönelik olarak herhangi bir artış ya da azalış eğiliminin söz konusu olmadığı görülmektedir. Bu dönem 6 yıllık dönemde toplumun en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyi yaklaşık ortalama olarak 94.000-95.000 dolar seviyelerinde iken, en varlıklı ilk % 10'luk dilimde yer alan bireylerin gelir düzeyi yaklaşık ortalama olarak 25.000-26.000 dolar seviyesinde ve son olarak toplumun düşük gelir düzeyine sahip % 50'lik diliminde yer alan bireylerin gelir düzeyi ise yaklaşık ortalama 700-800 dolar olarak gerçekleşmiştir. 2004-2023 yıllarını kapsayan üçüncü alt dönemde ise toplumun farklı kesimleri arasındaki gelir dağılımı dengesizliğinin hızla artış göstermeye başladığı görülmektedir. Bu bağlamda 2004 yılı için bir kırılma yılıdır demek yanlış olmayacaktır. 2004 yılından itibaren toplumun en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyi hızlı bir şekilde artış göstermiştir. Toplumu oluşturan en varlıklı ilk % 10'luk dilimde yer alan bireylerin gelir düzeyinin de 2004-2023 döneminde önemli ölçüde artış gösterdiği, ancak söz konusu artışın toplumun en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyindeki artışın çok altında gerçekleştiği görülmektedir. Toplumun düşük gelir düzeyine sahip % 50'lik diliminde yer alan bireylerin gelir düzeyindeki yükseliş ise son derece sınırlı düzeyde gerçekleşmiştir. Yıllar itibarıyla gelir dağılımı eşitsizliğini daha iyi anlayabilmek adına toplumu oluşturan farklı gelir düzeyine sahip bireylerin dönem başı ve dönem sonu gelirlerini incelediğimizde toplumun en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyin 2004 yılında 99.800 dolardan % 113,4 oranında artışla 2023 yılında 212.989 dolara, toplumu oluşturan en varlıklı ilk % 10'luk dilimde yer alan bireylerin gelir düzeyinin 2004 yılında 27.363 dolardan % 112,8 oranında artışla 2023 yılında 58.247 dolara ve son olarak toplumun düşük gelir düzeyine sahip % 50'lik diliminde yer alan bireylerin gelir düzeyi de 2004 yılındaki 888 dolar düzeyinden %111,5 oranında artışla 2023 yılında 1.879

dolara yükselmiştir. Dikkat edilirse her 3 kesimin gelir düzeyindeki artış dönem sonunda, dönem başına kıyasla yaklaşık olarak aynı düzeyde gerçekleşmiştir. Artış oransal olarak aynı düzeyde gerçekleşmiş olsa da toplumu oluşturan farklı kesimlerin gelir düzeyi arasındaki fark, rakamsal olarak artış göstermiş, bir diğer ifadeyle bireyler arasındaki gelir dağılımı eşitsizliği yıllar itibariyle artmıştır. Bu durum aşağıdaki şekil 2 de daha iyi anlaşılabilir.

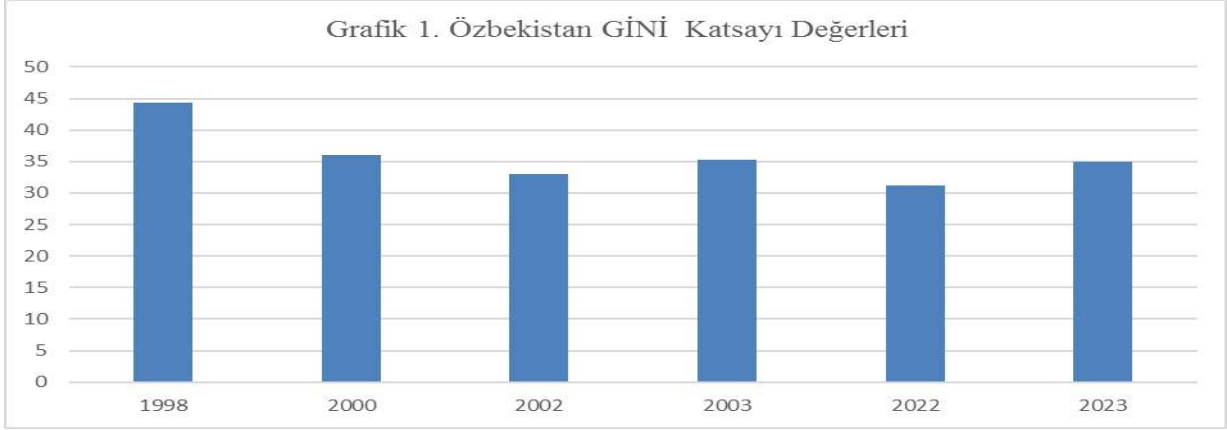

Şekil 2. Kişi Başı Ortalama Gelir Düzeyi

Kaynak: World Inequality Database, 2024, Uzbekistan, <https://wid.world/country/uzbekistan/>
https://wid.world/share/#0/countrytimeseries/sptinc_p90p100_z:sptinc_p0p50_z:sptinc_p99p100_z/UZ/2015/us/k/p/yearly/s/false/9.97499999999998/60/curve/false/1980/2023

Şekil 2. incelendiğinde yukarıda ifade ettiğimiz üzere 1990'lı yıllarda gelir dağılımı eşitsizliğinin azaldığı 1998-2004 döneminde sabit kaldığı ancak 2004 yılından toplumun en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyinin hızlı bir şekilde yükseldiği, toplumu oluşturan en varlıklı ilk % 10'luk dilimde yer alan bireylerin gelir düzeyinin ise yükseldiği ancak en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyiyle aralarındaki farkın yıllar itibariyle giderek açıldığı görülmektedir.

Dünya Bankası uzmanları Özbekistan'daki gelir eşitsizliğinin artış gösterdiğini, bunun da yoksulluktaki azalışın yavaşlamasına neden olduğunu, ayrıca gelir eşitsizliğinin yaygın bir ölçüsü olarak kullanılan Gini katsayısının da 2022 yılındaki 0,31 puan seviyesinde 2023 yılında 0,35 puan seviyesine yükseldiğini ifade etmişlerdir (Kun.uz, 2024; Degenhard, 2024). Gini katsayısı bir ülkenin tüm gelir dağılımını 0 ile 1 arasında tek bir sayıya indirmektedir. Bu rakamın yükselmesi, gelir eşitsizliği derecesinin de yükseldiği anlamına gelmektedir. Gini katsayısındaki bu yükseliş aynı zamanda yoksulluk oranında beklenen % 5,5 oranında bir azalış yerine sadece % 3,1 oranında bir azalışa işaret etmektedir. Ayrıca uzmanlar, 2022 yılından 2023 yılına kadar olan süreçte ülkenin toplam nüfusunun en yoksul % 10'luk diliminde yer alan bireylerin gelirinin sadece % 6 oranında artış gösterdiğini, buna karşın en zengin % 10'luk diliminde yer alan bireylerin gelirinin % 30'dan fazla arttığını, buna bağlı olarak da ülkede yaşayan bireyler arasında ekonomik eşitsizlik sorununun daha da kötüleştiğini ifade etmişlerdir (Kun.uz, 2024).

Kaynak: <https://databank.worldbank.org/source/world-development-indicators#> (Erişim tarihi: 28.11.2024)
<https://kun.uz/en/news/2024/05/13/world-bank-reports-increasing-economic-disparity-in-uzbekistan>
 (Erişim tarihi: 28.11.2024) (World Bank Reports Increasing Economic Disparity in Uzbekistan 2024)

Tek tek gelir gruplarındaki gelişmelerden farklı olarak toplu bir şekilde bakıldığında herhangi bir ülkenin gelir dağılımındaki eşitsizlikleri gösteren en önemli gösterge Gini katsayısıdır. Gini katsayısı 0 ile 1 arasında değerler almaktadır ve bu değer (rakamın) yükselmesi, o ülkedeki gelir dağılımındaki eşitsizliğin arttığı anlamına gelmektedir. Özbekistan'a ait Gini Katsayı değerlerinin yer aldığı Grafik 1 incelendiğinde ilk dikkat çeken şey sadece belirli yıllara ait Gini katsayı değerlerinin bulunduğudır. Böyle bir durumun ortaya çıkmasının tek nedeni sadece bu yıllar için Gini katsayı değerinin hesaplanmış olması ve dünya bankası veri tabanında ile çeşitli internet sitelerinde sadece bu yıllar için Gini katsayı değerlerinin bulunuyor olmasıdır. Yine aynı grafikte dikkat çeken bir diğer husus da Gini katsayısının yıllar itibariyle seyridir. Özbekistan'da 1998 yılında Gini katsayı değeri 0,44 olarak gerçekleşmiştir. Bu yüksek olarak kabul edilebilecek bir değerdir. 2000 ve 2002 yıllarında ise Gini katsayısının gerilediği görülmektedir. Gini katsayı değeri sırasıyla 2000 yılında 0,36 ve 2002 yılında da 0,33 olarak gerçekleşmiştir. Bu veriler Özbekistan'da gelir dağılımının iyileşme eğilimi gösterdiği anlamına gelmektedir. Ancak 2003 yılında Özbekistan'ın Gini katsayı değerinin bir miktar yükselmiş, bir diğer ifadeyle gelir dağılımı adaletsizliği artış göstermiştir. Ancak uzunca bir aradan sonra 2022 yılında yapılan hesaplama neticesinde Gini katsayı değeri 0,31 ye kadar gerilemiştir. Bu Gini katsayı değeri, gelir dağılımı eşitsizliğinin azalması adına son derece olumlu bir gelişmedir. Ancak 2023 yılı itibariyle Gini katsayı değeri yeniden yükselmiş ve 0,35 olarak gerçekleşmiş, bir diğer ifadeyle ülkedeki gelir dağılımı eşitsizliği artış göstermiştir. Genel bir fikir vermesi adına 1998 yılındaki hesaplama hariç hesaplama yapılan tüm yıllarda Gini katsayı değerinin 0,31 ile 0,36 arasında gerçekleşmiştir. Özbekistan'da gelir dağılımının en çok bozulduğu yıl 44,3 oranı ile 1998 yılı iken gelir dağılımı dengesizliklerinin azalış gösterdiği yıl 0,31 değeri ile 2022 yılı olarak gerçekleşmiştir.

SONUÇ

Küreselleşme sürecinin iktisadi olarak ülke ekonomileri üzerinde pek çok etkisinin bulunduğunu ifade etmek mümkündür. Bu etkilerden biri gelir dağılımındaki adaletsizliğe bağlı olarak ortaya çıkan yoksulluktur. Küreselleşme sürecinde ülkeler arasındaki fiziki sınırlar varlığını sürdürmekle birlikte başta ticari sınırlar olmak üzere sosyal ve kültürel sınırlar ortadan kalkmakta, uluslararası ticaret teknolojideki gelişmelerinde etkisiyle hız kazanmakta, farklı ülkelerdeki bireylerin tüketim alışkanlıkları birbirine benzeşmekte ve bu da aslında hem üreticiler için hem de tüketiciler için yeni yeni fırsatların ortaya çıkmasına neden olmaktadır. Özellikle ulaşım ve iletişim teknolojilerindeki olumlu gelişmeler uluslararası nitelikteki ticari faaliyetlerin ve ihracat hacminin artış göstermesine olanak sağlamaktadır. Zira küreselleşme

sayesinde üreticiler için ulusal piyasalardan daha geniş bir piyasaya yönelik üretim yapabilme olanağı doğmuş olmaktadır. Dolayısıyla üretim hacminin artırılmasını gerektirmektedir, ki üretim hacminin artırılabilmesi için de üretim faktörlerine olan talebin artmasına bağlı olarak ekonomide bir canlanma meydana gelecektir. Küreselleşme sürecinin tüketicilere sağlamış olduğu en önemli fayda ise ihtiyaç duyulan bütün mal ve hizmetlere nispeten de daha ucuza ulaşılabilmek imkanı kavuşmuş olmasıdır. Zira küreselleşme sürecinde üreticiler için olduğu gibi tüketiciler içinde ihtiyaçların karşılanabileceği geniş bir pazar imkânı ortaya çıkmış olmaktadır. Böyle bir durum ise üreticiler arasında yaşanacak yoğun rekabet nedeniyle tüketicilerin mal ve hizmetlere nispeten daha düşük maliyetlerle ulaşabilmesine olanak sağlayacaktır. Ayrıca yine tüketiciler ülkelerinde bulunmayan ya da üretilmeyen mal ve hizmetlere ulaşabilme imkanı kavuşmuş olmakta, dolayısıyla da hem bireysel hem de toplumsal düzeyde refah artışları meydana gelmektedir. Ancak küreselleşme sürecinde yaşanan asıl sorun elde edilen finansal kaynakların paylaşımına ilişkindir. Küreselleşme sürecinde başta ihracattan elde edilen gelirler olmak üzere bütün finansal kaynakların adil dağılımı son derece önemlidir. Aksi takdirde gelir dağılımı eşitsizliklerine bağlı olarak ülke de yoksulluk sorunu ortaya çıkacaktır. Bu nedenle toplumsal refah ve huzurun temini amacıyla gelir dağılımında adaletin sağlanmasına özen gösterilmelidir. Bu husus bütün ülkeler için önemli olduğu gibi Özbekistan için de son derece önemlidir. Hazırlanmış olan bu çalışmada Özbekistan özelinde küreselleşme sürecinin ülkenin gelir dağılımı ve yoksulluk üzerindeki etkileri değerlendirilmeye çalışılmıştır. Yapılan inceleme ve değerlendirmeler neticesinde Özbekistan'ın yıllar itibariyle küresel ekonomik sisteme daha da fazla entegre olmaya başladığı bir diğer ifadeyle Özbekistan'da küreselleşme sürecinin artış gösterdiği, ancak küreselleşme sürecinin olumlu etkilerinin toplumu oluşturan bireylere eşit düzeyde yansımadığı tespit edilmiştir. Zira toplumun en varlıklı % 1'lik diliminde yer alan bireylerin gelir düzeyi ile toplumdaki en varlıklı ilk % 10'luk dilimde yer alan bireylerin gelir düzeyi ve toplumun düşük gelir düzeyine sahip % 50'lik diliminde yer alan bireylerin gelir düzeyi arasındaki fark 2004 yılından itibaren hızlı bir şekilde artmaya başlamış, bir diğer ifadeyle gelir dağılımı hızla bozulmaya başlamıştır. Özbekistan'ın gelir dağılımındaki eşitsizlikleri gösteren Gini katsayısı incelendiğinde ise 2023 yılında bir önceki yıla kıyasla bir miktar yükselişin meydana geldiği, 2022 yılında 31.2 olan Özbekistan'ın Gini katsayısının 2023 yılında 35'e yükseldiği görülmektedir. Gini katsayısındaki bu artış Özbekistan'daki gelir dağılımının bozulduğu anlamına gelmektedir. Konuya ilişkin araştırma yapan uzmanlar Gini katsayısındaki bu yükselişin aynı zamanda yoksulluk oranında beklenen % 5,5 oranında bir azalış yerine sadece % 3,1 oranında bir azalışa işaret ettiğini ve ayrıca 2022 -2023 döneminde ülkenin en yoksul % 10'luk dilimde yer alan bireylerin geliri sadece % 6 oranında artış gösterirken, en zengin % 10'luk dilimde yer alan bireylerin gelirinin % 30'dan fazla arttığını, buna bağlı olarak da Özbekistan'da gelir dağılımındaki eşitsizliğin daha da arttığını ifade etmişlerdir. Bu bağlamda Özbekistan'da yoksulluğu azaltmak için öncelikle gelir dağılımında adalet sağlanmalı ve gelir düzeyi düşük bireylerin gelirini artırmaya yönelik politikaların uygulamaya konulmalıdır. Ancak bu sayede toplumu oluşturan bireyler arasındaki gelir eşitsizliğinin önüne geçilebilecek, yoksullukla etkin bir şekilde mücadele edilebilmiş olacak ve öncelikle bireylerin daha sonra da toplumun refahı artırılmış olacaktır.

Dicle University Engineering Faculty Electrical and Electronics Eng. Department, Diyarbakir

ABSTRACT

Electromagnetic (EM) waves arising from high-impedance and high-frequency communication tools such as radio, radar, GPS, and Wi-Fi are the main causes of EM interference (EMI) and therefore radiation pollution. ‘EMI Shielding’ is one of the primary methods that can be applied to protect against this negative situation, and various materials are used for this purpose. One of the most important and common of these is textile-based materials. This paper primarily aims to observe the difference in Shielding Effectiveness (SE) between non-protective material and material with protection properties. Another goal is to obtain a good SE value. For these purposes, metal particles are added to a textile-based material to ensure the absorption and reflection of EM waves. Copper is preferred as the metal, and a new material is produced in the ANSYS HFSS program following the characteristics of copper. The system's design, modeling, and waveguide measurements are simulated, and HFSS optimizes parameters that affect the EMI shielding performance, such as material conductivity, porosity, and thickness. Accordingly, the obtained result values are interpreted and information is given about EMI SE.

Keywords: EMI Shielding, Waveguides, Metal Coated Textile, HFSS

INTRODUCTION

Nowadays, the use of electronic devices and communication devices has become widespread and this has led to the increase of radiation pollution called electromagnetic interference (EMI). In parallel with this situation, the need for EMI shielding materials has emerged, and studies to reduce the effect of EM radiation have increased (Wu et al., 2017; Wilson et al., 2020; Khan et al., 2020). Textile-based EMI shielding methods continue to be developed to effectively absorb microwaves, especially in the 1-20 GHz frequency range. The method is based on the absorption process within a conductive volume or reflection mechanisms from the surface of the conductor added to the material. The performance of the shielding task is understood by calculating the Shielding Effectiveness (SE), which is the EMI capability of a material that can be determined by the combined effectiveness of the absorption and reflection loss values. The total SE can be calculated as given in Equation 1.

$$SE_T = SE_A + SE_R + SE_M \quad (1)$$

Where SE_A and SE_R are effectiveness of the absorption and reflection losses, respectively. As seen in Equation, multiple internal reflections should also taken into account as SE_M . However, it can be neglected when the SE_A value is greater than 15 decibels (dB) (Shacklette and Colaneri, 1991; Tong, 2016; Jiang et al., 2019).

In practice, the SE_T can be found using network analyzers. On the other hand, it can also be calculated numerically in the simulation environment by using the finite difference time domain method (FDTD), the finite element method (FEM) or the method of moments. Many studies use simulation programs to model and analyze the textile-based EMI shielding

process. For example, using FEM-based ANSYS HFSS software, (Rybicki et al., 2021) examined the EMI shielding performance of woven textiles with polymer-coated samples, while (Hu et al., 2022) analyzed the EMI shielding performance of metal particles coated on non-woven textile-based material using the same software program. Although not as detailed as the mentioned studies, a similar application is carried out in a simple and basic way in this study. Accordingly, changes in the behavior of the textile material with the EMI shielding feature are observed in the simulation environment.

MATERIALS AND METHOD

High Frequency Structural Simulator (HFSS) is a high-performance FEM-based EM field simulator tool used to design, model, and analyze various 3D objects, especially antennas, waveguides, human body exteriors, Bluetooth, Wi-Fi, and GPS equipments (HFSS User Manual, 2017). Many operations related to the aim of this study can be performed thanks to HFSS, such as obtaining an EMI Shielding material by coating the textile with metal particles, analyzing the performance of this material using a waveguide set at the desired frequencies, and interpreting the results by measuring some parameters such as transmittance, reflectance, electric field distribution, etc.

The sample HFSS interface image of the copper-coated non-woven fabric created in accordance with its real shape and properties, and the simulation environment representing the placement of this material in the waveguide is given in Figure 1. The effectiveness of EMI protection is examined in HFSS with a system using the WR90 waveguide set in the frequency range of 8.0 to 13.0 GHz according to the waveguide method in TE₁₀ mode. Metal particles coated on non-woven polyester are used as the material, and copper parts are chosen as the metal. Since EMI shielding quality depends on the conductivity, permeability, thickness, shape and number of pores of the material (Šafařová and Militký, 2017; Maity and Chatterjee, 2018), these features are specifically taken into account when creating the model. It is thought that the textile sample designed as a sandwich structure has square and circular openings suitable for the real sample. The thicknesses of polyester nonwoven fabrics and copper particles are determined as 0.068 mm and 0.006 mm, respectively. The number of pores is assumed and created as 600.

Figure 1. The simulated waveguide (WR90) model designed in HFSS for EMI shielding

RESULTS AND DISCUSSION

Results

In the previous section, it was mentioned that the EMI capability of a material can be determined by the combined effectiveness of its absorption and reflection losses. Relatedly, calculating the ratio of powers, as given in Equation 2, is another method of defining total SE (Yang and Gupta, 2005; Paul, 2006).

$$SE_T = 10 \log \frac{1}{T} = 10 \log \frac{P_1}{P_2} \quad \text{dB} \quad (2)$$

Where, T is the transmittance of the material, P₁ and P₂ are the incoming and outgoing powers of the wave, respectively. Accordingly, an important inference can be made about the protective performance of the material by calculating the transmission coefficient (TC). Similarly, EM waveforms reflected from the shielding material allow the level of reflection loss of the measured object to be determined.

At the 10 GHz frequency, which was chosen as an example value, the TC and SE values of the textile without the protection feature were measured and calculated as 75 and 1.25, respectively. At the same frequency, the TC and SE values of the textile covered with metal particles were measured and calculated as 1.58 and 18, respectively. Table 1 gives the average SE values between 8 and 13 GHz for two materials. Figure 2 shows the transmittance (-SE) change in this frequency range.

Table 1. Simulated average SE from 8 GHz to 13 GHz

Sample	Average SE Values (dB)	Transmission Coefficient
Pure Polyster Substance	1.8	66
Metal Particle-Coated Polyster	17	2

Figure 2. Simulation results of transmittance in the WR90 frequency range (8-13 GHz) for materials without and with shielding

Discussion

As can be understood from the explanations and equations given up to this section regarding the performance of EMI shielding, a material with high SE should have a low transmittance value. Accordingly, the protection feature of a substance is divided into five degrees. These gradations are SE grades designated for general use and can be listed as follows (FTTS,2024):

If 30 dB < SE; protection is excellent,

If 20 dB < SE < 30 dB; protection is very good,

If $10 \text{ dB} < SE < 20 \text{ dB}$; protection is good,
 If $7 \text{ dB} < SE < 10 \text{ dB}$; protection is moderate,
 If $5 \text{ dB} < SE < 7 \text{ dB}$; protection is fair.

As can be seen and interpreted from the Table 1 and Figure 2, the SE value of the textile not coated with any shielding material is less than 5 dB, so it could not even be included in the 'fair' class. However, since the average SE value of the textile with a metal particle layer is 17 dB, it can be included in the 'good' class. This comparison proves how effective even a simple and basic shielding can be.

CONCLUSIONS

This study first mentioned that EM radiation pollution resulting from telecommunication technologies, TV/Radio/Radar signals, and web systems may be at harmful levels for humans, other living things, and electronic devices. The 'EMI shielding' method, developed to prevent or reduce the effects of these damages, was explained, and it was stated that textile materials could have a shielding feature by coating them with conductors. It was shared that the materials commonly used for this purpose are carbon-based, metal-based, and conductive polymer-based materials. In order to provide an example of this method, creating a model in a simulation environment, coating the nonwoven fabric with metal particles, and making measurements with the help of a waveguide were planned. As a result of the simulation process carried out in accordance with the purpose, it was observed that the material with the added shielding feature had a good effect and performance. Here, a simple system was created and only one additive substance was examined. However, EMI shielding quality varies and improves depending on the material's conductivity, permeability, thickness, shape, and number of pores. Therefore, it can be said that better results will be obtained by changing the character and qualities of the substance as the subject of another study.

Dicle University Engineering Faculty Electrical and Electronics Eng. Department

ABSTRACT

In parallel with the development of wireless telecommunication systems, TV/Radio transmission signals, and web technologies, electromagnetic (EM) radiation pollution has begun to occur worldwide. EM interference (EMI) resulting from this pollution may be at a level causing health problems for humans and other living things. In addition, EMI can cause damage to electronic devices. For this reason, researches have focused on preventing EMI or minimizing its negative effects in recent years. EM waves, and therefore microwaves, which are a type of them, have perpendicular components: electric and magnetic fields. When exposed to microwave radiation, effective absorption is achieved by eliminating both of these components. One of the most important methods that has become widespread today is using 'Electromagnetic Shielding' materials to achieve this situation. There are many different types of materials that can be used for EMI shielding purposes. Every material has its benefits and drawbacks. They can be used alone, or can be mixed and combined. Thus, their disadvantages can be eliminated. Furthermore, using additives in materials can increase their protection performance. This paper will provide an overview of the properties, internal structures, and types of materials and additives that can be used in EMI shielding. For this purpose, the most commonly used materials such as carbon-based, metal-based, and conductive polymer-based materials will be examined.

Keywords: Electromagnetic Pollution, EMI Shielding, Conductive Textile Materials

INTRODUCTION

EM waves originate either from low-impedance and low-frequency devices such as transformers and motors or from high-impedance and high-frequency communication tools such as radio, radar, GPS, and Wi-Fi. The effect of low-impedance sources on EMI is 5%, and the interference caused by these sources only negatively affects devices located nearby. (Kunkel, 2020). Therefore, they can be considered relatively harmless in terms of EMI and radiation pollution. However, high impedance sources create the EM environment required for electronic systems to operate and are therefore the main sources of EMI. Table 1 shows approximate electric field intensity values emitted by some electrical household appliances (Barnes, 1995; Kodali, 2001). In addition, mobile phones, which have become indispensable in daily life, are also one of the main sources of EM radiation. In light of this information, interest in microwave absorbers in the 1-20 GHz frequency range has increased to prevent EMI and radar detection. The protection process carried out for this purpose is called 'EMI Shielding' (Jauchem, 2008; Willson et al., 2020; Dolchinkov et al., 2021). The materials to be preferred in this method for effective microwave protection are expected to be thin, low density, light, low cost, wide bandwidth, and flexible design (Ali et al., 2018; Rubežienė, V. and Varnaitė-Žuravlio, 2020; Rybicki et al., 2021). A graphical abstract of EMI Shielding materials prepared by (Wang et al., 2023) is given in Figure 1.

Table 1. Electric field intensity values emitted by some household devices

Electromagnetic Field Sources	Electric Field Intensity (V/m)
Electric Blanket	250
Microwave Oven	250
Boiler	130
Stereo	90
Refrigerator	60
Mixer	50
Hair Dryer	40
Television	30

**Figure 1.** A graphical abstract of EMI Shielding materials prepared by (Wang et al., 2023)

There are many different types of materials that can be used for EMI shielding purposes. Every material has merits and drawbacks. In some cases, the aim is to eliminate the disadvantages by mixing and combining different materials. Furthermore, adding additives to the materials can increase their protection performance. The properties of the main materials used are summarized below.

Carbon-based EMI Shielding Materials

It has been mentioned before that advantages such as good mechanical performance, lightness, flexibility, and wide aspect ratio are the main features required for EMI shielding. Carbon-based materials having many of these features excellently are one of the popular components that can be used to protect against the harms of EMI. Another important reason why carbon-based materials have become widespread in this field is that they have high electrical conductivity and corrosion resistance. They can be classified structurally as textile, composite, film and foam. Carbon fiber (CF), one of the most common types of these materials, stands out among fibers with high-performance thanks to its lightness and high specific strength. A useful summary of the internal structure and application areas of CF-based EMI shielding materials has been prepared graphically by (Yang et al., 2024) and shared in the Figure 2.

to the fore are polyaniline (PANI) and polypyrrole (PPy) due to their high EMI shielding efficiency. They can be applied to textiles by different methods, such as creating conductivity by polymerizing monomers on the textile or applying the dispersions of conductive polymers as coatings (Rybicki et al., 2021). Polymers can be considered a versatile platform for advanced EMI shielding materials, featuring different architectural designs for polymer composites and an abundant supply of precursors for polymer derivatives, as seen from the diagram prepared by (Liu et al., 2020) and shared in Figure 3.

Figure 3. Scheme of different types of polymer-based shielding materials (Liu et al., 2020)

CONCLUSIONS

In this study, it is primarily mentioned that EM radiation resulting from electronic and communication systems, which have become widespread in today's technology, may be at harmful levels for humans, other living things, and electronic devices. The 'EMI shielding' method applied to protect against these damages is explained and an overview of the materials used in the method is made. It has been explained through a literature review that among these materials, carbon-based, metal-based, and conductive-polymer-based are commonly used. The advantages and disadvantages of each material are given. Details are explained such as metal-based materials with very good conductivity have the disadvantage of being heavy, while light and flexible polymers have lower protection properties. As a result, the importance of the EMI shielding is emphasized and the use of materials in this method is summarized.

ÖZET

İslam dinine girmek için iman şartlarını kabul etmek zorunludur. İslam dinini kabul edip iman ettikten sonra kişi Müslüman adını almaktadır. İslam'ın beş şartından biri ve en önemlisi namaz kılmaktır. Namazın hükmü kitap, sünnet ve icma ile sabittir. Namazın kaç rekât olduğunu ve nasıl kılınacağını Hz. Peygamber (s.a.v.) ahabına öğretmiştir. Bu konuda tek örnek O'dur. Nitekim "Beni nasıl namaz kılarken gördüyseniz öylece namaz kılın." buyurarak bu konuda kendisine bakılmasını emretmiştir. Hz. Peygamber (s.a.v.)'in bu hadisi hadisçiler ve fakihleri ideal olan namazı tesbit etmeye ve kılınma şeklini belirleme gayretine sevk etmiştir. Namazın rükünleri konusunda tam bir mutabakat olmakla birlikte, muhaddisler ve fakihler arasında sünnet olarak değerlendirilen kısımlarda ihtilaflar meydana gelmiş ve birtakım fiiller farklı şekilde aktarılmıştır. Bu farklardan en dikkati çekenlerden biri namazda ruküya giderken ve ruküdan kalkarken ellerin kaldırılıp kaldırılmaması konusudur. Bu konuda cumhur olarak bilinen ve Şafiilerin temsil ettiği grup ile diğer taraftan rey ekolu olarak bilinen ve Hanefilerin temsilcisi olduğu grup gelmektedir.

Cumhur ruküya giderken ve ruküdan kalkarken ellerin kaldırılmasının sabit bir sünnet olduğunu dile getirmekle birlikte azda olsa bir kısım ulema namazda ellerin kaldırılmamasını sünnete muhalefet olarak değerlendirmiştir. Hanefilere mensup ulema ise kendilerine has usul açısından değerlendirip refu'l yedeynin kuvvetli bir sünnet olmadığını dile getirmişlerdir. Az da olsa bazı alimler namazda elleri kaldırmayı ameli kesir olarak değerlendirip namazı bozacağını ifade etmişlerdir.

Bu meseledeki ihtilafın kaynağı mezheplerin hadisleri değerlendirirken kullandıkları usul ve hüküm çıkarmadaki metod farklılığından kaynaklandığını söylemek mümkündür. Asıl itibariyle namazın farzlarından olmayan bir mesele olması sebebiyle avamı nasda bir karşılığı olmayan ve alimler arasında medarı münakaşa olmuş has bir mesele gibi durmaktadır. Bizim bu çalışmamızda ifade etmek istediğimiz cumhur ve Hanefilerin arasındaki bu ihtilafın kaynaklarına inmek suretiyle alanda çalışılmış makale ve kitaplardan yararlanarak ihtilaf ettikleri meselelere bir bakış atmaktır.

Anahtar Kelimeler: Elleri kaldırma, Namaz, Rükü, Hanefi, Cumhur

ABSTRACT

In order to enter the religion of Islam, it is obligatory to accept the conditions of faith. After accepting and believing in Islam, a person is called a Muslim. One of the five pillars of Islam and the most important one is prayer. The ruling of prayer is fixed by the book, sunnah and ijma. The Prophet (PBUH) taught his companions how many rak'ahs the prayer is and how to perform it. He is the only example in this regard. In fact, he commanded his companions to follow him in this matter by saying, 'Pray as you have seen me praying.' The Prophet (peace and blessings of Allaah be upon him) said, 'Pray as you have seen me praying. This hadith of

the Prophet (PBUH) prompted the hadith scholars and jurists to endeavour to determine the ideal prayer and the way it should be performed. Although there is a complete consensus on the rites of prayer, there have been disagreements among the muhaddithis and jurists on the parts that are considered as sunnah, and some actions have been transmitted differently. One of the most striking of these differences is whether or not to raise the hands when going to and rising from ruku' in prayer. On this issue, there is the group known as the republic and represented by the Shafi'is, and on the other hand, there is the group known as the school of rey and represented by the Hanafis.

Although the people state that raising the hands while going to and rising from ruku is a fixed sunnah, a small number of scholars have considered not raising the hands in prayer as opposition to the sunnah. The Hanafi scholars, on the other hand, evaluated it from the point of view of their own methodology and stated that refu'l sevayn is not a strong sunnah. Some scholars, albeit a few, considered raising the hands in prayer as ameli kesir and stated that it would invalidate the prayer.

It is possible to say that the source of the disagreement in this issue stems from the difference in the methodology used by the sects in evaluating the hadiths and the methodology used in drawing conclusions. Since it is a matter that is not one of the obligatory parts of the prayer, it seems to be a special issue that has no equivalent in the common sense and has been a matter of dispute among scholars. What we want to express in this study is to go down to the sources of this dispute between the republic and the Hanafis and to take a look at the issues they dispute by making use of articles and books that have been studied in the field.

Keywords: Raising hands, Prayer, Ruku, Hanafi, Cumhuriyet

1. Giriş

Kuran insanın yaratılış amacının Allah'a kul olmak olduğunu vurgular. Bir insanın en önemli görevi olan kulluğun belli davranış ve sözlerle ifadesi ise namazdır. Namazın kalitesine göre hesabın görüleceği, bir mihenk taşı gibi diğer amellerin de kendisine kıyasla değer kazanacağı hadislerde¹ ifade edilmiştir. Namaz hakkındaki ayet ve hadislerin teşviki ve özellikle mutlak ve mücmel olarak Kuran'da emredilen namaz ibadetinin nasıl kılınacağını söyleyen Hz. Peygamber'in (s.a.v.) "beni nasıl namaz kılarken gördüyseniz öylece namaz kılın"² hadisi müçtehitleri namazın kemiyet, keyfiyet ve faziletini araştırmaya, standartlarını belirlemeye sevk etmiştir. Bütün müçtehitler Hz. Peygamber'in namazı gibi namaz kılmayı ve buna göre fetva vermeyi ideal edinmişlerdir.

Müçtehitler; mensup oldukları usul ekolüne göre araştırmaları neticesinde namazın içinde ve dışında olmak üzere birtakım şartlar ve rükünler tesbit etmişlerdir. İftitah tekbiri, kıyam, kıraat, rükû, secdeler ve kade-i ahirenin namazın rükünleri olduğu hakkında icma vardır.³ Bu rükünleri besleyen, namazın kalitesini arttırmaya matuf bir takım sünnet veya müstehap olarak kabul edilen meselelerde mezheplerin ve dolayısıyla müçtehitlerin mezhep içerisinde oluşturulmuş kaide ve kurallara dayanarak yaptıkları araştırmalarda farklı sonuçlar elde edilmiştir. Namazda ellerin nere'ye kadar kaldırılması gerektiğinden başlayarak, kıyamın süresi, kıraatin miktarı ve Fatiha'nın okunup okunmaması, rükû öncesi ve sonrası ellerin kaldırılıp kaldırılmayacağı, tadili

erkan ve namazdan çıkış keyfiyeti gibi meseleler tartışma konusu olmuştur.⁴ İftitah tekbirinin dışında ellerin kaldırılıp kaldırılmayacağı üzerinde de bizzat mezhep imamları arasında başlayan tartışmalar giderek yoğunlaşmıştır. Bu konu o derece şöhret kazanmıştır ki fıkıh ve hadis sahasında tanınmış isimler tarafından konuyla ilgili müstakil eserler kaleme alınmıştır. Bu bağlamda refulyedeyn meselesini savunan müstakil eserlerden bazıları şunlardır:

1. Ebu Abdillâh Muhammed b. İsmâîl b. İbrâhîm el-Cu'fi el-Buhârî'nin (ö. 256/870) *Ref'u'l-yedeyn fi's-salât* kitabı. İmam Buhârî, eserinde elleri kaldırmamayı "sünnetten yüz çevirmek" olarak ifade etmiştir. Onu ehl-i hadis çizgisini izleyen,
2. Ebû Abdillâh Muhammed b. Nasr b. Yahyâ el-Mervezî'nin (ö. 294/906) *Ref'u'l-yedeyn fi's-salât'ı*,
3. İbn Kayyim el-Cevziyye'nin (ö. 751/1350) *Ref'u'l-yedeyn fi's-salât'ı*,
4. Ebû'l-Bekâ Bahâüddîn Muhammed b. Abdilberr b. Yahyâ es-Sübki'nin (ö. 756/1355) *Ehâdîsü ref'i'l-yedeyn'i (et-Temhîd fi ref'i'l-yedeyn fi's-salat)*,
5. Zeynuddin Ömer b. İsa eş-Şâfiî'nin (ö. 764/1363) *İzahu Akvâ'l-Mezhebeyn fi meseleti refil yedeyn'i*,
6. Şah Muhammed İsmail Dehlevî'nin (ö. 1246/ 1830) *Tenvîru'l-'ayneyn fi isbâti ref'i'l-yedeyn'i* gibi müstakil eserleri takip etmiştir.

Refulyedeyn meselesinde elleri kaldırmaya muhaliflerin eserlerinden bazıları ise şunlardır:

1. Emir Kâtib el-İtkânî'nin (ö. 758/1357) *Risâle fi terki ref'i'l-yedeyn*,
2. Mahmud b. Ahmed b. Mes'ûd, el-Konevî ed-Dımaşkî el-Hanefî, (ö. 777/1376) *Risâle fi Ref'i'l-Yedeyn fi's-Salât'ı*,
3. Ekmelüddîn Muhammed b. Mahmûd el-Bâbertî'nin (ö. 786/1384) *Risâle fi Ademi Cevâzi Ref'i'l-Yedeyn fi'r-Rüku'u*,
4. Enver Şâh Hüseyinî Keşmîrî'nin (1875-1933) *Neylü'l-ferkadeyn fi ref'i'l-yedeyn'i* sayılabilir.

Bu çalışmamızda rükû öncesi ve sonrası ellerin kaldırılması meselesini Hanefî ve Şâfiî mezheplerine göre inceleyeceğiz. Böylece mezhep görüşleri arasındaki ihtilafların temelde nelerden kaynaklandığını, bakış açısındaki farklılıkların pratiğe nasıl yansıdığını da görmüş olacağız. Çalışmamızda özellikle Hanefî ve Şâfiî mezhep alimlerinin eserlerine ve delillerine yer vereceğiz.

Rükûa giderken ve rükûdan doğrulurken ellerin kaldırılmasıyla alakalı görüşler ve deliller konusunda başlıca iki ekolden bahsedebiliriz, biri ehl-i re'y olarak bilinen Hanefî anlayışı, diğeri ise Şâfiîlerin temsil ettiği ehl-i hadis anlayıştır. İmam Nevevî de ellerin iftitah tekbiri dışında kaldırılmaması görüşünün ehl-i re'y görüşü olduğunu açıkça zikreder.⁵

2. Hanefilerin Görüşü ve Delilleri

Kuran ve Sünnette hükmü bulunmayan meseleler hakkında bazı müçtehitler re'ye göre hüküm verirlerdi. Bu müçtehitler ehl-i re'y olarak meşhur olmuşlardı. Ehl-i re'y kavramı, zamanla Hanefilerin nasları yorumlama ve hüküm çıkarma yönteminde kendileriyle özdeşleşen bir terim olmuştur.⁶ Ehl-i re'y ve ehl-i hadis anlayışının hadislere bakışı, İmam Ebû Hanîfe ile İmam Evzâî arasındaki refulyedeyn meselesini konu alan şu tartışmada çok net görülmektedir: Nakledildiğine göre Evzâî, Ebû Hanîfe ile karşılaşmış ve ona "İbn Ömer hadisine rağmen nasıl

⁴ Muhammed Bin Hamud El Vaili, *Buğyetul Muktasid Şerhu Bidayetil Müçtehid* (Beyrut: Daru İbni Hazm, 2019), 4/1567.

⁵ Ebû Zekeriyâ Yahyâ b. Şeref b. Mürî en-Nevevî, *el-Mecmu Şehu'l Muhezzeb* (Dimeşk: Daru'l Fikir, 2010), 3/400.

⁶ Taha Çelik, "Ref'ul Yedeyn Meselesi Çerçevesinde Beyhaki'nın Tahavi'ye İtirazları", *Hadis Tetkikleri Dergisi* XVI/1 (2018), 33-58.

olur da rükûda elleri kaldırmıyorsunuz” demiştir. Ebû Hanîfe “İbrâhim en-Nehaî'nin Alkame'den naklettiği, Resulullah'ın (s.a.v.) ilk tekbir haricinde ellerini kaldırmadığını haber veren İbn Mes'ûd rivayetini” zikredince Evzâi “Ebû Hanîfe ne tuhaf. Ben ona Zühri, Salim'den rivayet etti diyorum o Hammad-İbrahim-Alkame'den diyor.” diyerek tepkisini dile getirmiş ve âli isnad olduğu için Zühri rivayetinin râcih olduğunu belirtmiştir. Ebû Hanîfe ise “Hammad Zühri'den İbrahim de Salim'den daha fakihdir. İbn Ömer'in ise önce gelmişliği olmasa Alkame ondan fakihdir diyeceğim.” Der. İbn Mes'ûd rivâyetini ravilerinin fıkından dolayı tercihe daha layık görür. Çünkü Ebû Hanîfe, itibarın (seneddeki) uluvve değil (râvideki) fıkha olduğunu düşünür.”⁷

Ehl-i re'y ve ehl-i hadis bakış açısı bu meselede başka tartışmalarda da kendini göstermeye devam eder; Evzâi, Kûfe'li Sufyan-ı Sevrî ile de Mekke'de bu konuda tartışmış, Sevrî'ye sinirlenip onunla lanetleşmek bile istemiştir.⁸ Nitekim Etkânî gibi bu konuda müstakil eser yazan bir Hanefî fakihî de kendisine reddiye yazan Subkî'ye cevap verirken Ebu Hureyre'den nakledilen refulyedeyn rivayetine “Bu rivayet sabit olsa bile İbn Mes'ûd'un rivayeti tercih edilir. Çünkü o fakihdir ve onun hadisi kıyasa uygundur.” der.⁹

Görüldüğü gibi Hanefiler namazda iftitah tekbirinin dışında ellerin kaldırılmaması gerektiğini savunmuşlardır. Hatta Etkânî ellerin kaldırılması durumunda amel-i kesirle namazın bozulduğunu, Şâfi mezhebinden bir imamın arkasında namaz kılan bir Hanefî'nin namazının bu durumda bozulacağını ateşli bir şekilde savunur.¹⁰

Hanefiler ve onlarla aynı içtihatla olan Mâlikîler, ruküya giderken ellerin kaldırılması ile ilgili rivayetleri ya zayıf ya da hükmünün mensuh olduğunu / yürürlükten kaldırıldığını savunmuşlardır.¹¹

Hanefilerin bu konuda naklî delil olarak kabul ettikleri yaklaşık altı temel rivayet bulunmaktadır. Malikîler de Hanefilerin kabul ettiği delillerden ikisini kendileri için delil kabul ederler. Abdullah b. Mes'ûd'un rivayeti Hanefî ve Malikîlerin ortak olarak kabul ettikleri delillerdendir.

2.1. Abdullah b. Mes'ûd'un Rivayeti

Namazda ellerin kaldırılmaması konusunda Hanefî ulemanın dayandığı en kuvvetli delillerden biri Abdullah b. Mes'ûd'un rivayet ettiği hadistir.¹² Sahabelerden namazda ellerini kaldırmadığı rivayet edilenlerin başında İbni Mes'ûd gelmektedir. Tirmizî, İbni Mes'ûd rivayetini nakletmiş ve hasen bir hadis olduğunu, Sahabelerden ve Tâbiin alimlerinden birçoğu ve Kûfelilerin bu görüşü kabul ettikleri görüşün bu olduğunu dile getirmiştir;

Rivayete göre Abdullah b. Mes'ûd: “Size Resulullah'ın (s.a.v.) namazını kıldırayım mı?” Dedi ve namazı kıldırdı. Sadece bir defa ellerini kaldırdı.”¹³

Bu rivayet Abdullah b. Mes'ûd'un talebesi Alkame tarafından rivayet edilmiştir. Önde gelen hadis imamları Ebu Dâvûd, Tirmizî ve Nesâi Sünenlerinde bu rivayete yer vermişlerdir. Cerh

¹³ Ebi Abdurrahman Şerifulhak Muhammed Eşref es-Sedik Azimâbâdi, *Avnul Ma'bud Şerhi Süneni Ebi Davud* (Dimeşk: Darul Feyha, 2009), 2/355, (748); en-Nesâi, *Sünen-i Nesai*, “Kitabu't Tatbik”, 19 (1057); Ebû İsa Muhammed b. İsa b. Sevre et-Tirmizî - Ebû'l-Ulâ Muhammed Abdurrahmân b. Abdurrahîm el-Mübârekpûri, *Tuhfetü'l Ehvezi Şerhu Camiu't Tirmizi* (Dimeşk: Darul Feyha, 2011), 2/123, (257).

ve Ta'dil alimlerinin bu hadis hakkında ki "sahihtir" ifadeleri dikkate alınarak rivayetin isnat bakımından sağlam olduğu ifade edilmektedir.¹⁴

Şâfilerden Nevevî, Beyhakî'den İbni Mes'ûd hadisinin farklı rivayetleri ile birlikte değerlendirilmesinde Beyhakî'den bu rivayetin isnadının sabit olmadığını nakleder. İmam Buhârî "raf'ul-yedeyn" kitabında Ahmed b. Hanbel'e ve Yahya b. Âdem'e tâbi olarak bu rivayetin zayıf olduğunu ifade etmiştir. Dârekutnî, de bu hadisin zayıf olduğunu kabul etmiştir. Beyhakî, İmam Şâfi'nin "kavl-i kadîm"inin en güçlü râvisi olan Za'ferânî'den rivayetle İmam Şafii'nin: "Hz. Ali ve İbni Mes'ûd'un iftitah tekbiri dışında ellerini kaldırmadıklarına dair rivayetler sabit değildir. Sabit olsa bile bu durumda râvî bir sefer görmüş ve bunda da gafil davranmıştır" ifadesini kullanmaktadır.¹⁵

Hz. Alî ve İbn Mes'ûd'un ellerini rukuya giderken ve rükudan kalkarken kaldırdıklarının sâbit olmadığı, sâbit olsa bile râvînin olayı bir kez görmüş olup bunda gafil davranmış olabileceği iddiası ilginçtir. Çünkü İbrahim en-Nehâi'ye elleri kaldırmayı nakleden Vâil rivayeti sorulduğunda "Eğer Vâil, Peygamber'in bu işi bir defa yaptığını görmüş ise, Abdullah onun bu işi yapmadığını elli defa görmüştür. O, O'nun bunu yaptığını gördü de Abdullah b. Mes'ûd da, O'nun diğer ashâbı da O'nu görmedi (öyle mi?)" Diyerek itiraz eder.¹⁶ Cessâs da elleri kaldırmak sabit olsa bile, umum-u belvâ olan yani sıkça yaşandığı için bilinmemesi mümkün olmayan bir olay hakkında Ali b. Ebi Talib ve Abdullah b. Mes'ud'dan gizli kalmasının imkansızlığını savunur.¹⁷

Beyhakî, Şâfi fakih Ebu Bekir İshak'ın iftitah tekbiri ve diğer yerlerde elleri kaldırma uygulamasının "Hz. Peygamber'den (s.a.v.) sahih olarak nakledildiğini, Raşit halifeler, diğer Sahabeler ve Tabiin'den bu uygulamanın sabit olduğunu söylediğini bildirir. Nevevî'nin nakline göre Şâfi fakihi Ebû Bekir İshak, İbn Mes'ûd'un elleri kaldırmayı "unuttuğunu" iddia eder. Şöyle der: "Abdullah b. Mes'ûd'un bu kadar sahabenin Resulullah'ı ellerini kaldırırken diğer sahabelerin bu uygulamayı görmüş olduklarını rivayet etmeleri gerçeğini onun elleri kaldırmayı unutmaması değiştirmez."¹⁸

Hanefîler bu rivayetin zayıf olduğuna katılmaz. Yukarıda bahsedildiği gibi Tirmizî bu rivayetin "hasen" olduğunu, çok sayıda sahabe ve tabiinin de bu kanaatte olduğunu söyler. İbnü't-Türkmânî, Râşid Halifelerden özellikle Hz. Ömer ve Hz. Ali'den elleri kaldırmanın tam tersinin sahih olarak nakledildiğini, Hz. Ömer'den elleri kaldırma rivayetinin ise Beyhakî'nin kendi eserinde "sihhat" lafzıyla nakledilemediğini, Hz. Osman'dan ise elleri kaldırma konusunda bir rivayet olmadığını zikreder. Hz. Ali ve İbn Mes'ûd'un iftitah tekbirinde elleri kaldırmakla yetindikleri ise onların tabiin ashâbı tarafından nakledilmektedir.¹⁹

İbn Mes'ûd'un bu konuyu unutmakla itham edilmesi ise Hanefîlere göre delilsiz bir iddiadan öteye geçmez. Ayrıca unutmak insanî bir durumdur. Ancak, Kur'ân'ın kendisinden alınması emredilen, Resulullah'ın ehl-i beyti zannedilecek kadar onun yanından neredeyse hiç ayrılmayan, 20 yıl O'nun her vakit arkasında namaz kılan, Resulullah'ın ahirete irtihalinden sonra Hz. Ebû Bekir ve Hz. Ömer'in arkasında namaz kılmaya devam eden, tefsirde, fıkhıta otorite olan İbn Mes'ûd gibi bir sahabeye tüm müslümanların bilmesi gereken bir konuyu "unuttu" demek en basit ifadeyle edep dışıdır.²⁰ Ayrıca elleri kaldırmama konusunda İbn

Mes'ûd'un 'Unuttuğu' İddia Edilen Meselelerin Tahlili", *Marife Dini Araştırmalar Dergisi* 17/1 (30 Haziran 2017), 102-120; Bedreddin Aynî, *Umdetul Kari Şerhu Sahihil Buhari* (Beirut: Daru İhyai't Turasi'l Arabi, ts.), 5/274.

Mes'ûd yalnız da değildir. Kısaca Hanefiler İbn Mes'ûd'un elleri kaldırmayı unuttuğunu değil, Peygamber ve Râşid Halifelerden gördüğüyle amel ettiğini savunur.²¹

2.2. Berâ b. Âzib Rivayeti

Muhammed b. Sabbah el-Bezzar, Şerik Yezid b. Ebi Ziyad, Abdurrahman b. Ebi Leyla tariki ile Bera b. Azib'den rivayet edildiğine göre; “Resulullah (s.a.v.) namaza başlarken ellerini kulaklarının yakınına kadar kaldırır sonra bunu bir daha tekrarlamazdı.”²²

Cumhura göre Ebû Hanîfe ve arkadaşlarının Bera b. Azib hadisi sahih değildir. Çünkü Yezid b. Ebî Ziyad'ın (öl.136/753) hafızası zayıflamıştır. Süfyan b. Uyeyne: Yezid; Mekke'de yaptığı rivayetlerde ruküya giderken ve ruküdan kalkarken ellerin kaldırılması yönünde rivayet yaparken, Kûfe'de sadece iftitah tekbirinde ellerin kaldırılması gerektiği yönünde rivayet yaptığını ve bu konuda Yezid'e telkinatta bulunulduğunu dile getirmiştir.²³ Buhârî de Yezîd b. Ebî Ziyâd'ın ilk dönemlerinde kendisinden hadis alanların rivâyeti “sonra ellerini kaldırmadı” ifadesi olmadan aktardıklarını söylemiştir.²⁴

Hanefiler'e göre ise, Yezîd b. Ebî Ziyâd'ın, Buhârî hariç, Kütüb-i Sitte'nin diğer müelliflerinin kendisinden hadis aldığına ve Ebû Hanîfe'den rivayette bulunduğu dikkat çeker.²⁵ Sahih sahiplerinin ondan nakilde bulunması ve tadil etmeleri onun hakkındaki cerhi tadile mukaddem kılmanmayı gerektirir. Hanefiler, Kûfe'de yaşlılığı sebebiyle hafızası zayıfladığı ve telkine açık olduğu söylenen Yezid'i ta'dil edenleri sayarak, onun sika bir râvî olduğunu ifade eder.²⁶ Yezîd b. Ebî Ziyâd hakkında İbn Adî zayıf olmakla birlikte hadislerinin yazılacağı,²⁷ Zehebî ise hafızasının bozukluğuna rağmen sadûk olduğu ve hadislerinin terk edilmeyeceği görüşündedirler.²⁸ Aynî, Nevevî'nin zayıf saydığı bu râvîye yalan, fisk ve fuhşu galat nispet edilmediğini de ekler.²⁹

Kudûrî, Şâfiîlerin sadece eti yenmesi helal olan hayvanları avlaması durumunda ihramlıya ceza gerekeceğine dair Ebû Saîd el-Hudrî'den naklettikleri bir rivayetin senedinde Yezîd b. Ebî Ziyâd'ın bulunmasını eleştirirken sözü raf'ul-yedeyn rivâyetine getirir. Raf'u'l-yedeyn konusunda Yezid mâdem telkine açık olduğu iddiasıyla zayıf görülüyorsa ve Hanefiler eleştirilebiliyorsa neden başka konuda onu güvenilir kabul edebilmişlerdir? Dedikten sonra Kudûrî “zaten muhaliflerimizin tavrı genelde, kendi görüşlerine aykırı bir delili zayıf diyerek hemen eleştirmek, kendilerini destekleyen delil zayıf ise susmayı tercih etmektir” diyerek Şâfiîlerin çifte standart uyguladığını savunur.³⁰

²⁹ Bedruddin b. Muhammed b. Ahmed El-Aynî - Halid b. İbrahim Ebul Münzir, *Şerhu Sunen-i Ebi Davad* (Riyad: Mektebu'r-Rad, 1999), 1/255-256.

³⁰ El-Kuduri, *et-Tecrid*, 2/2118.

Yezid b. Ebî Ziyâd'ı telkine açık olmakla itham eden Süfyan b. Uyeyne'nin elimizde mevcut olan hadis cüzünde ise Yezid'den şeytan taşlamayla ilgili bir rivayeti ondan aldığı görülmektedir.³¹

Hanefiler “bunu bir daha tekrarlamazdı” kısmını ise Yezid dışında başkalarının da naklettiğini aktararak rivayeti destekler.³² Bu hadisi İbn Şuca Mualla - Halid – Yakupp- İbn Ebi Leyla-kardeşi kanalıyla Beraa'dan nakleder. Ebu Davud da Vaki'-İbn Ebi Leyla-kardeşi İsa-El-Hakem-Abdurrahman ibn Ebu Leyla kanalıyla Berâ'dan nakleder.³³

Süfyan Yezid'den hadisi "Rasulullah'ı namaza başlarken (tekbir için) ellerini kaldırdığını gördüm" şeklinde Mekke'de duyduktan sonra Kûfe'de "Hz. Peygamber her rekatta ellerini kaldırmıyordu" şeklindeki ziyade ile duyunca Kûfelilerin rivâyette oynama yaptığını ve telkinde bulunduğunu düşünmüş olabilir. Oysa ilk rivâyet zaten iftitah tekbiri dışında ellerin kaldırılmadığını mana olarak içeriyor. Ayrıca belki de râvî, Mekke'de unuttuğunu Kûfe'de hatırlamış ve ziyade etmiş olabilir.

2.3.Câbir b. Semure Rivayeti

Hanefilerin namazda ellerin kaldırılmaması konusunda dayanak olarak kabul ettikleri diğer bir rivayet Cabir b. Semure'nin rivayetidir. Cabir b. Semure “Resulullah yanımıza geldi ve şöyle buyurdu: Niçin, huysuz atların kuyrukları gibi sizin ellerinizi kaldırdığınızı görüyorum? Namazda sakın olun!”³⁴

Nevevî bu rivayeti delil getiren Hanefilere sert bir üslupla “cahilliğin en çirkini” bir şey yapmakla suçlar. Hadiste Ruküya giderken ve ruküdan kalkarken ellerin kaldırılacağı mevzu bahis olmadığı halde namazda selam verirken yanındakini kastederek ellerini kaldırmayı da kabul etmiş olmalarının geçtiğini söyler. “Bu hadis ehlinin ve hadis ehline en az karışmış birinin bile ihtilaf etmeyeceği bir meseledir.”³⁵ diyerek itirazını tamamlar.

Hanefiler ise bu rivayeti öncelikle namazın sükunet esasına dayandığını göstermek için zikrettiklerini söyler. Hadiste elleri kaldırmaktan sakındıran “namazda sakın olun” emri umum ifade eder. Hanefiler bu rivayeti delil alırken sebebin hususi olmasına değil, lafzın umumuna itibar eder.³⁶

2.4.Hz. Ali Rivayeti

Bize Abdullah b. Ebu Bekir en-Neşeli Asım b. Kuleyb el-Cermiden oda babasından -babası Hz. Ali'nin arkadaşıydı- haber verdi ki; Hz. Ali namaza başlanan ilk tekbirde ellerini kaldırıyor sonra namazın hiçbir yerinde ellerini kaldırmıyordu.³⁷

2.5.İbn Ömer Rivayeti

İbni Ömer'den gelen rivayete göre “Hz. Peygamber namaza başlayınca ellerini kaldırır, sonra bir daha ellerini kaldırmazdı.”³⁸

³¹ Süfyan b. Uyeyne, *Cüz ü Hadisi Süfyan bin Uyeyne, Ebu Yahya Zakeriya b. Yahya el-Mervezî rivayeti* (Tanta: Dar Al-Sahabe, 1992), 64.

³⁸ Muhammed b. Ali eş-Şevkani, *Neylul Evtar Şerhu Muntekal Ahbar Min Ehadis Seyyidul Ahyar* (Kahire: Daru ibni'l-Cevziy, 2010), 11/181.

2.6. İbn Abbas Rivayeti

Hanefiler bu konuda Hz. Peygamber'in fiiliyle alakalı rivayetlerin birbirine çelişkili gelmesi durumunda şu meşhur hadisi hakem kabul eder: “*Eller ancak yedi yerde kaldırılır. Namaza başlarken, bayramlarda, vitirdeki kunutta.*”³⁹

Hanefiler, Şâfilerin dayandığı elleri kaldırma rivayetlerini ise ilk dönemlere mahsus sayıp mensuh kabul ederler.⁴⁰ Cessas, secdeye giderken ve secdeden başını kaldırınca elleri kaldırma konusundaki rivayetlerin ittifakla terk edildiğini, istikrar hali olmayan secde fiilinde elleri kaldırma terk edildiğine göre aynı durum olan rükûlarda elleri kaldırmanın hükmü de aynıdır.⁴¹ Secde tekbirlerinde elleri kaldırmayı nesh eden bir haber bilinmemekte ve elleri kaldırmayı yasaklayan rivayet zaman olarak elleri kaldırma rivayetlerinden sonradır ve umum olarak gelmektedir. O halde secde tekbirlerinde olduğu gibi ruku tekbirlerinde de elleri kaldırmak nesh edilmiştir.

Rukuya giderken elleri kaldırmamanın gerekçesi olarak bu tekbirin, bir rükünden diğerine geçerken getirildiğini, secde tekbirleri gibi burada da ellerin kaldırılmamasının isabetli olduğunu söylerler.⁴²

Tahavi rükû'a giderken alınan tekbirin de kalkışta alınan tekbirin de namazın esasından olmadığını, çünkü bir kimsenin, bunu terk etmesi halinde namazının bozulmadığını ve bunların namazın sünnetlerinden olduğunu, o halde iki secdede el kaldırılmadığı gibi rükua giderken de kalkarken de el kaldırılmayacağını savunur.⁴³

Ayrıca elleri kaldırmak arkada namaz kılan sağıra namaza başladığını gösterir. Buna da bayramlardaki zaid tekbirler, kunut tekbiri gibi ayakta iken getirilen tekbirlerde gerek duyulur. Rükuya giderken ve kalkarken sağır kişi önündekileri göreceği için ayrıca elleri kaldırarak ona göstermeye gerek yoktur.⁴⁴

Malikiler de Hanefilerin bu uygulamasını Medine halkının ameline uygun olması gerekçesiyle tercih etmektedirler.⁴⁵

Secdeye giderken ellerin kaldırılmasının terk edilmesi kabul edilen bir konudur. Fakat ruküya giderken ve ruküdan kalkarken ellerin kaldırılmasının neshi ihtilaflıdır. Şâfilere göre burada bir ittifaktan söz edilemediği gibi medarı münakaşa olan ruku öncesi ve sonrası ellerin durumunu secdede yapılamaz kıyaslamak isabetli gözükmemektedir.

3. Şâfilerin Görüşü ve Delilleri

Ehl-i Hadisin temsilcisi olan Şâfiiler, Hanbeli, Malikilerden bir kısmı ve Zahirilerin ortak kanaati olarak ifade edilen namazda ruküya giderken ve ruküdan kalkarken ellerin kaldırılması sünnettir.

Ruküya giderken ve ruküdan kalkarken ellerin kaldırılması ulemanın önemli bir meselesi haline gelmiştir. Özellikle derdi ahiret olan ve bunun yolunun namazdan geçtiğini bilen Müslümanların bir günde defalarca namaz kılıyor olmaları bu meseleyi bilmelerini gerektirir. Öyle ki bazı Alimler bu konuya özgü eserler telif ettiler ve muhaliflerine şiddetli cevap verdiler. Bunların başında İmam Buhari gelmektedir. Nevevî de “bizim mezhebimizde sünnettir”

³⁹ Ebu Bekir Muhammed b. Ahmed Serahsi, *Mebcut*, ed. Mustafa Cevat Akşit (İstanbul: Gümüşev Yayıncılık, 2015), 1/14; ez-Zeylaî, *Nasbu'r Raye*, 1/292.

⁴⁰ Burhaneddin Ali b. Ebi Bekr el-Merginani, *el-Hidaye Şerhu Bidayeti'l Mübtedi* (Beyrut: Darul Feyha, 2019), 1/114.

⁴¹ el-Cessas, *Şerhu Muhtasari't-Tahavi*, 1/607.

⁴² Ebu Bekir Ahmed b. Ali er-Razi el-Cessas, *el-Fusul fi'l Usul* (Kuveyt: Vizaretü'l Efkâr, 1994), 2/39.

⁴³ el-Cessas, *Şerhu Muhtasari't-Tahavi*, 2/42.

⁴⁴ Serahsi, *Mebcut*, 1/14.

⁴⁵ İbni Rüşd, *Bidayetul Muctehid*, 1/238.

ifadesini kullanarak konuya dahil olur. Bu sahabe, tabiin ve onlardan sonraki alimlerin yaşayıp dile getirdikleri bir meseledir şeklinde görüşlerini kuvvetlendirirler.⁴⁶

Mekke, Hicaz, Şam, Basra, Yemen ve Horasan bölgesinden birçok alimin ruküya giderken ve ruküdan kalkarken ellerin kaldırılması noktasında aynı kanaatte oldukları görülmektedir. İmam Nevevî bu bölgelerdeki alimlerin birçoğunun isimlerini vermektedir.⁴⁷

İbni Abbasın “Eller sadece yedi yerde kaldırılır...” rivayetine gelince: Buhari’ye göre bu zayıf ve mürsel bir hadistir. Bu hadis nefî ifade eder ref hadisi ispattır, ispat ise önceliklidir. Bu hadis sabit olsa bile buna dayanarak sünneti veya Hz. Peygamber ve Ashabından sabit olan hadisi terk etmek kimseye caiz olmaz.⁴⁸ Ebu Hanife ise bu iki yerde de ellerin kaldırılmayacağına sünnet olduğu kanaatinde.

Cumhurun delili bu konudaki mezkûr hadislerin mana bakımından birbirine yakın farkla birçok tarikten sonraki nesillere ulaşmasıdır. Ali b. Medeni (ö. 234/848) bana göre: “bu hadis, işiten herkesin onunla amel etmesi için hüccettir çünkü isnadında herhangi bir sıkıntı yoktur der ve çocukluğumdan beri bununla amel ediyorum ve birçok Alim bunun böyle olduğunu kabul etmektedir.”⁴⁹ ifadelerini kullanır.

Rebi b. Süleyman, İmam Şafii’ye ruküda elleri kaldırmanın manası nedir diye sorar; İmam Şafii “İftitah tekbiri manasındadır. Safa, Merve gibi yerlerde ki gibi Allah’a tazim içindir. Yapılması gereken bir sünnettir. Bununla sevap umarız.” ifadesini kullanmaktadır.⁵⁰

Nevevî raf hadisleriyle ameli savunurken metin açısından birbiriyle muarız iki rivâyet arasında bir tercih yöntemi savunur; bir fiil haber veren yani müsbet bilgi içeren “raf haberleri” isbattır. Elleri kaldırma fiilini yapmadığını haber veren yani nefy ifade eden haberlere tercih edilir. İsbat ziyade ilim içermesi bakımından daima nefye mukaddemdir.⁵¹ Çünkü terk sabit olsa bile bu cevaza yorumlanabilir.

Hanefilerden Aynî bu tercihe şöyle itiraz eder: Müsbitin nâfiye takdim olunacağı şeklinde mutlak bir kabul olamaz. Müsbit, râvîleri yönünden tercihe şayan olabileceği gibi nâfi rivâyet için de bu söz konusudur. Lakin nefy ifade eden bir delil müsbet ile denk olur ve aralarında da bir muaraza mevcut olursa nefy de ilim ifade eden bir rivâyet olmazsa bu takdirde müsbet mukaddem olabilir. Elleri kaldırma konusunda ise nefy ilim ifade eden bir rivâyettir. Çünkü Abdullah b. Mes‘ûd, Resûlullâh’ın (s.a.v.) bizzat ilk seferde ellerini kaldırdığını ve sonrasında kaldırmadığını görmüştür. İbn Ömer hadisi de ilim ifade eden bir delilden kaynaklanan isbattır. O zaman kuvvet ve za’fta iki rivâyet eşittir. O halde böyle bir kaideden hareketle ellerin kaldırması tercih edilemez.⁵²

Cumhur yanında yer alan Şâfiiler bu konuda yirmiye yakın hadisi delil getirmektedirler. Getirilen deliller sistematığı içerisinde ana omurgayı oluşturan hadisler şunlardır:

3.1. Abdullah b. Ömer Rivâyeti

İbni Ömer’in oğlu Salim babasından yaptığı rivayete göre; İbni Ömer şöyle demiştir:

“Resûlullah’ın (s.a.v.) namaza başlarken, ruküya gitmeden önce ve rüküdan kalkarken, ellerini omuzlarının hizasına kadar kaldırdığını gördüm. İki secde arasında ellerini kaldırmıyordu.”⁵³

⁴⁶ en-Nevevî, *el-Mecmu Şehu’l Muhezzeb*, 3/399.

⁴⁷ en-Nevevî, *el-Mecmu Şehu’l Muhezzeb*, 3/400.

⁴⁸ en-Nevevî, *el-Mecmu Şehu’l Muhezzeb*, 3/404.

⁴⁹ Ebu Bekir el-Beyhaki, *El-Hilafiyat beynel-İmameyn Eş-Şafii ve Ebi Hanife ve Ashabihi* (Kahire: er-Ravza Linneşri vet’Tevzii, 2015), 2/331.

⁵⁰ el-Beyhaki, *El-Hilafiyat beynel-İmameyn Eş-Şafii ve Ebi Hanife ve Ashabihi*, 2/338.

⁵¹ en-Nevevî, *el-Mecmu Şehu’l Muhezzeb*, 3/403.

⁵² Çelik, “Ref’ul Yedeyn Medelesi Çerçevesinde Beyhaki’nın Tahavi’ye İtirazları”, 45.

⁵³ Azîmâbâdi, *Avnul Ma’bud Şerhi Süneni Ebi Davud*, 2/353, (745); el-Buhârî, *Camii’s-Sahih*, “Kitabu’l Ezan”, 84 (737); el-Kazvîni, *İbn Mâce*, “Kitabu’l İmame”, 55 (859); en-Nesâî, *Sünen-i Nesai*, “Kitabu’l İftitah”4 (880); Müslim, *Müslim*, 2/106,(391).

Müttefekun Aleyh olan bu rivayet Cumhurun müttefik olduğu en önemli dayanaklarından. İbni Ömer'den nakledilen bu rivayet Kütübi Sitte'de Müslim, Ebu Davud ve Nesai'nin sünenlerinde kayıt altına alınmıştır. Cerh ve Tadil alimlerinin incelemesine göre; Müslimin ravilerinden Amru'n Nakid dışındaki tüm raviler sika raviler olduğu ifade edilmektedir. Evhamından dolayı saduk olarak kabul edilen Amru'n Nakid ile birlikte aynı tabakada birçok sika ravinin bulunması rivayetın sıhhatini takviye etmesiyle birlikte isnat bakımından sağlam olduğu kabul edilmektedir.⁵⁴

Bu manada Buhari'nin başka bir rivayetinde İmam Malik İbni Şihab'dan o'da Salimden O'da babasından (İbni Ömer'den) şöyle rivayet etti: “Resulullah (s.a.v.) namaza başladığında ellerini kulaklarının hizasına kadar kaldırıyordu. Rükü için tekbir alırken, rüküdan başını kaldırırken aynı şekilde ellerini kaldırır ve Semiallahü limen hamideh, Rabbena ve leke'l hamd derdi. Bunu secdede yapmazdı.”⁵⁵

Cumhurun müşterek delillerinden olan ve Buhari'nin sahihi ile Nesai'nin süneninde yer alan ve İbni Ömer'den rivayet edilen ikinci metinde ilkinde bulunmayan “Semiallahü limen hamideh, Rabbena ve leke'l hamd” ibaresi zaid olarak yer almaktadır.⁵⁶ Her iki rivayet de ravileri bakımından cerh ve tadil alimleri tarafından incelenip ravilerinin güvenilir olup isnat bakımından sağlam olduğu ifade edilmiştir.⁵⁷

Hanefiler İbn Ömer'den ve Hz. Ali'den Peygamber'den sonra fiilî uygulaması olarak bizzat kendilerinin bunun aksini yaptıklarına dair rivayetler gelmesini delil getirerek uygulamanın neshedildiği itirazında bulunur. Çünkü bu iki büyük sahabenin teville ihtimali olmayan bir konuda nesh edildiğini bilmiş olmasalar, kendi rivayet ettikleri bir uygulamayı sünnete muhalefet olarak anlaşılacakken terk etmeleri düşünülemez.⁵⁸

3.2. Vâil b. Hucr rivâyeti

Müslimin, Zübeyr b. Harb'dan o'da Affandan o'da Hamam'dan o'da Muhammed b. Cühade'den o'da Abdulcebbar b. Vail o'da Alkame b. Vail'den; son iki ravi Vail b. Hucr'dan rivayetle; Vail b. Hucr “Nebi (s.a.v.)'in namaza başladığı zaman ellerini kaldırır, “Hemmam ellerini kulaklarının hizasına kadar kaldırdı” sonra elbisesine bürünür, sonra sağ elini sol elini üzerine koyardı ve rüküya gitmek istediğinde ellerini elbiseden çıkarır sonra ellerini kaldırır sonra rüküya gider ve “Semiallahu limen Hamideh” deyince ellerini kaldırır, secde edince de iki elinin arasına secde yapardı.” dediğini rivayet etmiştir.⁵⁹

Cumhurdan Şafii ve Hanbelilerin müşterek delillerinden olan bu rivayet Vail b. Hucr kanalıyla Kütübi Sitte den Müslim'in Sahihinde ve Ebu Davud'un süneninde rivayet edilmektedir.

Mezkûr hadis Cerh ve Tadil alimlerince incelenmiş, Müslimin ravilerinden Hammam b. Yahya hakkında sika bir ravi olmakla birlikte hafızadan kaynaklı birtakım evhamlar fark edilmiştir. Ebu Davud'un ravilerinden Abdülvaris b. Said'in güvenilir bir ravi olduğu ifade edilmekle birlikte Kaderiyye'den olduğu fakat mezhebinin propagandasını yapmaması güvenilirliğine zarar vermeyeceği ifade edilmiştir. Dolayısıyla mezkûr hadisin birden fazla tarikinın olması ve bu rivayetlerin birbirine destek vermesi ile isnadı bakımından rivayetın sağlam olduğu ifade edilmektedir.⁶⁰

⁵⁴ Aydın, “Namazda Ellerin Kaldırılmasına Dair Rivayetlerin İsnad Açısından Değerlendirilmesi”.

⁵⁵ el-Buhârî, *Camiu's-Sahih*, “Kitabu'l Ezan”, 83 (735); Müslim, *Müslim*, “Kitabu's Salat”, 390.

⁵⁶ en-Nesâî, *Sünen-i Nesai*, “Kitabu's Salat”, 16 (794).

⁵⁷ Aydın, “Namazda Ellerin Kaldırılmasına Dair Rivayetlerin İsnad Açısından Değerlendirilmesi”.

⁵⁸ el-Cessas, *Şerhu Muhtasari't-Tahavi*, 2/25; el-Cessas, *el-Fusul fi'l Usul*, 3/204.

⁵⁹ Azîmâbâdi, *Avnul Ma'bud Şerhi Süneni Ebi Davud*, 2/335, (724); el-Kazvîni, *İbn Mâce*, “Kitabu'l İmame”, 60 (867); Ebû Zekeriyâ Yahyâ b. Şeref b. Mürî en-Nevevî, *Şerhi Sahihi Müslim* (Dîmeşk: Darul Feyha, 2010), 1/127, (401).

⁶⁰ Aydın, “Namazda Ellerin Kaldırılmasına Dair Rivayetlerin İsnad Açısından Değerlendirilmesi”.

Yukarıda da geçtiği gibi ehl-i re'yanın imamlarından İbrahim en-Nehâî'ye bu rivayet sorulduğunda “Eğer Vâil, Peygamber'in bu işi bir defa yaptığını görmüş ise, Abdullah onun bu işi yapmadığını elli defa görmüştür. O, O'nun bunu yaptığını gördü de Abdullah b. Mes'ûd da, O'nun diğer ashâbı da O'nu görmedi (öyle mi?)” diyerek itiraz eder. İbn Mes'ûd, Vâil'den daha önce sahabe olmuştur ve ondan daha iyi kavrayan biridir. O, Peygamberin sünnetini iyi öğrenmek için yanından ayrılmayan, namazı öğrenmek ve öğretmek için ilk safta kılmaya gayret eden sahabesindedir.⁶¹

3.3.Mâlik b. el-Huveyris Rivâyeti

Buhârî; İshak b. Vasıtı'den o'da Halid b. Abdullah'tan o'da Halid el-Hazza o'da Ebu Kılabe'nin; “Malik b. Huveyris'i namaz kıldığı zaman tekbir aldığı anda ellerini kaldırır, ruküya giderken ellerini kaldırır, başını ruküdan kaldırdığında ellerini kaldırır ve Resulullah (s.a.v.)'in bu şekilde yaptığını söylediğini” gördüm demektir.⁶²

Cumhurun delil olarak kabul ettiği bu rivayet müttefekun aleyh olarak rivayet edilmiştir. Cerh ve tadil alimlerinden Ebu Hatim er-Razi'nin (ö. 277/980) Halid b. Hazza hakkında ki hafif eleştirisi dışında senette bulunan tüm ravilerin güvenilir olduğu kabul edilmiştir. Ebu Hatim ise cerh etmeyip derecesin saduk olduğunu ve hadisin yazılabileceğini dile getirmektedir. Dolayısıyla Buhârî ve Müslimin ortak rivayet ediyor olması senedinin sağlam olduğunu göstermektedir.⁶³

Hanefilerden Cessas (ö. 370/981) bu rivayet ve benzerlerinin terk rivayetleriyle uygulamada çelişmesi durumunda elleri kaldırmayı nehy eden rivayetlerin tercihinin evla olduğunu söyler. Onun açıklamasına göre Cabir rivayetindeki yasaklama iki şekilde elleri kaldırma uygulamasını kaldırır: birincisi Cabir rivayeti yasaklamadır, burada “elleri kaldırır” ifadesi ise emir değildir. İkinci olarak peygamberin fiili yükümlülük gerektirmez ancak yasaklaması yükümlülük gerektirir. Ayrıca Hanefilere göre bu elleri kaldırma eylemi sünnet olsaydı insanların genelinin bilmesi gereken işlerdendir. Bu sebeple tıpkı tekbirlerin rivayeti gibi mütevatir olarak nakledilmesi gerekirdi. Oysa rivayet tevatür ya da meşhur değil, haber-i vahid olarak gelmiştir. Eğer elleri kaldırma ispat edilmiş olsaydı, Peygamber'e bağlılıklarına rağmen Ali bin Ebi Talib ve Abdullah bin Mes'ûd'dan gizlenmezdi.⁶⁴

Nevevî terk ve isbat fillerinin çelişmesi durumunda isbatın öncelikli olduğunu zira bunun ziyade bilgiyi içerdiğini ifade ettiğini dile getirir.⁶⁵

Şafilere göre, Hanefilerin dışındaki cumhurun refulyedeyni kabul etmesi ve bu meseleyi şiddetle gündem yapması Hanefilerin refulyedeyn sünnet değildir tezini zayıflatır. Zira hanefi mezhebinde de haber-i vahid veya zayıf rivayetler kullanılarak birçok hüküm verilmiştir. Bu rivayetlerin haber-i vahid olması sünnet olmadığı anlamına gelmemektedir. Haberi-i vahid sahih şartlarını taşıması durumunda Şâfilere göre mamulün bih (onunla amel edilmesi gerektiği) kabul edilir ve ma'mulün bih olmaması da hadisi taz'îf etmez.

Hanefiler tarafından ise uygulamaya baktığımızda durum böyle değildir. Bir hadisin isnâdının sahih olmasıyla onunla amel edilip edilmeyeceği meselesi farklı şeylerdir. Zira hadis sahih kabul edilmesine rağmen neshedildiğinden dolayı amele konu olmayabilir. Ayrıca isnâdı sahih olmasına rağmen muhtevâsi fukahâ nezdinde kabul edilmediğinden şâz veya müevvel addedilebilir. Mesela İmam Malik'in Medine amelini dayanarak bazı sahih hadislerle amel etmediği görülür. Hanefilerin de batınî inkıta diyerek bazı sahih hadisleri uygulamadığı bilinen

⁶¹ el-Cessas, *Şerhu Muhtasari't-Tahavi*, 2/33,36.

⁶² Azîmâbâdi, *Avnul Ma'bud Şerhi Süneni Ebi Davud*, 2/353, (745); el-Buhârî, *Camiu's-Sahih*, “Kitabu'l Ezan”, 84 (737); el-Kazvîni, *İbn Mâce*, “Kitabu's Salat”, 15 (859); en-Nesâî, *Sünen-i Nesai*, “Kitabu'l İtitah”, 4 (880); en-Nevevî, *Şerhi Sahihi Müslim*, 2/106, (391).

⁶³ Aydın, “Namazda Ellerin Kaldırılmasına Dair Rivayetlerin İsnad Açısından Değerlendirilmesi”, 32.

⁶⁴ el-Cessas, *Şerhu Muhtasari't-Tahavi*, 1/606; el-Cessas, *el-Fusul fi'l Usul*, 3/115.

⁶⁵ en-Nevevî, *el-Mecmu Şehu'l Muhezzeb*, 3/403.

bir gerçektir. Bazılarına göre sahih ve sarih olan; diğer bazılarına göre karşısında daha güçlü bir delille terk edilebilir. Mesela sahih haber-i vahide karşı amel/uygulama olabilir. Çünkü uygulama mütevatir mesabesinde. Ya da haber-i vahid meşhur hadislerle tearuz etmiş olabilir. Yine haber, Kur'an'a, sünnete aykırı görülmüş olabilir.

3.4.Hz. Ali Rivâyeti

Kütübi Sitte'de yer alan Ebu Davud, Hasan b. Ali el-Hulvani'den o'da Süleyman b. Davud el-Haşimi'de o'da Abdurrahman b. Ebu Zinad'dan o'da Musa b. Ukbe'den o'da Abdullah b. Fadl b. Rebia b. Haris b. Abdulmuttalib'ten o'da Abdurrahman el-Arec'den o'da Ubeydullah b. Ebu Rafi o'da Ali b. Ebi Talip den: “Resulullah (s.a.v.) farz namazlara kalktığında tekbir alır ve ellerini omuzlarının hizasına kadar kaldırırdı. Okumasını yerine getirip rükûa gitmek istediğinde de aynısını yapardı. Rükûdan kalkarken de bunu yapardı. O (s.a.v.) namazda otururken hiçbir şekilde ellerini kaldırmazdı. İki secdeyi yaptıktan sonra kalkarken aynı şekilde ellerini kaldırır ve tekbir alırdı.”⁶⁶ hadisini rivayet etmiştir.

Bu hadis Şafiilerin davalarına delil olarak kabul ettikleri rivayetlerden biridir. Ebu Davud ile birlikte Tirmizi ve İbni Mace'nin sünenlerinde de rivayet edilmektedir. Üç kaynağın senetlerindeki ortak ravi Cerh ve Tadil alimlerince zayıf kabul edilen Abdurrahman b. Ebu Zinad'dır. Bu sebeple hadis zayıf kabul edilmiştir.⁶⁷

Hanefiler; bu rivayetin diğer varyantlarında elleri kaldırmaktan bahsedilmediğini belirtir. Rivayet sahih olsa bile Ali r.a.'ın Peygamber (s.a.v.)'in ellerini kaldırmış olduğunu gördüğü halde, daha sonra Peygamberin vefatının ardından ellerini kaldırmayı terk etmiş olmasına dair delilleri zikrederek, ellerin kaldırılmasının nesh edilmiş olmasının sabit olmasına delil sayar.⁶⁸

3.5.Ebu Humejd es-Saidi Rivayeti

Sünen sahibi Ebu Davud Ahmed b. Hanbel'den o'da Asım b. Dehhak b. Mahled'den o'da Abdulhamid b. Cafer'den o'da Muhammed b. Amr b. Ata'nın söyle dediğini rivayet etmiştir: “Resulullah (s.a.v.)'in ashabından birtakım kimselerin bulunduğu ve aralarında Ebu Katade'nin olduğu bir toplulukta Ebu Humejd es-Saidi'yi şu şekilde dediğini işittim: “Resulullah'ın (s.a.v.) namazını en iyi bileniniz benim.” Bu söz üzerine orada bulunanlar: “Niçin? Vallahi, sen, bizden daha çok ona tabi olan ve bizden daha önce sahabe olan biri değilsin!” dediler. O da “evet” dedi. Bunun üzerine “(onun namazını) bize anlat” dediler. O da şöyle anlattı: “Resulullah (s.a.v.) namaza kalktığında ellerini omuzlarının hizasına kadar kaldırır ve tekbir alırdı öyle ki her bir kemik en uygun şekilde kendi yerine yerleşirdi. (Tekbirden) Sonra okurdu. Sonra tekrar tekbir alır, ellerini omuzlarının hizasına kadar yükseltir, rükûa gider ve avuçlarını dizlerine koyardı. Sonra başını ne çok öne eğmeden ve ne de çok yukarı kaldırmadan en uygun şekilde rükûu yapar ve sonra başını kaldırarak şöyle derdi: “Semiallahü limen hamideh”. Sonra tekrar ellerini omuzlarının hizasına kadar kaldırır ve “Allah'u Ekber” diyerek yere doğru eğilirdi (secde yapardı). Bu sırada ellerini de yanlarından uzak tutardı. Sonra secdeden başını kaldırır, sol ayağını bükerek üzerine otururdu. Secde edeceğinde ayak parmaklarını açar, secde eder ve sonra “Allah'u Ekber” diyerek başını kaldırır, her bir kemik kendi yerine yerleşinceye kadar sol ayağını bükerek üzerine otururdu. Diğer (rekâta da) aynı bu şekilde yapardı. İki rekâtı kıldıktan sonra kalkarken tekbir alır, aynı namazın başında tekbir alırken yaptığı gibi ellerini omuzlarının hizasına kadar kaldırırdı. Sonra sol ayağını bükerek, sol yanı üzerine oturduğu selam vereceği son rekâta gelinceye kadar namazının geri kalanını da böyle tamamlardı.” Bu

⁶⁶ Azîmâbâdi, *Avnul Ma'bud Şerhi Süneni Ebi Davud*, 2/352 (744); el-Kazvînî, *İbn Mâce*, “İkametu's Salat”, 15 (864); et-Tirmiz - el-Mübârekpûrî, *Tuhfetü'l Ehvezî Şerhu Camiu't Tirmizi*, 9/635, (3423).

⁶⁷ Aydın, “Namazda Ellerin Kaldırılmasına Dair Rivayetlerin İsnad Açısından Değerlendirilmesi”, 36.

⁶⁸ el-Cessas, *Şerhu Muhtasari't-Tahavi*, 2/35.

anlatılanlardan sonra onlar da: “Doğru söyledin, Resulullah (s.a.v.) böyle namaz kılardı” dediler.⁶⁹

Bir önceki rivayette olduğu gibi genel itibari ile Cumhurun özelde Şafiilerin davalarına delil olarak kullandıkları Ebu Humejd es-Saidi’inin hadisini Ebu Davud, Tirmizi ve İbni Mace sünenlerinde rivayet etmişlerdir.

Ebu Humejd hadisinin senedini raviler açısından değerlendiren cerh ve tadil alimleri, Ebu Davud, Tirmizi ve İbni Mace’nin ortak rivayetlerindeki Abdulhamid b. Cafer dışındaki ravilerin tamamı güvenilir oldukları kabul edilmiştir. Abdulhamid b. Cafer kaderiyecilikle itham edilse de tamamen cerh edilmemiştir. Genel itibariyle isnadın sağlam olduğu ifade edilmiştir.⁷⁰ Ancak Hanefiler Yahya b. Main tarafından bu ravinin zayıf görüldüğünü söyler. Ayrıca senetteki İbn Atâ’nın Ebi Humejden işitmediğini belirtirler. Rivayet “elleri kaldırırdı” ilavesi olmadan da nakledilmiştir. Bu sebeple Hanefiler bu rivayeti delil olmaya elverişli görmez.⁷¹

Cumhur namazda iftitah tekbiri dışında ruküya giderken ellerin kaldırılmasının sünnet olduğunda ittifak etmiştir. Geniş coğrafyaya dağılımlarına rağmen sahabenin büyüklerinden hatırı sayılır kimselerin rükuya giderken ellerini kaldırdığı ve bu konuda aykırı bir durumun olmadığı anlaşılmaktadır. Başta Hulefa-i Raşidin olmak üzere aşere-i mübeşşere ve Enes b. Malik, Ebu Hureyre, Muhammed b. Mesleme, Ebu Musa el-Eşari, Cabir b. Abdullah, Vail b. Hucr, Ebu Katade, Ebu Humejd, Ebu Useyd, Sehl b. Sad gibi birçok sahabeden namazda ruküya giderken ellerin kaldırılacağı rivayet edilmektedir.⁷² Suyuti ellerin kaldırılmasını mütevatir rivayetler arasında zikretmiştir.⁷³

Evzâ-i “Kûfeliler haricinde Hicaz, Şam ve Irak ehlinin ellerini kaldırdığını gördüm” demiştir. Tabiinin büyüklerinden Hasan’ı Basri (ö. 110/728), Salim b. Abdullah, Said b. Cübeyr, Süfyan b. Uyeyne, İmam Malik, İbni Sirin (ö. 106/725), Abdullah b. Mübarek (ö. 181/797), Ata b. Ebi Rebah (ö. 114/732), Mücahit (ö. 103/721) ve İshak b. Rahuye (ö.238/853) gibi alimler ve mezhep İmamlarından İmam Şafii (ö. 204/820), Ahmed b. Hanbel (ö. 241/855), Taberi (ö. 310/923), Ebu Sevr (ö. 240/854) gibi müçtehitler namazda ellerin kaldırılmasını savunmuşlardır.⁷⁴

Hadis alimlerinin bu meselede başı çektiklerini söylemek zor değildir. Özellikle İmam Buhârî bu konuda sert eleştiride bulunarak, meselenin önemini belirtmek ve muhaliflere cevap verme adına bu konuya dair bir risale kaleme almıştır.

İmam Buhârî risalesinde on yedi sahabeden rivayette bulunarak ayet ve hadislerle sünnete tabi olmanın öneminden bahseder. Namazda ellerini kaldırmamayı sünnetten yüz çevirmek olarak değerlendirir.⁷⁵ Namazda ellerini kaldırmayanları tevbe etmeye davet eder kabul etmeyenleri meclisinden uzaklaştırdığı rivayet edilir.⁷⁶

Netice olarak İbni Hazm’ın ifadesiyle “hadisler sahihtir, sahabenin bu nehyettikleri nakledilmediğine göre, sahabenin filleri birbirine muhalif delil olarak değerlendirilemez. Aksine hüküm ekseriyete göre verilir.”⁷⁷

⁶⁹ Azîmâbâdi, *Avnul Ma’bud Şerhi Süneni Ebi Davud*, 2/338 (730); el-Buhârî, *Camiu’s-Sahih*, “kitabu’l Ezan”, 145 (828); et-Tirmiz - el-Mübârekpûrî, *Tuhfetü’l Ehvezî Şerhu Camiu’t Tirmizi*, 2/233, (304).

4. Sonuç

İslam dininde namazın en önemli ibadet olduğu hakkında herhangi bir şüphe yoktur. Namaz, günde beş vakit kılınan ve müminleri cemetmesiyle de sosyolojik bir alt yapıya da sahip bir ibadettir. Bu kadar müminin hayatında etkili olan, gündelik gündemi olan bir ibadette ayrıntılarda ihtilaf edilmesi ötekileştirmeden birlik olmaya bir vesile olmalıdır. Ancak zaman zaman bu ayrıntıların taassup ve tahammülsüzlük neticesinde özde ayrılık gibi sert tartışmalara araç kılındığı görülmüştür.

Namazda ellerin durumu hakkındaki ihtilaf elbette itikadi öneme sahip bir mesele değildir. Bununla birlikte farklı yaklaşımların farkında olmak ihtilafın tefrikaya dönüşmemesi için namaz ibadetinin sosyolojisi için çok önemlidir.

Hanefilerin ve kısmen Malikilerin delilleri, ehl-i hadis tarafından sünnete muhalefet gibi görülmekten kurtulamamıştır. Ashabu'r Re'y buna iki yönden cevap vermektedir. Birincisi; umum-u belva ve Medine ameli gibi delillerle toplumun geneline amel edilmiyor olması ve kabul ettikleri hadislerin ravilerinin fakih olmasıdır. İkinci delil olarak ellerin kaldırılmasının gerekliliği ile ilgili mervi olan hadislerin mensuh/ilk döneme ait uygulama olup daha sonra yürürlükten kaldırılmış olduğunu savunmalarıdır.

Şafii ve Hanbelilerin başını çektiği Ehl-i hadise göre özellikle rivayet edilen İbni Ömer hadisi başta olmak üzere diğer hadislerin âli isnada sahip olması tercih sebebi olmuştur. Ehl-i hadisin bakış açısına göre elleri kaldırma rivayetleri sahih ve mamulün bih olarak kabul etmektedirler. Öte yandan Hulefa-i Raşidin başta olmak üzere Aşere'yi Mübeşşere ashâbı ve geniş coğrafyaya yayılmış olan diğer sahabelerin namazda iftitah tekbirinin dışında ellerini kaldırıyor oldukları rivayetleri kendileri için güçlü bir delil olarak kabul etmektedirler. Ehl-i hadise göre "sahabe önceleri ellerini kaldırıyorlardı sonra terk etti" gibi itirazlar dayanaktan yoksundur. Ehl-i hadis bakış açısına göre "sahabelerin fiilleri birbirine muhalifse hüküm ekseriyete göre verilir." denilebilir.

Sonuç olarak Ehl-i re'y olan Hanefilerin senedin sıhhatinden önce ravinin fakih olması, umum-u belvaya aykırı olmaması gibi ilkeleri esas alması, sahih rivayetleri mensuh sayması ve ilk zamanlara ait olarak tevil etmesi dikkat çekmektedir. Ehl-i hadisi savunan şafilerin ise isnadı ve senedi esas alıp, tevatüre yakın sahih senetlere sahip olduklarını iddia ettiği görülür. Bu meselede tercihlerinin rivayet ağırlıklı olduğu görülmektedir.

THE IMPACT OF SOCIAL ENVIRONMENT ON THE DIETARY BEHAVIOR OF YOUNG PEOPLE

Ana Botchorishvili - PHD candidate
Shalva (David) Zarnadze – MD, PHD, MPH
Irine Zarnadze – MD, PHD, MPH

Tbilisi State Medical University

Introduction: The formation and regulation of eating behavior is a multifactorial process, which is significantly determined by the influence of the social environment. The eating habits of the young population affect not only personal health but also the overall well-being of society. The choice of food type, quantity, and mode is the result of a combination of social, cultural, economic, and environmental factors, which determine the dynamics of eating behavior and the factors affecting it.

Aim of research: Assessment of the eating behavior of the young population, based on a social modeling algorithm.

Research Methods: Meta-Analysis, Comparative Analysis.

Results: This study focuses on the various aspects of the social environment and the mechanisms through which they determine the eating behavior of the young population. Behavioral theories, which are based on the influence of structural and environmental factors on human behavior, are an important tool in understanding eating habits and behaviors. These theories explain how the environment, social relationships, and individual characteristics influence people's eating patterns. Recent research, which combines social cognitive theory and the theory of planned behavior, highlights the effectiveness of these models in promoting healthy eating habits ; examined parental decisions regarding children's vegetable intake, demonstrating that attitudes, behavioral control, and subjective norms are strong predictors of eating intentions and behaviors; behavioral beliefs, and role models significantly influenced physical activity levels and eating behaviors; focused on mothers' supplementary nutrition education, which demonstrated improved knowledge and behaviors related to nutrition; evaluated a nutrition intervention for adolescents, finding positive changes in eating habits based on SCT and a transtheoretical model.

Conclusion: Taking into account cultural norms and economic factors, it is possible to develop behavioral interventions that will promote the development of healthy eating habits.

Keywords: Dietary Behavior, Young People

INTRODUCTION

Dietary behavior plays a crucial role in shaping health, well-being, and overall quality of life, especially during adolescence and early adulthood. The choices young people make about what they eat are not only a matter of personal preference but are also deeply influenced by their surroundings. Peer groups, family traditions, cultural norms, and exposure to media create a complex social environment that significantly impacts eating habits. These influences are particularly important during the formative years, a time when lifelong dietary patterns often take root. Recent research underscores the growing impact of social factors on young people's eating behaviors. For instance, Smith et al. (2023) found that peer influence is one of the strongest drivers of dietary choices among adolescents, particularly in social settings like school cafeterias or gatherings. Similarly, a systematic review by Johnson and Lee (2022) highlights the positive role of family meal practices, revealing that young people who regularly eat with

their families tend to have more balanced diets. In today's digital age, social media has also emerged as a powerful force. A study by Brown et al. (2024) shows that food-related content on platforms like Instagram and TikTok significantly shapes dietary preferences, sometimes encouraging healthy choices but often promoting less nutritious options. The global rise in unhealthy eating habits among young people is a growing concern, given its links to increasing rates of obesity, diabetes, and other lifestyle-related health conditions. The World Health Organization (WHO, 2023) has reported a noticeable spike in the consumption of ultra-processed foods among young people, largely driven by aggressive marketing tactics and social media trends. Understanding how social factors influence dietary decisions is critical for developing interventions that encourage healthier eating habits. This study delves into the relationship between the social environment and dietary behaviors in young people. By exploring the influence of peers, family, and social media, this research aims to provide a deeper understanding of the factors that shape food choices during youth. Using a survey-based approach, it seeks to generate insights that can inform strategies for promoting healthier lifestyles in this pivotal age group.

Purpose:

The primary objective of this study is to examine the impact of social factors on the dietary behavior of young people, with a focus on identifying the key influences behind their food choices and evaluating the significance of these factors in their daily lives.

Tasks:

- To identify the specific components of the social environment that influence dietary behavior, including family, peer groups, and media.
- To assess the extent of peer influence on food choices, particularly in social settings such as schools or gatherings.
- To evaluate the role of family habits and traditions in shaping eating patterns.
- To analyze the impact of social media and advertising on dietary preferences among young people.
- To synthesize the findings into actionable recommendations for promoting healthier eating habits among young people.

Materials:

The study relied on primary data collected via a structured questionnaire distributed among young individuals aged 18 to 29 years. The questionnaire, hosted on Google Forms, was designed to capture detailed information about their eating habits, social interactions, and external influences. Additionally, existing literature on dietary behaviors and social determinants was reviewed to provide context and validate findings.

Methods

This study used a cross-sectional survey to explore how the social environment influences dietary behaviors in young people. To ensure the findings were representative, participants were chosen from a wide range of demographic backgrounds. A total of 400 individuals completed the questionnaire, sharing insights into their eating habits, social influences, and attitudes toward food choices. By collecting data at a single point in time, this approach provided a clear snapshot of current trends and allowed for the identification of patterns and connections within the group.

Data Collection Instrument:
The questionnaire was divided into several sections:

- 1) Personal Details: Collected information regarding age, gender, and educational level.
- 2) Dietary Habits: Addressed aspects such as meal frequency, preferred food types, and snacking behavior.
- 3) Social Environment: Explored the influence of family, peers, and media on food choices.
- 4) Perceptions and Awareness: Assessed participants' awareness of healthy eating and the perceived influence of external factors.

RESEARCH AND FINDINGS

Results and Discussion

The majority of respondents in this study were women, making up 77% of the participants. When asked to describe their health status, nearly half (49.1%) rated it as good, while 31% considered their health to be average. Analysis of BMI categories revealed gender-specific trends: women were more likely to fall into the normal or underweight BMI categories, whereas men were more frequently classified as overweight. Obesity, however, was relatively uncommon among both genders in this dataset. A Chi-Square Test of Independence was conducted to explore the relationship between gender and BMI categories. The results (Chi-Square Value: 10.55, p-value: 0.0144, Degrees of Freedom: 3) indicate a statistically significant association between gender and BMI categories ($p < 0.05$), as shown in Chart 1. In terms of eating habits, the majority of respondents (approximately 90%) reported eating two to three meals per day. However, 60% admitted to not following a consistent dietary regimen. This finding aligns with global trends, where inconsistent eating schedules are becoming increasingly prevalent due to the demands of modern work and lifestyles [5]. The fast pace of life and irregular work hours often contribute to unstable eating patterns, as reflected in our results. Interestingly, the dietary preferences of the respondents showed that nearly all participants (97%) consumed a mix of both plant-based and animal-based foods, highlighting a diverse and omnivorous diet across the sample group.

These findings shed light on the interplay between gender, BMI, and dietary habits, offering a glimpse into how modern lifestyles influence health and nutrition behaviors.

Chart 1. The chart compares the distribution of Body Mass Index (BMI) categories (Normal, Underweight, Obesity, Overweight) across genders, blue: male, red: female

The study found that 47% of respondents visit fast-food establishments daily or multiple times per week. Economic factors play a significant role in shaping dietary habits, especially in regions where affordability takes precedence over nutritional value. This aligns with findings from other studies, including one in African countries, where cost is a critical driver of food choices for many individuals [4]. Similarly, 63% of respondents in our survey indicated that cost is a significant factor in their dietary decisions. A 2018 survey conducted in Tbilisi revealed that 56% of the population frequented fast-food establishments, with the highest rates among young adults aged 18–24 (88%). Our data echoes these findings, emphasizing the prevalence of fast-food consumption in modern lifestyles. A significant portion of respondents consume fruits regularly, though not necessarily daily. Conversely, vegetables are consumed frequently by a larger percentage of participants, a positive trend aligned with the recommendations for a healthy diet. High intake of fruits and vegetables is essential for their fiber, vitamins, and antioxidants, which contribute to reducing the risk of chronic diseases such as cardiovascular conditions and certain cancers. Low consumption of processed meats among respondents is encouraging, as these foods are linked to an increased risk of cardiovascular diseases and cancer. Similarly, a majority report limited fast-food consumption, which supports the maintenance of a healthier lifestyle. Minimizing processed and fast foods helps reduce excess

calorie intake, sodium, and unhealthy fats, which are often culprits in the rise of obesity and related health issues. Despite its benefits as a source of omega-3 fatty acids, fish appears to be under-consumed among respondents. Increasing fish intake would significantly enhance heart and brain health, offering essential nutrients often lacking in other food groups. Canned and smoked foods are consumed infrequently by respondents, reflecting a positive trend toward healthy eating. However, even their occasional consumption could be further minimized to better align with long-term health goals. These findings, illustrated in Chart 2, highlight the potential for improvement in certain dietary habits, such as increasing fish and daily fruit consumption. They also underscore encouraging trends, like the limited intake of processed and fast foods, contributing to healthier lifestyle practices.

Chart 2. food consumption frequency distribution by category.

Young People prioritize taste, affordability, and health-related factors when making food choices. Cultural and traditional aspects are moderately important, showing regional or family-based food preferences.

The majority of respondents describe their relationship with their family as positive, with approximately 70% stating that they eat with their family every day. In response to simulated questions, most respondents indicated that the environment would not change their eating behavior—neither family nor friends—and they would remain loyal to their dietary patterns. When making dietary choices, the majority of respondents prioritize the taste of food (92.3%). Additionally, factors such as cost, health benefits, and convenience are significant for 63% of respondents. Environmental impact, cultural norms, and religious beliefs are considered influential by only 13%. European studies show moderate influence from cultural and religious norms on dietary patterns. In Mediterranean countries, adherence to traditional diets like the Mediterranean diet (rich in vegetables, fruits, and olive oil) is higher due to cultural traditions, contrasting with the low influence observed in our study[2]. To the question of whether upbringing and family traditions influence their eating habits, 84% believe it has a significant impact on their current dietary choices, while 16% think it has no impact. The question was: "You are at a family dinner where everyone is eating a high-calorie, traditional dish that you know is unhealthy. Do you eat the same food as your family members?" Respondents' answers are evenly divided into two groups. Among them, the main reason for eating the food is the perception that it is acceptable on rare occasions (30%), followed by the desire to adapt to the family (25.5%). Additionally, 15.2% cited their love for traditional dishes as the reason. Research in the U.S. highlights the role of social environments, such as family meals, in shaping dietary habits. Family mealtime is associated with healthier eating patterns, including increased fruit and vegetable intake. However, fast food consumption is prevalent among young adults due to convenience and affordability, similar to our findings on the 18-24 age group [1]. 77% of respondents stated that they have never changed their eating behavior to adapt to a specific social group. Additionally, 76% expressed that the portion size consumed by their friends while dining together does not influence their dietary decisions. To the question: "Imagine you are

spending time with friends, and they all decide to eat food from a fast-food restaurant. You usually prefer healthier options. What would you do?" 41.8% said they would choose a healthier option, 35% would eat the same food as their friends, and 14.5% would suggest a more alternative choice to their friends. The next question followed up: "What factors would influence your decision in this scenario?" 42% considered taste preference to be the most significant factor, 31.3% believed health awareness would play a role, and 15% regarded social harmony and peer pressure as important factors in their decision-making. To the question of whether a social media campaign influenced their dietary choices, 42% said they would verify the information about the recommendation before making a decision. In countries like South Korea and Japan, social media campaigns heavily influence young people's dietary choices, promoting healthy foods and fitness trends [3].

CONCLUSION

The survey sheds light on the dietary behaviors, preferences, and attitudes of respondents, with particular attention to gender differences, food consumption patterns, and the factors influencing dietary choices. Women are more likely to fall into normal or underweight BMI categories. Men, on the other hand, are more likely to be classified as overweight. Most respondents (90%) eat 2–3 meals daily. However, 60% do not follow a consistent dietary regimen, indicating a lack of structured meal planning. The vast majority (97%) consume a mixed diet of plant-based and animal-based products. Low intake of processed meats and fast foods suggests a positive trend toward healthier lifestyle choices. While frequent, the consumption of fruits and vegetables could improve to align with daily recommendations for a balanced diet. 47% of respondents visit fast-food establishments daily or multiple times weekly. Taste (92.3%), cost, health benefits, and convenience (63%) were identified as the primary factors influencing food choices. Environmental impact, cultural norms, and religious beliefs were deemed less influential, impacting only 13% of respondents. Social settings, including friends and peer pressure, generally do not affect respondents' eating habits, highlighting a strong adherence to individual dietary patterns. 42% of respondents verify health-related information from social media campaigns before making dietary decisions, showcasing a cautious and informed approach. These findings provide a comprehensive view of current dietary behaviors and underline areas for potential intervention, such as promoting structured meal planning, enhancing daily fruit and vegetable intake, and addressing the frequency of fast-food consumption. Additionally, the influence of social media on dietary decisions underscores the importance of accurate and reliable health communication.

Abstract: The Vikings' legacy in the medieval North Atlantic presents a compelling narrative of intercultural exchange, mainly through their interactions with the indigenous peoples of North America. Vital historical texts, such as the Vinland Sagas, the Groenlandia Saga, and the Eiríks Saga trauma, provide essential insights into these encounters. These sagas recount Norse seafarers' voyages and illuminate the significant cultural exchanges between them and the indigenous communities in Greenland and North America. These narratives show a dynamic relationship characterized by trade and cultural fusion. The exchanges facilitated the sharing of material goods, ideas, and technologies that enriched both societies, resulting in diverse traditions and practices. For instance, Norse settlers likely adopted specific indigenous agricultural techniques, while indigenous peoples may have integrated Norse craftsmanship and maritime technologies into their practices. Artistic collaboration and intertwined religious beliefs further underscore the depth of these interactions, suggesting that the Vikings' legacy is not merely one of conquest but rather a multifaceted story of cultural hybridity. Norse sagas, complemented by indigenous oral traditions, reveal these intricate connections and the shared experiences that shaped life during this time. This exploration challenges simplistic narratives centred on hostility, instead showcasing an era marked by collaboration and cultural exchange that profoundly influenced the region's identities and histories. The interactions prompted communities to exchange material goods, culinary traditions, and social practices, enriching their ways of life. This essay aims to delve deeper into the realm of the medieval North, explicitly focusing on the insights gleaned from the Viking experience, mainly through the lens of the term "other things." This term reflects the sociocultural collaboration among diasporas and within their respective communities during that time. It emphasizes the necessity of considering all aspects of historical events to understand history comprehensively. The methodology employed in this study includes documentary analysis and a qualitative approach, emphasizing a detailed examination of historical accounts and contemporary interpretations. The essay's central question explores how "other things" can be utilized to understand sociocultural amalgamation, foster community involvement, and facilitate a deeper engagement with the past and the present. In doing so, it aims to highlight the richness of human relationships across diverse cultures and historical contexts.

Keywords: Vikings, Intercultural exchange, Heritage, Historical memory, Sagas, Indigenous peoples, North America, Greenland, Cultural fusion, Trade, Agricultural techniques, Craftsmanship, Maritime technologies, Artistic collaboration, Religious beliefs, Cultural hybridity, Oral traditions, Collaboration, Identity, Global perspectives, Cross-cultural communication.

Introduction: Cultural memory and the Vikings are deeply intertwined. Social and cultural bonds were central to Norse society, contributing to the fame of medieval Norse mythology. Exploring Norse society from the beginning of their European connections to North America reveals much about their community's social and cultural ties. This cultural memory has been depicted through sources from the post-Viking age into the Victorian period and continues to

resonate in popular culture today. The people known as ¹"The Vikings" are characterized by their expansion beyond Scandinavia, reaching from North America to the Russian steppes. They are often remembered for their reputation for ²brutality and violence. The term ³"Viking" itself derives from the ⁴Norse word for "pirate" or "raider." Since this term describes a profession rather than an ethnic identity, some scholars hesitate to apply it to all medieval Scandinavians. This debate centers on distinguishing the violent members of Scandinavian society during the Viking Age from others who were traders, farmers, craftspeople, and so forth. The scarcity of contemporary narratives from the Vikings' perspective means that scholars must rely on accounts from those who encountered ⁵Viking raiders and Scandinavian settlers. There is significant debate over how much these sources exaggerate the violence attributed to the Vikings. Since the 1960s, revisionist interpretations have challenged the notion of Viking exceptionalism within a violent medieval world, highlighting the economic and cultural dimensions of Viking activities (Ellis,2020).

The long-standing debate surrounding the notorious reputation of the Vikings often hinges on whether the extent of their ferocity (Ellis,2020) has been significantly overstated. ⁶J. M. Wallace-Hadrill provocatively asks, "Should we view the Vikings as little more than groups of long-haired tourists who occasionally roughed up the natives?" (Ellis,2020). This inquiry challenges the traditional narratives shaped by those who survived the Viking raids. The old saying that the victors write # "history" (Ellis,2020) takes an intriguing twist here; it could be argued that our prevailing image of the Vikings is primarily derived from "history written by the victims"—the accounts penned by those in ecclesiastical circles across Britain, Ireland, and continental Europe, who lived in constant fear of impending attack (Ellis,2020). A pivotal shift in historiography occurred with the release of ⁷Peter Sawyer's seminal work, *The Age of the Vikings*, in 1962. This groundbreaking book confronted the widely accepted (Ellis,2020) portrayal of the Vikings as brutal marauders, instead advocating for a more nuanced understanding of their identity as ⁸"traders, not raiders." Sawyer meticulously dissected earlier misconceptions, suggesting that the magnitude of destruction associated with the Vikings had been grossly exaggerated. This recalibration of perspective was further supported by ⁹Anders Winroth, who credited Sawyer's book with instilling "a sense of proportion to the subject" of Viking violence, inviting readers to reconsider the complex legacy of these seafaring people beyond mere bloodshed.

Literature Review: The interactions between the Vikings and Indigenous peoples of North America and Greenland are essential topics for study. Research shows that these encounters were complex, involving cultural exchanges, blending of traditions, and new interpretations of

history. One key source is the Vinland Sagas, which include the Saga of the Greenlanders and the Saga of Erik the Red. These texts describe Norse journeys to North America and offer valuable insights into these interactions. Clunies Ross (1994) highlights that the sagas tell about exploration and the relationships formed during these meetings, challenging the idea that the Viking Age was only about violence and conquest. The Viking Road to America by Davidson, H. R. Ellis (1994) explores trade between the Vikings and Indigenous groups. Davidson argues that economic exchanges led to critical cultural mixings, where both groups shared farming techniques and maritime skills. Terry (2007) supports this view by studying how Norse settlers likely adopted Indigenous farming practices, showing that both sides benefited from these interactions.

Recent scholars, including Stalsberg (2018) and Igoe (2020), have investigated artistic collaborations and religious influences from these encounters. Stalsberg looks at artifacts that combine Norse and Native artistic styles, demonstrating a shared cultural exchange. Igoe's research reveals how spiritual practices merged, creating a rich cultural identity for both communities. It is also crucial to include Indigenous perspectives in the historical narrative. Deloria Jr. (1999) criticizes Eurocentric views of history and emphasizes the importance of Indigenous oral traditions. He argues that these stories provide essential insights into cultural exchanges and the long-term effects of Viking interactions, advocating for a more balanced view focused on Indigenous experiences. Theorists like Bhabha (1994) and McKinney (2019) help us understand cultural blending. Bhabha introduces concepts like "mimicry" and "third space" to analyze how identities shift through these interactions. McKinney focuses on memory and identity in post-colonial contexts, contributing to our current understanding of historical legacies.

Despite the valuable insights from this research, interdisciplinary approaches that combine historical analysis with Indigenous methods are still needed. Future studies should prioritize collaborative frameworks that highlight Native perspectives, ensuring the ongoing development of the Viking intercultural legacy in a more inclusive way. This review emphasizes the need to examine the Viking legacy through various lenses, bringing together historical texts, archaeological findings, and Indigenous peoples to better understand these cultural exchanges.

Methodology: The Vikings' cultural legacy study uses historical analysis, literature comparison, and cultural studies. It focuses on key sources, including the Vinland Sagas, Groenlandia Saga, Eiríks Saga, and oral traditions from indigenous peoples. By examining these texts, we find stories that reveal how Norse seafarers interacted with Native Americans. The analysis includes research from archaeology, anthropology, and modern views on history to deepen our understanding of these cultural exchanges. Interviews with experts in Viking history and indigenous studies also offer valuable insights into these complex interactions. This approach highlights the significance of the Vikings' journeys and the importance of considering different viewpoints when studying cultural relationships. The study aims to illuminate the nuanced connections that developed during this time, challenging the idea that these encounters were only about conflict and instead showing the cooperative elements of cultural mixing.

Discussion: The Vikings typically drank mead, a type of honey wine (Israelsen,2023). They also enjoyed wine when they could steal it from other Europeans. ¹⁰Viking chieftains were sometimes buried with longboats to sail to the afterlife (Israelsen,2023). The English names for Wednesday, Thursday, and Friday come from Viking gods: "Odin's Day," "Thor's Day," (Israelsen,2023) and ¹¹"Frigga's Day." The halls built by the Vikings were the most significant structures in northern Europe during the Middle Ages (Israelsen,2023). ¹² Icelandic poets were highly respected and considered the best in Viking culture. Viking warriors called defeating an

¹¹ Thirty-Seven Fierce Vikings Facts. Paragraph 1st.

¹² Thirty-Seven Fierce Vikings Facts. Paragraph 1st.

enemy "feeding the raven" (Israelsen,2023). They used the work of ¹³female servants and enslaved people to make woollen sails for their ships. Weaving a woollen sail for one Viking ship took thousands of hours. Viking warriors spent their winters building the vessel they would use to attack other European settlements in the spring (Israelsen,2023). Viking culture focused on the grand halls built by their Nordic chieftains. These halls were places to celebrate religious festivals and share the treasure from successful raids. A Viking chieftain's hall was sized to show his success in battle, attract new warriors, and display his wealth and treasures. ¹⁴Viking traders travelled across Eurasia, bringing back goods from places as far away as Russia and China (Israelsen,2023). Archaeologists have found Viking halls in northern Europe. This shows that many Viking leaders competed for power in medieval times. ¹⁵A Viking chieftain often gave warriors gifts like weapons or jewelry during festivals or after successful raids. Poets at Viking gatherings were called "skalds" (Israelsen,2023). Warriors sat around their chieftain's throne during feasts on "mead benches"(Israelsen,2023). ¹⁶Around 500 years before Christopher Columbus, Vikings sailed to North America, making them the first Europeans to reach the New World. ¹⁷At Viking festivals, it was common for animals to be ritually sacrificed. Costume designers created the horned helmets we often associate with Vikings for a ¹⁸19th-century opera about Viking mythology, which may have drawn inspiration from Viking ceremonial dress. ¹⁹Wagner's opera, *Das Rheingold* (1869), was based on Viking myths, but he changed many original stories to fit his ideas (Israelsen,2023). ²⁰In Viking myths, the god Odin and his two brothers created the world after dismembering a victim's body. Not all Vikings were ²¹pagans (Israelsen,2023). Some converted to ²²Christianity when it spread to Scandinavia. Archaeologists have found more ²³Anglo-Saxon pennies at Viking sites than in British settlements where the pennies were used initially. The Vikings' longships played a key role in their success as raiders. These ships allowed them to launch surprise attacks that slower boats or land armies could not achieve. ²⁴The Vikings built great wealth partly because their warriors were pagans. They had no hesitation in attacking Christian monasteries and churches (Israelsen,2023), which most other European armies avoided. ²⁵The word "Viking" (Israelsen,2023) is rarely found in their writings, suggesting it was not what they called themselves—Icelandic, Faroese, and Norwegian languages come from Old Norse, the language spoken by the Vikings. ²⁶The Viking Age lasted from 750 to 1050 AD (Israelsen,2023). In the 13th century, northern European writers recorded Viking culture's myths, legends, and sagas. Famous works include ²⁷The Poetic Edda, The Nibelungenlied, and The Volsunga Saga. "Viking metal" (Israelsen,2023) is a style of heavy metal music that started in Scandinavia in the 1990s, focusing on Viking culture and values. ²⁸The Viking Age ended in the 11th century (Israelsen,2023), mainly due to the spread of Christianity and the merging of their many chiefdoms into Norway, Sweden, and Denmark. Scholars believe the word "Viking"

(Israelsen,2023) originally meant "pirate" or "seafaring raider" (Israelsen,2023). ²⁹The Vikings explored more of the world than anyone else at the time, interacting with over 50 different cultures through trade or raiding. Viking writings explain what happens to men when they die, but it is unclear what they believed happened to women. Beowulf, the most famous poem about the Vikings, has only one original copy from that time. ³⁰Vikings believed in a link between violence and supernatural power, which led to practices like ritual rape and human sacrifice. Their myths foretold an end of time in a great battle called Ragnarok, where everything, including the gods, would perish. The idea of "other things" is an important part of Viking culture and society, and it has a wide reach from Scandinavia to England and even across the Atlantic to America. This cultural journey created strong connections, especially in how the Vikings were fierce pirates and smart businesspeople. Their lasting influence grew from their deep connection to the sea. "Other things" for the Vikings included their daily lives and their beliefs, spirituality, and fascinating myths that shaped their experiences. These elements blended, creating a unique identity that combines the supernatural with practical daily life. Viking women also played a key role, showing strength and adaptability that enriched their culture. The idea of "other things" demonstrates how various aspects of Viking life, including their beliefs and daily activities, contributed to the broader European culture. This mix allowed the Vikings to greatly influence cultural dynamics, leaving a lasting legacy that continues to shape how people view their society today.

Conclusion: The essay discusses the intercultural legacy of the Vikings, focusing on their interactions with indigenous peoples in North America, as highlighted in historical texts like the Vinland Sagas. These narratives depict a dynamic relationship characterized by trade and cultural fusion, where Norse settlers and indigenous communities enriched each other's traditions and practices. The Vikings adopted indigenous agricultural techniques, while indigenous peoples integrated Norse craftsmanship and maritime technologies. The text emphasizes the collaborative aspects of these encounters, challenging simplistic views of Viking conquests and illustrating a complex story of cultural hybridity that significantly shaped the identities and histories of the region. Exploring the Vikings' intercultural legacy illustrates a rich tapestry of historical memory profoundly influenced by their interactions with indigenous peoples of North America. By delving into the narratives in the Vinland Sagas and other historical texts, we uncover a story that transcends the simplistic view of conquest and hostility. Instead, it reveals a dynamic era of cultural exchange, mutual adaptation, and collaboration. These interactions' shared practices, innovations, and artistic expressions highlight the Vikings' role in fostering intercultural dialogue. This legacy reminds us of the complexities of human relationships and the importance of embracing diverse heritages to create a more nuanced understanding of our past. Through this lens, we can appreciate how the intertwined histories of the Vikings and Indigenous communities have shaped contemporary identities and cultural landscapes, urging us to recognize the value of intercultural connections in our global society today.

THE IMPACT OF SOCIAL AND EMOTIONAL LEARNING (SEL) PROGRAMS ON CHILDREN IN CONFLICT-AFFECTED AREAS

Anshit Mukherjee

Department of Computer Science, Abacus Institute of Engineering and Management, India.

ORCID NO: 0009-0001-7930-401X

ABSTRACT

It has become apparent that social and emotional learning programs are critical strategies in attending to the needs of children in conflict situations. It seeks to improve child's emotional mental health, reduce violent tendencies, increase school completion rates and prepare for workforce, in short, improving child's functioning despite unfavorable circumstances. Writing about SEL, academic works suggest that exposure to violence, trauma, and instability that are typical in conflict regions, can be at least partially neutralized through SEL interventions. SEL programs include five competencies: SEL incorporates understanding of feelings, controlling or managing feelings, perceiving other's feelings, handling interpersonal relationships, as well as being able to make right decisions; SEL enables a child to identify feelings, how to deal with stress, friendship and decision making. In the previous research, students exposed to SEL programmes have been found to have better performance, better self-regulation, and competent social relations. SEL is implemented in various learning systems in conflict affected systems to foster safety in learning institutions. Proven interventions like the Healing Classrooms by the International Rescue of Children Education have shown positive success in raising learning achievements as well as, social well-being among children in crisis settings. Moreover, SEL interventions have also been associated with positive effects to cohesion and stability of the community, which enable the community to turn down violent extremism. However, there still several issues that exist on the use of SEL programs in conflict situations, particularly in school settings, these include; lack of finances, culture, and contextual differences. However, more current practice-based research partnerships persist in enhancing the SEL approaches to guarantee their relevance and feasibility to deliver in the different conflict-ridden zones. Hence, SEL programs appear to be instrumental in rebuilding the child and youth as well as helping them and the community constructively adapt to conflict and crises in their regular lives.

Keywords: Social and Emotional Learning (SEL), Conflict-Affected Areas, Child Development, Emotional Regulation, Resilience, Educational Interventions.

1. INTRODUCTION

Conflict zones are considered unstable, violent, and disruptive, with adverse consequences of children affected by these environment. The kids in these areas are in various ways a challenged, in aspects such as trauma, lack of homes to call their own, an inconsistent education. Adverse effects of these living conditions are evidently reflected by lifelong psychological developmental changes such as anxiety, depression, and inability to have normal interpersonal relationships. It is for this reason that while dealing with living circumstances, their social and emotional aspects become even more important for child's wellbeing and further development. The physical suffering of children in conflict zones cannot be contested and thus, attention should be paid to enhancement of children psychological needs so that they can become productive individuals in future. Education has pointed out that children who learn social and emotional competencies will be able to handle various problems and relate well with others as well as their societies. Social and Emotional Learning (SEL) really addresses these needs by ensuring that children learn how to deal with their emotions, stress, and interpersonal relationships. If there is a

focus on any characteristic in conflict affected zone, it should be SEL which not only boosts academic achievements but also teachers and helps children to overcome hardships they are exposed to at young age. More specifically, the aim of this chapter is to understand how teaching SEL affects children affected by conflict. It is to draw attention to the importance of optimism that such interventions hold with reference to the total wellness of such children (UNESCO, 2020). This chapter will review the theoretical literature and case evidence of SEL to provide an understanding of how to integrate SEL for change and future viability of children affected by both trauma and instability. Throughout this chapter, several key questions will be addressed: Which social and emotional needs are threatened in kids in conflict areas? In what ways do SEL programs address the consequences of trauma and build up students' stress tolerance? Are these programmes evidence based in enhancing academic as well as social outcomes? Further, knowledge about the challenges faced when integrating and practicing SEL in such settings as well as ways to overcome them will be presented. In responding to these questions, this chapter aims at bringing out a clear understanding of the importance of SEL for child development in some parts of the world that are most difficult to handle.

2. LITERATURE REVIEW

Bailey (Bailey et al., 2021) asserts that SEL within conflict-affected contexts must be culturally appropriate, an undertaking this study on SEL program in Northeast Nigeria. The scientists used both interviews of stakeholders from the local contexts and quantitative measures of SEL program efficacy. Collecting the aggregated efficacy data of SEL programs, they found SEL programs developed with implementation references to local cultural values of the intended participants more effective in engaging and influencing the participants. Culturally related material had a positive effect on the children's emotional self-regulation and social competence to the programs.

A study launched by the Global TIES for Children at New York University (Global TIES for Children, 2023) and carried out in the International Rescue Committee (IRC) in Lebanon sought to assess the impact of a brand new SEL program known as the Five-Component SEL (5CSEL) curriculum. This study employed a randomized control trial design in order to assess program effectiveness with Syrian refugees children who had high exposure to conflict-related violence. Outcome data painted a very positive picture of what SEL can do for children in crisis situations and pointed out the need for well-structured SEL programs.

A perspective article of Reimers (Reimers et al., 2023) that identifies social inequalities of SEL practices that are implemented in low income, and conflict prone areas learning from one of their studies conducted in Rio de Janeiro, Brazil. The authors used qualitative approaches to determine important relational aspects about the delivery of SEL programs, including cultural beliefs, timing and government support. What they discovered was that instability and violence created barriers to implementation while active involvement of stakeholders in a country was important to overcome the challenges.

Drawing current practices of SEL in education during emergencies into focus, Kelsey Dalrymple critiques this by (Dalrymple, 2023). In her qualitative interviews with practitioners across East Africa she explores the gaps between planned aspirations of SEL programming, including the pursuit of social connectedness, and practiced goals that more often than not call for the training of self-regulation and emotionally intelligent behaviors for personalized achievements. These studies indicate that although there is strong SEL interest, practice and funding, most of these SEL programmes lack the 'wider agendas' such as those on conflict resolution or restorative justice.

A systematic review by Pherali, Tschannen-Mogan, & Garfin (Pherali et al., 2022) synthesize the findings on proved strategies for undertaking SEL in EiE contexts. This research integrates information from different sources in order to evaluate the extent to which these interventions are helpful for children who have known trauma and violence. The review also shows successful examples of increasing students' positive socio-emotional development and their academic achievements due to SEL implementation.

It is crucial to focus on localized approaches according Cho et al.'s work (Cho et al., 2022) on programming for refugee learners in Turkey. The researchers administered observational studies, as well as teacher questionnaires, to determine whether techniques that had been culturally modified influenced students' social-emotional development. They concluded that student-centered approach and materials matter to students' interest and achievement.

Thus, current research emphasizes the opportunity and risks of using Social and Emotional Learning programs in the conflict-affected sites. The focus on context corresponds with an understanding that when the content is culturally sensitive, program implementation is better and the community is more accepting. On the one hand, using innovative ideas, for example, incorporation of artificial intelligence into learning models, may open numerous opportunities for creating unique learning environments; on the other hand, system-level challenges persist as primary concerns and their solution requires collaborative efforts together with material resources. Moreover, critical analyses of the current approaches show that there is a gap between the stated goals as well as the current application of the SEL programs. As research on these aspects unfolds, it is crucial to focus on solutions that would be good for every child, as well as address society's aims and goals as the rebuilding of the fractured society with accountable and cohesive vulnerable communities.

3. UNDERSTANDING SOCIAL AND EMOTIONAL LEARNING

SEL is a comprehensive social and emotional training process (Bailey, 2021) meant to provide individuals and especially learners, with positive mindsets towards tackling emotional feelings, relationship management, and decision making processes. Aware of the importance of affective components for achievement, the practice of SEL stresses the connection between emotional competencies, conduct, and achievement. The Collaborative for Academic, Social, and Emotional Learning (CASEL) identifies five core competencies that form the foundation of SEL: Personal competence – self-awareness, self-management, social awareness and relationship competencies and responsible thinking. Altogether the named competencies assist children in managing their feelings and relationships. Emotional intelligence comprises of having an understanding of one's self, this includes feeling, cognition and values which are relative to the behavioral pattern. This competency makes an individual to be confident and become a growth orientated person due to ability to understand strength and weakness. More specifically, self-management includes the capacity of an individual to control emotions, thoughts and behaviors in different contexts; skills for controlling stress, impulses, setting goals and motivating oneself. This component comprises having a general appreciation of common social expectations as well as being able to take the perspective of others, or introspection. Interpersonal skills are designed to help people relate and relate well with others, learn how to communicate, listen, work in a team, and manage and solve conflicts. The last component is practicing decisions constructively on one's behavior and interaction with many others anchored on the principles of ethics and implications of results to make sound decisions.

SEL is based on many theoretical frameworks, considered in the development of principles and practices of the program. There is also emotional intelligence where the arguing suggestion is that individual's information processing concerned with emotions impacts outcomes of interpersonal relations and choices made. This theory provides evidence to the concepts that emotional competencies can in fact be learnt through emulation which SEL goals tries to enhance in the education sector. Another relevant framework is the social learning theory which holds that obtaining of new behaviour is accomplished through observations. In this sense, this theory holds that children acquire social behaviour by observing what surrounds them in the society. SEL programmes use this one by helping children find ways in which they can imitate positive behaviour from other children and the adults around them alongside modelling at teaching social, emotional skills. The necessity of the implementation of SEL in children's course is immense. Related studies reveal that children who acquire good skills on social-emotional development perform better across most spheres of life, including improved academic work, nutrition, optimal emotional and social well-being, and capacity to deal with life challenges. Hence, for the children who are subjected to conflicts and forced to learn in volatile environments, they require to learn SEL. SEL programs are effective when implemented by addressing toxic stress by creating positive learning environments in which children may learn how to express their emotions and interact safely and positively with peers and educators. Lastly, SEL investment does not only help specific children but also helps in the development of healthy society by raising psychologically healthy, emotionally mature members, who will be able to be a benefit to the society.

4. IMPACT OF CONFLICT ON CHILDREN

Through the exposure to trauma, stress, and other features of disturbed emotional states (International Rescue Committee, 2021) children growing in the conflict zones can suffer from quite severe abnormalities of psychological and emotional profiles. The experience of constant threats and violence cause individuals to develop anxiety, panic, and even post-traumatic stress disorder (PTSD), and to have depression. It is estimated that a large proportion of children are exposed to and or affected by grim events including bombings, deaths of their kin and or forced evictions from their homes. The psychological symptomatology is as follows, including inattention, mood swings, and introversion. Several empirical studies have suggested that approximately 60% of children in conflict areas experience learning difficulties in concentrating, and about a quarter of them complain of problems in controlling their feelings. Such an emotional dysregulation impairs the child's interaction with peers and adults, aggravating their sense of isolation, and hopelessness. Conflict exposure has similar negative social and behavioural outcomes as direct exposure. Closely connected with this like most other aspects of violence, children who are exposed to violent situations suffer disruptions in their social and interpersonal skills. The effects they experience include aggressive behaviors and heightened social anxiety and relationship formation issues. A large number of children may become withdrawn, and some will turn to antisocial behaviours in order to express their misery. The above behavioural changes affects students in that; it becomes awkward for them to communicate with some of their peers hence making it difficult for them to engage in normal or typical social resettling. Besides, they will avoid going to school or other functions in the society, which will reduce their chance of social growth concerning violent incidents.

The effects of conflict are most definitely grievous on the process of education. Schools in most conflicted societies are either attacked or destroyed, which impacts very much on both the quality of the education children receive and their attendance rates. For example, millions of children cannot attend school anymore because schools have been destroyed or their homes make them flee. The same notes that more than 240 million children around the world have experienced the closure of schools attributable to the influence of war and violence. Besides physical destruction, conflicts also bring about a learning environment that discourages children from attending school. Most children will stop attending school due to conflict. Therefore students likely to suffer from time gaps in their education to allow for other activities that may lead to high ill iterate rates and low outcomes. Research also reveals that children and adolescents who are affected by violent conflict perform poorly on standard achievement when compared to learner in less violent countries. This disruption does not only impact academic achievement for each learner separately but also recreates poverty and injustice in community who participates in war.

5. SEL PROGRAMS IN CONFLICT-AFFECTED AREAS

SEL in conflict affected context refers to multiple interventions aimed at helping children affected by trauma and instability to develop their social and emotional skills. Such programs may be differentiated by a range of types, such as school-based curricula, community workshops, as well as combined SEL with other educational programs. For instance, we have the International Rescue Committees Healing Classrooms program whereby children are taught how to work through their emotions and cope while at learning. Some of the other programs that can also be noticed on the OAESEP include; the "Colour of Kindness" in Bangladesh that puts into practice comprehensive approaches of SEL within institutions of emergencies, and also "Navegar Seguro" in Colombia that also offers SEL learning approaches from classes that are early childhood learning upto high school learning levels. These diverse programs stress the need to localize SEL content to fit the cultural needs and concerns of children under conflict situations. An analysis of specific SEL programs shows what may be accomplished in terms of children's well-being in conflicted zones. One good example of successfully implementing SEL at schools is the "Healing Classrooms" program. Unlike other attempts to improve academic performance, this project addresses not only educational losses but also toxic stress as part of the curriculum process with trauma-sensitive approaches. Likewise, through its "Navegar Seguro" program in Colombia

respondents stated it was helpful and effective since it increased the emotional well-being both learners and teachers therefore supported that 'SEL' helped improve academicians' performance when interacting with fellow learners since it promotes on proper appealing to feelings thus facilitating 21st century social skills. In the Northeast of Nigeria, there has been the enhancement of new strategies in making SEL developed content culturally sensitive due to regional cultural values. Due to community ownership because of community involvement in designing these programs, the take-up of the programs has been enhanced among affected children in conflicts (Reimers & Ainscow, 2021). Such case studies underline the importance of the context adaptation to enhance the use and effectiveness of SEL interventions.

In conflicts areas the reason of SEL programs must be well thought and acknowledged the local realities and structures. Strategies toward effective implementation and adoption depend on such crucial stakeholder collaborations including adopting key local education and community figures and groups. For instance, Creating networks of collaboration may help in sharing of resources and help in the development of SEL curriculum to fit certain communities. Moreover, information regarding cultural perception about SEL can be collected using qualitative research to enable the identification of the most appropriate delivery methodology for the program. Another approach relevant to this conversation is the need to train teachers in trauma-informed practices; arming them with the capacity to help create supportive classroom learning climate increases the ability of SEL interventions. In addition, incorporating use of technology can offer best practices to the enhancement of delivery of SEL contents when resources are limited. Collectively, these implementation strategies make clear that key aspects of SEL, as it is currently being developed and adapted for use in conflict-affected areas are flexibility, cultural relevance and community engagement.

6. OUTCOMES AND BENEFITS OF SEL PROGRAMS

SEL programs have been proven to raise achievement rates of students" as well as their commitment level to school. The evidence available suggests that learners covered in SEL interventions manifests a higher functionality in school achievement as seen in better grades, scores, attendance, and submission of homework. Published studies of 1059 students showed that Effectively implemented SEL interventions result in an average gain, moreover, marks improvement 11 percentile compared to students who are not involved in such programs. Moreover, the positive impact of SEL on academic outcomes is known to be long term; longitudinal evidence indicates that years after the implementation of SEL programs, students are 13 percentile points higher on average academic performance compared to non-SEL students. Such finding indicates that emotions and social spiritual which form portion of the SEL facilitate not merely day-to-day acquisition but besides long-run academic success. Besides academic values, children's SEL programs have a great importance for increasing students' emotional skills such as self and social management skills and for building their ability to cope with stress. Stakeholders who undergo SEL programs reveal better mental health, less anxiety, depression and indicators of self-harm and emotional disturbances. More specifically, research has demonstrated a decrease of SEL participants' emotional distress of 10% (United Nations Children's Fund, 2020). These programs help to develop better peer and adult interpersonal skills like empathy, cooperation, confidence to solve conflicts, etc. When young people are able to make positive changes in feelings, their ability to handle stress related to environments improves remarkably. Besides, the aforementioned heightened emotional regulation is beneficial in raising individual happiness and contributes to the positive climate within classrooms in which all students will gain what they need for their overall wellbeing.

Based on the analysis, the SEL upshots of instruction are not limited to productivity or persona changes but encompass community and social function. SEL also brings into the society responsible citizens that will be able to interact in the society in the right manner. Research has shown that more engagement in pro SEL programs is linked to better community connectedness and decrease in violent and violent – oriented actions. For example, children with better social skills are less likely to use propaganda aggression and more able to support the promotion of peaceful settlement of conflict in their societies.

Furthermore, SEL can have a broad application for bettering the health situation in schools and for fostering the overall all-encompassing student culture within institutions. If the students feel obliged to take care of students, the fellow men, and communities in general, chances of changing society are noted to be monumental thus boosting the community's resilience in the face of conflicts and instabilities.

7. CHALLENGES AND BARRIERS

Some of the biggest barriers to effectively applying SEL in conflicted affected zones can be lack of funds. A lack of funds can pose significant problems for the growth and permanency (Aber et al., 2021) of SEL strategies since most effective interventions need money for professionals' preparation, resources, and steady maintenance. It becomes extremely important where in some areas educational infrastructure is already destroyed and not equipped to provide education due to conflicts. Further, the roles of personnel are not well staffed, and in general, there could be a shortage of teachers trained in how to teach SEL content. Substitute teachers too may be a cause behind high teacher turnover rates especially in conflicted affected region thus worsening the consistency in teaching of SEL programs. A weakness to this is the absence of structures like safe learning environments and access to material that such implementation requires; thereby making it hard for schools to adopt a good SEL practice that caters for the student needs. Another challenge is changing SEL programs by culture that also requires an incredible amount of time and effort. SEL frameworks and curricula that are currently available are largely designed from cultural contexts which may not be familiar to children in the conflict zone. For instance, SEL content that may be in certain concerning social behaviors or emotional display may not response to the cultural affiliation in some regions hence poor interaction and outcome. Studies show that if the existing SEL programs do not include local language, cultural, or community norms and values, the existing SEL programs may not be of much use to the children in these settings. This calls for an understanding of culture, and its integration together with local culture especially in the development of any SEL interventions.

Good implementation of SEL also faces a few more hurdles particularly when it comes to the sustainability and scalability of the interventions. SEL programs are created with high expectations for how they will be applied that cannot be met by schools in conflict-engaged regions. Proximal implementation processes are at risk when teachers have heavy workloads, are not trained enough to implement with high quality, or have competing academic priorities. In addition, if such measures are not sustained continually with support from local governments or organizations, they may turn out to be short term or dysfunctional. In order to create sustainability further solid relationships should be developed between schools, community organizations, and government which can offer constant support and funding. Further, it is useful to build models that are flexible enough: SEL program may be launched in different contexts while keeping its goals in mind. Meeting these hurdles is important as it can ensure a better effective of SEL on children's social emotional learning in conflicted societies.

8. FUTURE SCOPES AND RECOMMENDATIONS

Nevertheless, the existing body of literature and evidence provide strong and evidence based support to enhance SEL to conflict affected region and population still many questions and gaps are awaiting to be answered. There is no doubt that SEL is a promising and valuable enterprise; however, there is a pressing need for additional research to determine the extent to which different SEL interventions produce positive outcomes for children across cultural backgrounds. Most prior research on SEL has concerned programs that originate from Western contexts that, in many ways, differ from the conflicts children face in conflict-prone regions (World Bank, 2020). Furthermore, there is a lack of research that evaluates multiple-year effects of SEL programs in children's emotional and academic achievement. Future research should also explore how best to incorporate newer technological tools into SEL frameworks incorporating perhaps artificial augment for increased interest and individuality. Filling these gaps will afford a better understanding of how implementation of SEL should happen in different settings and whether the strategies employed are appropriate and effective. In order to strengthen the practice of SEL

programs, new strategies of paradigm, which should be approved by policymakers, educators, and practitioners, should include culturally responsive and community-engaged approaches (Tubbs & Aber, 2021). Fundees of implementing SEL should be made available within the educational sector and which is meant to be used in enhancing SEL schooling within conflict per using affected schools. Besides, it is also necessary to incorporate trauma sensitive educational approaches as well as cultural diversity within SEL educational training for teachers. This training should be continuous in order that the educators are able to change their actions based on the response of the students and the members of the community. In the same way, getting partners with the local organizations best ensures that the content developed for SEL is relevant to the local culture and practices, enhancing the level of acceptance and hence student engagement.

In the current literature on SEL, new pressing directions that might improve the applicability of SEL in the selected conflict areas are discussed. , there are is one potentially productive path – the use of technology in enhancing the process of the implementation of the SEL initiatives. A range of use-approaches like game-based learning, virtual reality and AI applications may allow impactful student engagement that would encourage deeper learning. For example, the use of virtual reality is helpful when children practice empathy and conflict solving skills using staged setting and actors. Furthermore, the use of AI technologies is helpful in monitoring students' interactions, and thus, supportive in providing the feedback based on emotional regulation as well as on students' social skills training. These are innovations, which not only make learning even more interesting but also provide opportunity for solutions, which can also be replicated for greater numbers of learners. The application of SEL programs in conflict regions requires stakeholder participation as indicated in this paper. Incorporation of parents, local officials and other stakeholders in the commencement of animal SEL means that the programs set up are relevant in the population standards. It is possible to invite parents to seminars, practical classes and meetings to discuss how one can help children develop social-emotional skills at home as a part of wider processes occurring at schools. SEL programs can therefore ensure they are sustained by engaging the community and educators in groups and assuring everyone a common goal to accomplish.⁴

To guarantee sustainably, efficient protection and continuation of effective SEL programs, necessary monitoring and evaluation systems should be built. Such frameworks should define the measures for the evaluation of the short-term goals (for instance, the regulation of mood) and long-term ones (as, for instance, learners' achievement). It is proposed to conduct periodic evaluations, the results of which can serve as an indication of where and how it is necessary to change and improve the process of program implementation. Stakeholders' involvement can similarly promote the level of openness of the assessment results and the level of confidence of the communities in SEL benefits. In conclusion, it is stated that the findings of this article for future directions for SEL that lays down the map for dismantling and reconstructing the conflict-affected areas cannot be overemphasized that there is need adopt an array of intervention strategies such as identify research priorities and needs, prioritize policy suggestions, enthuse innovation, empower communities, and develop solid monitoring framework for SEL programmes. In prioritizing these strategies, stakeholders: The strategies make SEL programs more relevant and effective for children experiencing adversity in their lives – in turn, creating programs that will make these children more resilient. The dearth of evidence and gap in practice mean that ongoing interaction and engagement among researchers, practitioners, policymakers, and the communities concerned will be necessary for the development of context-appropriate and effective interventions for children in situations of armed violence.

9. CONCLUSION

The chapter has discussed in detail how Social and Emotional Learning (SEL) programs are important especially for children in such conflict zones. We talked about the basic psychological and emotional impact that affect children throughout the conflict, psychological trauma, stress, and emotional instability which lead to poor performance in their studies and social relationships. SEL programs can reduce these negative effects by not only improving regulation, interpersonal understanding, and

thriving. As illustrated by the case study of the Healing Classrooms programs, we pointed out programs that have been proven to yield positive results enhancing the academic achievement of students as well as student's emotional wellbeing. However, current issues include shortage of funds, cultural competences and lack of ability to sustain and increase the kinds of programs that are needed. In light of the presented research outcomes, educators, policymakers, and practitioners should consider SEL important elements of educational systems in countries experiencing ongoing conflicts. Governments should set aside specific funds to be given to SEL projects and encourage efforts that ensure teachers in schools are well conversant with practices that embrace the users of SEL (Al-Hroub, 2024). Moreover, there is a need to engage with the relevant communities in order to incorporate contextualised content into SEL so that its messages are relevant and accepted. The support from the schools, families and community based organizations allow stakeholders to develop protective environments that could magnify the effects of SEL for children. Therefore, the program on Social and Emotional Learning is an essential solution that should be applied within CE systems to foster the improvement of children's living in conflict zones. Thus, SEL helps children who experience special difficulties as sources of their vulnerability and offers them coping strategies. SEL shall improve individual child and contribute to development of healthy society since those children grow into empathetic and teamwork and responsible citizens. What is needed in the future continued promotion of the campaigner for and the provision of efficient SEL approaches that equip children to face life difficulties.

ALİ MƏKTƏB MÜƏLLİMLƏRİNİN DƏRS PLANI HAQQINDA
ABOUT THE CURRICULUM OF HIGH SCHOOL TEACHERS

Doc. Dr. Anvar Abbasov

Bakı Slavyan Universiteti

Baku Slavic University

Pedaqogika və psixologiya kafedrası, dosent

Department of pedagogy and psychology, associate professor

ORCID İD:0000-0002-0811-549X

ÖZET

Təhsil müəssisələrində təlim işinin qurulması onun təşkilindən başlayır. Öyrənmə işi necə qurulmalıdır? Təlimin məzmununda nələr nəzərə alınmalıdır? Tələbələrin fəallığını necə təmin etmək lazımdır? Tələbələrin fəaliyyəti necə dəyərləndirilməlidir? Tələbə-müəllim münasibəti necə qurulmalıdır?

Ali məktəb auditoriyasında dərs deyən müəllimlər dərs üçün hazırlıq mərhələsində bu ritorik suallar ətrafında düşünməli və deyəcəyi dərslərin planını qurmaq üçün onları nəzərə almalıdırlar. Məlum olduğu kimi, plan müəllimin deyəcəyi dərslərin ilkin yanaşmada layihəsidir. O, dərslər haqqında əminlik hasil etdikdən sonra bu sənədi hazırlayır.

Təcrübələr onu göstərir ki, ali təhsil müəssisələrinin müəllimləri dərslə hazırlaşarkən, əsasən, mühazirə materialları, yaxud təqdimat hazırlamaqla kifayətlənirlər. Çox hallarda dərslərin parametrlərini müəyyənləşdirən planın hazırlanmasına diqqət yetirmirlər. Yaxud ona əlavə, həm də artıq bir iş kimi yanaşırlar. Əslində fəaliyyətə başlayan hər kəs, hər bir təhsil işçisi, o cümlədən ali məktəb müəllimi yerinə yetirəcəyi işin fərqləndirilməlidir, onun haradan başlayıb, harada bitməsinə aydın təsəvvür etməlidir. Ona görə də hər bir dərslərin planı üzrə təşkil edilməli və aparılmalıdır.

Dərslərin uğurlu və məqsədəuyğun qaydada reallaşdırılması, ilkin olaraq, onun planlaşdırılmasından daha çox asılıdır. Planlaşdırılma işi ehtiyac və tələbatların ciddi şəkildə öyrənilməsinə və qruplaşdırılmasına, planın işə onları nəzərə almaqla tərtibini tələb edir.

Dərslərin planı əsasında nəzərdə tutulmuş mövzular üzrə aparılır və konkret məqsədlərin həyata keçirilməsinə nəzərdə tutur. Adətən hazırlıq mərhələsində müəllim mövzuya uyğun olaraq məqsədi müəyyənləşdirir. Ona görə də həmin məqsədlər elə formalaşdırılmalıdır ki, fəaliyyətə yönü olsun, mənimsənilmiş biliklərin tətbiqini tələb etsin. Həmcinin dərslərin mərhələlərə əsaslanan metodik aparatlarında tələbələrin interaktivliyi aparıcı rol oynasın və didaktik əhəmiyyət daşıсын. Bununla da dərslərdə tələbələrin bir tədqiqatçı kimi axtarış aparmalarına, yaradıcı fəaliyyət göstərmələrinə imkan yaradılsın.

Təhsil islahatlarının aparıldığı hazırkı şəraitdə ali məktəb müəllimlərinin də tədris fəaliyyətindəki irəliləyişlər, xüsusilə dərslərin məzmunu və strukturunun yeniləşdirilməsi, onun fəlsəfəsindəki dəyişikliklər müzakirə obyektinə çevrilməlidir.

Acar sözlər: dərslərin planı, təlimin məzmunu, mühazirə materialları, planlaşdırma, mövzu, məqsəd, təhsil islahatları

ABSTRACT

The establishment of training in educational institutions begins with its organization. How should the study be structured? What should be taken into account in the content of training? How to ensure students' activity? How should the activity of students be evaluated? How should the student-teacher relationship be established?

Teachers who teach in high school classrooms should think about these rhetorical questions during the preparation stage for the lesson and take them into account when planning the lesson. As it is known, the plan is the initial approach of the lesson that the teacher will teach. He prepares this document after he is confident about his lesson.

Experiences show that teachers of higher education institutions are mostly content with preparing lecture materials or presentations when preparing for a lesson. In many cases, they do not pay attention to the preparation of the plan that defines the parameters of the lesson. Or they treat it as an extra job. In fact, everyone who starts working, every educational worker, including a university teacher, should be aware of the work he is going to do, and he should have a clear idea of where it starts and ends. Therefore, each lesson should be organized and conducted according to the plan.

The successful and appropriate implementation of the lesson depends primarily on its planning. Planning requires a serious study and grouping of needs and requirements, and the design of a plan taking them into account.

Lessons are conducted on planned topics and involve the implementation of specific goals. Usually, in the preparatory stage, the teacher determines the goal according to the topic. Therefore, those goals should be formulated in such a way that they are action-oriented and require the application of acquired knowledge. Also, students' interactivity should play a leading role and have didactic importance in the methodological apparatus of the lesson based on stages. In this way, students should be able to conduct research and creative activities in the lesson as a researcher.

In the current conditions where educational reforms are being carried out, the progress in the teaching activities of the higher school teachers, especially the renewal of the content and structure of the lessons, changes in their philosophy should be discussed.

Keywords: lesson plan, content of training, lecture materials, planning, topic, goal educational reforms

GİRİŞ

Məlum olduğu kimi, təhsilin bütün pillə və səviyyələrində keyfiyyətin təmin olunması başlıca məqsədlərdən biri kimi diqqət mərkəzində saxlanılır. Onun daha uğurla həyata keçirilməsində planlaşdırma əsas vasitələrdən hesab edilir. Çünki planlaşdırma olmadan görülməli işin addımlarını müəyyənləşdirmək çətinləşir, müəyyən maneələr risk amili kimi gözlənilmədən fəaliyyətin zəifləməsinə və bəzən dayanmasına səbəb olur.

Təhsil müəssisələrində təlim onun təşkilindən başlayır. Bu isə əvvəlcədən bir sıra suallar üzərində düşünməyi tələb edir. Öyrənmə işi necə qurulmalıdır? Onun məzmununda nələr nəzərə alınmalıdır? Tələbənin fəallığını necə təyin etmək olar? Tələbənin fəaliyyəti necə dəyərləndirilməlidir? Tələbə-müəllim münasibətləri necə qurulmalıdır? və s.

Ali məktəb auditoriyalarında dərs deyən müəllim hər dərs üçün hazırlıq mərhələsində bu ritorik suallar ətrafında düşünməli və deyəcəyi dərslərin ümumi planını qurmaq üçün onları nəzərə almalıdır.

ARAŞDIRMALAR

İlkin araşdırmalar nəyi göstərir?

Məlum olduğu kimi, plan müəllimlərin deyəcəyi dərslərin ilkin yanaşmada layihəsidir.(1) Müəllim dərslərinin strukturu haqqında əminlik hasil etdikdən sonra onun hazırlanması ilə məşğul olmağa başlayır.

Təcrübələr onu göstərir ki, ali təhsil müəssisələrində müəllimlər əksər hallarda mühazirə materialı, yaxud təqdimat hazırlamaqla kifayətlənirlər. Dərslərin parametrlərini müəyyənləşdirməklə planın hazırlanmasına diqqət yetirmirlər. Yaxud ona əlavə, həm də artıq bir iş kimi yanaşırlar. Əslində fəaliyyətə başlayan hər kəs o cümlədən, ali məktəb müəllimi

yerinə yerinə yetirəcəyi işin fərqləndirilməli onun haradan başlayıb, harada bitməsinə aydın təsəvvür etməlidir. Ona görə də hər bir dərslər plan üzrə təşkil edilməli və aparılmalıdır.

Bu hal eynilə təhsil sistemində, o cümlədən müəllimlərin tədris fəaliyyətində baş verə bilər. Xüsusilə ali təhsildə, onun müxtəlif səviyyələrində kadrların bir mütəxəssis olaraq formalaşmasının tənzimlənməsində, işlərin ardıcıl və mərhələli şəkildə aparılmasında daha çox əhəmiyyət daşıyan şərt kimi qarşıya çıxır. Ona görə də ali təhsil pilləsində dərslər deyən hər bir müəllimin il ərzindəki tədris fəaliyyətinin planlı əsasda yerinə yetirilməsi dövlət əhəmiyyətli olmaqla ciddi strateji mahiyyət daşıyır. Onun konkret standartların reallaşdırılmasına xidmət göstərməsi və müvafiq qaydada hesabatlarla yekunlaşdırılması məsuliyyət yaradır. Hər bir müəllimin konkret fənn üzrə fəaliyyəti ixtisas və fənn standartlarının reallaşdırılmasına xidmət göstərməklə təzahür edir. Başqa sözlə, dərslər deyən müəllim kadr hazırlığı prosesində standartların reallaşması baxımından məsuliyyətlə üz-üzə dayanır. Ona görə də müəllim fəaliyyətinin planlaşdırılmasında belə hallar daha çox maraqlı doğurmalı, xüsusilə ixtisasa aid fənlər üzrə standartların tələbləri üzrə keyfiyyətlərin addım-addım reallaşdırılması izlənilməli, dəyərləndirilməli və yekunlaşdırılmalıdır. Xüsusilə təlimin əsas təşkilat forması olan dərslərin daha mükəmməlliyinə şərait yaratmaq üçün onun planlaşdırılma mərhələsinə daha çox diqqət yetirilməli və ciddi hazırlıq işləri aparılmalıdır.

İlkin araşdırmalar onu göstərir ki, ali təhsil müəssisələrinin müxtəlif sahələrində planlaşdırmaların aparılmasına xeyli diqqət yetirilsə də, müəllimlərin konkret dərslər saatlarını, onun məzmununu və sistemini planlaşdırmaqda çatışmazlıqlar hələ də qalmaqdadır.

Dərslər planı təlimin dizaynıdır.

Bu baxımdan yaranmış mülahizələrin doğruluğunu yəqin etmək üçün apardığımız araşdırmalar zamanı da şahid olduq ki, dərslər planları təlimin dizaynı adlandırılır və onlar müəllimlər üçün praktik təlim alətləri kimi dəyərləndirilir. Həmçinin məqsədəuyğun hesab edilir ki, müəllimlər dərslər saatlarını və mövzuları birgə götürərək eyni zamanda sillabus, dərslərlik və təhsil alanların faktiki vəziyyətini nəzərə alaraq təlimin məzmunu, təlim prosesi və təlim metodları ilə bağlı dizayn aparırlar. Çünki ali təhsil müəssisələrində müəllimlərin bir çoxu dərslər planları olmadan yalnız mühazirə və ya mühazirəyə dair qeydlərdən istifadə edirlər. Bəzi yeni fəaliyyətə başlayan müəllimlər isə sadəcə olaraq dərslər planlarının mənasını və nəticəsini aydın təsəvvür edə bilmirlər.(2)

Dərslər planı nə üçün lazımdır?

Göründüyü kimi, dərslər planının lazımi olub-olmaması hələ də, əvvəlki illərdə olduğu kimi, gündəmdə qalmaqdadır. Müəllimlər hələ də gündəlik planların hazırlanmasına artıq iş kimi yanaşmaqda davam edirlər. Xüsusilə ali təhsil müəssisələrinin professor-müəllim heyəti, yuxarıda göstəriləyi kimi, dərslərdə istifadə olunan materiallara dərslər planını əvəz edən sənəd kimi yanaşmaqdadır.

Dərslər planı, birinci növbədə, həyata keçiriləcək tədris prosesinin rəsmiləşdirilməsi üçün istifadə olunan zəruri sənəddir. O, müəllimin hazırladığı plan olsa da, funksiyasına görə həyata keçiriləcək dərslər prosesinin məzmun və strukturu və sair məsələləri barədə ilkin təsəvvür yaradır. Onun vasitəsi ilə hər hansı dinlənilməyən dərslər barəsində məlumat almaq mümkündür. Eyni zamanda müəllimin dərslər hazırlıq səviyyəsi barədə ilkin qənaətə gəlmək olur. Odur ki, müəllimlərin hazırladığı dərslər planları dərslərin proqram əsasında konkret cədvələ əsasən tədris olunması barədə ilkin təsəvvürün yaradılmasında əhəmiyyətli rol oynayır.

Dərslər planı, qeyd olunduğu kimi, müəllimin tədris fəaliyyətinin məzmununu əhatə etməklə özü tərəfindən hazırlanır. Eyni zamanda maraqlı olan hər bir strateji xarakterli idarəediciyə təqdim olunur. Çünki dərslərin bir öyrənmə prosesi kimi məqsədi, mahiyyəti və məzmunu gənclərin inkişafına təsir göstərən amil kimi xüsusi əhəmiyyət daşıyır. Ona görə də hər bir fənnin mahiyyətindən doğan və xüsusi təlim məqsədləri şəklində tələbələrə mənimsədilən bu anlayışlar, müddəalar, nəzəriyyə və faktlar aparıcı rol ilə diqqət mərkəzində olmalıdır.

Dərs planı haqqında danışarkən onun müəllimin fəaliyyət dairəsini müəyyənləşdirdiyi, eyni zamanda bir kompas olaraq lazımi istiqamətə yönəltdiyi qeyd olunur. Həmçinin bildirilir ki, “dərs planı tələbələrin nəyi öyrənməli olduğu və onun dərs müddətində vaxtını necə effektiv şəkildə həyata keçirməsi barədə yol xəritəsidir” (1)

Dərs planları müəllimin fəaliyyət istiqamətlərini əhatə etsə də, ümumi xarakter daşıyır və bununla müəllimin sitativ yanaşmalarına yol açır. Odur ki, bu sənəd haqqında mütəxəssislərin özünəməxsus qənaətləri vardır. Onların fikrincə, dərs planı tədris məqsədlərinin, təlim məqsədlərinə və onlara nail olmaq vasitələrinin ümumi konturlarını təqdim edir və heç bir halda tam xarakter daşıyan konkret fikir söyləmir. Məhsuldar və səmərəli dərs hər şeyin planlaşdırıldığı kimi baş verdiyi dərs deyil. Həm tələbələtin, həm də müəllimlərin bir-birindən öyrəndiyi dərslərdir. Elə dərs ki, hər kəs qarşılıqlı fikir mübadiləsində bir-birini dinləyir və bir-birindən öyrənir. Belə şəraitdə müəllimlərin daha yaxşı və keyfiyyətli işləmək cəhdi baş verir. Dərs planı strateji əhəmiyyət daşımaları ilə yanaşı, həm də müxtəlif funksiyaları özündə birləşdirən mürəkkəb bir struktur mexanizmidir. Bu mürəkkəblik, ilk növbədə, onun strukturunda özünü göstərir. Müxtəlif yanaşmalarda variativ xarakterli fikirlərdən ibarət olan bu yanaşmalara dərs planının hansı problemə, yaxud mövzuya aid olmasından asılı olmayaraq onun sadəliyi ayrıca qeyd olunur. İstər metodik aparaturasında, istərsə də ifadə etdiyi hər hansı məsələdən asılı olmayaraq sadədir. Digər əlaqəli bir şəxsin onu anlaması və başa düşməsidir. Təəssüflə qeyd etmək lazımdır ki, bəzi hallarda dərsin planı elə quruluşda və dildə hazırlanır ki, onu nəinki istifadə etmək, hətta anlamaq və başa düşmək belə çətinləşir. Ona görə də dərs planlarının sadə və anlaşılıqlı olması, həmçinin digər müəllimin ondan istifadə edə bilməsi, zəruri hallarda başqa müəllimlər tərəfindən reallaşdırıla bilməsi də vacib şərtlərdəndir.

Dərs planı necə hazırlanmalıdır?

Belə bir sualın meydana çıxması da təsadüfi olmamışdır. Müəllimlərlə aparılan çoxsaylı fikir mübadilələrində belə bir məsələnin daha çox maraq doğurduğu və müəllimlər tərəfindən səsləndirildiyi diqqəti cəlb etmişdir. Əslində dərs planının necə hazırlanması ilə bağlı çoxvariantlı fikirlərin olması da bəllidir. Və bunların içərisində təcrübəyə istinad etmək, sınılanmış yanaşmalara fərqli yer ayırmaq daha əhəmiyyətli hesab edilir.

Təcrübələr onu göstərir ki, ali təhsil müəssisələrində müəllimlər əksər hallarda mühazirə materialı, yaxud təqdimat hazırlamaqla kifayətlənirlər. Dərsin parametrlərini müəyyənləşdirməklə planın hazırlanmasına diqqət yetirmirlər. Yaxud ona əlavə, həm də artıq bir iş kimi yanaşırlar. Əslində fəaliyyətə başlayan hər kəs o cümlədən, ali məktəb müəllimi yerinə yerinə yetirəcəyi işin fərqi olmalı onun haradan başlayıb, harada bitməsini aydın təsəvvür etməlidir. Ona görə də hər bir dərs planı üzrə təşkil edilməli və aparılmalıdır.

Dərsin uğurlu və məqsədəuyğun qaydada reallaşdırılması ilkin olaraq onun planlaşdırılmasından daha çox aslıdır. Ona görə də planlar dərsin məqsədinə uyğun olaraq əhatə olunan məsələlərin, eləcə də tələbələrin ehtiyac və tələbatlarına uyğun hazırlanmalıdır. Həmçinin qarşıya qoyulmuş konkret məqsəd və vəzifələrin icrasına yönəldilməlidir.

İlkin olaraq dərs aydın və konkret ifadə olunan məqsədlərin reallaşdırılması istiqamətində qurulmalıdır. Məqsədlər inkişafyönümlü xarakter daşımaqla tələbələrin səriştəsəslı fəaliyyətinə təminat verməli və ölçülə bilən olmalıdır.

Həmçinin dərsin mərhələlərə əsaslanan metodik aparaturasında tələbələrin interaktivliyi aparıcı rol oynamalı və didaktik əhəmiyyət daşmalıdır. Dərsdə tələbələrin bir tədqiqatçı kimi axtarış aparmaq, kreativ fəaliyyət göstərə bilmək imkanlarının yarandığı və bu imkanların daha çox motivasiya xarakterli olması nəzərə alınmalıdır.

Nəzərə almaq lazımdır ki, təcrübələr də müəyyən nəzəri müddələrin əsasında yaranması ilə seçilir. Başlanğıc mərhələdə bir araşdırmanın nəticəsi kimi meydana çıxır. Yaxud bir müddəə olaraq irəli atılmaqla təcrübədən keçirilir. Bütün hallarda nəzəriyyə ilə təcrübənin sınağından keçərək geniş istifadə olunmağa başlayır. İstifadə olunduqca özünün istifadə olunma tarixini yaradır.

Təlimin əsas təşkilat forması-dərs.

Təlimin əsas təşkilat forması olan dərs haqqında da bu fikirləri söyləmək olar. Dərs özünün böyük bir inkişaf yolunu keçərək hazırkı daha modern mərhələyə gəlib çatmışdır. Onun barəsində araşdırma aparan, fikir söyləyən insanlar bu formanın müasir dövrdə daha kreativ xarakterdə olmasının zəruriliyini əsaslandırırlar. Onun istər elmi, istər metodiki baxımdan tələblərə cavab verməsindən bəhs edirlər. Bütün bunlarla yanaşı, onun daha mükəmməl planlaşdırılmasının vacibliyini də göstərir. Təcrübələr də onu göstərir ki, daha yaxşı düşünülmüş plan olmadıqda dərsin ardıcıl və sistemli qurulmasında yanlışlıqlara yol verilir. Qoyulmuş məqsədə doğru atılan addımlarda qeyri-dəqiq yanaşmalar baş verir. Həmçinin tələbə maraqlarının nəzərə alınmasında düzgün olmayan qərarlar qəbul edilir. Ona görə də aparılan araşdırmalarda uğurlu dərs planının hazırlanmasında aşağıdakı cəhətin nəzərə alınması məqbul hesab edilir.

1. Təlim məqsədinin müəyyənləşdirilməsi.
2. Təlim fəaliyyətinin, onun mərhələlərinin məzmununun müəyyən olunması.
3. İnkişafın müəyyən olunması üçün qiymətləndirmə mexanizmlərinin konkretləşdirilməsi.

Ali məktəb müəllimlərinin tədris işində, əsasən, tələbə və müəllimlərin qarşılıqlı fəaliyyəti bütövlükdə prosesin səmərəliliyində daha çox rol oynadığından bu işin effektiv qurulması və planlı şəkildə mərhələlərlə aparılması təklif edilir. Qabaqcıl təcrübəyə əsasən belə nəticəyə gəlmək olar ki, həmin mərhələləri aşağıdakı kimi qurmaq məqsədəuyğundur:

1. Dərsdən əvvəlki mərhələ.
2. Dərs mərhələsi.
3. Dərsdən sonrakı mərhələ.

Dərsdən əvvəlki mərhələni hazırlıq mərhələsi də adlandırmaq olar. Burada başlıca məqsəd dərsi daha məhsuldar, keyfiyyətli təşkil etmək üçün ona müvafiq hazırlıq işi aparmaqdan ibarətdir.(1;3;5)

Təlim məqsədlərinin müəyyənləşdirilməsi.

Müşahidələr onu göstərir ki, hazırlıq nə qədər lazımlı bir mərhələ olsa da, müəllimlər çox hallarda ona məhdud vaxt ayırır, müvafiq materialları nəzərdən keçirməklə öz vəzifələrini bitmiş hesab edirlər. Yaxud konkret mövzu üzrə nəzəri materialları xatırlamaq üçün gözdən keçirir və bunula işlərini başa vurmuş olurlar. Əslində dərsdən əvvəlki hazırlıq mərhələsi görülən işləri müəyyən etməklə onların ardıcıl planını hazırlamaqdan ibarətdir. Bu işlərin içərisində məqsədin müəyyən olunması ön planda dayanır. Hər dərs üçün məqsədi konkretləşdirməklə onun sistemini əvvəlcədən müəyyənləşdirmək asanlaşır. Həmçinin məqsədlər dərsin təlim keyfiyyəti haqqında fikir söyləməyə imkan verir. Məsələn, "Pedaqogika" üzrə "Təlim metodlarını müqayisəli təhlil etməklə fərqləndirir", "Dərsin mərhələləri arasında əlaqə və bağlılığı nümunələrlə əsaslandırır", "Blum taksonomiyalarına əsasən təhsil standartları hazırlayır", "Təhsilin məzmunu haqqında biliklərə istinad edərək fənn proqramlarının hissələrinə aid nümunələr (səriştə, məzmunun təsviri və s.) hazırlayır", Göründüyü kimi, bu təlim məqsədlərində sadəcə biliklər deyil, həmçinin tələbələrə "müqayisə aparmaq", "fərqləndirmək", "əsaslandırmaq", "standart nümunələri hazırlamaq" kimi tətbiq bacarıqları tələb olunur. Beləliklə, dərs prosesində həm müəllimlərin, həm də tələbələrin bu müddəalara fokuslaşmaları vacib hesab edilir. Beləliklə, bütövlükdə dərsin məzmunu və fəaliyyətlər belə bir praktik məqsədin reallaşdırılmasına yönəldilir.

Təlim məqsədləri müəyyənləşdirilərkən onlara hansı didaktik tələblər verilə bilər? Burada başlıca cəhət ondan ibarətdir ki, tələbələrin nəyi biləcəyi və ya edə biləcəyi aydın şəkildə ifadə olunsun. Bununla yanaşı, aşağıdakılar da nəzərə alınsın:

- aydın şəkildə ifadə edilməsi;
- əldə olunmasının mümkünlüyü;
- nümayiş etdirilən və ölçülə bilən olması;
- inkluzivliyin nəzərə alınması;

- proqramın məqsədlərinə uyğunluq.

Əlbəttə, bu problemlə bağlı xüsusi tədqiqatlar aparılırsa, tələblərin məzmunu və sayı dəyişə də bilər.

Tədris fəaliyyətinin konturları haqqında.

İkinci mərhələ xüsusi təlim fəaliyyətlərinin planlaşdırılmasıdır. Bunun üçün, ilk növbədə, məqsədin reallaşdırılmasında əhəmiyyətli hesab edilən fəaliyyət növləri müəyyən olunmalı və təlim materiallarının seçilməsi üzrəində iş aparılmalı, hər bir müəllim bu mərhələdə materialların xarakterindən irəli gələn və potensial imkanlara uyğun olan strateji addımlardan istifadə etməlidir. Başlıca olaraq aşağıdakı suallar ətrafında düşünülməlidir:

- Təlim marağı yaratmaq üçün nə edəcəm?
- Mövzunu fərqli şəkildə təqdim etmək üçün nədən başlayacam?
- Tələbələrin diqqətini mövzuya necə cəlb edəcəm?
- Təlim materiallarının daha yaxşı anlaşılması üçün hansı real həyat nümunələri, analogiyalar və vəziyyətlərdən istifadə edəcəm?
- Mövzunun daha yaxşı başa düşülməsi üçün əlavə olaraq daha nə edə biləcəm?

Öyrənmə strategiyasının müəyyənəndirilməsi.

Bununla yanaşı, tələbələrin öyrənmə strategiyasını da müəyyənəndirmək müəllimin üzərinə düşən ciddi vəzifədir. Ona görə də o, qeyd olunan məsələ ətrafında araşdırmalar apararaq özünün bu istiqamətdəki fəaliyyətində də qətiyyətli addımlarını müəyyənəndirməlidir. Təcrübələr göstərir ki, təlim prosesində, əsasən, aşağıdakı fəaliyyət növlərindən istifadə edilir.

1. Materiallarla qarşılıqlı əlaqə və tanışlıq.
2. Rəqəmsal məzmunla qarşılıqlı əlaqə.
3. Müəllim-şagird münasibətləri və həmyaşıdlarla qarşılıqlı əlaqə.
4. Tənqidi düşünmək və problemi həll etmək
5. Refleksiya (tələbənin münasibəti)

Tələbələrin təlim işi dərslərin məqsədlərinə uyğun olmalı, fəal konstruktiv, orijinal əməkdaşlıq yollarına cəlb etməli, praktik əhəmiyyət daşımalıdır.

Qiymətləndirmə fəaliyyətinin təşkili

Qiymətləndirmə ali məktəb auditoriyasında tələbələrin öyrənmə fəaliyyətini təmin edən mexanizmlərdən biridir. Müasir hesab edilən dərslərin hamısında bu elementin olması vacib hesab edilir. Çünki o dərslərin planını məzmun və struktur cəhətdən tamamlayır, tələbələrin fəaliyyətinin daha effektiv ölçülməsinə imkan yaradır və istifadə olunmuş tədris metodlarına tənqidi yanaşmağa imkan verir.(6)

SONUC

Bu gün müasir dünyanın təhsil merediyasında təhsilin bütün pillə və səvuyələrində, o cümlədən ali təhsildə vacib olan məsələlərdən biri kimi dərslərin daha modern planlaşdırılması dayanır. Bu barədə düşünmək və daha effektiv formalar tapmaq üçün araşdırmalar aparmaq, müzakirələr keçirmək pedaqoq alimlərin üzərinə düşür.

AI-DRIVEN PERSONALIZATION IN TOURISM: ANALYZING SUSTAINABLE TRAVEL PREFERENCES WITH MACHINE LEARNING

Anxhela Ferhataj

Department of Informatics & Technology, Faculty of Engineering, Informatics and Architecture, European University of Tirana, Tirana, Albania

ABSTRACT

Artificial Intelligence (AI) is revolutionizing the tourism industry by delivering hyper-personalized travel experiences and fostering sustainable practices. This study explores the adoption of AI-driven recommendations for eco-friendly travel, focusing on the interplay of perceived cost-benefit ratios, trust in AI systems, and environmental values among 157 tourists. The research identifies critical drivers of AI adoption, offering actionable insights into its transformative role in sustainable tourism. Perceived cost-effectiveness significantly predicts adoption (Odds Ratio = 2.87, $p < .001$), highlighting its critical role in encouraging AI adoption for sustainable travel. Trust in AI systems emerges as a significant predictor, doubling the likelihood of adoption with incremental increases in trust levels. Furthermore, tourists with strong environmental values are 15 times more likely to recognize AI's potential in monitoring environmental impacts and promoting sustainable behaviors, underscoring the synergy between eco-consciousness and AI personalization. This study underscores how AI can align ethical system design with sustainable personalization, providing stakeholders actionable pathways to enhance trust and adoption. By integrating behavioral data with machine learning insights, it provides practical strategies for tourism stakeholders to develop transparent, cost-effective, and sustainability-oriented AI platforms. These findings contribute to advancing global sustainability goals while enhancing trust and engagement in AI technologies.

Keywords: sustainable tourism, artificial intelligence, eco-friendly travel, machine learning, personalization, ethical AI.

INTRODUCTION

Artificial Intelligence (AI) has emerged as a transformative force in the tourism industry (García-Madurga & Grilló-Méndez, 2023), offering unprecedented opportunities to enhance user experiences while promoting sustainability (Majid, Tussyadiah, Kim, & Pal, 2023). AI systems leverage advanced algorithms and datasets to provide eco-friendly recommendations, including sustainable accommodations and low-carbon travel options (Filieri, D'Amico, Destefanis, Paolucci, & Raguseo, 2021; Zlatanov & Popesku, 2019). This dual role of AI in improving convenience and supporting sustainable practices has made it a cornerstone of modern tourism solutions (Bulchand-Gidumal, William Secin, O'Connor, & Buhalis, 2023; Pencarelli, 2020).

Despite its potential, AI adoption in sustainable tourism faces several challenges. Tourists' perceptions of cost-benefit tradeoffs, trust in AI systems, and alignment with environmental values significantly influence their willingness to embrace these technologies (Miceli, Hagen, Riccardi, Sotti, & Settembre-Blundo, 2021). Trust issues, in particular, are exacerbated by

concerns about data privacy, algorithmic transparency, and ethical decision-making, as highlighted in the broader field of AI services (Huang & Rust, 2018). Addressing these barriers is critical to unlocking AI's transformative potential.

As a rapidly emerging tourism destination, Albania offers a unique case for exploring the adoption of AI technologies in fostering sustainable tourism. With its diverse cultural and natural attractions, the country is poised to benefit significantly from AI-powered solutions, addressing both sustainability challenges and personalization demands in tourism. This study examines how trust, perceived benefits, and environmental values influence the adoption of AI-driven personalization for sustainable tourism. To address these challenges, this study is guided by the following research questions:

1. What factors influence tourists' adoption of AI-driven personalized recommendations for sustainable travel?
2. How do trust, perceived benefits, and environmental values shape tourists' behaviors and preferences?

This research contributes to the growing literature by offering actionable insights for tourism stakeholders. It emphasizes designing ethical, transparent, and user-centric AI systems that align with both individual preferences and broader sustainability goals.

LITERATURE REVIEW

AI-Driven Personalization in Tourism

AI technologies are transforming tourism by creating hyper-personalized travel experiences while encouraging sustainable practices (Solakis, Katsoni, Mahmoud, & Grigoriou, 2024; Buhalis, et al., 2019). AI-driven tools, including chatbots, virtual assistants, and recommendation engines, utilize advanced machine learning algorithms to analyze large datasets, offering recommendations tailored to user profiles (Samala, Katkam, Bellamkonda, & Rodriguez, 2022). These capabilities extend beyond user convenience, actively encouraging sustainable practices (Pencarelli, 2020) such as selecting green-certified accommodations, opting for low-carbon transportation modes, or visiting less crowded destinations, thereby aligning with global sustainability goals (Arora & Chandel, 2024; Majid, Tussyadiah, Kim, & Pal, 2023).

Yet, the success of AI-driven personalization in tourism depends on its ability to align recommendations with consumer values and deliver consistent, contextually relevant outcomes (Buhalis, et al., 2019). Without this alignment, the perceived value of such systems diminishes, especially when sustainability-related decisions involve trade-offs between convenience and ecological responsibility. Thus, the design of AI systems must consider not only the technical aspects but also the behavioral and ethical dimensions of user engagement.

Factors Influencing AI Adoption

The adoption of AI in tourism is shaped by a complex interplay of technological, psychological, and ethical factors. Drawing on the Technology Acceptance Model (TAM) (Davis F. D., 1989; Davis, Bagozzi, & Warshaw, 1989), perceived usefulness and ease of use emerge as critical determinants. These translate into tourists' evaluations of the relevance and convenience of AI recommendations versus their concerns about data privacy, algorithmic transparency, and reliability (Kim, So, Shin, & Li, 2024). As travelers increasingly demand seamless and secure services, integrating real-time data into AI systems has been identified as a key driver for enhancing perceived value (Gretzel, Werthner, Koo, & Lamsfus, 2015).

Recent research on AI adoption trade-offs further highlights the critical role of transparency and environmental sustainability in shaping user preferences (Ioku, Song, & Watamura, 2024). The study revealed that consumers prioritize transparency over performance when choosing AI systems, but tend to value performance over environmental sustainability. This finding underscores the importance of balancing ethical design with practical utility to cater to diverse consumer priorities. Moreover, the study noted that future-oriented individuals place greater emphasis on sustainability, aligning with broader trends in pro-environmental behavior and the need for eco-conscious AI solutions.

Trust plays a pivotal role in shaping adoption behaviors. Transparent AI features such as explainable algorithms and ethical data practices can directly address trust barriers, facilitating higher adoption rates. Tussyadiah (2020) emphasizes that skepticism surrounding AI's fairness, transparency, and reliability remains a significant barrier, particularly among tech-savvy users. Huang and Rust (2018) argue that trust in AI systems is contingent upon their ability to demonstrate ethicality, unbiased decision-making, and clear communication of how data is utilized. These findings suggest that addressing user concerns about transparency and fairness is essential for fostering trust and ensuring widespread adoption.

Environmental Values and AI Adoption

Environmental values are increasingly recognized as critical determinants of consumer behavior, particularly in the adoption of AI-driven sustainable travel solutions. Studies indicate that individuals with strong pro-environmental attitudes are more likely to embrace eco-friendly recommendations (Miceli, Hagen, Riccardi, Sotti, & Settembre-Blundo, 2021). This relationship is further supported by Sharmin et al. (2020), who demonstrate that environmental sustainability awareness (ESA) significantly enhances environmentally sustainable behavior (ESB) among millennial tourists. By applying the value-belief-norm (VBN) theory and the new ecological paradigm (NEP), Sharmin et al. found that awareness plays a pivotal role in motivating pro-environmental behaviors, particularly in natural protected areas (Sharmin, Sultan, Badulescu, Bac, & Li, 2020). These findings highlight the importance of designing AI systems that align with tourists' ecological values to encourage sustainable tourism practices. However, de Freitas Netto et al. (2020) caution against the risks of executional greenwashing, where superficial measures overshadow substantive environmental actions (de Freitas Netto, Sobral, Ribeiro, & Soares, 2020). For instance, AI systems promoting "green" options without genuine environmental benefits may alienate environmentally conscious users and deter long-term adoption.

Ioannou et al. (2023) further highlights the contingent role of a firm's capability reputation in mitigating the adverse effects of perceived greenwashing. Their research demonstrates that organizations with a strong reputation for sustainability can partially offset the negative impacts of perceived hypocrisy, preserving customer satisfaction and trust (Ioannou, Kassinis, & Papagiannakis, 2023). In the context of tourism, this suggests that businesses leveraging AI to promote sustainability must ensure that their recommendations are both credible and supported by actionable data.

Building on theoretical and empirical insights, this study examines the adoption of AI-driven personalized recommendations in sustainable tourism. The following hypotheses are proposed:

- H1: Tourists with a higher perceived benefit-to-cost ratio are significantly more likely to adopt AI-driven personalized recommendations for sustainable travel. ($\alpha = 0.05$). This hypothesis draws from the Technology Acceptance Model (Davis F. D., 1989; Davis, Bagozzi, & Warshaw, 1989), which emphasizes the influence of perceived

usefulness and ease of use on technology adoption. The perceived benefit-to-cost ratio, encompassing factors like cost savings, enhanced personalization, and convenience, plays a critical role in influencing adoption rates (Granić, 2024). AI systems that clearly demonstrate tangible advantages are expected to gain higher acceptance among tourists.

- H2: Trust in the ethicality and transparency of AI systems positively impacts tourists' willingness to adopt eco-friendly travel options. ($\alpha = 0.05$).

Trust has emerged as a pivotal determinant of technology adoption, particularly in the context of AI. Transparent decision-making processes, clear communication about data usage, and the ethical design of AI systems significantly enhance user confidence (Tussyadiah, 2020). Additionally, unbiased recommendations and adherence to ethical principles foster trust, thereby increasing adoption rates for eco-friendly travel options (Bulchand-Gidumal, William Secin, O'Connor, & Buhalis, 2023).

- H3: Tourists with stronger environmental values are more likely to adopt AI-driven sustainable travel recommendations and report higher satisfaction with these services. ($\alpha = 0.05$).

Environmental values are a strong predictor of pro-sustainable behaviors. Tourists who prioritize ecological responsibility are more likely to resonate with AI-generated recommendations that align with their values (Sharmin, Sultan, Badulescu, Bac, & Li, 2020). When AI systems reflect users' environmental priorities, they not only drive adoption but also enhance satisfaction by fostering a sense of alignment and trust.

These hypotheses provide a comprehensive framework for analyzing the psychological, ethical, and contextual factors influencing the adoption of AI-driven systems in sustainable tourism. By addressing these dimensions, the study seeks to offer actionable insights into the design of AI systems that meet user expectations and promote responsible travel behaviors.

METHODOLOGY

This study adopts a quantitative research approach to examine the factors influencing tourists' adoption of AI-driven personalized recommendations for sustainable travel. An online structured questionnaire was distributed, and 157 participants from Albania were surveyed, during September and October 2024. The sample reflects the perspectives of a growing tourism market in a developing economy, where technology adoption is gaining traction but faces unique barriers, such as affordability and digital literacy. Participation was voluntary, and respondents were informed about the study's objectives, confidentiality measures, and their right to withdraw at any time. The survey captured key behavioral drivers of AI adoption, focusing on cost-benefit perceptions, trust, and environmental values.

Survey Instrument

The questionnaire was structured into five key sections, each designed to gather specific insights:

1. Travel Habits:

This section collected participants' travel frequency, and familiarity with AI technologies. These variables were essential to contextualizing the findings and ensuring the sample's diversity and representativeness.

2. Familiarity with AI Systems:

Respondents assessed their exposure to and usage of AI tools, such as chatbots, virtual assistants, and recommendation engines. This section aimed to establish participants'

baseline familiarity with AI-driven services, a crucial factor for understanding adoption behaviors.

3. Perceived Benefits and Costs:

Participants evaluated the utility of AI systems, focusing on benefits such as personalized recommendations, enhanced efficiency, and cost-effectiveness, alongside trade-offs like privacy concerns and perceived costs. Responses were captured on a 5-point Likert scale (1 = Strongly Disagree to 5 = Strongly Agree), enabling quantitative analysis of sentiment towards AI-driven systems.

4. Trust and Ethical Considerations:

This section explored participants' perceptions of the ethicality and transparency of AI systems. Questions addressed key concerns, including data privacy, algorithmic biases, and transparency in recommendations, as these factors are pivotal in influencing trust and adoption.

5. Environmental Values and Behaviors:

Respondents indicated their alignment with eco-friendly practices and their willingness to engage with AI systems promoting sustainable travel. This section examined the role of environmental values in shaping attitudes toward AI-driven tourism solutions.

To ensure the questionnaire's reliability and validity:

- Cronbach's Alpha: The internal consistency of the survey instrument was evaluated, resulting in a high coefficient of 0.978, which demonstrates excellent reliability (table 1).

Data Analysis

Data were analyzed using JASP version 0.19.1.0, combining statistical and machine learning techniques to explore relationships between variables and identify key adoption drivers:

1. Descriptive Statistics

2. Inferential Statistics:

- Spearman's Rho correlation was employed to measure associations between the key variables of this study, including perceived benefits, trust, and environmental values, and their influence on the likelihood of adopting AI-driven personalized recommendations for sustainable travel (Lovie, 1995). The survey utilized a 5-point Likert scale (1 = Strongly Disagree to 5 = Strongly Agree) to measure participants' responses. Spearman's Rho is well-suited for ordinal data as it evaluates rank-order relationships without assuming equal intervals between scale points.
- Hypothesis Testing: Conducted using a 95% confidence interval to examine the statistical significance of relationships between key constructs.

3. Machine Learning Analysis: This study employs logistic regression, a widely used machine learning algorithm, to investigate the factors influencing tourists' adoption of AI-driven personalized recommendations for sustainable travel. Logistic regression, valued for its predictive accuracy and interpretability, provides insights into how variables such as trust, perceived cost-effectiveness, and environmental values influence tourists' willingness to adopt eco-friendly AI solutions. This approach highlights the

role of machine learning in advancing personalized tourism experiences while supporting sustainability objectives. By modeling behavioral data, logistic regression enables tourism stakeholders to quantify the likelihood of adoption based on key predictors. The integration of machine learning within the study framework underscores the transformative potential of AI in fostering sustainable tourism practices through dynamic, data-driven personalization.

RESEARCH AND FINDINGS

What factors influence tourists' adoption of AI-driven personalized recommendations for sustainable travel?

The study reveals that time-saving benefits are the most influential factor driving tourists' adoption of AI-driven personalized recommendations (table 2 and table 3). Over 53.50% of respondents strongly agree that AI tools save time in organizing and booking travel, with an additional 26.75% moderately agreeing. This factor demonstrated the strongest correlation with adoption (Spearman's $\rho = 0.568$, $p < 0.001$), underscoring its significance. These findings align with the Technology Acceptance Model (TAM), where perceived usefulness is pivotal in technology adoption (Davis, Bagozzi, & Warshaw, 1989; Davis F. D., 1989). In tourism, where complex planning and decision-making often deter users, AI systems that automate itinerary creation, booking, and updates are seen as indispensable. The findings suggest that efficiency and convenience dominate tourists' preferences, making time-saving features the cornerstone of AI design for travel platforms. High-impact systems that integrate automation with real-time updates can not only simplify travel planning but also create a competitive advantage for tourism providers.

The ability of AI to simplify decision-making is another critical factor, with 45.22% of respondents strongly agreeing and 37.58% moderately agreeing that AI tools help them make better travel decisions. This factor demonstrated a strong positive correlation (Spearman's $\rho = 0.437$, $p < 0.001$), emphasizing its importance in addressing the cognitive load associated with travel choices. Tourists rely on AI tools not just for convenience but also for confidence in their decisions. This aligns with broader theories of bounded rationality, where users seek decision-support systems that reduce uncertainty and enhance clarity. However, trust in AI systems remains a cornerstone for adoption. Developers must prioritize algorithmic transparency, ensuring that users understand how recommendations are generated and why they are relevant. This can be achieved through features like explainable AI and user-friendly interfaces, fostering trust and encouraging wider adoption.

Although cost-effectiveness was less critical than time-saving, it remains significant, with 47.13% strongly agreeing and a moderate positive correlation observed (Spearman's $\rho = 0.337$, $p < .001$). This factor demonstrated a moderate positive correlation (Spearman's $\rho = 0.337$, $p < 0.001$), suggesting that financial benefits are valued but not the primary driver of

adoption. Tourists, particularly those who are budget-conscious, appreciate AI systems that optimize pricing and highlight cost savings. However, the data suggests that cost savings alone are insufficient to drive widespread adoption without being coupled with other benefits like time-saving and trust. Tourism platforms should integrate price-comparison tools and exclusive deals into their systems while emphasizing other advantages to capture a broader audience.

Sustainability is a moderately influential factor, with 52.23% strongly agreeing and 33.76% moderately agreeing that AI promotes eco-friendly travel options. These findings highlight the opportunity to enhance AI systems with features such as carbon footprint calculators and green-certified recommendations to appeal to eco-conscious travelers. The correlation (Spearman's $\rho = 0.362$, $p < 0.001$) indicates that tourists value AI's ability to recommend green-certified accommodations, low-carbon transport options, and sustainable itineraries. This finding aligns with global trends in pro-environmental behavior and highlights the role of AI in bridging the gap between individual preferences and sustainability goals. Eco-conscious travelers are drawn to AI systems that promote responsible tourism (Miceli, Hagen, Riccardi, Sotti, & Settembre-Blundo, 2021; Ioannou, Kassinis, & Papagiannakis, 2023), suggesting an opportunity for developers to integrate environmental impact metrics such as carbon footprint calculators. Furthermore, by partnering with eco-friendly organizations, tourism platforms can position AI tools as drivers of sustainable practices, appealing to this growing segment. In the context of Albania's growing tourism industry, these findings provide valuable insights into how AI systems can address key challenges, such as affordability and sustainability. Tourism providers in Albania could leverage these insights to enhance their competitiveness in the regional and global markets.

How do trust, perceived benefits, and environmental values shape tourists' behaviors and preferences?

The interaction between trust, perceived benefits, and environmental values forms a crucial foundation for understanding how tourists engage with AI-powered tools in tourism. These insights highlight the transformative role of AI in enhancing travel experiences, addressing environmental challenges, and fostering innovation in the tourism industry.

Trust displayed a moderate positive correlation with tourist behaviors and preferences (Spearman's $\rho = 0.471$, $p < 0.001$), highlighting its role as a key determinant of AI adoption. Tourists who perceive AI systems as transparent, ethical, and reliable exhibit a greater likelihood of using these tools. However, persistent concerns around data privacy, algorithmic fairness, and transparency underline the importance of fostering trust through robust safeguards. Clear communication about how data is collected, stored, and utilized is critical, as is the implementation of explainable AI (XAI) to demystify the decision-making process. By addressing these concerns, AI platforms can enhance user confidence and secure greater engagement, paving the way for wider adoption across diverse demographics.

Perceived benefits emerged as the strongest driver of tourists' behaviors and preferences (Spearman's $\rho = 0.723$, $p < 0.001$), reinforcing the primacy of tangible advantages in AI adoption. Tourists prioritize AI tools that deliver measurable improvements, such as saving time, enhancing personalization, and providing cost-effective solutions. These findings align with the Technology Acceptance Model (TAM), which emphasizes perceived usefulness as a critical factor in technology adoption (Davis F. D., 1989; Davis, Bagozzi, & Warshaw, 1989). Dynamic pricing, personalized itineraries, and seamless booking experiences were among the most valued features. This underscores the importance of designing AI systems that not only optimize efficiency but also cater to the individual needs of travelers. Tourism platforms that

visibly demonstrate these benefits are more likely to attract and retain users while achieving competitive differentiation.

Environmental values were positively but less strongly correlated with tourist behaviors and preferences (Spearman's $\rho = 0.309$, $p < 0.001$). Eco-conscious travelers recognize AI's potential to facilitate sustainable tourism by promoting green-certified accommodations, low-carbon transportation, and resource-efficient practices. While sustainability is not the primary motivator for adoption, it appeals to a growing segment of environmentally conscious tourists. Notably, 38% of respondents identified improving mass tourism management as AI's most significant contribution to sustainability, followed by efficient resource use (21.6%) and waste reduction through green technologies (19.1%) (figure 1). These findings emphasize the opportunity for AI platforms to address overtourism and promote responsible travel behaviors. Developers can further engage eco-conscious travelers by integrating features like carbon footprint calculators and collaborating with sustainable organizations.

Despite the potential for AI to advance sustainability, there remains a knowledge gap. Nearly 43% of respondents rated AI as important or very important for achieving sustainability objectives, but 36.9% remained neutral, suggesting limited awareness of AI's environmental contributions (figure 2). This highlights the need for targeted awareness campaigns to showcase how AI can mitigate environmental challenges and drive sustainable tourism practices. Such initiatives can position AI as a tool not only for enhancing individual travel experiences but also for contributing to broader sustainability goals.

The findings also shed light on cost-benefit perceptions, a critical factor for smaller enterprises. While 38.2% of respondents believe the benefits of AI slightly outweigh its costs, and 14.6% view benefits as significantly greater, 22.2% perceive costs as exceeding benefits (figure 3). This suggests that affordability remains a barrier, particularly for small and medium enterprises (SMEs) in the tourism sector. To address this, scalable and cost-effective AI solutions tailored to the needs of SMEs must be developed. Subsidized implementation programs or partnerships with technology providers could further lower entry barriers and democratize access to advanced AI tools.

In summary, perceived benefits stand out as the most significant factor influencing tourist behaviors, followed by trust and environmental values. Tourists are most likely to adopt AI systems that deliver tangible advantages, such as personalization, efficiency, and cost savings, while trust plays a pivotal role in fostering long-term engagement. Sustainability, although a secondary motivator, represents a growing opportunity to attract eco-conscious travelers and contribute to global environmental goals. Tourism stakeholders must adopt a holistic approach that integrates these factors into the design and implementation of AI systems to maximize adoption, enhance traveler satisfaction, and drive sustainable innovation in the industry.

Table 4: Spearman's Correlations

Variable		Trust	Perceived Benefits	Environmental Values	Tourist Behaviors and Preferences
Trust	Spearman's rho	—			
	p-value	—			
Perceived Benefits	Spearman's rho	0.476***	—		
	p-value	< .001	—		
Environmental Values	Spearman's rho	0.318***	0.412***	—	
	p-value	< .001	< .001	—	
Tourist Behaviors and Preferences	Spearman's rho	0.471***	0.723***	0.309***	—
	p-value	< .001	< .001	< .001	—

H1: Tourists with a higher perceived benefit-to-cost ratio are significantly more likely to adopt AI-driven personalized recommendations for sustainable travel. ($\alpha = 0.05$).

The logistic regression model demonstrated a significant improvement over the null model, as shown in Table 5 ($\Delta X^2 = 18.673$, $p < .001$). The inclusion of perceived cost-effectiveness as a predictor significantly improved the model fit, with a McFadden R^2 of 0.094 and a Nagelkerke R^2 of 0.156, indicating that the model explains approximately 15.6% of the variance in tourists' perceptions of AI-driven travel personalization. The analysis revealed that perceived cost-effectiveness was a significant predictor of adoption (Odds Ratio = 2.87, 95% CI [1.69, 4.86], $p < .001$) (table 6). A one-unit increase in perceived cost-effectiveness tripled the likelihood of AI adoption for sustainable travel (Odds Ratio = 2.87, $p < .001$). These results underscore the importance of emphasizing cost-saving features in AI systems to drive adoption and engagement.

The findings confirm that perceived cost-effectiveness is a pivotal factor influencing tourists' adoption of AI-driven recommendations, supporting Hypothesis 1 (H1). This aligns with the Technology Acceptance Model (TAM), which posits that perceived usefulness drives technology adoption. The observed odds ratio (2.87) highlights the strength of this relationship, suggesting that tourists are highly motivated by features that offer financial value. The negative intercept highlights the importance of predictors like perceived cost-effectiveness in driving adoption. Without perceived financial or functional benefits, tourists are unlikely to engage with AI-driven personalization tools, reinforcing the significance of cost-saving features. Practically, these results emphasize the need for tourism platforms to prioritize tools like dynamic pricing algorithms, cost-comparison features, and exclusive deals to enhance perceived value. Moreover, transparency about cost savings can further build user trust and encourage sustained engagement. While the model explains a moderate portion of the variance (Nagelkerke $R^2 = 0.156$), it suggests that additional factors, such as trust in AI systems and environmental values, also play significant roles. Future research should explore these dimensions to provide a holistic understanding of adoption drivers.

Table 5: Logistic Regression

Model Summary - Adoption of AI-driven personalized recommendations

Model	Deviance	AIC	BIC	df	ΔX^2	p	McFadden R^2	Nagelkerke R^2	Tjur R^2
M ₀	197.966	199.966	203.022	156			0		0
M ₁	179.293	183.293	189.406	155	18.673	< .001	0.094	0.156	0.119

Note. M₁ includes Perceived Benefit-to-Cost Ratio.

H2: Trust in the ethicality and transparency of AI systems positively impacts tourists' willingness to adopt eco-friendly travel options. ($\alpha = 0.05$).

The logistic regression model demonstrated a significant improvement over the null model, as shown in Table 7 ($\Delta X^2 = 7.256$, $p = 0.007$). The inclusion of trust in AI systems as a predictor significantly improved the model fit, with a McFadden R^2 of 0.035 and a Nagelkerke R^2 of 0.062, indicating that the model explains approximately 6.2% of the variance in tourists' willingness to adopt eco-friendly travel options. The analysis revealed that trust in AI systems was a significant predictor of willingness to adopt eco-friendly options (Odds Ratio = 2.07, 95% CI [1.18, 4.86], $p = 0.009$) (table 8). Specifically, a one-unit increase in trust in AI systems increased the likelihood of willingness to adopt eco-friendly travel options by approximately 107%. These results underscore the importance of trust as a driver of sustainable behavior in tourism.

The findings confirm that trust in AI systems plays a critical role in influencing tourists' willingness to adopt eco-friendly travel options, supporting Hypothesis 2 (H2). Trust emerged as a key driver, enhancing tourists' perceptions of reliability, transparency, and ethicality in AI-driven platforms. These findings align with previous research emphasizing the role of trust in fostering positive attitudes toward AI technologies, particularly in domains with ethical and environmental implications (Arora & Chandel, 2024; García-Madurga & Grilló-Méndez, 2023; Bulchand-Gidumal, et al., 2023). The study highlights three actionable strategies for tourism platforms:

1. Explainable AI (XAI): Transparent explanations for recommendations reduce skepticism and improve user confidence.
2. Data Privacy and Security: Clearly communicating data practices fosters trust and ethical integrity.
3. Ethical AI Design: Promoting inclusivity and fairness in recommendations (e.g., diverse eco-friendly options) can further enhance reliability.

While the model explains a relatively small portion of the variance (Nagelkerke $R^2 = 0.062$), additional factors such as perceived benefits and environmental values likely contribute to eco-friendly adoption. Exploring these dimensions in future studies will provide a more comprehensive understanding of the mechanisms underlying sustainable tourism behaviors. This analysis emphasizes the importance of integrating ethical, transparent, and user-centered AI systems to foster greater adoption of eco-friendly travel options and align with global sustainability objectives.

Table 7: Logistic Regression

<i>Model Summary - Willingness to adopt eco-friendly travel options</i>									
Model	Deviance	AIC	BIC	df	ΔX^2	p	McFadden R^2	Nagelkerke R^2	Tjur R^2

						Lower bound	Upper bound
M ₀	(Intercept)	0.507	0.165	1.661	0.002	0.184	0.83
M ₁	(Intercept)	-2.15	1.032	0.117	0.037	-4.171	-0.128
	Trust in AI systems	0.727	0.28	2.07	0.009	0.178	1.277

Note. Willingness to adopt eco-friendly travel options level '1' coded as class 1.

Source: Author's creation

H3: Tourists with stronger environmental values are more likely to adopt AI-driven sustainable travel recommendations and report higher satisfaction with these services. ($\alpha = 0.05$).

The logistic regression model for the adoption of AI-driven systems in monitoring environmental impacts and encouraging responsible travel behaviors demonstrated a significant improvement over the null model, as shown in Table 9 ($\Delta X^2 = 54.667$, $p < .001$). The inclusion of perceptions and priorities regarding sustainability as a predictor significantly enhanced the model fit, with a McFadden R^2 of 0.253 and a Nagelkerke R^2 of 0.394, indicating that the model explains approximately 39.4% of the variance in tourists' perceptions of AI's role in environmental monitoring and promoting sustainable behavior. The analysis revealed that perceptions and priorities regarding sustainability was a highly significant predictor of this perception (Odds Ratio = 15.07, 95% CI [1.904, 3.522], $p < .001$) (table 10). Specifically, a one-standard-deviation increase in perceptions and priorities regarding sustainability increased the likelihood of recognizing AI's role in environmental monitoring and sustainable travel by over 15 times. This finding highlights the substantial influence of eco-consciousness on the perceived utility of AI in sustainability efforts.

The findings confirm that perceptions and priorities regarding sustainability are a pivotal factor shaping tourists' perceptions of AI as a tool for environmental monitoring and promoting sustainable travel behaviors. These results strongly support the hypothesis that eco-conscious tourists are more inclined to value AI-driven solutions for sustainability, aligning with prior research emphasizing the role of environmental values in technology adoption within the tourism sector (García-Madurga & Grilló-Méndez, 2023; Miceli, Hagen, Riccardi, Sotti, & Settembre-Blundo, 2021).

From a practical standpoint, these results underscore the following actionable strategies for leveraging AI in sustainable tourism:

1. **Integration of Environmental Metrics:** Incorporating tools such as carbon footprint calculators and resource efficiency trackers into AI systems can enhance their appeal to eco-conscious travelers. These features help quantify the environmental benefits of travel choices, increasing transparency and engagement.
2. **Personalized Eco-Recommendations:** AI-driven platforms should emphasize tailored eco-friendly options, including green-certified accommodations, low-carbon transport, and sustainable itineraries. Personalization ensures alignment with travelers' values and preferences, fostering stronger adoption.

3. Collaboration with Sustainable Organizations: Partnering with eco-friendly providers and NGOs reinforces the credibility of AI systems. These partnerships not only enhance the trustworthiness of the platform but also broaden its network of sustainable travel options.

The significantly high odds ratio (15.07) underscores the transformative potential of AI in fostering sustainable tourism practices. Eco-conscious travelers play a central role in driving the adoption of AI tools that monitor environmental impacts and encourage responsible behaviors. This finding suggests that tourism platforms emphasizing sustainability-oriented features can secure a competitive edge while contributing meaningfully to global sustainability goals. Tourism providers should prioritize designing AI-driven solutions that align with the growing demand for eco-friendly travel. By leveraging AI to bridge the gap between individual preferences and sustainability goals, stakeholders can address the environmental challenges of overtourism, improve resource management, and enhance traveler satisfaction. Moreover, integrating trust-building measures such as explainable AI and transparent communication can strengthen user engagement and foster long-term adoption.

CONCLUSION

This research demonstrates the pivotal role of AI-driven personalization in promoting sustainable tourism behaviors, guided by machine learning insights derived from logistic regression analysis. The findings illuminate the interplay between trust, perceived benefits, and environmental values in shaping tourists' adoption of AI technologies, offering actionable strategies for stakeholders.

Trust emerged as a critical determinant of eco-friendly AI adoption, with a significant positive impact on tourists' willingness to engage with sustainable travel solutions. Transparent algorithms, data privacy assurances, and ethical AI design are essential for fostering trust and encouraging long-term engagement.

The perceived benefit-to-cost ratio strongly influenced tourists' adoption of AI-driven personalized recommendations. Cost-effectiveness, efficiency, and convenience were key motivators, aligning with the principles of the Technology Acceptance Model (TAM). Tourism platforms that demonstrate tangible value are more likely to secure adoption and sustained usage.

Tourists with strong environmental values are more likely to adopt AI-driven solutions that align with eco-conscious goals. This underscores the importance of integrating sustainability metrics, such as carbon footprint calculators and green-certified recommendations, into AI systems to attract environmentally conscious travelers. Logistic regression's predictive capabilities provided critical insights into adoption pathways, highlighting its utility as a machine learning method for analyzing behavioral data in tourism. This study exemplifies how machine learning can enhance AI-driven personalization by uncovering nuanced preferences and behaviors.

The results emphasize the need for tourism platforms to adopt a holistic approach that integrates trust-building, cost-saving features, and sustainability-oriented functionalities. By leveraging machine learning insights, stakeholders can create AI systems that not only enhance user satisfaction but also contribute meaningfully to global sustainability objectives. These systems should prioritize transparency, inclusivity, and eco-conscious recommendations to foster trust, broaden adoption, and align with consumer values.

While this study highlights significant predictors of adoption, future research could explore advanced machine learning methods, such as ensemble models or clustering algorithms, to further refine the understanding of adoption dynamics. Additionally, cross-cultural comparisons and longitudinal studies could provide deeper insights into the global scalability of these findings. Additionally, expanding the scope to include diverse geographical and cultural contexts would enhance the generalizability of the findings, offering broader implications for sustainable tourism development worldwide.

Yüksek Lisans Programı Öğrencisi, Akdeniz Üniversitesi, Akdeniz Uygarlıkları Araştırma Enstitüsü, Akdeniz Ortaçağ Araştırmaları Anabilim Dalı

ÖZET

Türk eğitim sisteminde kullanılan lise tarih ders kitapları aracılığıyla Ortaçağ'ın, özellikle Avrupa'nın, görsel ve yazılı araçlar yoluyla kavramsallaştırılması, öğrencilerin öğrenme deneyimlerinde etkili olmaktadır. Tarih öğretiminde Ortaçağ konusunun işlenmesi sorunlu bir alana işaret etmektedir çünkü her şeyden önce karanlık olarak nitelenen Ortaçağ Türk-İslam dünyasında ilk gözlemevlerinin kurulduğu, ilk mekanik robotun yapıldığı, ilk üniversitelerin açıldığı ve bilimsel ilklerin gerçekleştirildiği bir dönem olmuştur ki aynı hızda olmasa da Avrupa Ortaçağı da bilimsel ilerlemenin yaşandığı bir dönemdir. Türkiye'deki Tarih ders kitaplarında Ortaçağ Avrupa'sının yazılı ve görsel temsillerini çözümlenmek ve ders kitapları içerikleri ile tarih şuuru ilişkisine katkıda bulunmak bu çalışmanın temel amacıdır. Çalışmada, alanyazın taraması ve ders kitaplarının incelemesi teknikleri kullanılmaktadır. Araştırma, eğitim materyallerindeki görsel ve dilsel araçların önemini vurgularken, bu araçların gelecekteki potansiyelini tartışmaya da katkı sağlamak hedeflenmektedir. Çalışmada, tarih ders kitaplarında Ortaçağ'ın sunumu ayrıntılı bir şekilde ortaya konulmaktadır. İncelenen kitaplarda Ortaçağ'ın siyasi, askeri, ticari, sosyal ve kültürel bağlamda nasıl yer aldığı incelenerek dönemin ders kitapları aracılığıyla aktarımındaki sorunlu alanlar vurgulanacaktır. Güncel ders kitaplarının, Ortaçağ konularını modern pedagojik yaklaşımların kriterleriyle nasıl sunduğu değerlendirilecektir. Elde edilen bulgular, tarih ders kitaplarının içerik geliştirmesine katkı sağlamayı amaçlamaktadır. Sonuç olarak, gelişen teknolojiler ışığında, eğitim araçlarının öğrenme süreçlerine entegre edilmesine yönelik öneriler da sunulmaktadır.

Anahtar sözcükler: Ortaçağ, Ders Kitapları, Materyal İnceleme, Doküman Analizi

ABSTRACT

The conceptualization of the Middle Ages through visual and written tools in high school history textbooks used in the Turkish education system is fundamental to students' learning experiences. The treatment of the Middle Ages in history teaching points to a problematic area because, first, the Middle Ages, which is unfortunately conceived as dark, was a period in the Turkish-Islamic world when the first observatories were established, the first mechanical robot was built, the first universities were opened, and scientific firsts were realized. In Europe, the age also included similar scientific developments, albeit slower in progress. Hence, the primary purpose of this study is to analyze the verbal and visual representations of the Middle Ages in history textbooks in Turkey. The study uses a literature review and textbook analysis as primary methods and emphasizes the importance of visual and linguistic tools in educational materials in light of new technologies. In the study, the significance of this period is checked on by analyzing the political, military, commercial, social, and cultural contexts of the Medieval world

as represented in the textbooks under study. It evaluates how the textbooks of the contemporary period present medieval realities with the criteria of modern pedagogical approaches. The findings obtained aim to contribute to the content development of history textbooks. In light of developing technologies, it offers suggestions for integrating educational tools into the learning processes.

Keywords: Middle Ages, Coursebooks, Textbooks, Material Assessment, Document Analysis

GİRİŞ

Avrupa'nın Ortaçağı, kimi tarihçiler tarafından baskıcı ve karanlık, kimi tarihçiler tarafından ise aydınlanmanın başlangıcı olarak nitelendirilir. Gül (2009), Ortaçağ Avrupa'sında İncil'i okuyabilen ve basit hesap işleri yapabilen tek sosyal sınıfın kilise mensupları olduğunu ve bu sebeple bölgenin "cehalet" ve "karanlık" içinde olduğunu iddia eder. Buna karşın, Mortimer (2023) gibi araştırmacılar Ortaçağ'ın büyük bilimsel ve teknolojik değişikliklerin ve toplumsal, ticari ve kültürel gelişmelerin zaman dilimi olduğu savını savunur. Mamafih, söz konusu yüzyılları salt karanlık veya aydınlık şeklinde iki kutuplu bir biçimde değerlendirmek doğru değildir. Ortaçağ terimi ile sürekli bir korku hali, fanatizm, hoşgörüsüzlük, salgın, kıtlık ve katliamlarla dolu bir çöküş dönemi kastedilebileceği gibi, aynı zamanda bilim, felsefe ve sanat alanlarında ilerlemelerin; dini ve kültürel etkileşimlerin yoğunlaştığı; mimarinin ve edebiyatın geliştiği bir dönem de anlaşılabilir. Eco'nun (2023) belirttiği gibi, "Bugün hala Ortaçağ teknolojisinin bayrağı altında yaşıyoruz. Örneğin, mekanik dokuma tezgahları, buhar makineleri kadar önemli olan gözlük, bir Ortaçağ buluşuydu" (s. 133).

Siyaset ve dinin iç içe geçtiği ve devlet yapılarının tutarsız kalmasına bakılırsa karanlık bir dönem gibi görünen Ortaçağda Almanya ve Saksonya'nın, Norman ve Macar saldırılarıyla dövuüdüğü kadar toplumsal yapıda olağanüstü gelişmelerin yaşandığı bir dönem olduğu da bilinir. Savaş yorgunu bir toplum iken okulları ve tartışma zeminleri ile bilinen manastırların yaydığı kültürün yaygınlaştığı da bir dönem olan Ortaçağ, yine Eco'nun (2014) deyimiyle ışıltılı da bir dönemdir:

Ortaçağ'ın hayata bakışı sadece iç karartıcı bir bakış değildi. Ortaçağ'da romanesk kilise alınlıklarının şeytanlarla ve cehennem işkenceleriyle dolup taşıdığı, bu çağın Ölümün Zaferi'ne dair imgeler açısından zengin olduğu, tövbekârların geçit alaylarının ve dünyanın sonuna dair nevroitik bir bekleyişin çağı olduğu, hem kırsal bölgelerden hem de köylerden akın akın dilencilerle cüzamlıların geçtiği, edebiyatın sıklıkla cehennem yolculuklarını saplantı haline getirdiği doğrudur, ancak bu aynı zamanda Goliard şairlerinin yaşama sevincini yücelttiği bir dönemdir ve özellikle de ışık çağıdır. (s.18)

Bütün bu ikircikli yaklaşımlara karşın Ortaçağ, tarafsız bir açıdan değerlendirilmesi doğru olmayan, çeşitli açılardan ve çok boyutlu bir şekilde incelenmesi gereken tarihsel bir süreçtir. Ortaçağ, yaygın olarak kabul edilen tanımına göre Roma İmparatorluğu'nun 395 yılında Doğu ve Batı olarak bölünmesiyle başlar ve 15. yüzyılın sonlarına doğru, kimilerine göre İstanbul'un fethiyle, kimilerine göre de Amerika kıtasının keşfiyle sona erer. Ortaçağın başlangıcı olan 4. yüzyıl Avrupa açısından oldukça karışık bir dönemdir. Takriben 476'da köle (serf) ayaklanmalarıyla iyice güçsüzleşen Batı Roma İmparatorluğu, bir yandan barbar kavimlerin saldırıları nedeniyle, diğer yandan da iç isyanlarla iyice zayıflamıştır (Gül, 2009). Avrupa'da 600'li yıllarda Franklar, İtalya, İspanya ve Almanya'da siyasi düzeni tekrar sağladı ve Katolik Kilisenin desteği ile gitgide sabitlenen siyasi birlik düşüncesi Karolenj İmparatorluğu'nun 800'lü yıllardaki Rönesans'ı ile Ortaçağı hareketli bir dönem haline getirmiş oldu. Özetle, Ortaçağ, Roma İmparatorluğu'nun zayıflamasıyla başlayan, Avrupa'da siyasi ve ekonomik

değişimlerin yanı sıra Hıristiyanlık etkisi altında şekillenen hareketli ve değişimlerle dolu bir dönem olarak tarihte yerini almıştır.

Elbette 11. yüzyıldan önceki döneme karanlık dönem (Dark Ages) denilmektedir ancak buradaki “karanlık” terimi yazılı belgeler elimizde yeterli sayıda olmadığı için karanlıkta kalmış, içeriği aydınlığa kavuşturulamamış bir dönemi işaret etmek amacıyla kullanılmıştır. Bu dönemde Avrupa halkları, Avrupa’yı sarsan “Barbar” akınları ile savrulmuş hayatta kalma mücadelesine girmişlerdir. Umumi kargaşadan dolayı yazılı eser bırakamayan, olanları da yangın ve savaşlarda kaybeden ve böylece yaşadıkları dönem hakkında bilgi biriktirememiş olan insanların dönemidir 11. yüzyıla kadar uzanan “Karanlık Dönem.” Altyapı tahrip edilmiş, madencilik ve tarım gibi temel beceriler ihmal edilmiştir. Avrupa kültürünün kökenlerini incelemek istediğimizde, günümüzde de kullandığımız İngilizce, Fransızca, İtalyanca, İspanyolca gibi dillerin bu “karanlık” olarak tanımlanan dönemde gelişmeye başladığını, Roma-Germen uygarlıkları ile Doğu Roma (Bizans) uygarlığının oluştuğunu ve hukuki yapıların ve siyasi sistemlerin ortaya çıkıp köklü değişimlere uğradığı bir dönem olduğu görülmektedir.

Le Goff’a (2021) göre, Ortaçağ Avrupa’sında “yaygınlaşan köylü geleneklerine ve Arap etkisine karşın, tamamen Batılı ilk görgü kuralları sayılan saraylı beğenilerin oluşmasıyla güçlenen aristokratik modellerin güçlü direnciyle birlikte zamana, paraya, işe, aileye karşı yeni tutumlar gelişir” (s. 18). İtalyan Rönesans’ı öncesi Avrupa’da toplumsal kurumlar zayıf düşmüşken, Doğu’da bambaşka bir Ortaçağ yaşanmaktaydı. Arap devletleri yayılcı politikaları sonucu Hint, İran, Orta Asya Türk ve Yunan kültürü gibi pek çok kültürle temas etmiş, bu etkileşimden hareketle zengin bir sosyal yapı ve gelişmiş bir bilimsel üretim ortaya çıkmıştır. Çok sayıda eser Arapçaya çevrilmiş, matematik ve tıp alanlarında muazzam çalışmalara imza atılmıştır (Başaran, 2021, s. 176). Örneğin, bu dönemin önemli bilim insanlarından Birunî ve İbn Sîna’nın eserleri Avrupa Ortaçağı’nda da, günümüzde de çalışılmış ve okutulmuştur. Öyle ki, Starr (2023), Birunî’nin dünya’nın çevresini 16. yüzyıla kadar kimsenin başaramadığı derecede bir hassasiyetle ölçtüğünü, hatta Kuzey ve Güney Amerika’nın varlığını dahi öngördüğünü belirtmektedir. Yazar ayrıca İbn Sîna’nın tıp alanındaki eserlerinin Avrupa, Orta Doğu ve Hindistan’da altı yüzyıl boyunca standart eserler olarak kabul edildiğini de ifade etmektedir. Bütün bunların ışığı altında Ortaçağ halen de önemini korumakta ve sayısız güncel eserde de hayat bulmaktadır ki günümüz insanların Ortaçağ bilgisinin kaynak ve kökenleri üzerine de araştırmalar yapılması gerekmekte, insanların Ortaçağ hakkındaki bilgilerinin resmi olarak tohumlarının atıldığı ve geliştirildiği ders kitaplarının da içerik olarak incelenmesi gerekmektedir.

ARAŞTIRMA

Bu çalışma, Türkiye’deki tarih ders kitaplarında Ortaçağın sunumunu incelemeyi amaçlamaktadır. Çalışmaya, 1941-2024 yılları arasında yayımlanmış geniş bir ders kitabı galerisi dahil edilmiştir. Türkiye Cumhuriyeti tarihini kapsayıcı şekilde seçen bu aralık, kitapların dönemsel pedagojik ve içerik özelliklerini karşılaştırmalı olarak değerlendirmektedir. Çalışmada nesnel bir değerlendirme sağlamak için, her bir kitabın temaları, kullanılan görsel ve yazılı araç türleri, içeriklerin ayrıntılı olma durumları, kullanılan dilin anlaşılabilirliği ve kullanılan pedagojik yaklaşımlar gibi kategorilerin öncelendiği bir kontrol listesi kullanılmıştır. Bu liste sayesinde, Ortaçağ’ın farklı kitaplarda nasıl ele alındığı sistematik olarak karşılaştırılabilir ve tarihsel bilgilerin görsellerle somutlaştırılması ve öğreticilik unsuru özelinde kitaplarda izlenen yöntemler değerlendirilmiştir. Çalışmada, görsellerin anlamlandırılması, ders içeriklerinin somutlaştırılmasına katkısı ve Ortaçağ’ın öğrencilere nasıl aktarıldığı ele alınmıştır. Bu doğrultuda, nitel araştırma yöntemlerinden yakın okuma tekniği ve karşılaştırma yöntemi

kullanılmıştır. Çalışmanın inceleme ve değerlendirme sürecinde ders kitaplarında “Ortaçağ” başlığı altında verilen metinler ve görseller ana veriler olarak kullanılmıştır. Yazılı ve görsel ifadelerin anlam ve işlevlerini açıklamak amacıyla göstergebilim, imgebilim ve anlambilim kuramlarından yararlanılmıştır.

İnceleme sürecinde, incelenen materyallerin sunduğu iletiler dikkatlice incelenmiş ve iletiler karşılaştırılarak ders kitaplarında sunulan “Avrupa imajı” ortaya konulmuştur. Değerlendirme süreci hem parçaların hem de bütünün verdiği iletilerin not edilmesi ve bulguların karşılaştırılması yoluyla tamamlanmıştır. Bu süreçlerde göstergebilim görsellerin sembolik anlamlarına, imgebilim kültürel bağlamlarına ve anlambilim görsellerin dilsel içeriklerle ilişkisine açıklık getirmekte yardımcı olmuştur. Görsellerin tarihsel olayları ve kişileri nasıl yansıttığı ve bütün bu bilgilerin öğrencilerin dönemin özelliklerini içselleştirmelerine ne şekilde katkı sağladığı derinlemesine bir tarzda tartışılmıştır.

BULGULAR

Basım Yılı 1941: Tarih II (Orta zamanlar)

T.T.C. (1941) tarafından hazırlanan ve Maarif Vekilliği, Talim ve Terbiye Heyeti'nin 12.6.1932 tarih ve 11 sayılı kararı ile ders kitabı olarak kabul edilmiş ve Neşriyat Müdürlüğü'nün 83-5878 sayılı ve 19.7.1941 tarihli emriyle üçüncü defa ve 3.000 adet basılmış olan *Tarih II (Orta zamanlar)* başlıklı ders kitabı ülkemizde uzun yıllar okutulmuş ve daha sonra yayımlanan birçok ders kitabına da örnek olmuştur. Kitabın alt başlığının “Orta zamanlar” olarak duyurulması 1940'lerde okullardaki her sınıfın Tarih derslerinde belirli bir dönemi çalıştıklarını göstermesi açısından önemlidir.

Kitabın V. kısmı “Beşinci Asırda Avrupa” başlığı ve “Kavimler Muhacereti” alt başlığından oluşmaktadır. Görsel araçların bulunmadığı bu kısımda, aşağıdaki başlıklarla öğrencilerin bu kısımda edinmesi gereken bilgiler sunulmuştur:

- Garp Germenleri: Alamanlar, Franklar, Saksonlar
- Şark Germenleri: Şark ve Garp Gotları
- Vizigotlar (Garp Gotları)
- Britanya'nın Angil ve Saksonlar Tarafından Fethi
- Burguntular ve Frankların Galyaya Girişleri
- Merovenj Sülalesinin Sukutu
- Frankların Ahlakları
- İspanya'da ve Afrika'da Vandallar
- Ostrogotlar, Odoakır- Garbi Roma İmparatorluğu'nun Yıkılması.

Ders kitabının bu başlıklar altında planlanması kitap yazarlarının beşinci yüzyıl Avrupa'sında kavimler göçünü anlatırken döneme Avrupa'da yaşayan kabileler ve etnik gruplar ekseninde baktıklarını göstermektedir. Germenlerin Doğu ve Batı olarak iki kola ayrılması, Britanyalı Angıllar ve Saksonlar, Franklar, Vandallar ve Gotlar gibi kabilelere başlıklar ayrılması kitap yazarlarının dönemi kabileler ekseninde düşündüklerini göstermektedir. Tabii ki bu durum kavimler göçünün anlatıldığı bir üniteye tutarlılık arz eder ancak Frankların ahlakları ve Merovenj Sülalesinin ortaya çıkışı gibi kısımlar dönemin sonrasında örneğin kazanacak olan tarihsel gelişmelere de kolaylık sağlar.

Ders kitabının bu kısmında Orta Asya Türkleri ile bu dönem Avrupa kavimleri arasında sürekli surette karşılaştırma yapıldığı görülmektedir. Hatta Avrupa kavimleri arasında da karşılaştırmalar yapılmaktadır. Örneğin, Franklar hakkında yazılan kısımda bu kavmin diğer

kavimlerle olan karşılaştırması, benzerlikler üzerinde yoğun bir şekilde durularak, şu şekilde yapılır:

Kırallar intihap olunduktan sonra Orta Asyada Türk adetleri veçhile, kalkan üstünde havaya kaldırılıp ordugahta gezdirilirdi. Kiral her şeyden evel bir kumandandı: hazar zamanında onun salahiyeti kurultaya tahdit olunurdu; Franklar avcı idiler, dinleri Germanlerinkinin aynı idi. Frankların milli ilaçlarının başlıcaları Votan (yahut Odin), Thor (yahut (Donar) idi; bunlardan birincisi güneş diğeri gök gürültüsüdür. (s. 34)

Basım Yılı 1976: Tarih II

MEB Devlet Kitapları bünyesinde 1976 yılında yayımlanmış, İbrahim Kafesoğlu ve Altan Deliorman (1976) tarafından yazılmış bulunan ders kitabıyla öğrencilere ulusal bir tarih anlayışı benimsetmek amaçlanmıştır. Örneğin, kitap İslamiyet ile başlar ve Türk devletleri ile devam eder. Bununla birlikte, *Batı Ortaçağı* başlıklı ünite Ortaçağ Avrupa'sının dini, siyasi, sosyal ve kültürel özelliklerini ayrıntılı bir şekilde açıklayarak farklı hanedanlar, imparatorluklar ve ideolojik hareketler arasındaki ilişkileri sunmaktadır. İlgili ünite çok sayıda alt bölümlere ayrılmıştır. Bu bölümler ve konu kapsamaları aşağıdaki gibidir:

- Papalık: Kilise teşkilatı ile Hıristiyanlıktaki mezhep ve tarikatları anlatır.
- İmparatorluk: Avrupa'daki kavimleri ve imparatorlukları anlatır.
- Feodalite: Feodal sistemin sosyal ve ekonomik dinamikleri üzerinde durur, köylülerin toprak sahipleriyle olan köle-efendi ilişkisini açıklar.
- Ortaçağ Batı Medeniyeti: Felsefi, iktisadi ve sanatsal gelişmeleri anlatır.
- Bizans (Doğu Roma İmparatorluğu): Kuruluşundan yıkılışına kadar Bizans'ı yöneten imparator ve sülalelerin dönemleri kronolojik sırayla verir.

Bu kitapta adı geçen Ortaçağ kavimleri şöyle sıralanabilir: Gotlar, Vizigotlar (Batı Gotları), Ostrogotlar, Vandallar, ve Franklar. Bunların dışında bazı krallık ve imparatorluklar kitapta kendine nispeten geniş yer bulmuştur. Örneğin, Karolenj imparatorluğu ve Mukaddes Roma-Germen imparatorluğu anlatılırken Karolenj imparatorluğu adına kral Şarlman'ın Avrupa'nın her yönüne seferler yaparak devletin sınırlarını genişletmesi anlatılır. Kitapta Saksonya Hanedanlığı da vurgulanmış olmakla beraber özellikle Büyük Otto dönemine değinilmiştir. Bu gibi anlatımlarla, dönemin uygarlıklarının yaşadığı mücadelelerin Avrupa üzerindeki etkileri öğrencilere aktarılır. Bu bağlamda kitap siyasi sınırların değişimi ve dönemin devletlerarası ilişkilerine dair daha geniş bir bakış açısı kazandırmaktadır. Kitapta Akdeniz bölgesi haritalar üzerinde gösterilirken metinde tek bir yerde yazılı olarak geçer: “Roma kilisesinin İtalya’da, Galya’da, Dalmaçya ve Akdeniz adalarında büyük malikaneler vardı” (s.198).

Ünitenin girişinin dolaysız olarak Papalık ile başlamasına bakılırsa dinin o dönemdeki önemi vurgulanır. Özellikle Kilise Teşkilatı bölümü oldukça ayrıntılı işlenmiştir. Papa'nın yetkileri ile inancın siyasetle karıştığı, imparatorların papalarla mücadelesi sonrası siyasetin de dine karşı daha da fazla güçlendiği hususu örneklerle açıklanmıştır. Mezheplerin doğuşu ise, kitapta anlatılan Hristiyanlık içindeki tartışmalar çerçevesinde ele alınmıştır. Bu bölümde adı geçen bazı Hıristiyanlık tarikatı ve mezhepleri şöyledir: Arianizm, Nestorizm, Monofizizm, Monotelizm, Baptistler, Metodistler, Quakerler, Mormonlar, ve St. Jean şövalyeleri.

Kullanılan öğretim yöntemleri doğrudan bilgi aktarımına dayalıdır. Ne metinler ne de görseller öğrencinin öğrenme süreçlerine etkin katılımını teşvik edecek şekilde tasarlanmıştır ancak her bölümün sonundaki değerlendirme soruları, öğrencilere öğrendiklerini pekiştirme fırsatı sunar. “Avrupa’da feodalitenin meydana gelişini hazırlayan siyasi ve sosyal sebepler nelerdir?” gibi sorularla, tarihî olayların analitik bir yaklaşımla değerlendirilmesi amaçlanmaktadır. Kitap boyunca kullanılan görsel unsurlar, sayıca fazla olmamakla birlikte, anlatılanları

somutlaştırmada etkili bir araç olarak öne çıkmaktadır. Haritalar, imparatorlukların sınırlarını ve siyasi bölünmeleri görsel olarak destekler. Dönemin önemli kişi ve olaylarının tasvir edildiği çeşitli sanat eserleri kullanılarak hem konu pekiştirilmiş hem de dönemin sanat akımlarından örnekler verilmiştir.

Basım Yılı 1987: Tarih Lise 2

1987 yılında Ders Kitapları Anonim Şirketi tarafından basılan ve İzmir Atatürk Lisesi tarih öğretmeni Yüksel Turhal (1987) tarafından yazılan *Tarih Lise 2* başlıklı ders kitabı, dönemin yenilenen öğretim programına uygun olarak hazırlanmıştır. Bu kitap, 12 Eylül askeri darbesi sonrası dönemde Türkiye Cumhuriyeti Millî Eğitim Bakanlığı Talim ve Terbiye Kurulu'nun 1984 tarihli kararıyla ders kitabı olarak kabul edilmiştir. Ortaçağ kitapta yalnızca *Ortaçağ'da Avrupa* başlıklı üniteye geçer ve 20 sayfalık yer kaplar. Bölümler dönemin gelişmelerini kronolojik değil konu sıralaması ile ele alır. İlk bölüm “Kilise ve Papalık” ile dönemin dini yapısı irdelenirken, ikinci bölüm olan “Feodalite” Avrupa'nın siyasi, sosyal ve ekonomik düzenini açıklar. Ardından bilim ve sanat alanlarındaki gelişmeler dönemin başat akımları ile birlikte aktarılır. Ünitelerin son ve en uzun bölümü, dönemin önemli askeri olaylarından biri olan Haçlı Seferleri'ne odaklanır. Seferlerin Türk-İslam dünyası üzerindeki etkileri anlatılırken Avrupa dışındaki uygarlıklardan kısaca söz edilir.

Bu kitapta dönemin uygarlıklarına ayrıntılarıyla yer verilmemiştir. Örneğin, feodalite konusu işlenirken Macar ve Frankların yalnızca adı geçer. Diğer taraftan Haçlı Seferleri'nin sonuçları anlatılırken Selçuklu, Emeviler ve Abbasilere de değinilmiştir. Kavimler ve bunların etkileşimi ünite boyunca sınırlı kalmıştır. Konu, kavimlerden ziyade anahtar kişi ve kavramlar üzerinden anlatılmıştır. Örneğin, Loren Dükü Godfuruva dö Buyon, Keşiş Piyer ve İsa'nın on iki havarilerinden biri olan Sen Piyer gibi isimler kitap boyunca kalın harflerle vurgulanmıştır. Kültür ve sanat bölümü, Ortaçağ Avrupa'sında mimarinin gelişimini Roman ve Gotik üslupları üzerinden değerlendirirken, sanatsal eserlerinin toplumsal hayattaki yeri hakkında okuyucuya fikir vermektedir. Örnek ikonik yapılar hakkında verilen bilgiler, mimarinin toplumsal yapıya etkisini somutlaştırmaktadır. Metinde, Paris'teki Notrdam Katedrali'nin Gotik tarzda yapılmış önemli bir eser olduğu gibi ifadeler, bu tarzın Avrupa'daki önemine dikkat çeker. Kiliselerin süslemeleri ve mimari detaylar da, dönemin estetik anlayışını gözler önüne sermektedir.

Kitabın geleneksel bilgi aktarımı üzerine kurulu bir eğitim yaklaşımı benimsediği görülmektedir. Öğretmen merkezli bir anlatım yapısına karşın her bölümün başında yer alan hazırlık soruları öğrencilerin ezber becerisini kullanmasını gerektirmekten ziyade araştırma ve karşılaştırma yapmasını gerektirir. Ayrıca bölüm sonlarındaki değerlendirme araçları öğrencilerin tarihî olayların neden-sonuç ilişkilerini düşünmelerine katkı sağlamaktadır. Kitapta, muhtemelen basıldığı dönemin teknolojilerinin elverdiği ölçüde, sınırlı sayıda görsel kullanılmıştır. Bu görseller, dönemin mimari öğelerini örneklendirmek ve öğrenciler için kavramları somutlaştırmak amacıyla verilmiştir. Kitapta Bizans mimarisinin başyapıtı olarak nitelendirilen Ayasofya'nın fotoğrafı, bu mimari tarzın özelliklerini belirgin kılmış ve somutlaştırmıştır. Görsel öğrenmeyi desteklemek amaçlı olarak kullanılan bir teknik de kitapta geçen önemli yer ve kişilerin kalın harflerle yazılmasıdır.

Basım Yılı 1990: Tarih II

MEB Talim Terbiye Kurulu'nun 23.8.1989 tarih ve 3942 sayılı kararı ile lise ikinci sınıflarda ders kitabı yerine okutulması kabul edilen *Tarih II*, Prof. Dr. Erdoğan Merçil ve Büte Merçil (1990) tarafından yazılmış olup 1990 yılında Altın Kitaplar Yayınevi tarafından basılmıştır. Aynı yılda basılan ve yine bakanlık onayıyla okutulan farklı en az üç kitaptan biridir. Kitapta

Ortaçağda çeşitli coğrafyalarda gerçekleşmiş olaylara farklı ünitelerde değinilmiş olsa da ünite başlığında bu terimin geçtiği tek yer *Ortaçağ'da Avrupa* başlıklı ikinci ünitedir. Ünitelerdeki bölümler, olayların birbiriyle bağlantılı yönlerini açıklamaya uygun bir şekilde tematik olarak düzenlenmiştir. Bu bölümler ve konu kapsamı aşağıdaki gibidir:

- Kilise ve Papalık: Hıristiyanlığın temel kavramlarını olay örgüsü içinde sunar.
- Feodalite: Feodal düzenin nasıl yaygınlaştığını ve nasıl işlediğini temel kavramlar üzerinden açıklar, “senyörler” ve “serfler” gibi Avrupa’daki sosyal yapıyı oluşturan her bir sınıfın tanımını yapar.
- Fikir ve Sanat Hareketleri: Dönemin Türk-İslam bilim insanlarının çalışmaları ve tercümelemeleri sayesinde, skolastik düşüncenin hüküm sürdüğü Avrupa’da Karanlık Çağ’ın son bulduğunu iddia eder. Avrupa ve Türk-İslam dünyasında görülen mimari akımlara karşılaştırmalı olarak nispeten uzunca yer verilmiştir.
- Haçlı Seferleri: Döneme damgasını vuran seferler anlatılır.

Konular ilgili tarihi olaylar, bunlarla ilgili kavramlar ve bunların gerçekleştiği yerler üzerinden aktarılmıştır. Dönemin önemli uygarlıklarına özel konu başlıkları açılmamıştır, kavimlere ayrıntılı olarak değinilmemiştir. Yalnız feodalitenin ortaya çıkışı anlatılırken, Karolenj hanedanının silahlı taht mücadelelerinin bu ortaya çıkış üzerinde etkisi şu sözlerle ifade edilmiştir:

Bu devrede en etkili asker, Karolenjiyen ordusunun oluşturduğu atlılardı... Genel kargaşa ve güvensizlik ortamı toprak sahiplerini, kuvvetli adamların korunmasını aramaya zorladı. Bir kralın toprağını daha fazla koruyamayacağını anlayan hür insanlar, bir şatoyu karargâh yaparak savunma düzenleyen güçlü kişilerin vassalı oldular. (s. 27)

Pedagojik açıdan bu kitabın temel özelliği bilgi aktarımına dayalı olmasıdır. Ünite boyunca kalın harflerle yazılmış pek çok anahtar kavram görmekteyiz. Bu sayede öğrenciler metne ilk bakışta öncelikli olarak anahtar kavramları fark eder. Kitaptaki görseller neredeyse tamamen dönemin önemli mimari yapılarını örneklemek üzere seçilmiştir. Bu yöntem ezber yoluyla öğrenmeyi kolaylaştırır ancak kitap üst düzey düşünce becerilerini hiç yansıtmıyor dersek haksızlık etmiş oluruz. Her bölümün başında yer alan hazırlık soruları öğrencilerin konuya başlamadan önce araştırma yaparak okuyacakları hakkında ön bilgi edinmelerini sağlar sağlar. Her bölüm sonundaki değerlendirme soruları neden-sonuç ilişkisi de sormakla birlikte ağırlıklı olarak ezber gerektiren sorulardan oluşmaktadır ki bunlardan bazılarını şöyle sıralayabiliriz: “Feodalite devrinde halk kaç sınıfa ayrılmıştır?” “Bir şövalyenin günlük hayatını açıklayınız.” ve “Vassalın senyöre olan yükümlülüklerini açıklayınız.”

Basım Yılı 1990: Tarih Lise II

Daha önce de Tarih ders kitapları yazmış olan Veli Şirin (1990) bu kitabın yazarıdır. Kitap Gentaş A.Ş. tarafından yayımlanmıştır ve aynı yıl Talim Terbiye Kurulu arşivine girmiş üç kitaptan biridir. Konular belirli başlıklar altında verilmiştir ki bunlardan biri olan *Ortaçağda Avrupa* ikinci üniteye işlenmiştir. Ünitelerin bölümleri şunlardır:

- Kilise ve Papalık
- Feodalite
- Ortaçağda Avrupa’da Fikir ve Sanat Hareketleri
- Haçlı Seferleri.

İçerik incelendiğinde kitabın tarihî olayları millî bir bakış açısıyla aktardığı ve öğrencilere bu doğrultuda bir tarih bilinci kazandırma amacı taşıdığı görülmektedir. Dönemin toplulukları, kavimler halinde açıklanmaktan ziyade ulus bilinci güdülerek metinler içinde kısaca verilmiştir. Örneğin, Alman İmparatorluğu, Fransız İmparatorluğu ve Lombardlar ayrıntılı şekilde işlenmeyip olayların ve kavramların açıklanması çerçevesinde yalnızca adları verilmiştir.

Toplulukların özellikleri ve etkileşimleri ünite boyunca öncelikli bilgiler olarak görülmemiş ancak Hristiyanlık mezhepleri ayrıntılı şekilde sunulmuştur. Öyle ki, isimleri geçen Hristiyan Mezhepleri Arianizm, Nesturizm, Monofizizm, Ortodoksluk, Katoliklik ve Protestanlık, Babtistler, Medodistler, Mormonlar ve St. Jean Şövalyeleridir.

Kitapta az sayıda, açık uçlu ve ezberci bir öğrenmeyi pekiştirecek sorular bulunmaktadır. Görsel öğrenmeyi desteklemek üzere kalın harflerle yazılan terimler temelde kişi ve yer isimleri, dönemin sosyal yapısını niteleyen terimler, Hristiyanlık içindeki dini terimler ve dönemin sanatsal akımları gibi ifadelerdir. Kitapta her bir görsel bulunduğu sayfada geniş yer kaplamıştır. Konu aktarımını görsel olarak pekiştirmek amaçlı haritalar ve çizimler tercih edilmiştir. Bu üniteye kutuplaştırıcı ve genelleyici ifadelerle doğu-batı karşılaştırılması yapılmaktadır. Ortaçağ Avrupa'sının "karanlık" ve "cehalet" dolu olduğunun belirtildiği üniteye göre "Avrupa ancak Yeni Çağda, üzerindeki geriliği atarak, yeni atılımlar içine girmiştir" (s. 56). Tarihsel gerçeklik açısından doğru bilgiler içermesine rağmen anlatım şekli sebebiyle genelleyici ve bilimsel düşünme ve yazmaya uygun olmayan ifadelerle örnek olarak şu kısım verilebilir:

Aynı dönemde İslam dünyasındaki medreseler büyük bir gelişme içindeyken, Avrupalılar fikir bakımından büyük bir karanlık ve cehalet içindeydiler. Tutuculuk fazla idi... Avrupalılar çeşitli bilimlerini öğrenmek için Endülüs, Sicilya gibi İslam memleketlerine giderler ve medreselerde okurlardı. (s. 54-55)

Basım Yılı 2024: Tarih 9. Sınıf (Ardıç ve diğerleri, 2024)

"Türkiye Yüzyılı Maarif Modeli" kapsamında yenilenen öğretim programları dolayısıyla güncellenen ve Millî Eğitim Bakanlığı Yayınları tarafından 2024 yılında yayımlanmış olan *Tarih 9. Sınıf* başlıklı kitabın 82 sayfası *Ortaçağ Medeniyetleri* başlıklı üniteye ayrılmıştır. Ünite girişinde ilgili üniteyle ilgili kazanımlar ve anahtar sözcükler listelenmiş, öğrencilerin konunun özetine erişebileceği bir karekod da kitaba eklenmiştir. Kitabın genel itibarıyla Ortaçağ tarihini çok yönlü bir anlayışla sunma amacındadır. Kitap, tarihî olayların pek çok açıdan incelenerek öğrenilmesini teşvik etmektedir. Kitabın tarihî olayları millî bir bakış açısıyla aktardığı ve öğrencilere bu doğrultuda tarih bilinci kazandırma amacı taşıdığı görülmektedir.

Ünite günümüzde yaşadığımız göç olgusunun istatistiksel verilerini de içerir güncel bir konuyu ele alır ve bunu Ortaçağ'daki göçlere bağlar. İlgili ünitenin ilk bölümü "Ortaçağ'daki Kitlesel Göçler" olup dönemin kavimlerini kısaca tanıtarak başlar ve Kavimler Göçü'nün neden ve sonuçlarını göç olgusu üzerinden açıklar. Asya'dan Avrupa'ya göç dalgası ve Germenlerin akınlarıyla değişen siyasi yapının temsili amacıyla verildiği akla gelen domino taşları görseli dikkat çekicidir. Bu noktada tek sorun Kavimler Göçü gibi kitlesel bir savaş hareketinin günümüz göçleriyle karşılaştırılmasıdır ki bu sorun bu çalışmanın konusu olmamakla birlikte öğrencilerde dikkat çekici bir kavram yanılgısına neden olabilecek bir benzetimdir.

Kitabın ilerleyen kısımlarında Avrupa'da merkezi otoritelerin güvenlikteki yetersizliğini kilisenin karşıladığı aktarılır. Kilisenin örgütlenmesi ve yaygınlaşmakta olan feodal sistemin toplum yapısındaki etkilerinin ardından Avrupa'daki Türk varlığı konu edilir. Şu iki alıntıyı örnek gösterebiliriz: "Türk kavimleri Balkan coğrafyasını kendilerine yurt edinerek Balkan milletlerinin kültürel gelişimlerinde önemli roller oynamışlardır" (s. 181). Ayrıca, kitapta "Hunlar, sürekli hazırlık, hayret verici bir manevra kabiliyeti ve çok gelişmiş süvari tabyalarıyla topraklarına bağlı Germen kavimler ve yüksek kültürlü Romalılar üzerinde üstünlük temin etmişti" (s. 182) denilirken buna ek olarak Avrupa'nın kültürel unsurları yine Türk medeniyetini vurgulamak amacıyla kurgulanır:

Nibelungen Destanı, Avrupa Hun Kağanlığı ve büyük hükümdarı Attila'nın taşıdığı yüksek askeri ve diplomatik mertebeyi dünyaya tanıtan önemli bir eserdir... Cermenlerin milli destanı olmasından ve içinde farklı kültürlerden birçok unsur barındırmasından dolayı da hakkında çok fazla araştırma yapılmış ve tarihe ışık tutmuştur. (s. 181)

Ünitenin diğer bölümleri ve kazanımları sırasıyla şöyledir: “Ortaçağ'daki Siyasi ve Askeri Gelişmeler” başlığı altında dönemin büyük uygarlıklarının siyasi dinamikleri verilir. Kendine ait bir kısım bulabilen uygarlıklar şunlardır:

- Çin İmparatorluğu,
- Sasani İmparatorluğu,
- Doğu Roma İmparatorluğu,
- I.ve II. Göktürk Devleti,
- Uygur Devleti,
- Hz. Muhammed Dönemi ve Dört Halife Dönemi İslam Devleti,
- Emevi Devleti,
- Abbasi Devleti.

“Ortaçağ'da Ticaret Yolları” başlığı altında İpek, Baharat ve Kürk Yolu olarak tanımlanan Doğu-Batı arası ticaret yollarının ekonomiye ve kültürel etkileşime katkıları sunulur. “Ortaçağ'da Bilim, Kültür ve Sanat” bölümü dönemin önemli medeniyet havzalarını bir dünya haritası üzerinde gösterir. Çeşitli mimari eserlerin görselleri paylaşılır ancak bunlarla ilgili ayrıntılı açıklamalara veya temsil ettikleri sanat akımlarına yer verilmez. Bunun yerine İslam medeniyetinin yetiştirdiği değerli bilim insanlarından Farabi, İbnül Heysem ve Biruni hakkında bilgiler verilmiştir. Öğrencinin konuyu içselleştirmesi için bir araştırma projesi yapması istenmiş ve araştırma yöntemlerinin her bir adımı için ayrıntılı yönergeler verilmiştir.

Ünite boyunca adı geçen pek çok kavim vardır ancak bunlardan bazıları diğerlerine nazaran daha ayrıntılı bir biçimde irdelenmiştir. Bunlar içinden Avrupa kavimleri nisbeten az yer kaplar ki adı geçen kavimler şunlardır:

- Germen kavimleri: Angıllar ve Saksonlar, Franklar, Burgundlar, Süevler, Vandallar, Ostrogotlar ve Vizigotlar
- Romalılar, Hunlar, Sasaniler, Habeş Krallığı, Arap kabileleri, Göktürkler, Çinliler, Hintler, Hz. Muhammed ve İslam Devleti
- Hazar Denizi'nin doğusunda yaşayan Türk kavimleri: Hunlar, Oğuzlar, Peçenekler, Kumanlar, Uzlar, Hazarlar, Sabarlar, Avarlar, Bulgarlar, Uygurlar, Ogurlar, Ak Hunlar.

Pedagojik açıdan elimizdeki kitap oldukça zengindir. Doğrudan bilgi aktarımı sınırlı tutulmuş, yorumlama ve fark etme yoluyla öğrencinin bilgiye ulaşması hedeflenmiştir. Kitap boyunca çok sayıda dış kaynaktan yararlanılmış ve bunlar metin içi alıntılarla belirtilmiştir. Çeşitli düşünce becerileri gerektiren sorularla, alıntılanan metin ve görsellerin öğrenciler tarafından yorumlanması istenmiştir. Her bölüm sonrası öğrenmeyi kalıcılaştıracak pekiştirme etkinlikleri mevcutken, her sayfada öğrenciye kazanımları özümsetecek daha küçük görevler verilmiştir. Bireysel ve grup çalışmaları teşvik edilmiş, hatta proje yoluyla öğrenmeye başvurulmuştur. Bu yönüyle kitapta öğrenci merkezli öğretim yöntemleri ön plana çıkar. Kitap, doğrudan konu anlatmayı ikincil tutmuş, özellikle alıntılanan materyaller üzerinden öğrencileri zihinsel ve iletişimsel olarak aktif tutacak şekilde tasarlanmıştır. “Düşüncenizi arkadaşlarınızla paylaşınız.” gibi yönergelerle etkileşimi arttırmak amaçlanmış, etkin öğrenme desteklenmiştir. Kitap boyunca görsel kullanımı, yalnızca işlenen konuyu somutlaştırmanın ötesinde, konunun işlenmesi için metinler kadar hayati bir önem taşır. Çok sayıda fotoğraf, resim, harita ve illüstrasyon hem öğrencilerin coğrafi bağlamı kavramasına yardımcı olmakta hem de her bir

görselle birlikte sorulan sorular sayesinde öğrencinin hedef konuyu daha iyi analiz etmesini sağlamaktadır.

Ünite sonu değerlendirme soruları öğrencilerin yorum yapma becerilerini geliştirmeyi amaçlar. Hem açık uçlu hem şıklı soruların yanı sıra daha farklı etkinliklerle de çeşitli öğrenme stillerine hitap edilmiştir. Cevaba ulaşabilmek için öğrencini okuyup anlaması gereken küçük paragraflar vardır. Olayları ezberlemekten ziyade, eleştirel düşünmeye yönlendiriyor. Bu yönüyle üniversite sınavındaki sisteme hazırlığı destekliyor. Yalnız ünite sonunda değil, konu aralarında da bulunan pekiştirme sorularıyla öğrencilere eleştirel bir bakış kazandırmak amaçlanmıştır. Konu aralarında sözlük çalışması, beyin fırtınası gibi etkinlikler yer almaktadır ve ilgili kavramların somutlaştırılması amaçlanmıştır.

SONUÇ

Kitapların incelemesi gösteriyor ki geçmişten günümüze tarih ders kitaplarında sunulan Ortaçağ Avrupa'sı ile ilgili içerik Cumhuriyet döneminin başlangıcından bugüne kadar azalma yoluna gitmiştir. 1941'deki ders kitaplarında bir senelik ağırlığı olan Ortaçağ günümüzde neredeyse yok denecek kadar az bir bilgiye indirgenmiştir. Buna ek olarak 1990'lı yıllara gelindiğinde Ortaçağ Avrupa'sı hakkında "karanlık" ve "cehalet" dönemi gibi önyargılı ve genelleyici bir üslupla olumsuz ifadeler kullanılmıştır. Son yayımlanan ders kitabında, Avrupa Ortaçağ'ı hakkında doyurucu bilgi kümeleri görebiliyoruz ancak içeriğin Türk-İslam tarihi ve güncel göç sorunları gibi konularla esnetilip odak noktasından sapıldığını da söyleyebiliriz.

İncelenen ders kitaplarının ekseriyetle geleneksel öğretim yöntemlerinden biri olan bilgi aktarımı üzerine kurulu bir eğitim yaklaşımı benimsediği görülmektedir. Öğretmen merkezli bir anlatım yapısına sahip bu ders kitaplarında Ortaçağ hakkındaki bilgilerin de görsellerle desteklenmiş olsa da bilgi verici bir yapıda sunulduğu görülmektedir. Ünitelerde yer alan düşünme, araştırma ve yorumlama sorularının da bilgileri ezberlemeye dayalı olduğu görülmektedir. Sonuç olarak Ortaçağ, incelenen ders kitaplarında kendi dönemlerine uygun yazılmıştır. Günümüzde yayımlanan ve yayınlanacak olan ders kitaplarının güncel bir tarih anlayışıyla, medeniyetlerin gelişmesi hakkında neden sonuç ilişkilerine dayalı bir yapı içinde ve örneğin, yeni kültürel tarih (Amman, 2019) gibi tarihinin toplumsal olan her şeyle ilgilendiği bir tarih anlayışıyla yazılabilir diyebiliriz.

ÖZET

Günümüzde engellilik ve engelli bireylerin topluma katılımı bugün bütün devletlerin ve kurumların işleyişlerine etki eden olan önemli bir gündem maddesidir. Daha çok çıkarılan yasa ve yönetmeliklerle engellilerin iş dünyasına, eğitim yaşamına ve belediyeçilik ve kamusal alan boyutlarında toplumsal ve çevresel yaşama katılımını sağlanmasının amaçlandığı günümüzde hükümetler engelli bireylerin ulaşım, yerleşim ve sağlık hizmetlerinden yararlanmaları gibi hususlarda çalışmalar yapmaktadır. Bütün bu olumlu çaba ve onun getirdiği değişimlere karşın, engellilik salt yasalar boyutunda ele alınması gereken bir gerçeklik değildir. Toplum bilim ve eğitim araştırmalarının da ortaya koyduğu gibi engellilik yasa ve yönetmeliklerde olduğu kadar bireysel ve toplumsal zihniyette de değişiklikler yapılmasını gerektiren çok boyutlu bir olgudur ve sadece sosyoloji, eğitim, hukuk ve ilahiyat gibi alanların değil edebiyat ve kültür çalışmalarının da gündeminde bulunması gereken çarpıcı bir çalışma alanıdır. Bu çalışmada da, edebiyat ve engellilik ilişkisi kuramsal olarak ele alınmaktadır. Mevcut alan yazının taranması ve derlenen kuramsal bilgilerin “Engellilik Kuramı nedir?” sorusuna yanıt vermesi çalışmanın temel amacıdır. Çalışma, ikincil olarak, “Engellilik Kuramı edebiyat araştırmalarında nasıl kullanılır?” sorusuna yanıt aramaktadır. Bu soruya yanıt vermek için de, ulusal ve uluslararası alanyazının taranması ile edilen ilgili bilimsel çalışmalar sınıflandırılmakta ve örnek uygulamalar ülkemiz araştırmacılarına fikir vermesi ve benzer araştırmaları planlayabilmeleri amacıyla önerilmektedir. Sonuç olarak bu çalışmada Engellilik Kuramının tanımlanmasının ardından, edebi eser incelemelerinde Engellilik Kuramının kullanıldığı çalışmalar sınıflandırılarak uygun alt başlıklar halinde araştırmacıların hizmetine sunulmaktadır.

Anahtar Kelimeler: Engellilik Kuramı, Engellilik, Edebiyat Kuramı, Edebi İnceleme

ABSTRACT

Disability and the participation of individuals with disabilities in society constitute a significant agenda item for all governments and institutions today. Today, efforts are increasingly made to enact laws and regulations to facilitate the integration of individuals with disabilities into the workforce, educational life, and public and environmental spheres, including municipal services. Governments are undertaking initiatives to ensure access to transportation, housing, and healthcare services for individuals with disabilities. Despite these positive efforts and the transformative changes they have brought, disability is not a reality that can be addressed solely through legislation. As demonstrated by studies in sociological and educational research, disability is a multidimensional phenomenon that requires changes not only in legal frameworks but also in mindsets at individual and societal levels. It is a striking area of study that deserves attention from fields like sociology, education, law, theology, literature, and cultural studies.

This study primarily approaches the relationship between literature and disability from a theoretical perspective. Its primary aim is to review the existing literature and compile theoretical insights to answer the question, “What is Disability Theory?” The study's secondary objective is to explore the question, “How can Disability Theory be applied in literary research?” The analysis classifies relevant scientific works by reviewing national and international literature to address this question. It proposes sample applications to inspire researchers in our country and assist them in planning similar studies. In conclusion, after defining Disability Theory, the study categorizes research that employs Disability Theory in analyzing literary works. These findings are presented under appropriate subheadings to serve as a resource for researchers.

Keywords: Disability Theory, Disability, Literary Theory, Literary Analysis

ENGELLİLİK VE TOPLUM

Günümüzde engellilik ve engelli bireylerin topluma katılımı bugün bütün devletlerin ve kurumların işleyişlerine etki eden olan önemli bir gündem maddesidir. Daha çok çıkarılan yasa ve yönetmeliklerle engellilerin iş dünyasına, eğitim yaşamına ve belediyeçilik ve kamusal alan boyutlarında toplumsal ve çevresel yaşama katılımını sağlanmasının amaçlandığı günümüzde hükümetler engelli bireylerin ulaşım, yerleşim ve sağlık hizmetlerinden yararlanmaları gibi hususlarda çalışmalar yapmaktadır. Bütün bu olumlu çaba ve onun getirdiği değişimlere karşın, engellilik salt yasalar boyutunda ele alınması gereken bir gerçeklik değildir. Toplum bilim ve eğitim araştırmalarının da ortaya koyduğu gibi engellilik yasa ve yönetmeliklerde olduğu kadar bireysel ve toplumsal zihniyette de değişiklikler yapılmasını gerektiren çok boyutlu bir olgudur ve sadece sosyoloji, eğitim, hukuk ve ilahiyat gibi alanların değil edebiyat ve kültür çalışmalarının da gündeminde bulunması gereken çarpıcı bir çalışma alanıdır.

Engellilik sosyolojisine ilişkin önemli girişimlerin 1970’lerde İngiltere’de başladığı bilinmektedir ki İngiltere’de öncelikle tıbbi bir bakış açısıyla ele alınan engellilik konusu kısa bir süre sonra tıbbi bakış açısını eleştiren sosyal yönüyle de tartışılmaya başlanmıştır (Burcu, 2015, s. 320). Engellilik kavramı genellikle hareket kabiliyeti düşük ve toplumsal işleyişe sınırlı katılım gösterebilen bireyleri ifade eder. Bu sınırlılık, doğuştan gelen, doğum sırasında yaşanan ya da sonradan meydana gelen bir hastalık veya kazanın sebep olduğu fiziksel ve biyolojik işlev bozukluklarından kaynaklanabilir ancak hareket kabiliyetinin sınırlı olması tek başına bir engellilik hali de değildir. Toplumdaki her bireyin hayatta yapamadığı ya da beceremediği şeyler olduğunu unutmamak gerekir ki bu açıdan bakıldığında toplumda bir şekilde “engeli” olmayan birey hemen yok gibidir.

Engellilik, esasen günlük yaşama katılımı kısıtlayan bedensel işlevlerdeki bir kısıtlılık durumu olarak değerlendirilmektedir. Toplumsal açıdan önemli olan, bu fiziksel kısıtlılıkların varlığından ziyade, bu eksiklikleri telafi edebilecek destek mekanizmalarının bulunup bulunmadığıdır. Dolayısıyla, engellilik bir sorun olarak ele alındığında, önce engelli bireylerin özelliklerinden değil, toplumun engelliliğe bakışından ve engelli bireylere yaklaşımından başlamak yerinde olur. Örneğin, görme sorununuz bir gözlükle kolayca giderilebiliyor ve günlük işlerinizi yapabiliyorsanız, bu durumda bir engelden bahsetmek zordur ancak gözlüğe ulaşmanın mümkün olmadığı bir yerleşim birinde yaşıyorsanız, ciddi bir engelle karşılaşabilirsiniz. Dolayısıyla engellilik, şartlara göre de değişkenlik gösteren bir durumdur. Nerede ve hangi koşullarda yaşandığına bağlı olarak sonuçları farklılık gösterebilir. Elbette ki eğer bir bireyin bedensel işlevlerindeki farklılıklar onun hareket kabiliyetini sınırlandırıyor o bireyin toplumun diğer üyelerinden “farklı” addedilmesi olağandır ki işte bu ve benzeri farklılıklar zaman zaman o bireyin ayrımcılığa uğramasına neden olabilir. Ayrımcılığın temelinde farklılıklar ve bu farklılıkların getirdiği sıra dışı durumlar bulunmaktadır. Bütün

bunların bireyin toplumdan uzaklaşmasına yol açması engellilik kavramının toplumsal yönüne işaret etmektedir.

Engelli bireylere yardımcı olabilecek toplumsal destek mekanizmalarının eksikliği ve toplumun engelli bireyleri dışlayıcı tutumları engelli bireylerin topluma eşit bireyler olarak katılmasının önündeki en büyük engellerdendir (Karataş, 2001). Örneğin, tekerlekli sandalye kullanmak zorunda olan bir kişinin, rampanın bulunmadığı bir bina girişine ulaşması ve merdivenlerle karşılaşması durumunu ele alalım. Bu kişinin tekerlekli sandalye kullanmasına neden olan bir “engeli” vardır ancak onu topluma daha etkin bir şekilde katılmaktan asıl alıkoyan şey, başka birinin inşa ettiği fiziksel bir engeldir: merdivenler. Elbette mimarlar tekerlekli sandalye kullanan bireyleri kasıtlı olarak toplumdan dışlamayı amaçlamaz ancak toplumumuzda insanların kullanımı ve rahat yaşaması için tasarlanan birçok şey, "engelsiz" bireyleri, yani merdiven çıkabilen, bilgisayar ekranlarını görebilen, yönlendirmeleri duyabilen bireyleri öncelikli kılmaktadır (Dunn, 2010).

Elbette ki engelliliğin getirdiği sınırlama ve sorunları ortadan kaldırmak ya da daha yaşanabilir bir yaşamı idame ettirmek tıp ve sağlık bilimlerinin başat uğraşlarından olmuştur. Ekseriyetle, bir zamanlar “normal” olan bir bedeni “eski haline getirmek” amacıyla üretilen protezler “şekil bozukluğu” ya da “sakatlıkları düzeltmek” amacıyla kullanılırken toplumun değişen normallik algısı ile “bir bedeni daha normal hale getirmeye yönelik gelişmelerin gözle görülebilecek bir sınırı yoktur” (Kelly, 2023, s. 161). Çok değişkenli böylesi bir toplumsal düzlemde engelli olma hali, engelli bir bireyin öznel halinden ziyade toplumun tümünün kendi önüne koyduğu sınırlık ve engelleri tanıma, onlarla baş etme ya da onları ortadan kaldırma üzerindeki düşünüş ve edimlerinin tümüne işaret eden çok geniş bir alandır. Yine tekerlekli sandalyedeki bireyle mimari yapı örneğine dönecek olursak; toplumsal açıdan engellilik deneyimi salt mimarlık ve teknolojiyi değil aynı zamanda film, sinema, edebiyat, din ve bilim gibi insanın ürettiği ve içinde edimlerini sürdürdüğü soyut ve somut tüm alanları da kapsayan bir alandır ve daha da doğrusu hayatın tümüdür.

ENGELLİLİK VE EDEBİYAT

“Edebiyatın hayatın aynası” olduğu eğretilmesi bilindik bir söylemdir. Farklı kuramlar farklı değerlendirmelerde bulunsa da sonuç olarak toplumun ürünü olan edebi eserlerde hayattan bir şeyler bulunur ve okuyucu okuduğu eserlerden belirli bir bilgi ve görgü edinir. Ülkemizin kültürel dağarcığına baktığımızda, film ve edebiyatta engelli bireylerin az da olsa yer aldıkları görülmektedir. Film ve edebiyat tarihimizde çoğunlukla mutluluğu en azından sağlıklı bireyler kadar hak ettiği ve “normal” bir yaşam sürme hakkına ve becerisine sahip olduğu gösterilen ya da ima edilen engelli bireylerin temsilleri maalesef “anormal” bireyler oldukları ya da acınılacak yaşamları olduğu gerçeğini değiştirmemektedir.

Edebiyat alanında, aynen Sosyoloji biliminde de olduğu gibi, postmodern ve feminist yaklaşımların engellilik sorunu ile yakından ilgilendiği görülmektedir. Örneğin, “Postmodern yaklaşıma göre engellilik ve sosyoloji ilişkisinde postmodernist soru, ‘bireyler üzerindeki baskının açıklanmasının ve devamlılığının sağlanmasından çok, birinin diğerinden daha üstün görülmesinin saptanmasının mümkünüzlüğünde’ vücut bulur” (Burcu, 2015, 328). Feminist yaklaşımlar ise engelliliği biyolojik cinsiyet üzerinden ele alır ki bu tarz araştırmaların temel sorunu “engeli bulunan kadınların engelli olmayan kadınlara göre daha farklı sorunları deneyimlemeleridir” (Burcu, 2015, 328). Çocuk edebiyatı eserleri ise, yalnızca toplumun engellilik algısını yansıtan değil, aynı zamanda bu algıyı şekillendiren önemli birer araçtır. Bu tür eserlerde kullanılan dil, “normal” olmanın ideolojisini yansıttığında, engelli bireylerin toplumda daha az değerli olarak algılanmasını pekiştirme riski taşır. Dolayısıyla, çocuklara

yönelik eserlerin dili ve içerikleri, engelliliğe dair önyargıları yeniden üretme potansiyeli taşımaları nedeniyle büyük bir titizlikle ele alınmalıdır (Ünal, 2010).

Edebi eserler, dilin kullanılmasıyla varlık bulur ve dil, o dili kullanan insanların tutumları ve inançları hakkında pek çok ipucu sunar (Ünal, 2010). Engellilik, genellikle kötülük, çaresizlik ya da acıma gibi duygularla eşleştirilir. Hem kahramanlar ve hem de kötü karakterler insan olmayı, insanca yaşamayı ve tüm varlıkların iyiliği için düşünmeyi engelleyen ve toplumca istenilen kişilik özelliklerinin oluşmasını zorlaştıran özellikleri “engelli” bireylere yapıştırabilirler. Örneğin, Shakespeare’in “kambur kralı 3. Richard, Melville’in takıntılı tek bacaklı kaptanı Ahab ve Dickens’ın duygusal bir şekilde tasvir edilen topal yetimi Tiny Tim” (Mitchell ve Snyder, 2022, s.196) okuyucunun ya da izleyicinin zihninden çıkmayacak karakterlerdir. Bu karakterler, edebi açıdan başarıyla yazılmış karakterler olsa da, okuyucuların kamburluk, organ/uzuv eksikliği ve yürürken aksama gibi bedensel görünüşleri içselleştirmelerinde olumsuz rol oynama gücüne sahiptirler. Kısacası, bu tür “engelli” karakterler, insanların zihinlerinde sonsuza kadar değişmeyecek olumsuz imgeler yaratabilir. Buna karşın, edebiyat ve edebi eserlerde görünür kılınan karakterler böylesi olumsuz imgelerin etkilerini azaltmada da rol oynayabilir.

Lakoff ve Johnson’a (2008) göre eğretilmeler anlatıların ve bilişsel süreçlerin yapılandırılmasında önemli unsurlardır. Shakespeare’in *3. Richard* eserindeki Richard’ın kamburuna bakıldığında, ilk etapta yalnızca bir fiziksel “biçimsizlik” görülebilir. Buna karşın, metne edebi bir bakış açısıyla baktığımızda görürüz ki bu kambur karakterin kamburu sadece fiziksel bir görünüm değildir. Kamburu, şahsi hırslarının ya da içsel kötülüğünün simgesi olur ve türlü söz sanatlarıyla kambur ve kötülük ilişkilendirilir. Çevresindekilerin "bottled spider" (şişelenmiş örümcek) veya "lump of foul deformity" (kötü bir biçimsizlik guddesi) gibi alaycı ve küçümseyici eğretilmeleri kullanması, engelli bireylere yapışan olumsuz imgeler oluşturur (Akhtar ve diğerleri, 2017, s.94). Bu noktada edebiyat, toplumsal algıları yansıtarak engelliliği tıbbi bir durumdan ziyade toplumsal bir olgu haline getirir.

ENGELLİLİK KURAMI

Engellilik çalışmaları ve edebiyat bağlamında ele alındığında, eğretilmelerin engellilik kavramının algılanış biçimini anlamaya yardımcı olan güçlü araçlar olduğu anlaşılabilir. İşte Engellilik kuramı tam bu noktada, yani edebi olanla toplumsal olan arasında belirmiştir. Engelliliği yalnızca bireysel bir sağlık sorunu olarak değil, aynı zamanda toplumsal ve kültürel bir olgu olarak ele alan Engellilik kuramı tıbbi, toplumsal ve kültürel modeller gibi farklı kuramsal yaklaşımları içerir ve edebi eserlerdeki engelli temsillerini ve bu temsillerin toplumsal anlamlarını ortaya koyabilmemiz için önemli araç ve yaklaşımlar barındırır. Kısaca söylemek gerekirse, Engellilik kuramı insanlara engellilerin de içinde olduğu toplumsal yaşamın gerçekliklerini, yaşamın edebiyatla kesiştiği noktaları temel alarak, okuyucuya bir kez daha gösterir (Cihantimur, 2024).

Edebiyatın temel istençlerinden biri, toplumu yansıtmaktır. Bérubé’nin (2005) sözleriyle, “edebi metinlerdeki karakterler bazen yalnızca gerçek insanları temsil eden figürler olarak okunabilirmiş gibi hareket eder” (s. 570). Edebi metinlerin bu doğrultuda okunmasıyla engelli bireylerin görünmezliği belirgin hale gelir çünkü edebi eserler yalnızca bireysel deneyimlerin değil, aynı zamanda toplumun engellilik algısının ve bu algının toplumsal yansımalarının bir aynasıdır. Engellilik çalışmaları, bu temsilleri inceleyip yorumlayarak toplumsal farkındalık yaratmayı ve engellilik olgusunun daha geniş bir bakış açısıyla değerlendirilmesini amaçlar. Bu çalışmada da, edebiyat ve engellilik ilişkisi önce kuramsal olarak ele alınmaktadır. Mevcut alan yazının taranması ve derlenen kuramsal bilgilerin “Engellilik Kuramı nedir?” sorusuna yanıt

vermesi çalışmanın temel amacıdır. Çalışma, ikincil olarak, “Engellilik Kuramı edebiyat araştırmalarında nasıl kullanılır?” sorusuna yanıt aramaktadır.

YÖNTEM

Bu çalışmada doküman tarama ve doküman inceleme teknikleri nitelik araştırması yönteminin araştırma teknikleri olarak kullanılmıştır. Çalışmada, JSTOR, Google Scholar, Scopus gibi veri tabanlarına ulaşılmış ve şu anahtar sözcükler başta olmak üzere birçok anahtar sözcük kullanılarak edebi eser incelemeleri içeren ilgili makale, kitap ve kitap bölümlerine ulaşılmıştır: “disability, disabled character, handicap, handicapped character, social disability, anti-social, deaf, blind, deaf/blind ve physical disability.” İlgili kaynaklara ulaşıldığında da önce hızlı ve daha sonra da odaklanılmış okumalar gerçekleştirilmiştir. Elde edilen çalışmalar tablolara aktarılmıştır. Tümüyle kuramsal olan çalışmalar tasnif dışı bırakılmıştır.

BULGULAR

Yapılan alanyazın taraması ve doküman incelemesi sonucunda toplamda 29 adet çalışmanın Engellilik kuramının kullanılması yoluyla bir edebi eseri incelediği saptanmıştır. Bunlardan 15 tanesi Amerikan, 10 tanesi İngiliz, 2 tanesi Amerikan-İngiliz, birer tanesi de Galli-Kanadalı ve İrlandalı yazarların eserleri üzerine yazılmıştır. Araştırmacıların Amerikan yazarlarına ve onların eserlerine yoğunlaştıklarını görmekteyiz. Bu bulgunun anlaşılır olduğuna inanıyoruz çünkü her ne kadar engelliliği tıbbi model yerine toplumsal bir modelden görme ve inceleme fikri İngiltere menşeli olsa da müstakil bir edebiyat kuramı olarak Engellilik kuramının ortaya çıkışı ve kurumsallaşması Amerika Birleşik Devletleri’nde olmuştur. İncelenen edebi eserlerin türlerine göre dağılımına baktığımızda romanların (16) ve onu takiben tiyatro eserlerinin (6) baskın olarak çalışılan türler olduğu görülmektedir. Kısa öykü (3), şiir (1), şiir-düzyazı (1) ve roman-kısa öykü (1) çalışılan diğer türlerdir. Her ne kadar edebi tür olmasa da, metin temelli ve yayımlandığı mecra edebiyat araştırmalarının yayımlandığı bir dergi olduğundan çalışmamıza kabul ettiğimiz çizgi film (1) de çalışılan türler (senaryo) arasında yerini almaktadır. Elde edilen çalışmaların yazarları, çalışmalarda incelenmiş bulunan eserlerin türleri ve araştırmacıların izledikleri yöntemler hakkında kısa açıklamalar alttaki tablolarda sunulmuştur. Tablo 1’de Amerikan, Tablo 2’de İngiliz ve Tablo 3’te de diğer ulusların edebiyatlarına odaklanan çalışmalar yer almaktadır.

Yazar	T	Yöntem
Preston	ÇF	“Finding Nemo” başlıklı çizgi filmde engelliliğin temsili
Cihantimur	Ş	Sağır/Kör bir şairin şiirlerine Deyişbilimsel bir bakış
Sklar	R	Daniel Keyes’in romanının başkişisinin entelektüel engelliliği
Geriguis	R	Edith Wharton’ın engelli karakterlerine alımlama kuramı ile bir bakış
Cheyne	R	Stephen King’ in “Dance Macabre” ve “Duma Key” gibi eserleriyle Thomas Harris’in “Red Dragon,” “The Silence of the Lambs” ve “Hannibal” gibi eserlerindeki ürkütücü karakterlere bir bakış
Jensen-Moulton	R	Steinbeck’in “Fareler ve İnsanlar” romanındaki başkişisinin entelektüel engelliliğine bir bakış
Gicking	R	William Faulkner’ın “Ses ve Öfke” başlıklı romanındaki engelli erkek karakterine Freud’un bilinç kuramları bağlamında bir bakış
Sauer	R	Harper Lee’nin “Bülbülü Öldürmek” romanındaki engellilik görünümlerine pratik bir yaklaşım
Woiak	R	“Chalion Laneti” başlıklı fantastik romana queer engellilik çerçevesinde bir bakış

Krajecki	R	“Harriet the Spy” başlıklı romana otizm-spektrum bozukluğu açısından bir bakış
Sandahl	T	Lynn Manning’in otobiyografik performanslarına engellilik ve toplum ilişkisi bağlamında bir bakış
Minich	Ö	Oscar Casares’in “Big Jesse, Little Jesse” başlıklı kısa öyküsüne engellilik ve erkeklik bağlamında bir bakış.
Bhargava ve Nambiar	Ö	Bibliyoterapi bağlamında “Algernon'a Çiçekler” eserine engelliliğin belirtileri ve görünümleri çerçevesinde bir bakış
Boyer	R	Feminist eleştiri ve engellilik kuramı çerçevesinde “Sırça Fanus” eserinde engelli kadın bedeninin dilin bir eğretilmesi olarak kullanımına bir bakış
Maple	R	Sylvia Plath’in “Sırça Fanus” romanına feminizm ve engellilik kuramının kesişimi çerçevesinde bir bakış.

Tablo 1. Amerikan edebiyatını inceleyen çalışmaların türlere göre sınıflandırılması

Amerikan edebiyatı üzerine yapılan çalışmaların çoğunluğunun Amerikan edebiyatının başat yazarlarının eserlerini ele aldığı görülür ki bunlar arasında Sylvia Plath, Harper Lee, William Faulkner ve Stephen King dikkat çekicidir. Hakeza İngiliz edebiyatı üzerine yapılan çalışmalarda da öncelikli olarak başat yazarların eserlerinin çalışıldığı görülmektedir ki bunların arasında Shakespeare, Byron, Richardson, Austen ve Dickens öneme çıkmaktadır. Bu çalışmalar arasında ekseriyetle şiirleri ile anılan Byron’un tiyatro oyununa odaklanılmış olması tiyatro oyunlarının şiir türüne kıyasla Engellilik kuramıyla incelenmesinin daha yapılabilir olduğunu gösteriyor olabilir.

Yazar	T	Yöntem
Mossman	R	Roman karakterlerinin bedenlerine normal/anormal ikircikliği çerçevesinden bir bakış
Thomson	T	Byron’ın “The Deformed Transformed” başlıklı oyununa yeni engellilik açısından bir bakış
Peterfreund	T	Byron’ın “The Deformed Transformed” başlıklı oyununa engellilik üzerinden bir bakış
Fawcett	T	Colley Cebbar’ın “Richard III” başlıklı oyununa deforme bedenler ekseninde bir bakış
Farr (a)	R	Samuel Richardson’ın “Pamela” ve Sarah Scott’un eserlerine queer ve engellilik açısından bir bakış
Farr (b)	R	Jane Austen’in “Sandition” başlıklı eserine queer ve engellilik bağlamında bir bakış
Muller	R	Mark Haddon’ın “Süper İyi Günler” romanındaki başkarakterine engellilik kuramı açısından bir bakış
Roshnavand ve Dibavar	Ö	Charles Dickens’in “Bir Noel Şarkısı” eserinde anlatı protezi olarak engellilik

Ingham	R	Jojo Moyes’in “Senden Önce Ben” romanında toplumun engelliliğe yönelik tutumunun engellilik kuramıyla incelemesi

Tablo 2. İngiliz edebiyatını inceleyen çalışmaların türlere göre sınıflandırılması

İngiliz ve Amerikan edebiyatları dışında kalan eserlerin dökümü aşağıdaki gibidir. Diğerlerine oranla bu sınıfta olan eserlerin yazarlarının diğerleri kadar tanınmış olmadığı iddia edilebilir.

Bu sınıflandırma içinde yer alan eserlerin türlerinde de gözle görülür oranda farklılık göz çarpmaktadır. İncelenmiş olan türler arasında tarihi romans ve tiyatro bulunmakla birlikte diğer iki çalışmada farklı türlerden alınan eserlerin karşılaştırıldığı görülmektedir. Bu grup içinde farklı ulusların yazarlarının olması bir yana asıl dikkat çekici husus farklı ulusların yazar ve eserlerinin, farklı türlerin ve kuramsal bakış açılarının (Deleuze ve Guattari gibi) Engellilik kuramı ile birlikte kullanılabilmesini göstermiş olmasıdır.

Yazar	T	Yöntem
Cheyne	R	Galli-Kanadalı Mary Balogh'nun engelli karakterlerine aşk ve ilişki bağlamında bir odaklanma
Barber-Stetson	Ş/D	İngiliz ve Amerikan otizmli şair ve yazarların dil kullanımlarına Deleuze ve Guattari'nin minör edebiyat ürünleri olarak engellilik bağlamında bir bakış
Niel	T	İrlandalı Brian Friel'in oyunlarındaki engelli karakterlere motif ve anlam bağlamında bir bakış.
Høgi	R-Ö	"Cesur Yeni Dünya" ve "Algernon'a Çiçekler" başlıklı eserlerde engelliliğe kimlik ve toplumsal hiyerarşi bağlamında bir bakış

Tablo 3. Diğer ulusların edebiyatlarını inceleyen çalışmaların türlere göre sınıflandırılması

İncelenen çalışmalara bakıldığında engellilik kuramı kullanılarak incelenen eserlerin ağırlıklı olarak edebi eserler olduğu ve bunların çoğunun da roman ve tiyatro üzerine yoğunlaştığı görülmektedir. Dolayısıyla şiir ve kısa öykü türleri üzerinden yapılacak çalışmalara daha çok ihtiyaç duyulmaktadır diyebiliriz ancak şiir ve kısa öyküde karakter gelişiminin sınırlıklarından yola çıkarak bu türleri ele alan çalışmaların sayıca az olmasını da kısmen anlayabiliriz. Bununla birlikte çizgi filmler ve filmler üzerinde de çalışmalar yapılmasına gereksinim duyulduğu açıktır çünkü bu tarz kültürel/teknolojik ürünler de aynı edebi eserlerde olduğu gibi metinlerden (senaryolardan) oluşmaktadır ki bunların bir kısmı edebi eserlerin senaryo olarak uyarlanmasından oluşmakta ve bu tarz eserlerin izleyici sayısı milyonları bulmaktadır.

Yayımlanan eserlerde bir kısım araştırmacılar inceledikleri eserlere Engellilik kuramı yoluyla yaklaşırlarken bazı araştırmacıların da Freud'cu, Deleuze ve Guattari'ci, Queer, Deyişbilimsel ya da Feminist bakış açılarıyla yaklaştıkları görülmektedir. Dolayısıyla bu ikinci gruba giren araştırmaların Engellilik kuramını edebi eser incelemesinde kullanılacak tek kuramsal yaklaşım aracı olarak bakmadıkları görülmektedir. Edebi eserlerin anlaşılmasında farklı kuramların bir arada kullanılmasının, hatta, farklı kuramlardan parçalar ya da araçlar ve teknikler alma yoluyla yeni ve özgün kuramsal çerçeveler oluşturulmasının daha yararlı olabileceği iddia edilebilir.

İncelenen çalışmaların romanları ele alan alt grubuna baktığımızda bunların çoğunun baş karaktere odaklandığı görülmektedir. Bununla birlikte böylesi çalışmalar romanda toplumun engelliliğe bakışını da çalışmanın odak noktası yapabilmektedir ki bu da bize Engellilik kuramının hem bireylere hem de topluma odaklanabilecek bir yapıda olduğunu göstermektedir. Buna ek olarak bir kısım çalışmalarda "Critical Disability Theory" (Eleştirel Engellilik Kuramı) olarak adlandırılan ve engellilikle ırk ve toplumsal sınıf gibi gerçeklikleri birbirleriyle olan ilişkileri bağlamında inceleyen eserler de bulunmaktadır ki bu tarz çalışmalarda özellikle toplumcu bir siyasi izlek varlığını güçlü bir şekilde hissettirmektedir.

Yazım yöntemi olarak incelenen çalışmaların öncelikle toplum-edebiyat-engellilik üzerine bir giriş yaptıkları ve daha sonra da incelenen eserin karakter ya da olay örgüsü dahilinde çatışma, eğretilme ya da diyaloglardaki güç ilişkileri gibi engellilik-eser ilişkisi üzerinden incelemelerini kotardıkları görülmüştür. Bir başka grup incelemede de, edebi eserlerdeki engellilik sorunu gündelik yaşam ve özellikle de okullaşma sorunu dahilinde ele alınmakta ve araştırmacı/yazarlar özyaşam deneyimlerini, öğretmen ya da araştırmacı olarak görüşlerini, edebi bir eseri Engellilik kuramı ile okuyarak birleştirmekte ve topluma olduğu kadar siyasi kurumlara, öğretim programlarının yazarlarına ve eğitim ve edebiyat araştırmacılarına somut önerilerde bulunmaktadır. Bu tarz yayınlardan en belirginini Sauer'in (2021) Harper Lee'nin "Bülbülü Öldürmek" romanını pedagojik olarak engellilik kuramı çerçevesinde çalışmasıdır.

SONUÇ

Tarama ve doküman incelemesi sonucunda elde edilen çalışmalar bize bu tarz çalışmaların Türk edebiyatı çalışmalarında olduğu kadar diğer dillerin edebiyatlarının çalışılmasında da örnek ve model olarak alınabileceğini göstermiştir. Takip eden çalışmaların yalnızca edebi eserleri değil film ve popüler müzik eserleri gibi diğer türleri de inceleyerek alanyazına katkıda bulunacağına inanıyoruz. İncelemelerimiz ayrıca göstermiştir ki edebi eserlere Engellilik kuramı çerçevesinde bakılırken salt bu kuramdan yararlanılması bir zorunluluk değildir çünkü farklı araştırmacılar özgün kuramsal çerçeveler oluşturarak farklı kuram ve düşünürlerin yöntem ve tekniklerinden de yararlanabilir ve farklı ulusların birbirinden farklı edebi türlerini de engellilik bağlamında inceleyebilirler.

ABSTRACT

Türkiye has come a long way since the introduction of first nationwide topographic map coverage in 1959-60. Since then, many distinctly scaled topographic, geologic, administrative, etc. maps have been produced and put into service with the interested parties, domains and projects. Due to including considerable amount of surface and land-cover detail, 25000 scaled topographic maps have been at the forefront of many scientific and infrastructure related works. Topographic maps have always been produced through stereo air-photo based photogrammetric techniques. Since the fourth quarter of the 2000s and along with the advancing technology, map production from the air-photo capture to the final digital raster product has entirely turned to digital means and capabilities. Thus, one last addition to the long list of successful cartographic accomplishments carried out by the General Directorate of Mapping has been introduced as the new 0.3 m national baseline digital elevation model (DEM). The initial visual investigation of this unusually high-resolution new DEM has revealed that it might open new horizons in various disciplines such as cadastral planning, agriculture, forestry, natural disaster mitigation, national defense, etc. In forestry particularly, forest management, watershed management and transport planning activities might benefit from this data. In this study, the usage possibilities of this new 0.3 m baseline DEM in Turkish forestry were elaborated through visual comparisons that had been captured from related domains within the raster DEM.

KEYWORDS: Digital elevation models, Forestry, Land management, Transport planning

INTRODUCTION

In line with the technology of the time, surface representation in Türkiye, as well as in the rest of the World started with the hard-copy production of topographic maps released in various scales. Although the advancing technology and the capabilities has nullified the use of such hard-copy maps, their land-cover and elevation precisions have not changed owing to the strict photogrammetric approaches used in their making (Altunel and Sakıcı, 2023). Especially after the 1980s as the cartographic capabilities have started leapfrogging, they have long been ready to be digitized and used to depict the topography and the related derivatives in various studies and projects (Carter, 1988; Arrighi and Soille, 1999; Freudiger et al. 2018). Until the release of C-band based and X-band based Shuttle Radar Topography Mission (SRTM) digital elevation models (DEM) in the second half of the 2000s, they were practically the only solution to turn to when topographic parameters were concerned. Stereo air-photo capture and photogrammetric principles were key in their success, so that Öztürk and Koçak (2007) later showed that not only the topographic maps, but also a very popular secondary product, a national DEM, could very-well be produced using the digitally acquired stereo air-photography. Indeed, such a product with an unusually high spatial-resolution of 5 m, was released by the General Directorate Mapping (GDM) as early as the end of 2023 (GDM, 2024). Altunel and Doğan (2024) showed

that a rather consistent less than 2.5 m Root Mean Square Error (RMSE) and Mean Absolute Error (MAE) could be achieved through this DEM. Although this new 5 m national DEM along with the Airbus DS Geo GmbH's famous 12 m TanDEM-X based TREx DEM, have been available to the interested parties via official-contract in GDM's products portal, the underlying dataset that the above-mentioned new high-resolution DEM was depended upon and produced as a 5 m resampled secondary product, was the subject of this study, 0.3 m national baseline DEM. After Yılmaz and Erdoğan (2018) showed how digitally acquired stereo air-photos could be auto-correlated to produce almost LiDAR quality DEMs, GDM has managed to produce this baseline DEM using the recently acquired, 2020-onwards, digital stereo air-photos. Just like the popular global land-cover datasets that are continuously updated (Altunel and Çelik, 2023), if the quality of this baseline DEM is good and it will also be updated with new air-photo acquisitions, it could very well provide a high-quality topographic data for Türkiye for years to come.

DATA

To understand the level of detail that can be achieved in this baseline DEM, Figure 1 was devised.

Figure 1. Illustration of the baseline DEM spatial resolution with respect to the others

PROSPECTS OF WHAT CAN BE DONE USING THE BASELINE DEM

Precision of the baseline DEM can be checked with extensive GNSS leveling if not already present in GDM, itself. With the amount of accumulated such leveling records in hand, we will surely perform that check by simultaneously comparing it to the global DEM datasets such as Copernicus, FABDEM, Diluvium DEM, etc. Especially in the case of Diluvium DEM, it can shed light to coastal deformations.

Owing to the amazing detail, it appeared that Above Ground Biomass (AGB) calculations can be done if a proper Digital Terrain Model (DTM) generating algorithm is run over the baseline DEM because individual trees are perfectly visible within the dataset. Additionally, it appeared that the tree heights could also be measured (Figure 2).

Figure 2. Tree forms are just like what to be expected from photogrammetric stereo air photo interpretation

Unusually intricate surface detail could be very handy in hydrological studies such as snow and avalanche management and mitigation, surface water and mass movement channeling, volume calculations etc. (Figure 3).

The only restrictive side of the baseline DEM is the fact that each dataset is custom tailored to the frame of the corresponding 25000-scaled topographic map. Since the amount of the detail in each frame is considerably enlarging the individual file size, it will be rather difficult to handle more than one frame because the processing capabilities in our disposal are relatively weak to work on an entire province spanning large number of frames. As we learned through the correspondence that we established with the GDM, although publicized as the baseline data underneath the new national 5 m DEM, their production sequence is still continuing so the demands may not be immediately filled.

Figure 3. Rather detailed surface representation

CONCLUSION

It is a remarkable feat that the GDM has managed to produce such a datasets for Türkiye and its peoples' endeavors. The absence of LIDAR technology and more than 70+ years of stereo air-photo capture and photogrammetry know-how has probably forced the GDM to opt for this way. It sure looked promising, but despite the amazing spatial resolution, it would still stay behind what aerial LIDAR can do.

THE INVESTMENT CLIMATE OF KYRGYZSTAN REGIONS

Asel Pazylova¹
Selçuk KOÇ²

Abstract

The investment climate is a pivotal factor influencing the economic development of regions, particularly in developing countries like Kyrgyzstan. This study aims to investigate the investment climate across various regions of Kyrgyzstan and to propose actionable recommendations for its enhancement. The research objectives include assessing the current investment conditions, identifying key determinants of regional investment attractiveness, conducting a comparative analysis with international benchmarks, and formulating strategies for improvement.

Employing a comprehensive methodology, the study integrates quantitative analysis of statistical data regarding foreign investment inflows, economic activity levels and infrastructure development.

The novelty of this research lies in its systematic examination of the regional investment climate in Kyrgyzstan, emphasizing unique regional characteristics and challenges. Unlike existing studies, this paper will incorporate new data and successful practices from other countries while offering concrete recommendations tailored to the Kyrgyz context.

In conclusion, the findings will summarize the current state of investment climates across Kyrgyzstan's regions and highlight areas for future research. The study underscores the necessity for a holistic approach to improving the investment climate which should encompass both governmental initiatives and active participation from the business sector.

Key recommendations include implementing reforms in tax and legal frameworks to simplify business operations, enhancing infrastructure and transportation networks to improve regional accessibility, strengthening local governance institutions for greater accountability and transparency, establishing support programs for small and medium-sized enterprises - especially in remote areas - and actively engaging international organizations for financing developmental projects.

Key words: investment climate, region, investment attractiveness, sustainable development, investment potential.

I. INTRODUCTION

The Kyrgyz Republic is a sovereign state in Central Asia. Kyrgyzstan is a landlocked country with mountainous terrain. It borders Kazakhstan to the north, Uzbekistan to the west and southwest, Tajikistan to the southwest, and China to the east. The capital and largest city is Bishkek. Administratively, Kyrgyzstan is divided into 7 regions (Batken, Jalal-Abad, Issyk-Kul, Naryn, Osh, Talas, and Chui) and 2 major cities (Bishkek and Osh).

The Kyrgyz Republic has many rivers with great hydropower potential and a favorable climate for agriculture (Investment portal of the Kyrgyz Republic, 2024). Each region specializes in specific products: Chui grows sugar beets, Issyk-Kul is known for apples and pears, Batken for dried apricots, Osh and Jalal-Abad for cotton and walnuts, Naryn for livestock, and Talas for kidney beans and soybeans. Kyrgyzstan is a unique year-round tourist destination, offering stunning lakes like Issyk-Kul, Sary-Chelek, and Son-Kul, as well as mountains for climbers in summer and skiers in winter. Its rich history and cultural heritage

¹ Lecturer, Osh Technological University, Department of Economics and Finance

² Prof.Dr., Kocaeli University, Department of Economics

also make it an attractive place for visitors. The textile industry is growing rapidly, driven by affordable labor and a young workforce. Kyrgyzstan has a long history of garment production, with large companies exporting mainly to Russia and Kazakhstan. Over the past eight years, the garment industry has grown six times in size.

The investment climate in Kyrgyzstan plays a key role in the economic development of the regions (Komendantova et al. 2018), attracting both domestic and foreign investors. This leads to an increase in capital investments, the creation of new jobs and an improvement in the standard of living. Investments contribute to business development, modernization of enterprises and growth in gross domestic product. Improvements in infrastructure, the introduction of new technologies and the enhancement of workforce skills also boost competitiveness and reduce unemployment (U.S. Department of State, 2023). A stable investment climate depends on political and economic stability and improving the climate in less developed regions can help reduce economic inequality. Investments can also support sustainable development and environmental protection (Fahmi, I., 2023). Overall, enhancing the investment climate is of significant importance for the economic progress of Kyrgyzstan.

II. LITERATURE REVIEW

A good investment climate is essential for economic growth. Without it, solving social and economic problems or maintaining scientific and technological progress is impossible (Sarsenbaevich et al. 2021). The investment environment includes all factors that affect how investors make decisions. Investors carefully study the economy of the country they plan to invest in, looking at positive and negative conditions, policies and culture. A better investment environment means lower risks for investors and higher investment attractiveness, leading to more investors coming in (Vinokurov et al. 2022). If the investment climate is poor, investor costs go up making investments ineffective and discouraging future investors. This makes the investment climate important for both investors and the countries receiving investments.

A good investment climate boosts investments in the country's economy and increases SME activity (Kulanov et al., 2020). Economic development and energy resources affect FDI inflows. Improving the investment climate by speeding up transitions and reducing risks is a key to attracting more FDI. Diversifying the natural resource-based economies can reduce reliance on energy and mining, boost economic growth, and attract different types of FDI (Penev, S., 2007).

The impact of digitalization on the economy and investment attractiveness has grown significantly recently and is expected to increase further, as the use of information and communication technologies is a priority in state's policy (Kiseleva E. G., 2020).

FDI inflows from the previous year positively impact FDI in the current year. Successful investments in the past can encourage more foreign investments in the future (Azretbergenova et al., 2022). To attract FDI and improve competitiveness, Kyrgyzstan needs clear policies and transparent procedures to make investors feel confident. This can help the country stand out as the best place for business in Central Asia, despite some geographic challenges (Lee, C. Y., 2019).

III. DATA AND METHODOLOGY

This study examines the investment climate in the regions of the Kyrgyz Republic from 2018 to 2023. The analysis is primarily based on data obtained from the National Statistics Committee of the Kyrgyz Republic along with indices provided by the Heritage Foundation. Additionally, various scholarly articles and reports focusing on investment and investment climates have been utilized to enrich the findings.

The data collected from the National Statistics Committee includes key economic indicators such as investments in fixed capital, foreign direct investment inflows and regional economic

performance metrics. These indicators provide a quantitative foundation for assessing the overall investment environment across different regions.

To evaluate the investment climate we incorporated the indices published by the Heritage Foundation which assess factors such as property rights, government integrity and regulatory efficiency. These indices serve as a benchmark for understanding how the Kyrgyz Republic compares with other countries in terms of attracting and sustaining investments.

Furthermore, a comprehensive review of existing literature on investment climates allowed for a qualitative analysis of the challenges and opportunities faced by investors in Kyrgyzstan.

IV. RESULTS AND DISCUSSION

Investment in fixed capital is one of the key indicators of economic growth, reflecting the material foundation of societal development. Let us examine the dynamics of this indicator across the regions of the Kyrgyzstan from 2018 to 2023 (Table 1).

Table 1. Investments in fixed capital by region 2018-2023 (mln. som).

	2018	2019	2020	2021	2022	2023
Republic of Kyrgyzstan (Total)	151467,9	162193,7	123279,6	122843,3	139417,5	168537,4
Batken region	3043,7	4275,3	2966,5	5830,8	4681,4	5904,9
Jalal-Abad region	23990,6	24375,5	16227,7	24880,4	31013,5	28990,4
Issyk-Kul region	25303,1	26173,2	23834,7	17928,3	19772,1	28960,2
Naryn region	4476,8	4887,3	3578,5	3678,9	4236,0	3740,0
Osh region	7897,7	6889,9	5088,2	5481,1	11810,0	12162,4
Talas region	2745,0	8349,8	4642,6	2763,5	2408,1	5546,3
Chui region	21199,9	22003,1	13941,3	12657,5	14261,1	21778,0
Bishkek city	57395,2	59556,0	47450,6	42852,8	42801,1	52776,7
Osh city	5416,0	5683,6	5549,5	5938,9	8434,2	8678,5

Across the Kyrgyzstan, the highest share of fixed capital investments during the analyzed period was recorded in 2023, driven by an increase in investments in Issyk-Kul, Chui regions, and the city of Bishkek. The volume of fixed capital investments in 2023 rose by 18.8%, reaching 168,537.4 million soms. Domestic financing sources played a key role in this growth, increasing by 34.6%, while external sources decreased by 26.3%. Support from the republican budget also led to a doubling of investment volumes. The primary contributors to domestic investments were enterprises and organizations (40.2%) and household funds (37.1%). It is worth noting that investments in fixed assets funded by the republican budget doubled during the year, reaching 23.5 billion soms. Most of the investments were directed toward the construction of facilities in various sectors, including mining, energy, trade, and transportation. Residential construction also positively impacted the sector, attracting over 54.2 billion soms in investments.

The highest volume of FDI into the Kyrgyz Republic during the analyzed period, in absolute terms, was recorded in 2022, amounting to \$1,202.5 million (Table 2). However, in 2023, a declining trend in FDI inflows into the country was observed. Compared to 2021, FDI from non-CIS countries increased by 8.4% in 2022, primarily driven by significant growth in investments from Korea (18.1 times), Kuwait (15.4 times), Japan (11.1 times), the UAE (5 times), Germany (2.6 times), and Turkey (1.4 times). Conversely, FDI inflows from CIS countries decreased by 12%, influenced by a 20.1% reduction in investments from Kazakhstan and a 9.7% decline from Russia.

Compared to 2021, an increase in FDI inflows was observed in enterprises located in Batken, Talas and Jalal-Abad regions, as well as Osh. The majority of FDI inflows (over 95%) were directed towards enterprises in the mining sector, manufacturing industries, financial

intermediation and insurance, wholesale and retail trade, as well as information and communications.

Table 2. Entrance of direct foreign investment by region (thsd. dollars USA).

	2018	2019	2020	2021	2022	2023
Republic of Kyrgyzstan (Total)	851 743,6	1 076 918,7	537 553,8	1 006 091,2	1 202 599,0	844 895,7
Batken region	2 152,2	11 470,6	3 009,3	334,8	36 647,6	305,4
Jalal-Abad region	128 806,7	255 388,8	79 266,3	359 833,3	511 197,4	179 938,5

Source: National Statistics Committee of the Kyrgyz Republic (2024): <http://www.stat.kg/>

According to the Statistical Committee of the Kyrgyzstan, in 2022, Jalal-Abad Region became the most attractive region for investors, receiving \$511.2 million, which is 42.07% more than in the previous year. This is attributed to the presence of large industrial enterprises in the region, such as JSC "Talaskant," which produces aerated concrete blocks and slabs, JSC "Ak-Tilek Energo," which generates electricity from renewable sources, as well as major gold mining companies. The second most attractive region was Chui Region, which attracted \$180.2 million in investments.

The volume of FDI's received by Kyrgyzstan from international investors also varies significantly across the regions of the country. For instance, 53.9% of all FDI is concentrated in just three regions: Jalal-Abad (21.3%), Talas (13.9%), Chui (12.5%) and the city of Bishkek (6.2%). In contrast, regions such as the city of Osh (1%), Osh Region (4.7%), Issyk-Kul Region (3.1%), Naryn Region (2.9%) and Batken Region (0.04%) received negligible amounts of FDI in 2023 (Table 2).

In studying the investment climate of the regions, we used the Heritage Foundation's indexes to analyze the level of economic freedom in the country and the actions taken by the government in this sector.

80–100 Free

70–79.9 Mostly Free

60–69.9 Moderately Free

50–59.9 Mostly Unfree

0–49.9 Repressed

Figure 1. Rule of Law.

Figure 2. Government Size.

Source: heritage.org/Index database.

The overall rule of law is weak in the Kyrgyz Republic. The country’s property rights score is below the world average; its judicial effectiveness score is below the world average; and its government integrity score is below the world average (Figure 1).

The top individual income tax rate is 10 percent and the top corporate tax rate is 10 percent. The tax burden equals 20.0 percent of GDP. Three year government spending and budget balance averages are respectively, 33.6 percent and –1.3 percent of GDP. Public debt amounts to 49.2 percent of GDP (Figure 2).

Figure 3. Regulatory Efficiency.

Figure 4. Open Markets.

Source: heritage.org/Index database.

The Kyrgyz Republic’s overall regulatory environment is poorly institutionalized and inefficient. The country’s business freedom score is below the world average; its labor freedom score is below the world average; and its monetary freedom score is below the world average (Figure 3).

The trade-weighted average tariff rate is 6.6 percent, and layers of nontariff measures are in force. The overall investment climate is subject to considerable risk and uncertainty. The financial sector, dominated by banking, is underdeveloped and lacks effective regulatory infrastructure. Credit costs remain high (Figure 4).

V. CONCLUSION

The analysis shows that foreign investments are attracted more to certain regions while others receive significantly less. If the Government of the Kyrgyz Republic does not regulate this phenomenon, interregional inequality, internal migration and residents dissatisfaction will arise which will lead to more congestion and problems in the overcrowded region. Regions

with little foreign investment will lose their potential to develop and contribute to the country's growth.

Foreign investments in education and healthcare are virtually absent. Additionally, there are no direct foreign investments in industries producing consumer goods and industrial-technical products. For instance, according to official statistics, no investments are being made in the garment industry which is currently a priority sector in the country. As a result, the majorities of foreign investments reinforce the raw material orientation of Kyrgyzstan's economy and increase its dependency on imported consumer goods.

The Kyrgyzstan's economic freedom score is 55.2, ranking it 112/176 in the 2024 Index of Economic Freedom. Its score dropped by 0.6 points from 2023 and is below the world and regional averages. The economy is classified as "mostly unfree" with weak foundations, corruption and slow reforms holding back progress. Issues like bureaucracy and low monetary stability also affect business and investment growth.

According to the official data above, it can be noted that the regions of the Kyrgyz Republic have yet to fully realize their potential as there are significant discrepancies between investor expectations and the actual capabilities of the regions. The substantial differentiation in investment conditions across Kyrgyzstan's regions indicates that most of them require the development of an effective set of measures to attract investments.

It would be naive to assume that major global companies will come to Kyrgyzstan with their best technologies to produce highly competitive goods and services.

Currently, Kyrgyzstan needs to acquire technologies and establish its own production capacities in collaboration with science. Unfortunately, science is not considered a prestigious profession in Kyrgyzstan. Therefore, we propose the following recommendations:

- Increase government support for regions with low investment levels, such as Batken and Naryn regions.
- Develop infrastructure in regions with high potential (for example, Issyk-Kul region).
- Focus on stimulating "green" investments and digitalizing the economy to create new growth opportunities.
- Simplify procedures for investors to remove barriers, especially in regions with low investment activity.

ÖZET

Kömür, organik madde olarak bitkisel kökenli kalıntılar ve inorganik bileşenlerden meydana gelen bir tortul kayadır. Bataklık ortamlarında bitki ve ağaç kalıntılarının zamanla birikerek çökmesi ve milyonlarca yıl süren kimyasal ve fiziksel değişimlerle şekil alması sonucu oluşur. Kömür, konvansiyonel fosil yakıt olup rezervleri bölgenin özelliklerini, yağış durumunu yansıtmaktadır. Neredeyse iki yüzyıldır temel enerji kaynaklarından biri olma özelliğini sürdürmüştür. Bu süreçte yeni enerji kaynaklarının ortaya çıkması ve özellikle kömürün çevresel etkileri nedeniyle son yıllarda çokça eleştirilmesine rağmen, dünya için kömür vazgeçilmez olmaya devam etmektedir. Dolayısıyla, günümüzde de güncelliğini koruyan kömür, ısınmanın yanı sıra çeşitli sektörlerde küresel enerji tüketiminin en önemli bileşenlerinden biridir. İçerdikleri kil, kum ve çeşitli oranlarda inorganik maddeler, kömürün kalitesini doğrudan olumsuz etkiler. Kok kömürü üretiminde şişme indeksi yüksek, gözenekli, dayanıklı ve oksitlenmemiş kaliteli kömürler kullanılırken, yakıt olarak kullanılan kömürlerde düşük kül, kükürt ve nem oranına sahip, ısıl değeri yüksek kömürler kullanılmaktadır. Ülkemizde kül ve kükürt oranı yüksek genç kömür rezervinin fazla olması; çevre sağlığı sebebiyle temiz kömür teknolojileri çalışmalarının artmasına sebep olmuştur. Kömürün yakıt özellikleri ve kimyasal bileşenlerine göre uygulamalarda kullanım yerlerini tespit etmek gerekir. Bu çalışmada ilk defa Tunçbilek, Soma kömür ocaklarından alınan numunelerin zenginleştirilmeden, analizlerine dayalı olarak bölgesel ve teknik uygulamalar dikkate almak suretiyle ekonomiye kazandırılması amaçlanmıştır.

Anahtar Kelimeler; Kömür, Kütahya/Tunçbilek, Manisa/Soma, Kömür analizi

BRINGING TÜRKİYE'S COAL INTO THE ECONOMY BASED ON ANALYSIS

ABSTRACT

Coal is a sedimentary rock consisting of plant-based residues and inorganic components as organic matter. It is formed as a result of the accumulation and collapse of plant and tree residues in swamp environments and their shaping through chemical and physical changes lasting millions of years. Coal is a conventional fossil fuel and its reserves reflect the characteristics of the region and the precipitation status. It has continued to be one of the basic energy sources for almost two centuries. Despite the emergence of new energy sources in this process and the fact that coal has been criticized a lot in recent years due to its environmental effects in particular, coal continues to be indispensable for the world. Therefore, coal, which still maintains its relevance today, is one of the most important components of global energy consumption in various sectors as well as warming. The clay, sand and inorganic substances in various proportions they contain directly negatively affect the quality of coal. While high-swelling-index, porous, durable and unoxidized quality coals are used in coke production, coals with low ash, sulfur and moisture content and high calorific value are used in coals used as fuel. The abundance of young coal reserves with high ash and sulfur content in our country; due to

environmental health, it has caused an increase in clean coal technology studies. It is necessary to determine the usage areas of coal in applications according to its fuel properties and chemical components. In this study, it was aimed to add samples taken from Tunçbilek, Soma coal mines to the economy for the first time without enrichment, by taking into account regional and technical applications based on their analysis.

Keywords; Coal, Kütahya/Tunçbilek, Manisa/Soma, Coal analysis

GİRİŞ

İlk kullanımı oldukça eskilere dayanan kömür, sanayi devrimi ile birlikte önemini arttıran, Dünya genelinde rezervlerinin nispeten düzenli dağılımından dolayı stratejik olarak önemli bir enerji kaynağıdır. [1] Son yıllarda yaşanan petrol krizi, enerji ihtiyacını karşılayabilecek kömür araştırmalarının önemini daha da artırmıştır. [2] Türkiye’de sınırlı miktarda taş kömürü üretimi yüzünden linyit yatakları en iyi şekilde değerlendirilmelidir. Numunelerin fiziksel, kimyasal, petrografik, ısıl ve yapısal özelliklerinin iyi bilinmesi hem bilimsel hem de teknolojik açıdan büyük önem taşır. [3]

Düşük kaliteli kömürler hava kirliliği ve çevre yönetmeliklerine göre uygun olmayıp, kullanımı sınırlıdır. Bu çeşit kömürlerin kullanımını arttırmak için kalite iyileştirmesi yapmak amacıyla araştırmalar devam etmektedir. Ülkemizdeki gibi dünya çapında da yüksek kalorili temiz kömürlere olan talep artmıştır. [4,5] Kömür bileşimi ve özelliklerine ait detaylı inceleme, onun kullanımı ile ilgili çeşitli problemlerin çözümünde faydalıdır. [6,7]

Kömürleşme süreci ve yataklanma, kül, nem içeriği, uçucu madde içeriği, kükürt ve sabit karbon miktarı, ve mineral madde içeriklerinin yanı sıra fiziksel, jeolojik, kimyasal, petrografik ve termik özellikler yönünden kömürler çok farklılık gösterirler. [8-10]

Bu çalışmada Tunçbilek ve Soma kömürleri karakteristik özellikleriyle incelenmiş olup, analize dayalı olarak ekonomik açıdan değerlendirilmesi amaçlanmıştır.

MATERYAL VE YÖNTEM

Tablo 1 de belirtilen numune alma noktalarından alınan numune boyutu +18mm olan numuneler numune kırıcı yardımıyla kırıldı. Numunenin tamamı uygun kırıcılarla tane boyutu 3,15 mm’ye indirildi. Homojenliğin sağlanması amacıyla numune karıştırıldı.

TS 4744 standardına göre Resim-1 de gösterilen dağılışa göre, dokuz adet parça alınarak numune miktarı azaltıldı.

Resim.1 Numune Hazırlama Metodu (TS 4744)

Çalışma sahasından numuneler bant konveyörlerden numune alma şeklinde her bir numune yaklaşık 10kg olarak temin edildi. Numuneler niteliklerini kaybetmeyecek şekilde uygun nakil araçlarıyla hava geçirmez taşıma kaplarına veya naylon torbalara konularak ısı, nem ve hava koşullarından etkilenmeyecek şekilde laboratuvara getirildi ve analizlere hazırlandı. Numune hazırlama işlemi; kırma, eleme ve öğütme suretiyle istenen boyutta tane elde etme, karıştırma ve bölerek numune kütlesini azaltma ile hazırlandı.

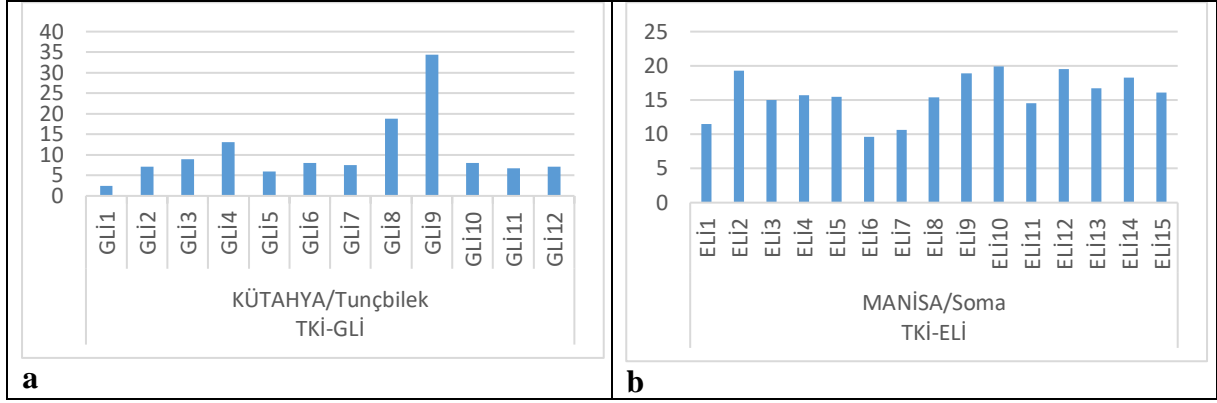

Daha sonra TS ISO 589 Kömürde Rutubet Tayini Standardı Metot B2 'ye göre etüv sıcaklığı 107 ± 3 °C ye ayarlandı. Darası alınan tavalarda her numuneden çift çalışma yapmak üzere 100'er g numune %0,1 yaklaşımla tartıldı ve 30 dakika boyunca sıcaklığı stabil hale gelen etüve konuldu. Numune konulan tavalara ağırlığı sabit tartıma gelene kadar yaklaşık 3 saat sonra etüvden çıkarılarak son tartımı alındı. Tartım, soğuma sırasında olabilecek su absorpsiyonunu engellemek için tava sıcakken yapıldı. Rutubeti alınan numune, numune öğütücüsünde 2,15mm tane boyutuna öğütülerek yaklaşık 60g laboratuvar numunesi ağzı kapalı kavanozlara konularak analizlere başlandı.

Kömürde bünye nemi, kül, uçucu madde tayininde ASTM D7582 test metoduna göre çalışıldı. Bu metodun uygulanmasında LECO marka 601 ve 801 model Termogravimetrik analiz cihazı kullanıldı. Kömürde kalori tayini ASTM D5865 test metoduna göre çalışılmıştır. PARR 6400 ve CKIC C5500 kalorimetre cihazları kullanılarak yapıldı.

Kömürde kükürt tayini, ASTM D4239 Metot-A test metoduna göre çalışıldı. SC 144 DR cihazı kullanılmıştır. Kömürde C, H, N Tayini, ASTM D 5373 Metot-A test metoduna göre LECO marka TruSpec model CHN analiz cihazı kullanıldı. Kül Ergime tayini ASTM D1857 test metoduna göre SUNDY SDAF105 Kül Ergime cihazında çalışılmıştır.

SONUÇLAR ve TARTIŞMA

Açık ocak ve yeraltı ocaklarında bulunan panolarda kömür damarlar halinde bulunmaktadır. Bu da aynı panoda olmasına rağmen farklı analiz değerlerine ulaşılmasının temel nedenidir. Çalışmalarda elde edilen analiz sonuçları karşılaştırmalı olarak grafik halinde sunulmuştur.

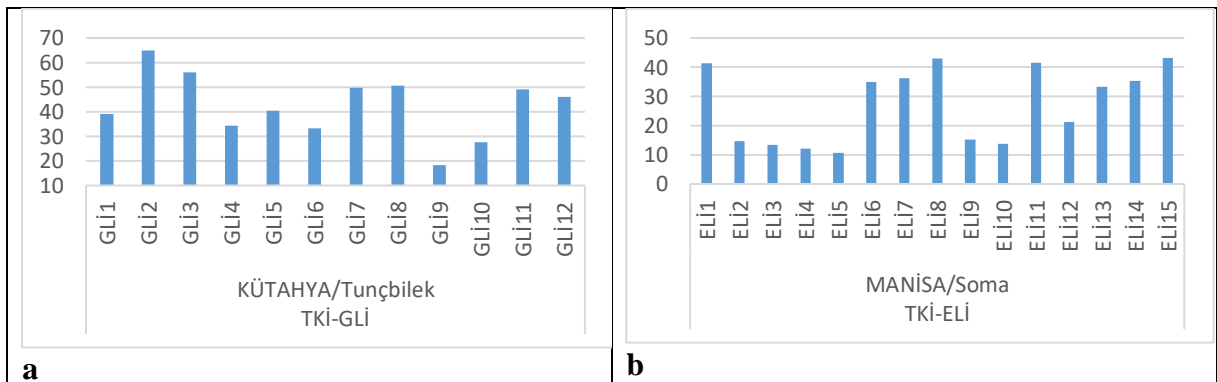

Şekil.1. Numunelere ait Nem Analizleri (%)

Yanma esnasında öncelikle kömürdeki nemin buharlaşması için ısı enerjisi gerektirir bu sebeple kömürdeki nem miktarı arttıkça elde edilen ısı enerjisi miktarı da azalır. Kaliteli ithal kömürlerdeki nem oranı en fazla %5 kaliteli yerli kömürlerde ise en fazla %20 olmalıdır. Her iki bölgedeki nem oranı bazı ocaklarda çok yüksek olsa da genel olarak kaliteli kömür sınıflandırılmasında yerini alır.

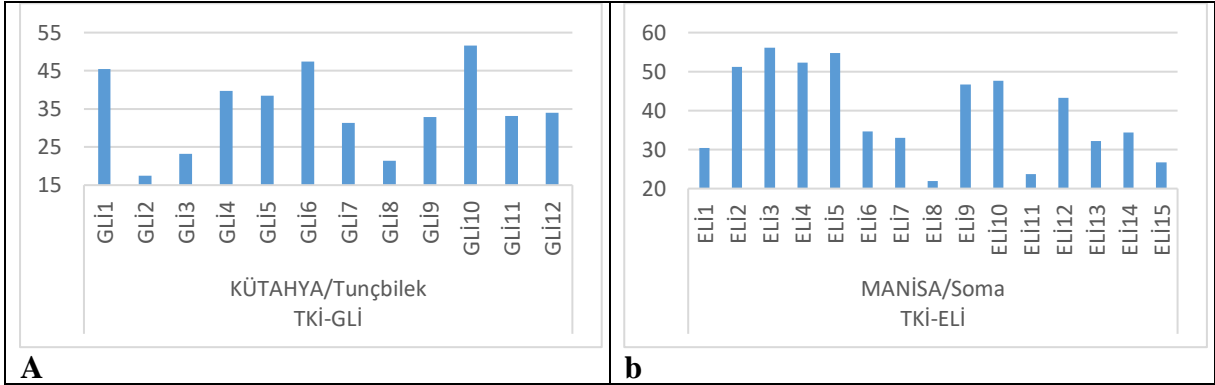

Şekil.2. Numunelere ait Alt Isıl Değer Analizleri (kcal/kg)

Kömürün tam yanmasıyla içeriğindeki suyun buhar haline geldiğinde elde edilen ısı enerjisi değeridir. Kalorimetre cihazında yapılan analizde suyun ilk ve son sıcaklık değerleriyle üst ısı enerjisi değeri bulunur içeriğindeki su buharı enerjisi hesap yöntemiyle düşülerek alt ısı enerjisi değeri bulunur. Isınmada ve sanayide yüksek ısı değere sahip kömür tercih edilmektedir. Kalorinin düşüklüğü ve külün çokluğu; inorganik maddeler, alkali toprak elementleri biraz da geçiş elementlerinin varlığını gösterir. Bölgenin topoğrafyasına bağlıdır. Kül oranı ile kalori ters orantılıdır.

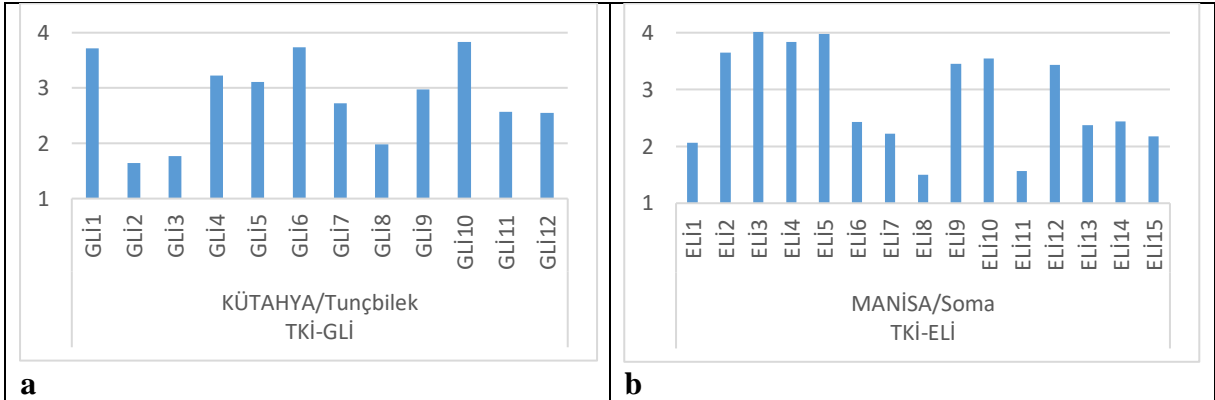

Şekil.3. Numunelere ait Kül Analizleri (%)

Kömürdeki kül miktarı arttıkça taban kül ve uçucu kül miktarı da artar. Soba, baca ve kazanların daha sık tıkanmasına sebep olurken baca emisyonunu da artırarak hava kirliliğine sebep olur. Külün kalorisinin sıfır olması sebebiyle külü yüksek olan kömürün ekonomik kaybı fazladır.

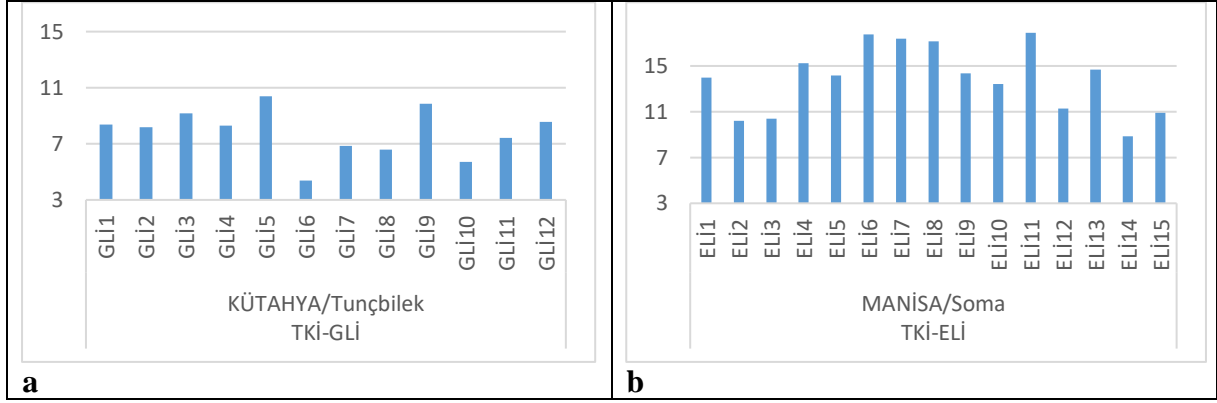

Şekil.4. Numunelere ait Karbon Analizleri (%)

Uluslararası kömür sınıflamasında kabul edilen sınıflama işlemlerinden biri Kömür Rank Sınıflamasıdır. Bu sınıflandırmada karbon içeriği temel değişkendir. Yüksek ranklı kömürlerde uçucu madde içeriği, düşük ranklı kömürlerde ise kalorifik değer baz alınarak sınıflandırma yapılmıştır. [11]

Şekil.5. Numunelere ait Hidrojen Analizleri (%)

Son yıllarda temiz kömür teknolojileri çalışmaları ile kömürden elde edilen enerji veriminin artırılması amaçlanmıştır. Bu teknolojiler emisyonları ve atıkları azaltırken, her bir ton kömürden kazanılan enerji miktarını da artırır.[12] Temiz kömür teknolojileri çalışmalarının hepsi her kömür için uygulanabilir değildir. Bu sebeple kömürün Hidrojen içeriği oldukça önemli bir parametredir.

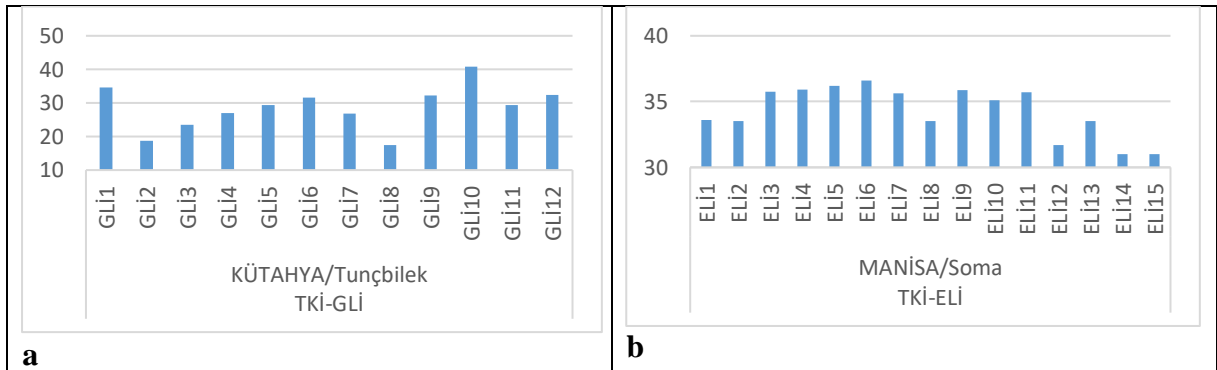

Şekil.6. Numunelere ait Oksijen ve Azot Analizleri (%)

Yüksek nem, azot, hidrojen ve oksijen içeriğine sahip kömürler, büyük hacimlerde kok gazı üretimini sağlar. Ancak, üretilen kok genleşme eğilimindedir ve fazla genişleyen kömürler kok fırınlarına da zarar verebilmektedir. Kömürde yüksek azot, yanma sırasında oksit oluşumunu artırması sebebiyle istenmemektedir. [7,13]

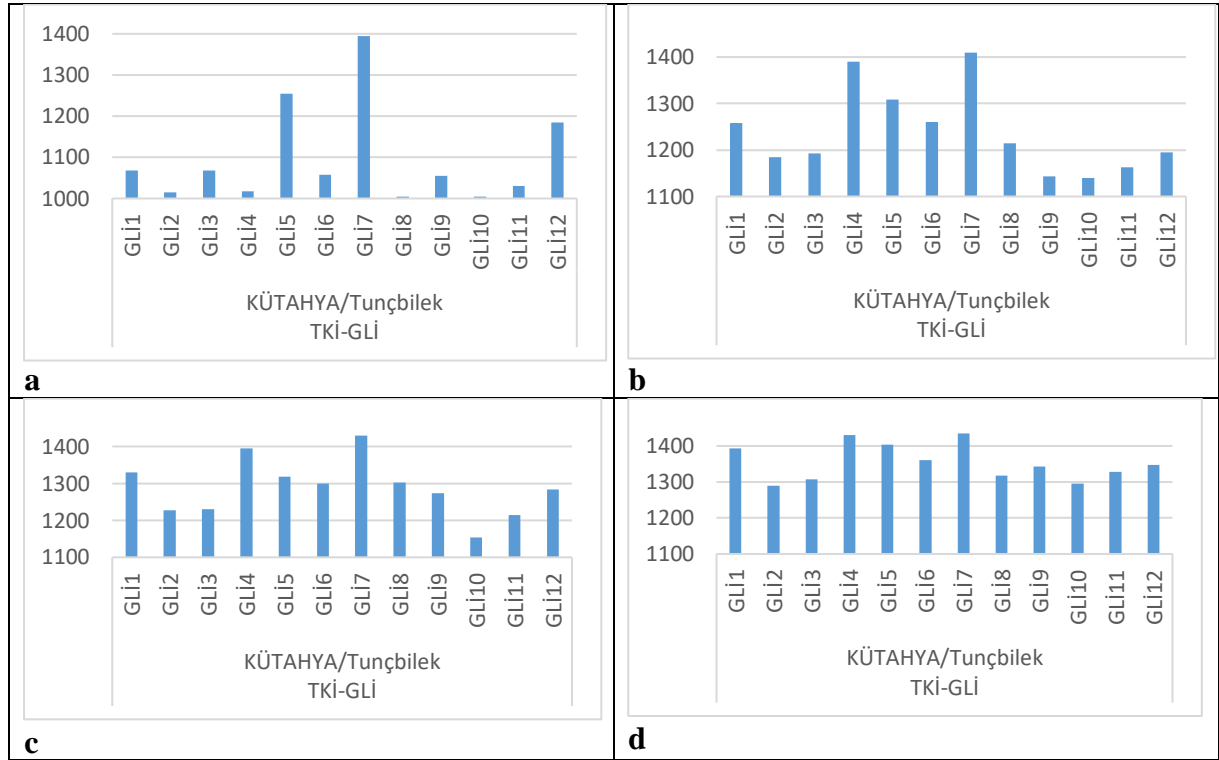

Şekil.7. Numunelere ait Kükürt Analizleri (%)

Kömürdeki kükürt kömür kalitesinin belirlenmesinde oldukça etkilidir. Kükürt yandığında kükürdioksit oluşturarak hava kirliliğine, asit yağmurlarına ve ayrıca baca ve ekonomizer gibi ekipmanların yüzey korozyonuna sebep olur. Yanmayan kükürt cüruf oluşturmaya sebebiyet verir.

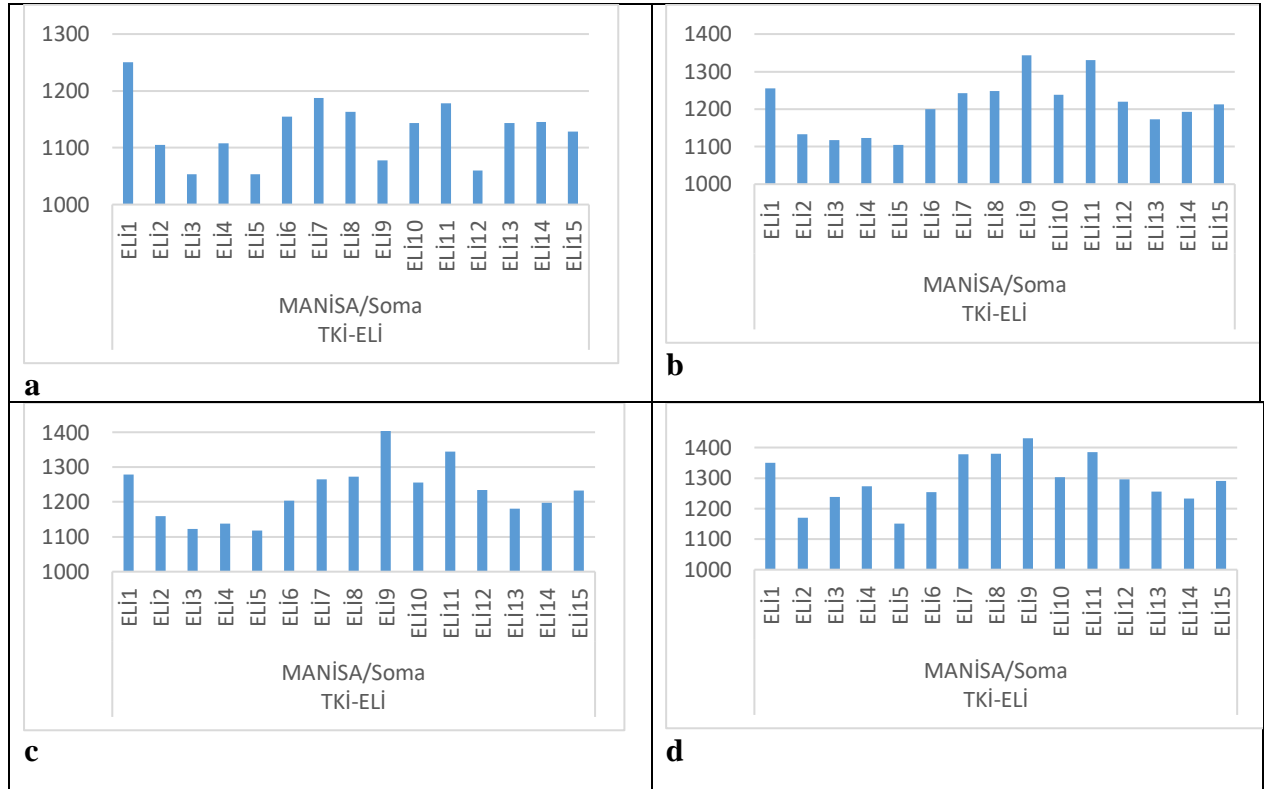

Şekil.8. Numunelere ait Uçucu Madde Analizleri (%)

Kömürde uçucu madde kömürün içerisindeki CO₂, azot ve hidrokarbonlar gibi yanmayan gazlardan oluşur. Yanma sırasında, doğrusal orantılı olarak alev boyutunu yükseltir ve tutuşmaya kolaylık sağlar. Minimum fırın yüksekliğinin belirlenmesinde etkilidir. [14]

Şekil.9. Kütahya/Tunçbilek Kül Ergime Analizleri (Kcal/kg)

Şekil.10. Manisa/Soma Kül Ergime Analizleri (kcal/kg)

Yüksek sıcaklıklarda kömürün deformasyon, yumuşama, akma davranışları gözlenerek kömür performansını tahmin etmek, soba ve kazanlardaki cüruf eğilimini değerlendirmede önemli bir parametredir. Kül ergimedeki akma sıcaklığı ve deformasyon sıcaklığı arasındaki fark arttıkça düşük ergime noktalı metal oksitlerin varlığını işaret eder.

Sonuç olarak;

Elde edilen verilere göre, Manisa/Soma Kömürleri yüksek ısıl değer, düşük kül, kükürt oranları ve nispeten yüksek akma sıcaklıkları ile termik santraller, sanayi ve çevre dostu projelerde enerji üretimi için oldukça uygundur. Yüksek Hidrojen muhtevası sebebiyle temiz kömür teknolojileri çalışmalarında tercih edilebilir. Yüksek nem, hidrojen, azot ve oksijen değerleri sebebiyle kok üretiminde kullanılabilir. Kok üretimi esnasında azotun bir kısmı azotlu bileşiklere dönüştürülerek gübre ve nitrik asit oluşumunda kullanılabilir. Ayrıca daha güvenilir yanma sağlayan yapısı ile evsel ısınma ve yüksek ısı gerektiren proseslerde de kullanılabilir.

Kütahya/Tunçbilek Kömürleri ise yüksek kül ve kükürt içerikleri, düşük enerji verimliliği nedeniyle meskun mahaller dışındaki endüstriyel proseslerde veya ısı geri kazanım tesislerinde değerlendirilebilir. Kükürt arıtma ve atık yönetim sistemlerinin mevcut olduğu tesislerde tercih edilebilir. Düşük kalorili kömürler yerinde gaz eldesi ile değerlendirilebilir. Jeneratör gazı düşük kalorili kömürlerden elde edilebilir ancak depolanamaz.

Ayrıca kömür zenginleştirme işlemleri uygulanarak maksimum ekonomik fayda sağlanabilecek panoların varlığı mevcut grafiklerle ön görülmektedir. 2000 kcal/g üzeri orijinal ısıl değere sahip düşük kükürtlü kömürlere kömür zenginleştirme yöntemleri uygulanmak sureti ile daha yüksek verim elde edilebileceği göz ardı edilmemelidir.

Bu analizlere göre, Manisa/Soma kömürleri daha yüksek enerji verimliliği ve çevresel uyumluluk sağlar ve bu nedenle daha geniş bir kullanım alanına sahiptir. Kütahya/Tunçbilek kömürleri ise uygun kömür zenginleştirme yöntemleri çalışmalarıyla kullanım alanları artırılabilir.

Bilgilendirme; Aslı Dülgerin tez çalışmasında kullanılan bu veriler, T.C. Enerji ve Tabii Kaynaklar Bakanlığı, Türkiye Kömür İşletmeleri Kurumu Genel Müdürlüğü, E-89435709-120.99-4135854 sayı ve 15.03.2023 tarihli Olur izni ile yapılmıştır.

ÖZET

Fırıncılık ürünleri, günlük beslenmede önemli bir yer tutmaktadır ve bu ürünlerin güvenliği, tüketici sağlığı açısından kritik öneme sahiptir. PAH, fırıncılık süreçlerinde ortaya çıkabilen zararlı bileşiklerdir. PAH'ların akut toksisitesi düşük olmasına rağmen, birçok PAH'ın farklı türlerde kanserojen olduğu belirtilmiştir. Gıdalardaki PAH varlığı, çevresel birikimlerin yanı sıra, gıda hazırlama ve üretiminde kullanılan termal işlem süreçlerinin sonucudur. Isıl işlemler, tütsüleme, kızartma, ızgara, fırınlama ve kızartma gibi prosesler, potansiyel olarak yüksek gıda kontaminasyonu seviyelerinin ana nedeni olarak kabul edilmektedir. Bunun yanında fırıncılık ürünlerinin pişirilmesinde kullanılan yakıt türleri de PAH kontaminasyonuna neden olmaktadır. Mazot ile çalışan fırınlardan elde edilen ürünlerde en yüksek PAH konsantrasyonlarına ulaşılmıştır.

Özellikle ekmek, bisküvi ve diğer unlu mamullerin üretiminde, yüksek sıcaklıklarda yapılan ısıl işlemler sırasında PAH'ların oluşumu mümkündür. Bu kimyasallar, organik maddelerin eksik yanması veya pişirme sırasında oluşan duman ve yağların yanmasıyla meydana gelir. Fırıncılık ürünlerinin içindeki PAH seviyeleri, kullanılan ham maddelerin kalitesi, fırınlama sıcaklığı ve süresi gibi faktörlere bağlı olarak değişiklik göstermektedir.

Yüksek PAH konsantrasyonları, insan sağlığına potansiyel tehdit oluşturabilir; bu nedenle, fırıncılık ürünlerinin üretiminde bu bileşenlerin kontrol edilmesi önemlidir. Gıda güvenliği standartlarının uygulanması, hammaddelerin dikkatli seçimi ve uygun pişirme tekniklerinin benimsenmesi, PAH kontaminasyonunu azaltma konusunda etkili stratejilerdir. Böylece, fırıncılık ürünlerinin tüketimi ile ilgili sağlık riskleri minimize edilebilir ve tüketicilere daha güvenli gıda seçenekleri sunulabilir.

Anahtar kelimeler: Fırıncılık ürünleri, polisiklik aromatik hidrokarbonlar, gıda güvenliği, ısıl işlem

THE PRESENCE OF POLYCYCLIC AROMATIC HYDROCARBONS (PAHS) IN BAKERY PRODUCTS AND REDUCTION METHODS

ABSTRACT

Bakery products hold an important place in daily nutrition, and the safety of these products is critically important for consumer health. PAHs are harmful compounds that can emerge during bakery processes. Although the acute toxicity of PAHs is low, many types of PAHs have been reported to be carcinogenic. The presence of PAHs in foods is a result of both environmental

accumulation and thermal processing methods used in food preparation and production. Thermal processes such as smoking, frying, grilling, baking, and roasting are considered to be the main contributors to high levels of food contamination. In addition, the type of fuel used in baking processes can also cause PAH contamination. The highest PAH concentrations have been observed in products baked in diesel-fueled ovens.

The formation of PAHs is possible, especially during high-temperature thermal processes used in the production of bread, biscuits, and other baked goods. These chemicals are generated by the incomplete combustion of organic materials or from smoke and oil produced during baking. The PAH levels in bakery products vary depending on the quality of raw materials, baking temperature, and duration.

High PAH concentrations may pose potential health risks; therefore, it is important to control these compounds in the production of bakery products. Implementing food safety standards, carefully selecting raw materials, and adopting proper baking techniques are effective strategies to reduce PAH contamination. Thus, health risks associated with the consumption of bakery products can be minimized, providing consumers with safer food options.

Keywords: Bakery products, polycyclic aromatic hydrocarbons, food safety, thermal processing

1.GİRİŞ

İnsanlar, kirli havayı soluyarak veya kirlenmiş su ve gıdaları tüketerek toksik ve kanserojen maddelere maruz kalmaktadır. Endüstriyel atıklar, tarım ilaçları, evsel atıklar, sigara dumanı ve sanayi baca gazları gibi zararlı kimyasallar, hava, su, toprak ve gıdalar aracılığıyla çevreye yayılmakta ve insan sağlığı açısından ciddi riskler oluşturmaktadır. Bu kirlenmeler arasında PAH, kükürt dioksit, azot oksitler, pestisitler, insektisitler ve ağır metaller yer almakta olup, bu maddeler toksik ve kanserojen özelliklere sahiptir (Alver ve ark., 2012).

Gıda maddelerinin tüketilebilirliği, çevresel faktörler ve işleme süreçlerinde meydana gelebilecek biyolojik, fiziksel ve kimyasal tehlikelerin varlığıyla doğrudan ilişkilidir. Kimyasal tehlikeler sınıfında yer alan Polisiklik Aromatik Hidrokarbonlar (PAH), endüstriyel üretim bölgelerindeki kirli hava bileşenlerinin bitkisel ürünler üzerinde birikmesi sonucu tahıl, sebze ve meyvelerde tespit edilebilmektedir. Bunun yanı sıra, kavurma, tütüleme ve ızgara gibi ısı işleme uygulamaları da PAH oluşumuna katkı sağlayabilmektedir. Özellikle gıdanın doğrudan alevle temas ettiği durumlarda PAH düzeylerinin önemli ölçüde arttığı gözlemlenmiştir (Ceylan ve Şengör, 2015).

PAH'lar, iki veya daha fazla benzen halkasına sahip hidrofobik karakterde organik bileşiklerdir. Organik maddelerin eksik yanması sonucunda doğal ya da insan kaynaklı olarak oluşabilmektedir. Doğal kaynaklı PAH oluşumları, orman yangınları ve volkanik patlamalar gibi olaylarla meydana gelirken, insan kaynaklı oluşumlar ise endüstriyel aktiviteler, motorlu taşıt emisyonları ve sigara tüketimi yoluyla gerçekleşmektedir (Alver ve ark., 2012).

2.PAH'LARIN KİMYASAL YAPISI

PAH'lar, saf halde renksiz, beyaz, açık sarı veya yeşil renklere, katı formda ve hafif hoş bir kokuya sahip organik bileşiklerdir. Bu bileşiklerin uçuculuk özellikleri, kaynaşmış halka sayısının artmasıyla birlikte azalmaktadır. Sadece karbon ve hidrojenden oluşan PAH'ların molekül ağırlığına bağlı özellikleri dikkat çekicidir. Genel olarak, molekül ağırlığı 216 g/mol'den düşük olan PAH'ların kanserojen özellik taşımadığı düşünülürken, daha yüksek molekül ağırlığına sahip olanların kanserojen etkiler gösterdiği bilinmektedir (Günç Ergönül ve Kaya, 2015).

PAH, iki veya daha fazla kaynaşmış benzen halkasına sahip, heteroatom içermeyen ve ikame grupları bulunmayan aromatik hidrokarbonlardır. Yapısal özelliklerine göre sınıflandırıldığında, dört halkaya kadar olan PAH'lar "hafif PAH'lar", dört veya daha fazla halkaya sahip olanlar ise "ağır PAH'lar" olarak adlandırılmaktadır. Ağır PAH'lar, hafif PAH'lara kıyasla daha kararlı bir yapıya sahip olup, toksik etkileri de daha belirgindir. PAH'lar, yalnızca karbon ve hidrojen atomlarının bağlanmasıyla oluşan basit veya karmaşık halka sistemlerinden meydana gelir. Bu bileşiklerin benzen halkalarının düzenlemeleri, fiziksel, kimyasal ve toksikolojik özelliklerinde büyük bir çeşitlilik göstermektedir. Tablo 1'de PAH'ların isimleri ve kısaltmaları verilmiştir (Lawal, 2017).

Tablo 1. PAH'ların isimleri ve kısaltmaları.

İsim	Kısaltma	İsim	Kısaltma
Acenaphthene	ACP	Benzo[ghi] perylene	BgP
Acenaphthylene	ACY	Benzo[a] pyrene	BaP
Anthracene	ANT	Chrysene	CHR
Fluoranthene	FLT	Cyclopenta[cd] pyrene	CPP
Fluorene	FLR	Dibenz[a,h] anthracene	DhA
Naphthalene	NAP	Dibenzo[a,e] pyrene	DeP
Phenanthrene	PHE	Dibenzo[a,h] pyrene	DhP
Pyrene	PYR	Dibenzo[a,i] pyrene	DiP
Benz[a] anthracene	BaA	Dibenzo[a,l] pyrene	DIP
Benzo[b] fluoranthene	BbF	Indeno[1,2,3-cd] pyrene	IcP
Benzo[j] fluoranthene	BjF	5-Methylchrysene	5MC
Benzo[k] fluoranthene	BkF		

3.PAH'LARIN OLUŞUM MEKANİZMASI

PAH'ların oluşumu, çeşitli kimyasal süreçlerle ilişkili karmaşık bir olgudur. Küçük moleküllerin, örneğin benzenin daha büyük PAH moleküllerine dönüşümüyle başlar. Bu süreç, özellikle asetilen gibi küçük birimlerin PAH radikallerine eklenmesi ve PAH-PAH radikal birleşmeleri gibi reaksiyonları içerir. Farklı yakıt türlerine bağlı olarak bu reaksiyonların katkıları değişiklik göstermektedir. Aromatik yakıtlarda asetilen gibi aktif reaktanlar daha yüksek konsantrasyonlarda bulunurken, alifatik yakıtlarda ilk aromatik halka, yakıtın parçalanma ürünlerinden oluşan daha düşük konsantrasyonlardaki reaktanlarla meydana gelmektedir (Richter ve Howard, 2000).

Gıdaların PAH ile kontaminasyonu iki temel yolla gerçekleşmektedir. Bunlardan ilki, çevresel kaynaklardan (hava, toprak, su vb.) bulaşma, ikincisi ise gıdalara uygulanan ısıtma süreçlerinde uygun olmayan koşulların oluşmasıdır. Özellikle 200 °C'yi aşan ısıtma süreçlerinde PAH oluşumu önemli bir risk faktörü haline gelmektedir. Ayrıca, yağ içeriği yüksek gıdalarda, yüksek sıcaklıkta yağın yanmasıyla oluşan dumanın gıdaya temas etmesi sonucu PAH bulaşması meydana gelebilmektedir (Terzi ve Çelik, 2006).

PAH'ların farklı gıda ürünlerindeki varlığı, pişirme yöntemlerine dikkat çekmiştir. İşleme, ambalajlama ve kurutma, tütüleme, fırınlama, kavurma, ızgara, kızartma gibi ısıtma süreçlerinin PAH oluşumuna önemli ölçüde katkıda bulunduğu bildirilmektedir. Yüksek sıcaklıkta gıda yanması sırasında oluşan serbest radikaller, Hafif PAH'lar oluşturmak üzere yeniden birleşirken, ardından ağır PAH'lar oluşur ve bu PAH'lar, hidrofobik gıda zinciri bileşenlerine geçer ve nihayetinde yağ açısından zengin gıda maddelerinde tutulmaktadır (Singh ve ark., 2016).

4. PAH'LARIN TOKSİSİTESİ VE SAĞLIK ÜZERİNE ETKİLERİ

PAH'lar, yaygın çevresel kirleticiler arasında yer almakta olup, birçok PAH bileşiğinin deneysel hayvan modellerinde kanserojen olduğu kanıtlanmıştır. Bu nedenle, PAH'ların insanlardaki kanser yüküne önemli bir katkı sağladığına dair yaygın bir görüş bulunmaktadır. Özellikle, bacacılar, kömür ürünlerine maruz kalan işçiler, demir dökümhaneleri, kok fabrikaları ve alüminyum üretim tesislerinde çalışan işçilerin meslek hastalıkları örneklerinin çoğu, PAH maruziyetine bağlanmaktadır. Ancak, PAH maruziyeti yalnızca mesleki ortamlarda sınırlı kalmamaktadır. PAH'lar, organik maddelerin eksik yanması sonucunda oluşmakta ve fosil yakıtların ya da bitkilerin yakılması sırasında çevreye yayılmaktadır. Bunun yanı sıra, PAH'lar tütün dumanında bulunan kanserojen kimyasal sınıflarından biri olup, gıdalarda da tespit edilebilmektedir (Phillips, 1999).

PAH bileşiklerinin mutajenik ve karsinojenik etkilerine ilişkin çeşitli raporlar, Uluslararası Kanser Araştırma Ajansı (IARC), Dünya Sağlık Örgütü (WHO), Avrupa Gıda Güvenliği Otoritesi (EFSA) ve Avrupa Bilimsel Gıda Komitesi (SCF) gibi kuruluşlar tarafından yayımlanmıştır. Bu raporlarda, toksik etkisinin daha fazla olduğu düşünülen 15 PAH bileşiği öncelikli kirletici olarak belirlenmiştir. Bu bileşikler arasında benzo[a]antrasen (BaA), benzo[b]floreten (BbF), benzo[j]floreten (BjF), benzo[k]floreten (BkF), benzo[ghi]perilen (BgP), benzo[a]piren (BaP), krisen (CHR), cyclopenta[cd]piren (CPP), dibenzo[a,h]antrasen (DhA), dibenzo[a,e]piren (DeP), dibenzo[a,h]piren (DhP), dibenzo[a,i]piren (DiP), dibenzo[a,l]piren (DIP), indeno[1,2,3-cd]piren (IcP) ve 5-metilkrise (5MC) yer almaktadır. SCF tarafından öncelikli kirletici olarak sınıflandırılan bu bileşiklerin, insanlarda potansiyel genotoksik ve karsinojenik etkiler gösterdiği bildirilmiştir. PAH bileşikleri arasında en çok incelenen ve gıdalarda PAH varlığının bir göstergesi olarak kabul edilen başlıca bileşik, benzo[a]piren (BaP) olmuştur. Bu raporlar ayrıca, sağlık açısından risk taşıyan PAH bileşiklerine maruz kalınmasının, akciğer, mesane, özofagus, mide, pankreas ve prostat kanserine yakalanma riskini artırabileceğini ortaya koymaktadır. Bu nedenlerle PAH bileşikleri, insanlar, hayvanlar ve bitkiler için ciddi bir risk kaynağı oluşturmaktadır (Karşlıoğlu, 2022; Kılış ve ark., 2017).

Diyetle alınan benzo[a]piren (BaP)'in bağırsaklardan emilimini ve biyoyararlanımını etkileyen faktörlere dikkat edilmesi gerekmektedir. Özellikle yağ içeriği yüksek besinlerin BaP emilimini artırdığı, su oranı yüksek besinlerin ise emilimi azalttığı bilinmektedir. Bunun yanı sıra, yeşil sebzelerde doğal olarak bulunan quercetin ve klorojenik asit gibi bileşiklerin BaP'nin biyoyararlanımını inhibe ettiği rapor edilmiştir. Bu nedenle, bu tür bileşenlerce zengin gıdaların tüketiminin artırılması önerilmektedir (Nursal ve Yurttagül, 2024).

Çeşitli polisiklik aromatik hidrokarbonların (PAH) deney hayvanlarında tümör oluşumuna neden olabileceği bilinmektedir. Özellikle benzo[a]piren (BaP) ve diğer bazı PAH türlerinin, oral yolla kemirgenlere uygulanması sonucunda karın, karaciğer, akciğer ve meme bezleri gibi vücudun farklı dokularında tümör oluşumuna yol açtığı gösterilmiştir. Bu bulgular, PAH bileşiklerinin potansiyel karsinojenik etkilerini ortaya koymakta ve bu maddelerin sağlık üzerindeki olumsuz etkilerine dikkat çekmektedir (Dayi ve ark., 2017). Ayrıca, yeterli ve dengeli bir diyet kapsamında tüketilen, iyi yıkanmış sebze ve meyveler, içeriklerindeki posa, antioksidan vitaminler, karotenoidler ve biyoflavonoidler sayesinde karsinojenik maddelere karşı koruyucu etki göstermektedir. Bu tür gıdalar, bireylerin genel sağlığını desteklemenin yanı sıra kanserojen maddelerin olumsuz etkilerini azaltmada önemli bir role sahiptir (Nursal ve Yurttagül, 2024).

5. FIRINCILIK ÜRÜNLERİNDE TESPİT EDİLEN POLİSİKLIK AROMATİK HİDROKARBONLAR (PAH)

Tahıllar, insanlarda PAH maruziyetinin başlıca kaynaklarından biridir (Orecchio ve Papuzza, 2009). Ekmek, insan beslenmesinde en yaygın tüketilen nişastalı üründür. İyi bir enerji, vitamin

ve mineral kaynağıdır. Fırınlanmış ve paketlenmiş ekmeğin tüketimi giderek artmasına rağmen, bu ürünler için izin verilen maksimum PAH limitleri henüz belirlenmemiştir. Pişirme işlemi yüksek sıcaklık gerektirdiğinden, ekmeğin bu kontaminantları içermesi kaçınılmazdır (Bansal ve Kim, 2015). AlRashdan ve ark. (2015) tarafından yapılan çalışmada ekmeğin kızartmanın PAH oluşumu üzerine etkisi incelenmiştir. Kullanılan unlarda BaP tespit edilmezken, ekmeğin bazı düşük ve yüksek molekül ağırlıklı PAH'lar bulunmuştur. Bunun haricinde, kahverengi ve buğday unlarında sırasıyla sırasıyla 1,19-2,19 $\mu\text{g}/\text{kg}$ ve 0,71-1,66 $\mu\text{g}/\text{kg}$ düzeylerinde daha yüksek molekül ağırlıklı PAH'lar (FLT ve PYR gibi) tespit edilmiştir. Ek olarak beyaz ve kahverengi buğday unlarında bazı düşük molekül ağırlıklı PAH'lar (NAP, FLR ve PHN gibi) da tespit edilmiştir.

Alomirah ve ark. (2011), pide ekmeğinde genotoksik PAH'ların varlığını bildirmişlerdir. Pide ekmeğindeki BaP miktarı her ne kadar ihmal edilebilir düzeyde olsa da genotoksik PAH'ların miktarı 0,94 $\mu\text{g}/\text{kg}$ olarak, toplam PAH miktarı ise 17,6 $\mu\text{g}/\text{kg}$ olarak tespit edilmiştir. Isıtmada kullanılan enerji türü (elektrik, odun, alev veya güneş enerjisi gibi) de pişirilmiş ekmekte PAH miktarını etkilemektedir. Ahmed ve ark. (2000) güneş enerjisi, katı atık ve elektrik kullanılarak pişirilen ekmeğin PAH seviyelerini rapor etmişlerdir. Kızarmış ekmekteki PAH seviyeleri 7.38-18.0 $\mu\text{g}/\text{kg}$ aralığında bulunmuştur (Nieva-Cano ve ark., 2001).

Yapılan araştırmalarda PAH'lar bisküvilerde de farklı miktarlarda tespit edilmiştir. Iwegbue vd. (2015) tarafından yapılan araştırmada Nijerya'daki marketlerde satışı sunulmuş olan 40 farklı örnekte PAH seviyeleri incelenmiş ve $\Sigma 16$ PAH miktarı farklı tür bisküviler için 35,7–645,3 $\mu\text{g kg}^{-1}$, 75,9–490,7 $\mu\text{g kg}^{-1}$, 91,5–537 $\mu\text{g kg}^{-1}$, 18,4–522,2 $\mu\text{g kg}^{-1}$, 123,5–393,8 $\mu\text{g kg}^{-1}$, 167,2–880 $\mu\text{g kg}^{-1}$, 136,5–316 $\mu\text{g kg}^{-1}$ ve 135,5–241,6 $\mu\text{g kg}^{-1}$ olarak rapor edilmiştir. Diğer yandan Oyekunle vd. (2021) tarafından yapılan çalışmada 6 farklı bisküvi örneğinde karsinogenik PAH'ların miktarı 0,001-0,007 $\mu\text{g g}^{-1}$ aralığında tespit edilmiştir.

6. PAH'LARIN ANALİZ YÖNTEMLERİ

Çeşitli bitkisel ve et bazlı gıda ürünlerinde PAH'ların analizi için farklı teknikler geliştirilmiştir. PAH analizinin temel olarak 3 basamağı bulunmaktadır, bunlar: (a) ekstraksiyon, (b) temizleme veya saflaştırma ve (c) kantitatif tespittir. Gaz kromatografisi (GC), her türlü gıda örneğindeki PAH'ların analizi için LC-MS'ten sonra en yaygın uygulanan ve popüler tekniktir. Gaz kromatografisi-kütle spektrometresi (GC-MS) tekniği, PAH analizi için birçok resmi yöntemde yaygın olarak önerilmektedir (Plaza-Bolanos ve ark., 2010). Çözünürlük açısından GC'nin LC'ye göre üstünlüğü nedeniyle, GC kütle spektrumlarıyla birlikte yapısal bilgileri tanımlamak için daha uygundur. GC-MS, daha az (NPH, ACY ve ACP) veya hiç (CS ve Ccdp) floresan özelliği olmayan PAH'lara da uygulanabilmektedir (Plaza-Bolanos ve ark., 2010). Ek olarak, GC-MS için tek adımlı enjeksiyon gerekirken, LC-FL tekniğinde doğrulama için çok aşamalı enjeksiyon gerekmektedir (Plaza-Bolanos ve ark., 2010; Bansal ve ark., 2017).

GC-MS tekniği için, PAH'ların parçalanması stabiliteleri nedeniyle çok kolay değildir. Bu nedenle, MS-MS fragmentasyon tekniği, daha yüksek molekül ağırlıklı PAH'ların tespiti için geliştirilmiştir. GC-MS-MS tekniği, diğer benzer bileşiklerle birlikte elüsyona uğrama eğiliminde olan daha ağır PAH'ların tespitinde kullanılabilir. Bu tespit tekniği, kromatografik özelliklerin iyileştirilmesiyle daha ağır PAH'ların (FA ve PYR) ayrılmasını iyileştirirken, lipidlerin sinyal gürültüsü sorunlarını ortadan kaldırmaktadır. Ayrıca, çok sayıda izomeri ve birlikte elüsyon eğilimi (örneğin dibenzopiren) olan PAH'ların analizi için yüksek çözünürlüklü gaz kromatografisi (HRGC-MS) uygun bir yöntemdir (Bansal ve ark., 2017).

GC temelli analize ek olarak, PAH'ların tespiti için yaygın olarak önerilen ve kullanılan analitik yöntemler, MS ile birlikte floresan dedektörlü (FLD) HPLC'dir. Ultraviyole görünür ve fotodiyot dizisi gibi bazı diğer dedektörlerle birlikte sıvı kromatografisi de daha önce kullanılmıştır. Bununla birlikte, FLD üstün özgülüğü ve hassasiyeti nedeniyle ilk tercih seçeneği olarak kabul edilmektedir (Nasr ve ark., 2012; Ramalhosa ve ark., 2012). LC-FLD,

yüksek seçicilik ve hassasiyete sahip bir analiz tekniği olarak gıda matrislerindeki daha geniş çeşitlilikteki PAH'ların tespiti için kullanılmaktadır (Bansal ve ark., 2017).

Yüksek performanslı sıvı kromatografisi (HPLC), PAH'ların belirlenmesi için en yaygın kullanılan tekniklerden birisidir. HPLC ayrıca gıda örneklerindeki PAH'ların doğrudan algılanması için hızlı ve basit bir çözüm sağlamaktadır. Ek olarak, FLD ile tespit, florimetrisinin moleküler emilim için artan seçiciliği ve duyarlılığına dayalı olarak PAH'ların çevrimiçi olarak izlenmesine olanak sağlamaktadır (Zougagh ve ark., 2004).

Günümüzde, PAH'ların tespiti için geliştirilmiş birçok ticari immünoassay de mevcuttur. Bu nedenle, PAH miktarlarının belirlenmesi için çok çeşitli immünoansörler bulunmaktadır (Zhang ve ark., 2015). Bu analizler potansiyometrik, amperometrik, kondüktometrik, florimetrik ve UV tespiti şeklindedir. Hassas, seçici ve güvenilir tespitle hızlı tespit sağlamayı amaçlarlar. Bu analizlerin diğer analitik tekniklere göre avantajları, enstrümantal cihazların minyatürleştirilmesi, elle tutulamayan ön işlem kurulumları, az miktarda test örneği gereksinimi, minimum organik çözücü tüketimi, zaman alıcı numune hazırlama işleminin atlanması ve kapsamlı temizliklerin olmamasıdır; bunların hepsi analizi kolaylaştırmaktadır (Bansal ve ark., 2017). Diğer yandan, genel olarak, gelişmiş dedektörlere (MS ve FLD) sahip kromatografik teknikler (GC ve UHPLC) hem tespit hassasiyeti hem de minimum numune gereksinimi açısından PAH'ların analizinde günümüzde en yaygın kullanılan tekniklerdir. GC-MS, tek bir enjeksiyonda doğru tespit ve kantifikasyonun tüm avantajlarını sağlar. Buna karşılık, LC, numune filtrasyonu ve hazırlanması için gereken ekstra adımlarla birlikte nispeten büyük bir numune hacmi gerektirmesi açısından eksik kalmaktadır (Bansal ve ark., 2017).

7. PAH'LARIN AZALTILMASINA YÖNELİK ÇALIŞMALAR

Polisiklik aromatik hidrokarbonların (PAH) gıdalarda oluşumunun azaltılmasına yönelik 3 temel yaklaşım benimsenmiştir. Bunlar hammaddenin iyileştirilmesi, proses koşullarının değiştirilmesi ve çeşitli ekzojenlerin kullanımı şeklindedir (Tablo 2).

Tablo 2. Farklı gıda ürünlerinde PAH'ların azaltılma yöntemleri (Xie ve ark., 2024).

Azaltılma yöntemi	Gıda ürünü	Azaltma şekli
Prekürsörlerin uzaklaştırılması	Geleneksel fermente soslar	Gıdadaki yağın etkin şekilde uzaklaştırılması
Proses koşullarının değiştirilmesi	Izgara etler	Duman kaynağının uzaklaştırılması
	Kızarmış patates ve balık	Daha kısa sürede kızartma
	Izgara biftek	Ürünün paketlenmesi
	Kömür kullanılarak ızgara yapılmış biftek	Ön ısıtma ve ürünün paketlenmesi ile gıdadaki yağın termal kaynak ile direkt temasının önlenmesi
Ekzojen katkı maddelerinin ilavesi	Barbekü et	Gıdanın elektrikli ısıtıcı ile pişirilmesi
	Tütsülenmiş balık ve et	Tütsü aroma vericilerinin kullanılması
	Kömür kullanılarak ızgara yapılmış et	Marine soslarının kullanımı
Ekzojen katkı maddelerinin ilavesi	Kömür kullanılarak ızgara yapılmış tavuk	Bira fenoliklerinin kullanımı
	Kızartılmış yer fıstığı	Farklı fenolik asitlerin kullanımı
		Çay fenoliklerinin kullanımı
		Tersiyer bütül hidrokinon (TBHQ) kullanımı
		Yer fıstığı kabuğu kullanımı

Özellikle kullanılan hammaddenin kompozisyonu PAH oluşumunu önemli düzeyde etkilemektedir. Gıdanın yapısında yer alan yağ, PAH oluşumunda doğrudan etkilidir. Bu

nedenle özellikle yağ içeriği yüksek et ürünlerinde pişirme işlemleri sırasında yüksek miktarda PAH açığa çıktığı belirtilmektedir (Xie ve ark., 2024). Geleneksel kuru fermente sosislerde PAH üretimi üzerinde yağ içeriğinin (%20, %40) etkisinin incelendiği bir araştırmada (Gomes ve ark., 2013) yağ içeriğinin özellikle BaA ve diğer bazı PAH'ların oluşumu üzerinde önemli bir etkiye sahip olduğu ve yüksek yağ miktarının PAH oluşumunu desteklediği gösterilmiştir. Hitzel ve ark. (2012) tarafından yapılan araştırmada sıcak tütsülenmiş sosislerdeki yağ içeriği %30'dan %20'ye düşürüldüğünde PAH içeriğinin önemli ölçüde azaldığı belirtilmiştir. Bu nedenle, etteki yağın uygun şekilde uzaklaştırılması ve yağ damlacıklarının ısı kaynaklarıyla temasından kaçınılması ile PAH oluşumunun azaltılabileceği rapor edilmiştir.

Kızartma sıcaklığının ve süresinin kontrol edilmesi, kızartılmış gıdalarda PAH oluşumunu büyük ölçüde azaltabilmektedir. PAH oluşumu sıcaklık ve süreyle yakından ilişkilidir. Kızartma sıcaklığı 200°C'den yüksek olduğunda, yağ, protein ve karbonhidratlar piroliz sırasında BaP üretebilir. Yağ sıcaklığı 240°C'den düşük olduğunda, oluşan PAH miktarı nispeten azdır. Yağ sıcaklığı 270°C ve üzerine ulaştığında, yağ dumanı yüksek düzeyde PAH içermektedir (Xie ve ark., 2024). Bu nedenle, kızartma sıcaklığının genellikle 160–180°C'de tutulması önerilmektedir (Purcaro ve ark., 2006). Kamal ve ark. (2018) 150, 200, 250, 300 ve 350°C kavurma sıcaklığında sığır etindeki PAH içeriğini analiz etmişlerdir. Sonuçlar, sıcaklık arttıkça sığır etindeki PAH içeriğinin özellikle 300°C ve 350°C'de arttığını, 4 farklı tür PAH miktarının ise Avrupa Birliği tarafından izin verilen en yüksek seviyeyi bile aştığını göstermiştir. Purcaro ve ark. (2006) 160–185°C sıcaklıkta patates ve balık kızartmışlar ve sıcaklığın PAH'lar üzerinde önemli bir etkisi olmadığını rapor etmişlerdir. Diğer yandan, yağdaki PAH konsantrasyonunun, kızartma süresinin artmasıyla birlikte arttığını tespit etmişlerdir. 45 dakika kızartılan örneklerde, yüksek molekül ağırlıklı PAH içeriği 15 dakika kızartılan örneklerin 1,9 katı ve taze yağın 31,5 katı olmuştur (Hao ve ark., 2016). Bu nedenle, kızartma sıcaklığının ve süresinin etkin şekilde kontrol edilmesi ile, kızarmış yiyeceklerdeki PAH içeriğinin etkili bir şekilde azaltılabileceği belirtilmiştir.

Gıdalara ekzojen aktif bileşenlerin eklenmesi, kimyasal tehlikelerin oluşumunu azaltmak için etkili bir yaklaşımdır (Huang ve ark., 2021). Doğal antioksidanlar, bitki ekstraktları ve polifenoller PAH oluşumunun azaltılmasına katkıda bulunmaktadır (Min ve ark., 2018). Serbest radikaller PAH oluşumu için büyük önem taşırlar ve bu katkı maddeleri serbest radikal reaksiyonuna müdahale edebilir veya onu bloke edebilir ve böylece PAH oluşumunu azaltabilirler. Örnek olarak, et ürünlerinin kürlenmesi işlemi sırasında, lipofilik polifenoller, E vitamini, C vitamini ve diğer antioksidan bileşenleri içeren sarımsak ve soğanın ilavesi, ortamdaki serbest radikalleri yakalayarak böylece PAH oluşumunu inhibe edebilir (Pulido ve ark., 2003; Viegas ve ark., 2014). Soğanın kızarmış etteki toplam PAH içeriğini %60, sarımsağın ise %54 oranında azalttığı belirtilmektedir. Soğan ve karabiberde bulunan kuersetin, biberde bulunan karoten ve kapsaisin ve zencefilde bulunan kapsaisin etkili antioksidan bileşenlerdir ve serbest radikalleri temizleme yeteneğine sahiptirler. Yeşil çay özleri, bira ve fenolik asitlerin (protokateşuik asit, gallik asit, ferulik asit) kullanımı ile tavuk kanatlarında 8 farklı tip PAH oluşumu engellenebilmiştir (Xie ve ark., 2024).

8. SONUÇ

Fırıncılık ürünlerinin üretiminde kullanılan yüksek sıcaklıklı ısı işlemler, PAH oluşumu açısından önemli bir risk faktörüdür. Bu zararlı bileşiklerin, insan sağlığı üzerindeki olumsuz etkilerini minimize etmek için üretim süreçlerinde özellikle düşük sıcaklık ve optimum pişirme sürelerinin uygulanması ve ortama antioksidan ajanların eklenmesi gibi önlemler alınmalıdır. Ayrıca, hammadde seçiminde kaliteye özen gösterilmesi ve gıda güvenliği standartlarının titizlikle uygulanması, PAH kontaminasyonunu azaltmada etkili yöntemlerdir. Bu tür yaklaşımlar, tüketici sağlığını korumayı ve daha güvenli fırıncılık ürünleri sunmayı hedefleyen sürdürülebilir üretim politikalarının temelini oluşturmaktadır. PAH hassas düzeylerde tespiti

için gaz kromatografisi-kütle spektrometresi (GC-MS) veya yüksek performanslı sıvı kromatografisi-kütle spektrometresi (LC-MS) gibi ileri analitik yöntemlerin kullanılması, ürün güvenliğini sağlamak açısından kritik öneme sahiptir.

OSMANLI DİPLOMASİSİNİN EVRİMİ: GELENEKTEN MODERN DEVLET ADAMLIĞINA

AYÇA SİMAY DİNÇER (0009-0004-6564-1113)

Yüksek Lisans Öğrencisi, Başkent Üniversitesi Avrupa Birliği ve Uluslararası İlişkiler Enstitüsü Siyaset Bilimi ve Uluslararası İlişkiler Anabilim Dalı

ÖZET

Bu çalışma, Osmanlı diplomasisinin tarihsel gelişimini ve uluslararası ilişkilerdeki etkisi, Osmanlı'nın kuruluşunun ilk dönemlerinden Türkiye Cumhuriyeti'ne dönüşümüne kadar geçirdiği evrimin izini sürüyor. Uluslararası İslam hukukuna (Siyer geleneği), göçebe Türk gelenekleri ve kültürler arası öğrenmeye derinden bağlı olan Osmanlı diplomasisi, diğer devletlerle benzersiz etkileşim yöntemleri oluşturdu. Erken Osmanlı dönemi geçici diplomasiye dayanıyordu. Savaş ve barış arasında denge kurmaya odaklanan Osmanlı'da geçici elçilerle başlayan diplomatik faaliyetleri 19. yüzyılda Batı etkisindeki daimî elçilik sistemine evrilmiştir. Evlilik ittifakları, ticari düzenlemeler (kapitülasyonlar), toprak yönetimi ve istihbarat ağları gibi diplomatik stratejik yöntemlerle hem güç dengesini hem de uluslararası etkisini diğer taraftan bölgesel istikrarını korumayı hedeflemiştir.

Klasik dönemde evrensel bir imparatorluk vizyonu doğrultusunda, Osmanlı diplomasisi sadece askeri zaferlerle değil, aynı zamanda kültürel ve politik öğrenme süreçleriyle şekillenmiştir. Tanzimat reformlarıyla modernleşme adımları hızlanmış, diplomasi profesyonel bir alana dönüşerek Batılı normlara uyum sağlamıştır. Buna rağmen Osmanlı, kendi geleneksel üstünlük statüsünü koruyarak diplomasiye yön vermiştir. Osmanlı İmparatorluğu'nun uluslararası hukuk çerçevesinde egemenliğini savunma gayreti, Cumhuriyet dönemine de aktarılmış, Türkiye Cumhuriyeti'nin statükocu dış politika anlayışının temelini oluşturmuştur.

Çalışma, Osmanlı diplomasi geleneğinin siyasi, hukuki ve kültürel boyutlarını derinlemesine analiz ederek, modern jeopolitik gerçeklere uyum sağlarken Türkiye Cumhuriyeti'nin devletçiliğini ve uluslararası hukuk odaklı dış politikasının uluslararası ilişkiler üzerindeki kalıcı etkilerini ve mirasını tartışmaktadır.

Anahtar Kelimeler: Osmanlı diplomasisi, Siyer geleneği, Ad hoc diplomasi, Daimî elçilikler, Kapitülasyonlar, Tanzimat reformları, İstihbarat ağları, Uluslararası hukuk, Statükocu dış politika, Osmanlı-Türk diplomasi sürekliliği

EVOLUTION OF OTTOMAN DIPLOMACY: FROM TRADITION TO MODERN STATESMANSHIP

ABSTRACT

The historical development of Ottoman diplomacy and its impact on international relations traces the evolution of the Ottoman Empire from its early foundation to its transformation into the Republic of Turkey. Ottoman diplomacy, deeply committed to international Islamic law (the tradition of the Prophet), nomadic Turkish traditions and intercultural learning, created unique methods of interaction with other states. The early Ottoman period was based on temporary diplomacy. Focusing on establishing a balance between war and peace, the Ottomans evolved their diplomatic activities, which began with temporary ambassadors, into a permanent embassy system under Western influence in the 19th century. With diplomatic strategic methods such as marriage alliances, commercial arrangements (capitulations), land

administration and intelligence networks, they aimed to maintain both the balance of power and international influence, and on the other hand, regional stability.

In line with the vision of a universal empire in the Classical Period, Ottoman diplomacy was shaped not only by military victories, but also by cultural and political learning processes. With the Tanzimat reforms, modernization steps accelerated, and diplomacy transformed into a professional field and adapted to Western norms. Despite this, the Ottoman Empire maintained its traditional superiority status and gave direction to diplomacy. The Ottoman Empire's efforts to defend its sovereignty within the framework of international law were also transferred to the Republican period and formed the basis of the Republic of Turkey's status quo foreign policy approach.

The study analyzes the political, legal and cultural dimensions of the Ottoman diplomatic tradition in depth, and discusses the permanent effects and legacy of the Republic of Turkey's statism and international law-oriented foreign policy on international relations while maintaining continuity while adapting to modern geopolitical realities.

Keywords: Ottoman diplomacy, Biography tradition, Ad hoc diplomacy, Permanent embassies, Capitulations, Tanzimat reforms, Universal empire, Intelligence networks, International law, Status quo foreign policy, Ottoman-Turkish diplomatic continuity

1.Giriş

Uluslararası İlişkiler, Devletler arası ilişkilerin barışçı yollardan, savaşa başvurulmadan yürütülmesi sanatıdır. Temel İskit, diplomasının “medenileştirici ve yumuşatıcı” özelliğine vurgu yaparak diplomasının ahlak felsefesi olmadığını, diplomatların sadece ülkelerinin çıkarlarına göre hareket etmesi gerektiğinden bahsetmiştir. İskit’e göre bir “araç” olan diplomatlar, ülkelerini dış politikanın içeriğine rağmen her zaman savunmak zorundadırlar.¹ Diplomasi kuramı ile ilgili diğer bir önemli görüş ise ABD’li diplomat ve siyasetçi Henry Kissinger tarafından söylenmiştir. Kissenger, diplomasının anlaşmaları sağlamak ve anlaşmazlıkları uzlaştırmak olduğu görüşünü savunmaktadır. Diplomasiyi devletlerin uluslararası alandaki amaçlarını gerçekleştirmek için kullandıkları bir araç olarak tanımlanmıştır.²

Kavram genellikle devletlerarasında savaş yerine barışçıl yolların kullanılması olarak anlaşılmış, bu anlayış diplomasının aynı zamanda ikna ve iletişim gibi beceriler gerektiren bir alan olarak belirginleşmesini sağlamıştır.³ Altı yüz senelik bir geleneğe sahip olan Osmanlı İmparatorluğu diplomasisi ise eskiden kurulmuş olup bugün Türkiye Cumhuriyeti olarak bizlere geçmişten gelen bir kaynak sağlamıştır.

Osmanlı Diplomasi geleneği temelde üçe ayrılmaktadır:

Birincisi; İslam’dan gelen gelenek olan İslam uluslararası hukuku siyer geleneğidir. Dünya görüşleri burada ikiye ayrılmaktadır. Bir tarafta *Dar’ul İslam* diğer tarafta da *Dar’ul Harp* dediğimiz *just war (haklı savaş)* bulunmaktadır. Böylelikle gayrimüslimlerle hem savaş hem de barış ilişkileri de birlikte kurulmaya başlanmıştır.

İkincisi; Göçebe Türklerden (Türk İslam devletlerinden) gelen geleneklerdir. Osmanlı, gayrimüslim devletlerin üstünlüğünü de kabul etmektedir. Eğer bu devletler barış isterlerse Osmanlı Devleti de ona göre barış ilişkisi kurabilmektedir. Osmanlı, Müslüman bir devletle

³ İsmail Hakkı Elçi, “Osmanlı Diplomasisi ve Gelişim Süreci,” Külliyyat Osmanlı Araştırmaları Dergisi/2019, 9 (2019): 23-38.

savaşmasının meşruluğunu, muhatap olduğu ülkenin adil bir şekilde yönetilmemesi ve halkın yönetime karşı durması vb. unsurlara dayandırmıştır.

Üçüncüsü; Sahada farklı kültür ve medeniyetlerden görülen tarihsel tecrübeler yer almaktadır. İmparatorluk genişledikçe farklı kültürlerle yapılan temaslar sonucu yeni diplomatik faaliyetler geliştirilmiştir.

2. Osmanlı Kuruluş Döneminde Diplomasi

Osmanlı İmparatorluğunun büyümesi esasen biranda ortaya çıkmamıştır. Kuruluş Döneminde karar alıcılardan olan Osmangazi diğer Alpler arasında “*primus inter pares*”dir. (Eşitler arasında birinci) Saltanat fikri Orhangazi ile yerleşmeye başlamış ve İmparatorluk merkezileştikçe uç beyleri ile merkezi idare arasında bir denge unsuru haline gelmiştir. Kurulduğu yer itibarıyla Osmanlı'nın yakın komşusu olan Bizans ile yakın ilişkiler kurulmuştur. Bizans'ın ihtiyacı olan paralı askerlik, at yetiştiriciliği ve kölelik müessesesinin Osmanlı'da elde tutulması sonucu bir takım diplomatik ilişkilerin kurulması da olağan karşılanmaktadır.⁴

Yani Osmanlı Devleti, bu dönemde diplomasiyi kullanmıştır.⁵ Ancak bu, hemen hemen her şeyde olduğu gibi hem İslam hukuku kurallarına⁶ göre sürdürülmüş hem de cihat anlayışı ve buna bağlı olarak da fetihler şeklinde olmuştur.⁷

14.yy'da devletleşme çabalarıyla birlikte etrafındaki yapılarla diplomatik ve savaş ilişkilerini kurarken birtakım kaynaklarını kullanmıştır. Örneğin; Koyunhisar savaşından sonra Bursa ovasının tekfurları Osman Bey'e saldırmak üzere ittifak etmişlerdir.⁸

Bizans'tan gelen emirle yapılan bu ittifak sonucunda girişilen Dimboz savaşında (1303) zafer Osman Bey'in olmuştur fakat Osman'ın yeğeni Aydoğdu (Gündüz Alp'in oğlu) bu karşılaşmada öldürülmüştür.⁹ Olayın ardından Bursa ve Adranos tekfurları kaçarak kalelerine sığınmışlardır.¹⁰ Nihayetinde Osmanlı tarafından hiç kimsenin Ulubad köprüsünü geçmeme şartıyla “andlaşub ahitname tahrir etdiler.”¹¹

*Bu antlaşma da savaş sonrası barışın sağlanmasının yanında, Aydoğdu'yu öldüren şahsın Osman Bey'e teslim edilmesi meselesi de antlaşma dahilinde konuşulmuştur.*¹²

Bir diğer ahidnâme örneği Bursa fethi (1326) sonrasında karşımıza çıkmaktadır. Bursa Ahidnâme ‘sinin maddeleri ise şunlardır:

- 1.) *Şehre giren Osmanlı askerleri halka zarar vermeyecek (yağma olmayacak, esir alınmayacak).*
- 2.) *Gitmek isteyen mallarıyla Osmanlı askerlerinin himayesinde şehri terk edecek.*
- 3.) *Teslimde Orhan Bey'e 30.000 altın ödenecek.*¹³

⁶ İslam'dan gelen gelenek olan İslam uluslararası hukuku siyer geleneğidir. Dünya görüşleri burada ikiye ayrılmaktadır. Bir tarafta *Dar'ul İslam* ve *Dar'ul Harp* dediğimiz *just war* (*haklı savaş*). Dar'ul İslam'da temel ölçü idare ve icraatın İslam'a İslam esaslarına göre yönetilip İslam Hukuku'nun uygulanması olurken Dar'ul Harb de ise İslam'ın siyasi hakimiyeti dışında kalan, idari ve hukuk düzeninin İslami olmadığı, gayri İslami hukuk düzeninin uygulandığı yer olmuştur. Osmanlı Devleti Dar'ul Harb ile sürekli savaş içinde olduğundan uzun süre buralara diplomatik temsilci gönderememiştir. Age.s.80.

Diğer bir örnek ise *Sultan I. Murat döneminde* evlilikler yoluyla topraklar elde edilmesidir. I. Murat oğluna, Germiyanlılar'dan gelin alınca, Kütahya ve altı ilçesi Osmanlılar'a çeyiz olarak verilmiştir.¹⁴ Ayrıca Hamitoğulları Beyliği'nden toprak satın alınmasın rağmen fetih esaslı genişleme yöntemi süregelmiştir.¹⁵ Böylelikle savaşmadan, barış yoluyla fetih ve genişleme hareketleri de gerçekleştirilmiştir.

II. Murat döneminde Karamanoğullarıyla barış sürecinde kız kardeşi Sultan Hatun'un arabulucu olarak gönderilmesi diplomatik faaliyetlerin göstergesidir. Bu dönemde bazı kadıların, medreselerde siyer eğitimi almalarının ardından diplomat olarak görev yaptıkları bilinmektedir. Saray içindeki divan ve divan katipleri diplomatik yazışma eğitimi almakta ve Yunanca, Bulgarca, Sırpça vb. dil eğitimlerinden geçerek önemli devlet kademelerinde görevlendirmekteydiler. Bizans Yunancası da Osmanlı'da kullanılmış, Bizans'la o dönemde yakın temasta bulunulmuştur. Bunlara rağmen temel yazışma dili olarak Türkçe kullanılmıştır. Bizans ve Selanik kuşatmalarında Gayrimüslim elçiler gönderilerek kendi dilleri kullanılarak teslim olmaları istenmiştir. Sonuçta, 1300'lerin başından itibaren Bizanslılar ve Anadolu Beylikleri ile yakın ilişkiler kurularak Osmanlı'nın kuruluş dönemi savaş ve barış ilişkileri ile kurulduğu da gözlemlenmiştir.

3. Osmanlı Yükseliş Döneminde Diplomasi

Osmanlı'nın, Orta Avrupa, Kuzey, Güney, Doğu ve Akdeniz yönünde fetihler yaparak topraklarını genişletmesi, farklı aktörlerle ilişkiler kurmasına ve geliştirmesine neden olmuştur. Diğer devletlerle Osmanlı devleti arasında halifelikten onay alma, ateşli silah desteği alma gibi ilişki modelleri kurulmuştur. Osmanlı bir dünya gücü haline gelmiş, geniş bir yetki alanına sahip olmuştur. Böylece Osmanlı diplomasi geleneği bir değişim geçirmiştir.

Öncelikle, karar alıcı mutlak olarak Sultan olmakla birlikte divan teşkilatının etkinliği de artırılmıştır. Fatih Sultan Mehmet'in, divan teşkilatı toplandığı zaman divanı bir kafes arkasından izlediği bilinmektedir. Amaç Sultan'ın, tebaasından farklı bir kimlikte olduğunun gösterilmek istenmesidir. Evrensel imparatorluk olgusu, Osmanlı'nın dünya görüşü haline gelerek tüm dünyaya da gösterilmeye başlanmıştır. Bunu göstermede dış politikada bir karar alıcı olan sadrazamların büyük etkisi görülmüştür.

Klasik Çağ'da Avrupa ve Avrupa dışı devletlere yoğun bir şekilde dil bilen ad hoc elçi gönderilmeye ve kuvvetli bir ağ oluşturulmaya başlanmıştır. Bu süreçte Osmanlı İmparatorluğu'nda yazılmış olan siyasetnamelerinde yer alan istihbaratlar diğer devletler hakkında doğru bilgi sahibi olmak için önemli bir bilgi kaynağı haline gelmiştir. Casusların yürüttükleri faaliyetler sonucu elde edilen bilgiler devletin gücü ve devamlığı için oldukça önemli bir kaynak oluşturmuştur.

Osmanlı'nın genişleme stratejisinde yer alan fetihler, tek başına gaza ve cihat anlayışı çerçevesinde gerçekleşmemiştir. Anlaşmaların bozulması veya anlaşma şartlarına uymama, adil olmayan yöneticinin Müslümanların üzerindeki yönetimini kaldırmak vs. haklı savaş için bir meşruiyet olarak görülmüştür.

15. yüzyıla gelindiğinde ise, Osmanlı'nın Avrupa kıtasında yer alan topraklarının genişlemesiyle birlikte ticari işbirlikleri de artmıştır. *Fatih Sultan Mehmet döneminde* Cenevizlilere, *Kanuni Sultan Süleyman döneminde* Fransızlara kapitülasyonlar verilmiştir. Ayrıca Fatih Sultan Mehmet döneminde devletlere sürekli dış temsilcilik veya elçi bulundurma hakkı da tanınmıştır. Özellikle İstanbul'un fethinden sonra İstanbul diplomatik öneme sahip bir şehir

¹⁴ Feroz Ahmad, *Bir Kimlik Peşinde Türkiye*, çev. Sedat Cem Karadeli (İstanbul: İstanbul Bilgi Üniversitesi Yayınları, 2010), 9.

¹⁵ Feroz Ahmad, "Bir Kimlik...", 9

haline gelmiştir. *Yavuz Sultan Selim döneminde* Safavi Devleti'nin yıkılmasının ardından Mısır'dan gelen ticari gelirler İstanbul'a önemli ölçüde zenginlik katmıştır.

Osmanlı bir taraftan üstünlük statüsünü korumak adına daimî elçi göndermese de daimî elçileri kabul etmiştir. Elçiliklerin karşılıklı olarak açıldığını belirtmekle birlikte Osmanlı'nın bu dönemde kabul ettiği daimî elçiliklerde ayırt edici bir farklılık olduğunu söylemek gerekir. Elçi kabul edilmesi ve elçi gönderme usullerine ilişkin detayları Tevkiî Abdurrahman Paşa Kanunnamesinde de görmekteyiz. Osmanlı diplomasisinin yazılı hale geldiği ve protokol kurallarının nasıl işlediği hakkında bir külliyat olduğu da görülmektedir. Örneğin; Elçiler, Arz odasında padişahın huzuruna kabul edilmeden önce bir cübbeyle hazırlanır ve genellikle sadrazam bu süreçle ilgilenir idi. (Üstünlük statüsünü unutmamak gerekir) Elçiler, Yeniçerilere ulufe dağıtım günü kabul edilir ve burada düzenlenen bir merasimle Osmanlı'nın gücü diğer devletlere daha fazla hissettirilmesi yoluna gidilmiştir.

Genellikle barış antlaşmalarının tasdikli metinlerinin hazırlanması, doğum, ölüm ve cülus gibi merasimler sebebiyle gönderilen elçiler tarafından kaleme alınmış yine sefaretnameler aracılığıyla elçilerin sınırlarda nasıl mübadele olduklarını, gönderildikleri ülkenin payitahtına nasıl girdiklerini ve yabancı hükümdarlar huzurunda yaptıkları resmî-i kabul merasimlerini nasıl gerçekleştirdiklerini ayrıntılı bir şekilde kaleme alınan bazı sefaretnameler de öğrenmemiz de mümkündür.¹⁶

Avrupa'da gelişen diplomatik kurallardan farklı olarak Osmanlı'da diplomatik kurallar değişim göstermekte idi. Örneğin, Osmanlılar yabancı elçilerin kabulünde dost ile düşman gördüklerinin arasında büyük bir ayrıma gidebilmekteydi. İran Elçisi huzura geldiğinde büyük bir itibar görürken, Avusturya elçisi geldiğinde ise kötü davranışlar sergilenebilir, bazen huzura bile kabul edilmeyebilirdi.¹⁷ Dolayısıyla Doğudan gelen elçilere saygınlık açısından Avrupa'dan gelen elçilere nazaran daha üst statüde ilgi gösterilmiştir.

Osmanlı'da kuruluş ve yükseliş dönemlerinde savaşın da bir diplomatik yöntem olarak görüldüğü, savaşın diplomasiinin bir uzantısı olarak kabul edildiği "*ad hoc*" diplomasi kullanılmıştır.¹⁸ Çünkü Osmanlı İmparatorluğu, askeri olarak güçlü bir dönem yaşamış, istediğini savaşarak elde etmiş ve diğer ülkelerle diplomatik ilişkileri geliştirme gereği duymamıştır.¹⁹ Bu nedenle Osmanlı Diplomasi tarihinde *ad hoc* elçileri belirli bir konu nedeniyle²⁰ o ülkeye gönderilmiştir.

4.Osmanlı Duraklama ve Gerileme Döneminde Diplomasi

1800 yılında Osmanlı İmparatorluğu'nun uluslararası siyasetteki durumu iki yüzyıldır gittikçe zayıflamaktaydı.²¹ 16. yüzyılın sonlarından itibaren Avrupa devletleri, özellikle de Batı Avrupa'nın yeni gelişmekte olan ulus devletleri, Osmanlı devletine göre ekonomik, teknolojik

²⁰ Antlaşma yapma, fermanları iletme, savaş öncesi barış müzakeresi, törenler vb. nedenlerle gönderilmişlerdir.

²¹ Erik Jan Zürcher, Modernleşen Türkiye'nin Tarihi, çev.Yasemin Saner Gönen (İstanbul:İletişim Yayınları,2000), 37.

ve askerî bakımdan daha iyi durumdaydılar. Bu, Osmanlının ciddi yenilgileri ve toprak kayıplarıyla sona eren uzun savaşlar silsilesiyle açığa çıkmıştı. Denge Çağı olarak adlandırılan bu dönemde Osmanlı İmparatorluğu büyük bir toprak kazancı yaşamamıştır. Bu dönemde Batı karşısında üstünlüğünü yitiren bir Osmanlı karşımıza çıkmaktadır.

Zitvatorok Antlaşması ile Osmanlı Devleti, Avrupa üstünlüğünün sona erdiği ve diğer devletlerle olan diplomatik ilişki biçiminin değiştiği bir döneme girmiştir. Zira bu antlaşma Osmanlı Devleti'nin o döneme kadar tatbik ettiği kendine has diplomasi usulünden tavizler verdiği ilk kırılma noktasını teşkil etmekte idi.²² Örneğin daha önce antlaşmalar, karşı tarafın Osmanlı payitahtına gönderdiği elçilere dikte edilip, altına “*Her daim muzaffer Sultan tarafından, her daim mağlup kâfir... Kralına bahşedilmiştir*” ibaresi de eklenerek onlara bir “lütuf” biçiminde bahşedilirken bu antlaşma ile ilk defa Osmanlı ve Habsburg İmparatorluklarının arasındaki Macaristan’da tarafsız bir bölgede imzalanmıştır.²³ Önceden hiçbir devletin idarecisini kendi dengi olarak görmeyen Osmanlı sultanı, Avusturya İmparatoru’na Avrupa diplomatik kurallarına uygun biçimde “Kayzer” diye hitap ederek imparatorun eşitliğini tanımıştır.²⁴

Denge Çağı’nda büyük ölçüde bürokrasiyi elinde bulunduran ve daha çok denge politikası izleyen Seyfiye ve Kalemîye sınıf mensupları, devletler arasında savaşın çıkmaması gerektiğini savunmuşlardır. Ancak; Osmanlı Devleti, Duraklama ve Gerileme döneminde uzun savaşlar yaşamış ve bu savaşların sonundaki anlaşma müzakerelerinde, (diplomatik ilişkilerini asgari düzeyde tuttuğu ve nitelikli bürokratlar yetiştirmede geç kaldığı için) o dönemde diplomaside gelişmiş ülkeler olarak görülen; İngiltere, Fransa, Hollanda gibi ülkelerden arabuluculuk faaliyetlerini üstlenmelerini istemiştir. Dolayısıyla savaş sonrası müzakereler, çok taraflı uluslararası arabuluculuk faaliyetleri olarak düzenlenmiştir.

Osmanlı İmparatorluğu, bu dönemden sonra diğer devletlerle birlikte “*Eşit Egemenlik*” prensibi üzerinden temsil edilmeye başlanmıştır.

Özellikle devlet egemenliğine dayalı modern uluslararası ilişkilerin ortaya çıkışının simgesi olan *Vestfalya Antlaşması*’ndan sonra Avrupa dahil olmak üzere diplomasi de önemli değişimler yaşanmıştır. Örneğin; kurumsallaşmalar artmış, daha düzenli raporlar tutulmaya başlanmıştır. Bu tür gelişmelerden geri kaldığını gören Osmanlı, Lale Devri döneminde içinde bulunduğu durumun düzeltilmesi yönünde Batı ile derin temaslar kurarak onları anlama ve anlamlandırma yoluna gitmiştir. Öyle ki, Osmanlı devletinin önemli reformcularından olan *III. Selim* çok genç yaşlarda Fransa kralı ile mektuplaşmış (kral ile konuşmalarından esinlenerek reformlar yapmaya karar vermiştir.) ve Avrupa ile ilgili sorunlarına çözüm yolları aramış ve Osmanlı Devleti’nin barış ortamına kavuşması için bir takım düzenlemeler yapmıştır. Örneğin o dönemde Avrupa devletleri arasındaki anlaşmazlıklardan ve Avusturya’nın yaşamış olduğu iç karışıklıklardan faydalanarak Zıştovi anlaşmasını yapmıştır. Rusya ile imzaladığı Yaş anlaşmasıyla birlikte Rusların daha önce elde ettikleri toprakları terk etmeye mecbur bırakmıştır.

III. Selim, Osmanlı Devleti’nin toprak bütünlüğünün ve bağımsızlığının korunması için diplomasinin ön plana çıkarılması gerektiğini ve Diplomasî kurumlarının geliştirilmesi ve burada uzman kişilerin yetiştirilmesi gerektiğini düşünmüştür. Diplomasî alanında önemli bir

²³ Hilal Çiftçi, Osmanlı Devleti’nin XVIII. Yüzyılda Diplomasî Alanında Geçirdiği Değişimin Diplomasî Dile Yansıması, Çiftçi, Türk Tarih Kongresi, 681-693

²⁴ Hilal Çiftçi, Osmanlı Devleti’nin XVIII. Yüzyılda Diplomasî Alanında Geçirdiği Değişimin Diplomasî Dile Yansıması, Çiftçi, Türk Tarih Kongresi, 681-693

adım atarak *ilk daimî ikamet elçiliğinin* İngiltere Krallığı başkenti Londra'da açılmasına karar verilmiştir. Sultan III. Selim'in bu kararı ile 23 Temmuz 1793'te "Kalyonlar Kâtibi" **Yusuf Agah Efendi** Londra'da itimatnamesini krala sunduktan sonra görevine başlamıştır.²⁵ Ardından, 1796'da Paris, Viyana ve Berlin'de daimî Osmanlı elçilikleri kurulmuştur.²⁶ Diplomatik etkinlikler Rum tercümanlar tarafından yürütülmüştür.(Bu önemli bir zafiyet olup Osmanlı aleyhine bilgi aktarımı, istihbarat vb. faaliyette bulunarak hareket etmelerine de olanak tanımıştır.)

İmparatorluğun sonraki ıslahatçılarından bir çoğu, bu Osmanlı elçiliklerinde kâtip olarak hizmet görürken ilk Avrupa deneyimlerini de edinmişlerdi.²⁷ Denildiğine göre bu ilk elçiler yetersiz kişilerdi. Mesleklerinde hiç deneyimleri yoktu (örneğin Yusuf agah efendi aslında tıp eğitimi almış sonradan gazetecilik ve katiplik yapmaya başlamasının ardından ilk daimî elçi olarak atanmıştır) ve Avrupa diplomasi oyununu sıfırdan öğrenmek zorunda kalmışlardı.²⁸

Paris'e atanan *Moralı Seyit Efendi* Paris'te elçilik yaptığı günlerde daha çok zevk ve sefa peşinde koşmuş, siyasi işlerle daha az ilgilenmiştir. Öyle ki Fransız ordularının Mısır'a yaptığı saldırıyı sonradan öğrenmiş bu nedenle Osmanlı büyük bir zaaf göstermiştir. Sonuçta bu dönemde diplomaside istenilen başarı elde edilememiştir. Yine de Osmanlı Devleti Avrupalı ittifaklar içerisinde yer almış ve *uluslararası nosyon* geliştirme başarısını elde etmiştir. Osmanlı devletinin bu diplomatik ihtiyaçları aslında Avrupa'da yer aldığı güç dengesi içerisinde savaşmadan savunmaya geçmesinden ve bu nedenle kendisini destekleyecek müttefiklere ihtiyaç duymasından kaynaklanmakta idi. Diğer taraftan daimî elçiliklerin kurulmuş olmasının en önemli nedeni Osmanlı'nın "*kendi kendine yeterlilik*" esasına dayanan politikasını terk etmesidir. Bu çerçevede Napolyon Bonapart'ın Mısır'ı almasının ardından ezeli rakip gördüğü Rusya ile Osmanlı Devleti, Fransa'ya karşı ittifak kurmuştur. Ancak bu ittifaklar uzun sürmemiş III. Selim'in yapmış olduğu reformlara karşı gelen gruplar birleşerek III. Selim'i tahttan indirmiştir.

III. Selim'in ardından başa gelen *II. Mahmut Dönemi'nde* ise Rum maslahatgüzarları Yunan ayaklanması sırasında kasten yanlış bilgiler vermeleri nedeniyle hepsi II. Mahmut tarafından görevlerinden azledilmiştir. Yunan ayaklanmasının ardından bürokraside yer alan ve dil bilen Rumlara güven olunmayacağı anlaşılmıştır. Bu nedenle yerel bürokratlar atanmış ve Tercüme Odaları kurularak Diploması Akademisi'ne dönüştürülmüştür. Burada Mühendishane hocaları genç Osmanlı memurlarına dil öğretmişlerdir. *Avrupa'nın diplomatik yazışmalarını ve uluslararası hukuk* gibi teamüllerini öğreterek entelektüel memurlar yetiştirmeye çalışmışlardır.

II. Mahmut döneminde kurulan *Meclis-i Ahkam-ı Adliye*, zamanla yeniden düzenlenerek farklı bir yapıya kavuşturulmuştur. Mustafa Reşit Paşa'nın öncülüğünü yaptığı birinci kuşak devlet adamları için önemli bir merkez haline gelen bu meclis, Reşit Paşa'nın desteğiyle yetişen ve Batılılaşma programını daha hızlı ve ileriye taşımaya amaçlayan Ali ve Fuat Paşaların liderliğindeki ikinci kuşak devlet adamlarıyla fikir ayrılıkları ortaya çıkmıştır.

²⁸ Erik Jan Zürcher, *Modernleşen Türkiye'nin Tarihi*, çev.Yasemin Saner Gönen (İstanbul:İletişim Yayınları,2000), 43.

II. Mahmut döneminde “*Hariciye Nezareti'nin*” kurulmasıyla birlikte *Reîsü'l-küttâb'lara* dış politika yapıcısı görevi verilmiş ve Sadrazama bağlı olarak çalışmaya başlamışlardır. *Reîsü'l-küttâb'lar* hem iç hem dış politikaların koordinasyonunu sağlamış, diplomatik protokol usullerini belirleyerek bir Dışişleri Bakanı olarak çalışmışlardır. Diplomatlar, padişahların taht değişikliklerini duyurmak, ateşkesleri duyurmak, antlaşmaların imza nüshasını hazırlamak, sınır müzakereleri yapmak ve istihbarat toplamak vb. faaliyetler yürütmek için uzun sürelerle farklı coğrafyalara gönderilmişlerdir.

5.Osmanlı 19. Yüzyıl Diplomasisi

19.yüzyılın başlarında Fransa tarafından ortaya atılan *Doğu Sorunu*, Osmanlı İmparatorluğu'nun Avrupa'daki topraklarının geleceğini ve bu toprakların hangi güçlerin kontrolü altına gireceğini tartışan bir kavram olarak ortaya çıkmıştır. Osmanlı'nın zayıflayan yapısı nedeniyle özellikle *1815 Viyana Kongresi*'nden sonra, Avrupa'nın büyük devletleri arasında stratejik, siyasi ve ekonomik çıkar çatışmaları baş göstermiştir. Bu durum, Osmanlı Devleti'nin toprak bütünlüğü üzerindeki uluslararası rekabeti tetiklemiş ve zamanla Avrupalı güçlerin politikalarında önemli bir yer edinmiştir.

19.yüzyılda ortaya atılan Doğu Sorunu, Balkanlarda çıkan isyanlar, Mısır sorunu ve Kırım Savaşı gibi olaylarla doğrudan bağlantılı olup, Osmanlı'nın zayıflayan siyasi yapısının Avrupa'daki dengeleri nasıl etkilediğini gözler önüne sermiştir. 19. yüzyıl gibi geç bir zamanda diplomasiyi önemini kavramış olan Osmanlı, bu büyük olaylar karşısında hazırlıksız yakalanmış, diplomasi alanındaki deneyimsizliği onun bu olaylar karşısında başarılı olmasını engellemiştir.²⁹

Diğer taraftan dünyada değişim ve dönüşümün yaşandığı *Fransız İhtilali ve 1815 Viyana Kongresiyle birlikte (Osmanlı'nın modern ulus devletler arasında oluşturulan sistemden yararlanabilmesi için tanzimat ve ıslahat fermanını yayınlaması gerekecektir.) Avrupa uyumu ve güç dengesi* de başlamıştır. Çünkü Viyana Kongresi, Avrupa devletleri arasındaki dengenin sağlanması için imzalanmış, dengenin devamı için devletlerin uymaları gereken hukuki teamüller ve kurallar getirmiştir.³⁰

Osmanlı toprakları, özellikle İngiltere, Fransa, Rusya ve Avusturya gibi büyük güçler tarafından kendi çıkarlarına göre yeniden şekillendirme istekleri ile büyük güçler arasında rekabet alanı haline gelmiştir. Osmanlı Devleti ise bu süreçte diplomasiye ağırlık vererek, büyük güçlerin arasındaki rekabeti kendi lehine kullanmaya çalışmıştır. “*Denge politikası*” olarak bilinen bu yaklaşım, Osmanlı'nın bir güç ile ittifak kurarak diğerine karşı durmasını ve böylelikle toprak bütünlüğünü korumaya çalışmasını içermektedir. Osmanlı devletinin denge politikasını izlemesinin en önemli nedeni; Osmanlı'nın, eski askeri gücünün olmadığından hareketle egemenlik haklarını korumak için Avrupa uluslararası hukukunun öğrenilmesi gerektiğini düşünmesidir.

Özellikle İngiltere ve Fransa'nın (İleriki süreçte İngiltere'nin ve Fransa'nın bu düşüncesi değişecek ve Osmanlı'yı parçalama politikaları güç kazanacaktır. Örneğin; İngiltere, 1869'da Süveyş Kanalı'nın açılması ve 1878 Berlin Konferansı'nın ardından bu politikasından vazgeçmiştir.) desteğini kazanarak Rusya'nın yayılmacı politikalarına karşı denge sağlamaya çalışan Osmanlı, aynı zamanda reform hareketleriyle Batılı devletleri ikna etmeye çalışmıştır. Örneğin, Tanzimat Fermanı gibi modernleşme girişimleri, *Osmanlı'yı uluslararası arenada güçlendirme amacını taşımıştır*. Bu bağlamda Doğu Sorunu meselesi, yalnızca Osmanlı'nın zayıflığını değil, aynı zamanda diplomasiyi etkin bir araç olarak kullanma çabalarını da

²⁹ İsmail Hakkı Elçi, “Osmanlı Diplomasisi ve Gelişim Süreci,” Külliyyat Osmanlı Araştırmaları Dergisi/2019, 9 (2019): 23-38.

³⁰ İsmail Hakkı Elçi, “Osmanlı Diplomasisi ve Gelişim Süreci,” Külliyyat Osmanlı Araştırmaları Dergisi/2019, 9 (2019): 23-38.

yansıtan ve batılı güçlerle zorlu bir müzakere süreci olarak değerlendirilebilir. Birinci Dünya Savaşı'na giden süreçte İngiltere ve Fransa gibi büyük devletlerle iş birliğine giremeyeceğini anlayan Osmanlı, Almanya ile ittifak kurmaya başlamıştır.

Sonuçta, Osmanlı Devleti'nin, diplomasi alanında 1922 yılına kadar kurmuş olduğu elçilik sayıları, kurum içi bazı reformlar yapma gayreti de göstermiştir. Ancak; bunların yeterli olmadığını belirtmekle birlikte o dönemde örgüt içi ağın şu şekilde olduğu söylenebilir: Hâriciye Teşrifatçılığından Hâriciye kâtibliğine, Tercüme Odası'ndan Tahrîrât-ı Hâriciye Odası'na, Mektubî-i Hâriciye Kalemî'nden Tabiiyet Kalemî'ne, Vilâyet-i Hariciye Müdürü'nden Vilâyet-i Hariciye Tercümanlığına, Divanhümayun kalemlerinden Hâriciye Muhâsebeciliğine kadar nezarete birçok birim katılmış geniş bir iç örgüt ağı oluşturulmuştur.³¹

6.Osmanlı Diplomasi Geleneğinin Modern Türkiye'ye Mirası

İmparatorluk'tan Cumhuriyet'e geçişle birlikte kurumsal devamlılık ikilik yaratmış olsa da Avrupalı temsilciliklerde geleneksel düzen yeni düzeni desteklemiştir. Türk Dış politikası statükocudur, revizyonist değildir. Statükocu politika ve Batıcı politika aslında madalyonun iki yüzüdür. Türkiye, her ikisinde denge kurulabildiği zaman politika yapması kolaylaşmış kurulamadığında ise zorlaşmıştır. Örneğin, kaybettiği toprakları kazanma yoluna gitmek yerine milli mücadele döneminde Misak-ı Milli sınırları kabul edilip statükoculuğa geri dönmüştür. Lozan Barış Antlaşması sürecinde, sınırlar konusunda Mustafa Kemal Atatürk'ün "*Savunulabilir sınırlar*" ve "*Ulus-Devlet*" ilkeleri izlenmiştir. Diğer taraftan, anti-statükocu güç olan Rusya'ya karşı, Türkiye'nin NATO'ya üye oluşu statükocu geleneğinin terkedildiğine bir örnek olarak verilebilir. Ayrıca, Osmanlı İmparatorluğu-Türkiye Cumhuriyeti Devleti'nin, Kuzey Komşusu olan Rusya ile 18.yy'dan itibaren diplomatik ilişkileri her dönem büyük önem arz etmiştir. *Tüm bunlara rağmen Osmanlı Devleti ile Türkiye Cumhuriyeti'nde yer alan diplomatik yaklaşımlarda büyük farklılıklar gözlemlenmiştir. Hem doğu hem batı ile ilişkiler içinde olan bir Osmanlı varken Türkiye Cumhuriyeti, Batı ile ittifaklar yapmış ve Batı dışında bir arayış içine girmemiştir. Osmanlı İmparatorluğu, çoğunlukla din temelli dış politika anlayışı izlemiş ve güç politikalarını ön plana çıkarmıştır. Türkiye Cumhuriyeti, dış politikasını güç politikalarından ziyade uluslararası hukuka atfen yönetmeye çalışmış ve meşruluğunu uluslararası hukuka dayandırmıştır.*

7.Araştırma ve Bulgular

Bu çalışmanın temel araştırma sorusu şu şekilde belirlenmiştir: Osmanlı diplomasisi, tarihsel süreçte hangi stratejilerle uluslararası arenada etkili olmuş ve bu modern Türkiye'nin dış politika anlayışına nasıl yansımıştır? Osmanlı diplomasisi, gerçekten bir miras olarak mı kalmıştır? Konuları tartışılmaktadır.

Bu çalışma, Osmanlı diplomasi geleneğinin tarihsel gelişimini, stratejik araçlarını ve modern döneme etkilerini analiz ederek, Osmanlı İmparatorluğu'nun uluslararası ilişkilerdeki mirasını ve bu mirasın Türkiye Cumhuriyeti'ne olan yansımalarını ele almaktadır. Araştırmanın temel bulguları aşağıda özetlenmiştir:

7.1.Osmanlı Diplomasi Geleneğinin Kaynakları

Osmanlı diplomasi geleneği, üç temel kaynaktan etkilenmiştir: İslam uluslararası hukuku (Siyer geleneği), göçebe Türk devletleri gelenekleri ve farklı kültürlerden edinilen diplomatik tecrübeler. Bu unsurlar, Osmanlı'nın diplomasi anlayışını şekillendirerek, savaş ve barış arasında bir denge kurmasını sağlamıştır. İslam hukukuna dayalı adalet anlayışı, özellikle

³¹ İsmail Hakkı Elçi, "Osmanlı Diplomasisi ve Gelişim Süreci," Külliyyat Osmanlı Araştırmaları Dergisi/2019, 9 (2019): 23-38.

fetihler ve barış antlaşmalarında kendini göstermiştir. Göçebe geleneklerden gelen esneklik ve pragmatizm ise Osmanlı'nın bölgesel güçlerle uyum içinde çalışmasına olanak tanımıştır.

7.2.Diplomatik Stratejiler ve Araçlar

Osmanlı İmparatorluğu, diplomatik ilişkilerinde farklı stratejiler kullanmıştır. Evlilik ittifakları, kapitülasyonlar, istihbarat ağı ve yerel güçlerle antlaşmalar gibi yöntemler, güç dengesini koruma ve uluslararası arenada etkin bir rol oynama amacını taşımıştır. Örneğin, Fatih Sultan Mehmet döneminde Cenevizlilere verilen kapitülasyonlar ve Kanuni Sultan Süleyman döneminde Fransızlara tanınan ticari ayrıcalıklar hem ekonomik hem de siyasi amaçlara hizmet etmiştir.

7.3.Diplomasi Kurumlarının Gelişimi

Osmanlı'da diplomasinin kurumsallaşması, özellikle Tanzimat Dönemi'nde hız kazanmıştır. Daimî elçiliklerin açılması ve tercüme odalarının kurulması, modern anlamda diplomasiye geçişin önemli adımlarıdır. 1793'te Londra'da açılan ilk daimî elçilik, Osmanlı'nın uluslararası alanda sürekli temsil anlayışını benimsediğini göstermektedir. Bu süreçte yetiştirilen diplomatlar, Batı'nın diplomatik normlarına uyum sağlamakla birlikte Osmanlı'nın üstünlük statüsünü de korumaya çalışmışlardır.

7.4.Osmanlı'nın Statükocu Politikası

Araştırma, Osmanlı'nın özellikle Duraklama ve Gerileme Dönemlerinde denge politikası güttüğünü ve uluslararası hukuk kurallarına daha fazla başvurduğunu ortaya koymaktadır. Zıttorok Antlaşması ile başlayan süreçte, Osmanlı üstünlük statüsünden eşit egemenlik ilkesine doğru bir dönüşüm yaşamıştır. Bu durum, Osmanlı'nın Batılı diplomasi kurallarına uyum sağlama çabalarının bir yansımasıdır.

7.5.Modern Türkiye'ye Yansımalar

Osmanlı diplomasinin mirası, Türkiye Cumhuriyeti'nin dış politika anlayışına önemli ölçüde yön vermiştir. Statükocu yaklaşım, Lozan Antlaşması ve sonrasında sürdürülen barışçıl dış politika ile kendini göstermiştir. Türkiye, Osmanlı'nın uluslararası hukuk çerçevesinde egemenlik haklarını savunma pratiğini devralmış ve bu geleneği modern diplomaside sürdürmüş olsa da temelde birçok farklılık olduğunu aslında Türkiye Cumhuriyeti'nin kendi içindeki dinamiklerin ön plana çıktığını görmekteyiz. Bu farklılıkları sıralamak gerekirse:

7.5.1.Devlet anlayışı ve dış politika hedefleri: Osmanlı imparatorluğu hem doğu hem Batı'yla ilişkilerini geliştirmiş dış politikası fetih anlayışı çerçevesinde genişleme ve saltanatın devamlılığı olarak uygulanmıştır. İmparatorlukta farklı etnik kökenden gruplar bulunduğu için hoşgörü politikası ve bunun yanında ona uygun diplomasi anlayışı geliştirilmiştir. Türkiye Cumhuriyeti'nde ise Atatürk'ün "*Yurtta sulh cihanda sulh*" ilkesi ile uluslararası ilişkilerde daha sınırlı ve realist bir dış politika izlenerek erken dönem Türk dış politikasının temeli oluşturulmuştur.

7.5.2. Diplomasi anlayışları: Osmanlı imparatorluğu daha çok ikili anlaşmalar, geçici veya daimî elçilikler ve uzun süre ad hoc diplomasi anlayışını da destekleyen ittifaklar kurmaya odaklanmıştır. Türkiye Cumhuriyeti'nin ilanının ardından modern diplomasi yöntemleri benimsenmiş, Osmanlı diplomasinde yok sayılan uluslararasılığı ön plana alınan yaklaşımlar sergilenmiştir. Örneğin uluslararası örgütlerde aktif rol oynama (Birleşmiş Milletler, NATO) bulunduğu coğrafyanın önemini kavrama ve buna göre diplomatik yaklaşımlar sergileme, bazen statükocu bazen taraflı bir şekilde hareket edilmiştir. Bu, modern devletler sisteminde devletin çıkarlarını koruyabilmesinin bir gerekliliğidir.

7.5.3. İdeolojik yaklaşımlar: Osmanlı İslam dünyasının liderliğini üstlenmiş ve halifelik makamını diplomatik bir araç olarak da kullanmıştır.(Balkan Savaşları Osmanlı Devleti için çok ciddi kayıplara sebep oldu; Avrupa'daki topraklarının %83'ünü, nüfusunun %69'unu ve devlet gelirlerinin önemli bir kısmını kaybettiği gibi yılların birikimi sonucu oluşan Osmanlı askerî gücü yok oldu ve milyonlarca sivil insan hayatını kaybetti.)³²

Bununla birlikte fetih politikaları ve vasal devletlerle ilişkiler daha çok ön plana çıkmıştır. Çünkü Osmanlı Devleti Avrupa'daki topraklarının bir çoğunu kaybettiği ve devletin bütünlüğünün sağlanması için elinde kalan Müslüman nüfusa yönelik Politikalar yapmak durumunda kalmıştır. Modern Türkiye Cumhuriyeti, kendini seküler bir ulus devlet olarak tanımlamış, ideolojik olarak din temelli dış politika yerine, laik ve ulusal çıkarlarını ön plana almış ve bu çerçevede yönelimlerini batılılaşma ve modernleşme ekseninde şekillendirmiştir.

7.5.4. Uluslararası sistem ve konjonktür: Osmanlı, uluslararası güçler sistemi içerisinde uzun bir süre denge politikası izlemiştir. Öyle ki Avrupalı güçler arasında dengeleri gözeterek toprak kayıplarını en aza indirmeye çalışmıştır. Cumhuriyet döneminde ise özellikle II. Dünya Savaşı sırasında diplomatik manevralarla savaşın bitmesine son bir hafta kalıncaya dek Türkiye Cumhuriyeti savaşa girmemiştir. Türkiye Cumhuriyeti, II. Dünya Savaşının bitimine bir hafta kala Birleşmiş Milletlerin kurucu üyeliğinin gerekliliği olarak Almanya ve Japonya'ya savaş ilan etmiştir. Ardından Birleşmiş Milletler kurucu üyeliğinde yer almıştır. II. Dünya Savaşı sonrası Dünya düzeninde batı bloğuna dahil edilmiştir. Soğuk savaş sonrası ise daha çok bölgesel ve küresel işbirlikleri geliştirmeye özen göstermiştir.(Örneğin NATO operasyonlarında(ISAF vb.) yer almış, Avrupa Birliği entegrasyonu sürecine girmiştir. Ayrıca bu dönemde bölgesel işbirlikleri ve komşularla sıfır sorun politikaları ön plana çıkmıştır.)

7.5.5. Jeopolitik kapsam: Osmanlı toprakları, Balkanlar, Orta Doğu, Kuzey Afrika ve Kafkasya gibi geniş bir coğrafyayı kapsadığı için diplomatik araçlar da buna göre şekillenmiştir. Türkiye'nin jeopolitik hedefleri daha sınırlı bir coğrafyada yer almış Özellikle Orta Doğu Kafkasya ve Doğu Akdeniz üzerinde yoğunlaşmıştır. 2000'lerden itibaren bu politikanın yerini "stratejik derinlik" politikası almış ve küresel etki alanını genişletme çabaları gözlemlenmiştir. Türkiye Cumhuriyeti devleti, kimi zaman Osmanlı devletinden bağımsız olan devletlerin haklarını da uluslararası ilişkilerde göz etmiş ve buna yönelik politikalar ve diplomatik faaliyetler göstermiştir.

7.5.6. Araçlar ve yöntemler: Osmanlıda diplomasi çoğunlukla savaşın tamamlayıcısı olarak görülmüştür. Özellikle ikna, temsiliyet ve güç gösterisi önemli bir araç olarak kullanılmıştır. Modern Türkiye Cumhuriyeti'nde uluslararası hukuk ve çok taraflı diplomasi araçları öne çıkmıştır. Türkiye Cumhuriyeti'nin kuruluş safhasında uluslararası hukuka dayanma ve meşruiyet kazanma yoluyla diplomasi ön plana çıkarılmıştır. Türkiye anlaşmalar ve diplomatik yollarla sorun çözmeyi tercih eden bir devlet olarak yer almaya özen göstermiştir. Öyle ki bugün devletler arasında arabuluculuk faaliyetleri gösterip uluslararası sistemde var olma çabalarını ortaya koymaya çalışmaktadır. Osmanlı İmparatorluğu'nda ve Türkiye Cumhuriyeti'nde, kendi dönemlerindeki konjonktüre bağlı olarak gerçekleştirilen; ekonomik, kültürel ve siyasi dönüşümlerle uluslararası sistem içerisinde var olmaya ve uyum sağlanmaya çalışılmıştır.

³² Şeyma Dereci, "Balkan Savaşları Sırasında Dul, Yetim ve Kimsesizleri Korumaya Yönelik Sosyal Yardım Uygulamaları," Trakya Üniversitesi Edebiyat Fakültesi Dergisi 3/2012,5 (2013):191–211.

8.Sonuç

Araştırma, Osmanlı diplomasi anlayışının tarihsel bir miras olarak Türkiye Cumhuriyeti üzerindeki etkilerini ele almıştır. Tarihsel süreçte Osmanlı diplomasisi, askeri güce dayalı bir yapıya sahip olmuş ve farklı stratejik hedefler doğrultusunda çeşitli araçlarla şekillenmiştir. Ancak bu anlayış, Türkiye Cumhuriyeti'nin kurulmasıyla birlikte, geleneksel yapıdan kurumsal ve modern bir devlet adamlığı anlayışına evrilmiştir. Bu bağlamda, Osmanlı'dan Türkiye Cumhuriyeti'ne kalıcı bir dış politika mirası devredildiği düşünülse de günün sonunda Türkiye Cumhuriyeti yeni dış politika kimliği ile uluslararası arenada var olmaya devam etmektedir.

ÖZET

Yumurtalık kanseri en ölümcül jinekolojik hastalık olarak bilinmektedir. Cerrahi ve kemoterapi temel tedavi yöntemlerindedir. Ancak hastaların büyük bir kısmında kemoterapiye direnç ile nüks görülmektedir. Bu durum, yeni tedavi stratejileri geliştirmeye duyulan ihtiyacı artırmaktadır. Bu amaçla, mevcut bir ilacın, daha önce uygulanmış olmadığı bir tıbbi durum için kullanılmasına dayanan yöntemler, yumurtalık kanseri için alternatif bir tedavi olarak araştırılmaktadır.

Abrocitinib, 2021 yılında, orta-şiddetli atopik dermatit (AD) tedavisi için İngiltere ve Japonya'da onaylanmıştır. Abrositinib, Janus kinaz 1'in (JAK1) küçük molekülü bir inhibitördür. Janus kinaz/transkripsiyon sinyal dönüştürücüleri ve aktivatörleri (JAK/STAT) sinyal yolunun, AD'de immün yanıtların düzensizliğinde kritik bir rol oynadığı bilinmektedir.

Literatürde, PI3K/AKT (Fosfoinositid-3 Kinaz/Protein kinaz B) sinyal yolunun birçok yumurtalık kanseri türünde düzensiz olduğu ve düşük sağkalım oranlarıyla ilişkili olduğu bildirilmiştir. PI3K, büyüme faktörlerine bağlı reseptörlerce aktive edilerek onkojenik proteinleri, özellikle Akt ve Akt'nin aşağı akış hedefi olan mTOR'u, aktive etmektedir. Ayrıca, RAS'ın anormal aktivasyonunun da RAF-1/MAP (mitojenle aktifleşen protein) kinaz, PI3K/AKT gibi sinyal yollarının kontrolsüz indüksiyonuna yol açtığı gösterilmiştir.

Ras-MAP kinaz yolunun, PI3K –AKT yolunun ve STAT sinyalinin optimal aktivasyonu için JAK fonksiyonunun gerekli olduğu bildirilmiştir.

Bu çalışmada, bir moleküler modelleme yöntemi olarak “docking” uygulamaları gerçekleştirilmiş, Abrocitinib'in Ras-MAP kinaz, PI3K-AKT sinyal yollarındaki proteinlerle kararlı bir kompleks oluşturma potansiyeli ve ortaya çıkabilecek komplekslerin oryantasyonları incelenmiştir. Ligand ve proteinlerin üç boyutlu yapılarına PubChem ve RCSB Protein Data Bank veritabanlarından ulaşılmıştır. Moleküler docking işlemleri AutoDock versiyon 4.2.6 (Scripps Research Institute, ABD) ile gerçekleştirilmiş, Discovery Studio Visualizer 24.1.0 (Dassault Systèmes, ABD) programıyla sonuçlar görselleştirilmiştir. Ligandın, altı farklı proteine ortalama bağlanma enerjisinin -6.18 ile -8.54 aralığında olduğu bulunmuştur. Abrocitinib'in bir JAK inhibitörü olduğu ve JAK fonksiyonunun yumurtalık kanseri ile ilişkili olan Ras-MAP ve PI3K-AKT sinyal yolları ile ilişkisi, ilacın yumurtalık kanserinde terapötik potansiyelini ortaya koymaktadır. İlerleyen çalışmalarda, gen ekspresyonu analizleri ile ilgili sinyal yollarında etkinliğinin araştırılması planlanmaktadır.

Anahtar kelimeler: Yumurtalık Kanseri, Abrocitinib, Moleküler Docking, Terapötik Etki

ABSTRACT

Ovarian cancer is one of the most lethal gynecological diseases. Surgery and chemotherapy are the two primary therapeutic approaches for ovarian cancer. However, recurrence occurs in most patients because of chemotherapy resistance. This has increased the need to develop new treatment strategies. The repurposing of existing drugs for new medical conditions is being explored for the treatment of ovarian cancer. Abrocitinib, a small-molecule inhibitor of Janus kinase 1 (JAK1), was approved for treating atopic dermatitis (AD) in 2021. Dysregulation of immune response in AD is affected by the Janus kinase/transcription signal transducer and activator (JAK/STAT) pathway. According to literature, ovarian cancer frequently exhibits dysregulation of the PI3K/AKT (phosphoinositide-3 kinase/protein kinase B) pathway, which is associated with poor survival rates. Growth factor receptors stimulate PI3K and activate oncogenic proteins, such as Akt and mTOR. Furthermore, atypical RAS activation may result in altered signaling via PI3K/Akt and RAF-1/MAPK pathways. JAK function is necessary for optimal activation of the PI3K-AKT, Ras-MAPK, and STAT pathways. In this study, the potential of brobrocitinib to form a stable complex with proteins in the Ras-MAP kinase and PI3K-AKT signaling pathways and the possible orientations of the formed complexes were investigated by molecular docking using AutoDock 4.2.6 (Scripps). The results were visualized using the Discovery Studio Visualizer 24.1.0 (Dassault Systèmes, USA). The three-dimensional structures of brocitinib and proteins were obtained from PubChem and RCSB Protein Data Bank databases. The mean binding energies of the ligand to the six proteins were found to range from -6.18 to -8.54. Abrocitinib is a JAK inhibitor, and the link of JAK function to Ras-MAP and PI3K-AKT signaling pathways, which are associated with ovarian cancer, suggests the therapeutic potential of the drug. Further studies are needed to investigate the efficacy of this drug in signaling pathways through gene expression analysis.

Keywords: Ovarian Cancer, Abrocitinib, Molecular Docking, Therapeutic Effect

1. GİRİŞ

Yumurtalık kanseri en ölümcül jinekolojik hastalık olarak bilinmektedir ve 2020 yılında dünya çapında 207.252 kişinin ölümüne neden olmuştur [1, 2]. Cerrahi ve kemoterapi temel tedavi yöntemlerindedir. Ancak hastaların büyük bir kısmında kemoterapiye direnç ile nüks görülmekte ve bu durum yeni tedavi stratejileri geliştirmeye duyulan ihtiyacı vurgulamaktadır [3, 4]. Bu bağlamda, mevcut bir ilacın veya ilaç adayının, daha önce uygulanmadığı yeni bir tedavi veya tıbbi durum için kullanılmasına dayanan yöntemler, yumurtalık kanseri için alternatif bir tedavi olarak araştırılmaktadır [5, 6].

Abrocitinib, Eylül 2021'de, sistemik tedaviye aday olan 12 yaş ve üzeri yetişkin ve ergenlerde orta-şiddetli atopik dermatit (AD) tedavisi için İngiltere ve Japonya'da onaylanmıştır. Dünya genelinde en yaygın inflamatuvar deri hastalıklarından biri olan atopik dermatit, kronik ve tekrarlayıcı özelliktedir [7]. Abrositinib, Janus kinaz 1'in (JAK1) küçük molekülü bir inhibitörüdür [8]. JAK/STAT sinyal yolunun, AD'de immün yanıtların düzensizliğinde kritik bir rol oynadığı bilinmektedir [9].

Memelilerde Janus kinaz/transkripsiyon sinyal dönüştürücüleri ve aktivatörleri (JAK/STAT) sinyal yolu, birçok sitokin ve büyüme faktörü için temel sinyal mekanizmasıdır. JAK aktivasyonu hücre çoğalmasını, farklılaşmasını, hücre göçünü ve apoptozu uyarmaktadır [10]. STAT'lar (sinyal dönüştürücüleri ve transkripsiyon aktivatörleri) yapısal ve işlevsel olarak ilişkili yedi proteinden oluşan bir ailedir: Stat1, Stat2, Stat3, Stat4, Stat5a ve Stat5b, Stat6. JAK'lar (janus kinazlar), Jak1, Jak2, Jak3 ve Tyk2 olmak üzere dört non-reseptör tirozin kinaz ailesini temsil etmektedir [11].

Fosfoinozid kinazlar (PIK'ler), fosfoinozidlerin inozitol halkasını fosforile eden ve böylece sinyal dönüştürücü olarak görev yapan lipid kinazlardır [12]. PI3K aktive edildiğinde, diğer sinyal moleküllerini fosforile ederek kimyasal sinyallerin aşağı yönde iletilmesine neden olmaktadır. PI3K, fosfatidilinositol 4,5 bisfosfatı (PIP2) fosforile ederek ikincil haberci olan fosfatidilinositol 3,4,5-trisfosfatı (PIP3) üretir [13]. PIP3, Akt dahil olmak üzere onkogenik sinyalizasyonda yer alan proteinleri aktive etmektedir. Akt'nin en yaygın aşağı akış efektörlerinden biri olan mTOR, kanser progresyonunu teşvik etmek için birçok proteini düzenlemektedir [14]. Araştırma bulguları, PI3K/AKT sinyalizasyonunun yumurtalık kanserinin önemli bir kısmında düzensiz olduğunu ve kötü sağkalım oranıyla ilişkili olduğunu ortaya koymaktadır [15].

RAS, guanozin trifosfatlar (GTPazlar) ailesine ait guanin nükleotidi bağlayan bir tür membrana bağlı düzenleyici proteindir [16]. RAS'ın anormal aktivasyonu, RAF-1/MAPK (mitojenle aktive olan protein kinaz), PI3K/AKT gibi çeşitli aşağı akış sinyal yollarının kontrolsüz indüksiyonuna yol açmaktadır. RAS, PKB (protein kinaz B) ve PKC (protein kinaz C) gibi hücre çoğalmasının yanı sıra tümör oluşumunu ve kanser hücrelerinin yayılmasını sağlayan yollarda da rol oynamaktadır [17].

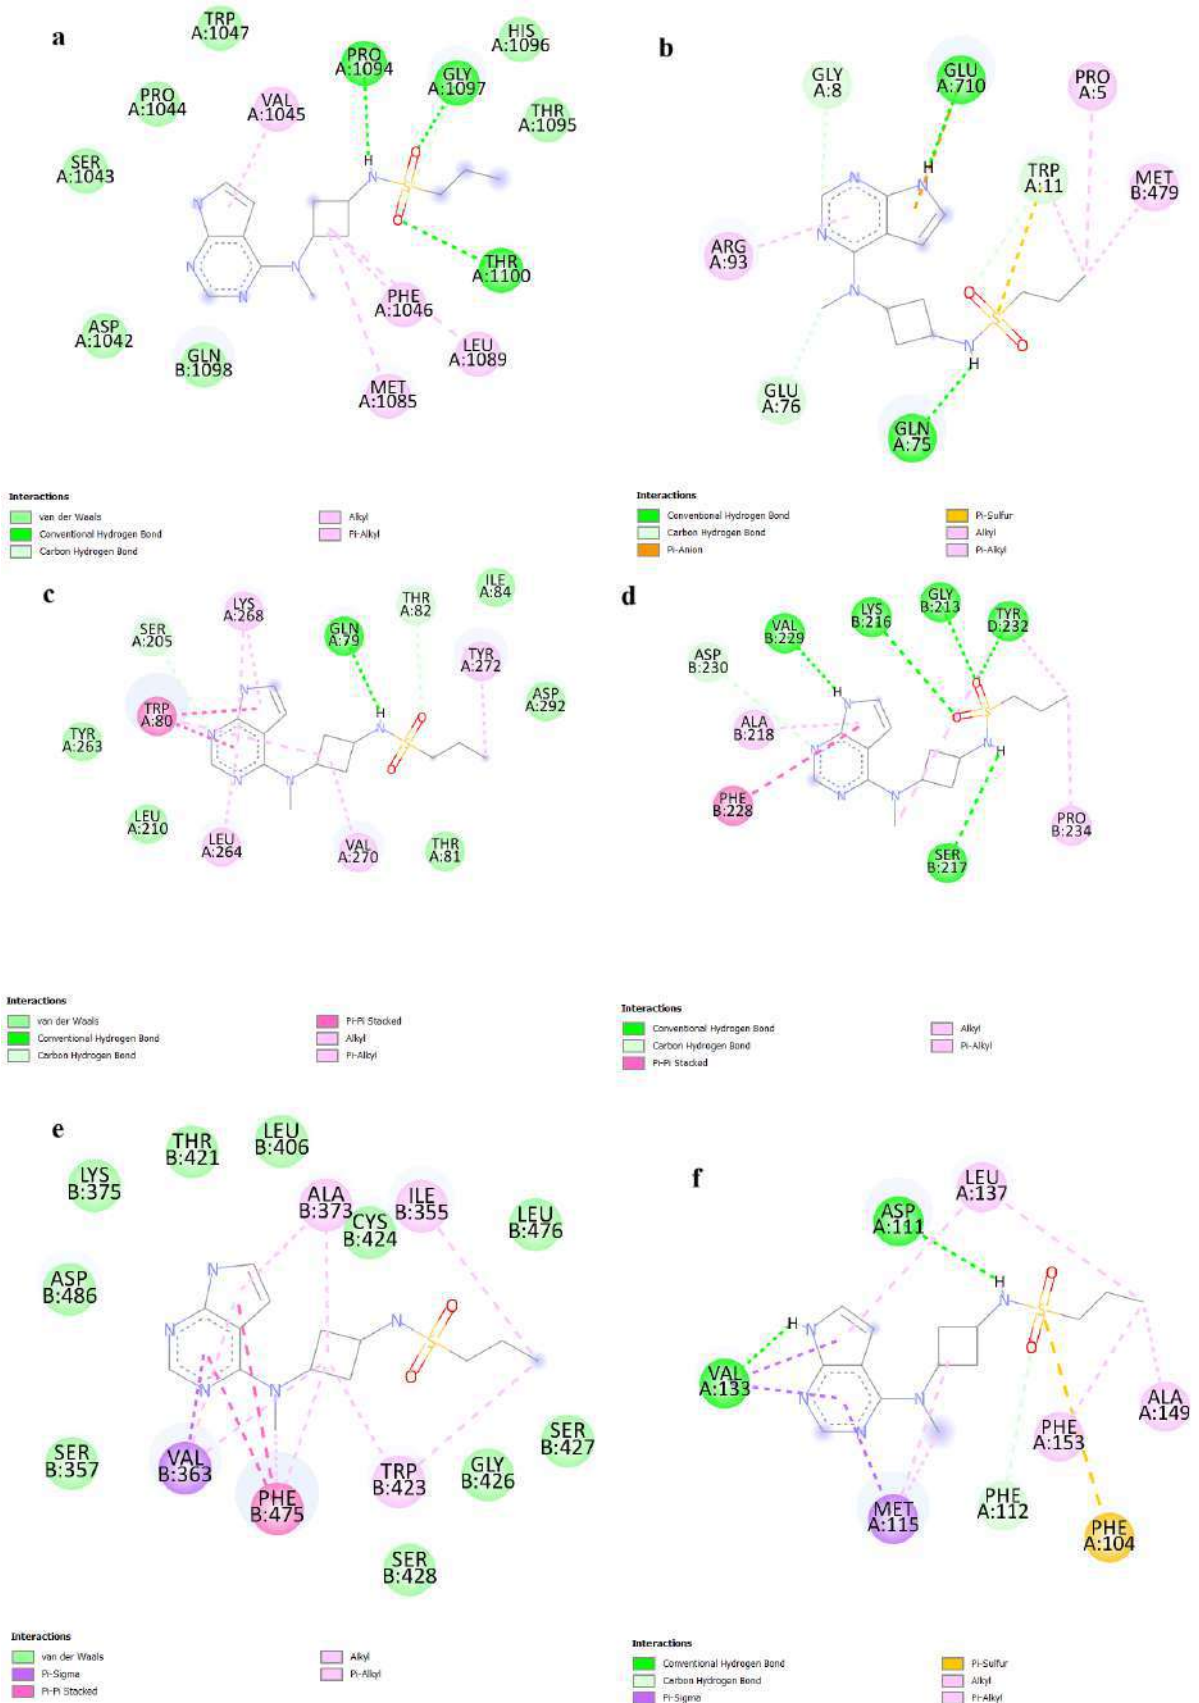

Literatürde, Ras-MAP kinaz yolunun, PI3K-AKT yolunun ve STAT sinyalinin optimal aktivasyonu için JAK fonksiyonunun gerekli olduğu gösterilmiştir [18]. Ek olarak, PI3K/Akt/mTOR, Raf/MEK/ERK ve Jak/STAT sinyal yollarının apoptozda rol oynayan Bcl-2 ailesi üyelerinin transkripsiyonel düzenlenmesine katkıda bulunduğu bildirilmiştir [19]. Bu çalışmada PI3K/Akt/mTOR ve Raf/MEK/ERK sinyal yollarının JAK ile ilişkisinden yola çıkılmış, bir JAK inhibitörü olan ve atopik dermatit tedavisi için onaylanmış bir ilaç olan Abrocitinib'in, bu sinyal yollarındaki proteinlerle etkileşiminin incelenmesi amaçlanmıştır. Bu amaçla moleküler docking uygulamaları gerçekleştirilmiş, Abrocitinib'in seçilen proteinlerle kararlı bir kompleks oluşturma potansiyeli ve ortaya çıkabilecek komplekslerin oryantasyonları incelenmiştir.

2. ARAŞTIRMA VE BULGULAR

Ligand (Abrocitinib) ve RAS (1LFD) [20], AKT-1 (3O96) [21], RAF-1 (3OMV) [22], PI3K alfa (7PG5) [23], JAK1 (6GGH) [24] ve BCL-2 (6O0K) [25] proteinlerinin üç boyutlu yapılarına PubChem [26] ve RCSB Protein Data Bank (PDB) veritabanlarından ulaşılmıştır [27]. Ligandı "pdbqt" formatına dönüştürmek amacıyla OpenBabel-2.4.1 programı kullanılmıştır [28]. Tüm moleküler docking işlemleri AutoDock versiyon 4.2.6 (Scripps Research Institute, ABD) ile gerçekleştirilmiştir [29]. Grid boyutları, proteinlerin aktif bölgelerini kapsayacak şekilde oluşturulmuş, aktif bölgelerin belirlenmesi amacıyla CASTp (Computed Atlas of Surface Topography of proteins) ve PyMol (DeLano Scientific LLC, ABD) uygulamaları kullanılmıştır [30]. Moleküler docking sonuçları 'pdbqt' formatında kaydedilmiş ve Discovery Studio Visualizer 24.1.0 (Dassault Systèmes, ABD) programı kullanılarak elde edilen veriler görselleştirilmiştir. Oluşturulan ligand-protein komplekslerinin isimleri, docking skorları, ortalama bağlanma enerjileri ve etkileşimde yer alan rezidüel Tablo 2.1'de yer almaktadır. Abrocitinib, sırasıyla -8.99, -7.78 ve -7.69 kcal/mol'lük docking skorları ile özellikle RAS (Şekil 2.1d), AKT-1 (Şekil 2.1c) ve PI3K alfa (Şekil 2.1b) proteinleriyle güçlü etkileşimler göstermiştir. Ligand ve proteinler arasında Van der Waals bağları, konvansiyonel hidrojen bağları, karbon hidrojen bağları, alkil ve çeşitli Pi etkileşimlerinin kurulduğu görülmüş ve bu etkileşimler Şekil 2.1'de görselleştirilmiştir.

Tablo 2.1 Docking sonuçları ve etkileşim gösteren rezidüer

Kompleks	Docking Skoru	Ortalama Bağlanma Enerjisi	Etkileşim Halindeki Rezidüer
RAS -Abrocitinib	-8.99	-8.40	GLY213, LYS216, SER217, ALA218, PHE228, VAL229, ASP230, TYR232, PRO234
AKT-1 - Abrocitinib	-7.78	-7.60	GLN79, TRP80, THR81, THR82, ILE84, SER205, LEU210, TYR263, LEU264, LYS268, VAL270, TYR272, ASP292
RAF-1 -Abrocitinib	-6.57	-6.57	ILE355, SER357, VAL363, ALA373, LYS375, LEU406, THR421, TRP423, CYS424, GLY426, SER427, SER428, PHE425, LEU476, ASP486
PI3K alfa - Abrocitinib	-7.69	-7.69	PRO5, GLY8, TRP11, GLN75, GLU76, ARG93, GLU710, MET479
JAK1-Abrocitinib	-6.45	-6.45	ASP1042, SER1043, PRO1044, VAL1045, PHE1046, TRP1047, MET1085, LEU1089, PRO1094, THR1095, HIS1096, GLY1097, GLN1098, THR1100
BCL-2 -Abrocitinib	-6.18	-6.15	PHE104, ASP11, PHE112, MET115, VAL133, LEU137, ALA149, PHE153

Şekil 2.1 (a) Ligand ve JAK1 proteini etkileşimleri. (b) Ligand ve PI3K alfa proteini etkileşimleri. (c) Ligand ve AKT-1 proteini etkileşimleri. (d) Ligand ve RAS proteini etkileşimleri.

etkileşimleri. (e) Ligand ve RAF-1 proteini etkileşimleri. (f) Ligand ve BCL-2 proteini etkileşimleri.

3. SONUÇ

Bu çalışmada, JAK1 inhibitörü olarak bilinen ve atopik dermatit tedavisinde kullanılan Abrocitinib'in, yumurtalık kanseri tedavisindeki potansiyeli moleküler docking çalışmalarıyla araştırılmıştır. Yapılan analizler sonucunda, ligandın altı farklı proteine olan ortalama bağlanma enerjilerinin -6.18 ile -8.54 kcal/mol aralığında değiştiği belirlenmiştir. Bu bulgular, Abrocitinib'in yumurtalık kanseriyle ilişkili Ras-MAP ve PI3K-AKT sinyal yollarında, ilgili proteinlerle güçlü etkileşimler kurabileceğini göstermektedir. Abrocitinib'in bu yollar üzerinde etki gösterme potansiyeli, özellikle PI3K/AKT yolunu hedef alan mevcut inhibitörlerle paralellikler sunmaktadır.

Docking analizi sırasında ligand ve proteinler arasında Van der Waals bağları, konvansiyonel hidrojen bağları, karbon-hidrojen bağları, alkil etkileşimleri ve Pi-etkileşimleri gibi çeşitli etkileşimler gözlemlenmiştir (Şekil 2.1). Bu bağlar, ligandın hedef proteine stabil bir şekilde bağlanabilme ve kompleks oluşturabilme kapasitesini gösteren kritik unsurlardır [31]. Hidrojen bağları, protein-ligand seçiciliğinde ve afinitesinde önemli bir rol oynarken, Pi-etkileşimleri ve Van der Waals bağları kompleksin genel stabilitesini artırmaktadır [32-34]. Bu etkileşimler, Abrocitinib'in hedef proteinlerle yüksek afinite gösterdiğini ve biyolojik süreçlerde etkili olabileceğini desteklemektedir.

Yumurtalık kanseri tedavisinde PI3K/AKT/mTOR sinyalizasyonu önemli bir hedef olup, bu yolağı hedefleyen çeşitli klinik çalışmalar devam etmektedir. Bu çalışmalarda PI3K inhibitörlerinden Alpelisib, Copanlisib ve CUDC-907 gibi ajanlar dikkat çekmektedir. Ayrıca, PI3K inhibitörlerinin mitokondriyal apoptozu artırarak pro-apoptotik BCL-2 protein dengesini desteklediği ve kanser hücrelerini kemoterapiye daha duyarlı hale getirdiği bilinmektedir [35]. Ek olarak, PI3K inhibitörlerinin BCL-2'nin ekspresyonunun düzenlenmesi yoluyla hücre sağkalımını etkileyebileceği düşünülmektedir. Özellikle, PI3K-AKT yolunun ER α üzerinden BCL-2 seviyelerini artırarak apoptozu baskıladığı gösterilmiştir [36]. PI3K inhibitörleri, yumurtalık kanseri tedavisinde umut vaat etmekle birlikte, bu inhibitörlerin toksisiteleri, hiperglisemi ve deri döküntüsü gibi ciddi yan etkileri, klinik uygulamalarda dikkate alınmalıdır [37]. AKT'yi hedef alan ilaçlar arasında ise Uprosertib, Afuresertib gibi ilaçlar bulunmaktadır. Bu ilaçların monoterapi veya kombine tedavide kullanımlarına dair klinik çalışmalar devam etmektedir. Bir dizi PI3K yolağı inhibitörü FDA (Food and Drug Administration) tarafından diğer kanser türleri için hastalarda kullanım için onaylanmış olsa da, henüz hiçbir inhibitör yumurtalık kanseri için klinik kullanıma geçmemiştir [38]. RAS/RAF/MAPK sinyal yolunu hedef alan inhibitörler arasından ise VS-6766 ve Defactinib'in aralıklı dozaj uygulamasının, tekrarlayan düşük dereceli seröz yumurtalık kanseri (LGSOC) hastalarında klinik etkinlik gösterdiği bildirilmiştir [39].

Bu çalışma, Abrocitinib'in ilgili sinyal yollarını hedef alarak terapötik bir potansiyel sunabileceğini ortaya koymaktadır. Bununla birlikte, bazı sınırlılıklar göz önünde bulundurulmalıdır. Moleküler docking, in-silico ilaç geliştirme ve ilaç yeniden konumlandırma (drug repurposing) süreçlerinin önemli bir bileşeni haline gelmiş olsa da, bu yöntemle elde edilen sonuçların geçerliliği, in vitro ve in vivo deneylerle desteklenmelidir. Ayrıca, bağlanma enerjilerinin biyolojik sistemlerdeki etkileri ve ilacın etki mekanizmaları daha ayrıntılı bir şekilde incelenmelidir. Bu sınırlamalara rağmen, bu çalışma, Abrocitinib'in yumurtalık kanseri ile ilişkili sinyal yollarındaki proteinlerle etkileşimi açısından önemli bir temel oluşturmaktadır. Gelecek çalışmalar, in vitro deneyler ve gen ekspresyon analizleri ile bu sınırlamaların aşılmasına katkıda bulunabilir. Ek olarak, Abrocitinib'in yumurtalık kanseri tedavisinde kullanılan mevcut kemoterapötik ajanlarla olası sinerjik etkilerinin değerlendirilmesi, ilacın tedavi protokollerindeki olası rolünün daha iyi anlaşılmasına katkı sağlayabilir.

PLASTIĞIN KÜÇÜK FORMU VE BÜYÜK SORUNU: MİKROPLASTİKLER VE EKOSİSTEM TAHRİBATI

SMALL FORM AND BIG PROBLEM OF PLASTIC: MICROPLASTICS AND ECOSYSTEM DAMAGE

Aysun ALTİKAT

Doç. Dr. Iğdır Üniversitesi Mühendislik Fakültesi İnşaat Mühendisliği Bölümü

ÖZET

Mikroplastikler, plastik materyallerin 5 mm'den küçük boyutlara ayrışmasıyla oluşan ve çevresel sürdürülebilirlik ile ekosistem sağlığı açısından ciddi tehdit oluşturan bir kirlilik unsurudur. Plastik atıkların doğal süreçlerle veya insan faaliyetleriyle ufalanarak mikro boyutlara ayrışması, mikroplastiklerin yayılımında başlıca rol oynamaktadır. Bu partiküller, karasal, tatlı su ve deniz ekosistemlerinde yaygın olarak bulunmakta ve toksik etkiler yaratarak biyolojik çeşitliliği tehdit etmektedir. Mikroplastik türleri arasında mikrodenez parçacıkları, mikrofiberler, mikroboncuklar ve mikrofragmanlar bulunmaktadır. Bu türler genellikle plastik atıkların parçalanmasından, kozmetik ve tekstil endüstrilerinden kaynaklanmakta, rüzgâr, yağmur suyu ve atık su arıtma tesislerinden çıkan deşarjlarla çevreye yayılmaktadır.

Mikroplastiklerin ekosistemler üzerindeki etkileri, özellikle besin zincirine dahil olmalarıyla daha belirgin hale gelir. Mikroplastikler, balıklar, kabuklular ve diğer sucul organizmalar tarafından kontamine besinler tüketildiğinde bünyeye alınır ve bu durum toksik kimyasalların biyolojik birikimine yol açar. Mikroplastiklerin besinlerle alınması, organizmaların metabolizmasında, üreme kapasitelerinde ve davranışlarında ciddi bozulmalara neden olur. Ayrıca mikroplastikler, ağır metaller, pestisitler ve diğer kirleticileri adsorbe ederek çevresel riskleri artırmaktadır. Karasal ekosistemlerde ise toprak mikroorganizmalarının işlevlerini bozarak toprak kalitesini düşürmekte, bu durum bitki büyümesini ve tarımsal verimliliği olumsuz yönde etkilemektedir. Bunun yanı sıra, mikroplastiklerin su döngüsündeki varlığı, su kalitesini bozarak insan sağlığına yönelik riskleri de beraberinde getirmektedir.

Sonuç olarak, mikroplastik kirliliği, ekosistemlerin sürdürülebilir işleyişini ciddi şekilde tehdit eden küresel bir çevresel sorun haline gelmiştir. Bu sorunun çözümü için plastik üretiminin ve kullanımının sınırlandırılması, geri dönüşüm süreçlerinin iyileştirilmesi ve etkin çevre politikalarının uygulanması gerekmektedir. Mikroplastiklerin çevresel ve biyolojik etkilerinin daha iyi anlaşılabilmesi için kapsamlı, disiplinler arası araştırmaların gerçekleştirilmesi büyük önem taşımaktadır. Bu çalışma, mikroplastiklerin ekosistemler üzerindeki etkilerini değerlendirerek çözüm önerilerini ortaya koymaktadır.

Anahtar Kelimeler: Mikroplastik kirliliği, biyolojik birikim, ekosistem sağlığı, sucul organizmalar, toprak kirliliği, hava kirliliği

ABSTRACT

Microplastics are a pollution element formed by the decomposition of plastic materials into sizes smaller than 5 mm and pose a serious threat to environmental sustainability and ecosystem health. The disintegration of plastic waste into micro-sized pieces by natural processes or human activities plays a major role in the spread of microplastics. These particles are widely found in terrestrial, freshwater and marine ecosystems and threaten biodiversity by creating toxic effects. Microplastic types include micromarine particles,

microfibers, microbeads and microfragments. These types generally originate from the decomposition of plastic waste, the cosmetics and textile industries, and are spread into the environment through wind, rainwater and discharges from wastewater treatment plants.

The effects of microplastics on ecosystems become more apparent, especially when they are included in the food chain. Microplastics are taken into the body when fish, crustaceans and other aquatic organisms consume contaminated food, and this leads to the bioaccumulation of toxic chemicals. Ingestion of microplastics with food causes serious disruptions in the metabolism, reproductive capacity and behavior of organisms. In addition, microplastics increase environmental risks by adsorbing heavy metals, pesticides and other pollutants. In terrestrial ecosystems, they disrupt the functions of soil microorganisms and reduce soil quality, which negatively affects plant growth and agricultural productivity. In addition, the presence of microplastics in the water cycle disrupts water quality and poses risks to human health.

As a result, microplastic pollution has become a global environmental problem that seriously threatens the sustainable functioning of ecosystems. In order to solve this problem, it is necessary to limit plastic production and use, improve recycling processes and implement effective environmental policies. It is of great importance to conduct comprehensive, interdisciplinary research to better understand the environmental and biological effects of microplastics. This study evaluates the effects of microplastics on ecosystems and presents solution proposals.

Keywords: Microplastic pollution, bioaccumulation, ecosystem health, aquatic organisms, soil pollution, air pollution

1. GİRİŞ

Özellikle 1950'lerdeki endüstriyel seri üretimin başlangıcından bu yana mikroplastikler, çevre kirliliğinin önemli bir bileşeni haline gelmiş durumdadır. Bu nedenle, bu kirliliğin ekosistemler üzerindeki etkileri ihmal edilmemelidir. Mikroplastikler, genellikle 5 milimetrenin altındaki boyuta sahip plastik parçacıklarıdır (Grechi et al., 2024). Bu parçacıklar, büyük oranda çevreye atılan büyük plastiklerin parçalanmasıyla ortaya çıkar (Ermis et al., 2024). Farklı mikroplastik türleri arasında mikrodeniz parçacıkları, mikrofiberler, mikroboncuklar ve mikrofragmanlar bulunmaktadır (Chen et al., 2024). Bu farklı türler, çevreye farklı şekillerde yayılıp ekosistemlere etki edebilmektedir.

Bu çalışmanın temel amacı, mikroplastiklerin çevreye dahil olma mekanizmalarını belirlemek ve ekosistemler üzerindeki etkilerini ortaya koymaktır. Bu etkiler, özellikle bitki ve hayvan popülasyonları üzerinde olumsuz sonuçlar doğurabilir ve bu da ekosistem dengesini bozabilir. Çalışma sonucunda mikroplastik kirliliğini önleme amacıyla ortaya konan öneriler çevre politikaları için bir kaynak oluşturacaktır. Mikroplastik kirliliğiyle ilgili farkındalık yaratma ve çevreyi koruma çabalarını destekleme amacı güden bu çalışma, mikroplastik kirliliği ile ilgilenen araştırmacılara da perspektif sunmayı amaçlamaktadır.

2. MİKROPLASTİKLER: TANIMI, TÜRLERİ VE KAYNAKLARI

Mikroplastik, insan gözüyle görülemeyecek kadar küçük plastik parçacıklarını ifade eder (Jaeger et al., 2024). Genellikle su, toprak ve hava gibi çevresel ortamlarda bulunur (Wang et al., 2024). Bu parçacıklar, plastik ambalajların parçalanması, sentetik tekstil ürünlerin aşınması ve endüstriyel atıkların bozulması gibi çeşitli yollarla ortaya çıkar (Gliaudelytė et al., 2024; Wohlleben et al., 2024; Kumar et al., 2024). Mikroplastik kirliliği, çevrenin önemli bir sorunu olmasının yanı sıra, ekosistemler ve insan sağlığı üzerinde de ciddi etkilere sahiptir.

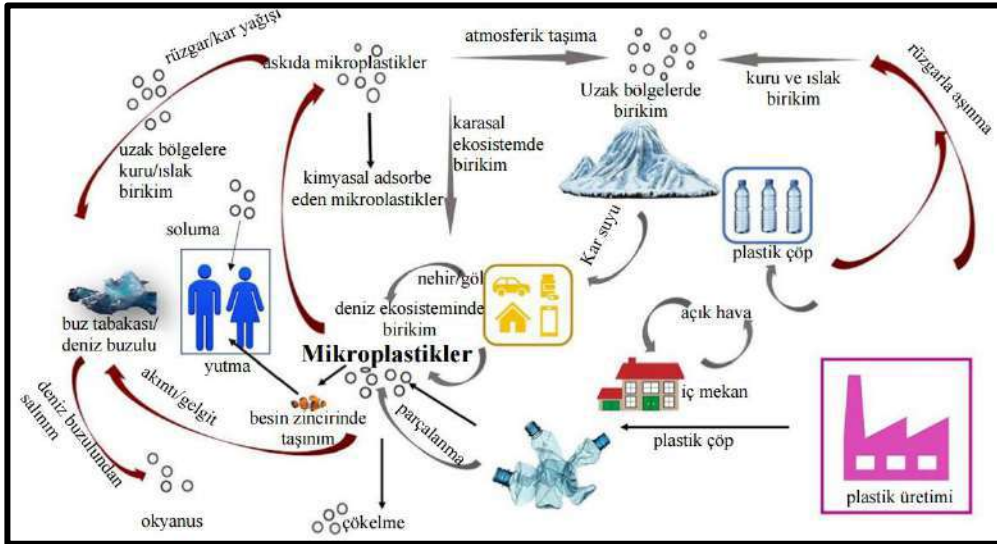

Tablo 1. Boyutlarına göre plastikler (Dhaka et al., 2022)

Plastik Türü	Boyut Aralığı	Özellikleri
Makroplastik	>20 mm	Çıplak gözle görülebilen ve çevreden toplanarak kolaylıkla uzaklaştırılabilen plastikler
Mezoplastik	5-20 mm	
Mikroplastik	1000 nm-5 mm	Nispeten gözle görünür, tespit edilebilmesi için ileri tekniklere ihtiyaç vardır, çevreden uzaklaştırılması neredeyse olanaksızdır.
Nanoplastik	<1000 nm	Hiçbir suretle gözle görünmez, çevreden uzaklaştırılmaz ve tespit edilmesi çok güçtür.

Farklı mikroplastik türleri, büyük ölçüde kaynaklarına bağlı olarak farklı özelliklere sahiptir. Mikrodeniz parçacıkları, genellikle kozmetik ürünler ve temizlik malzemelerinde bulunan yuvarlak plastik partiküllerdir (Gupta et al., 2024). Mikrofiberler ise sentetik tekstil ürünlerinin yıkanması sırasında atılan küçük parçacıklardır (Mishra et al., 2020). Mikroboncuklar, genellikle temizlik ürünleri ve boya gibi ürünlerde bulunan küresel plastik partiküllerdir (Miraj et al., 2021). Mikrofragmanlar ise büyük plastiklerin parçalanmasıyla oluşan düzensiz şekilli parçalardır (Shi et al., 2023).

3. MİKROPLASTİKLERİN ÇEVREYE YAYILMASI

Mikroplastikler, su ve toprak sistemlerinde farklı yollarla yayılabilir. Su sistemlerinde, bu yayılım genellikle atık su arıtma tesisleri veya tarımsal sulama gibi aktivitelerle tetiklenir (Lwanga et al., 2022). Mikroplastikler, nehir ve akarsular aracılığıyla denizlere ulaşırken sucul organizmalara da bulaşabilir (Vivekanand et al., 2021). Toprak sistemlerinde ise mikroplastikler, tarım faaliyetleri ve plastik atıkların çözünmesiyle toprağa karışır (Rehm et al., 2021). Bitkilerin köklerinden alınarak bitki tüketimi yoluyla insanlara ve diğer hayvanlara geçebilir (Ebere et al., 2019). Bu durum, mikroplastığın çevre ve ekosistemler üzerindeki potansiyel etkilerini araştırmak için önemli bir konudur.

Şekil 1. Mikroplastiklerin çevredeki üretim, taşınım, dağılım ve birikimini gösteren şematik model (Gupta et al.'dan (2023) uyarlanmıştır)

Mikroplastikler, çevreye birçok farklı yolla yayılmakta ve geniş bir alana dağılarak ekosistemleri etkilemektedir (Ajith et al., 2020). Mikroplastiklerin çevreye yayılmasının temel kaynakları, kullanım alanlarına ve plastiklerin özelliklerine göre ikiye ayrılabilir:

- **Birincil Mikroplastikler:** Doğrudan üretim esnasında 5 mm'den küçük boyutlarda tasarlanan mikroplastiklerdir (Lehtiniemi et al., 2018). Son yıllarda özellikle kozmetik ürünlerde (yüz temizleme jellerindeki mikro boncuklar vb) kullanılan mikroplastikler yerlerini suda çözünen polimerlere bırakmış ve çok da gerçekçi olmayacak bir dille “microplastic-free/mikroplastik içermez” etiketiyle piyasada yerini almıştır (Langlet et al. 2024). Diğer birincil mikroplastik kaynakları ise endüstriyel ürünler (plastik peletler ve granüller gibi) ve sentetik tekstillerden kaynaklanan mikrofiberlerdir (Acharya et al., 2021).
- **İkincil Mikroplastikler:** Daha büyük plastiklerin fiziksel, kimyasal ve biyolojik süreçlerle parçalanması sonucu oluşur. Ambalaj atıkları, plastik torbalar, şişeler, balık ağları, lastik aşınması sonucu çevreye yayılan parçacıklar ikincil mikroplastiklerdir (Andrady, 2017).

Mikroplastikler karasal ortamda; tarımsal faaliyetler ve toprak kullanımı ile, atık yönetimi sırasında veya sanayi faaliyetleri ile yayılım gösterirler (Surendran et al., 2023). Tarımsal faaliyetler sırasında özellikle arıtma çamurlarının gübrelemede kullanımı ya da plastik malç örtülerinin bozulması ile gerçekleşir (Hooge et al., 2023). Atıkların arıtılması, depolanması ya da uzaklaştırılmasını ifade eden atık yönetiminde ise katı atık deponi sahalarında sızıntı sularının toprağa karışması veya plastik atıkların toprağa gömülmesi gibi yanlış atık yönetimi uygulamaları ile karasal ortama yayılım gerçekleşir (Wojnowska-Baryła et al., 2022). Diğer yandan doğrudan plastik üretiminde ortaya çıkan küçük partiküller de karasal yayılıma sebep olabilir.

Mikroplastikler su kaynaklarına evsel ve endüstriyel atıkların arıtma tesislerinden yeterince giderilmeden deşarj edilmesi ile, karadaki plastiklerin yağmur suyu ve akıntılarla sürüklenmesi sonucu veya denizcilik/balıkçılık faaliyetlerinde kullanılan plastiklerin ya da eski balık ağlarının sulara atılması sonucu karışır (Xu et al., 2021; Belioka and Achilias, 2024; Kumartasli and Avinc, 2020). Ayrıca deniz ve okyanus akıntılarıyla binlerce kilometre uzaklığa ulaşabilir (Hale et al., 2020). Düşük yoğunluklu mikroplastikler su yüzeyinde taşınırken, yoğun olanlar okyanus tabanında birikerek habitatları etkiler (Kane and Clare, 2019).

Mikroplastikler atmosferde de buldukları alandan çok uzaklara taşınabilmektedir. Bu durum özellikle hafif ve küçük çaplı olmalarından kaynaklanmaktadır (Zhang et al. 2019). Rüzgar mikroparçacık yada mikro fiberleri sürükleyebilmekte, mikroplastikler ayrıca toprak yüzeyinden havalanarak aerosollerle taşınabilmektedir (Belioka and Achilias, 2024). Mikroplastikler yalnızca yukarıda bahsedilen yollarla değil ayrıca biyolojik yollarla da taşınabilmektedir. Biyolojik taşınımında mikroplastikler organizmalar tarafından tüketildikten sonra besin zinciri boyunca taşınabilir. Mikroplastikleri tüketen hayvanların yer değiştirmesiyle farklı habitatlara taşınır (Provencher et al., 2022).

Mikroplastiklerin çevreye yayılmasında rüzgar hızı, yağış miktarı, su akışı gibi çevresel faktörlerin yanı sıra; parçacıkların boyutu, yoğunluğu, şekli ve yüzey yapısı gibi mikroplastik özellikleri de etkilidir (Kumar et al., 2021). İnsan nüfus ve faaliyet yoğunluğu da yayılımı etkilemektedir (Wu et al., 2022). Mikroplastikler, yukarıdaki mekanizmalar aracılığıyla kutup bölgelerinden okyanusların derinliklerine kadar dünya genelinde geniş bir alana yayılabilir (Mishra et al., 2021). Havadaki mikroplastikler buzullarda bile bulunmuş, bu da çevresel yayılımın boyutunu gözler önüne sermiştir (Hale et al., 2020). Mikroplastiklerin çevreye bu şekilde yayılması, kontrolsüz kirlilik yaratmakta ve uzun vadeli ekolojik zararlar oluşturmaktadır. Bu nedenle, yayılma mekanizmalarının iyi anlaşılması, bu kirliliği önlemede stratejik adımlar atılması için kritik öneme sahiptir.

4. MİKROPLASTİKLERİN EKOSİSTEMLER ÜZERİNE ETKİLERİ

Ekosistemlerde mikroplastiklerin etkileri incelendiğinde, bu kirleticilerin bitki ve hayvan yaşamı üzerinde ciddi sonuçları olduğu görülmektedir. Mikroplastikler toprakta birikerek bitkilerin kök ve yapraklarına zarar verir, fotosentez sürecini engeller ve besin alımını etkileyebilir (Azeem et al., 2021). Ayrıca, su sistemlerinde kirlilik yaratarak sucul bitkilerin büyümesini ve beslenmesini olumsuz etkileyebilir. Bu durum, ekosistemde türler arasındaki dengenin bozulmasına ve biyoçeşitliliğin azalmasına neden olabilir, bu da ekosistemin sağlığını tehdit eder (Ge et al., 2021).

Mikroplastiklerin kök sistemine sızarak bitkilerin besin alımını engelleyebildiği ve toprakta birikerek bitki büyümesini etkileyebildiği bilinmektedir (Huang et al., 2022). Ayrıca, mikroplastikler bitkilerin fotosentez sürecini de olumsuz etkileyebilir, bu da bitkilerin büyüme ve gelişmelerini engelleyebilir (Yin et al., 2021). Bu durum, tarım alanlarında verim kaybına ve doğal bitki örtüsünün zarar görmesine neden olabilir. Diğer yandan sucul hayvanların mikroplastikleri besin olarak alabildiği ve bu durumun sindirim sistemi üzerinde ciddi etkiler yaratabildiği bilinmektedir (Egbeocha et al., 2018). Ayrıca, karasal hayvanların yaşam alanlarında mikroplastiklere maruz kalması, solunum yoluyla zararlı kimyasalları solunmalarına neden olabilir. Bu durum, hayvanların üreme, beslenme ve davranış kalıplarını olumsuz etkileyebilir ve nihayetinde türler arasındaki dengenin bozulmasına yol açabilir (Enyoh et al., 2020).

Mikroplastiklerin biyolojik etkileşimleri, genellikle biyoçeşitlilik ve ekosistem dengesi üzerinde odaklanır. Mikroplastik partiküllerinin ekosistemlerde mevcut olan organizmalarla etkileşimleri, sucul ve karasal habitatlarda farklı sonuçlara neden olabilir (de Souza Machado et al., 2018). Bu etkileşimler, mikroplastik kirliliğinin ekosistemdeki türler arasındaki dengeyi ne şekilde etkilediği ve biyoçeşitliliği nasıl etkilediği konularında detaylı araştırmalar gerektirmektedir. Ayrıca mikroplastiklerin ekosistemlerdeki döngülerinde nasıl bir rol üstlendiği ve bu döngülerin ekosistem dengesi üzerindeki etkileri de incelenmelidir.

Mikroplastiklerin insan sağlığı üzerindeki etkileri genellikle gıda zinciri aracılığıyla ortaya çıkar (Al Mamun et al., 2023). İnsanların günlük hayatlarında maruz kaldıkları ve tükettikleri gıda maddeleri mikroplastiklerin vücuda alınmasına neden olur. Deniz suyu ve tatlı su kaynaklarında bulunan mikroplastikler, balıklar, midyeler, karidesler ve diğer deniz canlıları tarafından emilerek bu canlıların vücutu içerisinde birikir (Al-Thawadi, 2020). Sonuç olarak, insanlar bu deniz ürünlerini tükettiklerinde mikroplastikleri de yanlarında taşırlar. Bu durum, insanların mikroplastiklere maruz kalma durumunu artırarak potansiyel sağlık risklerini artırabilir (Ageel et al., 2022). Gıda zinciri ve beslenme perspektifinden mikroplastik kirliliğinin önlenmesi ve azaltılması için bilimsel araştırmaların ve etkili politikaların hayata geçirilmesi gereklidir.

5. MİKROPLASTİK KİRLİLİĞİNİN ÖNLENMESİ VE AZALTILMASI

Mikroplastik kirliliğinin önlenmesi ve azaltılması için çeşitli önlemler alınabilir. Bu kapsamda, plastik üreticilerine ve tüketicilere yönelik bilinçlendirme kampanyaları düzenlenerek plastik tüketiminin azaltılması hedeflenebilir. Ayrıca, geri dönüşüm politikalarının ve tesislerinin geliştirilmesiyle plastik atıkların tekrar kullanıma kazandırılması sağlanabilir. Endüstriyel atık su arıtma tesislerinin etkinliğinin artırılması ve mikroplastik partiküllerinin arıtılmasına yönelik teknolojik gelişmelerin desteklenmesi de önemli adımlardır.

Mikroplastik kirliliğinin önlenmesinde yasal düzenlemeler ve politikalar da oldukça önemlidir. Bu amaçla mikroplastik içeren ürünlerin üretimi ve kullanımıyla ilgili kısıtlamalar getirilmesi gerekmektedir. Ayrıca, atık yönetimi alanında daha sıkı

düzenlemeler ve denetimler yapılmalı, mikroplastik atıkların çevreye bırakılmasının önüne geçilmelidir. Bunun yanı sıra, geri dönüşüm ve yeniden kullanım teşvik edici politikaların oluşturulması da mikroplastik kirliliğinin azaltılmasında etkili olacaktır.

6. SONUÇ VE ÖNERİLER

Mikroplastiklerin ekosistemler üzerindeki etkileri incelendiğinde, bu kirliliğin önemli bir çevresel sorun olduğu açıkça görülmektedir. Bu nedenle, mikroplastik kirliliğinin azaltılması ve önlenmesi için daha fazla araştırma yapılması gerekmektedir. Ayrıca, mikroplastiklerin çevreye ve insan sağlığına olan etkilerinin daha iyi anlaşılması için interdisipliner yaklaşımların benimsenmesi önerilmektedir. Sonuç olarak, bu alandaki araştırmaların ve çalışmaların artırılması, mikroplastik kirliliği konusunda alınacak tedbirlerin daha etkili olmasını sağlayacaktır.

Mikroplastiklerin geleceğe yönelik araştırma öncelikleri belirlenirken, öncelikle bu alandaki bilgi eksikliklerinin giderilmesi ve temel veri tabanlarının oluşturulması gerekmektedir. Ayrıca, mikroplastiklerin ekosistemlerdeki etkilerini daha iyi anlamak için uzun vadeli izleme çalışmaları ve saha araştırmalarının yapılması önemlidir. Bununla birlikte, mikroplastik kirliliğinin azaltılması ve önlenmesi için etkili politikalar geliştirilmesi amacıyla sosyal, ekonomik ve çevresel faktörlerin de dikkate alındığı bütüncül bir yaklaşım benimsenmelidir.

SUPER-TWISTING SLIDING MODE-BASED FAULT TOLERANCE IN PMSM CONTROL SYSTEMS

Ayyoub Zeglache

Dept. Electrical engineering in Faculty of Technology, University of M'sila, Algeria

Abdelmoumin Ouali

Dept. Electrical engineering / LI3CUB Laboratory, University of Biskra, Algeria

ABSTRACT

This study presents an active fault-tolerant control (FTC) strategy for permanent magnet synchronous motors (PMSMs), designed to ensure robust performance under both healthy and faulty conditions. The proposed approach combines a second-order sliding mode controller (SOSMC) with a second-order sliding mode observer (SOSMO), leveraging the benefits of super-twisting sliding mode techniques for control and observation.

Under healthy conditions, the SOSMC is integrated with a field-oriented control (FOC) framework to improve the tracking accuracy of speed and currents. This design ensures robust rejection of disturbances, including load torque variations, parameter uncertainties, and unmodeled dynamics, contributing to stable and precise operation.

When faults occur, such as phase-to-phase short circuits, demagnetization, or sensor failures, the SOSMC and SOSMO work together to estimate and reconstruct control laws, enabling effective fault compensation. The observer provides accurate fault reconstruction, ensuring that control performance is maintained despite the presence of faults.

The effectiveness of the proposed FTC strategy is validated through extensive simulations conducted in a processor-in-the-loop (PIL) environment using MATLAB/Simulink software. Results demonstrate that the combination of SOSMC and SOSMO successfully compensates for various types of faults, maintaining performance consistency comparable to healthy operating conditions.

This study highlights the potential of sliding mode techniques in developing robust and reliable control solutions for PMSMs, paving the way for enhanced fault tolerance in industrial and automotive applications.

Keywords: Fault-tolerant control, Permanent magnet synchronous motor, Field-oriented control, Super-twisting sliding mode, Sliding mode control, Sliding mode observer

1 Introduction

Permanent Magnet Synchronous Motors (PMSMs) are extensively used in applications such as electric vehicles, robotics, and marine systems due to their compact size, lightweight design, and high efficiency [1–3]. Despite these advantages, PMSMs are susceptible to operational challenges, including unexpected shutdowns and malfunctions caused by issues like eccentricity, demagnetization, and stator faults [4]. Among these, short-circuit faults in stator windings are the most common due to the significant voltage and thermal stress experienced by the stator coils [5,6]. To enhance reliability and extend the operational lifespan of PMSMs, fault detection and mitigation strategies are essential [7–12].

Field-Oriented Control (FOC) is a popular technique for PMSM control, offering advantages such as smooth starting, reduced torque ripple, and effective dynamic performance [13,14]. However, managing PMSMs remains challenging due to their nonlinear dynamics and parameter sensitivity to temperature changes [15,16]. Additionally, in many industrial settings, the load torque is not directly measurable, necessitating robust nonlinear control approaches such as Sliding Mode Control (SMC).

Traditional SMC is renowned for its robustness to uncertainties and disturbances but is hindered by chattering, an undesirable side effect of its switching nature. Various approaches have been proposed to address this issue, including Reaching Law SMC [17], Super-Twisting SMC [18], Terminal SMC [19], Adaptive SMC [20], and Event-Triggered SMC [21]. Among these, Super-Twisting SMC (SOSMC), a second-order sliding mode control method, effectively mitigates chattering while maintaining the robustness of traditional SMC [22,23].

Sliding mode observers (SMOs) have been widely used in applications such as system state estimation, fault reconstruction, and load torque identification (LTID). Fault reconstruction plays a crucial role in enabling fault-tolerant control (FTC) strategies. For instance, a robust SMO for PMSM speed and position estimation was developed in [24], showing enhanced performance over conventional observers. Similarly, the use of SMOs for load torque identification has demonstrated improved tracking and estimation in dynamic conditions [25]. Observer-based FTC strategies for PMSMs have also been explored to effectively address faults [26–28].

This paper aims to build on the existing research by presenting the following key contributions:

- Compared to [26], the proposed FTC strategy employs a second-order sliding mode for both control and observation, offering better resilience to external disturbances while reducing chattering.
- In contrast to [27], which used an improved SMO with equivalent input disturbance (EID) but neglected external load disturbances and uncertainties, this work addresses these limitations.
- While [28] designed an active FTC for fault detection and localization in the PMSM using a high-order SMO in the $\alpha\beta$ -reference frame, this paper simplifies the design by adopting a dq-reference frame-based SMO. This choice leverages the DC nature of voltage and current signals in this frame for greater efficiency.

The remainder of the paper is organized as follows: Section 2 describes the PMSM model, emphasizing the impact of faults and disturbances. Section 3 outlines the design of the SOSMC, including its stability analysis using Lyapunov theory. Section 4 presents the SOSMO design with a corresponding stability evaluation. Section 5 details the proposed FTC strategy for fault reconstruction. Section 6 provides simulation results under various conditions. Finally, the main conclusions are summarized in Section 7.

2 PMSM Modeling

The PMSM is a well-known dynamic model that can be represented in the dq -frame through the equations provided below.

$$\begin{cases} \frac{d\Omega}{dt} = c_1 i_q + c_2 i_d i_q - \alpha_1 \Omega - \alpha_2 T_r \\ \frac{di_d}{dt} = c_3 i_d + c_4 i_q \Omega + \beta_1 v_d \\ \frac{di_q}{dt} = c_5 i_q + c_6 \Omega i_d + c_7 \Omega + \beta_2 v_q \end{cases} \quad (1)$$

The equation for the torque generated by the PMSM is expressed as:

$$T_{em} = \frac{3}{2} n_p \left[(L_d - L_q) i_d i_q + i_q \phi_f \right] \quad (2)$$

The expressions of the components of the PMSM model are defined by the machine parameters as follows:

$$c_1 = \frac{3n_p \phi_f}{2J}; c_2 = \frac{3n_p}{2J}(L_d - L_q); c_3 = -\frac{R_s}{L_d}; c_4 = \frac{L_q n_p}{L_d}; c_5 = -\frac{R_s}{L_q}; c_6 = -\frac{L_d n_p}{L_q}; c_7 = -\frac{\phi_f n_p}{L_q}; \alpha_1 = \frac{f}{J}$$

$$; \alpha_2 = \frac{1}{J}; \beta_1 = \frac{1}{L_d}; \beta_2 = \frac{1}{L_q}$$

where v_d, v_q, i_d and i_q are the stator voltages and currents of the dq -frame, respectively; L_d and L_q denote the inductances of the dq -frame; R_s represents the stator resistance; ϕ_f is the rotor flux; Ω signifies the rotor mechanical speed; J is the moment of inertia; f represents the friction coefficient; T_r denotes the load torque, and n_p represents the number of pole pairs.

2.1 PMSM model in presence of disturbances

The PMSM model (1) can be reformulated under conditions of uncertain parameter perturbations and external disturbances:

$$\begin{cases} \frac{d\Omega}{dt} = c_1 i_q + c_2 i_d i_q - \alpha_1 \Omega + d_\Omega \\ \frac{di_d}{dt} = c_3 i_d + c_4 i_q \Omega + \beta_1 v_d + d_{i_d} \\ \frac{di_q}{dt} = c_5 i_q + c_6 \Omega i_d + c_7 \Omega + \beta_2 v_q + d_{i_q} \end{cases} \quad (3)$$

where d_Ω, d_{i_d} and d_{i_q} are the bounded lump perturbations given as follow:

$$\begin{bmatrix} d_\Omega \\ d_{i_d} \\ d_{i_q} \end{bmatrix} = \begin{bmatrix} \Delta c_1 i_q - \Delta \alpha_1 \Omega - (\alpha_2 - \Delta \alpha_2)(T_r + \Delta T_r) \\ \Delta c_3 i_d + \Delta c_4 i_q \Omega + \Delta \beta_1 v_d \\ \Delta c_5 i_q + \Delta c_6 \Omega i_d + \Delta c_7 \Omega + \Delta \beta_2 v_q \end{bmatrix}$$

the uncertainty components are described by:

$$\begin{cases} \Delta c_1 = \Delta\left(\frac{\phi_f}{J}\right) \frac{3n_p}{2}; \Delta c_3 = -\Delta\left(\frac{R_s}{L_d}\right); \Delta c_4 = \Delta\left(\frac{L_q}{L_d}\right) n_p \\ \Delta c_5 = -\Delta\left(\frac{R_s}{L_q}\right); \Delta c_6 = -\Delta\left(\frac{L_d}{L_q}\right) n_p; \Delta c_7 = -\Delta\left(\frac{\phi_f}{L_q}\right) n_p \\ \Delta \alpha_1 = \Delta\left(\frac{f}{J}\right); \Delta \alpha_2 = \Delta\left(\frac{1}{J}\right); \Delta \beta_1 = \Delta\left(\frac{1}{L_d}\right); \Delta \beta_2 = \Delta\left(\frac{1}{L_q}\right) \end{cases}$$

2.2 PMSM model in presence of faults

A PMSM becomes asymmetric due to electrical and magnetic faults. This produces harmonics in the spectrum of stator current [29]. As stated in [30], incorporating a sinusoidal component into the dq -frame currents can represent these faults.

$$\begin{cases} i_d \rightarrow i_d + \sum_i^{n_f} A_i \sin(\omega_i t + \theta_i) \\ i_q \rightarrow i_q + \sum_i^{n_f} A_i \cos(\omega_i t + \theta_i) \\ \omega_i = 2\pi \cdot (F_{fault} + F_s) \\ i = 1, \dots, n_f \end{cases} \quad (4)$$

where n_f represents the number of harmonics produced by the faults, A_i and θ_i are the unknown amplitude and phase parameters that describe the initial condition of the fault. F_s is the fundamental frequency, and F_{fault} is the characteristic frequency of the fault. The fault frequency can be easily detected and analyzed using current signature analysis (MCSA) [31].

The sideband components for different fault types in PMSM have the same frequency spectrum defined as [32]:

$$F_{fault} = \left[1 \pm \frac{k}{n_p} \right] F_s \quad (5)$$

where k is an integer constant number.

The following exosystem is able to model the faults depicted below:

$$\dot{z} = S \cdot z \quad (6)$$

with

$$\begin{cases} S = \text{diag}(S_i) \\ S_i = \begin{bmatrix} 0 & \omega_i \\ -\omega_i & 0 \end{bmatrix} \text{ with } \begin{cases} \text{size}(S) = 2n_f \times 2n_f \\ \text{size}(z) = 2n_f \times 1 \end{cases} \\ i = 1, 2, \dots, n_f \end{cases}$$

The dq-frame currents described in (4) with perturbing terms can be rewritten as follows:

$$\begin{cases} i_d \rightarrow i_d + Q_d Z \\ i_q \rightarrow i_q + Q_q Z \end{cases} \quad (7)$$

with

$$\begin{cases} Q_d = [1 & 0 & 1 & \dots & 1 & 0] \\ Q_q = [0 & 1 & 0 & \dots & 0 & 1] \end{cases}$$

Using the ecosystem (6), the derivatives of currents can be determined as follows:

$$\begin{cases} \dot{i}_d \rightarrow \dot{i}_d + Q_d \cdot S \cdot Z \\ \dot{i}_q \rightarrow \dot{i}_q + Q_q \cdot S \cdot Z \end{cases} \quad (8)$$

Substituting (7) and (8) into (1) yields the dq-frame currents of the PMSM model in the presence of faults, which are:

$$\begin{cases} \frac{di_d}{dt} = c_3 i_d + c_4 i_q \Omega + \beta_1 v_d + f_d \\ \frac{di_q}{dt} = c_5 i_q + c_6 \Omega i_d + c_7 \Omega + \beta_2 v_q + f_q \end{cases} \quad (9)$$

with

$$\begin{pmatrix} f_d \\ f_q \end{pmatrix} = \begin{pmatrix} c_3 Q_d z + c_4 Q_q \Omega z + Q_d S z \\ c_6 Q_d \Omega z + c_5 Q_q z + Q_q S z \end{pmatrix} = \Gamma z$$

where

$$\Gamma = \begin{pmatrix} \Gamma_d \\ \Gamma_q \end{pmatrix} = \begin{pmatrix} c_3 Q_d + c_4 Q_q \Omega + Q_d S \\ c_6 Q_d \Omega + c_5 Q_q + Q_q S \end{pmatrix}$$

3 Second-Order Sliding Mode Control

The advantage of the SOSMC over the traditional SMC is that it more precisely accounts for nonlinearities and uncertainties, thanks to integral action. Furthermore, integral action is well-recognized for boosting control efficiency when dealing with uncertainty. The SOSMC law, which utilizes a super-twisting algorithm, is outlined by [33] as follows:

$$\begin{cases} \dot{s} = -k_1 \sqrt{|s|} \text{sign}(s) + U + \rho_1 \\ \dot{U} = -k_2 \text{sign}(s) + \rho_2 \end{cases} \quad (10)$$

where s is the sliding surface; k_1 and k_2 are positive constants; ρ_1 and ρ_2 are perturbation terms.

The sliding surfaces are defined as follows:

$$\begin{aligned} S_1 &= (\Omega - \Omega^*) \\ S_2 &= (i_q - i_q^*) \\ S_3 &= (i_d - i_d^*) \end{aligned} \quad (11)$$

The SOSMC laws for the speed and dq -frame currents control are presented below. The speed control law is given by:

$$\begin{cases} \dot{i}_q^* = \frac{1}{(c_1 + c_2 i_d)} (\alpha_1 \Omega + \dot{\Omega}^*) - k_{1\Omega} \sqrt{|s_1|} \text{sign}(s_1) + U_\Omega \\ \dot{U}_\Omega = -k_{2\Omega} \text{sign}(s_1) \end{cases} \quad (12)$$

The q -axis current control law is given by:

$$\begin{cases} v_q^* = \frac{1}{\beta_2} (-c_5 i_q - c_6 \Omega i_d - c_7 \Omega + \dot{i}_q^*) - k_{1q} \sqrt{|s_2|} \text{sign}(s_2) + U_q \\ \dot{U}_q = -k_{2q} \text{sign}(s_2) \end{cases} \quad (13)$$

The d -axis current control law is given by:

$$\begin{cases} v_d^* = \frac{1}{\beta_1} (-c_3 i_d - c_4 \Omega i_q + \dot{i}_d^*) - k_{1d} \sqrt{|s_3|} \text{sign}(s_3) + U_d \\ \dot{U}_d = -k_{2d} \text{sign}(s_3) \end{cases} \quad (14)$$

3.1 Stability analysis

The proposed Lyapunov function for the control is shown in [33] as follows:

$$V = 2k_2 |s| + \frac{1}{2} U^2 + \frac{1}{2} (k_1 |s|^{1/2} \text{sign}(s) - U)^2 \quad (15)$$

Additionally, the Lyapunov function can be represented in a quadratic form:

$$V = \zeta^T P \zeta \quad (16)$$

where

$$\zeta^T = [|s|^{1/2} \text{sign}(s) \quad U]$$

$$P = \frac{1}{2} \begin{bmatrix} 4k_2 + k_1^2 & -k_1 \\ -k_1 & 2 \end{bmatrix}$$

Taking the time derivative of Eq. (14) yields:

$$\dot{V} = -\frac{1}{2} k_1 |s|^{-1/2} \zeta^T q \zeta$$

where

$$q = \frac{k_1}{2} \begin{bmatrix} 2k_2 + k_1^2 & -k_1 \\ -k_1 & 1 \end{bmatrix}$$

The perturbation terms are as follows: $\rho_{1\Omega} = d_\Omega$, $\rho_{1q} = d_{i_q}$, $\rho_{1d} = d_{i_d}$. It should be noted that the second terms do not exist ($\rho_{2\Omega} = \rho_{2q} = \rho_{2d} = 0$).

The perturbation terms are globally bounded, such as follows:

$$\begin{aligned} |\rho_{1\Omega}| &\leq \delta_\Omega \sqrt{|s_1|} \\ |\rho_{1q}| &\leq \delta_q \sqrt{|s_2|} \\ |\rho_{1d}| &\leq \delta_d \sqrt{|s_3|} \end{aligned}$$

where δ_Ω , δ_q and δ_d are bounding known positive constants. To assure the stability of the system ($\dot{V} < 0$), must select control gains that satisfy the following conditions:

$$\begin{cases} k_{1\Omega} > 2\delta_{\Omega} \\ k_{2\Omega} > k_{1\Omega} \frac{5\delta_{\Omega}k_{1\Omega} + 4\delta_{\Omega}^2}{2(k_{1\Omega} - 2\delta_{\Omega})} \end{cases} \begin{cases} k_{1q} > 2\delta_q \\ k_{2q} > k_{1q} \frac{5\delta_qk_{1q} + 4\delta_q^2}{2(k_{1q} - 2\delta_q)} \end{cases} \begin{cases} k_{1d} > 2\delta_d \\ k_{2d} > k_{1d} \frac{5\delta_dk_{1d} + 4\delta_d^2}{2(k_{1d} - 2\delta_d)} \end{cases}$$

3.2 Chattering attenuation

The main shortcoming of sliding mode control is the chattering phenomenon. This undesirable effect can be attributed to the employment of the sign function within the control algorithm. To further smooth the control output and reduce noise, it is suggested to replace the sign function with the sigmoid function [34], which is represented as:

$$F = \frac{s}{|s| + m} \quad (17)$$

where m is a small positive parameter, such as: $|s| \gg m$.

4 Second-Order Sliding Mode Observer

To estimate the faults affecting the PMSM when assuming that the currents are measured, a SOSMO based on a super-twisting algorithm in the dq -frame can be designed as follows:

$$\begin{cases} \frac{d\hat{i}_d}{dt} = c_3\hat{i}_d + c_4\Omega\hat{i}_q + \beta_1v_d - \eta_1\sqrt{|s_d|}\text{sign}(s_d) + u_d \\ \frac{d\hat{i}_q}{dt} = c_5\hat{i}_q + c_6\Omega\hat{i}_d + c_7\Omega + \beta_2v_q - \eta_1\sqrt{|s_q|}\text{sign}(s_q) + u_q \end{cases} \quad (18)$$

$$\begin{aligned} \dot{u}_d &= -\eta_2\text{sign}(s_d) \\ \dot{u}_q &= -\eta_2\text{sign}(s_q) \end{aligned}$$

where \hat{i}_d and \hat{i}_q are the observed stator currents; $s_d = \hat{i}_d - i_d$ and $s_q = \hat{i}_q - i_q$ are the observer sliding surfaces; η_1 and η_2 are design positive parameters.

The proposed Lyapunov function for the observer, as presented in [33], can be expressed by the following equation:

$$\begin{aligned} V &= 2\eta_2|s_d| + \frac{1}{2}u_d^2 + \frac{1}{2}\left(\eta_1|s_d|^{1/2}\text{sign}(s_d) - u_d\right)^2 \\ &+ 2\eta_2|s_q| + \frac{1}{2}u_q^2 + \frac{1}{2}\left(\eta_1|s_q|^{1/2}\text{sign}(s_q) - u_q\right)^2 \end{aligned} \quad (19)$$

Furthermore, (19) can be reformulated in a quadratic form, yielding:

$$V = \zeta_d^T P \zeta_d + \zeta_q^T P \zeta_q \quad (20)$$

where

$$\begin{aligned} \begin{bmatrix} \zeta_d & \zeta_q \end{bmatrix} &= \begin{bmatrix} |s_d|^{1/2}\text{sign}(s_d) & |s_q|^{1/2}\text{sign}(s_q) \\ u_d & u_q \end{bmatrix} \\ P &= \frac{1}{2} \begin{bmatrix} 4\eta_2 + \eta_1^2 & -\eta_1 \\ -\eta_1 & 2 \end{bmatrix} \end{aligned}$$

The first perturbation terms of the observer (18) are globally bounded by:

$$\begin{aligned} |\rho_{1\hat{i}_d}| &\leq \delta_{\hat{i}_d} \sqrt{|s_d|} \\ |\rho_{1\hat{i}_q}| &\leq \delta_{\hat{i}_q} \sqrt{|s_q|} \end{aligned}$$

where $\delta_{\hat{i}_d}$ and $\delta_{\hat{i}_q}$ are positive constants; The first perturbation terms are the following:

$$\begin{aligned} \rho_{1\hat{i}_d} &= c_3\hat{i}_d + c_4\Omega\hat{i}_q + \beta_1v_d \\ \rho_{1\hat{i}_q} &= c_5\hat{i}_q + c_6\Omega\hat{i}_d + c_7\Omega + \beta_2v_q \end{aligned}$$

Additionally, this observer does not include a second term perturbation, so:

$$\rho_{2\hat{i}_d} = \rho_{2\hat{i}_q} = 0$$

Taking the time derivative of (20) yields:

$$\dot{V} = -\frac{1}{2}\eta_1 |s_d|^{-1/2} \zeta_d^T q \zeta_d - \frac{1}{2}\eta_1 |s_q|^{-1/2} \zeta_q^T q \zeta_q \quad (21)$$

where

$$q = \frac{\eta_1}{2} \begin{bmatrix} 2\eta_2 + \eta_1^2 & -\eta_1 \\ -\eta_1 & 1 \end{bmatrix}$$

To assure \dot{V} is negative, must select η_1, η_2 that satisfy the following conditions:

$$\begin{aligned} \eta_1 &> 2\delta_{i_{dq}} \\ \eta_2 &> \eta_1 \frac{5\delta_{i_{dq}} \eta_1 + 4\delta_{i_{dq}}^2}{2(\eta_1 - 2\delta_{i_{dq}})} \end{aligned}$$

The observer (18) provides two terms that directly yield the estimated faults, as shown below:

$$\begin{aligned} \hat{f}_d &= -\eta_1 \sqrt{|s_d|} \text{sign}(s_d) + \int \dot{u}_d dt \\ \hat{f}_q &= -\eta_1 \sqrt{|s_q|} \text{sign}(s_q) + \int \dot{u}_q dt \end{aligned} \quad (22)$$

5 Reconstruction Control

In the proposed fault-tolerant control strategy, new control laws are employed to modify the SOSMC current controllers, as illustrated below:

$$\begin{aligned} v_{d_{new}} &= v_d^* + v_{fd} \\ v_{q_{new}} &= v_q^* + v_{fq} \end{aligned} \quad (23)$$

where v_d^* and v_q^* represent the SOSMC laws provided by (14) and (13), respectively, v_{fd} and v_{fq} denote additional control laws that the observer will estimate to counteract the effects of faults. These additional control laws are given by:

$$\begin{aligned} v_{fd} &= -\frac{1}{\beta_1} \hat{f}_d \\ v_{fq} &= -\frac{1}{\beta_2} \hat{f}_q \end{aligned} \quad (24)$$

6 Simulation Results

To validate the proposed fault-tolerant control for PMSM, simulation results were obtained using MATLAB/Simulink based on the structural diagram shown in Fig. 1. The PMSM parameters are listed in Table I. Simulink provides the capability to perform processor-in-the-loop (PIL) tests, which is a useful way to evaluate the control system on hardware as it allows Simulink models to be considered in real-time. In order to implement the proposed control on a digital signal processor (DSP) board (TMS320F28069M), it is necessary to configure hardware implementation settings and build the PIL block by generating code from the control proposed model through the "rtwbuild" command. Pulse width modulation (PWM) signals were generated using space vector pulse width modulation (SVPWM) at a switching frequency of 10 kHz. These PWM signals were used to control an inverter that supplied power to the motor from a DC-link voltage of 300 V. The PMSM and inverter models were not physically present but simulated in parallel with the controller operating in real-time with a fixed step size of 1×10^{-6} s, as shown in Fig. 2.

The proposed control strategy for PMSM was evaluated through result simulation and compared with PI control and traditional SMC. Each control strategy (PI, SMC, and SOSMC) utilized the same structural diagram as shown in Fig. 1, where each strategy replaced the three controllers (speed, q-axis current, and d-axis current). The PI controllers were tuned using the MATLAB SISO design tool, and their parameters are listed in Table 2. The traditional SMC strategy also employed the sliding surfaces proposed in this study, and Table 3 provides the design parameters for both the traditional SMC and the proposed controllers.

Table 2

The tuning parameters for PI controllers.

PI control Parameters	Speed controller	q-axis controller	d-axis controller
Proportional gain	1.2414	9	9
Integral gain	4.3545	1500	1500

Table 3

The parameters of SMC and SOSMC controllers.

Design parameters of	Speed controller	q-axis controller	d-axis controller
Traditional SMC	$k_{1\Omega} = 28$	$k_{1q} = 15$	$k_{1d} = 15$
SOSMC	$k_{1\Omega} = 28$ $k_{2\Omega} = 150$	$k_{1q} = 15$ $k_{2q} = 10000$	$k_{1d} = 15$ $k_{2d} = 10000$

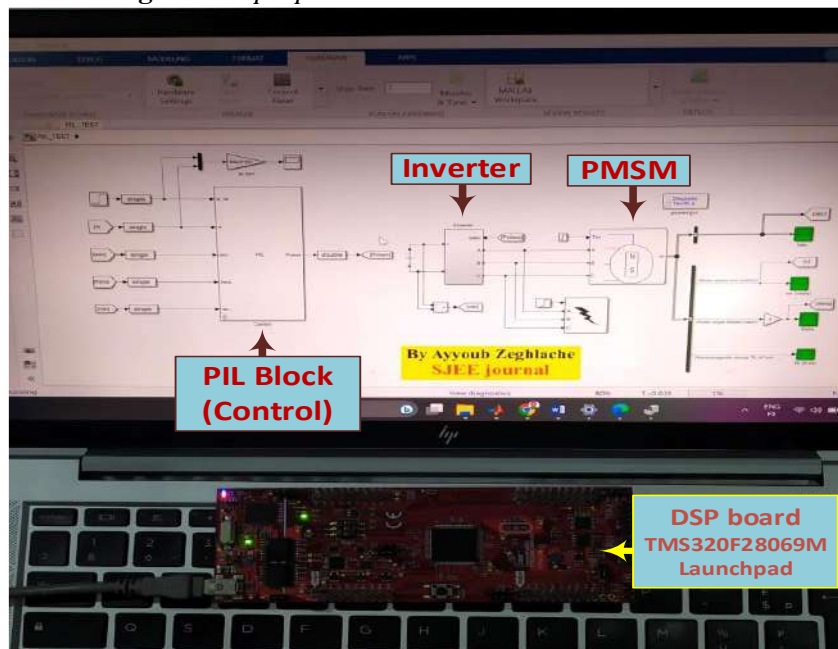

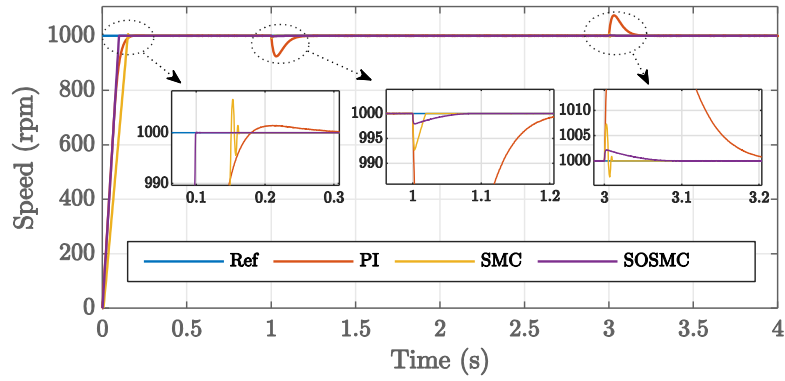

Fig. 2 –Experimental DSP board.

6.1 PMSM under different reference speed and load torque values

The proposed control was tested under normal conditions using two cases. The first case involved a constant speed of 1000 rpm and a variable torque that changed from 10 Nm to 20 Nm at $t = 1$ s and back to 10 Nm at $t = 3$ s (see Fig. 3). The second case involved a constant torque of 10 Nm and a variable speed that changed from 750 rpm to 1300 rpm in a sudden step until it returned to 750 rpm at $t=3$ s (see Fig. 4).

(a)

(b)

Fig. 3 – Performance with load torque variation in normal conditions (a) Speed; (b) Torque.

(a)

(b)

Fig. 4 – Performance under speed variation in normal conditions (a) Speed; (b) Torque.

Under normal conditions depicted in Figs. 3 and 4, the three controllers (PI, traditional SMC, and SOSMC) exhibit good tracking performance for speed and torque. However, the proposed SOSMC outperformed the other controllers in several aspects: it produced less

chattering, had smoother transitions during loading and unloading, and achieved a quicker settling time to attain a steady state without overshooting.

6.2 PMSM under modeled faults

In the following modeled faults scenario, sinusoidal components are introduced into the currents using the dq -frame currents model (9). The speed and load torque are set to 1000 rpm and 10 Nm, respectively, as depicted in Fig. 5.

- At $t = 1$ s, a single fault occurs and is modeled by a sinusoidal signal with the following characteristics: an amplitude (A_1) of 35, a frequency of 50 Hz, and a phase angle (θ_1) of $\pi/2$.
- At $t = 1.5$ s, two faults arise, each characterized by additional sinusoidal signals with amplitudes ($A_{2,3}$) of 5, frequencies of 80 Hz and 20 Hz, and phase angles ($\theta_{2,3}$) of $\pi/4$.

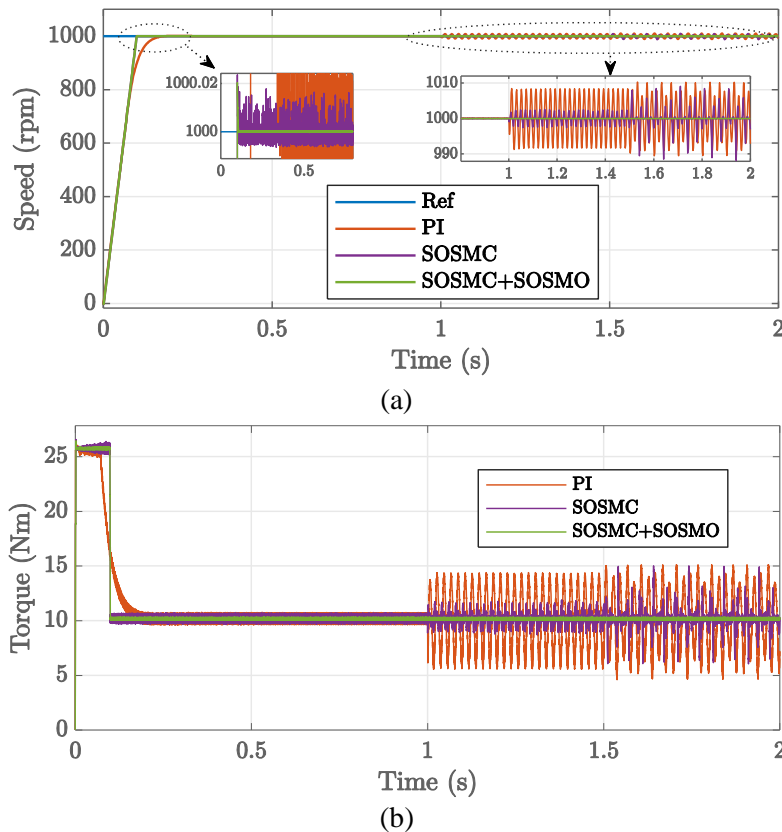

Fig. 5 – Performance under modeled faults (a) Speed; (b) Torque.

Fig. 5 shows the speed and torque performance under modeled faults (one and two faults). At $t = 1$ s and $t = 1.5$ s, when the faults occur, both the PI and SOSMC controllers experience torque ripples and speed fluctuations. In contrast, the proposed fault-tolerant control based on SOSMC with SOSMO shows almost the same performance as in normal conditions.

6.3 PMSM under a short-circuit fault

The performance of the proposed fault-tolerant control under a short-circuit fault is shown in Figs. 6 and 7. The speed and load torque are set at 1000 rpm and 10 Nm, respectively. At $t = 1$ s, a phase-to-phase short circuit between phase a and b suddenly occurs with a fault resistance of 0.005 Ohm. The load torque changed from 10 Nm to 15 Nm at $t = 2$ s to evaluate the fault-tolerant control under fault.

Fig. 6 shows that PI and SOSMC controllers without SOSMO exhibit high ripples in speed and torque performances during the fault. In contrast, SOSMC with SOSMO maintains a stable and robust performance with minimal ripples.

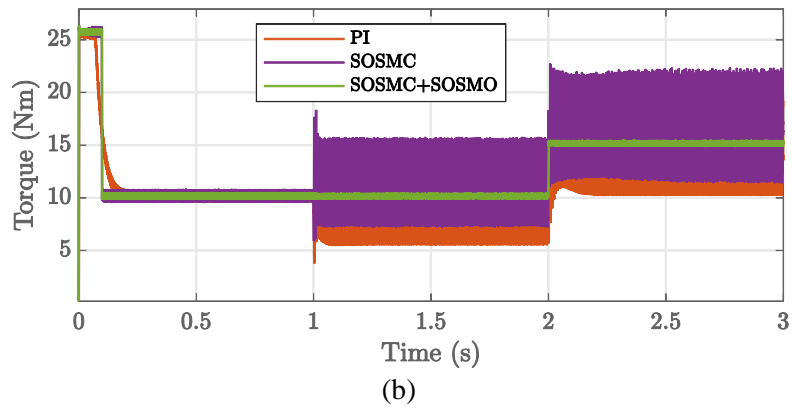

Fig. 6 – Performance under short-circuit fault (a) Speed; (b) Torque.

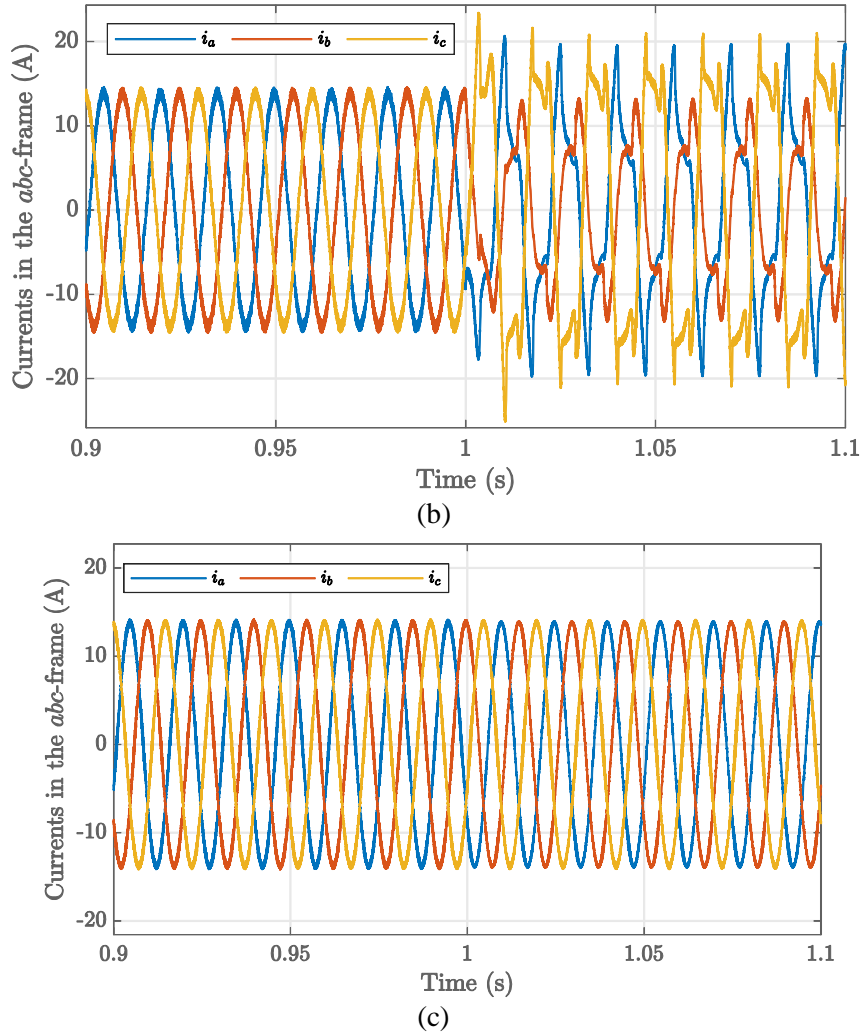

Fig. 7 – Performance of the currents in abc frame under short-circuit fault (a) PI; (b) SOSMC without SOSMO; (c) SOSMC with SOSMO.

Fig. 7 illustrates that abc currents in PI and SOSMC controllers become unbalanced during short-circuit fault conditions. However, when SOSMO is used with SOSMC, the currents remain at the same level during fault conditions as they do under healthy conditions.

To evaluate the performance under fault operations using SOSMC with and without SOSMO, two performance indicators are provided: torque ripples and speed fluctuations. These indicators are expressed in (25) and (26).

$$\Omega_{fluc} \% = \frac{(\max(\Omega) - \min(\Omega))}{\text{mean}(\Omega)} \times 100 \quad (25)$$

$$T_{ripple} \% = \frac{(\max(T_{em}) - \min(T_{em}))}{\text{mean}(T_{em})} \times 100 \quad (26)$$

As shown in Table 4, SOSMC with SOSMO significantly reduced speed fluctuations, torque ripples, and THD in both healthy and faulty conditions. This can be attributed to the ability of the observer to compensate for faults and external disturbances such as thermal effects, inverter nonlinearity, parameter uncertainties, and other unknown factors.

Table 4*Comparison results between SOSMC without SOSMO and with SOSMO.*

Control type	Condition	Speed fluctuation s %	Torque ripples %	THD of phase "a" %
SOSMC	Healthy	0.0033	10.6859	2.64
	One fault	0.5990	61.3230	19.66
	Two faults	1.9637	202.7749	27.21
	Short-circuit	1.1634	197.7197	26.58
SOSMC + SOSMO	Healthy	7.0108e-05	2.7070	2.50
	One fault	8.5662e-05	2.8381	2.41
	Two faults	8.5850e-05	2.9822	2.43
	Short-circuit	1.4111e-04	5.8511	1.76

7 Conclusion

This paper has introduced a FTC strategy for a three-phase PMSM utilizing a super-twisting sliding mode controller and observer. The SOSMC enhanced the tracking accuracy of speed and currents, effectively rejecting load disturbances under healthy operating conditions. Nonetheless, in the presence of fault scenarios such as phase-to-phase short circuits, the performance of the controller degraded. To address such faults, we introduced a control law reconfiguration by adding additional control laws from the SOSMO. This effectively compensated for the faults and maintained the same level of performance under fault conditions as under normal conditions.

A RESEARCH ON THE CONCEPT OF MOTHERHOOD IN ISLAMIC FEMINIST DISCOURSE

Babaei. Mohaddeseh

Department of women's studies, AhlulBayt International University

Abstract

Motherhood in Muslim feminist discourse is the object of investigation, with particular emphasis on the aspect of its challenge to patriarchal interpretations of gender roles, concerning maternal duties. Islamic feminism offers reinterpretations of the very meaning of motherhood in that it merges religion with feminist thinking, empowering women rather than limiting them as imposed by patriarchy. This study is notable for its focus on the various scholarly works that claim traditional readings of the Qur'an were based on patriarchal interpretations that restricted women's agency.

Islamic feminists contest these views and argue for an egalitarian reading of motherhood focused on choice, autonomy, and women's right to claim their own roles in society. This study discusses the position of motherhood in the wider context of mother's social and political activism. The literature review provides a composite view that unweaves the tight integrity typical of disciplines such as religious studies, sociology, and gender studies in respect to the not-so-simple relations of Islam, gender, and motherhood.

This research ultimately argues that Islamic feminism provides a somewhat different approach on reconsideration of motherhood, as it proposes a model with religious significance based on gender justice, challenging traditional hierarchies and providing a platform for more sweeping sociopolitical reforms.

Keywords: Motherhood, Islamic Feminism, Gender Equality

Introduction

The concept of motherhood constitutes a significant area of interest within feminist theory, often facing scrutiny from mainstream feminism for perpetuating patriarchal ideologies. However, Islamic feminist discourse offers a unique perspective by integrating religious convictions with feminist principles in order to reexamine the notion of motherhood. This discourse contests frameworks centered on Western perspectives, promoting gender justice via the reexamination of sacred scriptures and cultural practices (Badran, 2002).

Islamic feminists consider motherhood a political, sacred responsibility; they appreciate its value in the Qur'an and seek independence for women. Scholars argue that motherhood should be a choice and not an obligation, showing how cultural and historical contexts influence its interpretation (Barlas, 2002).

Islamic feminism deconstructs conventional narratives to depict motherhood as an avenue of empowerment rather than one of limitation. This paper strictly analyzes the concept of motherhood within the framework of Islamic feminist discourse, exploring its historical, religious, and sociopolitical dimensions. It highlights strategies used by Islamic feminists in negotiating the frictions between established and emerging views, representing motherhood as a field for cultural resistance and feminist re-creation (Ahmed, 1992). This study contributes to broader conversations about gender, religion, and identity within Islamic societies and beyond.

Literature Review

The meaning of motherhood in Islamic feminist discourse is one that has been taken up rigorously by scholars to explore its history, religion, and sociopolitical milieu. Initial works offer indispensable insights into the ways in which Islamic traditions have influenced women's

roles and perceptions. These underline how the norms of pre-Islamic Arabia, combined with subsequent patriarchal interpretations of Islam, relegated women to domestic duties at the same time as their status as mothers was elevated (Ahmed, 1992).

Similarly, Islamic feminism aims to question established interpretations by promoting more balanced readings of religious texts. These formative studies also highlight the need to regard motherhood not as a fixed role, but one that is inextricably linked to dynamic cultural and historical narratives (Margot Badran, 2002).

Modern academic discourses have taken this debate even further by exploring how Islamic feminists reinterpret the Quran to contest patriarchal ideas about motherhood. Classical interpretations of the Quran often emphasize male superiority, depicting women as inferior caretakers. However, what Islamic feminists state is that the Quran does not put very strict roles on gender; it has, on the contrary, a much more relativized outlook on motherhood (Asma Barlas, 2002).

Some scholars criticize the legal and religious systems that restrict women's lives to "reproductive-associated" roles. These researchers emphasize women's empowerment in determining their identities as mothers through using a contextual approach to interpreting Islamic texts (Kecia Ali, 2006).

Sociological research has also examined Islamic feminism's approach to the social expectations associated with motherhood, rather than or in addition to religious viewpoints. For instance, Nadje Al-Ali (2000) explores the ways that Muslim women in diaspora communities negotiate the expectations of motherhood with their employment and other life goals; similarly, Saba Mahmood's *Politics of Piety* (2005) examines the ways that pious Muslim women negotiate their role within patriarchal structures as mothers. The findings also show a very important conflict: while Islamic feminist discourse is meant to revalue women's status by redefining motherhood, the dominant structures of society often support traditional gender roles. This body of scholarship brings out the importance of placing motherhood in general social and political contexts, showing its links with class, education, and migration. Moreover, interdisciplinary scholarship has revealed the potential of motherhood as a site of resistance and empowerment. Amina Wadud (1999) posits in her work, *Qur'an and Woman*, that the choice of motherhood may be regarded as an empowering act instead of a compulsory duty. This assertion aligns with the research conducted by Ziba Mir-Hosseini (2015), which explores the ways in which changes in Islamic legal frameworks can challenge traditional gender norms. Collectively, these studies advocate for an alternative viewpoint on motherhood, recognizing its spiritual significance while contesting its use as a means for patriarchal control. Taken together, this literature demonstrates how Islamic feminism opens up new avenues to theorize motherhood within global feminist concepts.

Methodology

This study adopts a library-based approach to examine the theme of motherhood in Islamic feminist discourses. A library-based research is apt for this subject, as it allows an in-depth assessment of existing literature, both primary materials like religious texts and secondary references consisting of scholarly books, journal articles, and feminist critiques. The methodology makes it easier to gain a broader perception of what motherhood means within the context of Islamic feminism through aggregation and analysis of various materials. In addition, the approach enables the incorporation of various outlooks from several disciplines such as sociology, anthropology, religious studies, and gender studies in a comprehensive manner (Ahmed, 1992). The initial step in the research was selecting important texts related to the subject matter. Writers like Amina Wadud (1999) and Asma Barlas (2002) have worked with primary texts, the Qur'an included, and feminist readings of Islam in both English and Arabic to argue against patriarchal renditions of the said scriptures. Secondary works of Leila Ahmed (1992) and Margot Badran (2002) were also chosen for their sharp analysis of the

historical and cultural context within which Islamic feminism operates. JSTOR, ProQuest, and Google Scholar were used to identify peer-reviewed scholarly articles, while library catalogs were used to access seminal texts. The search was guided by the use of keywords such as "Islamic feminism," "motherhood," "gender roles," and "Qur'anic interpretation" to ensure that the reviewed literature was far-reaching and pertinent. The analysis took a thematic approach in categorizing and synthesizing the literature gathered. Prominent themes identified include the veneration of motherhood within Islamic doctrine, feminist viewpoints on the subject of motherhood, and the societal and political ramifications stemming from these debates. To illustrate, the work carried out by Saba Mahmood (2005) and Nadje Al-Ali (2000) sheds light on important discussions related to the intersection between Islamic feminist discourse with questions of class, migration, and identity. Concurrently, academics like Kecia Ali (2006) and Ziba Mir-Hosseini (2015) shed light on the difficulties of how to reconcile traditional Islamic legal frameworks with modern feminist demands. Such thematic organization aided the research in bringing forth both the commonalities and distinctions present within Islamic feminist perspectives on motherhood. Relying on library-based research, this approach guarantees a strong framework concerning the topic that is interdisciplinary. This study allows the culmination of various scholarly perspectives and highlights the dynamic nature of Islamic feminist discourse. Conducting an in-depth review of the existing literature, this research adds to our knowledge of motherhood as a complex and contested term within Islamic feminist discourse. It also highlights the need for re-examining religious interpretations, defying cultural norms, and exercising sociopolitical authority in the process of changing traditional gender roles. Thus, the methodological framework of the library provides a defined organization for examining the various elements of motherhood within the context of Islamic feminism, as posited by Barlas (2002) and Wadud (1999).

Results and Discussion

Indeed, the findings of this study show that motherhood in Islamic feminist discourse is both a source of empowerment and a point of contestation. Some authors like Amina Wadud and Asma Barlas argue that the traditional reading of the Qur'an has sustained limited roles of women as mothers because of the influence of patriarchal societies. Nevertheless, their research brings out that the Qur'an prescribes a view that is much more equalitarian in nature and in this regard, gives importance to motherhood but does not prescribe it to be the defining feature of womanhood. Again, Ziba Mir-Hosseini (2015) stresses the legal and sociopolitical constructs that continue to enforce traditional norms of motherhood and need for changes that would support feminist principles of self-determination and choice. These findings highlight Islamic feminism's ability to re-evaluate motherhood in a manner compatible with both religious convictions and gender equality. The discussion has also pointed out that despite much progress being made through which to contest traditional discourse, Islamic feminist discourse still faces some prevalent sociocultural and institutional obstacles. A relevant example is the work of Saba Mahmood (2005), demonstrating the challenges faced by pious Muslim women in harmonizing traditional expectations with personal agency in determining motherhood. This conflict specifically highlights the need for placing Islamic feminist activism into the larger picture of structures within society. In the final analysis, this study underlines the dynamic Islamic feminist discourse that brings in very useful suggestions for turning motherhood into spiritual and political expression.

Conclusion

The present study reveals that Islamic feminist discourse alters the understanding of motherhood in a manner that empowers women, highlighting themes of autonomy and the significance of religion, while simultaneously challenging patriarchal perspectives. By integrating religious doctrines with feminist ideologies, it establishes a multifaceted framework

for interpreting motherhood, underscoring its potential as a vehicle for cultural resistance and gender equity.

ÖZET

Bu araştırma, Türkiye’de bütünsel sağlık üzerine yüksek etkisi olan gürültünün konusunda bilimsel alanda yapılan çalışmaların neler olduğunun bulgulanması ve bu konularda farkındalığın artırılarak konuya dikkat çekilmesi amacı ile yapılmıştır. Diğer bir deyişle, gürültü konusunda yapılan çalışmaların incelenmesi ve durumun ortaya konulması amaçlanmıştır. Araştırma, Ulusal Tez Merkezi çevrimiçi veri tabanı üzerinde geriye dönük olarak yapılmıştır. Bu çalışma gürültü hakkında 1984 yılında yapılan ilk araştırma itibariyle incelenmeye başlanmış olup; 1984 - 2023 yılları arasında kapsamaktadır. Anahtar kelimeler; “gürültü”, “okullarda gürültü”, “hastanede gürültü” ve “sanayide gürültü” ve “ulaşımda gürültü” dür. Ulusal Tez Merkezi çevrimiçi veri tabanı üzerinden toplam 1075 tez çalışmasına ulaşılmıştır. Araştırmanın evren ve örneklemini ulusal tez merkezinde 1984 - 2023 yılları arasında yayımlanan 1075 çalışma oluşturmuştur. Verilerin incelenmesinde çalışma yılı, türü, araştırmada kullanılan dil ve alan özellikleri gibi faktörler incelenmiştir. Verilerin analizinde sayı yüzde dağılımları SPSS 25 paket programı ile yapılmıştır. Tezlerin 2014 - 2023 yılları arasında geçmiş yılların toplamından daha yüksek oranda (56.6) yapıldığı görülmüştür. En çok fen bilimleri enstitüsünde (71.45) çalışıldığı, en fazla yüksek lisans düzeyinde (80.7) araştırma yapıldığı, sosyal bilimlerde (3.3) bu konunun oldukça az oranda çalışıldığı saptanmıştır. Araştırma sonucunda, gürültü çalışmalarının son yıllarda ağırlık kazandığı, konunun alansal olarak çok geniş olduğu, lisansüstü çalışmalar açısından özellikle deneysel ve tanımlayıcı çalışmaların daha fazla yapılması ayrıca çok faktörlü bir şekilde ele alınması gerektiği, ülkemiz açısından ihtiyaç olduğu görülmektedir.

Anahtar Kelimeler: Gürültü, okullarda gürültü, hastanede gürültü, sanayide gürültü, ulaşımda gürültü

ABSTRACT

This research was conducted to find out the scientific studies conducted on noise, which has a high impact on holistic health in Turkey, and to draw attention to the issue by increasing awareness on these issues. In other words, it was aimed to examine the studies conducted on noise and to reveal the situation. The research was conducted retrospectively on the National Thesis Center online database. This study was started to be examined as of the first research conducted on noise in 1984; it covers the years 1984 - 2023. The keywords are; “noise”, “noise in schools”, “noise in hospitals”, “noise in industry” and “noise in transportation”. A total of 1075 thesis studies were reached through the National Thesis Center online database. The universe and sample of the research consisted of 1075 studies published in the national thesis center between 1984 - 2023. In the examination of the data, factors such as the year of study, type, language used in the study and field characteristics were examined. In the analysis of the data, the number percentage distributions were made with the SPSS 25 package program. It

was seen that the theses were made at a higher rate (56.6) between 2014 and 2023 than the total of previous years. It was determined that the most studies were conducted in the institute of science (71.45), the most research was conducted at the master's level (80.7), and this subject was studied very little in the social sciences (3.3). As a result of the research, it is seen that noise studies have gained importance in recent years, the subject is very broad in area, and that more experimental and descriptive studies should be conducted in terms of postgraduate studies and should be addressed in a multi-factorial manner, and that this is a need for our country.

Keywords: Noise, noise in schools, noise in hospitals, noise in industry, noise in transportation

GİRİŞ

Gürültü, her türlü istenmeyen rahatsız edici sese verilen addır. Türk Dil Kurumu sözlüğünde gürültü “Aralarında uyum bulunmayan düzensiz seslerin bütünü..” olarak tanımlanmaktadır (Türk Dil Kurumu Sözlüğü). Bu durumda, doğa sesi ve senfoni gibi müzik eserleri var olan uyum sebebiyle gürültü olarak adlandırılmazken; yüksek insan ve hayvan sesleri, her çeşit üretim araç-gereçlerinin, taşıtların, inşaat çalışmaları vb. her çeşit canlı ve cansız varlık kaynaklı sesler “gürültü” kapsamına girmektedir. Hangi kaynaktan ortaya çıkarsa çıksın, gürültü insanlar ve diğer canlılar üzerinde olumsuz etkiler ortaya çıkarmaktadır. İnsanlarda özellikle en kırılgan gruplar olan yaşlılar, çocuklar ve hastalar gürültünün olumsuz etkilerini deneyimler. Okul ortamındaki gürültü öğrenmeyi engelleyip fiziksel ve ruhsal sağlığı bozarken (Bulunuz ve ark. 2017), sanayide ölçülen en yüksek düzeydeki gürültü (85 db*8 saat) işyeri ortamında dikkat eksikliği oluşturarak insanlar arasındaki iletişimi bozmaktadır. (Erbaş ve Özfirat, 2024)

Bilinen en eski gürültü yönetmeliğine göre; M.Ö. 6. Yüzyılda Ege'deki bir Yunan kolonisi olan Sybaris eyaletinde çömlekçiler, kalaycılar ve diğer esnafların, çıkardıkları gürültü nedeniyle şehir duvarlarının dışında yaşamaları gerektiği bildirilir. Aynı yönetmelikle horoz sesi de yasaklanır. Bu yönetmelikten yaklaşık yüz yıl sonra Hipokrat tarafından uzun süreli gürültüye maruz kalma kaynaklı kulak çınlaması -tinnitus hastalığını- tanımlanmıştır. M.Ö. 44 yılında ise J. Sezar, konutların bulunduğu bölgede belli saatler arası araç kullanımını yasaklamıştır. Gürültü kirliliğinin en büyük kaynağı olan sanayileşmenin temeli ise 1770 yılında James Watt tarafından icat edilen buhar makinesidir (Goldsmith, 2020).

“Gürültü” konusunda yapılan tez çalışmaları incelenirken her enstitüden her sektörden alanda gürültü kirliliğinin mevcut olduğu ve bu konunun çok yönlü olarak incelendiği görülmüştür. Örneğin Çevre Mühendisliği programında “Gürültü bariyeri uygulamalarının karayolu yakını çevresel gürültü ve hava kirliliği üzerine etkilerinin incelenmesi ve optimizasyonu” (Tezel Oğuz, 2023) konusunda, Elektrik ve Elektronik Mühendisliği programında “Darbeli gürültüyü azaltmak için çevrimiçi ikincil yol modelleme (OSPM) kullanan etkili çok kanallı ileri beslemeli uyarlanabilir gürültü kontrol sistemi” (Khan, 2023), Mimarlık programında, “Yapı tasarımında gürültü faktörünün Türkiye ve Almanya gürültü yönetmelikleri kapsamında incelenmesi: Konut örneği”, Kulak-Burun-Boğaz programında ise “Gürültüye maruz kalan sürücülerde işitmenin değerlendirilmesi” (Balcı, 2023) isimli çalışmalar yapıldığı görülmüştür. Dolayısıyla “gürültü” konusu mühendislik, mimarlık, sağlık başta olmak üzere birçok disiplini ilgilendirmektedir.

Dünyadaki nüfus artışı, teknolojik gelişmeler ve sanayileşmenin yükselişiyle birlikte doğal kaynaklarda tahribat artmış; her çeşit kirlilik de bununla birlikte çoğalmıştır. (Çobanoğlu ve Güler, 1997) Gürültü kirliliği de nüfus artışı ve sanayileşmenin doğal bir sonucudur. Fiziki olarak ölçülebilse de gürültü konusunda yapılan çalışmalar diğer kirlilik türlerinden daha kısıtlı yer tutmaktadır. Bu nedenle bu çalışmayla Ulusal Tez Merkezinde ilgili konuda ne kadar

çalışma yapıldığı; hangi alanlarda, hangi eğitim seviyesinde, hangi sektörlerde ve dillerde çalışma yapıldığı incelenerek “Gürültü” konusunda yapılmış olan çalışmaların tespit edilmesi ve hangi alanlarda çalışmaya ihtiyaç olduğunun belirlenmesi amaçlanmıştır. Bu çalışma, sağlık üzerine çok çeşitli etkileri olan gürültü konusunda yapılan araştırmaların neler olduğunun belirlenmesi ve farkındalığın artırılması, bu konuya daha da yoğunlaşılması ve yeni çözüm yöntemleri bulunması amacı ile yapılmıştır.

YÖNTEM

Bu araştırma, bütünsel sağlık üzerine çok fazla etkileri olan gürültünün Türkiye de bilimsel alanda yapılan çalışmaların neler olduğunun bulgulanması ve bu konularda farkındalığın artırılması, dikkat çekilmesi amacı ile Ulusal Tez Merkezindeki veri tabanı üzerinde ilgili anahtar kelimeler üzerinde yapılmış bir içerik analizidir. İlk araştırmanın 1984 yılında olduğu görülmüştür. Geriye dönük olan bu çalışma 1984 - 2023 yılları arasını kapsamaktadır. Anahtar kelimeler; “gürültü”, “okullarda gürültü”, “hastanede gürültü” ve “sanayide gürültü” ve “ulaşımda gürültü” dür. Toplamda 1075 araştırmaya ulaşılmıştır. Araştırmanın evren ve örneklemini ulusal tez merkezindeki 1984 - 2023 yılları arasındaki 1075 çalışma oluşturmuştur. Verilerin incelenmesinde çalışma yılı, türü, araştırmada kullanılan dil ve alan özellikleri gibi faktörler incelenmiştir. Verilerin analizinde sayı yüzde dağılımları SPSS 25 paket programı ile yapılmıştır.

ARAŞTIRMA ETİĞİ

YÖK’ün tez tarama programı çevrimiçi ortamda herkese açıktır ve ulaşılabilir. Araştırmada bu arama motoru kullanılmıştır. YÖK ulusal tez merkezindeki çalışmalar incelenmiştir. Bu çalışmalar 1984-2023 yılları arasındadır. Çalışma sonucunda içerik analiz tespiti yapılmıştır. Geriye yönelik olan bu çalışmanın *literatür taraması* olması ve erişime açık kaynakların incelenmesi sebebiyle etik kurul iznine gereksinim yoktur.

BULGULAR

Yüksek Öğretim Kurumu tez veri tabanı incelemesi sonucu 1075 çalışmaya ulaşılmıştır. Çalışmaların yıllara göre dağılımı incelendiğinde ilk çalışmanın 1984 yılında olduğu görülmüştür. Çalışmaların %3.4’ünün (n=37) 1984-1993 yılları arasında, %13.6’sının (n=146) 1994-2003 yılları arasında, % 26.4’ünün (n=283) 2004-2013 yılları arasında, %56.6’sının (n=609) 2014-2023 yılları arasında olduğu görülmüştür (Grafik 1).

Grafik 1: Araştırmaların Yıllara Göre Dağılımı

Araştırmaların enstitülere göre dağılımı incelendiğinde çalışmaların % 71,45’i (n=768) Fen Bilimleri Enstitüsünde, % 23,35’i (n=251) Sağlık Bilimleri Enstitüsünde ve % 5,20’si (n=56) ise Sosyal Bilimleri Enstitüsünde yapıldığı bulgulanmıştır (Grafik 2).

Grafik 2: Araştırmaların Enstitülere Göre Dağılımı

Çalışmalar incelendiğinde; 1984-2023 yılları arasında % 80.7'sinin (n=868) Yüksek Lisans, %15'nin (n=161) Doktora, %4.2'nin (n=44) Sanatta yeterlik, %0,1' nin de(n=1) tıpta uzmanlık olduğu saptanmıştır (Grafik 3).

Grafik 3: Araştırmaların Türlerine Göre Dağılımı

Araştırmaların dillere göre dağılımı incelendiğinde; %72.2'nin (n=777) Türkçe, %27.6'nın (n=297) İngilizce, %0.2'nin (n=1) Almanca dilinde yazıldığı belirlenmiştir (Grafik 4).

Grafik 4: Araştırmaların Dillere Göre Dağılımı

Çalışmaların alanlarına göre dağılımları incelendiğinde; %63,5'nin (n=777) "Üretim ve Mühendislikte, %22,7'nin (n=245) Sağlıkta, %5,7'nin (n=62) Ulaşımında, %5,3'nün (n=57) Mimarlıkta, %3,3'nün (n=36) Sosyal Bilimlerde olduğu saptanmıştır (Grafik 5). Bu alanlar ayrıntılı incelendiğinde; sağlık bilimleri alanındaki çalışmaların veteriner hekimlik, turizm, spor, sağlık eğitimi, ortopedi ve travmatoloji, nöroloji, kulak burun boğaz, kazalar, halk sağlığı, hastaneler, hemşirelik, fiziksel tıp ve rehabilitasyon, fizyoloji, göğüs kalp damar cerrahisi, biyoteknoloji, çocuk sağlığı, diş hekimliği, ebelik, anestezi ve reanimasyon, biyofizik, biyokimya, biyomühendislik bölümlerinde yapıldığı görülmüştür. Sosyal bilimler alanında Amerikan kültürü ve edebiyatı, coğrafya, çalışma ekonomisi, dilbilim, eğitim ve öğretim, ekonometri, ekonomi, güzel sanatlar, halkla ilişkiler, hukuk, iletişim bilimleri, İngiliz dili ve edebiyatı, istatistik, iç mimari ve dekorasyon, işletme, kamu yönetimi, maliye, müzik, sivil havacılık, tarih, teknik eğitim, ulaşım, şehircilik ve bölge planlama bölümlerinde olduğu belirlenmiştir. Fen bilimleri alanında ise astronomi ve uzay bilimleri, ağaç işleri, bilgisayar mühendisliği bilimleri-bilgisayar ve kontrol, bilim ve teknoloji, biyoloji, çevre mühendisliği, deniz bilimleri, denizcilik, deprem mühendisliği, elektrik ve elektronik mühendisliği, endüstri ve endüstri mühendisliği, enerji, fizik ve fizik mühendisliği, gemi mühendisliği, havacılık mühendisliği, inşaat mühendisliği, jeodezi ve fotogrametri, jeofizik mühendisliği, kimya, maden mühendisliği ve madencilik, makine mühendisliği, matematik, mekatronik mühendisliği, metalurji mühendisliği, mimarlık, mühendislik bilimleri, nükleer mühendislik, ormancılık ve orman mühendisliği, petrol ve doğalgaz mühendisliği, peyzaj mimarlığı, tekstil ve tekstil mühendisliği, trafik, uçak mühendisliği ve ziraat bölümlerinde "Gürültü" konulu tez çalışmalarının yapıldığı saptanmıştır (Grafik 5).

Grafik 5: Araştırmaların Alanlarına Göre Dağılımı

TARTIŞMA

Bu araştırma, "gürültü" konusundaki tez çalışmalarının zaman içinde nasıl değiştiğini ve bu alandaki araştırmaların hangi disiplinlerde yoğunlaştığını incelemektedir. İncelenen verilere göre, "gürültü" konusundaki tez çalışmalarının zaman içindeki gelişimi dikkat çekicidir. İlk olarak 1984 yılına yapıldığı ve sonraki yıllarda özellikle 1994'ten itibaren ciddi bir artış yaşandığı görülmektedir. Özellikle toplam çalışmaların yarısından çoğunun son on yıllık dönemde yapılması gürültü konusundaki bilincin artmakta olduğunu göstermesi açısından sevindiricidir (Grafik 1). Bu artışın nedenlerinden birisinin süreç içindeki yasal düzenlemeler

olduğu düşünülmektedir. Örnek olarak; 11.08.1983 tarihli Çevre Kanunu (Çevre Kanunu, 1983) sonrasında gürültü ile ilgili çalışmalarda dikkat çekici bir artış bulunmazken; 2006 yılında ilgili kanunun “gürültü” maddesinde yapılan değişikliklerle (2872 Sayılı Çevre Kanunu Uyarınca Verilecek İdari Para Cezalarına İlişkin Genelge, 2006) birlikte konuya olan ilgide minimal bir artış gözlenmiştir. Bu durumda idari “Çevresel Gürültünün Değerlendirilmesi ve Yönetimi Yönetmeliği”nin (Çevresel Gürültünün Değerlendirilmesi ve Yönetimi Yönetmeliği, 2010) etkisiyle belirgin olarak yine aynı yıla özel olarak gürültü çalışmaları artmıştır. Cumhurbaşkanınının 31 Mart 2019 seçimleri için kullandığı ifadesinde “...gürültü ve görüntü kirliliği oluşturan propaganda yöntemlerini tamamen terk ediyoruz...” (“Çevreye ve insana saygılı bir seçim kampanyası yürütme kararı aldık” Açıklaması, 2018) ifadesi kullanmasının ve Fransa’da uygulamaya konulan gürültü radarı uygulamasının da (Paris’te ilk gürültü radarı kuruldu: Araçların gürültü emisyonları ölçülecek, 15.02.2022.) gürültü kirliliğine dikkat çekmiş olabileceği düşünülmektedir. Aynı yıl İstanbul valiliği tarafından da YKS sınavı sırasında gürültü kirliliği yapılmamasına ilişkin açıklama (İstanbul Valiliği'nden YKS İçin 'Gürültü' Uyarısı Haberi, 14.06.2019) yapılmıştır. Çevresel Gürültünün Değerlendirilmesi ve Yönetimi Yönetmeliğinde önce değişiklik yapılması (Çevresel Gürültünün Değerlendirilmesi ve Yönetimi Yönetmeliğinde Değişiklik Yapılmasına Dair Yönetmelik, 07.01.2022) sonrasında ise yeni gürültü yönetmeliği yayınlanması (Çevresel Gürültü Kontrol Yönetmeliği, 30.11.2022) sonrası artışın, çevre kanunlarındaki değişikliklerle ve gürültünün toplumda daha fazla fark edilmesiyle; gürültü hakkındaki bilinç düzeyinin artmasıyla ilişkilendirilebileceği öne sürülebilir.

Araştırmaların enstitülere göre dağılımı incelendiğinde, araştırmaların dörtte üçünün fen bilimleri enstitüsünde yapıldığı görülmüştür (Grafik 2). Fen Bilimleri alanının mühendislik ve üretimle ilgili olmasının ve üreticilerin mevzuatla daha büyük sorumluluk altında bulunmasının bu alanda yapılan çalışmaları artırdığı düşünülmektedir. Türkiye ILO’ya 1932 yılında üye olmuştur. O günden bugüne Türkiye’de bu konudaki gelişmelerin arttığı çalışma alanlarındaki yoğunlukla da karşımıza çıkmaktadır. Sağlık alanında gürültünün yadsınamaz olumsuz etkisinin yapılan çalışmalarda etkili olduğu düşünülmektedir. Ancak gürültü konusunda özellikle sosyal alanlarda daha fazla çalışmaya ihtiyaç olduğu düşünülmektedir.

Araştırma dilleri incelendiğinde; Türkçe %72.2, İngilizce %27.6 ve Almanca %0.2 olduğu belirlenmiştir (Grafik 4). Bu sonuç bize gürültü konusunda yoğunlukta olarak Türkçe dilinin kullanıldığını göstermekle birlikte, dörtte birinin İngilizce dilinde yazılması sevindiricidir. Çok küçük bir kısmının Almanca dilinde yazılması sürekli gelişim içinde olduğumuzun bir göstergesidir. Ülkemiz bilimsel araştırmalar açısından gün be gün ilerlemekte ve gelişmekte olduğunu bu sonuçlar bize göstermektedir.

Çalışmaların disiplinlere göre dağılımına baktığımızda, mühendislik programlarının bu alandaki tez çalışmalarında öne çıktığı görülmüştür. Özellikle Elektrik ve Elektronik Mühendisliği ile Makine Mühendisliği, gürültü konusundaki araştırmaların merkezini oluşturmuştur. Ulusal Tez Merkezindeki tezlerin alanlara göre dağılımı incelendiğinde ise yapılan çalışmaların %63,5’inin üretim ve mühendislik bilimleri alanında yapıldığı belirlenmiştir (Grafik 5). Bu oranın yüksekliği üretim tesislerinin mevzuata uygun üretim yapma zorunluluklarının ve ürünlerin kullanımı sırasında gürültü düzeyi yüksek olursa ticari kar oranlarının düşeceği kaygısının bu alana verilen önemi artırdığını düşündürmektedir. Diğer yandan hem kendi içinde hem etrafında rahatsızlığa neden olabilen eğitim kurumlarının gürültüsü konusunda sınırlı çalışma yapıldığı görülmüştür. Gürültü, sadece fiziksel bir etki oluşturmakla kalmayıp, aynı zamanda sosyal alanlarda ve eğitim bağlamında da önemli sonuçlar doğurmaktadır. Ancak, özellikle eğitim alanında yapılan tez çalışmalarının kısıtlılığı sosyal bilimlerin geniş bir konu yelpazesinin bulunmasından kaynaklanabileceği gibi konuya yönelik çalışmaların artması eğitim alanına katkı sağlayabilir. Bu duruma bakarak eğitim alanlarında ve çevresinde düzenlenebilecek gürültü bariyerleri hakkında yönetmeliklerde

güncelleme yapılmasının ve gürültü bilinç eğitiminin, öğrencilerin ve çevrenin sağlığı açısından faydalı olabileceği düşünülmektedir.

Sağlık alanında gürültü ile ilgili yapılan çalışmalar toplam tez çalışmalarının 1/5'i civarındadır. Sağlıkta gürültü konusunda çalışma sayısının artması sevindirici olacaktır. Bu durumun da kuvvetli yaptırımı olan gürültü mevzuatına ihtiyaç duyulmasından kaynaklı olabileceği düşünülmektedir. Ulaşım ile ilgili gürültü konusunda yapılan 59 adet; mimarlık alanındaki gürültüyle ilgili ise 56 adet tez çalışması bulunmaktadır. Ulaşım konusundaki çalışmaların yeterli oranda olduğu ancak mimarlık alanında daha fazla çalışmaya ihtiyaç olduğu düşünülmektedir. Türkiye’de yaşanan 6 Şubat 2023 depremindeki yıkımın boyutu da bu düşünceleri desteklemektedir. Cumhurbaşkanlığı Strateji ve Bütçe Başkanlığı tarafından yayınlanan 12. Kalkınma Planında da mevzuatlarda gerek görülen değişikliklere sık sık değinilmiştir. (On İkinci Kalkınma Planı Resmi Web Sitesi, 2023)

Son olarak, 2019 ve 2022 yıllarında yapılan çalışmalarda artışın çevresel düzenlemelerden sonra olması, mevzuat değişikliklerinin toplumun çevresel konulara duyarlılığının arttırdığını ve bunun akademik araştırmalara doğrudan etkisi olduğunu düşündürmektedir. Gürültü konusundaki tez çalışmalarının zaman içindeki evrimi konuya disiplinler arası bir ilgi olduğunu göstermektedir. Bu alandaki araştırmaların, çevresel değişiklikler, toplumsal farkındalık ve mevzuat düzenlemeleri gibi faktörlerle nasıl şekillendiğini anlamak, gelecekteki çalışmalara yol gösterici olabilir.

Bu minvalde gürültü konusunda yapılan araştırmalarda disiplinler arası bir yaklaşım benimsemek, özellikle sosyal bilimlerin daha fazla dâhil edilmesi, bu alandaki araştırmalara derinlik kazandırabilir. Eğitim alanında yapılan tez çalışmalarının sayısını artırmak ve bu alandaki boşluğu doldurmak için öğrencilere daha fazla teşvik ve destek sağlanabilir. Gürültü konusundaki araştırmaların uzun vadeli etkilerini anlamak için düzenli izleme ve değerlendirme çalışmaları yapılmalıdır. Bu, alandaki değişiklikleri daha iyi anlamamıza ve gelecekteki stratejileri geliştirmemize yardımcı olabilir. Ek olarak mevzuat değişikliklerinin toplumsal farkındalığı artırdığı göz önüne alındığında, gürültü konusundaki bu tür düzenlemelerin devam etmesi ve toplumun çevresel konularda daha bilinçli olması teşvik edilmelidir.

SONUÇ VE ÖNERİLER

Bu araştırmanın konusu ile ilgili ilk çalışmanın 1984 yılında yapıldığı görülmüştür. Yoğunlukta olarak 2014-2023 yılları arasında araştırmaların yarısından fazlasının bu yıllar arasında yapıldığı bulunmuştur. Çalışmaların dörtte üçünün fen bilimleri enstitüsünde, en çok yüksek lisans düzeyinde olduğu bulunmuştur. Tezlerin dili incelendiğinde; dörtte bir oranında İngilizce dilinde olduğu görülmüştür. Gürültü çalışmalarının son yıllarda ağırlık kazandığı, konunun alansal olarak çok geniş olduğu, lisansüstü çalışmalar açısından özellikle deneysel ve tanımlayıcı çalışmaların daha fazla yapılması ayrıca çok faktörlü bir şekilde ele alınması gerektiğini, ülkemiz açısından ihtiyaç olduğu görülmektedir.

FOSİL YAKIT ENERJİ TÜKETİMİNİN SAĞLIK HARCAMALARI ÜZERİNDEKİ ETKİLERİ: TÜRKİYE ÜZERİNE BİR İNCELEME

THE EFFECTS OF FOSSIL FUEL ENERGY CONSUMPTION ON HEALTH EXPENDITURES: AN EMPIRICAL ANALYSIS FOR TURKEY

ÖZET

Günümüzde birçok ülke, enerji gereksinimlerinin büyük bir kısmını fosil yakıtlar aracılığıyla karşılamaktadır. Fosil yakıt enerji tüketimi kaynaklı iklim değişikliği ve hava kirliliği insan sağlığını için önemli bir çevresel tehdit oluşturur. Hava kirliliği, solunum yolu hastalıkları ve kronik sağlık sorunlarının başlıca nedenlerinden biridir. Geleneksel enerji kaynaklarının toplam enerji tüketimindeki payı azaldıkça, insan sağlığı üzerindeki olumsuz etkiler de azalacaktır. Bu nedenle, fosil yakıt enerji tüketiminin insan sağlığı dolayısıyla sağlık harcamaları üzerindeki etkisinin ampirik olarak analiz edilmesi önemlidir. Bu ampirik sonuçlar, politika yapıcılar, uluslararası toplum ve araştırmacılar için değerli bilgiler sağlayacaktır.

Bu çalışma, 1975'ten 2015'e kadar olan zaman serisi verilerini analiz ederek Türkiye'de fosil yakıt enerji tüketiminin sağlık harcamaları üzerindeki etkisini incelemeyi amaçlamaktadır. Ayrıca, kişi başı GSYİH ve enflasyon kontrol değişkenleri olarak eklenmiştir. Değişkenler arasındaki kısa ve uzun dönem ilişkisi araştırmak için Johansen eşbütünleşme testi ve hata düzeltme modeli (ECM) uygulanmıştır. Johansen kointegrasyon test sonuçları, değişkenler arasında bir eşbütünleşme ilişkisi olduğu göstermiştir. Elde edilen ampirik sonuçlar, fosil yakıt enerji tüketimi endeksindeki artışın uzun dönemde sağlık harcamaları üzerinde pozitif bir etki meydana getirdiğini göstermektedir. Uzun dönemde, fosil yakıt enerji tüketimindeki %1'lik bir artışın sağlık harcamalarını yaklaşık %8.66 oranında arttırdığı görülmektedir. Diğer taraftan, uzun dönemde enflasyon serisindeki artış sağlık harcamaları üzerinde negatif bir etkiye sahiptir. Sağlık harcamaları ile GSYİH arasında uzun dönemde bir ilişki tespit edilememiştir. Elde edilen bulgular, fosil yakıt enerji tüketiminin sağlık harcamaları üzerinde yarattığı olumsuz etkileri kanıtlayarak, sürdürülebilir enerji politikalarının hayata geçirilmesinin önemine işaret etmektedir. Bu sebeple, politika yapıcıların fosil yakıt tüketim oranını düşüren politikalar benimsemesi ve yenilenebilir enerji kaynaklarına yönelik yatırımların teşvik edilmesinin önemine dikkat çekilmektedir.

Anahtar Kelimeler: Fosil Yakıt Enerji Tüketimi, Sağlık Harcamaları, Johansen Eşbütünleşme Testi, Vektör Hata Düzeltme Modeli (VECM), GSYİH

ABSTRACT

Today, many countries meet a large portion of their energy needs through fossil fuels. Climate change and air pollution caused by fossil fuel energy consumption pose a significant environmental threat to human health. Air pollution is one of the main causes of respiratory diseases and chronic health issues. As the share of traditional energy sources in total energy consumption decreases, the adverse impacts on human health will also diminish. Therefore, empirically analyzing the impact of fossil fuel energy consumption on human health and, consequently, on healthcare expenditures is essential. These empirical results will provide valuable information for policymakers, the international community, and researchers.

This study aims to examine the impact of fossil fuel energy consumption on healthcare expenditures in Turkey by analyzing time series data from 1975 to 2015. Additionally, GDP per capita and inflation have been added as control variables. The Johansen cointegration test and error correction model (ECM) have been applied to investigate the short- term and long-term relationships among the variables. The Johansen cointegration test results indicated a cointegration relationship among the variables. The empirical results indicate that an increase in the fossil fuel energy consumption index has a positive effect on healthcare expenditures in the long term. In the long term, a 1% increase in fossil fuel energy consumption is observed to increase healthcare expenditures by approximately 8.66%. On the other hand, in the long term, an increase in the inflation series has a negative effect on healthcare expenditures. No relationship was found between healthcare expenditures and GDP in the long term. The findings demonstrate the adverse effects of fossil fuel energy consumption on healthcare expenditures, highlighting the importance of implementing sustainable energy policies. Therefore, it is emphasized that policymakers should adopt policies aimed at reducing fossil fuel consumption rates and promote investments in renewable energy sources.

Key Words: Fossil Fuel Energy Consumption, Healthcare Expenditures, Johansen Cointegration Test, Vector Error Correction Model (VECM), GDP

1. GİRİŞ

Enerji, ekonomik büyüme ve yaşam standartlarının iyileştirilmesi için temel bir unsurdur. Sanayi Devrimi, fosil yakıtların yaygın enerji kaynağı olarak kullanılmaya başlandığı ve enerji tüketiminin teknolojik gelişmelerle hızla arttığı bir dönüm noktasıdır. Özellikle kömür, buhar makinelerinin çalıştırılması için birincil enerji kaynağı olarak öne çıkmış ve 18. yüzyılda sanayileşmeyi mümkün kılmıştır. Ancak, fosil yakıt tüketiminin yaygınlaşmasıyla birlikte sera gazı emisyonları, özellikle karbondioksit (CO₂), artış göstermiştir. Bu durum, 21. yüzyılda küresel ısınmanın hızlanmasına ve iklim değişikliğinin ciddi bir boyut kazanmasına yol açmıştır (Ahiduzzaman ve Islam, 2011). Fosil yakıtların sınırlı doğası ve artan enerji talebi ise ülkeleri enerji politikalarını gözden geçirmeye ve yenilenebilir enerji kaynaklarına yönelmeye teşvik etmiştir.

İklim değişikliği ve artan sera gazı emisyonları, insan sağlığı üzerinde ciddi olumsuz etkiler yaratmaktadır. Hava kirliliği, solunum yolu hastalıkları ve diğer sağlık sorunlarını tetiklemekte, bu da sağlık sistemlerine yönelik mali yükü artırmaktadır. Bu etkiler, sadece bireylerin sağlık durumunu değil, aynı zamanda ekonomiyi ve sağlık harcamalarını olumsuz yönde etkilemektedir (Güzel ve Özer, 2022). Bu bağlamda, enerji tüketimindeki artışın çevresel ve sağlık üzerindeki etkileri, ülkelerin enerji politikalarını sürdürülebilirlik ve yenilenebilir enerji kaynaklarına geçiş yönünde değiştirmelerini zorunlu kılmaktadır. Fosil yakıt kullanımını azaltarak ve yenilenebilir enerji teknolojilerinin çeşitli biçimlerde kullanımını teşvik ederek iklim değişikliğinin önüne geçmek, hava kirliliğine maruz kalmayı düşürerek yakın vadede sağlık koşullarını iyileştirebilir (Haines vd., 2006).

Dünyada meydana gelen farklı krizler, geleneksel enerji kaynaklarından uzaklaşıp yenilenebilir enerji kaynaklarına yönelme sürecini hızlandırmıştır. Özellikle 1973 Petrol Krizi, Almanya, Fransa ve İngiltere gibi Avrupa ülkelerinin alternatif enerji kaynaklarını değerlendirmeye başlamasına öncülük etmiştir (Balkır, 2016). Ayrıca, enerji konusunda dışa bağımlı ülkeler, enerji güvenliği sorunlarıyla karşılaşmakta ve bu durum, söz konusu ülkelerin alternatif enerji kaynaklarına yönelmesine olanak sağlamaktadır. 1979 yılında gerçekleşen İran Devrimi'nin etkisiyle gerçekleşen ikinci Petrol Krizi sebebiyle petrol arzındaki kesintiler, enerji fiyatlarının tekrar yükselmesine neden olmuştur. Bu olay, enerji tüketiminde çeşitliliği artırma ve yenilenebilir enerjiye yönelik yatırımları hızlandırmıştır. Bununla birlikte, Kyoto Protokolü (1997) ve Paris İklim Anlaşması (2015) gibi uluslararası düzenlemeler, fosil yakıtlardan uzaklaşarak yenilenebilir enerji kaynaklarına geçişi teşvik etmiştir. Ayrıca, 2022'de başlayan Rusya-Ukrayna savaşı, Avrupa'nın Rus gazına olan bağımlılığını azaltma çabalarını tetiklemiş ve yenilenebilir enerji projelerine yönelik yatırımları hızlandırmıştır. Son dönemde yaşanan Covid-19 Pandemi sürecinde fosil yakıt tüketimi düşerken yenilenebilir enerji projelerine yapılan yatırımlar nispeten daha az etkilenmiştir. Bu durum, enerji dönüşümünde yenilenebilir kaynaklara daha fazla önem verilmesini sağlamıştır. Bu krizlerin ortak sonucu, enerji arz güvenliğini sağlamak ve çevresel sürdürülebilirliği artırmak amacıyla yenilenebilir enerji kaynaklarının stratejik bir seçenek haline gelmesidir.

Grafik 1: Kişi Başı Sağlık Harcamaları, Türkiye (OECD - 2024)

Grafik 1'de Türkiye'nin kişi başına düşen sağlık harcamaları serisi gösterilmektedir. Grafik 1, kişi başına düşen sağlık harcamalarının zaman içinde sürekli bir artış gösterdiğini ortaya koymaktadır. Bu durum, ülkede gelir düzeyinin artışı ile doğrudan ilişkilendirilebilir. Ayrıca, kamu ve özel sektörün sağlık altyapısını, teknoloji ve hizmet kalitesini artırmak amacıyla yaptığı yatırımlar, kişi başına düşen harcamaların yükselmesine katkıda bulunmuştur. Bununla birlikte, nüfusun yaşlanması, kronik hastalıkların artışı ve yaşam süresinin uzaması gibi demografik değişimler de sağlık harcamalarını artırıcı bir etken olabilir. Bunun dışında, sağlık harcamalarının artışı, sosyal güvenlik sistemindeki genişlemelerle bağlantılı olabilir. Örneğin, Türkiye'de 2000'li yıllardan itibaren Genel Sağlık Sigortası'nın hayata geçmesi ve sağlık hizmetlerinin daha geniş bir kitleye sunulması bu harcamaların artmasını desteklemiştir. 1975'te yaklaşık 42 dolar olan kişi başı sağlık harcaması, 2015 yılında yaklaşık bin dolar artış ile 1040 dolar olarak gerçekleşmiştir. Ayrıca, 1975-1995 yılları arasında kişi başı sağlık

harcamaları düşük oranda bir artış göstermesine karşın, 1995-2015 yılları arasında yüksek oranda bir artış kaydedilmiştir.

Türkiye'nin hızla büyüyen ekonomisi, artan enerji ihtiyacıyla ön plana çıkarken, bu ihtiyacın büyük ölçüde yenilenemez kaynaklardan karşılanması da dikkat çekmektedir (Karaaslan ve Çamkaya, 2022). Grafik 2'de Türkiye'nin fosil yakıt (toplamın %'si) enerji tüketimi gösterilmektedir.

Grafik 2: Fosil Kaynak Enerji Tüketimi, Türkiye (Dünya Bankası - 2024)

Grafik 1, fosil kaynak enerji tüketiminin toplam enerji tüketimi içerisindeki payının 1975'ten itibaren artış gösterdiğini ortaya koyuyor. Bu durum, Türkiye'nin ekonomik büyüme ve sanayileşme süreçlerinde ağırlıklı olarak fosil yakıtlara bağımlı olduğunu yansıtmaktadır. Bu dönemde enerjiye olan talep artarken, alternatif yenilenebilir enerji kaynaklarına yeterince yatırım yapılmadığı gözlemlenebilir. 2005 sonrasında, fosil kaynakların toplam enerji tüketimindeki payı azalma eğilimine girmiştir. Bu durum, yenilenebilir enerji kaynaklarına yapılan yatırımların artmaya başlaması ve enerji verimliliğine yönelik politikaların devreye alınmasıyla ilişkilendirilebilir. Ayrıca, 2010'lu yıllarda fosil kaynaklardan kaynaklanan çevresel etkilerin daha çok gündeme gelmesi, politika yapıcıların yenilenebilir enerji kaynaklarına yönelmesini teşvik etmiş olabilir. 2015 yılı itibarıyla fosil yakıtların toplam enerji tüketimi içerisindeki payının %88 civarında olması, Türkiye'nin enerji tüketiminde hâlâ büyük ölçüde fosil kaynaklara bağımlı olduğunu göstermektedir. Bu bağımlılık, ithalat giderlerini artırarak cari açık üzerinde baskı oluşturabilir ve enerji güvenliği risklerini gündeme getirebilir. Yüksek fosil yakıt tüketimi, karbon salınımını artırarak çevresel bozulmaya katkıda bulunabilir.

2. LİTERATÜR

Günümüzde fosil enerji kaynakları, ekonomilerin temel enerji kaynakları arasında yer alırken, tüketimleri çevresel ve sağlık açısından kritik olumsuz sonuçlara sebep olmaktadır (Çetin ve Türeçe, 2024). Hava kirliliği, canlı ve cansız varlıkları etkileyerek yalnızca belirli bir bölgeyi değil, atmosfer yoluyla tüm dünyayı tehdit eden küresel bir sorundur (Güzel ve Özer, 2022). Ayrıca, fosil yakıtların (kömür, petrol ve doğalgaz gibi) yanması sonucu ortaya çıkan kirleticiler, hava kirliliğine sebep olup solunum, kalp ve kronik hastalıkların artmasına neden olmakta, bu da sağlık hizmetlerine olan talebi ve sağlık harcamalarını arttırmaktadır. Bu durum, sağlık sistemleri üzerinde baskı oluşturarak fosil yakıt tüketiminin sürdürülmesi

konusunda önemli endişelere yol açmaktadır. Bu noktada, sürdürülebilir enerji politikalarının uygulanması ve fosil yakıt enerji tüketiminin azaltılması, sağlık harcamalarının kontrol altına alınması ve sağlık sistemleri üzerindeki baskının hafifletilmesi için belirleyici bir öneme sahiptir (Sial vd., 2022).

Çetin ve Türeçe (2024), Analitik Hiyerarşi Süreci (AHP) ve TOPSIS yöntemlerinden yararlanılarak, 2010-2022 dönemi için Türkiye’de fosil yakıt tüketimi, fosil yakıt teşvikleri, Gayri Safi Yurt İçi Hasıla (GSYİH) ve fosil yakıt kaynaklı CO₂ emisyonlarının sağlık harcamaları üzerindeki etkilerini detaylı bir şekilde incelemiştir. AHP yöntemine göre, fosil yakıt tüketimi sağlık harcamaları üzerinde en önemli faktör olarak tespit edilmiştir. TOPSIS analizine göre, 2017 yılı, fosil yakıtların sağlık harcamalarına en fazla etki yaptığı yıl olarak öne çıkmış, bunu sırasıyla 2018 ve 2016 yılları izlemiştir. Bu sonuçlar, Türkiye’de fosil yakıt kullanımının sağlık harcamalarına olan olumsuz etkilerini açıkça ortaya koymakta ve sürdürülebilir enerji politikalarının gerekliliğine dikkat çekmektedir.

Güzel ve Özer (2022) Türkiye’de hava kirliliğine bağlı sağlık sorunlarının sağlık harcamaları üzerindeki mali etkilerinin analiz edilmesi hedeflenmiştir. 2009-2019 dönemine ait veriler, grafik ve tablolar aracılığıyla sunulmuş ve analiz edilmiştir. Yapılan analizler sonucunda, Türkiye’de hava kirliliğinin sağlık harcamalarına neden olduğu maliyetlerin en düşük 25,845 milyon TL, en yüksek ise 52,492 milyon TL arasında değiştiği tespit edilmiştir.

Raihan vd. (2022), Dinamik En Küçük Kareler (DOLS) tekniği kullanılarak Bangladeş’te karbon salımı, enerji kullanımı ve sağlık harcamaları arasındaki ilişkiyi 2000’den 2020’ye kadar olan zaman serisi verileri ile analiz etmiştir. Bulgular, karbon dioksit emisyonlarında ve fosil yakıt enerji kullanımında %1’lik bir artışın sırasıyla sağlık harcamalarını %0,95 ve %2,67 oranında artıracakını ortaya koymuştur. Ayrıca, yenilenebilir enerji kullanımında %1’lik bir artışın uzun vadede sağlık harcamalarını %1,44 oranında azaltabileceği belirtilmiştir.

Saleem vd. (2022), 2008-2018 yılları arasındaki verileri ile Panel vektör otoregresyon (VAR) ekonometrik yaklaşımı ve genel moment yöntemi (GMM) kullanılarak OECD bölgesinde (38 ülke) fosil kaynaklardan elde edilen yenilenemeyen enerji üretimi, sağlık harcamaları ve karbondioksit (CO₂) emisyonları arasındaki dinamik ilişkileri incelemiştir. Analiz sonuçları, fosil kaynaklardan elde edilen enerji üretiminin sağlık harcamaları üzerinde pozitif bir etkiye sahip olduğunu ortaya koymuştur.

Xing vd. (2019), fosil enerji kullanımının ve kirlenici emisyonların halk sağlığı üzerindeki etkilerini küresel bir çerçevede değerlendirmek amacıyla, 1995-2015 yılları arasında yüksek GSYİH seviyesine ve fosil enerji tüketimine sahip 33 ülkeyi sabit etkiler modeli kullanarak incelemiştir. Ampirik sonuçlar, toplam fosil enerji tüketiminin nüfusun yaşam beklentisi (LEP) üzerinde olumlu bir etkisi olduğunu, ancak kirlenici emisyonların (PM₁₀ konsantrasyonu ve sera gazı ölçüğü) LEP üzerinde olumsuz bir etkiye sahip olduğunu göstermektedir.

Türkiye özelinde, fosil enerji tüketimi ile sağlık harcamaları arasındaki ilişkiyi araştıran çalışmalar oldukça sınırlıdır ve bu konu literatürde yeterince ele alınmamıştır. Mevcut literatür incelendiğinde, bu çalışmanın kapsadığı dönem, kullanılan yöntem ve kontrol değişkenleri açısından diğer araştırmalardan ayrıştığı görülmektedir. Bu özellikleriyle, çalışmanın literatüre katkı yapması beklenmektedir.

3. VERİ ve YÖNTEM

Çalışmada, 1975-2015 dönemine ait sağlık harcamaları (kişi başı), fosil yakıt enerji tüketimi (toplamın %’si), GSYİH (kişi başı) ve enflasyona (tüketici fiyatları, yıllık %) ilişkin yıllık veriler kullanılmıştır. Fosil yakıt enerji tüketimi verilerinin kısıtlı olmasından dolayı, çalışma için veriler 2015 yılına kadar seçilmiştir. Sağlık harcamalarına ait veri kümesi Ekonomik

Kalkınma ve İş Birliği Örgütü (Organisation for Economic Co-operation and Development - OECD)'den, fosil yakıt enerji tüketimi (kömür, petrol, petrol ve doğal gaz ürünleri), GSYİH ve enflasyona ait veriler Dünya Bankası veri tabanından alınmıştır. Analizde, tüm değişkenlerin doğal logaritması alınmış değerleri kullanılmıştır.

Tablo 2: Değişkenler ile İlgili Açıklayıcı Bilgiler

Değişken	Tanım	Kaynak
LNHE	Sağlık Harcamaları (kişi başı, ABD \$) (doğal logaritma)	OECD
LNFFEC	Fosil Yakıt Enerji Tüketimi (toplamın %'si) (doğal logaritma)	Dünya Bankası
LNGDP	GSYİH (kişi başı, ABD \$) (doğal logaritma)	Dünya Bankası
LNINF	Enflasyon (tüketici fiyatları, yıllık %) (doğal logaritma)	Dünya Bankası

Tüm seriler 1975 – 2015 dönemi verilerini kapsamaktadır.

Değişkenlere ilişkin özet istatistiksel bilgiler aşağıda Tablo 3'te gösterilmektedir. Tablo 3 incelendiğinde ortalama, medyan, maksimum ve minimum değerler kişi başı GSYİH (LNGDP) için kişi başı sağlık harcamaları (LNHE), fosil kaynak enerji tüketimi (LNFFEC) ve nispi fiyata ve enflasyona (LNINF) göre daha yüksek düzeydedir. LNHE, LNFFEC ve LNINF serilerinin sola çarpık ya da negatif çarpık; LNGDP serisi ise sağa çarpık veya pozitif çarpık oldukları görülmektedir. Çalışmada analiz edilen tüm seriler normal dağılıma göre daha basıktır. Bu sonuçlara göre serilerin normal olmadığı ve serilerin normal dağıldığını varsayan boş hipotezi test eden Jarque-Bera testi ile de kanıtlanmıştır.

Tablo 3: Değişkenler ile İlgili Tanımlayıcı İstatistikler

	LNHE	LNFFEC	LNGDP	LNINF
Ortalama	5.455	4.402	8.132	3.395

Sağlık harcamaları, fosil yakıt enerji tüketimi, GSYİH ve enflasyon serileri arasındaki uzun dönemde ilişkisini araştırmak için Johansen eşbütünleşme testi ve kısa dönem ilişkileri Hata Düzeltme Modeli (ECM) ile analiz edilmiştir. Çalışmada kullanılan serilerin birim kök test analizleri Augmentred Dickey-Fuller (ADF) ve Phillips-Perron (PP) Birim Kök Testi ile gerçekleştirilmiştir.

3.1. BİRİM KÖK TESTİ

Birim kök testi, bir zaman serisinin durağan olup olmadığını, yani serinin ortalaması, varyans ve otokovaryansın zamanla sabit kalıp kalmadığını belirlemek için kullanılan bir yöntemdir. Durağan olmayan seriler, uzun dönem analizlerinde güvenilir sonuçlar vermeyebilir. Bu nedenle birim kök testleri, özellikle ekonomik ve finansal analizlerde, serinin modellenmeye

uygun olup olmadığını belirlemek için önemli bir araçtır. Zaman serisi analizinde anlamlı sonuçlar elde edebilmek için, kullanılan değişkenlerin durağanlık koşulunu sağlaması gereklidir. Durağanlık testi, serilerin birim kök içerip içermediklerini belirlemeye yönelik bir testtir.

Bu çalışmada, serilerin durağanlığını test etmek için literatürde en yaygın kullanılan Augmented Dickey Fuller (ADF) ve Phillips-Perron (PP) testleri kullanılmıştır. ADF birim kök testi için test süreci şu şekilde belirtilir:

$$\Delta Y_t = a + \delta_t + \gamma Y_{t-1} + \sum_{i=1}^p \lambda \Delta Y_{t-1} + \varepsilon_t \quad (1)$$

Burada; Y_t , bu modelde t zamanında dikkate alınan bir zaman serisi değişkenidir, t bir zaman eğilimi değişkenidir; Δ ilk fark operatörünü belirtir, ε_t hata terimidir; p, ilk farklı terimler ε_t 'yi beyaz bir gürültü yapacak şekilde seçilen her değişkenin en uygun gecikme uzunluğudur. Bu nedenle, ADF, birim kökünün olmadığı boş hipotezi test eder. Yani:

$H_0 : \gamma = 0$ (Birim kök vardır, seri durağan dışıdır.)

$H_1 : \gamma < 0$ (Birim kök yoktur, seri durağandır.)

Hesaplanan test istatistiği ilgili kritik değerlerden küçük olduğunda boş hipotez (H_0) reddedilir, yani seri durağandır sonucuna varılır. Aksi durumda, hesaplanan test istatistiği ilgili kritik değerlerden büyük olduğunda yokluk hipotezi reddedilemez, sonuç olarak serinin birim kök içerdiği yani durağan olmadığı anlamına gelir.

3.2. EŞBÜTÜNLEŞME TESTİ

Eşbütünlük, uzun dönemde birbirleriyle ilişkili ekonomik zaman serilerinin, kısa dönemli dalgalanmalarına rağmen belirli bir dengeye doğru hareket etmesi durumunu tanımlar. Tüm seriler birinci düzeyde bütünlük olduğunda, Johansen eşbütünlük testi ile seriler arasında uzun dönemli bir ilişki olup olmadığı test edilir. Aksi bir durumda bu analiz yöntemi kullanılamaz (Mert ve Çağlar, 2023). Çalışmada kullanılan tüm seriler birinci seviyede durağan olmasından dolayı değişkenler arasındaki uzun dönemli ilişkinin tespiti için Johansen'in (1988) geliştirdiği eşbütünlük testi kullanılmıştır.

Johansen'in eşbütünlük testi, Vektör Otoregresif (VAR) modeline dayalı olarak gerçekleştirilir (Tarı ve Yıldırım, 2009). Johansen yöntemine göre X_t , (4) eşitliğindeki gibi tanımlanan bir sınırlanmamış vektör otoregresif süreç olsun (Özdemir ve Öksüzler, 2006; Jordan ve Eita, 2007):

$$X_t = \mu + \Pi_1 X_{t-1} + \dots + \Pi_k X_{t-k} + \varepsilon_t \quad (2)$$

X_t , n tane değişkenden oluşan (n x 1) boyutlu vektör; Π (nxn) boyutlu tahmin edilecek parametreler vektörü ve k, gecikme sayısını ifade etmektedir. Denklem (2), VECM olacak şekilde (3) eşitliğindeki gibi yeniden yazılabilir (Jordan ve Eita, 2007).

$$\Delta X_t = \mu + \Gamma_1 \Delta X_{t-1} + \dots + \Gamma_{k-1} \Delta X_{t-k+1} + \Pi X_{t-k} + \varepsilon_t \quad (3)$$

Burada, $\Gamma_i = -(I - \Pi_1 - \dots - \Pi_i)$, (i=1, ..., k-1); $\Pi = -(I - \Pi_1 - \dots - \Pi_k)$; μ , sabit terim; ε_t , hata vektörünü temsil eder. Δ ise, serilerin farkı alınmış biçimini ifade etmektedir. (nxn) boyutlu ve r derecesinde olan Π matrisi, uzun dönem ilişki katsayılarını temsil etmektedir. Eşbütünlük analizinde amaç, Π matrisinin rankının (r) belirlenmesi ile eşbütünlük vektörlerinin sayısını tespit etmektir. Eğer rank 1'e eşitse, değişkenler arasında tek bir eşbütünlük ilişkisinin mevcut olduğuna karar verilir. Ancak, rankın 1'den büyük olması durumunda, değişkenler arasında birden fazla eşbütünlük ilişkisi bulunduğu anlamına gelir (Tarı ve Yıldırım, 2009).

Johansen eşbütünleşme testinde, eşbütünleşik bir ilişkinin varlığı “iz” ve “maksimum özdeğer” istatistikleri aracılığıyla belirlenir. Bu iki istatistik, serilerin birlikte hareket edip etmediğini ve uzun vadeli denge ilişkisi olup olmadığını ortaya koyar. Bu süreçte öncelikle, rankın r'ye eşit veya ondan küçük olduğunu ifade eden temel hipotez, alternatif hipotez ile karşılaştırılır. Karşılaştırma, iz ve maksimum özdeğer test istatistiklerinin kritik değerlerle kıyaslanmasıyla yapılır. Eğer test istatistikleri kritik değerden büyükse, temel hipotez reddedilir ve alternatif hipotez kabul edilir. İkinci aşamada ise rankın r'ye eşit olduğunu söyleyen temel hipotez ile r+1'e eşit olduğunu öne süren alternatif hipotez karşılaştırılarak test devam eder.

3.3. HATA DÜZELTME MODELİ

Eşbütünleşme ilişkisi tespit edilen değişkenler arasındaki nedensellik testi, ECM (Error Correction Model) aracılığıyla gerçekleştirilmektedir. Çalışmada ECM'nin işleyişi (4), (5), (6) ve (7) denklemleri ile ifade edilmiştir.

$$\begin{aligned} \Delta LNHE_t = & a_0 + \sum_{i=1}^n a_{1i} \Delta LNHE_{t-i} + \sum_{i=1}^n a_{2i} \Delta LNFFEC_{t-i} + \sum_{i=1}^n a_{3i} \Delta LNGDP_{i-1} \\ & + \sum_{i=1}^n a_{4i} \Delta LNINF_{t-i} + \lambda ECM_{t-1} + u_t \end{aligned} \quad (4)$$

$$\begin{aligned} \Delta LNFFEC_t = & b_0 + \sum_{i=1}^n b_{1i} \Delta LNFFEC_{t-i} + \sum_{i=1}^n b_{2i} \Delta LNHE_{t-i} + \sum_{i=1}^n b_{3i} \Delta LNGDP_{t-i} \\ & + \sum_{i=1}^n b_{4i} \Delta LNINF_{t-i} + \theta ECM_{t-1} + v_t \end{aligned} \quad (5)$$

$$\begin{aligned} \Delta LNGDP_t = & c_0 + \sum_{i=1}^n c_{1i} \Delta LNGDP_{t-i} + \sum_{i=1}^n c_{2i} \Delta LNHE_{t-i} + \sum_{i=1}^n c_{3i} \Delta LNFFEC_{t-i} \\ & + \sum_{i=1}^n c_{4i} \Delta LNINF_{t-i} + \lambda ECM_{t-1} + \varepsilon_t \end{aligned} \quad (6)$$

$$\begin{aligned} \Delta LNINF_t = & d_0 + \sum_{i=1}^n d_{1i} \Delta LNINF_{t-i} + \sum_{i=1}^n d_{2i} \Delta LNHEC_{t-i} + \sum_{i=1}^n d_{3i} \Delta LNFFEC_{i-1} \\ & + \sum_{i=1}^n d_{4i} \Delta LNGDP_{i-1} + \phi ECM_{t-1} + \omega_t \end{aligned} \quad (7)$$

Regresyon denklemlerinde (4, 5, 6 ve 7) yer alan ECM_{t-1} , eşbütünleşme denklemlerinden türetilmiş hata terimlerinin bir dönem gecikmeli halini temsil eder ve bu terim hata düzeltme katsayısı olarak ifade edilir. Hata düzeltme değişkeninin katsayılarının (λ , θ , γ , ω) istatistiksel açıdan anlamlı çıkması, uzun dönem dengesinden kısa dönem sapmaların varlığını gösterir (Polat ve Günay, 2012). Hata düzeltme katsayısının modelde çalışması için negatif ve istatistiksel açıdan anlamlı olması beklenir. ECM'de, bağımsız değişkenlerin gecikmeli değerlerine ait katsayıların F-istatistiğinin anlamlı bulunması veya hata düzeltme teriminin t-istatistiğinin anlamlı çıkması, seriler arasında nedensellik ilişkisinin varlığını gösterir (Aktaş, 2009). Bu durum, uzun dönem dengeye yönelik bir hareketin var olduğunu ifade eder.

4. AMPİRİK BULGULAR

Sağlık harcamaları, fosil yakıt enerji tüketimi, GSYİH ve enflasyon serileri arasındaki uzun dönemli bir ilişkinin varlığı araştırılmadan önce tüm serilerin durağanlık testi yapılmıştır. Durağanlık testi için uygun gecikme sayıları, mutlak değerce en düşük olan Schwarz bilgi kriterine göre seçilmiştir. Tablo 2’deki ADF ve PP birim kök testi sonuçlarından görüldüğü üzere, lnhe, lnffec, lngdp ve lninf serileri hem sabit hem de sabit ve trend modelde için elde edilen ADF ve PP test istatistik değerleri McKinnon %1 kritik değerlerinden daha küçüktür. Bu duruma göre, değişkenlerin tamamının düzeyde birim köke sahip olduğu ifade edilebilir.

Tablo 2: Birim Kök Testleri Sonuçları

Genişletilmiş Dickey-Fuller (ADF) Birim Kök Testi				
Değişkenler	Sabit		Sabit ve Trend	
	Düzye	1. Fark	Düzye	1. Fark
LNHE	-0.870 (0.787)	-8.084 (0.000)*	-2.568 (0.296)	-8.190 (0.000)*
LNFFEC	-1.341 (0.601)	-5.836 (0.000)*	-1.123(0.912)	-5.900 (0.000)*
LNGDP	-0.488 (0.883)	-6.784 (0.000)*	-2.406 (0.371)	-6.703 (0.000)*
LNINF	-0.795 (0.809)	-5.644 (0.000)*	-2.013 (0.577)	-5.894 (0.000)*

Phillips-Perron (PP) Birim Kök Testi				
Değişkenler	Sabit		Sabit ve Trend	
	Düzye	1. Fark	Düzye	1. Fark
LNHE	-0.902 (0.777)	-7.909 (0.000)*	-2.699(0.242)	-7.995 (0.000)*
LNFFEC	-1.342 (0.600)	-5.830 (0.000)*	-1.141 (0.909)	-5.900 (0.000)*
LNGDP	-0.488 (0.883)	-6.784 (0.000)*	-2.480 (0.336)	-6.702 (0.000)*
LNINF	-0.880 (0.784)	-5.637 (0.000)*	-2.013 (0.577)	-5.898 (0.000)*

* %1 istatistiksel anlamlılık seviyesini belirtir.

Tablo 2’den görüldüğü gibi serilerin birinci dereceden farkları alındığında, “birim kök vardır” yokluk hipotezi %1 düzeyinde reddedilmektedir. Bu sonuca göre, ADF ve PP testlerine göre ihracat gelirleri, sağlık harcamaları, fosil yakıt enerji tüketimi, GSYİH ve enflasyon serilerinin birinci farkı alındığında durağan hale gelmiştir. Dolayısıyla, birim kök testi sonuçları bu dört değişkenin birinci dereceden bütünleşik, yani I(1) seriler olduklarını göstermektedir.

Tüm değişkenlerin aynı seviyede durağan oldukları belirlendikten sonra, uzun vadeli denge ilişkisini incelemek amacıyla eşbütünleşme analizi uygulanmıştır. Bütün serilerin birinci dereceden bütünleşik olması, uygun nedensellik testinin Johansen test, olacağını göstermektedir. Johansen testinin kullanılabilmesi için VAR modelinin doğru kurgulanmış olması gerekir. Dolayısıyla Johansen testine geçmeden önce uygun gecikmenin tespit edilmesi önemlidir. Optimum gecikme uzunluğuna ilişkin test sonuçları Tablo 3’te gösterilmiştir.

Tablo 3: Gecikme Uzunluğunun Tespiti

Gecikme	LogL	LR	FPE	AIC	SC	HQ
0	11.99166	NA	7.72E-06	-0.42061	-0.24824	-0.35928
1	162.5524	261.5002*	6.52e-09*	-7.502757*	-6.640869*	-7.196104*
2	173.4218	16.59019	8.81E-09	-7.23273	-5.68133	-6.68075
3	187.8015	18.92061	1.04E-08	-7.14745	-4.90654	-6.35015

* Uygun olan gecikme uzunluğunu işaret etmektedir.

Tablo 3'teki sonuçlara göre, tüm bilgi kriterlerine göre uygun gecikme uzunluğunun 1 olduğu görülmektedir. Buna göre, gecikme uzunluğu bir (1) olarak belirlendiği için VAR(1) modeli tahmin edilmiştir. Model tahmin edildikten sonra, modelin durağan olup olmadığını belirlemek amacıyla Otoregresif Süreç (AR) karakteristik polinomu birim çember testine tabi tutulmuş ve bu testin sonuçlarını gösteren birim çember, aşağıdaki Şekil 1'de sunulmuştur.

Şekil 1: AR Karakteristik Polinomunun Ters Kökleri

Şekil 1'e bakıldığında, tüm AR karakteristik polinomunun ters kökleri çemberin sınırları içinde yer almaktadır. Karakteristik köklerin tamamının çemberin içinde yer alması, oluşturulan modelinin durağan bir yapıda olduğunu göstermektedir. Bu sonuçlardan sonra, analizin bir sonraki aşamasında VAR(1) modeline otokorelasyon ve değişen varyans testi sınamaları yapılmıştır. Bu sınamalar testlerinden elde edilen bulgular, aşağıda Tablo 4'te gösterilmiştir.

Tablo 4: Tanısal Sınama Test Sonuçları

Gecikme	Otokorelasyon LM Testi		White Değişen Varyans Testi	
	LM İstatistiği Değeri	Olasılık Değeri	Ki-Kare (X^2)	Olasılık Değeri
1	18.162	0.31	100.599	0.06
2	14.273	0.58		

Tablo 4'te görüldüğü üzere, otokorelasyon LM testinin birinci gecikmeye göre olasılık değeri %5 önem seviyesinin olasılık değerinden büyük ($p=0.31>0.05$) olduğu için boş hipotez reddedilememektedir, dolayısıyla tahmin edilen modelde otokorelasyon sorunu yoktur sonucuna varılmaktadır. White değişen varyans olasılık değeri de %5 önem seviyesinin olasılık değerinden büyük ($p=0.06>0.05$) olduğu için boş hipotez reddedilememektedir, yani tahmin edilen modelde değişen varyans sorununun da olmadığı sonucu çıkmaktadır. Sonuç olarak tahmin edilen model sınamalar testlerinden geçmiş olup bir sonraki aşamada kurulan VAR(1) modeline Johansen eşbütünleşme testi uygulanacaktır.

Johansen eşbütünleşme testi sonuçları Tablo 5'e verilmiştir. Tablo 5'e göre, sıfır hipotezi, iz istatistiği (58.26) %5 önem seviyesinde kritik değerden (47.86) büyük olduğu için reddedilir. Yani, değişkenler arasında uzun dönemli ilişkinin olduğu sonucuna varılır. En fazla bir tane eşbütünleşme vardır hipotezini reddedilememektedir. Benzer şekilde, Tablo 5'e göre, sıfır hipotezi, maksimum özdeğer istatistiği (29.22) %5 önem seviyesinde kritik değerden (27.58)

büyük olduğu için reddedilir. Yani, “Bağımlı ve bağımsız değişkenler arası uzun dönemli ilişki yoktur.” hipotezi reddedilir ve değişkenler arasında uzun dönemli ilişkinin olduğu sonucuna varılır. En fazla bir tane eşbütünleşme vardır hipotezini reddedilememektedir. Sonuç olarak, değişkenler arasında bir eşbütünleşme ilişkisi olduğu sonucuna ulaşılmaktadır. Bu durumda, Johansen Eşbütünleşme testine göre değişkenler arasında uzun dönemde hem iz hem de maksimum özdeğer istatistiğinde bu ilişkinin olduğu görülmektedir.

Tablo 5: Johansen Eşbütünleşme Testi Sonuçları

H ₀ Hipotezi	Özdeğer	İz İstatistiği	Kritik Değer (0.05)	Olasılık Değeri**	Maksimum Özdeğer İstatistiği	Kritik Değer (0.05)	Olasılık Değeri**
$r = 0$	0.527231	58.26044*	47.85613	0.003921	29.21678*	27.58434	0.030607
$r \leq 1$	0.387244	29.04366	29.79707	0.060889	19.10174	21.13162	0.09392
$r \leq 2$	0.131696	9.941922	15.49471	0.285221	5.507301	14.2646	0.676891
$r \leq 3$	0.107482	4.434622	3.841465	0.035209	4.434622	3.841465	0.035209

* %5 önem seviyesini, ** MacKinnon-Haug-Michelis (1999) olasılık değerlerini ifade etmektedir.

Tablo 6'da Johansen eşbütünleşme testi sonucunda elde edilen ve uzun dönem esneklikleri ifade eden parametre tahminlerini temsil eden normalleştirilmiş eşbütünleşme katsayıları gösterilmiştir. Bu katsayılara göre, fosil yakıt enerji tüketiminin sağlık harcamaları etkisi esnekliği pozitifdir. Fosil yakıt enerji tüketimindeki artışların uzun dönemde sağlık harcamalarını attırdığı görülmektedir. Hesaplanan esneklik etkisine göre, fosil yakıt enerji tüketimindeki %1'lik bir artışın sağlık harcamalarını yaklaşık %8.66 oranında arttırdığı sonucuna varılabilir. Diğer taraftan, enflasyonun sağlık harcamaları etkisi esnekliği negatiftir. Enflasyondaki artışların uzun dönemde sağlık harcamalarını düşürdüğü anlaşılmaktadır. Esneklik etkisine göre, enflasyondaki %1'lik bir artışın sağlık harcamalarını yaklaşık %0.17 oranında azalttığı söylenebilir. Sonuçlara göre, fosil yakıt enerji tüketimi serisi sağlık harcamaları serisi ile pozitif ilişkide ve enflasyon serisi sağlık harcamaları serisi ile negatif ilişkide olup, teorik beklentileri doğrulamaktadır. Kişi başına GSYİH ise t-istatistiği anlamlı sonuç vermemektedir. dolayısıyla, uzun dönemde sağlık harcamaları ile GSYİH arasında bir ilişkinin varlığı tespit edilememiştir.

Tablo 6: Normalleştirilmiş Eşbütünleşme Katsayıları

LNHE(-1)	LNFFEC(-1)	LNGDP(-1)	LNINF(-1)	C
1000000	8.65788	0.20875	-0.17277	-33.77126
	(1.309055)	(0.161987)	(0.060065)	
	[-6.61384]*	[-1.28869]	[2.87640]**	

Parantez içi standart sapmaları ve köşeli parantez içi t istatistiklerini ifade etmektedir. * %1 seviyesinde anlamlı olduğunu, ** ise %5 seviyesinde anlamlı olduğunu göstermektedir.

Seriler arasındaki uzun vadeli bir ilişkinin varlığı tespit edildikten sonra, seriler arasındaki kısa vadeli dinamiklere bakılabilir. Seriler birinci düzeyde durağan ve eşbütünleşik olduğundan dolayı, nedensellik testi için VECM kullanılmıştır. (4), (5), (6) ve (7) numaralı denklemler sırasıyla sağlık harcamaları, fosil yakıt enerji tüketimi, GSYİH ve enflasyon serilerine uygulanmıştır. Modellerin uygun gecikme uzunluğu, Schwarz bilgi kriterine göre 1 olarak seçilmiştir.

Her bir bağımlı değişken için bağımsız değişkenlerin, sabit terimlerin, t-istatistik değerleri ve vektör hata düzeltme modeli terimlerinin katsayıları yer almaktadır (Tablo 7). Bağımsız değişkenlerin katsayılarının anlamlı olması, değişkenler arasında kısa vadeli nedensellik bulunduğunu ifade ederken, hata düzeltme modeli terimlerinin katsayılarının anlamlı olması, uzun dönem etkinin varlığını göstermektedir. Seriler arasında kurulan hata düzeltme mekanizması sonuçları Tablo 7’de verilmiştir. Elde edilen sonuçlara göre, sadece D(LNHE)’nin bağımlı değişken olduğu denklem için hata düzeltme teriminin (ECT) katsayı negatif değere sahip ve 1’den küçük olup %5 anlamlılık düzeyinde anlamlı bulunmuştur.

Tablo 7: Vektör Hata Düzeltme Modeli Sonuçları

Köşeli parantez içi t istatistiklerini ifade etmektedir. * %5 seviyesinde anlamlı olduğunu göstermektedir.

VECM sonuçlarına göre, yalnızca ECT katsayısının anlamlı bulunması bile fosil yakıt enerji tüketimi, GSYİH ve enflasyonun sağlık harcamalarına neden olduğu anlaşılmaktadır. Ayrıca, D(LNINF)’nin bağımlı değişken olduğu model için sağlık harcamaları ile enflasyon arasında, uzun dönem olduğu gibi, kısa dönemde de %5 anlam düzeyinde negatif anlamlı bir ilişki tespit edilmiştir. Elde edilen sonuçlar, ECT katsayısının negatif ve anlamlı bir değerde olması, kısa vadeli sapmaların dengeye doğru yakınsadığını ve dolayısıyla hata düzeltme mekanizmasının işlediğini göstermektedir. Teoriye göre, ECT negatif olduğunda, sağlık harcamaları denkleminin denge değerinin altında bulunmaktadır ve hata terimi, bir sonraki dönemde onu dengeye doğru yaklaştıracaktır. Hata düzeltme katsayısı önündeki negatif katsayı, kısa dönemdeki dengeden sapmaların uzun dönem denge durumuna dönüş hızını ifade etmektedir. ECT = -0.176238 değeri, kısa dönemli şok nedeniyle meydana gelen uzun dönem dengesinden sapmanın her yıl yaklaşık %18 oranında giderildiğini ifade etmektedir.

Elde edilen Johansen eşbütünleşme test sonuçlarına göre, Çetin ve Türeçe (2024) çalışması ile benzer şekilde, fosil yakıt enerji tüketimi sağlık harcamaları üzerinde en yüksek etkiye sahip olduğunu göstermiştir. Ayrıca, fosil enerji kaynakları tüketimi ile sağlık harcamaları arasında pozitif bir ilişkinin varlığını ortaya koyan Raihan vd. (2022) ve Saleem vd. (2022) çalışmaları benzerlik göstermektedir.

5. SONUÇ ve ÖNERİLER

Bu çalışma, Johansen eşbütünleşme testi ve vektör hata düzeltme modeli (VECM) yöntemlerini kullanarak, 1975-2015 dönemine ait zaman serisi verileri ışığında Türkiye'deki fosil yakıt enerji tüketiminin sağlık harcamaları üzerindeki etkilerini analiz etmeyi amaçlamıştır. Johansen eşbütünleşme testi sonuçları, değişkenler arasında uzun dönemli bir ilişki olduğunu ve fosil yakıt enerji tüketimindeki artışın sağlık harcamaları üzerinde olumlu bir etkide bulunduğunu ortaya koymaktadır. Buna göre, fosil yakıt enerji tüketimindeki %1'lik artışın, uzun vadede sağlık harcamalarını yaklaşık %8.66 oranında artırdığı belirlenmiştir. Öte yandan, uzun dönemde enflasyondaki artışın sağlık harcamaları üzerinde olumsuz bir etkisi olduğu, ancak sağlık harcamaları ile GSYİH arasında uzun vadeli bir ilişki bulunmadığı saptanmıştır. Model sonuçları, Türkiye'de fosil yakıt tüketiminin sağlık harcamalarına olan olumsuz etkilerini ortaya koyan Çetin ve Türeçe (2024) ile de uyumludur. Ayrıca, analizden elde edilen bulgular, Bangladeş'te karbon dioksit emisyonları ile fosil yakıt enerji kullanımı arasındaki pozitif ilişkinin sağlık harcamalarını etkilediğini gösteren Raihan vd. (2022) ve 38 OECD ülkesinde fosil kaynaklardan elde edilen enerji üretiminin sağlık harcamaları üzerinde pozitif bir etkiye sahip olduğunu kanıtlayan Saleem vd. (2022) çalışmalarıyla paralellik göstermektedir. Bu sonuçlar, fosil yakıt kullanımının sağlık harcamaları üzerindeki ekonomik ve çevresel etkilerini anlamada önemli bir dayanak oluşturmaktadır.

Yüksek düzeyde enerji üretimi ve tüketimi, çevre kirliliği oranlarının artmasına neden olurken, bunun bir sonucu olarak yüksek karbon dioksit (CO₂) emisyon oranları, sağlık sektöründeki harcamaların artmasına yol açmaktadır. Bu durum, çevresel kirliliğin insan sağlığı üzerindeki olumsuz etkileri ve buna bağlı sağlık sistemine yönelik maliyet artışlarını açıkça ortaya koymaktadır. Bu çalışmanın sonuçları, fosil yakıt tüketiminin sağlık harcamalarına olan olumsuz etkilerini vurgularken, sürdürülebilir enerji politikalarının uygulanmasının gerekliliğine dikkat çekmektedir. Bu bağlamda, politika yapıcıların fosil yakıt kullanımını azaltacak önlemler alması ve yenilenebilir enerji yatırımlarını destekleyerek bu alandaki gelişmeleri teşvik etmesi kritik bir önem taşımaktadır.

PETROLOGICAL INSIGHTS INTO LANDSLIDE PREVENTION: A CASE STUDY OF INDONESIA'S VOLCANIC, SEDIMENTARY, AND METAMORPHIC TERRAINS

Bilal Shah 1 , Dicky Muslim 1 , Raden Irvan Sophian 1

1 Department of Geological Engineering, Padjadjaran University, Sumedang Jatinangor, 45360, Indonesia

Abstract:

In Indonesia, landslides are a serious risk, especially in areas with active tectonics, high rainfall, and complex geological structures. Petrology, the study of rocks, plays a crucial role in identifying factors contributing to slope instability and preventing landslides. This paper examines the application of petrological studies in understanding landslides and developing prevention strategies in Indonesia, with a particular focus on the volcanic, sedimentary, and metamorphic terrains of Sumatra, Java, and Sulawesi. This study examines the connection between weathering processes, rock types, and landslide vulnerability using petrographic analysis, X-ray diffraction (XRD), and field investigations. The findings demonstrate that sedimentary rocks prone to weathering, compaction and volcanic rocks rich in clay minerals like smectite and kaolinite have a major role in slope collapses. On the other hand, metamorphic rocks with stronger lithological characteristics exhibit greater resistance to landslides. The study presents data on landslide prevention strategies that incorporate petrological insights, including slope reinforcement, drainage management, and selecting construction materials based on rock type. Furthermore, suggestions for combining petrology with geotechnical engineering in landslide-prone locations are given. The significance of using petrological data to reduce landslide risks and create long-term preventive policies is highlighted by this research, which will eventually lessen the impact of landslides in Indonesia's susceptible areas.

Keywords; Landslides, Indonesia, Petrology, Landslide Prevention

Introduction:

Landslides are one of Indonesia's most severe natural hazards due to its unique geological and climatic conditions. Indonesia, located at the convergence of several tectonic plates, experiences frequent seismic activity, which, combined with the country's high rainfall and tropical climate, makes it prone to landslides (Catchment, 2017). Landslides in Indonesia are often caused by earthquakes and high rainfall (Smebye, 2010). Landslides are common across Indonesia due in part to the country's geomorphological features, notably its varied lithology and steep slopes, which are particularly evident in areas like Java, Sumatra, and Sulawesi. It is essential to comprehend the petrological elements that impact slope stability to prevent landslides effectively (Fandy et al., 2024).

Petrology, which deals with the study of rocks and their characteristics, has long been recognized as a critical component in understanding slope stability and preventing landslides. How the earth reacts to outside influences like rainfall and seismic activity is directly influenced by the kind of rock, its mineral makeup, degree of weathering, and structural integrity.

Slope collapse is more prone to occur in volcanic rocks rich in clay minerals (such as kaolinite and smectite) because of their higher porosity and decreased shear strength. Landslides are also highly susceptible to sedimentary rocks, particularly those that have had severe weathering or compaction. In contrast, because of their stronger structural features, more stable lithologies, including metamorphic rocks, can improve slope stability (Sinarta et al., 2016).

Therefore, petrology plays a critical role in preventing landslides. Engineers and geologists may create focused plans to reduce the likelihood of landslides by knowing the lithological features

of various areas (Carvalho, 2023). Decisions on where to construct infrastructure, how to stabilize slopes, and how to operate water drainage systems to avoid landslides may all be made with the help of petroleum data. Furthermore, more efficient landslide prevention and mitigation techniques can result from merging petrological research with geotechnical engineering and other geological disciplines.

Indonesia has a very diversified geology that includes sedimentary, metamorphic, and volcanic terrains. Landslides are especially common in volcanic regions like Java and Sumatra because of the presence of heavily worn rocks that are rich in clay minerals (Kasus et al., 2013). Rainfall can readily penetrate the weakening rock in certain places, leading to slope collapses. Likewise, weathering and compaction of sedimentary rocks in areas such as West Sumatra can result in decreased slope stability (Figure 1). Conversely, areas featuring metamorphic rocks, such as sections of Sulawesi, exhibit far fewer landslide occurrences because of the more robust lithological features of these rocks (Figure 2).

The purpose of this research is to investigate the use of petrological data in Indonesian landslide prevention. This study aims to discover the petrological characteristics that lead to slope instability by a mix of X-ray diffraction (XRD), petrographic analysis, and field observations. It also provides recommendations for how these insights might be implemented to prevent landslides. The research focuses on three main regions: Sumatra, Java, and Sulawesi, each having various geological conditions. The report offers a thorough review of how petrology might be utilized to guide landslide prevention methods in Indonesia by analyzing the lithological properties of different locations and their accompanying landslide hazards.

Materials and Methods:

This study focuses on three distinct regions in Indonesia West Sumatra, Central Java, and South Sulawesi each representing different geological settings and landslide susceptibility. Thirty samples of rock, ten from each location on landslide-prone slopes in the area, were gathered by field surveys. These areas were chosen because they have a history of landslides and a diverse range of geological formations, making them ideal for studying the connection between slope instability and rock properties.

X-ray diffraction (XRD) and petrographic analysis techniques were used to evaluate the petrological parameters influencing landslide vulnerability. Thin-section microscopy was used in the petrographic analysis process to examine the mineral content, porosity, grain size, and level of weathering of the rock samples that were obtained. With an emphasis on the presence of clay minerals like kaolinite and smectite, which are known to decrease shear strength and contribute to slope instability, this approach gave important insights into the texture and structural integrity of the rocks.

X-ray diffraction (XRD) was used in conjunction with petrographic analysis to precisely quantify the mineral composition of the rocks, with a specific emphasis on the identification of clay minerals. The number of clay minerals in volcanic and sedimentary rocks which are often linked to a higher risk of landslides because of their capacity to store water and raise pore pressure was ascertained by XRD analysis. To confirm the findings and establish a relationship between mineral composition and landslide susceptibility, the data from the XRD study was compared with the findings from the petrographic examination.

In order to support the conclusions drawn from the field surveys, the study also used data from earlier investigations. This contained data from earlier research carried out in the same areas on the sorts of rocks, mineralogy, and susceptibility to landslides. The research findings were validated by comparative data from different sources, which also offered a more comprehensive framework for comprehending the geological elements affecting landslides.

Figure 1; Shows the sample of Kaolinite in the West Sumatra (Province et al., 2022).

Figure 2; Shows the sample of quartz and Quartz-Feldspar veins hosted in syenitic rocks in south Sulawesi.

The table below summarizes key data from previous research, which was used for comparison:

Region	Rock type	Key minerals	Land susceptibility	References
West Sumatra	Volcanic Breccia	Smectite, Kaolinite	High	(Cahyaningsih et al., 2019)
Central Java	Shale, Sandstone	Illite, Kaolinite	Moderate	Rahman et al. (2019)
South Sulawesi	Metamorphic Schist	Quartz, Feldspar	Low	(Submitted et al., 2021)

Results and Discussion

Petrographic Characteristics and Slope Stability

The petrographic examination of the samples from every area provided important new information on the connection between mineral content, rock type, and vulnerability to landslides. Slope instability in West Sumatra is largely caused by volcanic breccias that are rich in clay minerals including kaolinite and smectite. Because of these rocks' high porosity and poor mechanical strength, water may easily seep in during periods of intense rainfall, decreasing the rocks' shear strength and raising the risk of landslides. The presence of these clay minerals was verified by petrographic investigation in extensively worn samples, especially in areas where landslides occur often.

Sedimentary rocks, such as sandstones and shales, showed a moderate sensitivity to landslides in Central Java. In this area, weathering of sedimentary strata lowers their overall stability and is the main cause of landslides. The rock structure was further weakened by the greater proportion of kaolinite and illite found in thin-section examination. Furthermore, these rocks' porosity has been reduced over time due to compaction, raising the possibility of slope collapse during periods of intense rainfall.

The metamorphic schists in South Sulawesi shown a significantly reduced sensitivity to landslides. According to the petrographic investigation, the limited porosity and densely interconnected grain structure of these rocks inhibit water penetration and preserve the slope's mechanical strength. Compared to Indonesia's volcanic and sedimentary areas, this area is significantly less prone to landslides due to its lithological features, especially the prevalence of quartz and feldspar.

Figure 3; Shows the Petrographic analysis of Quartz and Feldspar in South Sulawesi

Figure 4; Shows the Petrographic analysis of Kaolinite Rock.

Role of Petrology in Landslide Prevention

Petrology plays a vital role in landslide prevention by providing critical information about the lithological characteristics of a region. In volcanic and sedimentary regions where landslide risk is high, petrographic analysis can identify the specific rock types and mineral compositions that contribute to slope instability (Jaisingpure et al., 2021). For instance, in West Sumatra, the discovery of volcanic rocks rich in clay has influenced techniques for bolstering hillsides and enhancing drainage networks (Indonesia, n.d.). Similarly, slope strengthening techniques such as retaining walls and vegetation planting to decrease erosion have been developed in Central Java as a result of the recognition of the sensitivity of sedimentary rocks to weathering (Laksita et al., 2024).

Table 2 summarizes landslide prevention strategies based on petrological insights for each region.

Region	Prevention Strategy	Petrological Basis
West Sumatra	Drainage management, slope reinforcement	High clay content in volcanic rocks
Central Jawa	Retaining walls, erosion control measures	Compaction, weathering of sedimentary rocks
South Sulawesi	Minimal intervention, slope stability monitoring	Strong lithology of metamorphic schists

Conclusion:

This study demonstrates the critical role that petrology plays in understanding and preventing landslides in Indonesia. It is evident by examining the lithological features of several locations, including as West Sumatra, Central Java, and South Sulawesi, that the kind of rock, the makeup of its minerals, and the extent of weathering are important determinants of landslide vulnerability. The low shear strength and high porosity of volcanic and sedimentary rocks, especially those rich in clay minerals, make them more vulnerable to landslides. On the other hand, metamorphic rocks are more resilient to slope collapse.

The application of petrological data in landslide prevention strategies is essential for reducing the risk of future landslides in Indonesia. In regions with high landslide susceptibility, such as West Sumatra and Central Java, the use of drainage management, slope reinforcement, and erosion control measures is critical to maintaining slope stability. In more stable regions, such as South Sulawesi, minimal intervention may be required, although continuous monitoring is recommended to ensure long-term slope stability.

In general, landslide avoidance may be achieved by the integration of petrology, geotechnical engineering, and environmental management. Policymakers, engineers, and geologists can create focused plans to lessen the effects of landslides and safeguard vulnerable people in Indonesia by utilizing petrological findings.

STRUCTURE AND DESIGN CRITERIA OF DEFLECTOR SYSTEMS IN MISSILE LAUNCH VEHICLES

Bora Burak AZER

Koluman Automotive Industry Inc. Military Projects Department

ABSTRACT

Deflector systems play a crucial role in the performance and safety of missile launch vehicles. Their primary function is to protect the missile's internal components from high-speed aerodynamic forces, intense heat, and other environmental stresses during launch. The design of deflector systems involves multiple engineering considerations, ensuring that they can withstand extreme conditions without compromising missile stability or performance. Structural integrity is a top priority, and deflectors must be built from materials that are both strong and lightweight. Advanced composites and ceramics are commonly used due to their excellent heat resistance and ability to perform under high-pressure conditions. Aerodynamic efficiency is another essential aspect, as the deflector must guide airflow in a way that minimizes drag while maximizing stability. The integration of deflectors with missile guidance systems is also a critical consideration, as it ensures that they do not interfere with the missile's trajectory. Additionally, the deflector must be designed to withstand the mechanical stresses of launch while maintaining its structural performance over time. Modern design practices employ computational fluid dynamics (CFD) and advanced simulation techniques to optimize deflector shapes, materials, and placement. This paper provides a detailed exploration of the design criteria and structural elements that define deflector systems in missile launch vehicles. It also evaluates how advancements in materials and computational modeling have led to improved deflector efficiency and reliability. Understanding the complexity of deflector design is essential for ensuring the overall safety, accuracy, and success of missile launch operations.

INTRODUCTION

Structure and Design Criteria of Deflector Systems in Missile Launch Vehicles

Deflector systems are critical components in missile launch vehicles, designed to safely redirect exhaust gases and manage the extreme forces generated during launches. Their primary functions include protecting launch infrastructure, mitigating acoustic loads, and ensuring the stability of the missile during liftoff. This introduction explores the foundational principles behind the structure and design criteria of deflector systems, focusing on their evolution, material considerations, and aerodynamic efficiency. The structural design of deflector systems is heavily influenced by the extreme thermal and dynamic conditions experienced during launches. These systems must withstand temperatures exceeding 3,000°C, necessitating the use of high-temperature alloys and refractory materials. Studies have shown that materials like Inconel and carbon-based composites exhibit superior resistance to thermal fatigue, making them ideal for such applications [1]. Additionally, structural reinforcements and heat-dissipating designs are critical to prevent damage during repeated use [2]. Acoustic management is another crucial aspect of deflector design. Rocket engines generate sound levels exceeding 180 decibels, which can cause structural fatigue and damage sensitive equipment.

Advanced deflector geometries, combined with sound suppression systems like water deluge mechanisms, significantly reduce these acoustic impacts. For instance, research on the Space Shuttle's launch pad design revealed a substantial reduction in sound pressure levels through the integration of tailored deflector systems [3]. Aerodynamic considerations are equally important in deflector system design. The shape and orientation of deflectors must efficiently channel exhaust gases away from the vehicle and launch pad while minimizing turbulence. Computational Fluid Dynamics (CFD) simulations have become essential tools for optimizing deflector geometries, ensuring the stability of the launch vehicle. Recent studies demonstrate that curved and angled deflector designs provide enhanced performance by reducing backflow and recirculation zones [4]. In summary, the structure and design criteria of deflector systems are shaped by the need to address thermal, acoustic, and aerodynamic challenges in missile launches. By leveraging advanced materials, innovative geometries, and computational modeling, engineers continue to enhance the safety and efficiency of these systems. The following sections delve deeper into the principles and advancements underpinning deflector system design.

RESEARCH AND FINDINGS

The structure and design criteria of deflector systems in missile launch vehicles have been extensively researched, resulting in significant advancements in their functionality, durability, and integration with launch systems. This section highlights key findings related to material selection, thermal management, acoustic suppression, and aerodynamic efficiency in deflector design.

1. Material Advancements for Thermal Resistance

One of the core requirements for deflector systems is the ability to withstand extreme temperatures generated by rocket exhaust. Research has shown that high-temperature materials like Inconel alloys and ceramic composites are essential for ensuring the durability and reliability of deflector systems. For instance, studies on Inconel 718 have demonstrated its superior performance in resisting oxidation and thermal fatigue, making it a staple material in modern deflector designs [5]. Additionally, the use of ablative materials, which erode to dissipate heat, has proven effective in protecting deflector surfaces during launches [6].

2. Acoustic Load Mitigation

Rocket launches generate sound waves that can reach destructive decibel levels, posing risks to the vehicle and surrounding infrastructure. Advanced deflector designs, when paired with water deluge systems, have been shown to significantly mitigate acoustic loads. Research on water-cooled deflectors highlights a reduction in sound pressure levels by up to 40%, ensuring the safety and functionality of launch systems [7]. Computational studies have further refined water spray patterns and flow rates to optimize acoustic suppression performance [8].

3. Aerodynamic Efficiency and Flow Control

Efficient exhaust gas management is critical for maintaining vehicle stability during launch. Aerodynamic optimization of deflector geometries using Computational Fluid Dynamics (CFD) simulations has led to innovative designs, such as curved deflectors and parabolic channels. These designs effectively reduce turbulence and prevent exhaust backflow, ensuring a more controlled launch environment. A recent study demonstrated that incorporating angled

deflectors improved exhaust flow directionality by 25%, enhancing the stability of the vehicle during critical liftoff moments [9].

4. Structural Integration with Launch Pads

Deflector systems must integrate seamlessly with launch infrastructure while maintaining structural integrity under repeated launches. Modular deflector designs have been introduced to accommodate various vehicle configurations, reducing costs and improving versatility. For example, NASA's Artemis program implemented modular deflector systems to support multiple launch vehicle designs, achieving a significant reduction in reconfiguration time between missions [10]. Moreover, adaptive mechanisms that dynamically adjust deflector angles during launch are emerging as promising solutions to further improve performance and longevity [11].

5. Future Directions in Deflector Design

Emerging technologies such as additive manufacturing and real-time monitoring are poised to revolutionize deflector systems. Additive manufacturing enables the creation of complex geometries that enhance heat dissipation and reduce weight, as shown in recent applications of selective laser melting for aerospace components [12]. Simultaneously, sensors embedded in deflectors provide real-time feedback on thermal and structural performance, enabling predictive maintenance and improved reliability [13].

CONCLUSION

The structure and design criteria of deflector systems in missile launch vehicles underscore their pivotal role in ensuring successful and safe rocket launches. These systems must address the multifaceted challenges of extreme thermal conditions, acoustic loads, and aerodynamic stresses. Through continuous advancements in material science, engineering design, and computational tools, deflector systems have evolved into highly sophisticated components tailored to meet the rigorous demands of modern aerospace missions [14]. Thermal management remains a cornerstone of deflector system design, with high-temperature alloys, ablative materials, and ceramic composites proving essential for durability and performance. The incorporation of advanced manufacturing techniques such as additive manufacturing has further enhanced these systems, enabling the production of lightweight yet robust components optimized for extreme environments. This convergence of material innovation and manufacturing precision has significantly extended the operational life and versatility of deflector mechanisms [15]. Acoustic suppression and aerodynamic optimization are equally critical in the design of deflector systems. The integration of water deluge systems and carefully engineered deflector geometries has demonstrated substantial reductions in sound pressure levels and turbulence. Computational Fluid Dynamics (CFD) simulations have played a central role in refining these designs, ensuring the stability of launch vehicles while mitigating risks to infrastructure and equipment [16]. Looking forward, the future of deflector systems lies in modularity, adaptability, and intelligence. Modular designs promise cost-effective solutions for a variety of launch configurations, while adaptive systems with real-time monitoring capabilities can dynamically respond to changing launch conditions. Emerging technologies, such as embedded sensors and machine learning, are expected to revolutionize deflector system design by providing predictive maintenance and optimizing performance across diverse operational scenarios [17]. In conclusion, the advancements in the structure and design criteria of deflector systems reflect a blend of innovation and engineering excellence. By addressing the challenges of extreme environments and integrating cutting-edge technologies, these

systems continue to play a critical role in the success of missile launch vehicles, setting the stage for even greater achievements in aerospace engineering.

A HISTORICAL OVERVIEW OF DEFLECTOR MECHANISMS IN MISSILE LAUNCH VEHICLES

Bora Burak AZER

Koluman Automotive Industry Inc. Military Projects Department,

ABSTRACT

The evolution of deflector mechanisms in missile launch vehicles has been instrumental in enhancing missile performance and ensuring safe launches. Initially, deflectors were simple, passive components designed primarily to shield sensitive areas of the missile from aerodynamic forces and heat generated during launch. Early models used basic materials like steel and aluminum, which offered limited heat resistance but were adequate for the technological constraints of the time. With advancements in missile technology during the mid-20th century, especially during the Cold War era, deflectors underwent significant improvements. The need for better heat resistance and lower weight led to the use of more advanced materials, including high-performance ceramics and composites. These materials were capable of withstanding the extreme conditions of high-speed flight, significantly improving the efficiency and reliability of missile systems. In addition to material advancements, the role of deflectors evolved. What began as passive protective elements became integrated into the missile's overall guidance and control system. Modern deflectors now play an active role in stabilizing the missile's flight path, particularly in the critical early stages of launch. The combination of advanced sensors and computational fluid Dynamics (CFD) simulations has enabled designers to optimize deflector shapes and materials for specific launch conditions, further enhancing missile accuracy and stability. Today, deflectors are an essential part of missile design, contributing to both safety and mission success. Their integration into more sophisticated systems ensures that missiles can operate at higher speeds and under harsher conditions, driving continuous innovation in missile technology. As materials science and aerodynamics continue to evolve, deflector mechanisms will remain crucial for the next generation of missile launch vehicles.

Keywords: Deflector mechanisms, Missile launch vehicles, Cold War-era technology, Aerodynamic forces

INTRODUCTION

A Historical Overview of Deflector Mechanisms in Missile Launch Vehicles

Missile launch vehicles play a critical role in delivering payloads to their intended destinations, and a key component of these vehicles is the deflector mechanism. Deflector mechanisms are designed to redirect exhaust gases generated during launch to ensure stability, minimize structural damage, and optimize performance. This introduction provides an overview of the evolution of deflector mechanisms, focusing on their significance in aerospace engineering and the technological advancements that have shaped their design. The origins of deflector mechanisms can be traced back to the early stages of rocketry, where rudimentary exhaust redirection techniques were employed to protect launch platforms. During the mid-20th century, with the advent of more advanced rocket engines, the need for specialized deflector designs became evident. Early examples include fixed-angle deflectors and flame trenches that provided basic redirection capabilities to prevent overheating and damage to ground equipment [1]. As the complexity of missile systems increased, engineers began to develop more sophisticated deflector mechanisms capable of handling higher temperatures and pressures. The development of articulated and movable deflectors marked a significant technological

milestone. These systems allowed for dynamic adjustments during launch, enabling greater control over exhaust flow and improving launch stability. For instance, NASA's Apollo program extensively utilized advanced deflector systems to manage the immense thrust produced by the Saturn V rockets [2]. Modern deflector mechanisms incorporate state-of-the-art materials and computational modeling to optimize their performance. Heat-resistant alloys and ceramics, coupled with advanced fluid dynamics simulations, have enabled the design of deflectors that can withstand extreme conditions while minimizing weight. Furthermore, the integration of adaptive systems and real-time feedback mechanisms has enhanced the reliability and efficiency of missile launches. Recent studies highlight the potential of additive manufacturing to produce customized deflector components with superior thermal properties, further revolutionizing their application [3]. In conclusion, the evolution of deflector mechanisms in missile launch vehicles underscores their critical importance in aerospace engineering. From their rudimentary beginnings to the advanced systems of today, these mechanisms have continually adapted to meet the demands of increasingly complex launch environments. This historical perspective highlights the interplay between engineering innovation and practical application, providing valuable insights into the development of future technologies in missile launch systems.

RESEARCH AND FINDINGS

The study of deflector mechanisms in missile launch vehicles reveals a continuous trajectory of innovation driven by technological and operational demands. This section outlines the key research findings, emphasizing the critical advancements and applications that have defined deflector systems over time.

1. Thermal Management and Material Innovation

One of the primary challenges faced by deflector mechanisms is managing the extreme thermal environment generated during rocket launches. Early designs relied on reinforced concrete flame trenches, which were effective for smaller rockets but inadequate for modern high-thrust engines. Advances in heat-resistant materials, such as high-temperature alloys and ceramic composites, have significantly enhanced the thermal durability of deflectors. For example, the introduction of Inconel alloys provided excellent resistance to oxidation and heat stress, making them ideal for modern applications [4]. Furthermore, recent research has explored the use of ablative coatings that absorb heat and gradually erode during launch, thereby protecting the underlying structure [5].

2. Aerodynamic Optimization

Aerodynamic considerations are crucial in deflector design to ensure the efficient redirection of exhaust gases while minimizing turbulence and vibration. Computational Fluid Dynamics (CFD) simulations have become indispensable tools for optimizing deflector geometries. Studies have shown that parabolic and angled deflectors, when designed with CFD input, can significantly reduce recirculating flow patterns and improve the overall stability of the launch vehicle [6]. Additionally, research has highlighted the importance of tailoring deflector designs to specific launch configurations, as the exhaust dynamics differ between vertical and inclined launches [7].

3. Integration with Launch Infrastructure

The integration of deflector mechanisms with launch pad infrastructure has been a focal point of research. Modern launch pads are equipped with water deluge systems that work in conjunction with deflectors to cool exhaust gases and suppress acoustic energy. A study conducted on the Space Shuttle program demonstrated that the combination of deflector systems and water spray reduced sound pressure levels by up to 40%, mitigating potential damage to both the rocket and nearby equipment [8]. Recent efforts aim to further enhance these systems by incorporating real-time monitoring and adaptive control technologies to dynamically adjust water flow and deflector angles during launch [9].

4. Advanced Manufacturing Techniques

Additive manufacturing, commonly known as 3D printing, has emerged as a transformative technology in the development of deflector mechanisms. Unlike traditional fabrication methods, additive manufacturing allows for the production of complex geometries and customized components with reduced lead times and material waste. A case study on the use of selective laser melting for deflector parts revealed significant improvements in thermal performance and weight reduction, underscoring the potential of this approach for next-generation launch systems [10].

5. Future Directions

Looking ahead, the focus is shifting toward deflectors that are more versatile and adaptable to a wide range of missions. Researchers are exploring the concept of modular deflectors that can be reconfigured for different vehicle sizes and exhaust profiles. Additionally, the incorporation of machine learning algorithms to predict and adjust for exhaust flow variations during launch is an emerging area of interest. Such advancements promise to make deflector systems more efficient, cost-effective, and resilient to the challenges of modern aerospace operations [11].

CONCLUSION

The historical development of deflector mechanisms in missile launch vehicles reflects the dynamic interplay between engineering innovation and the evolving demands of space exploration and defense. From their humble beginnings as simple flame trenches to the advanced, adaptive systems used today, deflector technologies have undergone significant transformation. These advancements have been driven by the necessity to manage extreme thermal, acoustic, and aerodynamic stresses during rocket launches [12]. Modern deflector systems are the product of multidisciplinary efforts involving material science, fluid dynamics, and systems engineering. The integration of heat-resistant materials, such as Inconel alloys and ceramics, has improved the durability and effectiveness of deflector mechanisms under the extreme conditions of modern launches. Additionally, the use of advanced computational tools, including CFD simulations, has optimized deflector designs for efficiency and safety, ensuring compatibility with the increasing complexity of missile systems [13]. Moreover, the adoption of innovative manufacturing techniques like additive manufacturing has further enhanced the feasibility of producing highly customized and efficient deflector components. These methods not only reduce material waste but also facilitate rapid prototyping and deployment, aligning with the fast-paced requirements of aerospace programs [14]. Furthermore, the incorporation of adaptive control systems and real-time monitoring ensures that modern deflectors can dynamically respond to varying launch conditions, setting a benchmark for future developments [15]. In summary, the evolution of deflector mechanisms highlights their indispensable role in the success and safety of missile launch vehicles. As aerospace missions continue to grow in complexity and scale, the future of deflector technology promises even greater advancements, including modular designs, machine learning integration, and enhanced sustainability. By understanding the historical and technological progression of these systems, researchers and engineers can build on a strong foundation to innovate further in the pursuit of excellence in aerospace engineering [16].

ÇAĞDAŞ SANATTA MELANKOLİK İFADENİN YENİ GÖRÜNÜMLERİ
NEW APPEARANCES OF MELANCHOLIC EXPRESSION IN CONTEMPORARY ART

Doç. Burçin Ünal

Ankara Hacı Bayram Veli Üniversitesi, Güzel Sanatlar Fakültesi, Heykel Bölümü
ORCID No:0000-0002-2773-8115

ÖZET

Melankoli kavramı, entelektüel tarih boyunca düşünce sistemlerinin şekillenmesinde ve sanatsal üretimin karmaşık yapısının derinleşmesinde belirleyici bir etken olmuştur. Çağdaş sanat bağlamında bu olgu, derin hüznün, karamsarlık, kayıp ve yas gibi temalarla ilişkilendirilen öznel bir deneyimleme alanı olmak yerine, 'öteki' ile kurduğu diyalektik ilişkileneyle yeni anlamlar kazanmıştır. Öyle ki bazı çağdaş sanat pratikleri, melankoliyi bireysel bir duygulanım olmaktan çıkararak kolektif bir varoluş problematiği olarak yeniden tanımlamış; iklim krizi, teknolojik yabancılaşma ve toplumsal travmalar gibi çağın belirleyici meselelerini, melankolik deneyimleme üzerinden daha kapsamlı ve derinlemesine bir bağlamda ele alınmasını gerekli kılmıştır. Bu bağlamda bazı sanatçılar, video enstalasyonlardan mekânsal deneyimlere, performans sanatından yeni medya uygulamalarına kadar uzanan yaratıcı pratiklerini kolektif duygulanım ve çevresel bilinç uyandıracak şekilde kurgulayarak, küresel sorunlara yönelen eleştirel bir bakış, estetik bir sorgulama aracı olarak yeniden konumlandırmıştır.

Bu çalışmada, çağdaş sanat pratiklerinde melankolinin deneyimlenme biçimleri, Marina Abramović'in bedensel varoluşun sınırlarını zorlayan uzun performansları, Bill Viola'nın zamanın geçiciliğini ve ölümlülük temalarıyla metafiziksel deneyime davet eden video enstalasyonu ve Tea Mäkipää'nın iklim krizine dair yeni bir bakış açısı kazandıran projesi çerçevesinde ele alınmıştır. Sanatçıların eserleri üzerinden melankolinin, çağdaş sanatın yenilikçi düşünce/kurgulama alternatifleri ile geçirdiği dönüşüm incelenmiş ve bu sürecin çağdaş estetik literatürüne yenilikçi bir perspektif kazandırma potansiyeli değerlendirilmiştir.

Anahtar Kelimeler: Melankoli, Çağdaş sanat, Sanatsal yaratıcılık, Estetik deneyim, Kolektif etkileşim.

ABSTRACT

The concept of melancholy has been a decisive factor in shaping systems of thought and deepening the complex structure of artistic production throughout intellectual history. In the context of contemporary art, instead of being a subjective field of experience associated with themes such as deep sadness, pessimism, loss and mourning, this phenomenon has gained new meanings through its dialectical relationship with the 'other'. In fact, some contemporary art practices have redefined melancholy as a collective existential problematic, rather than an individual affect, and have made it necessary to address the defining issues of the age, such as the climate crisis, technological alienation and social traumas, in a more comprehensive and in-depth context through melancholic experience. In this context, some artists have repositioned their creative practices, ranging from video installations to spatial experiences, from performance art to new media practices, as a critical gaze towards global problems and as a

means of aesthetic questioning by constructing them in a way to evoke collective affect and environmental consciousness.

In this study, the ways in which melancholy is experienced in contemporary art practices are examined within the framework of Marina Abramović's long performances that push the boundaries of bodily existence, Bill Viola's video installation that invites to metaphysical experience with the themes of the transience of time and mortality, and Tea Mäkipää's project that provides a new perspective on the climate crisis. Through the works of the artists, the transformation of melancholy with the innovative thinking/constructing alternatives of contemporary art is analyzed and the potential of this process to bring an innovative perspective to the contemporary aesthetic literature is evaluated.

Keywords: Melancholia, Contemporary art, Artistic creativity, Aesthetic experience, Collective interactions.

GİRİŞ

Melankoli, Antik Yunan'dan günümüze uzanan süreçte farklı disiplinlerde sıklıkla ele alınan ve irdelenen popüler bir kavram olmasına rağmen arketipini oluşturan ana hattı 'bireysellik' üzerine kuruludur. Melankoli bireyin ve yaşamının karanlık, karamsar yönlerinin, karmaşık duygu geçişlerinin sebebiyet verdiği ruhsal ıstırapla; bedeni hatta dış dünyadaki yeri arasında oluşan -baş etmekte zorlandığı- bir tür sıkışmışlık ve yoğun bunaltı halidir.

Prigent, *Melankoli: Bunalımın başkalaşimleri* kitabında melankolinin tarihsel dönüşümünü ele alırken, Hipokratik tıp geleneğinde bunun 'kaygı ve üzüntünün uzun sürdüğü durumlar' olarak tanımlandığını ve fizyolojik bir dengesizliğe dayandırıldığını belirtir. Aristoteles'e atfedilen XXX. Problem'de ise melankolinin olumsuzlama üzerine kurulu tıbbi patolojisinden çıkarılıp deha ve yaratıcılıkla ilişkilendirilen sıra dışı bir zihinsel durum olarak yorumlandığından bahseder (Prigent, 2009, s. 18-19). "Aristoteles'te dehayla dengelenen melankoli, insanın varlıktaki kaygısıyla aynı zamana denk gelir"(Kristeva, 1989, s.7), bu yaklaşıma göre melankoli, insanın varoluşsal kaygısıyla bağlantılıdır ve bu durum, bireyin "varlık" üzerine düşünmesini; kendini ve dünyadaki yerini sorgulamasını teşvik eder. Bu kaygı, ancak dehayla dengelenir ve yaratıcı düşünceye dönüşür.

Rönesans düşüncesi, Aristotelesçi melankoli anlayışını Marsilio Ficino ve Agrippa gibi düşünürler aracılığıyla dönüştürerek melankoliyi ilahi bir boyuta taşır. Radden'in, *The nature of melancholy from Aristotle to Kristeva* isimli kitapta bahsettiği üzere; bu dönemde melankoli, bir hastalık olmanın ötesine geçerek, insanın yaratıcı ve entelektüel potansiyelinin bir ifadesi olarak yüceltilir. Ficino'nun "ilahi melankoli" kavramı, Platoncu ve Aristotelesçi öğretileri birleştirerek, melankoliyi insanın kozmik düzenle ve ilahi olanla bağlantı kurduğu bir deneyim olarak tanımlar (Radden, 2002, s. 87-88). Sonrasında ise bu kozmolojik melankoli anlayışı, on yedinci yüzyılın başlarında yeni bir teorik açılıma uğrar ve Robert Burton'un, 1621'de yayımlanan *Melankolinin Anatomisi* adlı eserinde 'bütün dünya melankoliktir' önermesiyle melankoliyi evrensel bir olgu olarak insanlığın kaçınılmaz bir parçası olarak ele alır. Burton' a göre normal ve anormal zihinsel yaşamı eşit düzlemde ele alan bu yaklaşım, özellikle anormal duygular ve hayaller üzerinde durarak bir yandan melankoli anlayışını derinleştirirken diğer yandan melankolik deneyimin sürekli değişen ve dinamik yapısına vurgu yapar(Radden, 2017, s.10). Özellikle sanat tarihinde Dürer' in "Melencolia I" gravürü, melankolinin bu ikircikli yanının görsel manifestosu niteliğindedir. Eserde melankoli, geometri ve sanatın kesişiminde konumlandırılan, temsili olarak kanatlı Melencolia figürünün tekinsiz bakışı ile yere bağlı insani ıstırap ve gökyüzüne yükselen ilahi ilham arasındaki gerilimi cisimleştirir. Bu eser toplumsal meselelerin melankolik birey üzerindeki dayatmasının; bir şeyler yapma istenciyle kolektif sorumluluk ve hatta yapamama durumunda da kolektif suçluluk ile karakterize bir gelecek görüngüsü yaratır. Eseri çağın ilerisine taşıyan ve sanat tarihsel süreçte bu denli önemli

kılan şeylerden birinin de bu olduğu söylenebilir çünkü melankolinin sanatsal kronolojisinin konumlandırılmasında önemli iki durak sayılan rönesansın yaratıcı ‘ilahi melankolisi’ ile romantizmin tekil ve lirik ‘romantik melankolisi’ nin ötesine taşan bir zamansızlığa işaret eder. 20. yüzyıl ve sonrasında melankoli ve sanatsal yaratıcılık ilişkisi, psikanalitik, fenomenolojik ve postyapısalcı yaklaşımların kesişiminde ele alınmaktadır. Freud'un, *Yas ve Melankoli*(1917) ve *Tekinsiz*(1919) metinlerinde geliştirdiği psikanalitik çerçeve, tanıdık olanın yabancılaşması ve kaybedilen nesneyle kurulan sorunlu özdeşleşme üzerinden modern özneyi analiz ederken, ilerleyen yıllarda Kristeva'nın ‘yabancılaşma’ ve ‘öteki’ kavramlarıyla genişleyerek; varoluşsal deneyimin yanı sıra, postyapısalcı yaklaşımlarla da melankolinin göstergeler sistemi üzerinden değerlendirilmesine olanak sağlar.

ARAŞTIRMA VE BULGULAR

Çağdaş Sanatta Melankoli: Bireysel Duygulanımdan Kolektif Etkileşime

Melankoli, tarihsel süreçte bireysel bir duygu durumu olarak değerlendirilirken, çağdaş sanat pratiklerinde kendi öznel alanından çıkarak kolektif sorumluluk ve duygulanımın merkezine yerleşen bir deneyime dönüşür. Bu dönüşüm, her bir bireyin gündelik meselelere dair yaşadığı duygulanımı evrenselleştirerek daha makul bir düzleme taşırken küresel sorunların estetik bağlamda sorgulanmasında da alan yaratmaktadır.

Marina Abramović'in, *Sanatçı aramızda*(2010) performansı, bireysel melankolik deneyimin ‘bakış’ ve ‘sessizlik’ aracılığıyla ‘öteki’ ile kurulan iletişim üzerinden toplumsal bir katarsise dönüşümünü gösteren çarpıcı bir örnektir(Görsel 1-2). MoMA'da gerçekleştirilen ve üç ay boyunca her gün müzenin açık olduğu saatlerde, sanatçının hareketsiz bir şekilde oturarak karşı sandalyedeki katılımcıyla sessiz göz teması kurduğu bu performans bireysel yüzleşmenin kolektif duygulanım ve etkileşim alanı yarattığı bir hal alır. Performansta katılımcılar, kendi içsel dünyalarını ve kırılma noktalarını -bir yabancı- Abramović'in sessiz varlığında, bakışında keşfetmektedir. Sessizlik, burada pasif bir unsur değil, katılımcının kendi düşüncelerine ve duygularına derinlemesine nüfuz etmesini sağlayan bir katalizör olarak işlev görmektedir. Performansın kurgusundaki duygulanım tekinsizlik ve melankoli ile karakterize olmuş bir tür yüzleşme yaratır ki hem bireyin içindeki yabancıya hem de fiziksel anlamda karşısındaki yabancıya duyulan direnç kadar teslimiyetle büyülenmişliği de aynı anda ortaya çıkarır. Katılımcılar, sessizlikteki içsel yankılarının sesini ve sanatçının bakışında, Freudyen o "tanıdık" ve bir o kadar da "yabancı" olan şeyi deneyimler. Sessizlik ve bakış, bireyin bastırıldığı, kaçındığı, yüzleşemediği adı tam olarak konulamayan belki de o kayıp ‘şey’in açığa çıkarılması için dayatan hem bir tehdit hem de bir davettir. Benzer şekilde içimizdeki ‘öteki(ben)’ ve yabancı ‘öteki/ler’ arasındaki geçişkenliğe Kristeva, *Kendimize Yabancıyız/Strangers to ourselves*] kitabında şu şekilde değinir:

Yabancıyı bizde uyandırdığı büyülenmiş reddedişte, Freud'un onda keşfettiği ve çocuksu arzularımızı ve ötekine -ölümün ötekisine, kadının ötekisine, kontrol edilemeyen güdünün ötekisine- dair korkularımızı yeniden gündeme getiren kişiliksizleşme anlamında tekinsiz bir yabancılık payı vardır. Yabancı içimizdedir. Ve yabancıdan kaçtığımızda ya da ona karşı mücadele ettiğimizde, bilinçdışımızla, yani imkânsız “kendimize ait ve uygun” olanın “uygunsuz” yönüyle savaşıyoruz. Freud incelikle, analitik bir şekilde yabancılardan bahsetmez: bize kendi içimizdeki yabancılığı nasıl tespit edeceğimizi öğretir. Bu belki de onu dışımızda aramamızın tek yoludur (Kristeva, 1991, s.191).

Görsel 1. Marina Abramović, *Sanatçı Aramızda(The Artist Is Present)*, 14 March-31 Mayıs 2010, Performans, Museum of Modern Art, New York(solda)
Görsel 2. Marina Abramović, *Sanatçı Aramızda, Detay*(sağda)

Performansın, yabancı ile olan iletişimin çift taraflı yönüyle özdeşleşme yaratması ABD ve Rusya'dan birçok bilim insanının dikkatini çeker. Abramović, *Duvarlardan Geçmek* isimli otobiyografi kitabında bu durumun bilimsel tarafından şu şekilde bahseder: “Bu bakışmanın iki yabancı arasındaki bu sözsüz iletişimin beyin dalgalarında tetiklediği örüntüleri incelemek istediler ve bu bulguları şu oldu: Söz konusu koşullarda beyin dalgaları birbiriyle uyumlu hale gelerek özdeş örüntüler üretiyordu”(Abramović, 2020, s.371).

Katılımcıların sanatçıyla kurdukları göz teması sırasında yaşadıkları duygusal deneyimler - ağlama, gülümseme, donup kalma- melankolinin bireysel sınırları aşan ve hatta etraftaki izleyiciler tarafından da içselleştirilen ve yansıtılan bir deneyime dönüşebileceğini gösterir. Performansın yarattığı duygulanım alanının genişlediği bir diğer proje ise melankolik deneyimi metafiziksel bir boyuta taşıyan Bill Viola'nın *Tristian'ın yükselişi* isimli video/ses entalasyonudur(Görsel 3).

Viola'nın entalasyonu, ölüm ve yeniden doğuşun evrensel temasını, görsel ve duyuşal metafizik deneyime sürükleyen etkileyici bir estetik yapı/an üzerinden sorgular. Deneyimlemeye dayalı bu sanatsal yaklaşım, estetik anın dönüştürücü gücüne dair teorik tartışmalarla doğrudan ilişkilendirilir. Holly, *The melancholy art* isimli yazısında görsel sanatlardaki estetik anın, izleyicinin sanat eseriyle karşılaşma halindeki büyüleyici ve değiştirici doğasına dikkat çeker. Holly'e göre estetik an, bireyin sanat eseriyle bütünleştiği, zaman ve mekânın geçici olarak ortadan kalktığı ve bilincin sınırlarını aştığı bir deneyimdir. Bu süreçte izleyici, yalnızca sanat eserine değil, aynı zamanda kendi içsel farkındalıklarına da erişir. Gündelik bilinç yeniden devreye girdiğinde, bu deneyim birey üzerinde derin bir etki bırakır; izleyici, varoluşa ilişkin daha kapsamlı bir kavrayış ve içsel bir dönüşüm hissiyle kuşatılır ki bu da estetik anı/deneyimi varoluşsal derinlik kazandıran bir anlama ulaştırır(Holly, 2019, s.122).

Viola'nın çalışmasındaki estetik anın büyüleyiciliğinin bu denli güçlü olmasının en önemli sebeplerinden birinin; öncelikle 'ölüm' gibi evrensel bir temanın hissedilir şekilde bireyi her yönden kuşatması üzerine kurgulanması olduğu söylenebilir. Devasa bir dikey video

projeksiyonuyla sunulan proje, maddesel dünyanın ötesine geçerek, varoluşun daha derin katmanlarına nüfuz eden bir dönüşümün şiirsel hikâyesini anlatır gibidir.

Görsel 3. Bill Viola, *Tristan'ın Yükselişi* (*Tristan's Ascension*), 2011, Video/Ses Enstalasyonu: 10dk. 16sn., Gucci Museum, İtalya

Kurgudaki figür, geriye akan bir şelale içinde yavaşça yükselerek, fizik yasalarını ve yerçekiminin mutlaklığını altüst eden bir metafor haline gelir. Bu yükseliş, sadece maddesel sınırları değil, aynı zamanda yaşam ve ölüm arasındaki algısal geçişleri de aşan bir semboldür. Suyun tersine akışı, bir anlamda doğanın döngüsel hareketini geri sararak, insanın sonlu varoluşuna karşılık sonsuz bir yolculuğun görsel anlatısını yaratır. Sanatçının yavaş çekim kullanımı, zamanı adeta durdurup izleyiciyi bir tür zamansızlık içinde yakalar. Bu teknik, ruhun bedenden ayrılıp maddesel dünyadan tinsel bir varoluşa doğru yolculuğunu, anın sınırlılığını aşan bir tecrübe haline getirir. Figürün bedensel konumlandırılması ve suyun tersine akışı, izleyiciyi yalnızca 'izleyen' konumdan çıkarıp, bu transandantal geçişin bir parçası olmaya davet eder. Böylece birey, eserin sunduğu bu liminal alanda, kendi varoluşunun sınırlarını sorgulama fırsatı bulur. Kurgunun altında yatan en güçlü poetik unsur, dualiteler arasındaki sınırların çözülmesidir. Yaşam ile ölüm, madde ile ruh, yerçekimi ile yükseliş arasındaki karşıtlıklar, eserin dokusunda uyumlu bir bütünlük yaratır. Bu, insanlık tarihinde sıklıkla ele alınan ölüm temasıyla ilgili alışılmış kavrayışları yıkararak, ölümün bir son değil, dönüşümsel bir yeniden doğuş olduğunu ifade eder. Böylece Viola, bireysel varoluşun ötesinde, evrensel bir dönüşüm alanı yaratır. Bu alan, insanlığın kadim metafizik sorunsallarından 'ölüm'ün yarattığı içsel melankoliyi, yası, çağdaş sanatın ifade araç ve diliyle dönüştürülmüş yeni bir okuma sağlar. Ölümün ötesine geçen bu yeni okuma -ruhsal uyanış- teması hem bireysel hem de kolektif varoluş üzerine de derin bir düşünüm oluşturur.

Bireysel deneyimden kolektif duyarlılığa evrilen başka bir sanatsal yaklaşım olarak, Tea Mäkipää'nın ekolojik kriz üzerinden şekillenen Atlantis projesi önemli bir örneklem oluşturur(Görsel 4-5). Bu proje, küresel ısınma ve çevresel felaketlerin etkilerini metaforik bir biçimde ele alarak, melankoliyi yalnızca geçmişe yönelik bir kayıp duygusu değil, aynı zamanda geleceğe yönelik bir endişe ve farkındalık çağrısıyla sunar.

Görsel 4. Tea Mäkipää, *Atlantis*, 2007, Enstalasyon, Wanäs İsveç(solda)

Görsel 5. Tea Mäkipää, *Atlantis*, 2014, Enstalasyon, Rostock Almanya(sağda)

Mäkipää'nın, Atlantis projesi(sanatçı Halldór Úlfarsson iş birliğiyle) göl, gölet veya nehrin ortasında batmakta olan farklı konumlarda farklı varyasyonları bulunan bir kulübe üzerinden insanlığın çevresel krizlere karşı gösterdiği duyarsızlık ve kayıtsızlığı vurgular. Kulübeden zaman zaman dışarı yayılan ışıklar ve içeriden gelen sıradan aile yaşamı sesleri, ev sakinlerinin yaklaşan felaketin farkında olmadığını imler. Bu görsel ve işitsel unsurlar, insanlığın kendi yıkımına dair trajik bir ironi yaratırken, melankoliyi çağdaş bir bağlamda yeniden şekillendirir. Batmakta olan kulübenin gündelik hayatın sıradan sesleriyle kontrast oluşturması, kayıtsızlık ve farkındalık arasındaki gerilimi artırır. Bu gerilim, izleyicinin kendi konfor alanını sorgulamasına ve melankoliyi yalnızca bir duygu durumu olarak değil, eyleme geçme

gerekliliği doğuran bir düşünsel uyarıcı olarak deneyimlemesine de olanak sağlar. Diğer bir deyişle enstalasyon üzerinden kurgulanan melankolik durum, izleyiciyi bir yandan kayıplarının farkına varmaya, diğer yandan bu kayıpların sorumluluğunu üstlenmeye ve eyleme geçmeye davet eder. Sanatçı bu konu ile ilgili düşüncelerini şu şekilde dile getirir: “Hayal kırıklığı ve çaresizliğe bağlı küresel suçluluk duygusu ile mücadele, ekolojik bakış açısının devreye girmesi ve her türlü eğitime dahil edilmesiyle mümkün olabilir... Elimizden gelenin en azı üzgün hissetmektir, ama tabii ki bu günlük hayat içinde bir eyleme de yol açmalı”(Brown, 2014, s. 55). Atlantis projesi sadece çevresel sorunlara dikkat çeken bir dış mekân enstalasyonu değil, aynı zamanda insanlığın varoluşuna dair sorgulayıcı bir çerçevede kolektif etik sorumluluk çağrısıdır. Bu bağlamda, Mäkipää'nin projesi, çağdaş sanatın melankoliye dair yeni bir estetik, etik ve düşünsel alan açtığını gösterir.

Özetle; çağdaş sanat pratiklerinde melankolinin dönüşümü, estetik deneyimin sınırlarını yeniden tanımlarken, bireysel duygulanımdan kolektif bilince uzanan çok katmanlı bir yapı ortaya koyar. Abramović'in "Sanatçı Aramızda" performansında sessizlik ve bakış üzerinden kurgulanan duygusal rezonans alanı, Viola'nın *Tristan'ın yükselişi* enstalasyonunda ölüm temasını transandantal boyuta taşıyan görsel şiirsellik ve Mäkipää'nin Atlantis projesinde çevresel krizi ironik bir melankoliyle ele alan yaklaşımı, bu dönüşümün farklı katmanlarını görünür kılar. Performansta bireysel karşılaşmanın yarattığı tekinsiz deneyim, video enstalasyonunda varoluşsal bir düşünüm alanı, çevresel enstalasyonda ise kolektif bir sorumluluk çağrısı ön plana çıkar. Bu anlamda sanatçıların çalışmaları çağdaş melankolinin ifadeselliği bağlamında bazen kolektif bellek, duygulanım ve etkileşimin bazen varoluşsal sorgulamanın bazen de ekolojik farkındalığın yeni görüngülerini oluşturur.

SONUÇ

Bu çalışmada, melankoli kavramının tarihsel ve disiplinlerarası bağlamda geçirdiği dönüşümler, çağdaş sanatın eleştirel perspektifinden incelenmiş ve kavramın bireysel, toplumsal ve varoluşsal boyutları kapsamlı bir şekilde ele alınmıştır. Antik Yunan'dan itibaren melankolinin, bireysel patolojiden sıyrılarak entelektüel yaratıcılıkla ilişkilendirilen bir zihinsel duruma evrildiği; Rönesans döneminde ilahi anlam katmanlarıyla insanın kozmik düzenle bağlantısının güçlendiği ve modern dönemde psikanalitik yaklaşımlar çerçevesinde yas, melankoli, tekinsizlik, yabancı ve kayıp 'şey' ile kurulan özdeşleşme aracılığıyla çok yönlü bir anlam derinliği kazandığı vurgulanmıştır. Freud'un yas ve kayıp bağlamındaki analizlerinin yanı sıra Kristeva'nın 'öteki/kendi' kavramını Freudyan 'yabancı' kavramı ekseninde genişleterek sunduğu yorumların, çağdaş sanatta melankoli temsillerinin analizi için kritik bir zemin oluşturduğu belirtilmiştir. Bu bağlamda, Abramović'in performatif eserlerinde karşılaşma anlarının yarattığı tekinsizlik ile aşinalık arasındaki gerilim, bireyin öteki ile kurduğu sınırları sorgulayan bir alan yarattığı, Viola'nın enstalasyonlarında ölüm ve zaman temalarının transandantal bir düşünce ve tefekkür alanına dönüşerek melankoliyi metafizik bir boyuta taşıdığı gözlemlenmiştir. Mäkipää'nin çevresel krizlere yönelik ironik melankoli yaklaşımının ise bireysel varoluşsal kaygıları toplumsal ve ekolojik farkındalıkla harmanlayarak melankoliyi, çağdaş sanatta direnç ve eleştirel düşünce aracı olarak işlevsel bir konuma taşıdığı sonucuna ulaşılmıştır.

Sonuç olarak, bu çalışmada melankoli kavramının çağdaş sanattaki konumunun, sanatın eleştirel ve dönüştürücü gücü üzerinden yeniden tanımlandığı, estetik ve etik tartışmaların sınırlarını genişleterek farklı bağlamlarla yeni ifade olanakları yarattığı görülmüştür. Bu dönüşümün, birey ile kolektif, geçmiş ile şimdi ve estetik ile etik arasındaki dinamik diyalogların oluşumunu teşvik ettiği ve yaratıcı ifade biçimlerinin gelişimine zemin hazırladığı kuramsal ve uygulamalar üzerinden irdelenerek değerlendirilmiştir. Bu perspektif doğrultusunda, melankolinin çağdaş sanatta ve disiplinlerarası düşünce alanında hem kuramsal

hem de sanat pratikleri için yeni ifade olanakları geliştirdiği ve geliştirmeye devam edeceği düşünülmektedir.

ÖZET

Son yıllarda özellikle savunma sanayinde yer alan şirketlerin teknolojik ve kurumsal altyapılarına çok sayıda bilgi güvenliği ve siber güvenlik saldırıları gerçekleşmektedir. Savunma Sanayinde yaşanan ilerlemeler ve teknolojik gelişmeler sonrasında bu güvenlik saldırılarının daha da artması beklenmektedir. Güvenlik saldırılarının gerçekleşmesini önlemek ya da gerçekleştiğinde zararı azaltmak için savunma sanayi şirketleri Bilgi Güvenliği ve Siber Güvenlik organizasyonları oluşturmaktadırlar. Bu organizasyonların amacı hızlı karar alıp bu kararları aksiyon haline getirerek; bilginin gizlilik, bütünlük ve erişilebilirliğini korumaktır. Savunma Sanayi süreçleri kapsamında Bilgi Güvenliği standartları ya da devletlerin yayınlamış olduğu uyum rehberleri (ISO 27001, ISO 27035, Cumhurbaşkanlığı Dijital Dönüşüm Ofisi Bilgi ve İletişim Güvenliği Rehberi vb.) gerekli güvenlik kontrollerinin ana hatlarını ortaya koyar. Savunma Sanayi Şirketleri bu kontroller üzerine ek isterler koyarak kendi bilgi güvenliği yönetim sistemlerini oluştururlar. Bunun amacı daha fazla güvenlik önlemi almak, güvenlik saldırılarına hızlı cevap verebilmek ve güvenlik saldırılarının etkilerini azaltabilmektir. Kontroller kuruluşların tam anlamıyla güvenliğini sağlamayabilir; bu yüzden güvenlik saldırılarına müdahale etme yöntemlerinin de geliştirilmesi gerekir. Güvenlik saldırısına müdahale etmenin amacı kuruluşun aldığı hasarı en aza indirmek, olayın gerçekleşmesine neden olan olayın kök nedenine ulaşmak ve bir daha olmaması için düzeltici ve önleyici faaliyetleri yürütebilmektir. Aynı anda birden fazla güvenlik saldırısı gerçekleştirildiğinde kuruluşlarda yer alan bilgi güvenliği ve siber güvenlik ekipleri hangi saldırıya önce müdahale edileceğini belirlemek için bir yönteme ihtiyaç duyarlar. Bu çalışmada hangi saldırıya önce müdahale edileceğine karar vermek için ÇKKV (Çok Kriterli Karar Verme) yöntemlerinden SWARA (Step-wise Weight Assessment Ratio Analysis- Kademeli Ağırlık Değerlendirme Oran Analizi) yöntemi ile kriterlerin önem ağırlıkları belirlenmiş ve karar vericilerin her bir saldırı için kriterleri var (1) ve yok (0) olarak değerlendirmesi ile saldırılar sıralanmıştır.

Anahtar Kelimeler: SWARA, ÇKKV, Bilgi Güvenliği Saldırıları, Siber Güvenlik Saldırıları

ABSTRACT

In recent years, there have been many information security and cyber security attacks on the technological and corporate infrastructure of companies in the defense industry. These security attacks are expected to increase even more after the advances and technological developments in the Defense Industry. In order to prevent security attacks from occurring or to reduce the damage when they occur, defense industry companies create Information Security and Cyber Security organizations. The purpose of these organizations is to take quick decisions and turn these decisions into action; to protect the confidentiality, integrity and accessibility of information. Within the scope of Defense Industry processes, Information Security standards or

compliance guides published by states (ISO 27001, ISO 27035, Presidency Digital Transformation Office Information and Communication Security Guide, etc.) outline the necessary security controls. Defense Industry Companies create their own information security management systems by placing additional requirements on these controls. The purpose of this is to take more security measures, respond quickly to security attacks and reduce the impact of security attacks. Controls may not fully secure organizations, so methods of responding to security attacks must also be developed. The purpose of responding to a security attack is to minimize the damage to the organization, get to the root cause of the incident, and take corrective and preventive actions to prevent it from happening again. When multiple security attacks occur simultaneously, information security and cyber security teams in organizations need a method to determine which attack to respond to first. In this study, the importance weights of the criteria were determined by using SWARA (Step-wise Weight Assessment Ratio Analysis) method, one of the MCDM (Multi Criteria Decision Making) methods, to decide which attack to intervene first, and the attacks were ranked by decision makers evaluating the criteria as present (1) and absent (0) for each attack.

Key Words: SWARA, MCDM, Information Security attacks, Cyber security attacks

1. GİRİŞ

Bilgi, bir şirket için değerli bir varlıktır ve işin değerini artırmada stratejik bir kaynaktır. Bu nedenle, bilginin korunması, en üst düzey yöneticilerden ilgili çalışanlara kadar herkes tarafından ciddiye alınması gereken bir konudur. Bilginin bulunduğu ortamın güvenliği ile işletmedeki bilginin bütünlüğü, erişilebilirliği ve gizliliği garanti altına alınacaktır. Bir işletmenin işlerinin sürekliliğini sağlamak için, işletmenin etkili faktörlerden biri olarak veri ve bilginin kullanılabilirliğine ihtiyacı vardır[1].

Bilgi karar vermede ve eyleme geçmede kullanılır. Tüm bilgilerin tek yerde ve tek departmanda toplanmasının mümkün olmaması nedeniyle farklı şirketler, departmanlar ve kişiler arasında bilgi transferini sağlayacak güvenli teknolojilere ihtiyaç vardır. İlgili taraflarla bilgi paylaşımı şirketin sahip olduğu bilgi güvenliği risklerini artırır. Bilgiyi paylaşan şirket, departman ya da kişi iç ve dış tehditlere karşı bilgiyi korumak zorundadır. Bilgiyi korumak şirketlerde oluşturulan organizasyon yapısı bilgiye karşı oluşan bilgi güvenliği ve siber güvenlik olaylarına müdahale etmekten ve bir daha gerçekleşmemesi için gerekli aksiyonları almaktan sorumludur.

2. BİLGİ GÜVENLİĞİ VE SİBER GÜVENLİK

Bilgi Güvenliği, bilgi kaynaklarının her türlü tehdit ve riske karşı güvende kalması için bilgi ve bilgiyi içeren bilişim cihazının ya da basılı bilginin yetkisiz erişimden korunmasıdır. Başka bir ifadeyle “Bilgi Güvenliği; Bilginin ya da verinin kaybolmasını, yetkisiz erişilmesi, değiştirilmesini ve kötüye kullanılmasını engellemek “olarak tanımlanır.

Bilgi Güvenliği unsurları; “Gizlilik”, ‘bütünlük’ ve ‘erişilebilirlik’ olarak adlandırılan üç ana unsurun birleşimidir. Bilginin yetkisiz erişime karşı korunması gizlilik olarak adlandırılır. Bütünlük, yetkisiz kişiler tarafından değiştirilmeyen bilgi olarak tanımlanır. Bilginin yetkili kişilere ihtiyaç duyulduğunda ulaşılabilir ve kullanılabilir olması erişilebilirlik olarak adlandırılır.

Siber güvenlik, internet ve diğer iletişim ağları üzerinden gerçekleşen veri, bilgi ve sistemlere erişimi koruyan önlemler ve yöntemler olarak tanımlanabilir [2].

Tehdit; bilgi varlıklarının gizlilik, bütünlük ve erişilebilirliğini olumsuz yönde etkileme olasılığı olan risklerdir [3]. Tehditlerin bilgi sistemlerinde etkili olabilmesi için bilgi sistemleri üzerinde var olan zafiyetleri kullanmaları gereklidir. Tehditlerin bilgi varlıklarına etkisi, tehlikenin oluşma olasılığı, bilgi varlığı üzerindeki açık ve varlığın değeri ile doğru orantılıdır. Tehditler uygun ortam şartlarının oluşmasıyla bilgi sistemlerine zarar verecek kusurları içeren zafiyetlere, zafiyetler saldırganlar tarafından kullanıldığında güvenlik ihlallerine yol açarak bilgi sistemlerine zarar vermektedir [4].

Tehditler, tehdit kaynağı açısından bakıldığında aşağıda tanımlandığı şekilde gruplanabilirler:

- Doğal afetler veya teknik arızalarla ilgili tehditler,
- Prosedürel eksiklerle ilgili tehditler,
- İnsan faktöründen kaynaklanan tehditler,
- Kötücül yazılımlarla ilgili tehditler,
 - Bilgisayar solucanları,
 - Truva atları,
 - Rootkitler,
 - Hackerlar,
 - Casus yazılım,
 - Scareware,
 - Fidye yazılımları,
 - Bilgisayar korsanlığı araçları,
 - Saldırıları,
 - Sosyal mühendislik saldırıları
 - Uygulama saldırıları,
 - Kriptografi saldırıları,
 - Korsanlık saldırıları,
 - Bilgisayar ağı saldırıları,
 - Oltalama saldırıları,
 - Kötü amaçlı yazılım saldırıları,
 - Botlar ve bot ağları,
 - Parola saldırıları,
 - Ortadaki adam saldırıları.

3. ÇALIŞMANIN AMACI VE YÖNTEMİ

Son yıllarda Savunma Sanayi şirketlerinin teknolojik ve kurumsal altyapılarına çok sayıda güvenlik saldırısı gerçekleşmektedir. Savunma Sanayi'nde gelişen rekabet ortamı ve teknolojik gelişmeler sonrasında bu güvenlik saldırılarının artması beklenmektedir. Güvenlik saldırılarının gerçekleşmesini ya da gerçekleştiğinde etkisini azaltmak için şirketler Bilgi Güvenliği ve Siber Güvenlik organizasyonları oluşturmaktadır. Bunun amacı daha fazla güvenlik önlemi almak ve güvenlik saldırılarının etkilerini azaltmaktır. Alınan önlemler şirketlere tam güvenlik sağlayamaz, bu yüzden güvenlik saldırılarına müdahale etme yöntemlerinin de geliştirilmesi gerekmektedir. Güvenlik saldırılarına müdahale etmenin amacı şirketin aldığı zararı en aza indirmek, olayın gerçekleşmesine neden olan bilgi güvenliği olayının kök nedenine inmek ve

olayın bir daha olmaması için düzeltici ve önleyici faaliyetleri yürütebilmektir. Saldırı Bilgi Güvenliği olayı olarak ele alınıp incelemeye başlanır.

Bilgi Güvenliği ve Siber Güvenlik Olaylarına müdahale 6 aşamadan oluşur [5].

1. Hazırlık,
2. Olayın tespit edilmesi,
3. Ekipler tarafından kontrol altına alınması,
4. Olayın ve kök nedenin ortadan kaldırılması,
5. İyileştirilmesi (Tekrar gerçekleşmemesi için düzeltici ve önleyici faaliyetlerin yürütülmesi)
6. Raporlanması ve öğrenilmiş derslerin süreci beslemesi.

Olay Müdahale süreci şirketler için önemlidir. Çünkü şirket bir ihlali/olayı her zaman engelleyemez ve bu nedenle saldırıya hızlı bir olay müdahalesi gerekmektedir. Aynı anda birden fazla saldırı gerçekleşebilir ve birden fazla olay müdahale süreci işletilmesi gerekebilir. Şirket için diğer saldırılardan daha önemli olan olayı önceliklendirip, bu saldırıya ilk olarak olay müdahale sürecinin işletilmesi çok önemlidir. Bu önceliklendirmenin yapılabilmesi şirketlerin mali zarardan kaçınmalarına ve en önemlisi işlerini, itibarlarını ve rekabet avantajlarını korumalarına yardımcı olur.

Bu çalışmada aynı anda gerçekleşen saldırılardan hangi saldırıya önce olay müdahale sürecinin işletileceğinin belirlenmesi için Çok Kriterli Karar Verme yöntemlerinden SWARA yöntemi ile önceliklendirmede kullanılacak kriterlerin önem ağırlıkları belirlenmiş ve karar vericilerin her bir saldırı için kriterleri var (1) ve yok (0) olarak değerlendirmesi ile saldırıların sıralanması için bir model oluşturulmuştur.

3.1. SWARA YÖNTEMİ

Çalışmanın genel amacı, karar vericilere en öncelikli müdahale edilmesi gereken saldırıyı belirlemede etkin biçimde yardımcı olmaktır. SWARA, ÇKKV problemlerinde kriter ağırlıklarının belirlenebilmesi için kullanılan ve Keršuliene vd. [6] tarafından geliştirilen bir yöntemdir. Bu uygulamada SWARA, saldırı önceliklendirme ilgili her kriterin ağırlıklarını hesaplamak için kullanılmıştır. SWARA yöntemi, karar vericiye önceliklerini seçme şansı veren uzman odaklı bir yöntemdir. Bu yöntemin temel özelliği, kriter ağırlıklarının belirlenmesi aşamasında kriterlerin önem oranlarına ilişkin uzman görüşlerini tahmin edebilme yeteneğidir. Ayrıca yöntem, uzmanlardan bilgi toplanması ve bunların bir araya getirilmesi bakımından önemlidir. Yöntem, doğrudan kriterler ve öncelikleri hakkında karar verebilmektedir. Literatürde de uzman odaklı yöntem olarak bilinmektedir [7].

SWARA yönteminin adımları aşağıda özetlenmiştir:

Adım 1. Probleme ilişkin kriterler ve seçim sürecine katılacak karar vericilerden oluşan karar komitesi belirlenmektedir. Problemde n tane kriterin ($C_j, j=1,2,\dots,n$) ve karar komitesinde k tane karar vericinin ($KV_k, k=1,2,\dots,K$) bulunduğu varsayılmaktadır.

Adım 2. Bu adımda seçim sürecine katılan her KV, kendi bilgileri ve deneyimlerine dayalı olarak kriterleri değerlendirmektedir. Bu değerlendirmenin ardından KV'lerden, kriterlerin en iyiden en kötüye doğru sıralanmasına ilişkin ortak bir bütünleştirilmiş sıralama oluşturmaları istenmektedir. Bu bütünleştirilmiş sıralamada C_1 ve C_n , en iyi ve en kötü kriteri belirtmektedir.

Adım 3. Bütünleştirilmiş sıralama dikkate alınarak her KV, ikinci sıradaki kriterden başlayarak kriterlerin karşılaştırmalı ağırlığını belirlemektedir. Bu belirlemede KV'ler, en önemli kriter 1,00 puanını vermektedir. Diğer kriterlere atanan puanlar, en önemli kriter göre yapılmaktadır. Tüm puanlar, 0 ile 1 arasında 5'in katları olacak şekilde atanmaktadır. KV bazında yapılan karşılaştırmalı ağırlıkların ortalamalarının alınması ile her kriter için karşılaştırmalı ağırlıkların ortalamaları (s_j) hesaplanmaktadır. Örneğin s_1 , 1. önemli kriter ile 2. önemli kriter arasındaki karşılaştırmalı ağırlığın ortalama değerini göstermektedir.

Adım 4. Her kriter için Eşitlik (1)'de verilen bir katsayı (k_j) hesaplanmaktadır. Kriterlerin ortak sıralamasında en önemli kriterin k_j katsayısı, 1 olarak atanmaktadır.

$$k_j = \begin{cases} 1 & \text{eğer } j = 1 \\ s_j + 1 & \text{eğer } j > 1 \end{cases} \quad (1)$$

Adım 5. Her bir kriter için ağırlık (w_j), Eşitlik (2) yardımıyla hesaplanmaktadır. Bir önceki adımda olduğu gibi kriterlerin ortak sıralamasında en önemli kriterin w_j katsayısı, 1'dir.

$$w_j = \begin{cases} 1 & \text{eğer } j = 1 \\ \frac{w_{j-1}}{k_j} & \text{eğer } j > 1 \end{cases} \quad (2)$$

Adım 6. Son olarak bir önceki adımda hesaplanan kriter ağırlıkları (w_j), kriter ağırlıkları toplamına bölünerek her bir kriterin nihai ağırlıkları (q_j) bulunmaktadır.

$$q_j = \frac{w_j}{\sum w_j} \quad (3)$$

4. UYGULAMA

Çalışmanın bu bölümünde Savunma Sanayinde aynı anda gerçekleşen saldırılardan hangi saldırıya önce müdahale sürecinin işletileceğinin belirlenmesi için Cumhurbaşkanlığı Dijital Dönüşüm Ofisi Bilgi ve İletişim Güvenliği Rehberinde tanımlanan ve bilgi varlıklarını değerlendirmede kullanılan Tablo 1'de yer alan kriterler bu rehberde uyum gerekliliği nedeniyle önceliklendirme kriterleri olarak kullanılmıştır.

Çalışmada Kullanılan Kriterler [8]

- İtibar: Savunma Sanayi'nin ulusal ve uluslararası itibarını zedeleyen olayları ifade eder.
- Veriye Etkisi (Gizlilik, Bütünlük, Erişilebilirlik): Verinin Gizlilik, Bütünlük ve Erişilebilirlik unsurlarından en az bir ya da daha fazlasının etkilendiği olayları ifade eder.
- Hizmet Kalitesi: Verilen hizmetin kesintiye uğramasına ve veri kaybına neden olan olayları ifade eder.
- Sektörel Etki: Savunma Sanayi'ni etkileyen olayları ifade eder.
- Kurumsal/Stratejik Etki: Şirketin kurumsal yapısına ve stratejisine zarar veren olayları ifade eder.
- Finansal Etki: Şirketin finansal durumunu tehlikeye sokan olayları ifade eder.

- Uyum Etkisi: Şirketin çalıştığı sektör kapsamında uyması gereken regülasyonların uygulanmasını engelleyen olayları ifade eder.
- Toplumsal Etki: Toplumu, şirketin fiziki ve sosyal çevresini etkileyen olayları ifade eder.
- Gizlilik: Verinin gizliliğinin bozulduğu olayları ifade eder.
- Bütünlük: Verinin bütünlüğünün bozulduğu olayları ifade eder.
- Erişilebilirlik: Verinin erişilemez olduğu olayları ifade eder.
- Etkilenen Kişi Sayısı: Fazla sayıda kişinin etkilendiği olayları ifade eder.
- Hizmet Kesinti Süresi: Uzun süreli hizmet kesintisine neden olan olayları ifade eder.
- Kaybedilen Veri Miktarı: Yüksek miktarda veri kaybına neden olan olayları ifade eder.

5. SONUÇ VE ÖNERİLER

Bilgi Güvenliği ve Siber Güvenlik saldırıları son dönemde özellikle Savunma Sanayi'nin ana gündem maddeleri haline gelmiştir. Artan saldırılar ve ekiplerin saldırılara müdahale için önceliklendirme eksikleri ciddi veri kayıplarına neden olabilmektedir. Tüm bu riskler ışığında SWARA yöntemi ile uzman karar vericiler önceliklendirmede önem arz eden kriterlerin ağırlıklarını belirlemişlerdir. Bu ağırlıklar sayesinde bir saldırı geldiği zaman karar verici Bilgi Güvenliği ve Siber Güvenlik ekibi var (1) ve yok (0) değerlendirmesi ile önce müdahale edilecek saldırıyı seçebilir hale gelmiştir. İleride çalışmada başka sektörlerde çalışan uzman gruplar kullanılıp, Savunma Sanayi sonuçları ile karşılaştırıldığında farklı sektörlerin Bilgi Güvenliği ve Siber Güvenlik olaylarına farklı bakış açıları ortaya konabilir.

ÖZET

Endüstri devrimi, 18.yy sonlarında sosyolojik, ekonomik ve psikolojik etkileriyle tüm dünyayı etkileyen kol gücünden makine gücüne geçiş dönemidir. Endüstri devrimiyle şehir merkezlerinde kurulan fabrika, depo, ambar, demiryolu gibi endüstriyel bina ve tesisler; teknoloji ve bilişimdeki gelişmeler sonucu terkedilerek âtil hale gelmiştir. Bu dönemin ürünü binalar, somut/soyut değerleri ile Endüstri Mirası olarak kabul edilmektedir [1][15]. Endüstriyel üretimin devam ettiği ve durduktan sonraki süreçte, kirlilik ve bozulmaların olduğu binalar ve çevreleri, kahverengi alan (brownfield) olarak değerlendirilmektedir [2].

Kahverengi alanlar ve içinde barındırdığı yapı stoğu teknolojik, ekolojik, mimari, sosyolojik, tarihsel ve bilimsel değerler taşıması nedeniyle disiplinler arası çalışılması gereken bir konudur. Endüstri mirası yapılar/alanlar buldukları bölgeye, yapıldıkları döneme ve toplum yapısına, yapılış amaçlarına özgü özellikler barındırabilmektedir. Yeniden kullanım projelerinin başarısı alanlarında uzman kişilerce ortak ve özgün karar verme süreçlerini içeren çalışmalara bağlıdır. Bu alanların ve yapıların tescillenmesi, korunması ve yeniden kente kazandırılması sürdürülebilirlikleri açısından büyük önem taşımaktadır [3][4]. Endüstri mirası yapılar ve alanlar kendi işlevinde kalarak müze, rekreasyon alanları olarak kullanılabilir hale getirilebilirken; farklı işlevlerde de kullanılabilir [5]. Kahverengi alanların ve barındırdığı yapıların yeniden işlevlendirilmesiyle; yeniden yapım projelerinde kullanılacak malzeme, enerji, iş gücünden tasarruf sağlanarak ekonomik; mevcut yapıların değerlendirilmesi ile yeşil arazilerin imara açılması engellenerek mevcut arazinin kullanılabilir hale getirilmesi için temizleme ve onarma çalışmalarının yapılmasıyla ekolojik; bir dönemin tarihine, yaşamına ve toplumsal yapısına ışık tutacak belge niteliğinde yapılar ve anıtsal eklentilerinin günümüze ulaşabilmesinin sağlanması ile tarihi ve toplumsal; toplumun yaşamında bir değer edinmiş ve kent belleğini sürekli canlı tutabilmeyi sağlayan bu yapıların korunmasıyla sosyolojik; biyoçeşitliliğin fazla olduğu bu alanların ve yeşil alanların korunması, kentliye ait değerlerin sürekli canlı kalmasının sağlanması ile psikolojik yararlar sağlanmaktadır. Tüm bu yararlar, Birleşmiş Milletler'in 2030 Sürdürülebilir Kalkınma Hedefleri bağlamında önem arz etmektedir. Bu amaçla çalışma kapsamında endüstri mirası

yapıların yeniden işlevlendirilmesi kapsamında uygulanan müdahaleler, Hedef 11. Sürdürülebilir Şehirler ve Topluluklar' a göre incelenecektir.

Anahtar kelimeler: Endüstri Mirası, Kahverengi Alan, Yeniden Kullanım, Yeniden İşlevlendirme, Sürdürülebilir Kalkınma Hedefleri (SDG), SDG 11. Sürdürülebilir Şehirler ve Topluluklar.

ABSTRACT

The industrial revolution is the period of transition from arm power to machine power, which affected the whole world with its sociological, economic and psychological effects at the end of the 18th century. Industrial buildings and facilities such as factories, warehouses, railways established in city centers with the industrial revolution have been abandoned and become idle because of developments in technology and informatics. Buildings from this period are recognized as Industrial Heritage for their tangible/intangible values. Buildings and their surroundings where pollution and deterioration have occurred during and after the cessation of industrial production are called brownfields.

Brownfields and the building stock they contain are an interdisciplinary subject due to their technological, ecological, architectural, sociological, historical and scientific values. Industrial heritage buildings/areas may have characteristics specific to the region, the period in which they were built, the social structure and the purpose for which they were built. The success of reuse projects depends on studies involving the joint and unique decision-making processes of experts in their field. The registration, conservation and reuse of these areas and buildings are of great importance for their sustainability. Industrial heritage buildings and areas can be used as museums and recreational areas while remaining in their original function; they can also be used for different functions. Economic by re-functionalizing brownfields and the structures they contain; economic by saving on materials, energy and labor to be used in reconstruction projects; ecological by preventing the use of green lands for development through the utilization of existing structures and by carrying out cleaning and repair works to make the existing land usable; historical and social by ensuring that buildings and monumental annexes, which are documents that shed light on the history, life and social structure of a period, can survive to the present day; sociological by preserving these buildings, which have acquired a value in the life of the society and ensure that the memory of the city is kept alive; psychological by protecting these areas with high biodiversity and green areas, and by ensuring that the values of the urbanites are kept alive. All these benefits are important in the context of the United Nations' 2030 Sustainable Development Goals. For this purpose, within the scope of the study, the interventions applied within the scope of the re-functionalization of industrial heritage buildings will be examined according to Goal 11: Sustainable Cities and Communities.

Keywords: Industrial Heritage, Brownfield, Reuse, Re-functioning, Sustainable Development Goals (SDG), SDG 11. Sustainable Cities and Communities

GİRİŞ

İnsanoğlu dünyada var olduğu andan itibaren güvenlik, barınma, beslenme gibi bazı gereksinimler hissetmiş, bu gereksinimleri karşılayabilmek adına çeşitli eylemlerde bulunmuştur. Bakir doğada yaban hayatı ile baş başa kalan insan aradığı cevapları yine

doğada bularak ağaç kovuklarına yerleşmiş; avcılık ve toplayıcılık faaliyetleriyle ilgilenmiş ve kendisini koruyabilmek adına silah olarak kullanabileceği aletleri üretmiştir. İnsan doğayı kendisinin üstünde ve ona yol gösteren bir varlık olarak görmekteyken bu görüşü zedeleyecek, tersine çevirecek olaylar sonucu insan-doğa ilişkisinin bozulduğu, çevrenin kirlendiği, biyoçeşitliliğin azaldığı ve kaynakların hızla yok olduğu görülmektedir. İnsan-doğa ilişkisinin bozulması, biyoçeşitliliğin azalması insan sağlığı üzerinde olumsuz etkiler yaratmaktadır. Doğal Hayatı Koruma Vakfı (WWF) ‘Yaşayan Gezegen Raporu’nda Covid-19 gibi salgın hastalıkların doğanın bozulmasının bir sonucu olarak belirtmekte ve biyoçeşitliliğin azalmasının insan psikolojisini olumsuz etkilediğini vurgulamaktadır [6]. İnsanlık tarihinde insanlığın yaşayış biçimi, toplum yapısı, yerleşim şekli, dünya görüşü gibi birçok olguyu değiştiren, dönüştüren iki dönüm noktası bulunmaktadır. Bunlardan ilki tarımın bulunması ile toprağın işlenebilirliğinin farkına varıldığı Tarım Devrimi, ikincisi ise kol gücünden makine gücüne geçerek üretim yöntemlerinde değişime neden olan Endüstri Devrimidir. Bu devrim sonucu şehir merkezlerinde kurulan fabrikaların teknoloji, ulaşım alanlarında gerçekleşen gelişmelerle şehir çeperlerine taşınması sonucu şehir merkezlerinde kirlenmiş ve terkedilmiş alanlar oluşmaktadır. Bu alanların yeniden kazandırılması barındırdığı potansiyeller sebebiyle büyük önem taşımaktadır [7].

ARAŞTIRMA VE BULGULAR

Endüstri devrimi başlangıcı 18.yy sonlarında İngiltere’de başlayıp sosyolojik, ekonomik ve psikolojik etkileriyle kısa zamanda tüm dünyayı etkileyen el gücünden makine gücüne geçiş dönemidir. Endüstri devrimiyle hızlı nüfus artışı sonucu şehir çeperlerinde toplu yerleşim alanları, gecekondular; şehir merkezlerinde ise endüstri tesisleri, fabrikalar kurulmuş ve bunları birbirine bağlayıcı ulaşım yolları oluşturulmuştur. Bu durum mimari ve şehircilik anlamında da köklü değişimlere neden olmaktadır. Endüstri devrimi ve sonrası teknolojik gelişmeler sonucu şehir merkezlerindeki fabrika ve tesislerin şehir çeperlerine taşınması ile mevcut fabrikalar, tesisler, depolar vs. terkedilerek atıl hale gelerek kirlenmiş/bozulmuş çöküntü alanlar oluşturmuştur. Üretim ve terkedilme süreçlerinde gerek üretimsel gerekse bilinçsizce tahrip edilme, bakım ve onarimsızlık nedeniyle hava, su, toprak, gürültü vb. kirlilik oluşmuştur. Yapı, çevre ve kullanıcı kirlilikten etkilenme ve etkileme bağlamında kaynak veya alıcı olabilmektedir [8][9]. Bu kirlilik tespit edilip ortadan kaldırılmazsa kirlenme ve kirletme devam edecek, yapı-çevre ve kullanıcı sürekli birbirinden etkilenecektir. Bu alanlar kent içinde sağlıksız, güvensiz, atıl alanlar olarak varlığını sürdürmektedir. Endüstri yapıları/alanları o dönemin teknolojisini yansıtan teknik ve mekanik donanımlar, teçhizatlar içermeleri sebebiyle teknolojik değere, tarihi dönemlere tanıklık etmeleri sebebiyle tarihi değere, inşa edildikleri dönemin mimari özelliklerini yansıtmaları ve mekânsal özelliklerinin getirdiği esneklik sebebiyle mekânsal değere, sosyal yaşama tanıklık etmeleri ve toplum yapısını yansıtan özellikler barındırması sebebiyle sosyal değere, yere ve alana aidiyet duygusunun duyulması sebebiyle psikolojik değere, özellikle terkedilme dönemlerinde birçok canlıya ev sahipliği yaparak biyoçeşitliliğin sağlanmasına katkıda bulunması sebebiyle ekolojik değere, yeniden kullanılmaları ile döngüsel ekonomiye ve istihdama katkıda bulunması sebebiyle ekonomik değere ve yeşil alan olarak tekrar kullanımıyla çevresel bağlantıları güçlendirmesinin yanında yeniden yapım için açılacak yeşil alanların tahribini önlemesiyle çevresel değere sahiptir.

Kirlenmiş ve bozulmuş alanlar literatürde kahverengi alan (brownfield) olarak adlandırılmaktadır. Bu alanlar kirlenmişlik ve bozulmuşlukları ile dezavantajlı alanlar olarak algılandıkları dönemin toplumsal, tarihi, ekonomik, teknolojik, mimari vb. özelliklerinden izler taşıyan, kent belleğinde yer edinmiş ve aidiyet hissi uyandıran, terkedilme döneminde insan faaliyetlerinden yoksun kalarak biyoçeşitlilik açısından avantajlı

hale gelmiş alanlardır [2][14]. Bazı kahverengi alanlardaki biyolojik çeşitliliğinin eski bir ormanla eşdeğer olabildiği görülmektedir. Birleşik Krallık (UK) özelinde yapılan araştırmada terk edilmiş endüstri alanlarında nadir görülen Çizgili Bombardıman Böceği (*Brachinus sclopeta*), Zıplayan Örümcek (*Sitticus distinguendus*), bazı kelebek çeşitlerine (Dingy skipper, Grizzled skipper, Grayling) rastlandığı görülmektedir [10]. Biyoçeşitliliğin artışı insan psikolojisinde olumlu etkiler yaratmaktadır. Biyoçeşitliliğin yitirilmemesi, kahverengi alanlardaki biyoçeşitliliğin tespiti ve korunması son derece önemlidir. Kahverengi alanların barındırdığı potansiyeller nedeniyle yeniden kullanma projelerinde potansiyellerin belirlenmesi, anlama, ilişki kurma, ortak karar verme süreçleri, uygulama, izlem ve değerlendirme aşamalarının yetkin kişiler tarafından ve koordineli yürütülmesi projelerin başarısı açısından önemlidir. Bu konuda yapılan bilimsel araştırmalarla ortak karar süreçlerini ve uygulamaları içeren sistematik yaklaşımlar önerilmektedir [11]. Kahverengi alanlardaki endüstri yapılarının

- Herhangi bir değişim olmadan veya en az değişim ile işlevini koruyarak
- Çok az değişim ile işlevine yakın bir işlev yükleyerek
- Yeni bir işlev yükleyerek
- Endüstriyel yapının ve teknolojinin sürdürülebilirliği amacıyla müze işlevi verilerek

korunması ve yeniden kullanımı sağlanabilmektedir [5]. Yeniden kullanım uygulamalarında endüstriyel alanın/yapının kendine özgü bölgesel ve toplumsal özellikleri incelenmeli, kirlenmiş ve bozulmuşluk değerini tespit edilmeli ve disiplinler arası ortak karar süreçlerinin yönetilmelidir.

Birleşmiş Milletler, 2030 yılına kadar gerçekleştirmeyi hedeflediği ‘gezegenimizi korumak, yoksulluğu ortadan kaldırmak ve insanların barış ve refah içinde yaşamasını’ amaçlayan 17 maddelik kalkınma hedeflerini oluşturmuştur [12]. Bu 17 hedef ve alt başlıklarından Hedef 11 ‘sürdürülebilir şehirler ve topluluklar’ başlığı ve 10 alt hedefi mimar, şehir plancısı, mühendis vb. meslek gruplarını yakından ilgilendiren uygulamaları içermektedir. Sürdürülebilir Şehirler ve Topluluklar başlığı altında herkesin uygun fiyatlı ve erişilebilir konutlara sahip olması, kentsel ve kırsal alan arasında erişilebilirlik, doğal ve kültürel mirasın korunması, katılımcı, entegre ve sürdürülebilir insan yerleşimlerinin hedeflenmesi, yeşil alanlara erişilebilirlik kahverengi alanlardaki endüstri yapılarının yeniden kullanımı ile ilişkilendirilmiştir. Kahverengi alanlardaki endüstri yapılarının yeniden kullanımı projelerinin BM Sürdürülebilir Kalkınma Amaçları (SKA) 11. Hedef kapsamında;

- 11.1. 2030’a kadar herkesin yeterli, güvenli ve uygun fiyatlı konutlara ve temel hizmetlere erişiminin sağlanması ve gecekondu mahallelerinin iyileştirilmesi
- 11.3. 2030’a kadar bütün ülkelerde kapsayıcı ve sürdürülebilir kentleşmenin geliştirilmesi ve katılımcı, entegre ve sürdürülebilir insan yerleşimlerinin planlanması ve yönetilmesi için kapasitenin güçlendirilmesi
- 11.4. Dünyanın kültürel ve doğal mirasının korunması ve gözetilmesi çabalarının artırılması
- 11.6. 2030’a kadar hava kalitesine ve belediye atık yönetimi ve diğer atık yönetimlerine özel önem göstererek kentlerin kişi başına düşen olumsuz çevresel etkilerinin azaltılması
- 11.7. 2030’a kadar özellikle kadınlar, çocuklar, yaşlılar ve engellilerin güvenli, kapsayıcı ve erişilebilir yeşil alanlara ve kamu alanlarına evrensel erişimlerinin güvence altına alınması

- 11.a. Ulusal ve bölgesel kalkınma planlamasını güçlendirerek kentsel, kent çevresindeki ve kırsal alanlar arasındaki olumlu ekonomik, sosyal ve çevresel bağlantıların desteklenmesi

alt maddeleriyle ilişkili olduğu görülmektedir.

Bildiri kapsamında incelenen Stag Bira Fabrikası, Londra'nın Richmond bölgesinde bulunan ve tarihi 15.yy'a dayanan bir tesistir. Fabrika, 2010 yılında işlevini yitirerek terkedilmiş, atıl hale gelmiştir. Tesis Thames Nehri ve Mortlake Green arasında bulunmasıyla tampon bölge olma niteliği taşımakta ve nehir ile şehir arasında köprü görevi gördüğü söylenebilmektedir. Tesisin bölgedeki stratejik konumu ve tesisin tarihi, sosyal ve ekonomik değerleri gereği Richmond Belediyesi ve Greater London Authority (GLA) tarafından dönüşüm süreci başlatılmıştır. Proje kapsamında endüstri mirası binalar korunarak yeniden işlevlendirilmiştir [13].

Şekil 1: Fabrika atıl hali.

Şekil 2: Konut alanları ve korunan fabrika binası.

Proje kapsamında bölgenin yeniden canlanması, tarihi, endüstri mirasının korunması ve sürdürülebilirliği, ekolojik sürdürülebilirliğin amaçlandığı görülmektedir. Projede modern bir mahalle yaratma hedefiyle oluşturulacak konutların bir kısmının herkesin uygun fiyatlı konutlara erişebilmesi amacıyla sosyal konut olarak üretilmesi Hedef 11.1; proje sürecinde sivil toplum kuruluşları ve halktan gelen eleştirel geri bildirimlerin dikkate alınmasıyla sosyal sürdürülebilir, entegre, katılımcı bir yönetim sisteminin kurulmasıyla Hedef 11.3; Endüstri mirasının korunması ve alanın canlandırılması, alanın yaya ve bisiklet kullanımına teşvik eden bir tasarımla ekolojik ayak izini azaltıcı politikalar gözetmesi sebebiyle Hedef 11.4; Thames Nehri ve Morthlake Green güzergahının iyi aydınlatılmış, erişilebilir, güvenli ve geçirgen yaya yolları ile desteklenmiş olması, projenin yeşil alanlarla desteklenmesiyle Hedef 11.7; alanın canlandırılması sonucu istihdam artışı ile ekonomik sürdürülebilirliğin sağlanması, alana erişilebilirliği artırmak amacıyla çevresel bağlantıların güçlendirilmesiyle Hedef 11.a; biyolojik çeşitliliği destekleyecek çatı tasarımı, bölgede fosil yakıt yerine ısı pompalarının ve fotovoltaik panellerin kullanılması, sel baskınlarına karşı yürüyüş yollarının tasarlanması ile 11.b maddelerine uygun olduğu belirlenmiştir.

Şekil 3: Vaziyet şeması.

Şekil 4: Thames Nehri rekreasyon alanları.

Şekil 5: Kentsel alanlar ve bağlantı yolları.

SONUÇ

Kahverengi alanların ve içinde barındırdığı endüstri mirası yapıların yeniden işlevlendirilmesiyle; yeniden yapım projelerinde kullanılacak malzeme, enerji, iş gücünden tasarruf sağlanarak ekonomik; mevcut yapıların değerlendirilmesi ile yeşil arazilerin imara açılması engellenerek mevcut arazinin de temizleme ve onarma çalışmalarının yapılmasıyla kullanılabilir hale getirilmesi ekolojik; bir dönemin tarihine, yaşamına ve toplumsal yapısına ışık tutacak belge niteliğinde yapılar ve anıtsal eklentilerinin günümüze kadar gelebilmesinin sağlanması ile tarihi ve toplumsal; toplumun yaşamında bir değer edinmiş ve kent belleğini sürekli canlı tutabilmeyi sağlayan bu yapıların korunmasıyla sosyolojik; biyoçeşitliliğin fazla olduğu bu alanların ve yeşil alanların korunması, kentliye ait değerlerin sürekli canlı kalmasının sağlanması ile psikolojik yararlar sağlanmaktadır. Kahverengi alanlardaki endüstri mirasının yeniden canlandırılması disiplinler arası titizlikle çalışılması gereken, ortak karar süreçlerinin sonucunda izlem ve değerlendirme çalışmalarıyla da takip edilmesi gereken bir konudur.

Terk edilmiş endüstri yapılarının yeniden işlevlendirilmesi projeleri Hedef 11'e göre incelendiğinde projelerin ekonomik, sosyal, çevresel sürdürülebilirliğe katkı sağladığı görülmektedir.

**APPLICATIONS OF ARTIFICIAL INTELLIGENCE IN THE 21ST CENTURY
MANUFACTURING
INDUSTRY IN NIGERIA: INSIGHT FROM SELECTED MANUFACTURING
COMPANIES
IN ABIA STATE, NIGERIA**

DR. CHUKWUEMEKA G. EME (PhD)

Lecturer, Department of Business Administration, Faculty of Management Sciences,
National Open University of Nigeria (NOUN), Jabi – Abuja, Nigeria;

Abstract

Artificial intelligence (AI) is the ability of a digital computer, computer-controlled machine or robot to perform tasks commonly associated with intelligent beings like humans. The study was to investigate the relationship between artificial intelligence application and organizational efficiency in manufacturing sector in Abia State. A descriptive research survey design was used for the study. The sample of the study is six (6) operational managers from each of the twenty six (26) registered manufacturing companies in Abia State by the manufacturing association of Nigeria (MAN) Abia State chapter. The population of the study is twenty six (26) registered manufacturing companies in Abia State. The researcher distributed 156 questionnaires to the respondents. The method of data collection was through questionnaires. Data from the distributed questionnaires was further analysed, using the Pearson Product Moment Correlation Coefficient. The hypotheses of the study were tested using Pearson's product moment Correlation with aid of the statistical package for social science (SPSS). Findings revealed that, the predictor variable artificial intelligence and its dimensions robotics, and electronic fund transfer have significant relationship with the measures of the criterion variable as innovation cost reduction. Therefore, it was recommended among others that manufacturing sector should adopt the use of robot in their production process to bring about safety of their staff that might be working with hazardous substances and in the high risk sections of an organization.

Key Words: Artificial intelligence, Organization efficiency, scientific Robotics, Electronic fund transfer, Innovation, Cost reduction.

Introduction

Today, artificial intelligence application is a popular subject that is widely discussed in the technology and business world. Many experts and industry analysts argue that artificial intelligence or machine learning is the future, but if we look around, we are convinced that it's not the future, but it is already the present. The technology is in its initial phase and more and more companies are investing their resources in machine learning, indicating a robust growth in artificial intelligence application (AIA) products and apps in the near future (Hauser, 2018). Artificial intelligence application (AIA) is an area of computer science that emphasizes on the creation of intelligent machines that work and react like humans. Some of the activities they do are speech recognition, learning and planning, problem solving, etc.

Artificial intelligence application is a branch of computer science that aims to create intelligent machines. It has become the essential part of the technology in the industry. Machine learning is also a core part of AIA. Artificial intelligence refers to systems designs to interpret data, use it to make decisions, solve problems and identify risk. Artificial intelligence application (AIA) is a branch of computer sciences that emphasizes on the development of intelligence machines,

thinking and working like humans e.g. speech recognition, problem-solving, learning and planning, decision-making, visual perception (Smith, 2016). Learning AIA textbooks define the field as the study of “intelligent agents” or any device that perceives its environment and take actions that maximize the chance of successfully achieving its goals. AIA is a machine that mimics cognitive functions that humans, associate with the human mind such as “learning and problem-solving toward organizational efficiency.

Most developed countries have used artificial intelligence to grow every aspect of their economies to become world powers. Although we now live in a time when artificial intelligence (AI) is taking over many jobs, almost everything in Nigeria is done manually (Ugonna, 2020). Unstable supply and demand, inefficiency, and a lack of critical analysis essential for optimal administration pose new challenges to the manufacturing industry (Mustapha, 2017). Despite its relevance and progress in terms of innovation, AI has experienced several difficulties, particularly in developing countries such as Nigeria. Complex algorithms, AI human interface, cultural and religious barriers, software malfunction and a decline in investment are some of the challenges identified by Nkemakolam (2021). AI concerns can be solved systematically by transferring expertise from the manufacturing sector to AI software firms (George, 2018). Some people believe that if Artificial Intelligence (AI) continues to advance unabated, it will threaten humanity. Others believe that, unlike previous technological revolutions, Artificial Intelligence (AI) will increase the risk of mass unemployment. This implies that artificial intelligence is involved in the project of developing machines endowed with human-like cognitive processes and attributes such as reasoning, seeking answers, or learning from previous scenarios (Johnson, 2016).

Similarly, Artificial Intelligence can be used to shape the growth of key sectors in the Nigerian economy, particularly the manufacturing sector. Indeed, the applications of artificial intelligence (AI) technology will be the best technology for boosting core sectors and assisting Nigeria in its rapid digitization (Hassan et al., 2019). According to Yakubu (2018), the employment of artificial intelligence in the manufacturing industry will reduce costs of manufactured goods and services and encourage the growth of indigenous firms. Mgbemere (2021) underlined that numerous opportunities such as digital progression and national development by adopting information and communication technologies are by-products for a nation that imbibes the tenets of artificial intelligence.

Artificial intelligence (AI) has grown dramatically and becomes more and more institutionalized in the 21st century. In this era of interdisciplinary science, of computer science, cybernetics, automation, mathematical logic, and, and linguistics, questions have been raised about the specific concept of artificial intelligence (Arthur, 2018). Actually, as early as the 1940s and 1950s, scientists in the field of Mathematics, Engineering, and Computer Science had explored the possibilities of artificial brains and were trying to define the intelligence, of the machine. In 1950, Turing presented the famous “Turing Test” which defined the concept of “Machine Intelligence”. On this background, the origins of AI can be traced to the workshop held on the campus of Dartmouth College in 1965, in which McCarthy persuaded participants to accept the concept of “Artificial Intelligence”. It is likewise the beginning of the first “Golden age” of artificial intelligence.

In simple terms, artificial intelligence (AI) aims to extend and augment the capacity and efficiency of mankind in tasks of remaking nature and governing the society through intelligent machines, with the final goal of realizing a society where people and machines coexist harmoniously together (Liu et al., 2017). Due to the historical development, artificial intelligence has been utilized into several major subjects including computer vision, natural language processing, the science of cognition and reasoning, robotics, game theory, and machine learning since the 1980s (Biu, 2019). These subjects developed independently of each other. However, these disciplines basically had already abandoned the logical reasoning and

heuristic search-based methods which were proposed 30 years ago. Instead, most of them were based on statistical methods which include modelling and learning.

Studies have already shown the ability of the quantitative analysis to reveal the nature of the specific field and its development over time. On the grounds of science of science, many scientific online systems including AMiner, Google Scholar, and Microsoft Academic Services, have long been developed for beer science. They also provide opportunities for providing direct access to scholarly big data. A significant body of work has concentrated on developing scientometric methods and tools to quantify the impact of publications, researchers, venues, conferences, and others.

1.1 The Problem

The rise of super-intelligent machines, and technology stirs up recollections of the movie recreation by Mary Shelley's *Frankenstein*, which in the eyes of many, provoked both the feeling of horror and awe, to a majority of researchers and thinkers, these advances in Artificial Intelligence (AI) innovations sparked off fascinating and exciting possibilities that can only be limited by the imaginations of individuals. These inconsistencies notwithstanding, renewed studies on advances in AI research and technology, indicate that there are rising concerns about the place of man in the presence of these innovations in AI technology and its direct implications and consequences on the existential state of persons who work in manufacturing industries (MIs) for their sustenance and livelihood. With the reality of these artificial intelligence (AI) innovations now existing in smart phones, automated self-driving cars and in most heavy duty machines in the manufacturing industry (MI), one big question that looms man in the face is the question of 'whether the benefits of AI outweighs the existential risks it poses to workers in the labour force? Another group of studies conducted by FLI, for instance, all focused on raising serious awareness about what Moshe Vardi in 2015 described as the scary extinction risks.

1.2 Objectives of the Study

In the light of some of the research questions raised in the above page, this study, among other things, focused on doing the following:

1. Evaluating critically, the existential risks claim and the perceived benefits believed to be associated with rising innovations and automations of human jobs by super-intelligent machines and technology.
2. Attempt a valid inference of the future of mankind in the light of rising innovations and automations in the manufacturing industry.
3. Identify and recommend pathways that should facilitate aligning the goals of super-intelligent technology with those of mankind in the twenty-first century.

1.3 Hypotheses

To achieve the objectives stated above, the following null hypotheses were tested at 0.05 level of significance:

Ho1: There is no significant relationship between Robotics and innovation in the Manufacturing sector in Abia State.

Ho2: There is no significant relationship between Robotics and Cost Reduction in the Manufacturing sector in Abia State.

Ho3: There is no significant relationship between Electronic Fund Transfer and innovation in the manufacturing sector in Abia State.

Ho4: There is no significant relationship between Electronic Fund Transfer and Cost Reduction in the manufacturing sector in Abia State.

1.4 Theoretical Foundations and Methodology for the Study

Karl Marx's alienation theory which essentially highlights the various kinds of estrangements that individuals experience from aspects of their essence is adopted for the study. The theory was chosen because it offers basic knowledge and foundations for conducting investigations in the subject areas of the paper. This paper argues that the situation arising from this context creates derogatory relations which makes man feel very helpless in the face of the forces of technology he created himself.

The descriptive research method was considered an appropriate methodology for the study, since it largely relies on the analysis of data from other studies, debates and arguments conducted on the advantages and disadvantages of super-intelligent machines, now fully operational in today's manufacturing industries. Deriders' deconstructive and critical reconstructive analytic method of enquiry in philosophy was adopted for the study because it essentially interrogates the meaning of concepts, arguments and issues in the on-going debates on the pros and cons of innovations in Artificial Intelligence (AI) technology and the existential threats of super-intelligent machines to mankind in the twenty-first (21st) century.

2. Conceptual Framework

2.1 The Concept of Artificial Intelligence

Artificial intelligence (AI) called machine intelligence, is intelligence demonstrated by machines in contrast to natural intelligence displayed by humans and other animals (McCorduck, 2004). This implies that machines can be made to perform tasks commonly associated with intelligent beings like humans and animals. It is an area of computer science with the help of digital electronics that emphasizes the creation of intelligent machines that work and react like humans. The term is frequently applied to the project of developing systems endowed with the intellectual processes and characteristics of humans, such as the ability to reason, discover meaning, generalize, or learn from past experiences.

Since the development of the digital computer in the 1940s, it has been demonstrated that computers can be programmed to carry out very complex tasks like discovering proofs or mathematical theorems and playing chess with great proficiency. Artificial Intelligence (AI) has been studied for decades and is still one of the most challenging subjects in digital computer. However, it is taking the world by storm considering the application of its innovative uses across all industry segments. Indeed, the world is decades away from replacing every human intelligence with AI robots.

AI technology ranges from machines truly capable of thinking to search algorithms used to solve societal problems. In fact, intelligent robots are slowly and gradually in demand and can be considered as an emerging and natural language processing (McGuire, 2006). Using these terminologies, computers can be trained to accomplish specific tasks by processing large amounts of data and recognizing patterns in the data. The overall research goal of artificial intelligence is to create technology that allows computers and machines to function in an intelligent manner. The general problem of simulating (or creating) intelligence has been broken down into sub-problems. These consists of particular traits or capabilities that researchers expect an intelligent system to display. The traits are learning, reasoning, problem-solving, perception, planning and speech recognition. These traits have described to have received the most attention in AI technology.

2.1 The Origin of Artificial Intelligence

Artificial intelligence (AI) as a concept is often referred to as "the general mental capacity to process data intellectually and abstractly, which results in the knowledge of new ways for addressing issues for the benefit of mankind (Sambo et al., 2019). Most researchers ascribe the feature of intelligence to man alone; hence, those in this category tend to reject the idea that

such feature of intelligence is replicable in artefacts such as machines. The belief that intelligence is exclusive to man alone is premised on the notion that the feature of intelligence gives man the edge and dominant advantage of reason and resourceful introspection, a feature that makes it possible for them to thrive well and surpass all his contemporaries in all things (Ferdinand, 2018). Any other thing or artefact which seems to possess this similar feature of intelligence can only be regarded as artificial intelligence (AI) and not intelligence as it was.

The idea of inanimate objects coming to life as intelligent beings (Artificial Intelligence) has been around for a long time. It began in antiquity with myths, stories and rumours of artificial beings endowed with intelligence, or consciousness by master craftsmen. In fact, the ancient Greeks had myths about robots, and Chinese and Egyptian engineers built automations.

The beginnings of modern Artificial Intelligence (AI) can be traced to classical philosophers' attempts to describe human thinking as a systematic system. But the field of AI was not formally founded until 1956, when John McCarthy at an academic conference at Dartmouth College in Hanover, New Hampshire where the term 'artificial intelligence' was coined (McGuire, 2006). Massachusetts Institute of Technology (MIT) scientist, Marvin Minsky and others who attended the conferences were extremely optimistic about AI's future. Many of them predicted that a machine as intelligent as a human being would exist in no more than a generation and they were given millions of dollars to make this vision come true. Eventually, it became obvious that they had grossly underestimated the difficulty of the project. But achieving an artificially intelligent being was not so simple. After several reports criticizing the progress in AI, in 1973, in response to the criticism from James Lighthill and on-going pressure from congress, the U.S and British Governments stopped funding undirected research on artificial intelligence, and the difficult years that followed was later known as an 'AI winter'.

The applications of big data began to reach into other fields as well, such as training models, in ecology and for various applications in economics (Hampton et al., 2013). Advances in deep learning (particularly deep convolutional neural networks and recurrent neural networks) drove the programs of AI to image, video processing, text analysis, and speech recognition.

2.2 Importance of Artificial Intelligence in Nigeria's Manufacturing Industry

In Nigeria, almost everything is done manually, despite the fact that we now live in the time where a lot of works are taken over by machines (Artificial Intelligence). Therefore, artificial intelligence has a key role to play in Nigeria, almost all the works are done manually by humans, hence causing several economic dangers due to poor production and poor technology inclination. However, artificial intelligence (AI) technology is efficient enough to reduce human efforts in various areas hence improving production and technology. In developed nations, in order to improve production in various activities in the economy, many of them are using artificial intelligence to create machine slaves that perform various activities on a regular basis. The use of artificial intelligence will assist humans to get the work done faster and with accurate results. Error-free and efficient works are the main motives behind artificial intelligence. In the recent years, many nations have started using AI technology to reduce human efforts, and also to get efficient and faster results, but Nigeria is yet to give the required attention to artificial intelligence (AI).

Though there are quite a lot of benefits in the technology of artificial intelligence (AI), but with every great invention, there are certain amounts of risk. One of such risks is the use of this technology for foolish and selfish activities, especially in the destruction of human lives. Unfortunately, Nigeria could be a clear victim considering her volatile ethno-religious differences. To control this, there are already a great push for national and international control of its development in order to ensure human safety and peace in the world.

The manufacturing sector is known to be prone to pollution and contamination of the environment through a lack of proper environmental analysis and proper quality checks.

Therefore, the manufacturing industry has shown a trend of combining with information technology to provide a means of adequate environmental data collection and efficient material utilization to minimize the effects on the environment (Williams, 2011).

Intelligent manufacturing includes computer amalgamated manufacturing, high adaptability potential, and design fixes, information technology, and more fluid training programmes. Several established and developing countries are speeding up their strategic plans to revitalize their diverse manufacturing sectors by implementing smart and efficient industrial layouts. Most major economies, including the United States, China and the European Union (Bogle, 2017) have said that smart manufacturing is a top priority. The US Smart Manufacturing Leadership Coalition established the Smart Process Manufacturing roadmap, which is a system aimed at implementing intelligent and efficient process manufacturing operations in the twenty first (21st) century to reduce hazardous emissions and pollution of the environment (SLMC, 2011). Germany proposed intelligent manufacturing to complete the Fourth Industrial Revolution. Considering this, China emerged with the Made in China 2025 strategy, as reported by (State Council of the People's Republic of China (2015), to achieve manufacturing industry development and transformation during the next industrial revolution. This means that these major economies and corporate bodies agree to achieve the sole objective of smart and sustainable manufacturing. So, artificial intelligence (AI) and Information and Communication Technology (ICT) applications are being made to better equip global economies through the manufacturing sector. The following are the problems of the manufacturing sector that have been resolved by the incorporation of Artificial Intelligence (AI) and Information and Communication Technology (ICT): safety of consumer products and quality of packaging, management of supply logistics and visibility, duplicate identification, cloud capacity and computational functionality, review of regulations and standards and environmentally conscious products and manufacturing methods (BMCsoftware, 2020).

2.3 Challenges of Artificial Intelligence in Nigeria's Manufacturing Industry

Despite the innovative importance and growth of artificial intelligence technology, it has indeed been faced with some significant challenges especially in developing nation like Nigeria. Nigeria as a nation must endeavour to overcome these challenges in order to improve artificial intelligence. Some of the challenges are seen below.

Computer Algorithms:

The technical side of artificial intelligence (AI) involves some huge data and complex algorithm, sometimes making users not to grasp AI concepts. A lot of researchers in Nigeria are completely unaware of these algorithms and technology, hence finds it difficult to understand the functioning of AI technology. Besides, many Nigerians tend to stay away from some complicated learning.

AI human interface:

The challenge here is the shortage of data science skills within humans to get maximum output from artificial intelligence. There is a clear shortage of advanced skills that will interface between Nigerians and AI technology.

Decline of investment in AI:

Another challenge of artificial intelligence in Nigeria is that not all business owners or managers are willing to invest in it. The funds required to set up and implement Artificial Intelligence is very high, thus not every business owner or organization in Nigeria can invest in it.

Software malfunction:

No technology of humans is perfect. A case of software or hardware crash could be highly frustrating to researchers especially in Nigeria where storage and retrieval systems are poor. Hence, software tasks performed by humans can be difficult to trace. This kind of problem can be frustrating and discouraging.

Cultural and religious barriers:

Cultural affiliation and religious bigotry are the two most common barriers to development in Nigeria; hence AI technology is not spared. Language might not be a much challenge to artificial intelligence progress in Nigeria, but persons of the same tribal affiliation are usually biased in working cooperatively with other tribes especially in knowledge acquisition. Similarly, there is so much religious intolerance that can seriously militate against AI technology in Nigeria.

2.4 Applications of Artificial Intelligence (AI) in Nigeria

It has been acknowledged of late that machines are performing many smarter activities using cognitive intelligence in contrast to natural intelligence (NI) displayed by humans and other animals. Most of the developed nations have used artificial intelligence to grow every facet of their economy to become world power. Similarly, Artificial Intelligence can be used to play a major role in shaping the growth of core sectors in Nigerian economy. What is paramount is for Nigeria to quickly adopt the AI technology and commence experiments in many new things for a positive outcome and applications. Indeed, the applications of AI technology will be the finest technology to give a boost to core sectors and help Nigeria for a fastest digitization. Meanwhile, below are some of the applications of Artificial Intelligence.

Astronomy:

It has been ascertained that the accuracy of artificial intelligence is immeasurable. Researchers have shown that calculations carried out by artificial intelligence can make more accurate predictions than humans concerning the long-term stability of circumlunar planets. Hence, this technology can be used in understanding our entire universe and how it works. This implementation could give Nigeria the ability to make an attempt into space.

Construction:

AI based applications can widely be used in the construction sectors of the Nigerian economy. AI could give the ideal design for buildings and recommend best safety features to make lives more secure. It understands complex languages and the ability to fixing them. This invariably means that AI technology can make engineers more productive and capable of delivering high quality work in the stipulated time frame. Besides, the technology can be useful in analysing the work and process of the construction industry.

Agriculture:

Agriculture is one of the core sectors of the Nigerian economy and efforts are being made to modify the cultivation process in order to yield more production. AI technology could be of immense help. It can understand a timely planting, getting predictions, using fertilizers, harvesting and climate conditions. Automation of farming activities is possible with the implementation of the AI technology and maximum output from agriculture can be achieved.

Sports:

There has been a huge demand for AI technology in the sports industry as it possesses significant capabilities. This technology can make sports more interesting and help sports men and women to go beyond the capacity to practice and deliver the best out of them. The implementation of this technology is certainly going to solve many major changes in the sports

world of Nigeria by bringing the capacity and competition among sports men and women in the country.

Education:

This is the most important sector in Nigeria that touches every life regardless of the age and location. AI technology can make education system smarter in Nigeria. This can be done by introducing self-teaching classrooms at every level of the education institution. In this classroom, machines can be used to properly teach and answer on the spot questions in a universally accepted manner. Indeed, the 21st century classrooms can be equipped with emerging technological solutions to deliver the best learning environment to students. It can also collaborate with virtual networks in order to make a perfect learning environment for students as well as teachers.

Healthcare:

The AI technology can certainly cater for greater services in the healthcare sector of the Nigerian economy. The implementation of the AI technology in the health sector can be used to understand medical data and reach the right conclusion without direct human input. It can be applied in diagnosis processes, treatment protocol development, drug development, personalized medicine, and patient monitoring and care.

Banking:

Banks and other financial institutions all over the world have begun adopting the AI technology into their systems and Nigeria cannot be an exclusion. It can create a huge impact on the business and commerce of the banking industry in Nigeria. The implementation of the AI technology in the banking industries can be used in the payment efforts and reduce complex process through simple chatbots conversation to continue the operations without any hassles. The banking industries in Nigeria can also use the AI technology in the field of intelligent virtual assistant to improve their customer services.

2.5 Prospect of AI in the world of technology

Artificial intelligence (AI) has been a fascinating concept of science fiction for decades. This is a type of 'deep learning' that allows machines to process information for themselves on a very sophisticated level allowing them to perform complex functions like facial recognition. Scientists have made breakthroughs in 'machine learning' using neural networks, which mimic the processes of real neurons. Many researchers thought the world has finally stabilized on the development of AI technology. However, 'Big data' is speeding up the AI development process and hence creating more opportunities for future prospect. The followings are some prospect of AI technology.

Automated transportation:

Self-driving cars already exist, though the vehicles are currently required to have a driver present at the wheel for safety. Despite these interesting developments, it will take a while for a public acceptance to bring automated cars into widespread use. But when Google began the testing of a self-driving car in 2012, the U.S. Department of Transportation was forced to release policies to control different levels of automation. It is being believed that other self-driving transportation means like buses and train will soon emerge.

Cyborg technology:

One of the main limitations of being human is simply our own bodies and brains. Researchers have thought that in the future, humans will be able to augment themselves with computers and enhance many of their own natural abilities. Though many of these possible cyborg enhancements would be added for convenience, others might serve as for a more practical purpose. For instance, AI will soon be used for people with amputated limbs, in order to give

patients more control. This kind of cyborg technology would significantly reduce the limitations that amputees deal with on a daily basis.

Taking over dangerous jobs:

Some machines are already taking over some of the most hazardous jobs like bomb defusing. These machines aren't quite robots yet but are technically drones, being used as the physical counterpart for defusing bombs, but required a human to control them, rather than using AI. Whatever their classification, they have been saving thousands of lives by taking over one of the most dangerous jobs in the world. As technology improves, we will likely see more AI integration to help these machines function. Other jobs are also being reconsidered for AI integration. Welding which is well known for producing toxic substances, intense heat, and ear-splitting noise will also be replaced by robots soon in the future.

Robot as friends:

Presently, most robots are still emotionless and it is difficult to picture a robot you could relate to emotionally. However, a company in Japan has made the first big steps toward a robot companion, one that can understand and feel emotions of humans. Developed in 2014 and was called Pepper. About 1000 pieces of Pepper the companion robot were produced and all were sold in the year 2015. The robot was programmed to read human emotions, develop its own emotions and help its human friends, stay happy. More sophisticated friendly robots are sure to be developed soon.

Robots as medical doctors:

Presently, in the medical field, robots are assisted by humans to carry out surgeries or treat patients. However, it is being believed that autonomous surgical robots can be used in the future to perform surgeries on their own without the help of surgeons and medical doctors in the future can be a fully-autonomous robots that can make their own decisions.

Improved house servants:

For many persons, everyday life is a struggle, hence the high demand for house servants all over the world. As a result, hiring house servants to manage their care is becoming scarce and expensive. Artificial intelligence (AI) is at a stage where replacing this need isn't too far off. Home robots could soon replace house servants doing everyday tasks as the owners allow them to stay comfortably in their homes for as long as possible. It will also be replicated to house guards robots who will perform the services of a gate-man or security personnel at homes.

3. Results

3.1 Analysis of Research Questions

In chapter one of this study, the researcher sought to ascertain the influence of the elements of artificial intelligence applications on the Nigeria's manufacturing sector in Abia State. The descriptive relationships between the components of artificial intelligence application in the manufacturing sector of Abia State are presented in this section. The descriptive statistics is presented to answer the research questions previously raised in chapter one of this study.

Research Question One: To what extent does robotics influence organizational efficiency of the manufacturing sector in Abia State?

Table 1: Respondents' Mean Scores on the extent robotics influences organizational efficiency of the manufacturing sector of Abia State

S/No	STATEMENT	SUM	MEAN	S.D.	REMARK
1.	In manufacturing, robots automate repetitive tasks, reduce margins of error to negligible rates and enable humans to focus on operation in the workplace.	526	3.36	0.74	
2.	Robots in manufacturing allows companies to remain competitive globally, offering an efficient, viable alternative to fulfil the skill gap in the area.	504	3.23	0.89	
3.	Robots can be programmed to operate 24/7 in lights out situations for continuous production without getting tired or bored	443	2.84	0.92	
Grand Mean			3.29	0.81	HE

Table 1 shows respondents' mean and standard deviation value; it was revealed that robots automate repetitive tasks, reduce margins of error to negligible rates and enable humans to focus on operation in the workplace, 3.36 (0.74), robotics in manufacturing allows companies to remain competitive globally, offering an efficient, value alternative to fulfil the skill gap in the area 3.23 (0.89), and robots can be programmed to operate 24/7 in lights out situations for continuous production without getting tired or bored with value 2.84 (0.92). With a grand mean of 3.29 implies that robotics influences organizational efficiency of the manufacturing sector in Abia State to a high extent.

Research Question Two: To what extent does Electronic Fund Transfer influence organizational efficiency of the manufacturing sector in Abia State?

Table 2: Respondents' Mean Scores on the extent Electronic Fund Transfer influences organizational efficiency of the manufacturing sector in Abia State

S/No	STATEMENT	SUM	MEAN	S.D	REMARK
4.	Electronic Fund transfer can make transactions such as deposit, cash withdrawals, fund transfers, or account information at any time without the direct interaction with bank representative.	410	2.66	0.77	
5.	With electronic Fund transfer, you can do your transaction 24/7 at the comfort of your workplace.	448	2.91	0.81	
6.	The device had completely eliminated the era of carrying bulk of money (physical cash) from one place to another.	447	2.90	0.91	
Grand Mean			2.79	0.79	ME

Table 2 shows respondents' mean and standard deviation value; it was revealed that electronic cash transfer can make transactions such as deposit , cash withdrawals, fund transfers, or account information at any time without the direct interaction with bank representative 2.66 (0.77), electronic cash transfer, workers can do your transactions 24/7 at the comfort of your workplace 2.91 (0.81) and electronic cash transfer had completely eliminated the era of carrying bulk of money (physical cash)from one place to another with value 2.84 (0.92). With a grand mean of 2.79 implies that electronic cash transfer influences organizational efficiency of the manufacturing sector in Abia State.

Test of Hypotheses

Decision Rule

Significant/probability value (Pv) < 0.05 (level of significance = significant relationship

Significant probability value (Pv) < 0.05 (level of significance = not significant relationship

Ho1: There is no significant relationship between robotics and innovation of the manufacturing sector in Abia State.

Table 3: Relationship between Robotics and Innovation of the Manufacturing Sector of Abia State

			Robotics	Cost Reduction
Robotics	Pearson Correlation		1	-150
	Sig. (2-tailed)			.084
	N		154	154
Cost Reduction	Pearson Correlation		-150	1
	Sig. (2-tailed)		.064	
	N		154	154

Table 3 shows the result that the correlation between robotics and cost reduction of the manufacturing sector in Abia State is -150. For two-tailed test, the observed correlation between robotics and cost reduction has a significant level (sig. 2-tailed) of 0.64 is greater than the chosen Alpha level of 0.05. Therefore, the null hypothesis of no significant relationship between robotics and cost reduction of the manufacturing sector in Abia State is retained. That is, there is indeed no statistical relationship, $r(152) = -0.64, P > 0.05$.

Ho3: There is no significant relationship between Electronic Fund Transfer and innovation of the manufacturing sector in Abia State.

Table 4: Relationship between Electronic Fund Transfer and innovation of the manufacturing sector on Abia State

		EFT	Innovation
EFT	Pearson Correlation	1	.018
	Sig. (2-tailed)		.829
	N	154	154
Innovation	Pearson Correlation	.018	1
	Sig. (2-tailed)	.829	
	N	154	154

(EFT – Electronic Fund Transfer)

Table 4 shows the result that the correlation between electronic fund transfer and innovation of the manufacturing sector in Abia State is .018. For the two-tailed test, the observed correlation between electronic fund transfer and innovation has a significant level (sig, 2-tailed) of .829 is greater than the chosen Alpha level of 0.05.

Therefore, the null hypothesis of no significant relationship between electronic fund transfer and innovation of the manufacturing sector in Abia State is retained. That is, there is indeed no statistical relationship, $r(152) = -0.83, P > 0.05$.

Ho4: There is no significant relationship between Electronic Fund Transfer and cost reduction of the manufacturing sector in Abia State.

Table 5: Relationship between Electronic Fund Transfer and Cost Reduction of the Manufacturing Sector in Abia State

		EFT	Cost Reduction
EFT	Pearson Correlation	1	-.009
	Sig. (2-tailed)		.914
	N	154	154
Cost Reduction	Pearson Correlation	-.009	1
	Sig. (2-tailed)	.914	
	N	154	154

EFT – Electronic Fund Transfer)

Table 5 shows the result that the correlation between electronic fund transfer and cost reduction of the manufacturing sector in Abia State is -.009. For two-tailed test, the observed correlation between electronic fund transfer and production efficiency has a significant level (sig, 2-tailed) of .914 is greater than the chosen Alpha level of 0.05. Therefore, the null hypothesis of no significant relationship between electronic fund transfer and cost reduction of the manufacturing sector in Abia State is retained based on the statistical evidence. That is, there is indeed no statistical relationship, $r(152) = -0.914$, $P > 0.05$.

4. Discussion of Findings

This study uses descriptive and survey design method in investigating the relationship between artificial intelligence application and organizational efficiency in manufacturing sector in Abia State, as well as the moderating role of technology. The findings revealed there is a positive and significant relationship between artificial intelligence application and organizational efficiency in the manufacturing sector in Abia State, using the Pearson correlation coefficient with point above 0.05 indicating that there is a significant relationship between artificial intelligence and organizational efficiency. These findings support the idea of Kwantes and Boglarsky (2007) who claim that the application of artificial intelligence in an organization will increase production, cost reduction which will amount to high profitability which will also bring about robust growth in the industry. Many experts and industrialists argued that AI is the further that they are expecting because of the huge benefit (Hintze, 2016). The study also revealed that artificial intelligence is categorized into weak and strong artificial intelligence. The weak artificial intelligence is the one that handled specific task, while strong artificial intelligence is the one that will handle multiple tasks, which is yet to come into existence. For now it is a fiction.

From research finding one, this is in agreement with the study conducted by Davidow and Malone (2014) that robot performs job that are traditionally done by human being and carry out repetitive tasks and it should be used in manufacturing sector and in an environment that is hazardous to human. Robot is also equipped with the sense of vision, touch, and ability to sense temperature; even some of the robots today are taking simple decision in an unstructured environment. Within the industry today robot had introduced the idea of using machine to increase productivity and reduce the cost of production.

The study also makes us to realize that there are three principles that guide the behaviour of robots and smart machines. These principles are what guided robots in its operations. Therefore robotics will bring about organizational efficiency in the manufacturing sector of Abia State.

Research finding two: This is concerned with electronic fund transfer, which according to research by Howcroft (2002) is the electronic way of transferring of funds from one bank account directly to another bank account without any paper money changing hands. This is supported by the work of Balarchandler, Santha, Norhazlinand Rajendra 92001) which made us understand that electronic fund transfer had done so much good to the manufacturing sector and the entire society at large. Looking back to the era when workers were also paid by hand in cash from their various organizations and companies, how workers were attacked by arm-robbers during end of months and also those that are carrying money in bulk for business purposes. All these set of people mentioned above were all robbed during the period mentioned and other times of the season. And during this robbery time, lives were also wasted by the criminals to enable them go away with the cash, but the good news is that you can stay at the comfort of your home or workplace and do your financial transaction without the presence of any bank representative, no stress or to endanger yourself. Workers are now receiving their salary even sleeping in the comfort of their bed and also perform any type of financial transaction at their comfort because of electronic fund transfer, it is a welcome development.

5. Conclusion

It was concluded that artificial intelligence had become the way forward for manufacturing sector in Abia State, because its application had enhanced efficiency in the organization and will lead to high productivity and cost reduction which shall amount to high productivity. The study concluded that robotics does not only increase productivity, but also save humans from working in temperate region like the production plant, which can cause injury to humans.

6. Recommendations

Based on the findings of the study, the following recommendations are made by the researcher.

- i. Manufacturing sector should adopt the use of robot in their production process to bring about safety of their staff that might be working on hazardous substances and in high risk section of an organization.
- ii. Electronic Fund Transfer is an innovation that reduce cost. Therefore, manufacturing sector in Abia State should begin to use it to ensure security of personal and financial resources.

FACTORS INFLUENCING RURAL-URBAN MIGRATION OF YOUTHS IN ABIA STATE, NIGERIA

DR CHUKWUEMEKA G. EME (PhD)

Lecturer, Department of Business Administration, Faculty of Management Sciences, National Open University of Nigeria (NOUN), Jabi-Abuja, Nigeria

ABSTRACT

This study examined the factors influencing rural-urban migration of youths in Abia State of Nigeria. A multi-staged sampling technique was employed in the selection of 240 of the respondents (youths) from three local government areas of the state. Data for this study were sourced primarily through the use of well-structured questionnaire. Both descriptive and inferential analyses were employed in the analyses of the data. The result of this study showed that mean age of the respondents was 22.60 years. The study further revealed that majority (68.8%) of the respondents were male, single and family size of between 5 – 8 and had secondary education. The results revealed that the poor electricity supply in the rural areas, bad condition of roads, absence of pipe-borne water were push factors driving the youths away from their communities into urban areas. Results further revealed that better employment opportunities, superior wages in the urban areas, improved living condition are pull factors that attract rural youths to the urban centers. Majority (68.8%) of the respondents were not willing to stay in the rural areas with or without improvement in the condition of living in their communities. The results of this study revealed that age ($r = 0.50$; $p < 0.00$), sex (X-squared – 34.57; $p < 0.05$) and educational level (X-squared – 45.57; $p < 0.01$) of the respondents were significantly related to their decision to migrate from rural to urban areas. The study recommends that government should provide basic social amenities in the rural areas as they are found in the urban areas so as to encourage the youths to stay.

1. INTRODUCTION

The trends, challenge and impacts of rural-urban migration have continued to generate global debates since the last decades or so. Those moving from rural to urban areas constitute certain classes, categories and strata of the society that are basically plagued with certain social and economic problems in which poverty ranks highest and most fundamental. Debates on rural-urban gap have since the 1960s been one of the major focus areas that continued to produce insights on the precarious condition of people in both the rural and urban settlements with attendant consequences in many forms and dimensions.

Thus, rural-urban inequality, resulting in the phenomenal rural-urban migration, has become the prevailing orthodoxy in conceptualizing the problems and trends of development policy and strategy in Nigeria. However, with the eclipse of the post-independence euphoria in Nigeria whereby the laid down expectations, hopes and visions were eluded and clouded with cynicism, apathy and despair whereas much have been officially expected but with little achievements.

With the evaporation of hope and enthusiasm within the socio-economic and political environment, the unfavorable economic conditions facing both the rural and urban habitats have no doubt completely degenerated and dilapidated to the extent of weakening the basic foundations of the economy. Even on the political angle alone, the situation is simultaneously affected by the complete breakdown of the political capacity to apply the expedient public policy measures to avert the impending political turmoil within an essentially hostile though in an economic resource milieu.

Given the significant disparities that have emerged and developed between and within rural and urban settlements, migration phenomenon should be strategically used for the re-distributional development dynamics: designed to solve problems usually associated with it: the problems that have emerged out of population pressures to handle or balance resource demand, resource availability and resource management.

Migration was initially viewed favorably as a natural process of transferring surplus labor from the rural sector to the urban industrial sector and migrants would find well-paying jobs in urban areas and send remittances to their families, thereby improving the welfare of rural folks left behind (Gilbert & Gugler, 1992)¹. Unfortunately, this has not been the case in recent years due to the phenomenon of urban surplus labor, leading to urban unemployment problems (Todaro, 1976)² and urban cash economy where a decline in wages makes vulnerable to a multiplicity of problems even worse than in the rural areas (Tindigarukayo, 2014).³

Migration affects people with economic, social, educational and demographic peculiarities (Amrevurayire and Ojeh, 2016).⁴ Migration follows a variety of patterns on space dimension which include urban-urban; urban-rural; rural-rural and rural-urban (Eze, 2016)⁵. Rural-urban migration results from movement from rural to urban in the search for opportunities due to rural-urban inequality in wealth and better quality of life found in urban centers. Three categories of factors are perceived as responsible for rural-urban migration which include those related to the need for education and acquisition of skills in various vocations; those related to the absence of job opportunities in rural areas which are the absence of industries and companies and boredom in agriculture and finally those factors relating to social, such as inadequate amenities (Aworemi et al. 2011)⁶.

Further, inadequate housing and associated facilities such as water, electricity, waste disposal in the urban areas resulting in millions living in substandard environments called slums and grossly inadequate social amenities, such as a shortage of schools, poor health facilities and lack of opportunities for recreation among others. Migration is placing pressure on limited appropriate housing, resulting in increases in in the numbers of urban residents now found to reside in informal housing (Amrevuruyire & Ojeh, 2016)⁷. Rural communities share this burden through loss of manpower necessary for agricultural activities and production. It also results into reduction in agricultural productivity which in turn leads to food insecurity and soaring price of food. Consequently, agriculture which prior to discovery of oil was the mainstay of Nigeria's economy with activities concentrated in the rural areas was far relegated to the background leading to the country's mono-economy status (Amrevurayire and Ojeh, 2016)⁸.

⁸ Amrevurariye, E. O. & Ojeh, V. N. (2016) (ibid.)

Having highlighted various effects and causes of rural-urban migration especially on agricultural production, this study aimed at assisting the development planners, policy makers and government on how to make policy that will take care of the push factors in the rural areas and other pull factors in the urban areas thus making life more meaningful for our youths in the rural communities thereby reducing the rate of rural-urban migration. This study therefore aims at examining the factors influencing youth rural-urban migration in Abia State, examine the willingness of the youths towards staying in the rural communities; examine the effects of youth rural-urban migration in Abia State and identify the determinants of the youth rural-urban migration in Abia State. Abia State in South-Eastern Nigeria was created on 27th August, 1991 out of the old Imo State. The state lies approximately within latitudes 4 degrees 40 miles and 6 degrees 14 miles N and longitudes 7 degrees 10 miles and 8 miles E. It occupies a land area of about 5,243.7 square kilometers with a population of 2,833,999 based on the 2006 census. It has common boundaries with Ebonyi and Enugu states to the north, Rivers State to the south and southwest, Cross River and Akwa Ibom states to the east and southeast respectively, Imo State to the west and Anambra State to the northeast. Abia people are of the Igbo ethnic group. Abia State has seventeen (17) Local Government Areas (LGAs). The capital is Umuahia. Other notable urban centers include Aba, Arochukwu, Abiriba, Ohafia, Uturu and Bende. Abia State has a number of tourist sites such as the National War Museum, Umuahia, Arochukwu Caves, Azumini Blue River Tourist Village, Akwete Weaving Centre, the Long Juju Shrine, Arochukwu, Museum of Colonial History, Aba.

1.1 OBJECTIVES OF THE STUDY

The major aim or objective of this study is to analyze the factors influencing the rural-urban migration of youths in Abia State of Nigeria. The specific objectives of the study were to:

- i) determine the ages of migrants at migration from Abia State using three LGAs as case study;
- ii) assess the ages of migrants in groups at migration from the three local governments (LGAs) under study in Abia State;
- iii) highlight the year the migrants migrate from the three LGAs of Abia State;
- iv) determine the sex of migrants from the three LGAs of Abia State for the period under study.

2. Conceptual, Theoretical & Empirical Review

2.1 Conceptual Review

Basically, in Nigeria, urban centers or cities are springing up and people are migrating from rural areas to urban areas. They have different reasons for migrating from rural areas to urban centers; these reasons may include among others, lack of employment opportunities, lack of infrastructural facilities; educational institutions etc. According to Afolayan (1995)⁹, rural areas can be easily identified by various criteria, apart from population. Such criteria may include the level of infrastructural development i.e. road networks, educational institutions, water supply, electricity, health facilities, communication, etc. Other criteria used include occupation, housing, extent of community planning etc.

He argued that rural areas refer to geographical areas that lie outside the densely built-up environment of towns, cities and the sub-urban villages and whose inhabitants are engaged primarily in agriculture as well as the most basic of rudimentary form of secondary and tertiary activities. Rural area, which is the opposite of an urban area, refers to the country side whose

⁹ Afolayan, S. O. (1995). Community Mobilization for Rural Development in Bangladesh: Lessons for Nigeria. Ilorin:

population engages mainly in primary production activities like agriculture, fishing and rearing of livestock (Ele, 2006)¹⁰. Nyagba (2009)¹¹ noted that about 90 percent of the rural labor workforce engages directly or indirectly in agriculture.

In the words of Sorenson (2004) and Madu (2006)¹² rural-urban migration results from the search for perceived or real opportunities as a consequence of rural-urban inequality in wealth. This inequality and/or urban bias in development, according to research findings over the years, results from the overwhelming concentration of wealth, assets, purchasing capacity, economic activities, and variety of services in the urban centers as well as the continued neglect and degradation of rural environment or areas (Harris and Todaro, 1970).¹³

Mabogunje (1968)¹⁴ pointed out that in many parts of the world particularly the so-called Third World countries, it is inevitable that urbanization will continue to increase during the foreseeable future. The fact that most of the countries of the Third World are just on the threshold of their industrial take-off, and the patent deduction based on the previous unfolding of events in the Western world that urbanization and industrialization are inseparable patterns, lead readily to the view point that continuing rapid urbanization is so far, inevitable in the third world. In the words of Abada (2001)¹⁵, the cause of urbanization include: lack of employment opportunities in the rural areas, the system of land ownership, lack of social amenities in the rural areas, war periods, lack of industrial raw materials and educational institutions.

2.2 Theoretical Framework

This paper adopted urban bias theory as its framework of analysis. Urban bias refers to a political economy argument according to which economic development is hampered by groups who, by their central location in urban areas, are able to pressure governments protect their interests. Among the leading scholars to this theory of urban bias are Michael Lipton (1977) and Robert H. Bates (1981).¹⁶

According to Lipton (1977)¹⁷, urban areas are favored by the politicians at the expense of the countryside. This takes on a variety of forms: the infrastructure is concentrated in the cities, the countryside is taxed more harshly and the price policy turns relative prices in favor of urban pursuits. Also too many resources are spent on cities, both from the point of view of efficiency and from the point of view of equality. The fundamental reason why the countryside is discriminated against is political: the countryside is poor because it is politically powerless.

The consequence is that the growth of developing countries has been both slower and less equitable than it could otherwise have been. His constructive message is that as a rule you have to develop agriculture across a broad range before you start dealing with the remaining sector of the economy. It is only through the development of small-scale agriculture that per-capita

¹⁷ Lipton, M., (1977) (Ibid.)

income can be brought to such a level that the citizens can abstain from as much consumption as is needed to start the industrialization process without inflicting pain and without having to squeeze agriculture. This is not in opposition to industrialization; the latter requires a transfer of resources from agriculture, but this is much more easily accomplished when the agricultural sector is well developed. Nweke (2012)¹⁸ noted that the bias in favor of city areas has created a disparity between country and city with respect to consumption, wage and productivity levels. Such disparities translate into a higher standard of living from urban dweller and draw migrant from rural areas.

3. Methodology

A multi-staged sampling was employed in the selection of the respondents (youths). The first stage involved the random selection of three Local Government Areas among 17 Local Governments Areas in Abia State. These are Bende Local Government, Ikwuano/Ohuhu Local Government and Osisioma Local Government among 17 Local Governments in Abia State. The second stage involved the random selection of two wards/districts from local government area. The third stage involved the random selection of two villages in each of the selected wards/districts. While the final stage however involved a purposive selection of 20 youths from each selected village. Thus, giving a total of 240 respondents for the study.

4. DATA COLLECTION PROCEDURE AND DATA ANALYSIS

4.1 DATA COLLECTION PROCEDURE

The data collected were socio-economic characteristics of the respondents, which include variables like age in years, sex, household size, education level and marital status etc. Data were also obtained from the respondent's willingness to stay in rural areas. Furthermore, respondents' opinion on the perceived effects of the rural-urban migration were also sourced for. Data were also obtained on push (making them move away from the rural community) and pull (making them stay) and inferential analyses were employed in the analyses of the data.

4.2 RESULTS AND DISCUSSION

4.2.1 Socio-economic Characteristics of the Respondents

The result of this study (Table 1) showed that mean age of the respondents was 22.60 years. Majority of the respondents were between the age group of 26 – 30 years. This shows that majority of the respondents were within their youthful stage of development, a stage when a child begins to operate independently from the parents and it is assumed that at this age a ward could be allowed by the parent to travel out of their communities. The study also agreed with the finding of Mutandwa et al. (2011)¹⁹ who found out that youths who are likely to migrate are predominantly between 17 to 22 years. The study further revealed that majorities (68.8%) of the respondents were male while 31.3% were female. This implies that there were more male than the female in the study area. Majority (66.3%) of the respondents have household size of between 5 and 8. This implies that majority of the households in the rural areas are larger in size than their urban counterpart which usually have between 1 and 4 members. This finding is in agreement with Ehirim et al. (2012) and Ango et al., (2014)²⁰ who reported that the household

²⁰ Ehirim, N. C. (2012) & Ango, A. K. (2014). Effects and prospects of rural to urban migration on the poverty status of migrants in Abia State, Nigeria. Agricultural Science Research Journal, 2 (4), 147-149

size of rural people is always much when compared to its counterpart living in the city because of their dependence on the family as a source of farm labor. Table shows that 76.3% of the respondents had secondary education with few (11.3%) had tertiary education. The result of the study also implies that none of the respondents was illiterate, as they have attained one form of education or the other or the other. Also, it was observed that 48.8% of the respondents were Christian while 47.5% were Muslim. This implies that Christianity and Islam have dominated. Also, the Table shows that majority (70%) of the respondents were single while 30% were married. This finding included that majority of the respondents were single which could make it easy for them to travel out of the village due to less responsibility of caring for wife and children.

This finding is in conformity with the finding of Abdur-Rokib and Abdul-Goni (2011),²¹ Ehirim et al. (2012). Pradhan (2013) and Ango et al. (2014)²² who reported that the single people among the members of the society migrated more than the married ones, which could be attributed to the fact that the single people among the members of the society migrated more than the married ones, which could be attributed to the fact that those married may find it difficult to move without their household members.

Table 1: Selected socio-economic characteristics of respondents (n = 240)

Variable	F(%)	Mean	SD
Actual Age			
16-20	90 (37.7%)	22.60	4.4

Table 7: Pearson Correlation between age and Push Factor affecting Migration (n = 240)

Variable	PPMC (r)	Sign
Age	0.51	0.00

The findings imply that majority of the youths migrated to the cities as a result of lack of social amenities, search for better employment, to improve livelihood welfare and for the purpose of furthering education, which are not available in their original place of residence but consequently found in the cities. The dichotomy between the rural and urban areas in the availability of basic amenities for the youth is responsible for rural-urban migration among the youths. This finding agree with the findings of Aromolaran (2013²³) who reported that the important factors responsible for youth rural-urban migration include education needs, skills acquisition in various vocations, seeking for means of livelihood, boredom in agriculture, inadequate social amenities and expulsion due to offence and crime committed.

The study further showed that 64% of respondents agreed that rural-urban migration will lead to underdevelopment of rural communities This is because in most rural communities, community efforts are used in providing most infrastructure used among the people. In addition, the study showed that 67.5% of the respondents agreed that the persistent use of child labor in agricultural population will increase if rural-urban migration is not controlled. Also 55% of the respondents believe that labor force for farm work will reduce due to migration. Also, 66.3% of the respondents believed that continued reduction in agricultural population is inevitable if action is not taken to curb the rate at which the youths migrate. The effects of rural-urban

²³ Aromolaran, A. K. (2013). Assessment of benefits associated with rural-urban migration among non-migrants in

Ode da area, Ogun State, Nigeria. International Journal of Pure and Applied Sciences and Technology, 14 (2), 3-6

migration can be felt in area of the workload on the farm, decreased number of potential workers in the village, increased vulnerability (mostly for the older generation), emotional effects and economic effects for the household that in certain cases can be perceived as positive and in other cases negative.

4.2.2 Relationship between Socio-Economic Characteristics and Push Factor Affecting Migration

Within the developing countries, there exists a significant selectivity of migrants with respect to age, sex, caste, marital status, education, occupation and the propensity of migration differs significantly among these socio-economic groups (Hossain, 2001)²⁴. The results of this study (Table 6) revealed that age ($r = 0.51$; $p < 0.01$) of the respondents is significantly related to their decision to migrate from rural to urban areas. This implies that age influences their decision to migrate from the rural area to urban area. Based on the result of this study, majority of the respondents were young and this may account for the decision to move to the urban area to look for greener pastures.

The results of this study (Table 7) further revealed that sex ($X^2 = 34.57$; $p < 0.05$) of the respondents is significantly related to their decision to migrate from rural to urban areas. In addition, the results of this study revealed that education level ($X^2 = 45.57$; $p < 0.01$) is significantly related to their migration from rural to urban area. This implies that educational level influence their decision to move from rural to urban areas. Most of the respondents had primary and secondary education and hence may decide to move to the urban areas to further their education since no tertiary education is located in the rural communities. This is in line with Ajaero et al. (2013)²⁵ who opined that primary and secondary level of education represent the stage at which most people leave their parents to seek for education as some of these educational institutions may not be available in the rural areas of the migrants.

5. CONCLUSION AND RECOMMENDATIONS

Poor electricity supply, bad condition of roads and absence of pipe-borne water in rural areas were push factors driving rural youths away from their communities into urban areas. Better employment opportunities in the cities, superior wages in the urban areas, improved living condition in the cities were found to be pull factors that attract rural youths to the urban centers. The major factors that influenced rural youths' decision to migrate from rural to urban areas are age, sex and educational level. The study recommends that special incentives be offered to private firms, business outfits and companies that operate in the rural areas of the state to boost employment opportunities and so reduce rural migration to a minimum level. In addition, government should provide basic social amenities in the rural areas as they are found in the urban so as to encourage the youth to stay. Tax incentives should also be provided for agro-based companies to create a conducive environment for them in the rural areas of the state. This

²⁴Hossain, P. M. (2001)

²⁵Ajaero et al., (2013) (Ibid.)

may motivate the rural youth to stay in their communities, thereby contributing their quota to agricultural development.

CLIMATE CHANGE AND ITS EFFECTS ON THE SOCIO-ECONOMIC DEVELOPMENT OF NIGERIA

DR. CHUKWUEMEKA GODSON EME (PhD)

Lecturer, Department of Business Administration, Faculty of Management Sciences,
National Open University of Nigeria, Jabi- Abuja, Nigeria;

Abstract

Climate change has become a great challenge to our generation and its impact is felt in almost every society in the world. Nigeria is likely to be the one of the most negatively impacted countries in the world as a result of climate change. Nigeria is plagued with many ecological problems of various dimensions. Whilst the people living in the southern part of the country are being ravaged by flood and gully erosion, their counterparts in the north are contending with the menace of desertification, deforestation and drought, among others. These environmental challenges have direct and indirect effects on the social and economic activities of the societies. The paper reviews the potential impact of climate change on Nigeria's economic and socio-cultural developments. Secondary data were used and descriptive research design was adopted. The findings indicates that many sectors of the Nigerian economy appears to be directly vulnerable to the impacts of climate change such as manufacturing, insurance, transportation, offshore oil and gas exploration and thermal and hydro-power generation and transmission. Other vulnerable sectors are those dependent on climate-sensitive resources like agriculture, fishing, forestry, renewable energy and eco-tourism. These cumulative effects will impact the GDP negatively. On the basis of the findings, the following were recommended; there should be policies toward mitigation and toward developing technology that can improve productivity and are environmentally friendly, irrigation should be encouraged, NIMET should be well equip to enable it function effectively, government agencies and NGOs should sensitize the people about the dangers of Climate Change in the drive towards a sustainable environment.

Key Words: Climate change, Global warming, Economic development, Sustainable development, Nigeria

1.0 Introduction

Climate change has become a great challenge to our generation and its impact is felt in almost every society in the world. Nigeria as a developing country with a population of about 160 million is likely to be adversely impacted by climate change due to the vulnerability and low coping capability. Evidences have shown that climate change impacts on Nigeria arises from various climate change-related causes experienced due to the increase in temperature, rainfall, sea level rise, impact on fresh water resources, extreme weather conditions, flooding, drought in the north and increased health risk.

Climate change is an interminable environmental threat of the 21st century which the world is currently experiencing and seeking measures to adopt and mitigate its impact. The United Nations Framework Convention on Climate Change (UNFCCC) defines climate change as a change which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere over comparable time periods. Climate change is wreaking havoc on the economies of several individuals, societies, and countries, including Nigeria. This has detrimental effect on a huge number of farmlands and the means of sustenance of persons, increasing poverty and leading to food insecurity, migration, conflicts and public health concerns. As poverty becomes severe, the poor become more reliant on unsustainable

development strategies. Thus, unsustainable development strategies such as fossil fuels add to global warming. Global warming therefore exacerbates problems in underdeveloped countries, particularly in sub-Saharan Africa, which lacks the capacity to adapt to climate change. As greenhouse gas emissions cover the Earth, they trap the sun's heat, causing it to warm at an unprecedented rate; hence, global warming and climate change occur.

As one of the most pressing environmental challenges and global crisis affecting civilization today, climate change is becoming a significant global concern, particularly in Africa and Nigeria, where rain-fed agriculture is used. One fossil-fuel-based economic system has been altering the world for many years. Sub-Saharan Africa, in general, and Nigeria, in particular, have been recognized as the region most likely to be affected by climate change, including increasing heat, erratic rainfall and natural catastrophes, as a result of global warming. The failure of the international leaders' meeting in Copenhagen to enhance aspirations for a healthy climate saddened the region. The gathering, a worldwide meeting held in December 2009 to assess progress toward the 1997 Kyoto Protocol's aim and design a new direction for addressing climate change challenges, did not yield a satisfactory result (Muller, 2010). Carbon dioxide (Co₂) emissions and the building of greenhouse gases in the atmosphere have changed weather and climate patterns; sadly, those responsible for climate change are rarely held accountable. Climate change has been exacerbated by traditional agricultural practices such as deforestation (tree felling for firewood and cooking energy) and bush burning as a farming practice.

Despite the fact that man and nature are closely linked, growing industrialization has accelerated the carbonization of the biosphere, leaving mother Earth with a negative carbon imprint that is redefining our symbolic relationship with nature. The issue of slow accumulation of dangerous gases in the atmosphere is central to the issue of anthropogenic carbonization of the biosphere and the bio-geophysical interests of world powers, which influence the nature and extent of all socioeconomic and political interactions on climate change (Sadiq, 2013).

Nigeria is vulnerable to climate change. Under the A2 Scenario of the Intergovernmental Panel on Climate Change's (IPCC's) Emissions Report (National Adaptation Strategy and Plan of Action on Climate Change for Nigeria (NASPA-CCN, 2011), it is projected that Nigeria will experience a temperature increase of 0.04 degree centigrade (0c) per year from 1981/2000 until the 2046/2065 period, rising to 0.08 0c per year after 2060. The scenario also projects wetter conditions in the southern part. The drier conditions are expected to be most severe in the north-eastern part of the country. For the 2046/2065 period, rainfall is projected to increase by an average of 15 on the rate of 7.5 cm annually in the north (NASPA-CCN 2011: 10). Increased climatic risks, notably floods and droughts, are typically the result, wreaking havoc on food supplies and the economy. Climate change and global warming would wreak havoc on Nigerian livelihoods, including crop production, livestock production, fisheries, forests, and post-harvest activities, if they go uncontrolled.

The impact of these changes, therefore without adaptation could cost between 6% of Nigeria's GDP by 2050, amounting to between USD 100 billion and USD 200 billion. The government has put in place N460 billion to enable them fight the menace of climate change and global warming (Department for International Development (DFID, 2009: 10).

1.1 Objective of the Study

The main objective of this study is to examine climate change in Nigeria, looking at its impact on the socio-economic and cultural sustainable developments of Nigeria. The specific objectives of the study were to:

- i. examine the climate governance and policies as response to climate change in Nigeria;
- ii. highlight the impacts of climate change on the socio-economic development of Nigeria;

- iii. assess the efforts of Nigerian government in mitigating the impacts of climate on the socio-economic development of the country'
- iv. proffer solutions to the challenges facing Nigeria's socio-economic development as a result of the global scourges of climate change.

1.2 Methodology

The research adopted a descriptive research design. It dealt exhaustively on the impact of climate change on Nigeria's socio-economic and cultural development. The research made extensive use of secondary sources of data from textbooks, internet sources and newspapers.

2.0 Conceptual Clarifications

2.1.1 Concept of Climate Change

There are many different ways to measure climate change. The International Panel on Climate Change says that it's a 'change in the state of the climate' that can be found by looking at how its properties change over time, usually for decades or more. Any change in temperature over time, whether caused by natural variability or human activity, is called climate change. 'Climate change is defined as "a change in the climate that is caused by human activity and that is in addition to natural climate variability that has occurred over the same time periods"' (United Nations Framework Convention on Climate Change UNFCCC, in IPCC, 2007). 'A change in the statistical distribution of weather over long periods of time is called "climate change"'. Wikipedia says that "climate change" is a change in the weather over a long period of time (Wikipedia, 2009). Wikipedia (2009) says that global warming is "the rise in the average temperature of the Earth's surface, air, and oceans since the mid-20th century and its expected continuation". This makes it clear that what is called climate change is actually the result of global warming. Climate change is a problem or phenomenon that has come about because there has been a high rise in the concentration of greenhouse gases (GHGs) made by humans (Spore, 2008). Natural resource depletion, ozone layer depletion, and global warming are some of the most important things about climate change. These traits are more self-reinforcing than other traits. A big problem in Africa when it comes to climate change is how many different stressors, like HIV/AIDS spreading and the effects of economic globalization and resource privatization, work together with climate change to make things worse.

Climate change has arisen as a new component, contributing to increased underdevelopment. There's a danger that Nigeria's climate change crisis may be exacerbated by the lack of a robust emergency and development policy, further complicating problems and increasing dependency and underdevelopment. Thus, the subject of climate change in Nigeria must be viewed in conjunction with developmental challenges, poverty, and unemployment. Nigeria has been seen as a weak, fragile state that has failed to put in place strong systems to help its citizens who have been affected by global economic woes. Every aspect of development in Nigeria is vulnerable to climate-related stressors. Nigeria's natural capital, including land, forests, landscapes, water and fisheries) and physical capital, including cities, infrastructure, and other kinds of capital are highly susceptible to the impact of climate change. Climate change affects the ability of natural capital, which is the main source of income and livelihoods for majority of Nigerians, to deliver its wide range of products and services including food, timber, and the regulation of water cycle. It's worth highlighting for instance, that economic fights are inextricably linked to social and environmental aspects of man's interaction with the climate system (Edeh, Eme and Nnoli, 2014).

2.1.2 Concept of Global Warming

The continuous rise in temperature of the planet is really upsetting. The root cause for this is global warming. Global warming begins when sunlight reaches the Earth. The clouds, atmospheric particles, reflective ground surfaces, and surface of oceans then sends back about

30% of sunlight back into the space, whilst the remaining is absorbed by oceans, air and land. This consequently heats up the surface of the planet and atmosphere, making life feasible. As the Earth warms up, this solar energy is radiated by thermal radiation and infrared rays, propagating directly out to space, thereby cooling the Earth. However, some of the outgoing radiation is re-absorbed by carbon dioxide, water vapour, ozone, methane and other gases in the atmosphere and is radiated back to the surface of the Earth. These gases are commonly known as greenhouse gases due to their heat-tripping capacity. It must be noted that re-absorption process is actually good as the Earth's average surface temperature would be very cold if there was no resistance of greenhouse gases. The dilemma began when the concentration of greenhouse gases in the atmosphere was artificially increased by humankind at an alarming rate since the past two centuries. As of 2004, over 8 billion tons of carbon dioxide was pumped, thermal radiation is further hindered by increased levels of greenhouse gases resulting in a phenomenon known as human enhanced global warming effect. Recent observations regarding global warming have sustained the theory that it is indeed a human enhanced greenhouse effect that is causing the planet to heat up. The planet has experienced the largest increase in surface temperature over the last 100 years. Between 1906 and 2006, the Earth's average surface temperature augmented between 0.6 to 0.9 degrees Celsius. Millions of pounds of methane gas are generated in landfills and agricultural decomposition of biomass and animal manure. Nitrous oxide is released into the atmosphere by various nitrogen-based fertilizers including area and diammonium phosphate and other soil management utilizations. Once released, these greenhouse gases stay in the atmosphere for decades or even longer. According to Intergovernmental Panel on Climate Change (IPCC), carbon dioxide and methane levels increased by 35% and 148% since the industrial revolution of 1750.

2.1.3 Impact of Climate Change on the socio-economic development of Nigeria

Climate change has been described as a statistical variation that persists for an extended period, typically for a decade or longer. It includes shift in the frequency and magnitude sporadic weather events as well as the slow but continuous rise in global average surface temperature (Intergovernmental Panel on Climate Change (IPCC, 2001). The German advisory council on climate change noted that climate is a threat already having substantial impact on human beings and the natural eco-system both in developed and developing countries but at varying degrees (German Advisory Council on Global Change (WBGU, 2003). For the developed countries, the impact of climate change has been perceived to be less severe due to natural advantage, high adaptation techniques, high technology, mechanical agricultural system and wealth status. These factors have enabled the developed economies to curtail the adverse effects of climate change. For developing countries like Nigeria, the impact of climate change is of great importance given the high temperature level, poor adaptation capacity and lack of early warning system. Apart from the above, climate change affects economies whose economic activities are natural resource sensitive such as agricultural activities. Unfortunately, some aspects of the existing literature shows that climate change may lead to significant reductions in agricultural productivity in developing countries (McGungan et al., 2002). Indeed, the effect of climate change on agricultural activities can be viewed from various aspects. Climate change affects the distribution of rainfall and temperature during a year and this determines crop yields especially those crops cultivated under rain-fed conditions (Thurlow et al., 2009). Excessive rainfall leads to destruction of arable land, impairment of cultivated crops, increased growth of weeds and greater post-harvest loss while a significant reduction in rainfall may culminate in drier land, reduction in water level in streams and rivers, increase in farmers' search for water for irrigation and consequently resulting in invaluable man hour losses and reductions in crop yield (Ozor, 2009). Climate change also affects livestock production due to reduction in the available pasture land, reduction in surface water resources for animals, increase in salinity of

water resources for animals, increase in salinity at watering points due to increased temperature and evaporation in the face of reduced rainfall. This implies that there would be a decline in the production of livestock, resulting in a reduction in the supply and availability of annual protein including meat, egg, milk and other animal produce such as hides and skins (Ozor, 2009).

In Nigeria, climate change also affects forestry due to erosion and excessive wind thereby resulting in decline in forest produce such as wood and cane. Consequently, it leads to reduction in forestry produce and low income, as well as an increase in the costs of building and furniture materials. Onuoha (2009) estimated the cost of deforestation and losses in non-timber forest products in the last 5 years in Nigeria at N120 billion per year which is equivalent of 1.7% of gross domestic product (GDP) in 2003. Obviously, climate change portrays a potential threat to the composition of agricultural output on agricultural output in particular and to aggregate national output in general.

In 2012, Nigeria adopted its Climate Change Policy Response and Strategy (CCPRS) to ensure an effective national response to the multi-faceted impacts of climate change. The main goals of the CCPRS include: Implementation of mitigation measures that will promote low carbon as well as sustainable and high economic growth, enhancement of national capacity to adapt to climate change, raising climate change related science, technology and research and development to a new level that will enable the country to better participate in international scientific and technological cooperation on climate change; significantly increase public awareness and involve private sector participation in addressing the challenges of climate change; strengthen national institutions and mechanisms (policy, legislative and economic) to establish a suitable and functional framework for climate change governance. The National Adaptation Strategy and Plan of Action for Climate Change Nigeria (NASPA-CCN) describes the adaptation priorities for future action. The NASPA-CCN vision is a Nigerian approach in which climate change adaptation is an integrated component of sustainable development, reducing the vulnerability and enhancing the resilience and adaptive capacity of all economic sectors and of all people to the adverse impacts of climate change, while also capturing the opportunities that arise as a result of climate change.

The impact of climate change is numerous. The variations in rainfall, temperature, drought, and humidity associated with the science of climate change in Nigeria affect climate dependent sectors. It affects the socioeconomic and political landscapes of countries as well as the relationship across nations as a trans-boundary phenomenon. As a result of its features which are life threatening; the rising sea levels, flooding, starvation, desertification, it is recognized as a threat to human existence. Certain factors such as HIV/AIDS, failing commodity prices, and in some areas have significantly weakened the ability of poor Nigerians to withstand shocks from extreme climate events.

Climate change puts our food and waste supplies at risk, as well as our health, security, stability, and property. Different countries' economic conditions and institutional infrastructure have an effect on their vulnerability to climate change. Certain countries particularly those with affluent economies, exhibit a high degree of resilience, while others, particularly those in sub-Saharan Africa with less favourable economic and institutional conditions, are more fragile. Indeed, because developing countries are frequently exposed to a variety of climatic and non-climatic stresses, their failure to collect reliable data on the resulting consequences exacerbates the consequences.

With climate change affecting highly populated locations in Nigeria like Lagos state, the number of environmental refugees displaced by natural disaster will increase. Forced migration therefore becomes one of the effects of climate change in human settlements, industries and businesses. Flood catastrophes in 2010 affected almost 250,000 people in Nigeria (BRNCCC 2011). In 2012, the situation became worse as the country was hit by high incidence of flooding; 1.3 million people were affected and over 400 people killed and in Makurdi, the flood was much

that crocodiles were found in the streets of the town. These incidence were blamed on climate change thus making the Director General of the National Emergency Management Agency (NEMA), Muhammad Sani-Sidi, to say that, ‘We are now living witnesses to the reality of climate change and global warming where areas considered dry land in the Northern part of the country witnessed excessive and torrential rainfall while some communities in the South were also submerged’ (Ezigbo, 2012). Rainfall patterns across the country have changed dramatically over the years, with most regions now seeing late onset rainfall as opposed to only a few areas in the northeast, northwest, and southeast (BNRCC, 2001).

Climate change affects human health and survival creating a major concern as well as the health and survival of other species of flora and fauna, and the environment. The World Health Organization (WHO) estimated that at least 150,000 deaths each year could be traced to the outcome of climate change. Moreover, the figure is expected to double by 2030 with connections to flooding and water-related diseases (WHO, 2021). Studies have claimed that climate change-related torrential flooding has led to disease outbreaks in various regions of the globe (Lislie, 1995; Rose et al., 2000). Consequently, the Nigerian population could be exposed to such threats.

Another area affected by climate change is source of livelihood. Livelihood is a means of securing the necessities of life. The effect of climate change threatens the means of sustenance of people. With the increased threats to productivity, farmers’ income will diminish and their ability to meet household needs (food, income, etc) will be difficult (Ozor, 2009). Oceanic acidification and increase in surface water temperature especially around the coast affects fish stocks and as a result threaten the livelihood of small-scale fishing communities in the area (IPCC 2007). This eventually will further deepen the vulnerability of the poor.

Climate change could also engender resource conflicts. In Nigeria, resource conflicts worsen given climate change as a result of the scarcity of resources. Population growth and the resulting increases in supply and demand for resources increase competition for scarce food, water, oil, and other resources. For instance, the Fulani herdsmen and farmers in Nigeria compete for grassland and water resources thereby engaging in violent conflicts.

Aside from the effects of climate change visible in the nature of glaciers, vegetation, the core, and other exotic indicators, sea level variations are especially important in our assessments of Nigeria’s socio-economic development. Some Nigerian observers have pointed out with some justifications that Nigeria is doubly vulnerable to climate change: heavy rainfall, flooding, soil erosion, and submergence of land in coastal areas as well as loss of wetlands (Ekott, 2009). Climate change in the South-South zone of Nigeria manifests primarily in increased precipitation, widespread flooding risk, ocean encroachment, increased deforestation, psychosomatic illnesses caused by the excessive heat of gas flaring and sea-level rise. However, it should be pointed out that while developing countries are concerned about the effects of climate change on their population, developed countries are concerned that climate change will limit their unique habits and lifestyle. This is the irony of life.

Climate change impacts are moderated by the level of socioeconomic development of a given community and Nigeria’s rather weak socioeconomic development is heightening the severity of the impact; further limiting the country’s capacity to respond to emerging challenges (Adesina & Odekunle, 2011). Without serous interventions, including, adaptation, the impact of climate change could be greater as the century progresses. This makes it crucial for Nigeria to focus on those activities and programs that would strengthen its resilience and adaptive capacity in terms of socioeconomic development and effective management of ecosystems (Raffaello et al., 2013; United States Agency for International Development (USAID, 2018).

2.1.4 Climate Governance and Policies as Response to Climate Change in Nigeria

Awareness creation on the impact of climate change involves the effort of everyone; thus, climate change governance involves broad public participation in decision-making which is a critical condition for achieving climate-resilient development. In Nigeria, various stakeholders, (government, non-governmental organizations, the academia and private organizations) collaborate to achieve positive results in climate change management and governance, disseminating information to every local community, stating the impact of climate change on the people especially those into agriculture. With the recognition of the impact of climate change on the socio-economic development of the country and the well-being of the populace by the federal government and other non-governmental organizations, efforts are made to manage climate-related development challenges with appropriate policy and institutional arrangements that will encourage the implementation of mitigation and adaptation actions at all levels of governance for climate compatible sustainable development. Such efforts include in 2012, the Federal Executive Council approved a comprehensive strategy policy on climate change: the Nigeria Climate Change Policy Response and Strategy (NCCPRS), a document which is an output of a national participatory and stakeholders consultative approach to put in place a well-defined national climate change response framework and implementation plan that incorporates critical elements of mitigation and adaptation, contains policy elements and short, medium and long-term national strategies that will enable the country to mainstream mitigation and adaptation into its national development efforts. This is to enable Nigeria respond effectively to the impact of climate change to reduce its vulnerability and enhance its resilience so that the national priorities of rapid economic growth, energy sufficiency, job creation, food security, transparent and accountable climate change governance will be properly addressed.

The Policy has been guiding policy decisions and led to actions in responding to climate change in the country. With the development of the NCCPRS, the global discourse on climate change has led to the adoption of new initiatives that have been domesticated to guide national response to reducing the impact and adapting to the challenge. In particular, a major basis for Nigeria's effective response to the challenge of climate change is the implementation of the 2015 Paris Agreement constitutes an important milestone in promoting the transition to a low carbon economy. Thus, the purpose of this National Policy on Climate Change is to define a new holistic framework to guide the country's response to the development challenge of climate change. As a framework document, it prescribes sector and cross-sectoral strategic policy statements and actions for the management of climate change within the country's pursuit for climate resilient sustainable development (Federal Ministry of Environment, 2021).

Also, the government of Nigeria mapped out other steps to address the challenges of climate change and they include the establishment of the Department of Climate Change (DCC) in the Federal Ministry of Environment which is the focal point to the United Nations Framework Convention on Climate Change (UNFCCC) and also the Designated National Authority (DNA) for the Clean Development Mechanism. The DCC works with other Ministries through the Inter-Ministerial Committee on Climate Change. Also taken as a measure are some development policies with clear implications for climate change adaptation: (i) Vision 20:2020; (ii) the Transformation Agenda (2011 – 2015); and (iii) Economic Recovery and Growth Programme (ERGP) (2017 – 2020). There is also the Nationally Determined Contribution (NDC) which was developed in 2015 towards the ratification of the Paris Agreement on Climate Change. Its aim is to reduce greenhouse gas (GHG) emissions intensity of GDP by 20% by 2030 relative to the emissions intensity of GDP in the base period 2010 to 2014 on an unconditional basis as well as a further 45% on a conditional basis consequent upon receiving climate finance, technology transfer and capacity building from the developed countries.

2.2 Theoretical Review

Two theoretical perspectives are particularly relevant towards our understanding of the phenomenon of climate change; namely the Anthropogenic Global Warming (AGW) hypothesis and the standard theory of externalities. The UK Met Office (1998) describes the AGW hypothesis as the first theory of climate change, which contends that human emissions of greenhouse gases principally carbon dioxide (CO₂), methane, and nitrous oxide, are causing a catastrophic rise in global temperatures. The mechanism whereby this happens is called the enhanced greenhouse effect. Energy from the sun travels through space and reaches the earth. The earth's atmosphere is mostly transparent to the incoming sunlight, allowing it to reach the planet's surface where some of it is absorbed and some is reflected back as heat into the atmosphere. Certain gases in the atmosphere, called "green-house gases" absorb the outgoing reflected or internal thermal radiation, resulting in earth's atmosphere becoming warmer than it otherwise might be. Water vapour is the major greenhouse gas, responsible for about 36-90% of the greenhouse effect, followed by CO₂, methane, and ozone. During the past century, human activities such as burning of wood and fossil-fuel as well as burning of forests are thought to have increased the concentration of Co₂ in the atmosphere by approximately 50%. Proponents of the AGW theory believe that man-made crop failures, species extinctions, spread of diseases, ocean coral bleaching, famines and literally hundreds of other catastrophes are fall-outs of climate change. According to them, all these disasters will become more frequent and more severe as temperatures continue to rise so that only large and rapid reductions in human emissions will save the planet from these catastrophic events.

Like other environmental problems, climate change involves externality, for instance, the emission of greenhouse gases causes damages to other economic agents for which they are not compensated by the agent responsible for the emission. The standard theory of externalities points to one of taxation of the emitter equivalent to marginal social cost of the externalities generated by it. But where there is weak representation of those most affected, coupled with long-term horizons, a global scale major externalities, and important interactions with other market failures, then resolving the externality problem can be quite complex. Hence, while the standard theory can provide useful initial insights, there is a much deeper and more complex economic policy problem. There is a problem of intertemporal international collective action with major uncertainty and linked market failures.

2.3 Empirical Review

Empirical studies have also confirmed that climate change can have substantial impacts on the overall economy. In Ethiopia, Gebreegziabher et al. (2011) examined the economic effect of climate on agriculture productivity (GGE) model. The study observed that the impact of overall climate change will be relatively benign until approximately 2050, and thereafter worsen considerably. Further, the simulation results showed that, over a 50-year period, the projected reduction in agricultural productivity may lead to about 30% less average of climate change. Using descriptive analysis, Ozor (2009) demonstrated the processes that lead to climate change so as to enable a better understanding of the concept. The study described in details the impacts of climate change on various issues of national development such as low agricultural productivity, food insecurity, resource conflicts, unemployment, environmentally-induced migration, livelihood problems and health issues. The study also noted that these impacts are as a result of devastating effects of flooding, drought, erosion, desertification, sea level rise, heat stress, pests and diseases, and erratic rainfall patterns, arising from climate change. The study further suggested the need for climate policy in Nigeria, the establishment of NCCC, the development of a national framework for climate change adaptation, and the embracing of emerging technologies.

Onuoha (2009) examined the threats posed by climate change across the globe with particular reference to developing countries, where agriculture is a dominant sector and in turn depends on weather and climate. The study utilized the sustainable development model in the form of the Green Wall Sahara Nigeria Program as a strategy for greening the drought-prone and desert infested areas of Northern Nigeria. The study concluded that the challenges of climate change to economic growth and sustainable development in Nigeria require creative thinking, holistic ideas, innovative solutions and the involvement of all stakeholders. Agwu and Okhimamhe (2009) conducted two studies on the gender dimensions of climate change in North-Central and South-Eastern Nigeria. The North-Central study assessed the impact of climate change on the Zumba and Augie Communities in Niger and Kebbi states respectively. It highlighted the challenges and adaptation strategies of the selected communities. The study observed that communities had noticed climate change but failed to identify its causes. Some of the women in these communities attributed the climate change such as environmental degradation to the construction of the Shiroro dam and the resulting massive deforestation. Less scientifically, Augie women believed that the flood waters from Bakoleri and Goronyo dams which destroyed their farms and affected the health of their people were calamities inflicted by the gods. Again, the women accepted that they had contributed to deforestation in their search of the wood which led to the disappearance of many plant and animal species. Although these resilient communities have put various adaptation measures in place, they were not primarily targeted at reducing the impact of climate change. The study finds that Augie community is already practising a number of coping strategies and requesting for assistance to strengthen them. Specifically, the stakeholders of the community requested for funding, awareness campaigns and capacity building. In Zumba, awareness campaigns are also needed to address traditional beliefs. The second aspect of the study focused on two South-eastern communities, namely Enugwu Nanka in Anambra State and Akama Amankwo Ngwo in Enugu State. The study revealed that the impacts of climate change in South-Eastern Nigeria include the destruction of roads and economic trees by landslides and tornadoes. Climate change is also responsible for excessive heat, heightened insect activity and the drying up of streams. The study concluded that while ingenious adaptive and mitigation strategies developed by women were found in the sample states, better policy making to combat climate change is urgently needed.

Nwafor (2007) notes that a common theme in the climate change vulnerability literature is the idea that countries, regions, economic actors and social groups differ in their degree of vulnerability to climate change. This is partly due to the fact that changes in temperature and precipitation occur unevenly and that climate change effects on resources and wealth are distributed unevenly across the globe. Onuoha (2008) examined these observations by adding that unless appropriate mitigation measures are adopted to reduce vulnerability in Nigerian and other developing countries of sub-Saharan Africa, climate change portends grave danger not only to the people but also to the biotic and abiotic environments. The study expressed concern that all the developmental advances witnessed in sub-Saharan Africa may be destroyed or reversed over a short period of time unless the effects of climate change are urgently tackled.

3.0 Results and Discussion

The empirical analysis began with the examination of the data for its time series properties. The results of the unit root tests are shown in Table 1. The results indicate that all the series are $I(1)$ except annual rainfall. This suggests that the variables may be co-integrated, since the dependent variable (GDP) has the same order of integration with majority of the regressors. Indeed, we conducted the co-integration test using the residual approach. The result which is shown in Table 2, indicates that the residual is stationary at all level, thereby confirming the existence of an equilibrium relationship between the variables.

Table 1: Unit root test results

Variable	ADF	Phillips-Perron	Result
GDP	1(1)	1(1)	1(1)
ARF	1(0)	1(0)	1(0)
GEM	1(1)	1(1)	1(1)
FDI	1(1)	1(1)	1(1)
GEXP	1(1)	1(1)	1(1)
PINV	1(1)	1(1)	1(1)
REXR	1(1)	1(1)	1(1)

1(0) and 1(1) denote stationary at level and after first difference, respectively. The unit root tests were performed at 5% level controlling for trend and intercept for GDP, GEXP and REXR and controlling for only intercept in other cases. All variables are in their natural log transformation, GDP (Gross Domestic Product); ADF, Augmented Dickey Fuller

As a robustness check, we also conducted the Johansen co-integration test and the results are shown in Table 3. While the Trace test indicates the existence of at least 4 co-integrating equations.

Table 2: Testing the residual for unit root

Variable	Augmented Dickey Fuller Test Statistics	1% Critical Value	5% Critical Value	Probability Value
Residual	-6.339649	-3.646342	-2.954021	0.0000

The residual is stationary at 1% level of significance

Table 3: Johansen co-integration test results

Hypothesized number of CE (s)	Trace Statistics	5% critical value	P value	Hypothesized number of CE (s)	Max-Eigen statistics	5% critical value	P value
None (x)	218.0508	150.5585	0.0000	None	56.8722	50.5999	0.0099

D(CEM)	-0.21 (x)	F-statistic	Remarks
D(FDL)	-0.05	Durbin-Watson statistic	
D(GEXP)	0.76 (xxx)	Breusch-Godfrey test (observed Chi-square)	
D(PENV)	-0.30 (xxxx)	Breusch-Pagan-Godfrey test (observed Chi-square)	
D(REXR)	-0.29 (xxx)	Breusch-Pagan-Godfrey (observed Chi-square)	
BCM(-1)	-1.09 (xxx)	Jarque-Bera statistic	

Following the establishment of an equilibrium relationship between the variables, we estimated the long-run relationship of equation 1. The results are shown in Table 4. We summarize the main findings as follows. First, out of the three climate change variables in this study, only carbon emission impacts negatively on the overall output growth of the Nigerian economy. This suggests that Nigerian government must resolve and implement policies that will reduce the amount of carbon emission in the country, especially those coming from the consumption of fossil fuel and gas flaring. Second, the impacts of rainfall and carbon emission are statistically significant at the 5% level. This shows that these climate change variables are important in Nigeria. Third, contrary to expectation, the impact of forest depletion is positive, though it is not statistically significant. This may be due to inadequacies in documenting forest depletion activities in Nigeria. Consequently, the study will favour the continuation of efforts towards forest conservation in Nigeria. Fourth, all the control variables conformed to theoretical expectations, except for domestic private investment. While government expenditures impacts positively and significantly on output at the 1% level, both private investment and exchange rate impact negatively.

The diagnostic checks indicate that the underlying assumptions of the model have been substantially satisfied. The adjusted R square shows that the regressors have adequately accounted for the variations in the dependent variable. The F-statistics, which is strongly significant at the 1% level, shows that the model as a whole is meaningful. The Durbin-Watson Statistic which is approximately 2 is in line with theoretical expectation. Even though the Breusch-Godfrey Test indicates the presence of residual serial correlation problem at the 5% level, we corrected the problem using the Newey-West FAC method. The Breusch-Pagan-Godfrey test shows that there is no problem of Heteroscedasticity in the results. The Jarque-Bera statistic shows that the residual is normally distributed in line with theoretical expectations. Overall, the model assumptions are adequately fulfilled.

5. Conclusion and Recommendations

This paper examined the impact of climate change on socio-economic growth and development in Nigeria. The paper used OLS estimation technique and data for the period 1981-2014. Changes in annual rainfall, carbon emission and forest depletion were used to capture climate change, while government expenditure, domestic private investment and exchange rate were used as control variables in order to obtain robust estimates. The paper estimated an error correlation model in order to account for both long-run and short-run relationships. The results indicate that both in the long-run and short-run, carbon emission affect output growth in Nigeria

adversely. In addition, forest depletion impacts negatively on national output growth in Nigeria in the short-run. These results imply that Nigerian government should evolve and implement policies to curb carbon emissions and forest depletion. In other words, government intervention is required to reduce carbon burning, deforestation and fossil fuel consumption. Government should evolve policies to encourage the use of environmental-friendly equipment, machines, infrastructure, and technologies that generate minimal greenhouse gases, such as improved road and rail transport as well as use of bio-fuels and energy saving devices. A NCCC is obviously required in Nigeria to deal with all climate change issues. Furthermore, the finding that domestic private investment and naira-to-dollar exchange rate impede output growth in Nigeria implies that policymakers and governments at all levels in Nigeria should evolve and implement policies to reverse these undesirable outcomes.

ÇOK AMAÇLI OTONOM BİR SUALTI ARAÇ TASARIM AŞAMALARI
DESIGN STAGES OF A MULTI-PURPOSE AUTONOMOUS UNDERWATER VEHICLE

Cihan Alp ŞAHİN

Dr. Öğr. Üyesi, Manisa Celal Bayar Üniversitesi, Teknik Bilimler Meslek Yüksekokulu,
Elektrik ve Enerji Bölümü

ÖZET

Bu çalışmada çok amaçlı olarak kullanımı planlanan otonom bir sualtı aracı için gerçekleştirilen tasarım aşamaları sunulmuştur. Hem sivil hem askeri çalışmalarda önemli bir çalışma alanı olan sualtı çalışmaları kara ve hava alanında yapılan çalışmalarla kıyaslandığında oldukça sınırlı kalmaktadır. Fakat hem askeri çalışmalar hem de değişen doğa olayları bilim insanlarını sualtının keşfine daha da meraklandırmıştır. Özellikle de sualtında keşfedilmemiş madenler, petrol ve doğalgaz rezervleri dünyanın enerji geleceğinde önemli bir yer tutmaktadır. Bu amaçlar doğrultusunda ROV (Remotely Operated Underwater Vehicle) olarak da adlandırılan uzaktan kontrollü çeşitli sualtı araçları kullanılmaktadır. Fakat teknolojinin gelişmesiyle kullanıcılar AUV (Autonomous Underwater Vehicle) olarak da bilinen otonom sualtı araçlarını kullanmaya başlamışlardır. Bunlar sayesinde son yıllarda sualtı araştırmalarında artışlar meydana geldiği görülmektedir. Bu çalışmanın sonucunda kendini bu alanda geliştirmek isteyen öğrenciler için otonom bir su altı aracı tasarımı gerçekleştirilmiştir. Yapay sinir ağı temelli otonom bir su altı aracının birinci aşaması olan bu çalışma mekanik tasarım unsurlarının önemini vurgulamaktadır. Kontrol algoritması ne kadar yüksek kalitede olsa da iyi tasarlanmamış bir araç kullanım açısından oldukça kısıtlı kalabilmektedir. Bu noktada doğadaki canlılardan esinlenmek oldukça yaygındır. Biyomimetik yaklaşım olarak da bilinen, doğadaki canlılardan esinlenerek tasarlanmış olan otonom sualtı aracının üretim aşamaları dört aşamadan oluşmaktadır. Bunlar sırasıyla; ana gövde tasarımı ve gerekli analizlerin yapılması, tahrik sisteminin tasarlanması ve gerekli analizlerin yapılması, ana gövdenin eklemeli imalat yöntemiyle üretilmesi, elektronik donanımların montajı ve sistemin çalışır hale getirilmesi, son olarak da testlerin gerçekleştirilmesi ve yazılım geliştirilmesi olarak sıralanmaktadır.

Anahtar Kelimeler: Sualtı aracı, 3B baskı, Otonom

ABSTRACT

In this study, the design stages for an autonomous underwater vehicle planned to be used for multi-purpose purposes are presented. Underwater studies, which are an important field of study in both civil and military studies, are quite limited when compared to studies carried out on land and in the air. However, both military studies and changing natural events have made scientists even more interested in underwater exploration. In particular, undiscovered underwater mines, oil and natural gas reserves hold an important place in the world's energy future. For these purposes, various remotely controlled underwater vehicles, also called ROV (Remotely Operated Underwater Vehicle), are used. However, with the development of technology, users have started to use autonomous underwater vehicles, also known as AUV (Autonomous Underwater Vehicle). Thanks to these, it has been observed that there has been an increase in underwater research in recent years. As a result of this study, an autonomous underwater vehicle design was carried out for students who want to improve themselves in this field. This study, which is the first phase of an artificial neural network-based autonomous underwater vehicle,

emphasizes the importance of mechanical design elements. No matter how high quality the control algorithm is, a poorly designed vehicle may be quite limited in terms of use. At this point, it is quite common to be inspired by living things in nature. The production phases of the autonomous underwater vehicle, which was designed with inspiration from living things in nature, also known as the biomimetic approach, consist of four stages. These are; designing the main body and performing the necessary analysis, designing the drive system and performing the necessary analysis, producing the main body using the additive manufacturing method, assembling the electronic hardware and making the system operational, and finally performing the tests and developing the software.

Keywords: Underwater vehicle, 3D printing, Autonomous

1. Giriş

Sualtının gizemi her daim insanoğlunun merak ettiği bir alan olmuştur. Sualtının barındırdığı yaşam, sakladığı kaynaklar, gözle görülemeyen gizemi insanoğlu için hem hobi amaçlı, hem bilimsel amaçlı hem de askeri amaçlı olarak her zaman merak edilmiştir. Özellikle de enerji kaynaklarının gelecek açısından yetersiz olarak görülmesi insanoğlunu yeni kaynaklar bulmaya yönlendirmektedir. Bu noktada da sualtının keşfedilmemiş kaynakları büyük önem arz etmektedir. İnsanoğlu tüm bunların keşfi için 1960'lı yıllardan bu yana arama çalışmalarında önemli bir yere sahip olan ROV (Remotely Operated Underwater Vehicle) olarak da adlandırılan uzaktan kontrollü çeşitli sualtı araçları kullanmaktadır [1, 2]. Günümüzde hayallerin ötesinde yaşanan teknolojik gelişmeler insansı robotları hayatımızın her noktasında ön plana çıkarmaya başlamaktadır. İnsanoğlunun duyu organlarıyla hissetmekte olduğu fiziksel olguları sensör teknolojisiyle hisseden insansı robotlar sayesinde otonom teknolojilerde büyük ilerlemeler gerçekleşmektedir. Bu gelişmeler sivil ve askeri çalışmalarda uzaktan kontrollü sualtı araçlarının yanında AUV (Autonomous Underwater Vehicle) araçlarının da kullanılmasına olanak sağlamıştır. Literatürde önemli su altı araçları olarak anılan bu araçlar uzun süre navigasyon ve yüksek ağırlık taşıma kapasitesine de sahip olabilmektedirler. Bu özellikleri sayesinde çok farklı alanların ihtiyacını görmektedir [3]. Otonom araçları uzaktan kumandalı araçlardan ayıran en önemli fark, sahip olduğu kontrol algoritmaları sayesinde insanlarla iletişim kurmadan tanımlanan görevi icra edebilmesidir [4]. Bu da çevre koşullarının çok hızlı bir şekilde değiştiği oldukça zorlu ortamlarda çalışan AUV'ler için doğru ve güvenilir bir kontrol sistemini zorunlu kılmaktadır. Kontrol sisteminin kendi arızasını teşhis etmesi de otonom sualtı araçlarının sahip olduğu gelişmiş zekanın göstergesidir [5]. Bilgisayar, Elektronik, Malzeme bilimi ve Haberleşme gibi teknolojilerde yaşanan gelişmeler otonom sualtı araçlarına önemli bir misyon yüklemiş olsa da, bu araçların tasarımı ve geliştirilmesi karmaşık ve maliyetli bir süreçtir [6]. Bu çalışmada, otonom bir sualtı aracı için tasarım aşamaları ve süreç yer almaktadır. Üretilen otonom sualtı aracıyla kendisini bu alanda geliştirmek isteyen öğrencilere rehber olmak hedeflenmiştir. Kontrol algoritması ne kadar yüksek olsa da iyi bir tasarıma sahip olmayan araçların kullanımı oldukça kısıtlanmaktadır.

2. Otonom Sualtı Aracı (AUV)

Sualtında veri toplama, denizaltı kurtarma veya deniz bilimi görevlerinde yaygın olarak kullanılan sualtı araçlarının kontrol edilmesindeki oldukça zordur. Bilinmeyen bir yol üzerinde seyredecek olan su altı araçlarının iyi bir kontrol algoritmasına ve iyi bir tasarıma ihtiyacı vardır. Özellikle okyanus akıntıları ve dalgalar önemli dış etkenlerdir. Üstlenmiş olduğu zorlu görevi dinamik ortamlarda gerçekleştiren sualtı araçları yüksek oranda doğrusal olmayan dinamiklere sahiptirler. Bundan dolayı da otonom araçlar için kontrol tasarım sistemlerinin yüksek verimli olması istenir [7, 8]. Tabii otonom sualtı araçları için iyi bir kontrol algoritması

kadar iyi bir fiziksel yapı da önemlidir. Bu noktada doğadan ilham alınarak tasarlanmış araçlar farklı koşullarda daha adapte bir çalışma sunmaktadırlar. Biyomimetik yaklaşım olarak bilinen doğadan ilham alınarak yapılan tasarımlar günümüzde uçak, otomobil, robot gibi birçok alanda kullanılmaktadır. Bu yaklaşımda doğadaki canlıların yapıları ve fonksiyonel özellikleri incelenerek, sistem ve mekanizmalar taklit edilmektedir [9]. Gerçekleştirilen çalışmada tasarlanan sualtı aracı Caretta Caretta deniz kaplumbağasından esinlenerek tasarlanmıştır. Şekil 1’de tasarlanan sualtı aracının render görseli görülmektedir. Sualtı aracı üç ana bölümden oluşmaktadır. Bunlar kabuk (ana gövde), pil ve elektronik ekipmanların yerleştirildiği kapsüller ve thruster (itici).

Şekil 1. Sualtı aracı render görseli

2.1. Ana Gövde

Şekil 2’de deniz kaplumbağasından esinlenerek gövde tasarımı gerçekleştirilen sualtı aracının Solidworks görselleri görülmektedir. Aracın ön tarafı kaplumbağanın kafa yapısı olarak kabul edilerek, aracın dışarıya bakan gözü olarak tasarlanmıştır. Tasarımda açık iskelet sisteminin tercih edilmesi suya karşı direncin minimize edilerek dayanıklılığı arttırmaktır. Ayrıca aracın gövde tasarımı Solidworks ortamında statik analizleri gerçekleştirilerek zayıf yönleri belirlenmiştir. Bu sayede aracın kolay ve hızlı manevra yapabilmesi için gerekli iyileştirmeler yapılmıştır. Tablo 1’de aracın geometrik özellikleri Şekil 2’de Solidworks çizimleri, Şekil 3’de Solidworks statik analizleri görülmektedir.

Özellik	Ölçü
Araç kütlesi	6 kg
Araç hacmi	7.649 dm ³
Yüzey alanı	2.187 dm ³
Araç uzunluğu	420 mm
Araç genişliği	436.74mm
Araç yüksekliği	359 mm

Tablo 1. Aracın geometrik özellikleri

Şekil 2. Gövde tasarımı Solidworks görselleri

Şekil 3. Sualtı aracı Solidworks statik analizleri

Prototip otonom sualtı aracının ana parçaları için son yıllarda kullanımı oldukça yaygınlaşan 3B baskı yöntemi kullanılmıştır. 3B baskı yöntemi son yıllarda tıp, askeri, sivil uygulamalar gibi birçok alanda kullanılan bilimsel alanda da hızla gelişen ve oldukça ilgi duyulan bir alandır [10]. Bilgisayar destekli tasarım programları kullanılarak oluşturulan parçaların fiziksel olarak üretilmesi felsefesiyle çalışan 3B üretim, birçok araştırmacı ve girişimci tarafından ilgi görerek kullanılmaktadır [11, 12]. Ayrıca parçanın üretim sınırları olmadan tek aşamada üretilmesi gibi özellikleri de barındırmasıyla imalat sektöründe yaygın olarak kullanılmaktadır. Şekil 4'de sualtı aracının iskelet yapısının 3B baskı yöntemiyle üretilmesi görülmektedir.

Şekil 4. 3B teknolojisi ile gövde üretimi

2.2. Kapsül

6063 serisi alüminyum tercih edilerek imalatı gerçekleştirilen kapsül bölümü, aracın sahip olduğu elektronik bileşenleri su ve çevresel etkilerden korumaktadır. Zehirleyici ve manyetik olmayan özelliklere sahip 6063 serisi alüminyum 660 °C erime sıcaklığı ve 2519 °C kaynama sıcaklığı özelliğine sahip 6063 serisi alüminyum serisi üstün korozyon özelliklerini de sahiptir. Ayrıca bataryalardan çıkan ısının elektronik donanımlara zarar vermemesi için ikinci bir kapsül yapısı görülmektedir. Kapsül kapakları PetG filamentini kullanarak 3B yazıcı ile %30 doluluk oranıyla üretilmiştir. Ön kapağın içine görüntü aktarımında kullanılacak kameraya uygun bölme ve kameranın önüne tam oturacak şekilde 120 mm çapında pleksiglas için yuva açılmıştır. Ayrıca elektronik kablolar için M10 Kablo Kanalı (Penetratör) kullanılmıştır. Şekil 5’de kapsül dış ve iç yapısının 3B tasarımı, Şekil 6’da alüminyum boru yüzey temizleme, Şekil 7’de ise kapsüle ait ön ve arka kapak üretimleri görülmektedir.

Şekil 5. Alüminyum boru yüzey temizleme işlemi

a)

b)

Şekil 6. a) Kapsül ön kapak b) Kapsül arka kapak üretimi

2.3. Thruster (İtici)

Otonom aracın hareketini sağlamak için araç üzerinde altı adet Thruster bulunmaktadır. Bunlardan ikisi aracın dikey hareketini ve dengenin sağlanması için kullanılmaktadır. Yapılan kavitasyon testleri sonucunda pervaneler üç bacaklı olarak tasarlanmıştır. Şekil 7’de thruster render görünümü, Şekil 8’de pervanelerin üretim aşaması görülmektedir.

Şekil 7. Thruster render görünümü

Şekil 8. Pervanelerin üretimi

Prototip sualtı aracının karakteristik yapısının detaylı bilgi edinmek için HAD (Hesaplamalı Akışkanlar Dinamiği) analizleri gerçekleştirilmiştir. Isı, akış ve kütle transferi problemlerinin çözümünde kullanılan bir yöntem olan HAD analizi bilgisayar tabanlı bir simülasyon sistemidir. Şekil 8’de pervaneler için gerçekleştirilmiş olan girdap viskozitesi analiz sonuçları görülmektedir. Pervanelerin girdap viskozitesi incelendiğinde Thruster’ın arkasından çıkan su geliş hızı ile beraber arka bölgede sıkışıp daha yoğun bir hal almaktadır. Bunun sebebi ise thruster’ın arkasında pervanelerden dolayı oluşan girdaptır.

Şekil 9. Girdap Vizkozitesi analiz görseli

2.4. Elektronik Ön Tasarım

Görüntü alınırken raspberry pi kamera modülü kullanılmıştır. Bu aşamalardan sonra RASPBERRY Pi 4 içinde gerekli hesaplamaları yaparak motor kontrolünü yapacak olan Arduino Mega'ya veriler aktarmıştır. Raspberry Pi 4 üzerinden görüntü işleme yazılımında zamansal ve görüntüsel gecikmeler olduğundan dolayı, bu durum Jetson Nano kartı kullanılarak fps ve görüntü işlemede yaşanan zorluklar ortadan kaldırılmıştır.

Tüm bölümlerin bitirilmesiyle araç parçaları boyanarak birleştirilmiştir. Şekil 10-a'da otonom sualtı aracının boyama ve birleştirme aşamaları, Şekil 10-b'de ise otonom sualtı aracının prototipi görülmektedir.

a)

b)

Şekil 10. a) Otonom sualtı aracı boyama ve birleştirme aşamaları b) Otonom sualtı prototipi

3. SONUÇ

Son yıllarda otonom sistemlerde yaşanan gelişmeler yaşamın her noktasında kendini göstermektedir. Özellikle araştırma ve askeri projelerde yaşanan hızlı gelişim bu alanda

çalışmak isteyen kişi sayısında da gözle görülür bir artışa sebep olmaktadır. Bu çalışmada kendini sualtı otonom sistemlerde geliştirmek isteyen öğrenciler için bir sualtı otonom robot uygulamasının birinci aşaması olan prototip otonom sualtı robot üretimi gerçekleştirilmiştir. Laboratuvar çalışmaları için gerçekleştirilen robot sayesinde, 3B teknolojileri, bilgisayarlı simülasyon programları, elektronik kart tasarımları, kontrol algoritmaları alanında kendilerini geliştirmek isteyen öğrenciler için katkı sağlayacaktır.

Teşekkür

Bu çalışma Manisa Celal Bayar Üniversitesi, Bilimsel Araştırma Projeleri Koordinasyon Birimi 2021-059 numaralı genel araştırma projesi tarafından desteklenmiştir. Ayrıca çalışmanın proje sürecinde aramızdan ayrılan Dr. Mevlüt KARAÇOR'a teşekkürü bir borç biliriz.

DIAGNOSTIC ASSESSMENT OF SECONDARY STUDENTS' AREAS OF DIFFICULTIES IN QUANTITATIVE ECONOMICS IN PLATEAU STATE, NIGERIA

Clementina Hashimu Bulus

Department of Educational Foundations, University of Jos, Plateau State, Nigeria

The study assessed secondary school students' areas of difficulty in Quantitative Economics in Plateau State, Nigeria. The objectives of the study were to find out the performance profile of students in Quantitative Economics in terms of mastery and non-mastery of the objectives covered by the diagnostic test items, identify the errors committed and find out the perceived causes of errors and how these errors can be minimized. The study adopted a survey research design. The study population comprised all 30,195 senior secondary school two (SS II) students in Plateau State. A sample of 1,594 Economics Students (849 male and 745 female) was determined using the Taro Yamane formula. A multi-stage stratified sampling technique was used for the study. The instrument used for data collection was a Quantitative Economic Diagnostic Test (QEDT) developed by the researcher. The instruments were made up of 104 multiple-choice, 11 essay items and a questionnaire. The reliability of the QEDT items and the questionnaire were determined using the Kuder-Richardson formula 21 (KR-21) and Cronbach Alpha approaches. Data collected were computed using simple percentages, mean, standard deviation. The result obtained showed that students have not mastered graphs, consumer behaviour, demand/supply and price determination and public finance, but have mastery of measures of central tendency and theory of cost. The study revealed that the most common error made by students in Quantitative Economics was computation error and the least was interpretation error. Based on the findings of this study, it was concluded that students have low mastery of skills in graphs, price determination, public finance and the theory of consumer behaviour. The researcher recommended that economics teachers use diagnostic assessments in addition to formative and summative tests for assessing students' learning.

KEYWORDS: Diagnostic Assessment, Quantitative Economics, Errors

INTRODUCTION

Economics is a social science subject that studies how individuals, firms and nations make choices and satisfy unlimited wants with scarce resources. It enables an individual to think and apply economic principles in solving practical problems for useful living and effective management of scarce resources (Bulus, 2018). The structural changes needed for broad-based development in Nigeria have not been forthcoming. It has been observed that oil-rich Nigeria is hobbled by inadequate power supply, lack of infrastructure, inefficient property registration system, restrictive trade policies, inconsistent regulatory environment and pervasive corruption (Gabriel, 2016). Also, people live in extreme poverty; investors are losing their investment in stock as a result of depreciation in currencies (Nevin, 2016). Inflation, due to falling domestic fuel prices has led to an increase in the price of imported goods, hence the need for effective teaching and learning of Economics in Nigerian secondary schools to build bridges between educators, businessmen and consumers to prepare the Nigerian society to meet the challenges that will yield benefits to students and the nation.

The teaching of Economics as a subject has two facets: theoretical and quantitative. Theoretical Economics is an aspect of economics that explains economic principles and phenomena and

treats the qualitative elements of economics. On the other hand, quantitative Economics is an aspect of Economics that uses a range of complex mathematical and statistical procedures to analyse economic phenomena. It helps economic analysts explain and predict economic issues (Bulus & Namang 2024). It is an aspect of Economics designed to expose students to a more practical application of economic principles to real-life situations (Pettinger, 2019). It helps economic analysts explain economic issues, as well as predict future economic conditions. They not only lend quantitative empirical support to economic theories, which are generally expressed in qualitative terms, but also forecast economic conditions, evaluate the impact of economic policies, examine the feasibility of government or business decisions, and analyze market conditions for businesses (Economics Research, 2015). The knowledge of Economics can also reduce the problem of unemployment by giving students ideas on how to establish businesses in their locality with the available resources.

The importance of quantitative aspects of Economics to the economic development of Nigeria must have informed the inclusion of error analysis as part of the functions of Chief Examiners which require Senior School Certificate Examinations conducted by the West African Examinations Council (WAEC) and the National Examinations Council (NECO) to write a report on the different topics students commit errors in Economics. The areas of weaknesses as shown in the Chief Examiners' Report (WAEC & NECO, 2022) include poor knowledge of basic tools of economic analysis (tables, graphs, some basic statistical measures and representations and their simple applications), theory of demand/supply and price determination, theory of consumer behaviour and theory of cost concept. These areas of weakness are from the Quantitative aspects of Economics. These weaknesses according to the Chief Examiners' Report (WAEC & NECO, 2020- 2022), were attributed to students' inability to interpret facts, poor grammatical expression, poor presentation, misinterpretation of concepts, poor knowledge of drawing good diagrams, poor calculation skills, students not being able to interpret graphs, weak manipulative skills, use of wrong vocabulary, inadequate knowledge of basic requirements of questions and illegible handwritings. The problems in all these may not have started in the last year of schooling in senior secondary three. If the errors had been detected in the first and second year in the senior class, it would have gone a long way to reducing the errors at the SSCE (Bulus, 2018, Bulus & Namang 2024). Errors are wrong answers or mistakes, blunders, miscalculations or misjudgments in responding to questions. It could be unintended mistakes, which emanate from fatigue and carelessness. For example, in graphs, students have demonstrated faulty thinking by drawing bar charts instead of histograms (WAEC Report, 2022). Although students make errors, their opinions on what is causing errors have not been investigated. Therefore, students continue to make errors, which leads to poor performance in Economics.

The existing strategies for diagnosing learning errors include observation, screening assessment and progress monitoring (George, 2008; Logsdon, 2010; Jerry, 2014). Other strategies, which are important to this study, are error analysis and diagnostic assessment. Error analysis is the examination of those mistakes made by students. It's for identifying, classifying and systematically interpreting unacceptable deviation. It also aims at identifying the patterns of errors to establish error taxonomies. Error analysis gives feedback to both teachers and students regarding strategies and progress, provides insights into the nature of the problem and reveals to the teacher areas in which students have difficulties.

Errors can also be dictated using diagnostic assessment. Diagnostic assessment is a pre-evaluation that allows a teacher to determine a student's strengths, weaknesses, knowledge, and skills before instruction. Ketterlin-Cieller and Yaranoff (2009) defined diagnostic assessment as the process of locating and identifying students' areas of learning difficulties, weaknesses, and errors in a subject or skill. Diagnostic assessment could be standardized, where assessment uses well-defined testing methods to evaluate a student's knowledge and identify any existing

gaps. This assessment provides teachers with a more in-depth analysis of a student's learning weaknesses and strengths. It usually occurs when an informed assessment has been achieved. Diagnostic assessment tends to expand the student's knowledge and achievement. Its purpose is to assess the student's prior knowledge in addition to the type of learning problem the student may encounter; such can reduce the student's commitment to new learning if not diagnosed. The primary concern of diagnostic assessment is not how much the student scores but his or her areas of difficulty. Therefore, there is a need for diagnostic assessment to assess areas students have mastered and those that they have not mastered and to find out the errors made by the students, the causes of those errors made by students, and how these errors can be minimized.

RESEARCH QUESTIONS

1. What is the achievement profile of SSIII students in Economics in terms of mastery and non-mastery of the objectives covered by the quantitative Economics diagnostic test?
2. What are the errors committed by students in Economics as measured by the quantitative Economics diagnostic test?
3. What are the causes of errors made by students in the quantitative Economics diagnostic test?
4. How can errors committed by students in the quantitative Economics diagnostic test be minimized?

METHODOLOGY

The study assessed secondary school students' areas of difficulty in Quantitative Economics in Plateau State, Nigeria. The study adopted a descriptive survey research design. The study population comprised all 30,195 senior secondary school two (SS II) students in Plateau State. A sample of 1,594 Economics Students was determined using the Taro Yamane formula. A multi-stage stratified sampling technique was used for the study. The instruments used for data collection were a Quantitative Economic Diagnostic Test (QEDT) developed by the researcher. The instrument was made up of 104 multiple-choice and 11 essay items. The reliability of the QEDT items and the questionnaire were determined using the Kuder-Richardson formula 21 (KR-21) and the Cronbach Alpha approaches. Data collected were computed using simple percentages, mean, and standard deviation. The errors committed by students in QEDT were identified and classified into different error patterns (conceptual, computation, procedural, plotting and interpretation errors) based on the subtests (graphs and diagrams, measures of central tendency, demand and supply, theory of cost and theory of consumer behaviour). The distribution of each error type was determined using percentages. This provides diagnostic feedback which guides teaching and learning. Errors were identified from students' responses to the Quantitative Economics Diagnostic Test essay items.

RESULTS

Research Question One

What is the achievement profile of SSIII students in Economics in terms of mastery and non-mastery of the objectives covered by the quantitative Economics diagnostic test?

Table 1

Summary of the Achievement Profile of SSII Students in Economics for Multiple-Choice Items

Subtest	Mastery		Non-Mastery		Total	
	N	%	N	%	N	%
Graphs/Diagrams	149	9	1445	91	1594	100
Measures of central tendency	954	60	640	40	1594	100
Demand, Supply and Price determination	624	39	970	61	1594	100
Theory of consumer behaviour	300	19	1294	81	1594	100
Theory of cost	817	51	777	49	1594	100
Public Finance	483	30	1111	70	1594	100
Total	3327	35	6237	65	9564	100

Table 1 shows the mastery and non-mastery attributes for the multiple-choice subtests (graphs and diagrams, measures of central tendency, demand /supply and price determination, theory of cost, public finance and theory of consumer behaviour). The result in Table 1 reveals that measures of central tendency and theory of costs have been mastered by 954 (60%) and 817 (51%) students, respectively. This implies that half of the Senior Secondary II Economics students possess the skills needed to have mastery of the items in the subtests. In addition, 1445(91%),1294 (81%),1111(70%) and 970 (61%) students have not mastered graphs, theory of consumer behaviour, public finance and demand/supply and price determination, meaning that majority of the SS-II economics students do not possess the skills needed to perform well in those subtests. Generally, 65% of the students have non-mastery of the Quantitative Economics Diagnostic Test (QEDT) items while 35 % had mastery of the QEDT items.

Table 2**Summary of the Achievement Profile of SSII Students in Economics for Essay Items**

Item	Subtest	Mastery		Non-Mastery		Total	
		N	%	N	%	N	%
1	Graphs /Diagrams	658	41	936	59	1594	100
2	Graphs/Diagrams	1041	65	553	35	1594	100
3	Measures of central tendency	1047	66	547	34	1594	100
4	Demand/Supply	411	26	1183	74	1594	100
5	Demand /Supply	433	27	1161	73	1594	100
6	Consumer behaviour	416	26	1178	74	1594	100
7	Consumer behaviour	593	37	1001	63	1594	100
8	Theory of cost	595	37	999	63	1594	100
9	Theory of cost	471	30	1123	70	1594	100
10	Public Finance	468	29	1126	71	1594	100
11	Public Finance	809	51	784	49	1594	100

Table 2 shows a profile of mastery and non-mastery attributes for the eleven essay items. The result indicated that 1047(66%) of the 1594 students have mastery of item 3 (Measures of central tendency), 1041(65%) have mastery of item 2(Graphs and diagrams) and 809 (51%) have mastery of item 11 (Public finance). This means that the majority of the students possess the necessary skills needed to perform well in those items. For non-mastery, 1183 (74%) of the 1594 students are classified under non-mastery of item 4 (Demand and supply), and 1178 (74%) students have not mastered item 6 (consumer behaviour). Meaning the majority of the students did not possess the skills needed to pass items on demand and supply and consumer behaviour. Also, Table 2 reveals that 1161 (73%), 1126(71%), 1118(70%), 1001(63%), 999(63%) and 925(58%) have not mastered items 4, 10, 3, 9, 1 and 6, respectively. This means that half of the students do not possess the necessary skills needed to perform well in demand and supply, public finance, theory of cost and consumer behaviour.

Research Question Two

What are the errors committed by students in Economics as measured by the quantitative Economics diagnostic test?

Errors were classified into different patterns of error (conceptual errors, computation errors, procedural errors, interpretation errors and careless errors) based on the different subtests (graphs and diagrams, demand/supply and price determination, theory of cost, public finance and theory of consumer behavior). The number of times each identified error was committed by a student was recorded and later added and percentage was calculated based on the pattern of error.

Table 3
Errors made by Students in Quantitative Economics Diagnostic Test Essay Items
Table 3
Errors made by Students in Quantitative Economics Diagnostic Test Essay Items

Subtest	Conceptual		Plotting		Computation		Procedural		Interpretation		Total %
	Freq.	%	Freq.	%	Freq.	%	Freq.	%	Freq.	%	
Graphs and diagram	2100	53	750	19	735	19	-	-	362	9	3947(100)
Measures of central tendency	350	18	-	-	920	48	650	34	-	-	1920(100)
Demand/supply and price determination	986	14	2105	30	2520	35	-	-	1450	21	7061(100)
Theory of cost	990	23	-	-	1750	41	1540	36	-	-	4282 (100)
Theory of consumer behaviour	1232	34	-	-	1150	31	1270	35	-	-	3652(100)
Public finance	1263	24	-	-	2775	53	1210	23	-	-	5248(100)
Total error	6921	27	2855	11	9850	37	4670	18	1812	7	26108(100)

The result in Table 3 reveals the most common errors made by students in the Quantitative Economics Diagnostic Test. The errors made by Economics students in the Quantitative Economics Diagnostic Test were analysed using frequency count and percentage. Table 3 revealed the most common errors made by Economics students in QEDT to be conceptual errors at 53% while computation, plotting and interpretation errors had 19%, 19% and 9%, respectively. Thus, interpretation errors had the least. This result indicates that the most common error made by students in diagrams and graphs is conceptual error and the least was interpretation error.

On errors made by students in demand, supply and price determination Table 3 shows that computation error is the most common with a frequency of 2520 (35%). This was closely followed by plotting errors (30%), then interpretation errors (21%) in that order and the least conceptual errors (14%). This implies that the most common error made by students in demand/supply and price determination was computation error and the least was conceptual error.

Table 3 also presents the frequency of errors committed by students in the theory of cost. From the Table, it was observed that 1752 (41%) errors were computational errors, 1540 (36%) procedural errors and 990 (23%) conceptual errors in that order. This shows that the most common error in the theory of cost was computation error and the least was conceptual error. From Table 3, the most common errors in the theory of consumer behaviour are procedural errors and conceptual errors with frequencies of 1270 (35%) and 1232 (34%) followed by computation (1150, 30%) errors. Again, the most common error committed in measures of central tendency was computation error with 920 (48%), while procedural error had 650(34%) and conceptual error had 350(18%). This shows that the most common error was computation error and the least was conceptual error.

Lastly, the errors committed by students in public finance as indicated in Table 3 are conceptual errors, computation errors and procedural errors. However, the most common error was computation error with a frequency of 2775 (53%), while conceptual error had 1263 (24%) and procedural error had 1210 (23%). This shows that the most common error was computational error and the least was procedural error. Generally, it was found that the most common error was computation error (37%) followed by conceptual error and then procedural error, while the least was interpretation error.

Research Question Three

What are the causes of errors made by students in the quantitative Economics diagnostic test?

Table 4
The Responses of Students on the Causes of Errors made by Students in the Quantitative Economics Diagnostic Test

S/N	ITEMS	SA 5	A 4	U 3	D 2	SD 1	N	Mean	Std	Decision
1	The unfriendly nature of some teachers makes students not to voice out their thought.	252	862		288	192	1594	3.44	1.28	Agree
2	Wrong application of calculation rules	336	778	-	384	96	1594	3.55	1.23	Agree
3	Poor background in Basic mathematics at the secondary school level	656	458	-		480	1159	3.51	1.69	Agree
4	inability of students to master the topics	1114	-		144	144	1594	4.13	1.41	Agree
5	Number of hours allocated to subject are not enough	1114	144	192	48	96	1594	4.34	1.17	Agree
6	The belief that anything calculation is difficult,	656	650	144	96	48	1594	4.11	1.00	Agree
7	Students forget the procedures taught due to lack of practicing.	1131	234	65	128	36	1594	4.44	1.04	Agree
8	Some students do not read instructions during examinations.	1114	96	96	144	144	1594	4.19	1.37	Agree
9	Students lack of concentration in class	967	319	171	54	83	1594	4.28	1.11	Agree
10	Poor teaching of key concepts by teachers	1114	288	48	48	96	1594	4.43	1.10	Agree

Table 4 shows the result of the analysis of the causes of errors made by students in the faculty of education. The result reveals that all the items have mean scores above the criterion mean of 3.00, indicating that the causes of errors in MCT are the unfriendly nature of some teachers, which makes students not voice out their thoughts, the wrong application of calculation rules, a poor background in basic mathematics at the secondary school level, the inability of students to master the topics, the fact that the number of hours allocated to each subject is not enough, the belief that any calculation is difficult, Students forget the procedures taught due to a lack of practice. Some students do not read instructions during examinations, and students' lack of concentration in class can lead to errors.

Research Question Four

How can errors committed by students in the quantitative Economics diagnostic test be minimized?

Table 5
How can Errors Committed by Students in the Quantitative Economics Diagnostic Test be Minimized

S/N	ITEMS	SA 5	A 4	U 3	D 2	SD 1	N	X	Std	DECISIO N
1	Teachers should teach key concepts before starting a lesson and should start from simple to complex	1114			288	192	1594	3.98	1.583	Agree
2	students should find time to read and practice what have been taught at home	1114	192	48	96	144	1594	4.28	1.307	Agree
3	Students should think positively toward calculation	560	554		240	240	1594	3.60	1.466	Agree
4	students should read and understand instruction during examinations	1114	192	96	144	48	1594	4.37	1.121	Agree
5	teacher should teach only the topics they are specialized in, for effective mastery of content areas	1114	192	144	48	96	1594	4.37	1.148	Agree
6	Teachers should vary their teaching methods	224	1178	48	96	48	1594	3.90	.820	Agree
7	Teacher should motivate their students through giving prizes and being friendly with them	140	974	-	144	336	1594	3.27	1.350	Agree

Table 5 shows the result of the analysis on the possible solutions to the causes of errors made by faculty of education students in quantitative Economics diagnostic test. The result reveals that all the items have mean scores above the criterion mean of 3.00, indicating that the possible solutions to the causes of errors are that teachers should teach key concepts before starting a new lesson and should start from simple to complex; students should find time to read and practice what has been taught at home; students should think positively toward calculation; teachers should teach only the subjects they are specialized in for effective mastery of content areas; teachers should vary their teaching methods; and teachers should motivate their students through giving prizes and being friendly with them.

DISCUSSION

The findings on the achievement profiles of Economics students in terms of mastery and non-mastery of the skills covered by quantitative Economics diagnostic test multiple choice items revealed that students show high mastery of items that measured attributes in measures of central tendency and theory of cost. This contradicts the Chief Examiners' Report (WAEC & NECO, 2020, 2022) and Eleje, Esomonu, Agu, Okoye, Obasi and Onah (2016), that students have weaknesses in measures of central tendency and theory of cost. It further revealed that students show low mastery of items that measured skills in graphs, demand, supply and price determination, public finance and theory of consumer behaviour. This supports the findings of the Chief Examiners' Report (WAEC & NECO, 2010 – 2016), which found students to have weaknesses in those topics. For essay items, the findings revealed that students show mastery of items 7, 8 and 11 which measured skills in graphs and diagrams, measures of central tendency

and public finance, while students showed low mastery of items 1, 2, 3, 4, 5, 6, 9 and 10 which measured skills in theory of cost, demand, supply and price determination, theory of consumer behaviour, graphs and diagrams and public finance.

The findings on errors in the quantitative Economics diagnostic test (QEDT) showed that errors were classified into error patterns, which include conceptual, procedural, computation, plotting and interpretation errors. The result showed the most common errors to be computation, conceptual and procedural errors. This implies that students lack conceptual and computation skills which is in line with the findings of Hansen (2006) and Aderomu and Nte (2012) that computation, conceptual and procedural errors are the most common errors made by students. This is contrary to the findings of Omosewo and Akanbi (2013), and Mutai, Gude and Role (2015), who found operational errors, algorithm errors and communication errors to be the most common errors in their studies on errors committed by students in physics. This could be a result of poor teaching of key concepts by teachers, prior knowledge students come into the class with, lack of preparedness, lack of concentration on the part of students, lack of practising, unfriendly nature of some teachers and poor assessment techniques among others.

Again, the findings on the causes of errors made by students in quantitative Economics indicated that the causes of errors are the unfriendly nature of some teachers, which makes students not voice out their thoughts; poor background in basic mathematics at the school level; inability of students to master the topics; the number of hours allocated to the course is not enough; the belief that any calculation is difficult; students forget the procedures taught due to a lack of practice; some students do not read instructions during examinations; and a lack of concentration on the part of students can lead to errors. This is in line with the work of Bulus (2018), Abok (2022) and Hamidu (2023), who found errors to be caused by teachers' poor knowledge of the subject matter, not teaching concepts before starting new lessons, and a lack of practising at home after school hours.

The findings on how the causes of errors made by secondary school students in quantitative economics can be minimized are that teachers should teach key concepts before starting a new lesson and should start from simple to complex, students should find time to read and practice what has been taught at home, Students should think positively toward calculation; teachers should teach only the subjects they are specialized in for effective mastery of content areas; and teachers should motivate their students through giving prizes and being friendly with them. This is in line with the work of Hamidu(2023) who found that causes of errors in measures of central tendency can be minimized through teaching key concepts before starting a new topic and by teaching from simple to complex.

CONCLUSION

The achievement profile of Economics students in multiple-choice items showed high mastery of items that measured skills in measures of central tendency and theory of cost and low mastery of items that measured skills in graphs, demand, supply and price determination, public finance and theory of consumer behaviour. For essay items, students showed mastery of three items that measured skills in graphs and diagrams, measures of central tendency and public finance, while students showed low mastery of eight items, which measured skills in the theory of cost, demand, supply and price determination, theory of consumer behaviour and some items in public finance. Therefore, when students' areas of mastery are known, it will help the students to grow more and aim higher to achieve much more, and knowing students' areas of weaknesses will provide diagnostic information that will guide teachers on how to provide remedial instruction to students to improve their performance. Furthermore, the most common errors made by students in QEDT were computation, conceptual and procedural errors. The causes of errors made by students in quantitative Economics are the unfriendly nature of some teachers, which makes students not voice out their thoughts; poor background in basic mathematics at the school level; inability of students to master the topics; the number of hours allocated to the

course is not enough; the belief that any calculation is difficult; students forget the procedures taught due to a lack of practice; some students do not read instructions during examinations; and a lack of concentration on the part of students can lead to errors. When errors and the causes of errors are identified, the teacher can provide effective instruction and strategies to address those errors to help improve students' performance.

RECOMMENDATIONS

Based on the findings of the study the following recommendations were made:

1. Teachers should use the use diagnostic assessments in addition to formative and summative tests for assessing students' learning so as to promote teaching and provide immediate access to diagnostic reports about students' strengths and areas of need, promote teachers understanding of students' strength and areas of needs. This will also allow monitoring of students' achievement to guide ongoing planning and instruction and provide opportunities for teachers to reflect, collaborate and match instruction to students need, that is, to ensure that follow up instruction is meaningfully aligned with students learning expectations.
2. When errors and the causes of errors are identified, teachers can provide remedial teaching to students. In providing remedial teaching, teachers should follow the principles of helping students with learning difficulties by designing appropriate teaching plan to facilitate students effective learning and since students have individual differences in learning, teachers should devise different learning activities with same teaching objectives to develop students varied abilities and skills in problem solving.

TURKEY'S SUSTAINABILITY TRANSFORMATION: ADOPTING CIRCULAR ECONOMY PRINCIPLES

Full-Professor PhD. Habil. Cristina Raluca Gh. Popescu

University of Bucharest, Bucharest, Romania and The Bucharest University of Economic Studies, Bucharest, Romania.

ABSTRACT

Nowadays, it has become crucial to focus on the countries commitment to contribute to a sustainable world, especially since the adoption of the Agenda 2030. In this particular matter, recent studies have shown that Turkey plays a pivotal part in emphasizing and displaying the commitment towards the Sustainable Development Goals (SDGs) in every occasion. On the one hand, the current research study focuses on the way in which Turkey has managed to link the implementation of the Agenda 2030 with the National Development Plans (NDPs) and sectorial strategies, centering on the opportunities offered by “sustainable development” – a crucial concept successfully imbedded in the NDPs from 1996. On the other hand, the study tackles the new opportunities brought by the SDGs in Turkey, with a major accent on the accumulated experience of the country in terms of strong infrastructure and institutional mechanisms able to provide strong grounds towards adopting Circular Economy Principles. The practical approach and the originality of this paper are represented by: (a) displaying the way in which Turkey has made significant progress in all three dimensions of sustainable development, hence targeting the eradication of poverty, the reduction of inequalities, and the aid of the vulnerable; (b) showing how the human-centered approaches and environmentally-friendly entities helped Turkey achieve remarkable progress in providing better quality, while being keen on supporting well-being and health, strengthening human resources, improving research and development (R&D) as well as innovation ecosystems, enabling digital transformation, and centering on “competitive production and efficiency” and “living no one behind” principles; and (c) analyzing the Sustainability Index and the Organization for Economic Co-operation and Development (OECD) Better Life Index of Turkey.

Keywords: Sustainability Practices; Circular Economy; Sustainability Index; Organization for Economic Co-operation and Development (OECD) Better Life Index; Businesses; Human Resources; Sustainable Finance; Turkey.

INTRODUCTION AND PURPOSE

In this day and age, there is a great accent placed on sustainable inclusive growth which has become an imperative at international level for countries around the world (Popescu (Ed.), 2024a). In particular, sustainable inclusive growth is believed to be crucial in the case of Turkey as well, representing both a challenge and an opportunity (Popescu & Popescu, 2024e). In this matter, Turkey ratified the Paris Agreement on climate change in 2021, emphasizing that the year 2053 represents the proposed target for achieving net-zero emissions, hence showing that Turkey's sustainability transformation is absolutely crucial in centering on the net-zero opportunities (Popescu & Popescu, 2024d; Bostancı & Yıldırım, 2022).

To begin with, it has become crucial these days to focus on the countries' commitment to contribute to a sustainable world, especially since the adoption of the Agenda 2030. In this particular matter, it ought to be brought to the attention that recent studies have shown that Turkey plays a pivotal part in emphasizing and displaying the commitment towards the

Sustainable Development Goals (SDGs) in every occasion. On the one hand, the current research study focuses on the way in which Turkey has managed to link the implementation of the Agenda 2030 with the National Development Plans (NDPs) and sectorial strategies, centering on the opportunities offered by “sustainable development” – a crucial concept successfully imbedded in the NDPs from 1996. On the other hand, the study tackles the new opportunities brought by the SDGs in Turkey, with a major accent on the accumulated experience of the country in terms of strong infrastructure and institutional mechanisms able to provide strong grounds towards adopting Circular Economy Principles. In continuation, the practical approach and the originality of this paper are represented by: (a) first of all, displaying the way in which Turkey has made significant progress in all three dimensions of sustainable development, hence targeting the eradication of poverty, the reduction of inequalities, and the aid of the vulnerable; (b) second of all, showing how the human-centered approaches and environmentally-friendly entities helped Turkey achieve remarkable progress in providing better quality, while being keen on supporting well-being and health, strengthening human resources, improving research and development (R&D) as well as innovation ecosystems, enabling digital transformation, and centering on “competitive production and efficiency” and “living no one behind” principles; and (c) third of all, analyzing the Sustainability Index and the Organization for Economic Co-operation and Development (OECD) Better Life Index of Turkey.

This current study entitled “Turkey’s Sustainability Transformation: Adopting Circular Economy Principles” focuses on displaying the utmost importance of several vital concepts, namely: sustainability practices; circular economy; Sustainability Index; Organization for Economic Co-operation and Development (OECD) Better Life Index; businesses; human resources; sustainable finance; and Turkey.

Given the aspects brought to light in the lines above, the sustainable initiatives for Turkey are impressive, the focus being on several aspects, such as: (a) first of all, Turkey’s SDGs actions are centered primarily on preserving the existing resources, the ecosystems, and the biodiversity, hence displaying a major interest in the environmental dimension of the SDGs (Christiansen & Erdoğan (Eds.), 2016); (b) second of all, Turkey’s SDGs actions take into account sustainable and climate-adapted agriculture, with a keen interest in the agricultural production methods and techniques which protect the people, the communities, and the environment (Demir, 2020); and, (c) third of all, Turkey’s SDGs actions take into consideration sustainable water management, trying to create the optimum balance between nature conservation and resource development (Yildiz, (Ed.), 2022; Popescu & Popescu, 2024a; Popescu & Popescu, 2024b; Popescu & Popescu, 2024c).

CONCEPTUAL FRAMEWORK (LITERATURE REVIEW OR BACKGROUND)

This section is dedicated to the conceptual framework section (also acknowledged as the literature review section or the background section) in which the most important concepts related to this theme are displayed and explained as seen by reputed international specialists. In this particular matter, this section centers of the most interesting and novel studies in the filed which have shown that Turkey plays a pivotal part in emphasizing and displaying the commitment towards the SDGs. On the one hand, there is a major accent placed on the way in which Turkey has managed to link the implementation of the Agenda 2030 with the National Development Plans (NDPs) and sectorial strategies, centering on the opportunities offered by “sustainable development” – a crucial concept successfully imbedded in the NDPs from 1996. On the other hand, there are numerous new opportunities brought by the SDGs in Turkey, which need to be mentioned and closely analyzed, in the context in which an impressive interest has been displayed on the accumulated experience of the country in terms of strong

infrastructure and institutional mechanisms able to provide strong grounds towards adopting Circular Economy Principles.

In the lines below, the accent is positioned on the pivotal actions taken by Turkey in terms of the SDGs, having in mind that there is a particular interest towards creating and addressing policies having as national focal point the SDGs (see, in this matter, Table no. 1: Creating Vital Links between the Implementation of the Agenda 2030, National Development Plans (NDPs), and Sectorial Strategies in Turkey, while Centering on the Opportunities Offered by Sustainable Development).

Table no. 1: Creating Vital Links between the Implementation of the Agenda 2030, National Development Plans (NDPs), and Sectorial Strategies in Turkey, while Centering on the Opportunities Offered by Sustainable Development

Creating vital links between the implementation of the Agenda 2030, National Development Plans (NDPs), and sectorial strategies in Turkey:	Painting numerous new opportunities brought by the SDGs in Turkey:
<p>Turkey is interested in a holistic approach to SDGs actions, in order to integrate them in the National Development Plans (NDPs) as well as in the sectorial strategies.</p>	<p>In this matter, the studies have shown that the Government of Turkey greatly focuses on the powerful relationships that were created between the SDGs, hence focusing on several priorities that are capable to generate faster process as well as allocate the appropriate resources.</p> <p>(a) A very good example in this case is represented by SDG 7 targeting energy efficiency in transport, buildings, and industries (Zorlu & Ezin, 2021).</p> <p>(b) Another vital example that can be offered here is the one represented by the SDGs 9 and 12 which encourage people, communities, and organizations to center on the “zero waste” target at the industrial scale, with major benefits by promoting bio-plastic products and eco-labeling (SDG 9), together with the need to constantly strive towards raising consumers’ and producers’ awareness on sustainable consumption and production methods and techniques (SDG 12) (Hamza Çelikyay, 2021).</p>
<p>Turkey is highly implicated in discovering, developing, and implementing a wide range of strategies capable to help reduce the greenhouse gas (GHG) emissions, so that the emission targets will be met.</p>	<p>In this case, recent studies have mentioned that ensuring the greenhouse gas (GHG) emission control through technologies represents a must when it comes to supporting climate adaptation as seen in the case of SDGs 9 and 13.</p> <p>Interestingly, among the recommendations for reducing greenhouse gas (GHG) emissions could be brought to the attention the benefits and the impressive opportunities generated by utilizing a government-verified transportation program and by reducing the energy consumed.</p> <p>Of great importance could be the following ideas:</p> <p>(a) The Green Transformation Support Program in Turkey is believed to be a significant step taken by</p>

	<p>the country in achieving environmentally friendly production and consumption, while working towards the sustainability goals (European Commission, Joint Research Centre, Türker <i>et al.</i>, 2023).</p> <p>There are several performance indicators that are crucial in this case and among which could be mentioned the following ones: energy consumption; greenhouse gas (GHG) emission amount; air pollutant emission amount; and, carbon and water footprint (Ministry of Industry and Technology, 2024).</p> <p>(b) The Green Economy Transformation Strategy in Turkey is highly centered on the carbon tax, in the context in which climate change is one of the most pressing problems with which humankind confronts itself (European Commission, Directorate-General for Economic and Financial Affairs, 2022a).</p> <p>In addition, there are several major problems that were noted in this matter, as follows: the increased carbon and greenhouse gas (GHG) emissions; the deterioration of the natural habitats and balance, as a result of industrialization, environmental pollution, rapid population growth with a particular concentration in cities, uncontrolled consumption of natural resources, the excessive use of fossil fuels and, the improper use of land, which led in a very short time period to massive deforestation.</p>

MATERIALS AND METHODS

This particular section is represented by the materials and methods section in which the research questions of this current study are presented and analyzed. In this matter, it needs to be stressed that there are 2 (two) research questions (RQ) which are representative for this current study and which were displayed in the lines below (see, in this matter, Table no. 2: Highlighting the Research Questions (RQ)).

Table no. 2: Highlighting the Research Questions (RQ)

The two major research questions (RQ) of this current research paper:	
The first research question (RQ1) which refers to:	Which are Turkey's most significant accomplishments in the three dimensions of sustainable development?
The second research question (RQ2) which refers to:	Which are the human-centered approaches that helped Turkey achieve remarkable progress in addressing climate change and sustainability and circular economy principles?

Source: The Author' Own Elaboration, Based on the References Highlighted in the Table and in the Bibliography Section

RESULTS

This section highlights the results section or the findings of the study on “Turkey’s Sustainability Transformation: Adopting Circular Economy Principles”. This section tackles the findings of the study which make reference to an in-depth analysis of the following key aspects: on the one hand, it is of major interest to display which are Turkey’s most significant accomplishments in the three dimensions of sustainable development, in this manner being able to present the most significant aspects related to the first research question (RQ1); and, on the other hand, it is of great interest to show which are the human-centered approaches that helped Turkey achieve remarkable progress in addressing climate change and sustainability and circular economy principles, hence being able to emphasize the answers to the second research question (RQ2).

In the lines below the Table no. 3 has the important role of displaying Turkey’s most significant accomplishments in the three dimensions of sustainable development and the human-centered approaches that enabled Turkey achieve remarkable progress in addressing climate change and sustainability and circular economy principles (see, in this matter, Table no. 3: Turkey’s Most Significant Accomplishments in the Three Dimensions of Sustainable Development and the Human-Centered Approaches that helped Turkey Achieve Remarkable Progress in Addressing Climate Change and Sustainability and Circular Economy Principles).

Table no. 3: Turkey’s Most Significant Accomplishments in the Three Dimensions of Sustainable Development and the Human-Centered Approaches that helped Turkey Achieve Remarkable Progress in Addressing Climate Change and Sustainability and Circular Economy Principles

Turkey’s Most Significant Accomplishments in the Three Dimensions of Sustainable Development:	
<p>The latest figures have shown that Turkey has achieved very close integration with the European Union (EU) as well as with the Customs Union, being a major player on the marketplace.</p> <p>In this matter, it needs to be emphasized that those countries that integrate with the Customs Union are able to successfully collaborate against other countries, being centered, among other aspects on: (a) dividing the labor among the Customs Union countries; (b) liberalizing trade among the Customs Union countries; (c) working towards the new growth strategies promoted by the European Green Deal Consensus; and, (d) working together towards a “better future for all” in order to fulfill the necessary transformations that reshape the industries and the policies that focus the axis of climate change.</p>	<p>(European Commission, Directorate-General for Regional and Urban Policy, Ilic <i>et al.</i>, 2022); (Popescu, 2024b); (Popescu, 2024c).</p>
<p>In the year 2021 Turkey prepared a “Green Deal Action Plan” which includes 32 targets as well as 81 actions, which are centered under 9 main headings.</p> <p>Among the key priorities in this particular case could be emphasized the following crucial steps: (a) first of all, reducing greenhouse gas emissions, with a particular focus on the manufacturing industry sectors; (b) second of all, strengthening the technological infrastructure for green transformation, with a keen focus on the importance of the implementation of the Green Transformation of Organized Industrial Zones (OIZs); and, (c)</p>	<p>(European Commission, Eurostat, 2022a); (Popescu, 2024d).</p>

<p>third of all, based on the Turkish Ministry of Commerce 2021 Agenda, reducing the carbon footprint, with a major focus on Turkey’s commitment to de-carbonize the value chain.</p>	
<p>Besides all the aspects highlighted in the lines above, Turkey’s successful integration into the European Green Deal could enhance the companies’ competitive advantage on the marketplace by reducing the companies’ costs.</p> <p>It needs to be closely considered that the place where Turkey is located, namely the Mediterranean basin, is nowadays highly affected by the negative sides of global warming, the adverse effects of climate change, the significant decrease of the water resources, and the devastating effects of ecological deterioration and desertification.</p>	<p>(European Commission, Eurostat, 2022b).</p>
<p>Human-Centered Approaches that helped Turkey Achieve Remarkable Progress in Addressing Climate Change and Sustainability and Circular Economy Principles:</p>	
<p>Turkey needs to pay particular attention to the effects of climate change and climate change crisis, since the latest data has shown that the country was seriously affected by forest fires (such as, for instance, the ones in Antalya and Muğla) and floods (such as, for instance, the ones in Kastamonu, Bartın, and Sinop).</p> <p>In addition, based on recent Reports, Turkey’s economy has been growing very rapidly starting with the year 2008, which leads to the very important idea that it ought to focus on the effects of the fossil fuel consumption, the air quality especially in large cities, and the situation of the industrial areas in terms of the dedication to the circular economy principals – such as, for example, the recovery and the recycling of municipal solid waste.</p>	<p>(European Commission, Directorate-General for Economic and Financial Affairs, 2022b).</p>
<p>Analyzing the Sustainability Index and the Organization for Economic Co-operation and Development (OECD) Better Life Index of Turkey has shown the following aspects:</p> <p>(a) Based on statistics, Turkey has made notable process in the last two decades in significantly improving the quality of life of the citizens, mainly focusing on “well-being”, the “work-life balance, education, health, environmental quality, social connections, and life satisfaction”.</p> <p>(b) In addition to the aforementioned ideas, Turkey has made notable process also in terms of “life satisfaction”.</p>	<p>(Organization for Economic Co-operation and Development (OECD), 2024).</p>

Source: The Author’ Own Elaboration, Based on the References Highlighted in the Table and in the Bibliography Section

DISCUSSION AND CONCLUSION

The discussion and the conclusion section of the current study on “Turkey’s Sustainability Transformation: Adopting Circular Economy Principles” brings to the attention the following major ideas:

(a) First of all, based on a highly interesting report entitled “Türkiye’s business leaders embrace “green transformation”” published in the year 2023, it has been stressed that the Turkish business owners are uniting their efforts in order to ensure the “green transformation” in Turkey, addressing aspects such as: climate change; climate solutions; global climate targets; and, “large-scale technological and economic transformations” (United Nations Development Program (UNDP), 2023; European Commission, Directorate-General for Justice and Consumers, Chopin & Germaine, 2023);

(b) Second of all, there is the need to ensure Turkey’s sustainable tourism transformation, having in mind the country’s commitment towards fostering bold policies capable to support environmental transformation (Organization for Economic Co-operation and Development (OECD), 2024; European Investment Bank, 2006; European Commission, Joint Research Centre, Leeuwen *et al.*, 2011; European Training Foundation, Kita *et al.*, 2013).

ACKNOWLEDGEMENT

The Author of the manuscript, Cristina Raluca Gh. Popescu (C.R.G.P.), is extremely appreciative and extremely grateful to the Organizers of this first-rate and delightful international scientific event and want to hereby acknowledge the Organizers kindness and thoughtfulness in offering the position of invited speaker, hence having the wonderful opportunity to express the ideas and the thoughts concerning this novel and up-to-date topic at such a prestigious international scientific event. In particular, Cristina Raluca Gh. Popescu (C.R.G.P.) is extremely appreciative and extremely grateful to the Organizers and wants to hereby acknowledge the Organizers kindness and thoughtfulness in offering the position of invited speaker, hence having the wonderful opportunity to express the ideas and the thoughts concerning this novel and up-to-date topic at such a prestigious international scientific event. In addition, the Author proves to be highly enthusiastic concerning the fruitful discussions on this presentation that took place during the session of this wonderful international scientific event, which ultimately had the objective of enhancing the ideas displayed in this current study so that the theme chosen for the analysis will increase its power and will offer a better understanding of sustainability and sustainable development in terms of fostering the people’s and the environment most pressing needs.

FUNDING

The Author received no funding for the current research.

PRODUCTION AND COMPARISON OF PROPERTIES OF ORGANIC-FILLED PLASTIC COMPOSITES FOR REDUCING PLASTIC USE IN INDUSTRY

ENDÜSTRİDE PLASTİK KULLANIMINI AZALTMAYA YÖNELİK ORGANİK DOLGULU PLASTİK KOMPOZİTLERİN ÜRETİMİ VE ÖZELLİKLERİNİN KARŞILAŞTIRILMASI

ABSTRACT

The use of plastics has become widespread both on an individual and global scale due to advantages such as low cost, flexibility, and durability. While it is true that plastics make daily life easier, the environmental damage they cause is also rapidly increasing. Since plastic waste does not decompose in nature for many years, it accumulates in the environment, negatively impacting the circular economy. Additionally, the harm caused by plastic waste to the environment and inadequacies in managing this waste makes plastic waste management even more challenging. At this point, it is expressed that plastic usage poses many risks for the future of the world. Due to the difficulty of decomposing plastic waste and its accumulation leading to pollution, this study aims to reduce the production of plastic materials at the source by creating a new composite material formed by combining the polymer polypropylene with the organic material powdered activated carbon. In this study, the properties of the composite material formed by activated carbon and polypropylene were compared with polypropylene material. Activated carbon and polypropylene, in ratios of 20% and 80%, respectively, were compounded using an extruder machine and then manufactured using an injection molding machine. The resulting samples were subjected to various mechanical tests and analyses for comparison. It was observed that the composite material had higher strength than polypropylene and lower elasticity compared to polypropylene. Furthermore, according to the FTIR analysis, the similarity ratio of the composite material to polypropylene was measured to be 70%. In conclusion, it was observed that the newly obtained composite material would reduce plastic usage.

Keywords: Activated Carbon, Polypropylene, Composite

ÖZET

Plastik kullanımı, düşük maliyet, esneklik ve dayanıklılık gibi avantajlar nedeniyle hem bireysel hem de küresel düzeyde yaygınlaşmıştır. Plastiklerin günlük yaşamı kolaylaştırdığı bir gerçek olsa da, çevreye verdikleri zararlar da hızla artmaktadır. Plastik atıklar doğada uzun yıllar boyunca çözünmediği için çevrede birikmekte ve bu durum döngüsel ekonomiyi olumsuz yönde etkilemektedir. Ayrıca, plastik atıkların çevreye verdiği zararlar ve bu atıkların yönetimindeki yetersizlikler, plastik atık yönetimini daha da zor hale getirmektedir. Bu noktada plastik kullanımının gelecek dünya açısından olumsuz birçok riski olduğu ifade edilmektedir.

Plastik atıkların kolay çözünmemesi ve çevrede birikerek kirliliğe sebep olmasından dolayı endüstride kullanılan plastik malzemelerin azaltılması için polimer madde olan polipropilen ile organik madde olan toz aktif karbonun birleşiminden oluşacak yeni kompozit malzeme yaparak belirli ölçüde plastik malzeme üretimini kaynağında azaltmak hedeflenmiştir. Bu çalışmada aktif karbonun polipropilen ile oluşturduğu kompozit malzemenin özellikleri polipropilen malzeme ile karşılaştırılmıştır. Aktif karbon ile polipropilen sırasıyla %20 ve %80 oranlarında ekstrüder makinesi yardımıyla bileşik haline getirilerek daha sonra enjeksiyon kalıp makinesi ile imalat gerçekleştirilmiştir. Elde edilen numunelerle belirli mekanik testler, analizler yapılarak kıyaslanmıştır. Kompozit malzemenin mukavemetinin polipropilenden yüksek olduğu, elastisitesinin de polipropilene göre düşük olduğu gözlemlenmiştir. Ayrıca yapılan FTIR analizine göre kompozit malzemenin polipropilene benzerlik oranı %70 olarak ölçülmüştür. Sonuç olarak elde edilen yeni kompozit malzemenin plastik kullanımını azaltacağı gözlemlenmiştir.

Anahtar Kelimeler: Aktif Karbon, Polipropilen, Kompozit

1. INTRODUCTION

In the production of hybrid composites, both organic and inorganic materials can be used simultaneously. Organic materials are those obtained from nature that are sustainable and environmentally friendly. Examples include wood chips, plant fibers, cotton, and jute. In recent years, extensive research has been conducted on hybrid composites that use both organic and inorganic materials together [1].

Santosh and colleagues (2021) studied the development of fiber-reinforced polypropylene composites and found that composites reinforced with natural coconut fibers showed higher fracture toughness and better mechanical properties than pure polypropylene [2].

McGrauran and colleagues (2020) examined the effects of adding eggshell and poultry litter ash (PL ash) to polypropylene. While improvements in Young's modulus and bending properties were observed, there was a decrease in tensile strength and elongation, making the material more brittle. Characterization showed eggshell and ash bond well with polypropylene, demonstrating full contact between particles and matrix. This confirmed the potential of the material as a polymer filler and replaced a large amount of oil-based polymer raw materials [3].

Yang and colleagues (2004) added rice husk flour to polypropylene. They found that as filler loading increased, the tensile strength of the composites decreased, but the tensile modulus increased. The addition of rice husk flour reduced Izod impact strength. As the test temperature increased, plastic deformation occurred [4].

Rana and colleagues (2003) analyzed the mechanical properties of jute-polypropylene composites and found that fiber loading increased impact strength, with 40% fiber loading being optimal [5].

Hattatuwa and colleagues (2002) studied composites made from rice husk and ground talc fillers with polypropylene. They observed that while Young's and bending modulus increased with higher filler loading, tensile strength and elongation at break decreased for both composites. Rice husk composites showed lower tensile strength, Young's modulus, and bending modulus but higher elongation at break than talc composites [6].

In this study, the aim was to produce an environmentally friendly polymer matrix composite using activated carbon as the filler and polypropylene as the matrix material. Polypropylene was used because it is widely used in industry. By adding activated carbon to polypropylene, composite samples were produced. First, powdered activated carbon and polypropylene were mixed in certain proportions to create a compound. Samples containing 20% activated carbon by weight were produced using injection molding. The effect of the composites on mechanical properties such as tensile strength, elongation, and hardness was examined. The use of activated carbon in this study aims to reduce production costs, decrease the use of synthetic fillers, lower costs, reduce gas emissions, and protect natural resources.

2. MATERIALS AND METHODS

The technical data sheets of the powdered activated carbon used in this study are given in Table 1. In this study, polypropylene granules, a polymer widely used in industry, were used as the matrix. Three types of powdered activated carbon were used as the filler material. The composite material samples were produced by injection molding. When determining the sample formulation, the aim was to create a composite material using the maximum possible amount of activated carbon. Based on trial productions carried out with the extrusion machine, the maximum amount of activated carbon that could be used was determined to be 20%. The extrusion machine could not process samples with higher amounts of activated carbon into a compound. First, activated carbon was weighed at 20% by weight. In addition, polypropylene weighed 80%. The prepared materials were fed into the extrusion machine through the feeding points. The extrusion machine parameters were set to a temperature of 220°C and a production rate of 20 kg of compound per hour. The prepared composite mixture formulation is provided in Table 2.

Table 1. Powdered activated carbon produced from coconut shell

Surface Area	1150	m ² /g
Total Pore Volume	0.65	cm ³ /g
Density	0.35	g/cm ³

Table 2. Composition ratios of the composite

Types of Activated Carbon	Plastic	Mixing Ratios
Powdered Activated Carbon Produced from Coconut Shells	Polypropylene	20% / 80%

The prepared samples were passed through the extruder to ensure they were transformed into a homogeneous granule form. The composite samples prepared in the extruder were molded into test specimens using an injection molding machine.

3. RESULTS AND DISCUSSION

Figs. 1 and 2 show SEM images of the polypropylene and activated carbon-polypropylene composite samples at different magnification scales, respectively. The carbon fibers in the activated carbon-polypropylene composite material are clearly visible and marked.

Figure 1. SEM images of polypropylene sample a)1 kx, b)5 kx, c)10 kx

Figure 2. SEM images of activated carbon-polypropylene composite sample a)1 kx, b)5 kx, c)10 kx

Fig. 3 demonstrates the optical microscope images of polypropylene and activated carbon-polypropylene composite specimens. The activated carbon-filled polypropylene composites show similar patterns. Compared to the pure polypropylene material, the dark areas in the images are identified as activated carbon.

Figure 3. Microstructures of (a) polypropylene and (b) activated carbon-polypropylene composite samples

Table 3 gives the surface roughness results of the samples. When examining the values, it has been observed that the surface roughness of the activated carbon-based composites is higher than that of the pure polypropylene material. Depending on the application and intended use of the material, a higher or lower surface roughness may be desirable.

Table 3. Surface roughness results of the samples

SAMPLES	1		2		3		4		5	
	Ra	Rz	Ra	Rz	Ra	Rz	Ra	Rz	Ra	Rz
Activated carbon-polypropylene composite	1.789	12.66	3.222	18.209	2.971	15.944	1.377	11.164	1.14	7.563
Polypropylene	0.424	3.592	0.534	5.023	0.468	4.196	0.697	6.288	0.466	4.012

Also, in processes like bonding polypropylene materials, the surface roughness is very low, so to achieve good adhesion, the surfaces should be properly prepared, which requires an extra process. Since the composite material obtained has a high surface roughness, no additional processes are needed.

Table 4 shows the densities of the composites made with the activated carbon and the polypropylene samples. The density of the activated carbon-containing composites is higher than that of polypropylene. This indicates that combining two different low-density materials results in a new composite material with a higher density.

Table 4. Density values of polypropylene and activated carbon-polypropylene composite samples

	Activated Carbon-Polypropylene Composite		Polypropylene	
Measurement 1	1.259	g/cm ³	1.141	g/cm ³
Measurement 2	1.26	g/cm ³	1.149	g/cm ³
Measurement 3	1.263	g/cm ³	1.142	g/cm ³
Measurement 4	1.261	g/cm ³	1.145	g/cm ³
Measurement 5	1.266	g/cm ³	1.14	g/cm ³
Average	1.262	g/cm³	1.143	g/cm³

Different types of plastic materials can be selected based on the density of plastic applications. For instance, high-density polyethylene is preferred over polypropylene for parts requiring high strength and density. The high density of the activated carbon-polypropylene composite material also allows it to be used as a substitute for materials that require high-density polyethylene.

The tensile test results and elongation of the samples in Fig. 4 show the strength and elongation of the composite made with the activated carbon raw material and the polypropylene material. In multiple tensile tests, the average tensile strength of polypropylene samples was measured

as 30.19 MPa, and the average tensile strength of activated carbon-polypropylene composite samples was measured as 31.71 MPa. In multiple elongation percentage tests, the average elongation of polypropylene samples was measured as 15.24%, while the average elongation of activated carbon-polypropylene composite samples was measured as 2.22%.

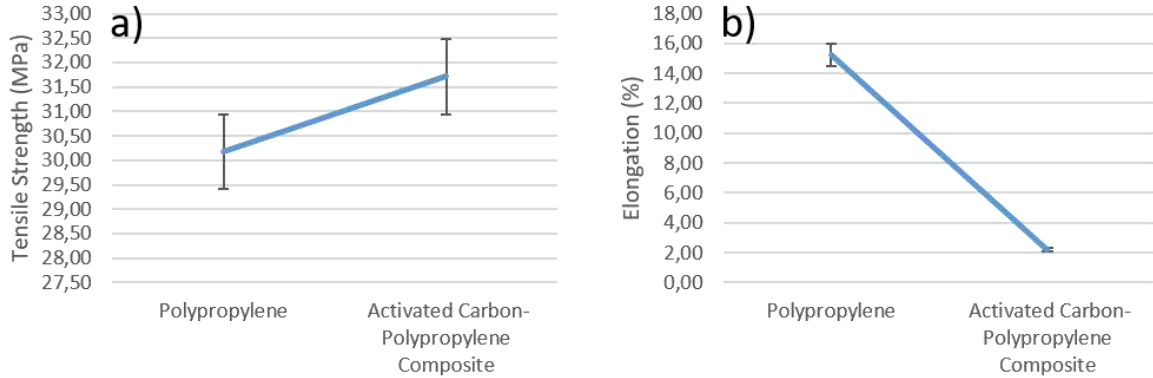

Figure 4. (a) Tensile strength and (b) elongation of the samples

It has been observed that the strengths of the composites with added activated carbon are higher than those of pure polypropylene. In this way, activated carbon-polypropylene composite can be used instead of polypropylene or high-density polyethylene in the production of materials requiring high strength. The elongation graph for the activated carbon-polypropylene composite test specimens has demonstrated that the elongation values of the composites made with activated carbon decrease compared to pure polypropylene.

4. CONCLUSIONS

In this study, the composites formed by activated carbon and polypropylene were compared with pure polypropylene material. The differences between the polypropylene-based material and the activated carbon-polypropylene composite were clearly demonstrated in both microscopic analyses and mechanical tests.

The results of SEM and optical microscopy tests showed that the activated carbons in the composite material were distinctly visible, and a heterogeneous mixture was achieved.

The density test results indicated that the densities of activated carbon and polypropylene were lower than those of the produced composite materials. This demonstrates that the new composite material formed by combining two different low-density materials has a higher density. Additionally, it can be used instead of polypropylene or high-density polyethylene in materials that require high density.

The roughness of the newly produced composite materials increased compared to pure polypropylene. Depending on the application of the polymer material, the increased roughness may be desirable in certain areas, allowing polypropylene to be effectively replaced with composite material.

The tensile test results showed that all the new composite materials had higher strength than pure polypropylene. Therefore, in applications requiring higher strength, the activated carbon-polypropylene composite material can be preferred over pure polypropylene.

Finally, when comparing elasticity, it is noted that the elasticity of polypropylene is higher than that of the composite materials produced. Consequently, in areas where low elasticity is required, the activated carbon-polypropylene composite can be chosen for plastic parts made from polypropylene.

ÖZET

Nöroatletik eğitim, sinir sistemi ile kas-iskelet sistemi arasındaki koordinasyonu artırmayı hedefleyen bir yöntemdir. Bu yaklaşım, gluteus maximus, hamstringler, lumbar erector spinae ve gastrocnemius gibi posterior zincir kaslarının performansını optimize etmek için kritik öneme sahiptir. Postürü koruma ve işlevsel hareketlerde önemli rol oynayan bu kaslar üzerinde nöroatletik eğitimin kas aktivasyonu, esneklik ve eklem hareket açıklığına olan akut etkileri sınırlı bir şekilde araştırılmıştır.

Bu çalışma, 18-30 yaş arası 22 rekreasyonel olarak aktif bireyde nöroatletik eğitimin posterior zincir kas aktivasyonu, hamstring esnekliği ve ayak bileği dorsifleksiyon hareket açıklığı üzerindeki anlık etkilerini incelemiştir. Katılımcılar, görsel, vestibüler ve proprioseptif sistemleri hedef alan Z-health® kiti kullanılarak 30 dakikalık bir nöroatletik eğitim seansına katılmıştır. Egzersizler arasında yıldız grafiği takibi, harf kartları ile sakkadik eğitim, yakınsama-uzaksama egzersizleri, Smart Optometry® uygulaması ile optokinetik eğitim ve Brock String boncuk odaklama yer almıştır. Kas aktivasyonu yüzeyel elektromiyografi (sEMG) ile ölçülmüş, esneklik aktif diz ekstansiyonu testi ile değerlendirilmiş ve dorsifleksiyon ağırlık taşıyan hamle testiyle analiz edilmiştir. Öncesi ve sonrası ölçümler eşleştirilmiş t-testleriyle karşılaştırılmış, etki büyüklükleri (Cohen's d) hesaplanmıştır.

Sonuçlar tüm değişkenlerde anlamlı iyileşmeler göstermiştir. Kas aktivasyonu, gluteus maximus (%60.1 ± 5.3'ten %65.4 ± 5.5'e, p < 0.001, d = 1.03), hamstringler (%60.4 ± 5.1'den %66.2 ± 5.4'e, p < 0.001, d = 1.49), lumbar erector spinae (%61.0 ± 5.2'den %65.8 ± 5.0'a, p = 0.0015, d = 1.09) ve gastrocnemius (%60.5 ± 5.0'dan %65.5 ± 5.3'e, p = 0.0030, d = 1.10) kaslarında artmıştır. Esneklik, aktif diz ekstansiyonu açılarında artışla iyileşmiştir (%65.4 ± 6.1°'den %72.2 ± 5.7°'ye, p < 0.001, d = 1.32). Ayak bileği dorsifleksiyon aralığı da anlamlı şekilde artmıştır (%10.2 ± 1.8 cm'den %12.5 ± 1.6 cm'ye, p < 0.001, d = 1.64).

Sonuç olarak, nöroatletik eğitim kas aktivasyonu, esneklik ve hareketlilik üzerinde önemli akut faydalar sağlamaktadır. Bu sonuçlar, atletik performansı artırma ve sakatlıkları önlemede değerli bir yöntem olduğunu göstermektedir. Daha fazla araştırma, uzun vadeli uygulamalar ve farklı sporcu grupları üzerindeki etkilerini incelemelidir.

Anahtar kelimeler: Nöroatletik Eğitim; Posterior Zincir; Kas Aktivasyonu; Esneklik; Dorsifleksiyon

ABSTRACT

Neuroathletic training integrates neuroscience with physical activity, aiming to enhance coordination between the nervous and musculoskeletal systems. This approach is critical for optimizing posterior chain performance, which includes key muscles like the gluteus maximus, hamstrings, lumbar erector spinae, and gastrocnemius. These muscles are essential for maintaining posture and functional movement, yet the acute effects of neuroathletic training on muscle activation, flexibility, and joint mobility are underexplored.

This study investigated the immediate effects of neuroathletic training on posterior chain muscle activation, hamstring flexibility, and ankle dorsiflexion range of motion in 22 recreationally active individuals aged 18–30 years. Participants underwent a 30-minute neuroathletic training session using the Z-health® kit, targeting visual, vestibular, and proprioceptive systems. Exercises included star chart tracing, saccadic training with letter cards, convergence-divergence exercises, optokinetic training with the Smart Optometry® app, and Brock String bead focusing. Muscle activation was measured using surface electromyography (sEMG), flexibility was assessed via the active knee extension test, and dorsiflexion was evaluated using the weight-bearing lunge test. Pre- and post-training results were compared using paired t-tests, and effect sizes (Cohen's d) were calculated.

The results showed significant improvements across all variables. Muscle activation increased for the gluteus maximus (from $60.1\% \pm 5.3$ to $65.4\% \pm 5.5$, $p < 0.001$, $d = 1.03$), hamstrings ($60.4\% \pm 5.1$ to $66.2\% \pm 5.4$, $p < 0.001$, $d = 1.49$), lumbar erector spinae ($61.0\% \pm 5.2$ to $65.8\% \pm 5.0$, $p = 0.0015$, $d = 1.09$), and gastrocnemius ($60.5\% \pm 5.0$ to $65.5\% \pm 5.3$, $p = 0.0030$, $d = 1.10$). Flexibility improved with increased active knee extension angles ($65.4^\circ \pm 6.1^\circ$ to $72.2^\circ \pm 5.7^\circ$, $p < 0.001$, $d = 1.32$). Ankle dorsiflexion range also increased ($10.2 \text{ cm} \pm 1.8 \text{ cm}$ to $12.5 \text{ cm} \pm 1.6 \text{ cm}$, $p < 0.001$, $d = 1.64$).

In conclusion, neuroathletic training provides significant acute benefits for muscle activation, flexibility, and mobility. These results suggest its value for enhancing athletic performance and preventing injuries. Further research is needed to explore long-term applications and broader use in athletic and clinical populations.

Key words: Neuroathletic Training; Posterior Chain; Muscle Activation; Flexibility; Dorsiflexion

1. GİRİŞ

Nöroatletik antrenman, atletik performansın geliştirilmesinde sinir sistemi ve kas-iskelet sistemi arasındaki bağlantıları güçlendiren yenilikçi bir yaklaşımdır. Bu yöntem, hareketin nörobilimsel temelleriyle klasik atletik antrenman uygulamalarını birleştirerek performans artırmayı ve yaralanmaları önlemeyi amaçlar (1). 2000'li yılların başında Eric Cobb, atletik antrenman ve nörobilim disiplinlerini harmanlayarak Z-Health Performans Eğitim Sistemi'ni geliştirmiştir. Bu sistem, görsel, vestibüler ve proprioseptif hareket kontrol mekanizmalarını klasik antrenman modellerine entegre ederek hareketin daha etkili bir şekilde kontrol edilmesini sağlamayı hedefler.

Sinir sisteminin hareket kontrolündeki üç temel bileşeni olan görsel, vestibüler ve proprioseptif sistemler, fiziksel performansı doğrudan etkiler. Bu sistemlerden gelen duyuşal sinyallerin netliği ve kalitesi ne kadar yüksekse, bireyin motor performansı o kadar iyi olur. Ancak, bu sistemler arasındaki iletişimdeki zayıflıklar veya sinyal kalitesinin düşük olması performansın düşmesine neden olabilir. Nöroatletik antrenman, bu zayıf noktaları hedefleyen egzersizlerle sinir sistemi süreçlerini optimize ederek performansı artırır ve yaralanma riskini azaltır. Ayrıca bu yöntem, bireyin doğal hareket kontrol mekanizmalarını yeniden düzenleyerek günlük yaşam, spor ve işlevsel hareketlerde iyileşme sağlar (2, 3).

Nöroatletik antrenmanın faydaları yalnızca sporcularla sınırlı değildir; çocuklardan yaşlı bireylere, sağlıklı popülasyondan kronik rahatsızlıkları olan bireylere kadar geniş bir kitle üzerinde olumlu etkiler yaratabilir. Bu yöntemin; ağrı, yorgunluk, eklem sertlikleri, görme problemleri, baş dönmesi, disleksi ve kaygı gibi çeşitli sağlık sorunlarının yönetiminde etkili olabileceği bildirilmiştir (4). Ayrıca vestibüler sistemin posterior zincir kasları ile ilişkili olduğu ve vestibüler sistemdeki asimetrisinin idiyopatik skolyoz gibi postürü bozukluklara yol açabileceği öne sürülmektedir (5).

Posterior zincir kasları, vücudun arka tarafında yer alan ve dik postürün korunmasını sağlayan bir grup kası kapsar. Bu kaslar arasında erector spinae, gluteus maximus, hamstring, gastrocnemius, soleus ve ayak iç kasları yer alır (6). Posterior zincirdeki herhangi bir kasın işlevinde meydana gelen bir bozukluk, zincirdeki diğer kasların da olumsuz etkilenmesine yol açabilir. Bunun nedeni, bu kasların dura mater kaynaklı sinir bağlantıları aracılığıyla birbiriyle ilişkilendirilmiş olmasıdır (7). Optimal bir posterior zincir fonksiyonu, doğru motor kontrol, kuvvet ve dayanıklılığı içerir. Bu durum, hem sporcu hem de genel popülasyonda bel ağrısı ve diğer kas-iskelet sistemi problemlerinin önlenmesinde kritik öneme sahiptir (8).

Yapılan araştırmalar, bel ağrısı yaşayan bireylerde motor kontrol bozuklukları, kas kuvvetinde azalma ve dayanıklılık problemlerinin yaygın olduğunu göstermektedir (9-11). Bu bağlamda, posterior zincir kaslarının nöroatletik antrenman ile doğru şekilde aktive edilmesi, hem sağlıklı bireyler hem de sporcular için koruyucu bir strateji olarak değerlendirilmektedir.

Bu çalışmada, nöroatletik antrenmanın posterior zincir kasları üzerindeki akut etkileri değerlendirilmiştir. Çalışmanın amacı, nöroatletik antrenmanın gluteus maximus, hamstring, lumbar erector spinae ve gastrocnemius kaslarının yüzeysel elektromiyografi (sEMG) aktivasyonlarını incelemek; aynı zamanda posterior zincir kaslarının esneklik ve eklem hareket açıklığı üzerindeki akut etkilerini ortaya koymaktır. Bu kapsamda, elde edilen bulgular, nöroatletik antrenmanın koruyucu ve performans artırıcı potansiyelini daha iyi anlamamıza olanak sağlayacaktır.

2. MATERYAL VE YONTEM

Bu araştırma, nöroatletik antrenmanın akut etkilerini incelemek amacıyla prospektif kesitsel bir çalışma olarak tasarlanmıştır. Çalışma, 2023-2024 yılları arasında Sağlık Bilimleri Üniversitesi Gülhane Fizyoterapi ve Rehabilitasyon Fakültesi Uygulama ve Araştırma Laboratuvarlarında yürütülmüştür. Araştırma, ilgili etik kurulun onayının alınmasının ardından başlatılmıştır.

Etik kurul onayı, 31.10.2023 tarihinde yapılan toplantıda alınmış olup, toplantı numarası 2023/09 ve proje karar numarası 2023-352 olarak kaydedilmiştir. Çalışma, etik ilkeler ve bilimsel standartlara uygun şekilde gerçekleştirilmiştir.

Katılımcılar

Çalışmaya 18-30 yaş aralığında, beden kütle indeksi (BKİ) 18.5-24.9 kg/m² arasında olan ve fiziksel aktivite düzeyi yeterli (IPAQ Kısa Form'a göre >3000 MET-dk/hf) rekreasyonel olarak aktif bireyler katılmıştır. Katılımcılar, çalışmaya dahil edilmeden önce yazılı olarak bilgilendirilmiş ve onamları alınmıştır.

Dahil Edilme Kriterleri

1. Yaş aralığı 18-30 arasında olmak.
2. BKİ değerinin 18.5-24.9 kg/m² arasında olması.
3. Gönüllü olarak çalışmaya katılmak.
4. Testleri ve egzersizleri yapabilme yeteneğine sahip olmak.
5. Sağlıklı, rekreasyonel olarak aktif birey olmak.

Dışlama Kriterleri

1. Son bir yıl içinde alt veya üst ekstremitede yaralanma öyküsü veya hamstring strain öyküsü bulunması.
2. Profesyonel spor geçmişine sahip olmak.

3. Katılımı engelleyici duyuşal veya nörolojik bir problemi bulunması.
4. Egzersizi kısıtlayacak muskuloskeletal, nörolojik, respiratuar veya kardiyovasküler risk faktörlerine sahip olmak.
5. Dünya Anti-Doping Ajansı (WADA) tarafından yasaklanan ilaç veya besin takviyesi kullanımı.
6. Malign hastalık öyküsü.

Araştırma Modeli ve Örneklem

Çalışma, bağımsız tek grup tasarımına dayalı olarak gerçekleştirilmiştir. Gerekli örneklem büyüklüğü, G*Power yazılımı kullanılarak hesaplanmış ve etkili büyüklüğü orta düzeyde ($d=0.50$) varsayılarak toplamda 20 gönüllü belirlenmiştir (12). Olası katılım kayıplarını telafi etmek amacıyla %10 yedek katılımcı ile toplam 22 gönüllü çalışmaya dahil edilmiştir.

Veri Toplama

Araştırmada, nöroatletik antrenman öncesi ve sonrası değerlendirilen bağımlı değişkenler şunlardır:

- Hamstring esnekliği ($^{\circ}$)
- Ayak bileği dorsifleksiyon eklem hareket açıklığı ($^{\circ}$)
- Gluteus maximus kas aktivasyonu (mV)
- Biceps femoris uzun başı kas aktivasyonu (mV)
- İliocostalis lumborum kas aktivasyonu (mV)
- Gastrocnemius kas aktivasyonu (mV)

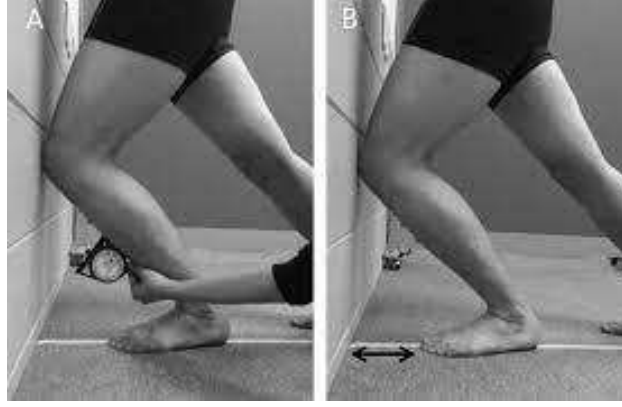

Bağımsız değişkenler ise yaş, cinsiyet, boy, kilo, beden kütle indeksi (BKİ) ve dominant ekstremiteler olarak kaydedilmiştir.

Hamstring Esneklik Ölçümü

Bireylerin hamstring kaslarının esneklik değerlendirmeleri maksimum kalça fleksiyonuyla birlikte aktif diz ekstansiyon testi (ICC: 0.96) ile yapıldı. Sırtüstü yatan bireylerden test edilecek bacağı maksimum kalça fleksiyonuna aldıktan sonra dizlerinin arkasından ellerini kenetlemeleri ve aktif olarak dizlerini getirebildiği son noktaya kadar ekstansiyona getirmeleri istendi. Karşı taraf bacak terapist tarafından sabitlendi. Tibia kristasına konulan Dualer IQ (J-Tech Medical, Midvale, UT, USA) dijital inklinometre ile açı değeri derece cinsinden kaydedildi. Aynı ölçüm diğer bacakta tekrarlandı. Ölçümler üç tekrar halinde yapıldı ve ortalaması derece cinsinden not edildi (13).

Ayak Bileği Dorsifleksiyon Hareket Açıklığı Ölçümü

Ayak bileği dorsifleksiyon hareket açıklığı, ağırlık aktarmalı hamle testi (AAHT) kullanılarak değerlendirilmiştir. Katılımcılar, dominant bacakları ile mezura üzerinde pozisyonlandırılmış ve tibial inklinasyon açıları dijital inklinometre ile ölçülmüştür. Üç tekrar alınmış ve en uzak mesafede başarılı olunan değerler kaydedilmiştir (şekil 1).

Şekil 1. Ağır Ağırlıklı Aktarmalı Hamle Testi Uygulanışı (A) tibial inklınasyon açısı ölçümü, (B) mezura ile mesafe ölçümü (15).

Posterior Zincir Kas Aktivasyonlarının Değerlendirilmesi

Posterior zincir kaslarının (gastrocnemius, biceps femoris, gluteus maximus, iliocostalis lumborum) yüzeysel elektromiyografi (sEMG) ölçümleri, Noraxon Ultium cihazı ile gerçekleştirilmiştir. Gastrocnemius, biceps femoris uzun başı, gluteus maximus ve lumbal erektor spina kaslarının yüzeysel kinezyolojik EMG ölçümleri, çalışmaya katılan bireylerin her iki ekstremitesinde gerçekleştirilmiştir. Kas aktivasyonlarının değerlendirilmesi için 8 kanallı yüzeysel EMG sistemi (Noraxon Ultium, Scottsdale, ABD) kullanılmıştır. Ölçüm sırasında, elektrot boyutu 1 cm olan gümüş/gümüş-klorür yüzeysel elektrotlar (Noraxon, Scottsdale, ABD) tercih edilmiştir. Elektrotların yerleştirilmesinden önce, yüzeysel EMG (Surface Electromyography for the Non-Invasive Assessment of Muscles - SENIAM) kriterlerine uygun olarak cilt yüzeyi temizlenmiştir. Deri açık kırmızı renk aldığı uygun deri empedans ortamının sağlandığı kabul edilmiş ve elektrotlar gastrocnemius, biceps femoris uzun başı, gluteus maximus ve lumbal erektor spina kaslarına bilateral olarak yerleştirilmiştir. Elektrotların merkezleri arasındaki mesafenin 2 cm'yi aşmamasına özen gösterilmiştir.

Elektrot Yerleşimi

SENIAM kriterlerine göre elektrot yerleşimi şu şekilde gerçekleştirilmiştir:

- **Medial Gastrocnemius:** Kasın en şişkin bölgesine, kas liflerine paralel.
- **Biceps femoris uzun başı:** Tuber ishium ve tibianın lateral kondili arasındaki hattın orta noktasına, kas liflerine paralel.
- **Gluteus maximus:** Spina iliak posterior superiordan uyluğun arka yüzeyine kadar olan çizgi boyunca, kas liflerine paralel.
- **İliocostalis lumborum pars lumborum:** L3 seviyesinde, erector spinae'nin lateral kenarı ile posterosuperior iliak omurga arasındaki dikey bir çizginin ortasında, kas liflerine paralel (Şekil 2) (16).

Şekil 2. SENIAM kriterlerine göre yüzeyel EMG elektrot yerleşimleri: (A) Gluteus maksimus, (B) Gastrokinemius medial başı, (C) Biceps femoris uzun başı, (D) İliokostalis lumborum-pars lumborum (16).

Ölçüm Süreci

Elektrotlar deriye yerleştirildikten sonra, elektrotların herhangi bir gürültü kaydedip kaydetmediğini değerlendirmek amacıyla bireylerin istirahat halindeki kas aktiviteleri ölçülmüştür. Bireylerden hareket etmemeleri ve yeterince gevşemeleri istenmiş, bu sırada 15 saniyelik ölçümler gerçekleştirilmiştir. Eğer herhangi bir gürültü tespit edilmemişse ölçümlere devam edilmiş, ancak gürültü tespit edilmesi durumunda elektrotların yerleşimi yeniden düzenlenmiştir.

Maksimum İstemli İzometrik Kontraksiyon (MVIC) Değerlendirmesi

Katılımcıların her iki tarafta gastrokinemius medial başı, biceps femoris uzun başı, gluteus maximus ve iliocostalis lumborum pars lumborum kas gruplarında maksimum istemli izometrik kontraksiyon (MVIC) değerleri ölçülmüştür. Her kas, en yüksek aktivasyon gösterdiği pozisyonda manuel dirence karşı 5 saniyelik üç tekrarlı maksimal kasılma ile değerlendirilmiştir. Her bir tekrar arasında 30 saniyelik dinlenme süresi verilmiş, kasın MVIC değeri üç tekrarlı olarak kaydedilmiş ve 1 dakikalık aralar ile ölçümler gerçekleştirilmiştir. Sonrasında, MVIC normalizasyonu için posterior zinciri en fazla aktive eden egzersizlerden biri olan Superman egzersizi (Şekil 3) sırasında 10 saniyelik yüzeyel EMG ölçümleri alınmıştır. Egzersiz konsantrik, izometrik ve eksantrik olmak üzere üç fazda gerçekleştirilmiştir. Her bir faz 3 saniyelik sürelerle metronom kullanılarak kontrol altında tutulmuş ve ölçümler sırasında 60 fps hızında bir video kamera (Logitech Web camera C500, Morger, İsviçre) ile senkronize kayıt yapılmıştır. MVIC değerlendirmesinin ardından 5 dakikalık dinlenme süresi uygulanmıştır.

Şekil 3. Superman egzersizi

Her bir kas için MVIC değerine göre Superman egzersizi sırasındaki aktivasyon oranları belirlenmiş ve normalizasyon yapılmıştır ($[\text{aktivite miktarı}/\text{MVIC}] \times 100$). Egzersiz sonrasında, nöroatletik antrenman tamamlandıktan 5 dakika sonra tüm ölçümler tekrarlanmıştır.

EMG Sinyal Analizleri

Örnekleme hızı 2000 Hz olarak ayarlanmış, sinyal analizleri Noraxon MyoResearch XP yazılımı (Sürüm 3.16; Noraxon Inc, Scottsdale, AZ, ABD) kullanılarak gerçekleştirilmiştir. EMG sinyalleri, 20 Hz yüksek geçişli Butterworth filtreleme işlemine tabi tutulmuş, kardiyak artefakt etkisi en aza indirilmiştir. Ham veriler tam dalga rektifikasyon işleminden geçirilmiş, ardından 100 milisaniyelik zaman aralıklarında kök ortalama kare (RMS) değerleri alınarak düzgünleştirilmiştir (17).

Nöroatletik Antrenman

Bu çalışmada, katılımcılar üzerinde nöroatletik antrenmanın akut etkilerini değerlendirmek amacıyla Z-health® nöroatletik antrenman kiti kullanılmıştır. Bu antrenman, görsel, vestibüler ve proprioseptif sistemleri hedef alarak, katılımcıların sinir sistemi ve motor kontrol kapasitelerini artırmaya yönelik çeşitli egzersizlerden oluşmaktadır.

Yıldız Grafiği ile Göz Kaslarının Eğitimi

Yıldız grafiği, katılımcının göz hizasına uygun bir yüksekliğe, bir duvara yerleştirilmiştir. Egzersiz sırasında katılımcıdan, grafikteki ortada bulunan "A" harfine odaklanırken, baş hareketleriyle yıldız grafiğinde belirtilen sekiz köşegen boyunca hareket etmesi istenmiştir. Bu hareket, her bir köşegen için üç set ve sekiz tekrardan oluşmuştur. Bu egzersiz, göz ve baş koordinasyonunu iyileştirmek amacıyla tasarlanmıştır (1-3).

Harf Kartları ile Sakkad Eğitimi

Katılımcılar, nöroatletik kit içerisinde bulunan harf kartlarını kullanarak sakkadik göz hareketlerini geliştirmiştir. Daha küçük boyuttaki harf kartı katılımcının eline verilmiş, büyük harf kartı ise duvara, katılımcının göz hizasında olacak şekilde yerleştirilmiştir. Katılımcıdan, elindeki küçük harf kartındaki harflerden başlayarak, duvardaki büyük harf kartına gözlerini hızla hareket ettirerek harfleri soldan sağa doğru okuması istenmiştir. Bu eğitim, sakkadik göz hareketlerinin hızını ve doğruluğunu artırmak için uygulanmıştır (1-3).

Yakınsama-Uzaksama Eğitimi

Yakınsama-uzaksama eğitimi sırasında katılımcıdan, yaklaşık 40-50 cm mesafede, burun hizasında bir görüş çubuğu veya tükenmez kalem tutması istenmiştir. Katılımcı, çubuğu veya

kalemi iki gözle takip ederek burnuna doğru yavaşça yaklaştırmış, görüntü bulanıklaştığında tekrar başlangıç noktasına geri götürmüştür. Bu egzersiz, her biri iki set ve beş tekrardan oluşmuştur. Bu yöntem, gözlerin yakınsama ve uzaksama becerisini geliştirerek görsel odaklanmayı artırmayı hedeflemiştir (1-3).

Optokinetik Eğitim

Katılımcılar, Smart Optometry® uygulaması yardımıyla optokinetik eğitim gerçekleştirmiştir. Egzersiz sırasında, uygulamada ekranda belirlenen ilerleyen kırmızı bir çizgi katılımcıya gösterilmiş ve bu çizgiyi yalnızca göz hareketleriyle takip etmesi istenmiştir. Bu sırada başın sabit tutulması sağlanmış ve göz hareketlerinin pürüzsüz olmasına dikkat edilmiştir. Egzersiz, katılımcıların göz kaslarının kontrolünü ve görsel izleme yeteneğini geliştirmek amacıyla uygulanmıştır (1-3).

Brock String Eğitimi

Brock String eğitimi sırasında katılımcılara, üzerinde farklı renklerde boncuklar bulunan bir ip verilmiştir. Bu ipin bir ucu burun hizasında tutulurken, diğer ucu göz hizasında sabitlenmiştir. Boncuklar, ip üzerinde 12-15 inç aralıklarla eşit bir şekilde dizilmiştir. Katılımcılardan aşağıdaki adımları izlemeleri istenmiştir (1-3):

1. **Merkez boncuğa odaklanma:** Katılımcılar, iplerle birlikte bir “X” desenini görmeyi hedeflemiştir.
2. **En uzak boncuğa odaklanma:** Katılımcılardan, kendilerine doğru açılan bir “V” deseni görmeleri istenmiştir.
3. **En yakın boncuğa odaklanma:** Katılımcılar, kendilerinden uzağa açılan bir “V” desenini görmeye çalışmıştır.
4. **Göz hareketleri:** Katılımcılar, boncuktan boncuğa atlayarak göz hareketlerini kademeli olarak hızlandırmıştır.
5. **Odaklanma süresi:** Katılımcılardan, her boncuğa 10 saniye boyunca bakarak odaklanmayı sağlamaları beklenmiştir.
6. **Hareketli ip kullanımı:** Katılımcılar, ipi yavaşça yukarı ve aşağı hareket ettirerek boncukları gözleriyle takip etmiştir.

İstatistiksel Analiz

Verilerin analizi, IBM SPSS Statistics 26 programı kullanılarak gerçekleştirilmiştir. Değişkenlerin normal dağılıma uygunluğu, görsel yöntemler (histogram ve olasılık grafikleri) ve analitik yöntemler (Kolmogorov-Smirnov ve Shapiro-Wilk testleri) aracılığıyla değerlendirilmiştir. Tanımlayıcı istatistikler, sayısal değişkenler için ortalama \pm standart sapma, ortanca (minimum; maksimum) değerleri; kategorik değişkenler için ise sayı (yüzde) biçiminde sunulmuştur. Sayısal değişkenlerin eğitim öncesi ve sonrası karşılaştırılmasında, verilerin dağılımına uygun olarak Wilcoxon testi veya Paired Samples t-test uygulanmıştır. Eğitim öncesi ve sonrası değişimlerin büyüklüğü etki genişliği (Cohen's d) ile hesaplanmıştır. Etki büyüklüğü, 0.10- $<$ 0.30 arasında ise küçük (small), 0.30- $<$ 0.50 arasında ise orta (medium) ve 0.50 ve üzerinde ise büyük (large) olarak yorumlanmıştır (18). Tüm analizlerde istatistiksel anlamlılık düzeyi $p<$ 0.05 olarak kabul edilmiştir.

3. BULGULAR

Araştırmanın sonuçları, nöroatletik antrenmanın tüm incelenen değişkenlerde anlamlı iyileşmeler sağladığını göstermiştir. Posterior zincir kas aktivasyonlarında, hamstring esnekliğinde ve ayak bileği dorsifleksiyon hareket açıklığında önemli artışlar gözlemlenmiştir.

Kas Aktivasyonu:

- **Gluteus Maximus:** Kas aktivasyonu, antrenman öncesinde 60.1 ± 5.3 iken, antrenman sonrasında 65.4 ± 5.5 'e yükselmiştir ($p < 0.001$, $d = 1.03$) (Şekil 4). Bu, gluteus maximus kasının nöroatletik antrenmana anlamlı bir yanıt verdiğini göstermektedir.
- **Hamstring Kasları:** Hamstring kaslarının aktivasyonu, 60.4 ± 5.1 'den 66.2 ± 5.4 'e yükselmiştir ($p < 0.001$, $d = 1.49$) (Şekil 4). Bu yüksek etki büyüklüğü, hamstringlerin antrenman sonrası fonksiyonel iyileşme potansiyelini vurgulamaktadır.
- **Lumbar Erector Spinae:** Lumbar erector spinae kasında aktivasyon, 61.0 ± 5.2 'den 65.8 ± 5.0 'a çıkarak anlamlı bir artış göstermiştir ($p = 0.0015$, $d = 1.09$) (Şekil 4). Bu, antrenmanın postüral kontrol ve spinal stabiliteyi artırıcı etkisini desteklemektedir.
- **Gastrocnemius:** Gastrocnemius kasının aktivasyonu, 60.5 ± 5.0 'dan 65.5 ± 5.3 'e yükselmiştir ($p = 0.0030$, $d = 1.10$) (Şekil 4). Bu sonuç, alt ekstremitte kaslarının motor aktivitesinde kayda değer bir iyileşme olduğunu ortaya koymaktadır.

Şekil 4. Posterior Zincir Kaslarının Nöroatletik Antrenman Öncesi ve Sonrası Aktivasyon Değişimleri (%MVIC)

Hamstring kaslarının esnekliği, aktif diz ekstansiyonu testiyle değerlendirilmiş ve antrenman öncesinde $65.4 \pm 6.1^\circ$ olan esneklik açısı, antrenman sonrasında $72.2 \pm 5.7^\circ$ 'ye yükselmiştir ($p < 0.001$, $d = 1.32$). Bu bulgu, nöroatletik antrenmanın kas-tendon biriminin elastikiyetini artırma üzerindeki etkisini ortaya koymaktadır.

Ayak bileği dorsifleksiyon hareket açıklığı, ağırlık aktarmalı hamle testi ile değerlendirilmiş ve anlamlı bir iyileşme kaydedilmiştir. Antrenman öncesinde 10.2 ± 1.8 cm olan dorsifleksiyon aralığı, antrenman sonrasında 12.5 ± 1.6 cm'ye yükselmiştir ($p < 0.001$, $d = 1.64$). Bu, nöroatletik antrenmanın alt ekstremitte mobilitesini artırma üzerindeki güçlü etkisini göstermektedir.

4. TARTISMA

Nöroatletik antrenmanın posterior zincir kas aktivasyonu, hamstring esnekliği ve ayak bileği dorsifleksiyon hareket açıklığı üzerindeki akut etkilerini inceleyen bu çalışma, sinir sistemi adaptasyonlarının kas-iskelet sistemi performansını artırmadaki önemini vurgulamaktadır. Bulgular, nöroatletik antrenmanın tüm incelenen parametrelerde anlamlı iyileşmeler sağladığını göstermiştir.

Posterior zincir kaslarının (gluteus maximus, hamstring, lumbar erector spinae ve gastrocnemius) aktivasyon seviyelerindeki artışlar, nöromüsküler koordinasyonun ve motor ünite senkronizasyonunun optimize edildiğini ortaya koymaktadır. Gabriel ve arkadaşları,

motor ünite katılımını artıran antrenmanların motor kontrol ve stabiliteyi geliştirdiğini belirtmiştir (19). Ayrıca, nöroatletik antrenmanın elit sporcularda benzer faydalar sunduğu, özellikle üst ekstremitelerde performans ve hizmet hızı gibi parametrelerde önemli iyileşmeler sağladığı bir diğer çalışma tarafından da desteklenmiştir (20). Bu bağlamda, nöroatletik antrenmanın hem kas hem de sinir sistemi üzerinde etkili bir müdahale olduğu ve atletik performansın farklı yönlerini geliştirdiği görülmektedir.

Hamstring kaslarının esnekliğindeki artış, nöroatletik antrenmanın esneklik üzerindeki olumlu etkisini ortaya koymaktadır. Bu artışlar, proprioseptif geri bildirim artması ve sinirsel gerginliğin azalması ile açıklanabilir. Magnusson ve arkadaşları, esneklik iyileşmelerinin kas-tendon birimindeki elastikiyet artışı ve sinirsel uyumlanma ile ilişkili olduğunu ifade etmiştir (21). Esneklik iyileşmelerinin atletik performansına etkisini değerlendiren bir diğer çalışmada, nöroatletik antrenmanın elit voleybol oyuncularında hizmet hızı ve hareket verimliliğini artırdığı gösterilmiştir. Bu durum, nöroatletik antrenmanın genel hareket ekonomisini ve esnekliği artırıcı bir yöntem olarak uygulanabilirliğini desteklemektedir (20).

Ayak bileği dorsifleksiyonundaki anlamlı artışlar, nöroatletik antrenmanın alt ekstremitelerde mobilitesini ve dinamik stabiliteyi artırdığını göstermektedir. Dietz'in çalışmaları, proprioseptif antrenmanların eklem hareket açıklığı ve alt ekstremitelerde stabilitesini artırmada etkili olduğunu vurgulamıştır (22). Ayak bileği dorsifleksiyon hareket açıklığındaki iyileşmeler, hareket biyomekaniğini optimize ederek spor performansını artırabileceği ve aşıl tendiniti gibi aşırı kullanım yaralanmalarını önleyebileceği sonucunu desteklemektedir.

Sonuç olarak, nöroatletik antrenmanın sinirsel ve fiziksel adaptasyonlar üzerindeki etkileri, hem sporcularda hem de rehabilitasyon süreçlerinde kullanılacak potansiyel bir strateji olduğunu ortaya koymaktadır. Ayrıca, bu yöntemin elit voleybol oyuncularında esneklik ve performans parametrelerini artırmadaki etkisi, nöroatletik antrenmanın spor branşına özgü uygulamalarını genişletme potansiyelini göstermektedir (20). Ancak, bu çalışmanın yalnızca kısa vadeli etkileri değerlendirdiği dikkate alınmalıdır. İleri araştırmalar, nöroatletik antrenmanın uzun vadeli etkilerini ve farklı spor branşlarındaki uygulamalarını daha kapsamlı bir şekilde incelemelidir. Ayrıca, nöroplastisite ve motor kontrol değişikliklerini anlamak için fonksiyonel manyetik rezonans görüntüleme (fMRI) ve transkraniyal manyetik stimülasyon (TMS) gibi ileri teknolojilerin kullanılması önerilmektedir. Bu tür çalışmalar, bireysel ihtiyaçlara göre uyarlanmış kişiselleştirilmiş antrenman protokollerinin geliştirilmesine olanak sağlayabilir.

ÖZET

Minecraft, oyunculara sınırsız bir hayal gücü ve tasarı özgürlüğü sunarak, problem çözme becerilerini ve işbirliğini teşvik eden yapısıyla eğitimde etkili bir öğrenme aracı olarak dikkat çekmektedir. Özellikle STEM (Bilim, Teknoloji, Mühendislik, Matematik) alanlarında geniş bir kullanım alanı bulan Minecraft, öğrencilerin hem bireysel hem de grup çalışmalarıyla soyut kavramları somut deneyimlere dönüştürmelerine olanak tanır. Minecraft Education Edition, kodlama, kimya, matematik, fizik ve tarih gibi dersleri interaktif ve eğlenceli bir öğrenme deneyimine dönüştürerek öğrencilerin motivasyonlarını artırır. Bu araştırma, Minecraft'ın eğitsel ve bilimsel öğrenme süreçlerine entegrasyonunu inceleyerek, oyun tabanlı öğrenmenin akademik başarıya ve öğrencilerin bilişsel gelişimine etkilerini ele almayı amaçlamaktadır.

Anahtar Kelimeler: Minecraft, Oyun, Kodlama, STEM, Eğitim

ABSTRACT:

Minecraft, by offering players unlimited imagination and design freedom, has gained attention as an effective learning tool in education due to its structure that fosters problem-solving skills and collaboration. Widely used in STEM (Science, Technology, Engineering, Mathematics) fields, Minecraft allows students to transform abstract concepts into concrete experiences through both individual and group work. Minecraft Education Edition enhances student motivation by transforming lessons such as coding, chemistry, mathematics, physics, and history into interactive and engaging learning experiences. This research aims to examine the integration of Minecraft into educational and scientific learning processes and to evaluate the effects of game-based learning on academic achievement and students' cognitive development.

Keywords: Minecraft, Game, Coding, STEM, Education

GİRİŞ

Teknolojinin hızla gelişmesi, eğitimde yenilikçi yaklaşımların ve araçların kullanımını zorunlu hale getirmiştir. Bu araçlardan biri olan oyun tabanlı öğrenme, geleneksel eğitim yöntemlerinin ötesine geçerek dersleri daha eğlenceli ve motive edici hale getirmeyi amaçlamaktadır. Dijital oyunlar, öğrencilerin derse olan ilgilerini artırırken, problem çözme, eleştirel düşünme, özgün fikirler üretme ve takım çalışması gibi 21. yüzyıl becerilerini geliştirmelerine olanak tanır (Prensky, 2005). Oyunların eğitimde kullanımı, öğrencilerin teorik bilgileri deneyimsel olarak pekiştirmelerini sağlarken, onları aktif katılım sürecine dâhil eder. Özellikle oyunların sağladığı etkileşimli yapı ve anlık geri bildirim mekanizmaları, öğrencilerin hatalarını fark edip öğrenme süreçlerini iyileştirmeleri için fırsatlar sunar (Prensky, 2001). Ayrıca, bilgisayar destekli eğitimde, oyun tabanlı öğrenme bilgi işlemsel düşünme, uzamsal farkındalık ve mantıksal akıl yürütme becerilerini geliştirmede etkili bir araç olarak öne çıkmaktadır (Wing, 2006). Bu nedenle, öğrenci merkezli bir yaklaşımı benimseyen öğretmenler, oyun tabanlı stratejileri eğitimde yaygın olarak tercih etmektedir.

Minecraft, 2011'de Mojang Studios tarafından piyasaya sürülmüş bir oyundur. Oyunculara, üç boyutlu bloklardan oluşan bir dünyada serbestçe inşa, keşif ve hayatta kalma deneyimi sunan Minecraft, sınırsız özgün ve farklı olanaklar sayesinde oyuncuların kendi dünyalarını inşa etmelerine, çeşitli zorlukları aşarak problem çözme becerilerini geliştirmelerine olanak tanır. Minecraft'ın açık uçlu tasarımı ve etkileşimli özellikleri, eğitimde geniş bir kullanım alanı bulmuş ve öğrencilere problem çözme, eleştirel düşünme, takım çalışması ve uzamsal farkındalık gibi 21. yüzyıl becerilerini kazandırma potansiyeli sunmuştur (Ekaputra, Lim, & Eng, 2013). Minecraft, sadece bilgisayar bilimleri değil, tarih, coğrafya gibi farklı alanlarda da eğitimde kullanılmaktadır (Şajben, Klimová, & Lovászová, 2020). Özellikle kodlama, mühendislik, matematik ve coğrafya gibi derslerde kullanılmakta olan Minecraft, ayrıca soyut kavramları somutlaştırarak öğrencilerin öğrenme süreçlerini daha ilgi çekici ve etkileşimli hale getirmektedir. Bilgi işlemsel düşünme, bireylerin problem çözme süreçlerinde sistematik düşüncelerini ve algoritmik çözümler geliştirmelerini içerir (Wing, 2006). Minecraft, bu becerilerin gelişimi için ideal bir ortam sunarak öğrencilerin oyun içindeki sorunlara algoritmik stratejiler geliştirmelerine ve bilgi işlemsel düşünme becerilerini pekiştirmelerine yardımcı olur. Örneğin, öğrenciler Minecraft'ta bir şehir planı oluştururken kodlama ve mühendislik kavramlarını deneyimleyebilir veya tarih derslerinde antik yapılar inşa ederek tarihsel bağlamları daha iyi anlayabilirler (Karsenti & Bugmann, 2017). Aynı zamanda, açık uçlu oyun deneyimi, öğrencilerin fikir ve düşüncelerini serbestçe ifade etmelerine ve öğrenmeye dair motivasyonlarını artırmalarına katkı sağlar (Prensky, 2001). Bu nedenlerle Minecraft, eğitimde oyun tabanlı öğrenme stratejilerinin etkili bir aracı olarak giderek daha fazla ilgi görmektedir.

YÖNTEM

Eğitimde Oyun Kullanımının Değerlendirilmesi: Minecraft Örneği

Teknolojinin eğitim süreçlerine entegre edilmesi, son yıllarda giderek önem kazanan bir alan haline gelmiştir. Dijital oyunlar, bu entegrasyonun en popüler ve etkili araçlarından biri olarak öne çıkmaktadır. Eğitimde oyun kullanımı, öğrencilerin derslere olan ilgisini artırmak, öğrenme süreçlerini daha eğlenceli hale getirmek ve öğrencilere eleştirel düşünme, problem çözme, iş birliği ve özgün fikirler üretme gibi önemli becerileri kazandırmak amacıyla kullanılmaktadır (Gee, 2003). Oyun tabanlı öğrenme, geleneksel eğitim yöntemlerinin ötesine geçerek öğrencilere aktif katılım, deneyimsel öğrenme ve keşfetmeye dayalı bir öğrenme ortamı sunar.

Eğitimde kullanılan oyunlar, genellikle öğretim amaçlarına yönelik olarak tasarlanmış eğitsel oyunlar ve popüler ticari oyunların uyarlanmış versiyonları olarak ikiye ayrılmaktadır. Eğitsel oyunlar, öğrencilerin belirli ders içeriklerini pekiştirmeleri amacıyla özel olarak tasarlanırken; ticari oyunlar, öğrenme ortamına adapte edilerek öğrencilerin soyut kavramları keşfetmeleri ve problem çözme becerilerini geliştirmeleri için kullanılabilir. Örneğin, Kahoot ve Quizizz gibi çevrim içi oyunlar bilgi ölçme ve pekiştirme amacıyla kullanılırken, SimCity ve Civilization gibi strateji tabanlı oyunlar tarih ve sosyal bilgiler derslerinde karmaşık süreçleri anlamak için kullanılabilir.

Tablo 1: Eğitimde Kullanılan Oyunlar ve Amaçları

Oyun	Kullanım Amacı	Öne Çıkan Özellikler	Güçlü Yönleri
Kahoot!	Bilgi ölçme, pekiştirme	Çevrimiçi sınavlar ve testler	Eğlenceli yarışma formatı, yüksek katılım ve motivasyon sağlar.
Quizizz	Bilgi kontrolü, hızlı değerlendirme	Anında geri bildirim ve puanlama	Eşzamanlı oyun oynama, öğrenciler arasında rekabet oluşturur.
SimCity	Sosyal bilgiler, şehir planlama	Strateji geliştirme ve kaynak yönetimi	Karmaşık süreçleri anlama, eleştirel düşünmeyi teşvik eder.
Civilization	Tarih, strateji geliştirme	Medeniyet kurma ve tarihi olayları keşfetme	Tarihsel bağlamda problem çözme ve stratejik düşünme geliştirir.
Minecraft	Özgün fikirler üretme, problem çözme, keşif Kodlama, STEM eğitimi	Açık uçlu yapı, sınırsız inşa etme olanakları Kod blokları, proje tabanlı öğrenme	Özgün fikirleri destekler, farklı öğrenme deneyimi sunar, iş birliği becerilerini güçlendirir. Bilgi işlemsel düşünme becerilerini geliştirir, ders içerikleriyle esnek entegrasyon sağlar.

Minecraft ise eğitimde oyun kullanımına yeni bir boyut kazandıran açık uçlu bir platformdur, Minecraft'ın diğer oyunlardan temel farkı, yapılandırılmamış bir oyun deneyimi sunmasıdır. Oyunculara sadece belirli bir hedefe ulaşmak için değil, kendi özgün fikirlerini üretme ve problem çözme becerilerini özgürce kullanarak kendi öğrenme deneyimlerini oluşturmaları için bir alan tanır. Minecraft'ın eğitimdeki gücü, esnek yapısı sayesinde farklı derslere kolayca entegre edilebilmesinden kaynaklanmaktadır (Alawajee & Delafield-Butt, 2021). Örneğin, matematik derslerinde öğrenciler, geometrik şekiller oluşturarak uzamsal farkındalıklarını artırırken, tarih derslerinde antik yapılar inşa ederek tarihsel olayları ve kültürel bağlamları keşfedebilirler. Kodlama derslerinde ise oyun içerisindeki araçları kullanılarak öğrenciler kod blokları ile algoritmalar geliştirebilir ve bilgi işlemsel düşünme becerilerini pekiştirebilir (Wing, 2006).

Minecraft'ın sunduğu esnek yapı ve etkileşimli özellikler, öğrencilerin kendi öğrenme süreçlerini özelleştirmelerine olanak tanır. Bu durum, öğrencilerin özgün düşünme, iş birliği yapma ve analitik problem çözme becerilerini geliştirmelerine katkı sağlar (Ekaputra, Lim & Kho, 2013). Minecraft ayrıca, öğretmenlerin ders içeriklerini oyun ortamında yeniden yapılandırmalarına ve öğrencilerle birlikte keşif temelli öğrenme deneyimleri oluşturmalarına

olanak tanır. Diğer pek çok eğitsel oyunun aksine, Minecraft öğrencilerin yalnızca belirli bilgileri öğrenmesini değil, aynı zamanda bilgiyi nasıl uygulayacaklarını deneyimleyerek öğrenmelerini teşvik eder. Bu nedenle Minecraft, eğitimde kullanılan diğer oyunlardan farklı olarak, öğrencilere daha geniş bir öğrenme alanı sunar ve öğretmenler için esnek bir ders planlama aracı olarak öne çıkar.

TARTIŞMA VE SONUÇ

Elde edilen bulgular, eğitimde oyun tabanlı öğrenme yöntemlerinin, özellikle Minecraft gibi açık uçlu dijital platformların, öğrencilerin bilişsel ve sosyal becerilerini geliştirmede önemli bir rol oynadığını göstermektedir. Minecraft, yapılandırılmamış bir oyun deneyimi sunarak öğrencilerin problem çözme, özgün fikirler üretme, iş birliği ve eleştirel düşünme becerilerini pekiştirmelerine olanak tanır. Özellikle kodlama, matematik ve tarih gibi farklı disiplinlerde etkili bir şekilde kullanılabilmesi, oyunun esnek yapısının eğitim süreçlerine entegre edilmesini kolaylaştırmaktadır.

Araştırmalar, Minecraft'ın öğrencilere yalnızca belirli bilgileri öğretmekle kalmayıp, aynı zamanda bu bilgileri uygulayarak öğrenmelerini sağladığını göstermektedir (Wing, 2006). Bu da öğrencilerin teorik bilgileri günlük yaşamda kullanabilme becerilerini geliştirmelerine katkı sağlamaktadır. Minecraft'ın sunduğu esnek yapı, öğrencilerin öğrenme süreçlerini kendi ilgi alanlarına göre özelleştirmelerine imkân tanımakta ve böylece motivasyonlarını artırmaktadır (Ekaputra, Lim & Kho, 2013). Bu durum, oyun tabanlı öğrenmenin, öğrenci merkezli yaklaşımla ne kadar uyumlu olduğunu bir kez daha ortaya koymaktadır.

Dijital oyunların eğitimdeki etkisi sadece akademik başarı ile sınırlı kalmayıp, öğrencilerin özgüvenlerini artırma, sosyal becerilerini geliştirme ve takım çalışmasına yönelik olumlu tutumlar kazandırma gibi katkılar da sağlamaktadır (Peirce, 2013). Özellikle Minecraft'ın sunduğu iş birliğine dayalı etkinlikler, birlikte çalışma ve problem çözme deneyimlerini güçlendirmektedir.

Sonuç olarak, Minecraft ve benzeri dijital oyunların eğitimde kullanımı, öğrencilerin 21. yüzyıl becerilerini geliştirmelerine katkı sağlayan etkili bir öğrenme yöntemi olarak değerlendirilebilir. Eğitimde geleneksel yöntemlerin yanı sıra oyun tabanlı stratejilerin benimsenmesi, öğrencilere aktif öğrenme fırsatları sunarak eğitim süreçlerini daha verimli ve ilgi çekici hale getirebilir. Bu bağlamda, öğretmenlerin Minecraft gibi açık uçlu oyunları ders içeriklerine entegre etmeleri, öğrencilerin bilgi işlemsel düşünme ve uzamsal farkındalık becerilerini geliştirmelerinde destekleyici bir rol oynayacaktır.

Abstract

Cost-benefit analysis of *Clarias gariepinus* fingerlings fed different levels of Maca root powder as Phyto-additive was evaluated. Five (5) isonitrogenous (40% crude protein) and isocaloric (1,732kcal kg⁻¹ gross energy) diets were formulated, where Maca root powder in form of Phyto-additive was incorporated at 0.0g/100g (TM₀), 0.25g/100g (TM₁), 0.5g/100g (TM₂), 0.75g/100g (TM₃) and 1.0g/100g (TM₄) inclusion levels, diet without Maca root powder (TM₀), served as the control diet. Formulated diets were fed to *C. gariepinus* fingerlings (n = 300, 10.0±0.00g) in fifteen (15) rectangular white plastic tanks (n = 20) at a fixed feeding rate of 3% body weight twice daily between the hours of 8:00 - 9:00am and 4:00 - 5:00pm at regular interval and adjusted after every two (2) weeks of sampling for a period of twelve (12) weeks. The cost-benefit analysis for each of the diets was calculated using the cost-benefit analysis models. Mean net profit value (₦252), profit index value (1.15) were better along treatments with the least (best) incidence of cost value (₦1.09) and the better benefit cost ratio value (1.06) in fingerlings fed diet TM₃, while the mean net profit value (₦225.5) was least in fingerlings fed control diet (TM₀), profit index value (1.08) was least in both the fingerlings fed diets TM₁ and TM₄. Incidence of cost value (₦1.12) was highest (poor) and benefit cost ratio value (0.95) were least in both the fingerlings fed diets TM₁ and TM₄ respectively. Findings from this study indicated that inclusion of Maca root powder as Phyto-additive at 0.75g/100g into the diet of *C. gariepinus* fingerlings was a profitable venture. Maca root powder is recommended to be included into the diet of *C. gariepinus* in order to minimize the cost of production.

Keywords: Cost-benefit, *Clarias gariepinus*, Fingerlings, Maca root, Phyto-additive

Introduction

In current global economic challenges, locally available resources can ensure sustainable production at an affordable price to the local consumers and can offer comparative advantage in the international market. Cost-benefit analysis (CBA) is a principle used in calculating the economic performance of budgeted capital to meet up with definitive human requirements (Wambua, 2018). CBA may be applied to estimate the overall or expected effect of actions, or to estimate the worth's, against the cost of a decision, project, or master plan (Ali *et al.*, 2024a). It is constantly used in corporate transactions, businesses or in the course of making choice (especially public policies), and project investments (Mohammed *et al.*, 2020). CBA is connected and controlled with the time value of money; all flows of benefits and cost over time are demonstrated on a common basis in terms of their net present values, regardless of whether they are contracted at various times (Ali *et al.*, 2024b). Other related regulations

include; cost-utility analysis, risk-benefit analysis, economic impact analysis, fiscal impact analysis, and social return on investment (SROI) analysis (Umar *et al.*, 2019). The CBA in an aquaculture enterprise is linked with associating the costs, both the fixed and variable costs, to the sources of revenues and other benefits that flow over time (Wambua, 2018). This study is focused on the cost-benefit analysis of *Clarias gariepinus* (Burchell, 1822) fingerlings fed different levels of Maca (*Lepidium meyenii*, Walp.) root powder as Phyto-additive.

Materials and Methods

Study Area

The study was carried out at the Lay-Joy Fish Farm, Gombe - Yola road, Billiri local government area (LGA), Gombe State of Nigeria. Billiri LGA lies within Lat. 9°50'N; 11°09'E and Long. 9.833°N 11.150°E. It covers an area of 737km² (285 sq. m) and is 50 km away from Gombe Local government area which is the State capital.

Experimental Fish and Feed

Three hundred (300) *Clarias gariepinus* fingerlings with mean initial weight (10.0±0.00g) were stocked twenty (20) fingerlings per tank in triplicates per treatment after one (1) week of acclimatization, the study lasted for a period of twelve (12) weeks. Five (5) isonitrogenous and isocaloric diets were prepared, each diet with crude protein (CP) content at 40% CP as calculated according to Pearson's square method and gross energy content of 1,732kcal kg⁻¹ for feeding the experimental *C. gariepinus* as recommended by Ali (2022). The Maca root powder in form of Phyto-additive was incorporated into the diet at 0.0g/100g (TM₀), 0.25g/100g (TM₁), 0.5g/100g (TM₂), 0.75g/100g (TM₃) and 1.0g/100g (TM₄) inclusion levels. The diet without Maca root powder (TM₀) served as the control diet.

Experimental Design

The fish were cultured in fifteen (15) rectangular white plastic tanks (flow-through system) with a water holding capacity of one thousand litres (1,000L) each in a complete randomized design (CRD). Each tank was washed thoroughly with salt, filled to just a little over 1/3 (350 litre) capacity and stocked with twenty (20) fingerlings of *C. gariepinus* with mean initial weight (10.0±0.00g). The *C. gariepinus* fingerlings were fed the experimental diet at 3% body weight two (2) times daily between the hours of 8:00 - 9:00am and 4:00 - 5:00pm for a period of twelve (12) weeks. The quantity of feed was adjusted accordingly after every two (2) weeks of sampling for growth performance and survival rate (mean body weight and mortality). Water temperature, pH, dissolved oxygen, and ammonia were measured at the beginning of the experiment after which they were measured weekly throughout the period of the experiment. Water temperature, dissolved oxygen and pH were measured using Horiba U-22 XD multi-parameter water quality checker while ammonia was measured using freshwater aquaculture test kit (Model AQ-2, Code 3633-03, Lamotte U. S. A). Data on cost-benefit analysis were collected.

Cost-benefit Analysis of *Clarias gariepinus* Fingerlings Fed Different Levels of Maca Root Powder as Phyto-additive

The cost-benefit analysis of the *Clarias gariepinus* fingerlings fed different levels of Maca root powder as Phyto-additive was calculated using the method of Ali (2022) as follows:

Investment cost analysis (ICA) = Cost of Feed (₦) + Cost of Fingerlings Stocked (₦)

Profit Index (PI) = Net Profit (₦)/cost of feeding (₦)

Incidence of Cost (₦) = Cost of feeding / weight of fish produce (g)

Benefit Cost Ratio (BCR) = Net Profit (₦)/Investment cost Analysis

Economic analysis was based on the following:

- i. A major assumption was that all other operating costs for fish production remained the same for all the dietary treatments. Thus, cost of feed was the only economic criterion (expenditure) considered in this study.
- ii. Cost of feed was based on the prevailing market prices of the feed ingredients as at the time of purchase (that is time of commencement of the experiment).
- iii. Value of fish produced (cost of fish cropped) depends on the selling price of fish per kilogram (₦2500/kg) in the markets around Gombe as at the end of the experiment.
- iv. Cost of producing Maca root powder additive diet depended on the cost of obtaining the Maca root powder.
- v. Total weights of fish produced were obtained from the total weight of fish recovered at the end of the feeding trial.

Data Analysis

The data collected was analysed using the cost-benefit analysis models as described by Ali (2022).

Results

The cost-benefit analysis of *C. gariepinus* fingerlings fed different levels of Maca root powder as Phyto-additive is in Table 1. *C. gariepinus* fingerlings fed diet TM₃ (Maca root powder at 0.75g/100g) had the highest mean final body weight value (200g), while fingerlings fed the control diet TM₀ (Maca root powder at 0.0g/100g) had the least mean final body weight value (185g). There was an increase in the mean cost of feed from the value (₦207) from fingerlings fed control diet (TM₀) to the value (₦220) in fingerlings fed diet TM₄ (Maca root powder at 1.0g/100g). The least mean cost of feed value was recorded from the fingerlings fed control diet TM₀ (₦207). The investment cost analysis value was higher in fingerlings fed diet TM₄ (₦250) followed by those from the fingerlings fed diets TM₃ (₦248), TM₂ (₦244) and TM₁ (₦240), while the least value was recorded from fingerlings fed control diet (TM₀) (₦237).

Table 1: The Cost - Benefit Analysis of *Clarias gariepinus* Fingerlings Fed Different Levels of Maca Root Powder as Phyto - Additive

Parameters	TM ₀	TM ₁	TM ₂	TM ₃	TM ₄
Mean final weight (g/fish)	180	187	193	200	195
Mean cost of feed/g (₦)	207	210	214	218	220
Cost of fingerlings (₦/fish)	30	30	30	30	30
Investment cost analysis (₦)	237	240	244	248	250
Cost of fish/kg (₦)	2500	2500	2500	2500	2500
Mean yield cost/fish (₦)	462.5	467.5	482.5	500	487.5
Mean net profit (₦)	225.5	227.5	238.5	252	237.5
Profit index	1.09	1.08	1.11	1.15	1.08
Incidence of cost (₦)	1.11	1.12	1.10	1.09	1.12
Benefit cost ratio (BCR)	0.96	0.95	0.98	1.06	0.95

Keys: TM₀ - Maca root powder (0.0g/100g). TM₁ - Maca root powder (0.25g/100g), TM₂ - Maca root powder (0.5g/100g), TM₃ - Maca root powder (0.75g/100g), TM₄ - Maca root powder (1.0g/100g).

The highest mean net profit value (₦252) was recorded from the fingerlings fed diet TM₃, while the least value (₦225.5) was recorded from the fingerlings fed the control diet (TM₀). The highest profit index value (1.15) was recorded from the fingerlings fed diet TM₃, while the least value (1.08) was recorded from both the fingerlings fed diets TM₁ and TM₄. The least

(better) incidence of cost value (₦1.09) was recorded from the fingerlings fed diet TM₃, while the highest (poor) value (₦1.12) was recorded from both the fingerlings fed diet TM₁ and diet TM₄. The result also indicated that fingerlings fed diet TM₃ had the highest benefit cost ratio value (1.06), while fingerlings fed diets TM₁ and diet TM₄ have the least value (0.95).

Discussion

The mean final body weight values, 185g - 200g recorded from this study were comparable with the values 189g - 202g reported by Ali (2022) for *C. gariepinus* fingerlings fed β -glucan additive diet. This indicated that the experimental diets were well utilized by the *C. gariepinus* fingerlings. Nwanna *et al.* (2014) reported that the dietary treatment with the highest weight gain also produced fish with the highest value for *C. gariepinus* fed plantain peel-based diets. The mean net profit values, ₦225.5 - ₦252 obtained from this study were lower than the values, ₦204.10 - ₦350 reported by Babale (2016) for *C. gariepinus* fingerlings fed various inclusion levels of processed water melon (*Citrullus lanatus*) seed cake diets. The profit index values, 1.08 - 1.15 recorded from this study were lower than the values, 1.65 - 1.68 reported by Elezuo (2016) for *C. gariepinus* juveniles fed mechanically extracted almond (*Terminalia catappa*) kernel meal. The incidence of cost values, 1.09 - 1.12 recorded from this study were higher than the values, ₦0.61 - ₦0.84 reported by Ali (2022) for *C. gariepinus* fingerlings fed dietary β -glucan additive diet, but lower than the values, ₦9.49 - ₦15.53 reported by Mohammed *et al.* (2020) for masculinised *Oreochromis niloticus* using camel testicles-based diet. The variations in these values could be attributed to the variance in the cost of feed ingredients and other input cost used in the various studies. The low incidence of cost values observed from this study shows that using Maca root powder as Phyto-additive produced the most cost effective diets. The benefit cost ratio values, 0.95 - 1.06 recorded from this study were comparable with the values, 0.72 - 1.27 reported by Sogbesan and Bashir (2018) and lower than the values, 1.41 - 1.55 reported by Umar *et al.* (2019) for *O. niloticus* fed camel testicles-based diet. Babale (2016) and Wambua (2018) reported that when the benefit cost ratio value is greater than or equal to one indicates profitability, but less than one shows lack of viability or unprofitability of the venture. Therefore, since the ratio value of *C. gariepinus* fingerlings fed diet TM₃ (Maca root powder at 0.75g/100g feed inclusion level) was the only ratio greater than one, it indicated that feeding *C. gariepinus* fingerlings with Maca root powder as Phyto-additive at 0.75g/100g feed inclusion level is economically more efficient and beneficial; the stream of benefits exceeds the costs incurred over the study period.

Conclusion and Recommendation

Feeding *C. gariepinus* fingerlings with Maca root powder as Phyto-additive, specifically at 0.75g/100g feed inclusion level produced fish with the highest mean net profit and profit index values of ₦252 and 1.15, respectively. The least (better) incidence of cost value (₦1.09) and the highest cost-benefit ratio value (1.06) were also observed in fish fed diet TM₃. Maca root powder should be included into the diets of *C. gariepinus* fingerlings at 0.75g/100g feed inclusion level in order to minimize the cost of production while using locally available ingredients especially to catfish farmers.

DESIGN AND DEVELOPMENT OF NOVEL APPROACH FOR FILE SHARING FOR SECURITY USING BLOCKCHAIN TECHNOLOGY

Deepak Bansal¹

¹Indian Institute of Finance, Greater Noida, India

ORCID number: 0009-0001-0777-3300

Abstract: File sharing is a fundamental aspect of data management, and it is essential for collaboration, communication, and data exchange. However, file sharing systems are susceptible to security threats and data breaches, which can compromise data confidentiality, integrity, and availability. A novel approach for file sharing using blockchain technology is required which would ensure secure and decentralized file sharing. The novel approach for file sharing would use a hybrid consensus mechanism, combining proof-of-work and proof-of-stake algorithms, to ensure network security and prevent malicious attacks.

It would use multi-layer encryption to enhance file security, where files are encrypted at the user level and the blockchain level. The proposed Novel approach would also incorporate smart contract technology for file access control, where users can set permissions for file sharing and access. The proposed approach was developed and tested using a prototype implementation, and the results show that the system is secure, efficient, and scalable. The system also provides a high level of data privacy and security, making it suitable for various applications, including healthcare, finance, and government.

Keywords: Novel Approach, File sharing; Security; Blockchain, Technology

1. Introduction

In recent years, file sharing has become an integral part of our daily lives. It is widely used for sharing information, collaborating with colleagues, and transferring data between individuals and organizations. However, traditional file sharing systems are vulnerable to various security threats, such as data breaches, hacking, and unauthorized access. Blockchain technology offers a decentralized, secure, and tamper-proof environment for file sharing, making it an ideal solution to address the security challenges of traditional file sharing systems. This literature review provides an overview of the current state of research on blockchain-based file sharing systems, their architecture, security mechanisms, and performance.

Evolution of Blockchain Technology

Blockchain technology was initially introduced as the underlying technology for the Bitcoin cryptocurrency. However, since its inception, blockchain technology has evolved significantly, and its application has expanded beyond cryptocurrency to various domains, including file sharing. Blockchain technology is a decentralized, distributed, and tamper-proof database that provides secure and transparent data sharing. The main characteristics of blockchain technology are its decentralized architecture, immutability, and consensus mechanism.

Architecture of Blockchain-Based File Sharing Systems

Blockchain-based file sharing systems are designed to provide a secure and decentralized environment for file sharing. These systems are composed of three main components: the blockchain network, the user interface, and the file storage. The blockchain network is

responsible for maintaining the integrity of the system, ensuring the validity of transactions, and preventing malicious attacks. The user interface provides users with an easy-to-use interface for uploading, downloading, and sharing files. The file storage component is responsible for storing and retrieving files securely.

Security Mechanisms of Blockchain-Based File Sharing Systems

Security is a crucial aspect of blockchain-based file sharing systems. The security mechanisms of these systems are designed to provide data confidentiality, integrity, and availability. The security mechanisms of blockchain-based file sharing systems include network consensus, encryption, and smart contracts.

Network Consensus

Network consensus is the mechanism used by blockchain-based file sharing systems to validate transactions and ensure the integrity of the system. The most commonly used consensus algorithms are proof-of-work (PoW) and proof-of-stake (PoS). PoW is used in the Bitcoin network, and it requires miners to solve a cryptographic puzzle to validate transactions. PoS is used in the Ethereum network, and it requires validators to hold a certain amount of cryptocurrency to validate transactions.

Encryption

Encryption is the process of encoding data to ensure its confidentiality and integrity. Blockchain-based file sharing systems use encryption to protect files from unauthorized access and tampering. The most commonly used encryption algorithms in blockchain-based file sharing systems are AES and RSA. AES is a symmetric encryption algorithm that uses a shared secret key to encrypt and decrypt data. RSA is an asymmetric encryption algorithm that uses a public key to encrypt data and a private key to decrypt data.

Smart Contracts

Smart contracts are self-executing contracts that are stored on the blockchain network. Smart contracts are used in blockchain-based file sharing systems to implement access control and automate file sharing. Smart contracts can be programmed to execute certain actions when specific conditions are met.

Performance of Block-chain-Based File Sharing Systems

The performance of block-chain-based file sharing systems is affected by various factors, including transaction throughput, latency, and network scalability. The transaction throughput is the number of transactions that can be processed per second. Latency is the time taken to process a transaction. Network scalability is the ability of the network to handle an increasing number of users and transactions. The performance of block-chain-based file sharing systems can be improved by using efficient consensus algorithms, optimized file storage, and network optimizations.

II. LITERATURE REVIEW

Muqaddas Naz et al (2019)

Data sharing within a research community is crucial to maximizing the information gained from earlier work. Current data sharing solutions rely on a reliable third party. Such systems lack trust, transparency, security, and immutability because of the presence of TTP. This article proposes a blockchain-based secure data sharing platform to address these problems by using the advantages of the interplanetary file system. Owner uploads a meta data to an IPFS server, which is subsequently separated into n secret shares. By performing the access roles that the

owner has defined in the smart contract, the suggested system ensures security and access control. Prior to submitting the desired amount as the fee of digital material, users must first confirm their identities using RSA signatures. The user is invited to provide feedback of the data after its successful delivery. The Watson analyzer is used to verify these reviews and weed out any bogus ones. Customers that submit truthful evaluations are rewarded. The greatest number of reviews is therefore submitted for each file. The Ethereum blockchain, decentralized storage, encryption, and an incentive system are all incorporated in this scenario. Solidity-written smart contracts are deployed on a local Ethereum test network to carry out the suggested scenario. Transparency, security, access control, owner authenticity, and data quality are all achieved by the suggested plan. In order to accurately assess the cost of implementing the implemented scenario in a real-world setting, a study of gas consumption and actual cost necessary in terms of USD is conducted in the simulation results. Also, the computational time for several encryption algorithms is plotted to show how well the implemented system, shamir secret sharing, performs.

Kanayo Kizito Uka et al (2020)

The purpose of this study is to examine how a tertiary institution uses blockchain architecture to share and manage files. It is anticipated that this technology will enable an online system that could offer a decentralized architecture for multiple file transfers and sharing among participants, design a system that can ensure data integrity and security of files using IBM Blockchain technology, and provide a system that can support multiple users and multiple transactions at once. The research was spurred on by the security issues with the current system, which include slow file transfer and sharing, giving a single user a lot of power and responsibility in a centralized system, high risk of attack and file loss, sluggish file access/retrieval speeds, and a finite number of concurrent users. The programming language used was HTML, CSS, Java, and Node Js, and the methodology utilized was Object Oriented Analysis Design Process together with IBM Blockchain Technology and Unified Modeling Language (UML). A decentralized cloud-based file sharing and management system that supports multiple-shared, replicated, and permissioned network transactions was the end outcome of the design process.

Tuan-Vinh Le¹ and Chien-Lung Hsu (2021)

With the advent of its first and most popular use, bitcoin, blockchain technology has gained recognition as a cryptocurrency platform. Blockchain helps to transform centralized transaction ledgers with low trust, maintained by a single entity, into decentralized ones with high trust, held by several verifying nodes. Blockchain has enormous potential for use in a variety of sectors outside of bitcoin because of its decentralized structure and security resilience. Blockchain transforms the conventional method of centrally storing data into a decentralized, trustless one. Blockchain's inherent security features open the door for large-scale applications that are coupled with cutting-edge technologies like mobile networks, edge computing, or IoT. They present and describe several blockchain security aspects in order to do this. There is a detailed taxonomy of blockchain applications in numerous areas. Also, they examine the security and performance issues with blockchains in their work and provide a number of remedies. The security features of blockchain should be acknowledged more, Work on safe energy and healthcare applications powered by blockchain should continue, and the environmental sustainability of blockchain has to be further addressed.

Md. Nasim Uddin et al (2021)

Humans rely on centralized systems with trusted third-party administration for sharing material, yet these platforms lack security, trust, immutability, and clarity. By combining the Interplanetary File System and Public Key Infrastructure technologies, this study has suggested a file-sharing environment based on Blockchain, which offers benefits for resolving these issues. The predetermined access-control list is enforced using a modified version of the IPFS software, and the smart contract is used to limit access rights.

In order to secure file sharing, an application framework on a secure decentralized file sharing system is described. It works with IPFS and PKI. Every file transaction is encrypted and decrypted using PKI using public and private keys, and identities are authenticated with Metamask to cryptographically identify account ownership in the Blockchain system. On the private Ethereum network, a gas consumption-based outcome analysis is conducted, and it achieves transparency, securely regulated access, and quality of data suggesting higher effectiveness of this job.

Pabba Sumanth et al (2021)

The market share of cloud computing, a relatively recent technical development, has consistently grown over the previous three years. In this article, we'll outline a novel approach to sharing files safely via the cloud that combines block chain for secure transactions and file viewing. The use of file-shredding software is widespread. Some individuals use these applications to earn money by selling the files that represent their work.

Chegg, Scribd, and other platforms offering a platform for academics, researchers, and independent contractors to publish their work are well known. Yet we need to be members in order to access these programs. Even if a user want access to the files, the application—not the author—must be paid a charge. We thus developed a novel strategy called as "Cloud-based file sharing utilizing Blockchain" in order to do away with middlemen. Users may simply transfer files utilizing the cloud-based file sharing approach by using our program.

As a consequence, this technology makes it easy and efficient for users to store and distribute information over cloud networks. We often lose control of our data when we upload it to the cloud, which increases the security threats to the integrity and confidentiality of our data. Hence, to prevent this, they will talk about an encrypted secure file sharing system for the cloud in this paper. In this study, we presented a novel file-sharing technique. A block chain is used to transfer the transaction from one user to another in order to see the files.

Yogesh M Gajmal and R. Udayakumar (2021)

A key element in improving data security in the cloud storage system is access control. The research community has a significant difficulty due to privacy data leaks and key abuse in the present data sharing and access control methods. As a result, the cloud storage system develops an efficient technique known as Blockchain-based access control and data sharing approach to improve data security. Single-point failure in the cloud system is successfully resolved by the suggested Blockchain-based access control and data sharing strategy. By boosting throughput and decreasing cost, it offers greater advantages. With their ID and password, the Data User submits a registration request to the Data Owner, who then processes it and verifies the Data User's identity. With the encrypted master key, the data owner's information is encoded and added to the transactional blockchain. The Data Owner completes the data encryption

procedure, and the Interplanetary File System receives the encrypted files. The Data owner creates the ciphertext information and is included in the transactional blockchain based on the location of the encrypted file and the encrypted key. The suggested blockchain-based solution to data exchange and access control performed better according to the metrics, with a reduced response time of 25 seconds and a higher percentage of authentic user detection of 95%.

Xiaowei Wang (2022)

The expansion of numerous data sharing technologies has increasingly filtered into many industries thanks to the ongoing development of technology. In order to realize the value of the data, data exchange and security are essential. Yet, the original data sharing arrangement makes it difficult to keep an eye out for signs of electronic data usage. Another issue is the data suppliers' unwillingness to release their data. This study suggests a data sharing paradigm based on blockchain technology, providing safe access to data in order to overcome the security and control challenges of conventional centralized data sharing and administration. The model's usefulness and security are also evaluated in this research. The findings demonstrate the high degree of viability, security, controllability, and efficiency of the blockchain-based data sharing paradigm proposed in this study.

Ajitesh Kumar et al (2022)

The blockchain used in this study organizes network users into groups and maintains a single copy of the blockchain for each group. In contrast to the current bitcoin network and the lightweight blockchain architecture, the study offers a revolutionary blockchain method for safe healthcare sector data management. This mechanism lowers communicational and computing overhead costs. The article also explores how to use the suggested design to deal with the identified risks. The experimental findings demonstrate that the proposed design decreases network bandwidth by ten times and speeds up ledger updates by 63% as the number of nodes increases.

III. SUMMARY

File sharing is a fundamental aspect of data management, and it is essential for collaboration, communication, and data exchange. However, file sharing systems are susceptible to security threats and data breaches, which can compromise data confidentiality, integrity, and availability. A novel approach for file sharing using blockchain technology is required which would ensure secure and decentralized file sharing. The novel approach for file sharing would use a hybrid consensus mechanism, combining proof-of-work and proof-of-stake algorithms, to ensure network security and prevent malicious attacks.

It would use multi-layer encryption to enhance file security, where files are encrypted at the user level and the blockchain level. The proposed Novel approach would also incorporate smart contract technology for file access control, where users can set permissions for file sharing and access. The proposed approach was developed and tested using a prototype implementation, and the results show that the system is secure, efficient, and scalable. The system also provides a high level of data privacy and security, making it suitable for various applications, including healthcare, finance, and government.

HACİM AKUSTİĞİ TASARIMINDA KONUŞMA SESİ VE MÜZİKAL SES DEĞERLENDİRİLMESİ EVALUATION OF SPEECH SOUND AND MUSICAL SOUND IN VOLUME ACOUSTIC DESIGN

Derin Hilal BİLMEZ

Doktora Öğrencisi, Mimar Sinan Güzel Sanatlar Üniversitesi, Lisansüstü Eğitim Enstitüsü, Yapı Fiziği ve Malzemesi Programı, İstanbul / Türkiye
ORC-ID: 0000-0002-3318-1982

ÖZET

Hacim akustiği, işitsel işlevli mekanlarda sesin yayılımı ve dinleyiciye iletim sürecini kapsamaktadır. Mimari ve müzikal akustik, psikoakustik ile yakından ilişkilidir. Elektronik ses sistemlerinin kullanıldığı kapalı mekanlarda elektro-akustik ile de ilişkilenebilir. Günümüz hacim akustiği yöntemi yaklaşık 100 yıl önce W. C. Sabine'nin çalışmaları ile başlamıştır. O tarihten itibaren çeşitli akustik uzmanlar tarafından geliştirilmiştir. Yeni parametreler eklenmiş, farklı ses türlerine göre farklı bakış açıları geliştirilmiştir. Tasarım süreci: "Salonun kullanım işlevinin belirlenmesi, mimari proje taslağının tamamlanması, iç mekân tasarımında kullanılacak malzemelerin belirlenmesi, hacim akustiği hesaplarının yapılması ve parametre sonuçlarının incelenmesi, sonuçların uygun sınır değerler arasında olup olmadığının kontrol edilmesi ve tasarım sürecinin tamamlanması" şeklinde özetlenebilmektedir.

Konuşma sesi ve müzikal sesler, aynı frekans aralığı ve aynı ses düzeyinde olabilmelerine karşın yapısal açıdan farklıdır. Sesler yansıma süresi, zenginlik, tını, çeşitlilik gibi özellikler bakımından birbirinden ayrılmaktadır. Aradaki farklılık sadece ses kaynağı açısından değil, dinleyici açısından da önemlidir. Bu nedenle hacim akustiği parametrelerinde konuşma sesi ile müzikal ses için farklı sınır değerleri kabul edilir. Sınırlar çoğunlukla zaman ile ilgilidir. Ayrıca çeşitli pasif akustik tasarım kriterleri de farklılık gösterir. Bu çalışma, günümüzde kullanılan hacim akustiği tasarım yöntemi açısından konuşma sesi ve müzikal sesin farklılıklarını incelemek amacıyla yapılmıştır. Her iki ses türü de doğal ses olarak kabul edilerek irdelenmiştir.

Anahtar Kelimeler: Ses Kaynağı, Doğal Ses, Oditoryum Akustiği, Mimari Akustik

ABSTRACT

Volume acoustics covers the process of sound propagation and transmission to the listener in auditory functional spaces. Architectural and musical acoustics are closely related to psychoacoustics. It is also related to electro-acoustics in closed spaces where electronic sound systems are used. Today's volume acoustics method started about 100 years ago with the work of W. C. Sabine. Since then it has been developed by various acoustic experts. New parameters have been added and different perspectives have been developed for different types of sound. The design process can be summarized as: "Determining the function of the hall, completing the architectural project draft, determining the materials to be used in interior design, making volume acoustics calculations and examining the parameter results, checking whether the results are within the appropriate limit values and completing the design process".

Speech and musical sounds are structurally different, although they can be in the same frequency range and at the same volume level. Sounds differ from each other in terms of

characteristics such as reflection time, richness, timbre and variety. The difference is important not only for the sound source but also for the listener. For this reason, different boundary values are accepted for speech sound and musical sound in volume acoustics parameters. The limits are mostly related to time. Various passive acoustic design criteria also differ. This study was conducted to examine the differences between speech sound and musical sound in terms of the volume acoustic design method used today. Both types of sound are considered as natural sounds and analyzed.

Keywords: Sound Source, Natural Sound, Auditorium Acoustics, Architectural Acoustics

1 GİRİŞ

Oditoryumlar görsel, işitsel veya hem görsel hem işitsel performansların sergilendiği kapalı mekanlardır. Performansın sergilenmesi için uygun fiziksel koşullara ihtiyaç duyulur (Çelebi Şeker 2021). Performansın kalitesi, performansın iç kurgusu kadar sergilenme şekline ve dinleyiciye (veya izleyiciye) ulaşma şekline de bağlıdır (Rose et al. 2021; Vathagavorakul, Gonjo, and Homma 2024). Bu nedenle performans sergi alanlarının fiziksel çevre konforu açısından doğru planlanması oldukça önemlidir.

Genellikle müzikal işlevli salonlar (konser vs) ile konuşma işlevli (konferans vs) salonların akustik açıdan ele alınış biçimi farklıdır (Kurtay, Harputlugil, and Yaman 2021). Sesin türü, ses karşı yapılacak tasarımı, malzeme seçimini, hesap sınırlarını belirler (Demirel, İlisulu, and Görkem 2018). Bu açıdan bakıldığında sahne aydınlatması tasarımı ile akustik hesap yöntemi benzerlik gösterir. Sahne aydınlatması tasarımında da sahnedeki performansın uygun bir renk seçimi, kurgu, yerleşim planı belirlenir (Vathagavorakul et al. 2024). Akustik tasarımda da ses türüne özgü bir yerleşim ve kurgu belirlenir (Çelebi Şeker 2021; Demirel and İlisulu 2013).

Günümüzde birçok amaca hizmet etmek ve yer tasarrufu sağlamak amacıyla çok amaçlı salonlar (oditoryumlar) inşa edilmektedir. Çok amaçlı salonların tasarımı sırasında hem müzikal hem konuşma sesine uygun alanlar yaratılmalıdır (Şimşek 2021). Yer tasarrufu sağlamasına karşın bu tarz mekanların akustiğini yönetmek oldukça zordur. Hareketli veya yer değiştiren sistemler kullanılabilir (orkestra çukuru, sahne kulesi gibi). Bu sistemlerin yönetilmesi ve oluşturulması için kaynak türleri hakkında bilgi sahibi olunmalıdır. Bu çalışmanın amacı, ses türlerinin hacim akustiği hesabında ne gibi farklılıklara neden olduğunu göstermektir. Özellikle mekan tasarımcılarının ses kaynağı değişikliğinin mekan incelemesi hakkında nasıl bir fark yarattığını bilmesi çok önemlidir. Çalışmanın değerlendirme ve sonuç bölümlerinde; hesap farklılıkları detaylandırılmış ve çok amaçlı salonlar gibi farklı kaynakların kullanıldığı mekanlarda akustik tasarım yapılırken izlenen yol hakkında bilgi verilmiştir.

1.1 Konuşma Sesi

Düşük – orta frekans aralığında düzensiz seslerden oluşur. Tek seslidir. Tekli ses kaynağıdır. Konuşmanın anlaşılabilirliği yansıma süresine, frekanslar arası farklara, ses düzeyine bağlıdır (Demirel and İlisulu 2013; Kurtay et al. 2021). Her harf için farklı bir frekans değeri vardır (Halvaşi 2015). Harfler heceye heceler kelimelere dönüştükçe seslerin birbiri ardına bağlanması sayesinde kişiye özel bir söyleyiş tarzı oluşur (Ak, Sarıkaş, and Yayla 2017). Konuşma sesi kısa sürelerde (sık sık) değişimlerden oluşan bir ses türüdür (Hamzadayı, Bayat, and Gölpınar 2018). Konuşmadaki vurgular, ses hızı, ses yüksekliği, ses değişimleri (Girgin 2010) dinleyiciye konuşmacının ifade ettiği gibi ulaşmalıdır (Une and Miyazaki 2020). Yetişkin bireylerde konuşma sesinin algısı farklılık gösterir. Konuşma sesindeki nüanslar vurgular dinleyicide farklı izlenimler oluşmasına neden olur (Honda, Clayards, and Baum 2024; Kapnoula et al. 2017).

Konuşmanın anlaşılabilirliğin sağlanabilmesi için kısa yansıma süresine ihtiyaç duyulur (Demirel and İlisulu 2013). Konferans salonu, kongre salonu gibi alanlarda sahnede konuşan tek kaynak (omni kaynak) varlığında dinleyicilerin işittikleri seslerin üst üste binmemesi ve tane tane işitilebilir olması gereklidir (Çelebi Şeker 2021).

1.2 Müzikal Ses

Müzikal kompozisyonlar; sanatçının kültürel, biyolojik ve devam eden içsel durumunun ses ile ifadesidir (Burdurlu 2024). Müzikal kompozisyonlar tını, ritim, enstrüman çeşitliliği yaratılır. Her kompozisyon türü ile oluşan ayrı müzik türü vardır. Her müzik türü için ayrı yansıma süresine ihtiyaç duyulur. Yansıma süresi uygun değilse müzik sesi birbirine karışarak anlamsız bir hale gelebilir (Sharma 2020).

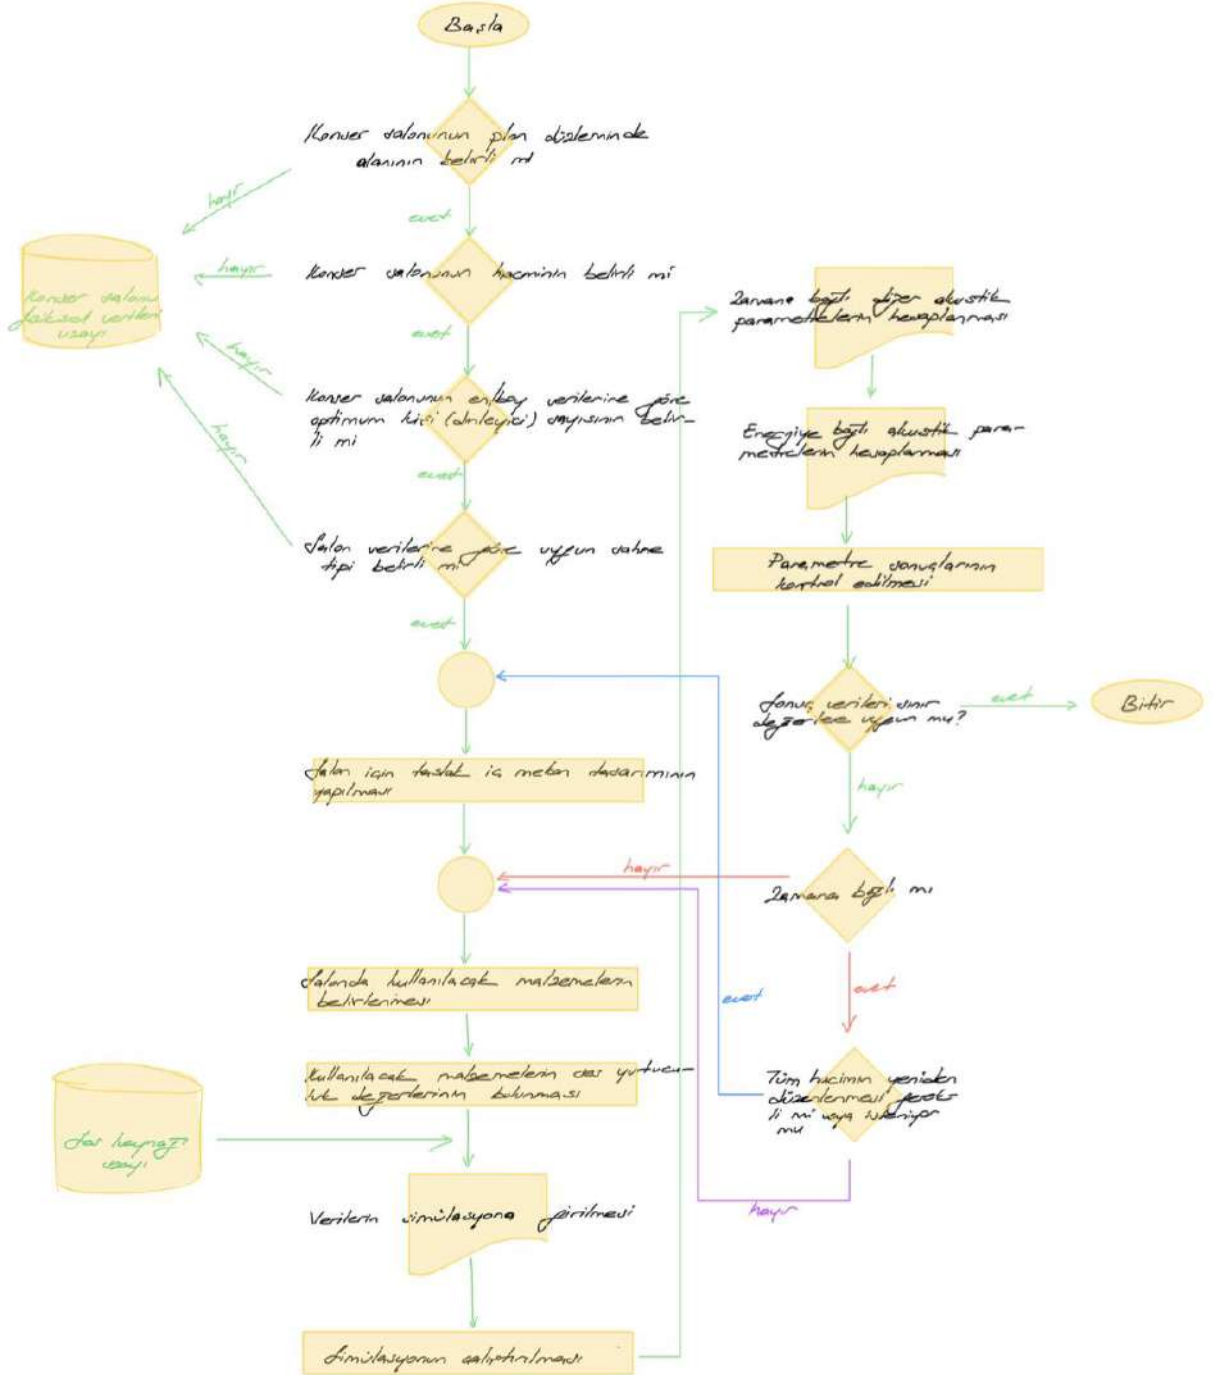

Geniş bir frekans yelpazesine sahiptir. Düzenli ve armonik seslerden oluşur. Tek veya çok sesli olabilir. Belli bir ritim kapsamında ilerler. Tekli veya çoklu ses kaynağı kullanılabilir. Çok sesli müzikler, karmaşık ses kategorisinde incelenir. Birden çok tını ve frekansın aynı anda belli ritimlerle ilerletilmesi ile oluşur (Diri 2008). Müzikal sesin temel kaynakları enstrüman ve insan sesidir. Müzik enstrümanlarının tarihi neredeyse insanlık tarihi kadar eskiye dayanır (Bestle, Eberhard, and Hanss 2017). Ses üretmeye yarayan ve üretilen sesin kontrol edilebildiği aletlerdir. Tekli veya çoklu kompozisyon yaratmak için kullanılırlar (Bestle, Hanss, and Eberhard 2014). İnsan sesi de bir enstrümandır. Bazı kaynaklara göre dünyadaki en eski enstrüman insan sesidir (Duran, Türkel Oter, and Ok 2021).

Müzikal seslerdeki geniş frekans aralığı ve fazla tını sayısı nedeniyle bu ses türleri için nicel veriler yetersiz kalabilmektedir. Nitel verileri değerlendirmek içinse çeşitli yöntemler araştırılmaktadır. Çünkü her ne kadar mimari akustikte insan sesi de enstrüman sesi de müzikal ses kaynağı kabul edilse de insan sesi için farklı, müzikal enstrümanlar için insan beyninin farklı bölgelerinin çalıştığı ileri sürülmektedir (Rigoulot, Pell, and Armony 2015). Bu nedenle müzikal seslerdeki nitel değişimlerin fark edilmesi için müzik sinyallerinde değişimler yaşanması gereklidir. Bu değişimlerin ifade edilebilmesi için çeşitli matematiksel yaklaşımlar oluşturulmaktadır ("Hopf" gibi) (Gazor and Shoghi 2021) ayrıca manyetik rezonans görüntüleme (fMRI) çalışmaları ile müziğe karşı gösterilen tepki incelenebilmektedir (Lai et al. 2012; Rigoulot et al. 2015; Tierney et al. 2013). Bunlar sayesinde ileride müzikal sesler için daha nitelikli akustik hesaplar yapılması amaçlanmaktadır.

2 HACİM AKUSTİĞİ TASARIMI

Hacim akustiği tasarımının amacı: sesin kaynaktan dinleyiciye en az değişikliğe uğrayarak iletilmesidir (Long 2006). Multidisipliner bir çalışma alanıdır (Lokki 2016). Ancak özellikle kapalı mekanlarda bunu sağlamak oldukça zordur. Ses, karşılaştığı her yüzeyde biraz yutulur, yansır ve birazı ise hareket ya da ısı enerjisine dönüşür (Dahil, Başpınar, and Karabulut 2011; Kaya and Dalgar 2017; Şimşek 2020). Bu açıdan bakıldığında kapalı bir mekânda akustik planlama yapmak oldukça fazla değişkene sahip bir tasarım sürecidir (Tıraş and Yüğrük Akdağ 2023). Salon planı, salon kapasitesi, en/boy oranı, dinleyici konumu, malzeme türü, yüzeyi, malzeme konumu, açısı, montaj detayı gibi birçok fiziksel etken tasarım sürecinde önemlidir (Öztürk, Kazanasmaz, and İlal 2022; Vergili and Öziş 2022).

Hacim akustiği hesapları çoğunlukla simülasyonlar ile yapılır ve salonun mevcut durumu ile kontrol etmek için (arka plan gürültüsü, yansıma süresi gibi değerler için) mekan içi ölçümler yapılmaktadır (Demirel and İlisulu 2013; Öziş 2014). Salonun akustik performansı için yayınık alan ses kuramından ziyade yönlü ses kaynağına ihtiyaç vardır sürecidir (Tıraş and Yüğrük Akdağ 2023). Ölçüm ile yapılan çalışmalarda yönlülük hesabı yapılması gerekir. Mekana göre (kaynak, mekan işlevi vs) kaç yön üzerinden hesap yapılacağı belirlenir (Kurtay et al. 2021).

Şekil 1: Hacim Akustiği Tasarım Yöntemi

Aşağıdaki bölümde açıklanan hacim akustiği parametreleri, sesin bir hacimdeki yayılımını kontrol edebilmek amacıyla geliştirilmiştir (Egan 2007; Kurtay et al. 2021). Bu bölümde doğal ses kaynağı ile hacim akustiği tasarım sürecinin kapalı bir mekânda nasıl ilerlediği gösterilmiştir. Tasarım süreci: “Salonun kullanım işlevinin belirlenmesi, mimari proje taslağının tamamlanması, iç mekân tasarımında kullanılacak malzemelerin belirlenmesi, hacim akustiği hesaplarının yapılması ve parametre sonuçlarının incelenmesi, sonuçların uygun sınır değerler arasında olup olmadığının kontrol edilmesi ve tasarım sürecinin tamamlanması” şeklinde özetlenebilmektedir. Şekil 1’de tasarım sürecini gösteren akış modeli yer almaktadır. Elektro-akustik desteklerden (aktif akustik sistemler) faydalandığında süreç daha farklı bir şekilde ilerlemektedir. Aktif akustik

sistemler yankı kontrolü, ses düzeyi arttırımı veya ses güçlendirme amacıyla kullanılır (Marco De Bortoli et al. 2024). Kaynakların konumu, kullanım amaçları ve sayıları akustik tasarım sürecinde değişiklikler oluşturmaktadır.

Aşağıdaki bölümde günümüzde genel kabul görmüş hacim akustiği parametreleri açıklanmıştır. Bu parametrelerin yetersiz olduğuna dair genel bir görüş söz konusudur (Lokki and Lladó 2023). Bu nedenle günümüze kadar yapılan çalışmalarda uzmanlar çeşitli parametreler eklemiştir (Vural 2009). Örneğin ITDG (ilk ulaşım gecikmesi) bunlardan biridir. L. Beranek tarafından ortaya atılmış ve oditoryumun “yakınlığını, samimiyetini” ifade etmek amacıyla kullanılmıştır (Beranek 2004). Günümüzde genel bir kabul görmemiş olduğu için özel durumlar ve araştırmalar haricinde hesaba katılmamaktadır (Çelebi Şeker 2014).

2.1 Hacim Akustiği Tasarım Parametreleri

Hacim akustiği parametreleri değişkenlerine göre zamana bağlı ve enerjiye bağlı olmak üzere ikiye ayrılmaktadır.

Zamana bağlı parametreler: yansıma süresi (RT, T60), erken düşme süresi (EDT), bas oranı (BR), merkez zaman (Ts). Zamana bağlı parametreler, ses kaynağı ve salon ile ilgilidir katılmamaktadır (Çelebi Şeker 2014). Sesin kaynaktan çıktıktan sonra mekânda ne kadar süre işitildiği ile alakalıdır. Zamana bağlı parametrelerde en temel olan yansıma süresidir. Birçok hesap bu parametre üzerinden yapılmaktadır. Sesin kaynaktan çıktıktan sonra 60 dB azalması için gerekli olan süreyi tanımlamaktadır (Cavanaugh and Wilkes 1999).

Enerjiye bağlı parametreler: ses gücü kuvveti (G), netlik (C), belirlilik (D), erken yanal yansıma (LF), geç yanal yansıma (LG). Enerjiye bağlı parametreler, ses kaynağının gücüne ve zamana bağlı parametrelere bağlıdır (Beranek 2004). Bu nedenle zamana bağlı parametrelerin ardından hesaplanmaktadır. Kapalı mekanlarda kullanılan ses kaynakları (Hem doğal hem yapay) gelen olarak nokta kaynak kabul edilmektedir (Barron 2009; Everest 2001). Nokta kaynaklarda ses dalgası küresel bir alanda yayılım gösterir. Hesaplar, mesafeye bağlı olarak ses dalgasının küre yüzeyi üzerindeki basıncına göre yapılır (Kırbaş et al. 2013). Ses bir yüzeyden yansıma yaptığında ise yansıma şekline göre oluşan alanın hesabı yapılır. Oluşan yüzey parabolik, hiperbolik, eliptik veya daha karmaşık organik biçimler olabilir. Bu nedenle enerjiye bağlı akustik parametrelerin formülleri integral ile hesaplanır (Beranek 2004).

3 DEĞERLENDİRME VE SONUÇ

Konuşma sesi ve müzikal sesler, aynı frekans aralığı ve aynı ses düzeyinde olabilmelerine karşın yapısal açıdan farklıdır. Sesler yansıma süresi, zenginlik, tını, çeşitlilik gibi özellikler bakımından birbirinden ayrılmaktadır. Bu bölümde konuşma sesi ve müzikal sesler arasındaki farkların değerlendirmesi hacim akustiği parametreleri ve pasif tasarım değişkenleri üzerinden yapılmıştır. Tablo 1’de farklı değişkenler özelinde konuşma sesine ve müzikal sese göre olması gereken veya en ideal değerler (durumlar) verilmiştir.

Tablo 1: Hacim Akustiği Parametreleri Özelinde Konuşma Sesi ve Müzikal Ses

Parametre	Konuşma Sesi	Müzikal Ses
RT	Kısa yansıma süresi	Müzik türüne göre değişen yansıma süresi
EDT	Hesaba katılmaz	Hesaba katılır
BR	Hesaba katılmaz	Hesaba katılır
Ts	İlk 50 ms’de hesaplanır	İlk 80 ms’de hesaplanır
G	Düşük olması tercih edilir	Yüksek olması tercih edilir
C	İlk 50 ms’de hesaplanır	İlk 80 ms’de hesaplanır
D	İlk 50 ms’de hesaplanır	İlk 80 ms’de hesaplanır
LF	İlk 50 ms’de hesaplanır	İlk 80 ms’de hesaplanır
LG	Hesaba katılmaz	Hesaba katılır

Tablo 2’de farklı değişkenler özelinde konuşma sesine ve müzikal sese göre oditoryumlarda olması gereken veya en ideal değerler (durumlar) verilmiştir. Sahne alanı ve tüm salon alanı olarak iki şekilde incelenmiştir.

Tablo 2: Farklı Değişkenler Özelinde Konuşma Sesi ve Müzikal Ses

	Değişkenler	Konuşma Sesi	Müzikal Ses
Sahne	Sahne Planı	Çerçeve Sahne (Burris-Meyer and Cole 1964)	Çerçeve Sahne, Arena Sahne (Diri, Bilmez, and Arpacioğlu 2023)
	Sahne içi ilk yansıma süresinde dikkate alınan sınır değeri	80ms (Türkmen 2013)	50 ms (Barron 1995; Skalevik and Brekke Strand Akustik 2006; Türkmen 2013)
	Ön sahne genişliği	14 m (Luykx, Vercammen, and Metkemeijer 2008; Türkmen 2013)	Sınır Değeri Bulunmamaktadır
	Sahne döşemesi altı hava boşluğu miktarı	2 – 5 cm (M. Mehta, Johnson, and Rocafort 1999)	2 – 20 cm (M Mehta, Johnson, and Rocafort 1999; Türkmen 2013)
	Önerilen sahne kulesi yüksekliği	Ön sahne yüksekliğinin 2,5 – 3 katı kadar (Türkmen 2013)	Önerilmemektedir
	Sahne önü ile sahne arkası duvarı arasındaki uzaklık	x<8,5m (Marshall Day Acoustics Pty Ltd 2003; Türkmen 2013)	
Salon	Salon Planı	Yelpaze Plan Tipi (Diri et al. 2023)	Dikdörtgen Plan Tipi (Diri et al. 2023)
	Ses kaynağı plan düzleminde seyirciye kaç derecelik açı ile düzenlemeli	140° (Marshall Day Acoustics Pty Ltd 2003; Türkmen 2013)	Açı sınırı bulunmamaktadır
	Dinleyici başı ideal hacim	3 – 6 m³ (Deutches Institut für Normung n.d.; Türkmen 2013)	5 – 8 m³ (Deutches Institut für Normung n.d.; Türkmen 2013)
	Yansıma Süresi	0,2 – 1,2 s (Acoustical Solutions Inc. 2009; Ahnert and Tennhardt 2008; Dolby Laboratories Inc 1993)	0,8 – 2, 8 s (Acoustical Solutions Inc. 2009; Türkmen 2013)
	Balkon derinlik/yükseklik oranı veya balkon altından bakış açısı	Maksimum 40° (Barron 1995, 2009; Beranek 1962; Türkmen 2013)	D/H<1 (Barron 2009; Beranek 1962; Türkmen 2013)
	Dinleyici Seyirci Arası Mesafe	x<20 m (Demirel and İlisulu 2013; M. Mehta et al. 1999)	x<30 m (Barron 2009; Türkmen 2013)
	Dinleyici Alanı Oturma Eğimi	x>8° (Demirel and İlisulu 2013; Long 2006)	

Şekil 2’de Tablo 2’de verilen değerlerin bir oditoryumda kesit ve plan düzleminde gösterimleri verilmiştir. Şekil 2’deki salon dinleti veya konuşma işlevi için doğrudan yönlendirilmemiştir. Sahne üzerinde müzikal sese uygun bir kanopi yerleştirilmiştir. Kanopinin üstünde ise konuşma sesinde kullanıma uygun sahne kulesi yerleştirilmiştir. (Kanopi ile sahne kulesi birlikte kullanıma uygun değildir.)

Şekil 2: Tablo 2'deki Değişkenlerin Bir Konser Salonu (Oditoryum) Örneğinde Gösterimi

3.1 Sonuç

Tablo 1'deki değerlere göre konuşma sesi ve müzikal seslerin akustik hesabında kullanılan parametreler aynı olsa da dikkate alınan sınır değerlerin birbirinden farklı olduğu görülmektedir. Yani, ilk yansıma süresinin önemi açısından iki ses türü arasında ciddi fark vardır. Bu fark, sahne ve salondaki malzeme seçimlerinden, plan seçimine kadar birçok konuda mimari tasarımı etkilemektedir.

Tablo 2'de ise mimari tasarım açısından konuşma sesi ve müzikal ses için sınırlar ve değerler verilmiştir. Değerler incelendiğinde ses türünün mimari proje üzerindeki etkisi net biçimde görülmektedir. Konuşma sesi için salonda ihtiyaç duyulan alan daha küçük ve dar iken müzikal seslerde bu alan daha geniş ve uzundur. Sahne alanı da konuşma sesi için çerçeve tip iken müzikal seslerde arena tip dahi kullanılabilir. Konuşma sesinde sahne kulesi kullanılabilirken müzikal seslerde sahne üstü yansıtıcılar istenmektedir. Sydney Opera Binası'ndaki gibi arena sahne üstünde dahi yansıtıcı paneller kullanılabilir.

Her iki tabloya da bakıldığında her iki ses türü için istenenlerin salon ve sahne özelinde benzerlik gösterdiği görülebilmekte olup iki ses türü için de kullanılacak olan bir salonda akustik tasarım yapılırken birbiriyle neredeyse zıtlaşan özelliklerin aynı mekanda yer alması gereklidir. Bunu çözmek için hareketli tasarım sistemleri kullanılabilir. Bu sistemler seyirci alanını veya sahne alanını genişletip daraltabilir, sahne yüksekliğini değiştirebilir.

Bu çalışma, iki farklı ses türüne karşı bir akustik tasarımcının hesap yaparken izlediği yol hakkında özet bir bilgi vermek amacıyla yapılmıştır. Aynı metotlar kullanılsa bile akustik tasarımcı açısından ses türü, bir mekânın ele alınış biçimi açısından bambaşka planlanmasına yol açar. Mimarların ve iç mimarların bu konuda bilgilendirilmesi ve tasarımın başlangıç aşamasından itibaren akustik uzmanlar ile çalışılması bu nedenle oldukça önemlidir.

ORCID: 0009-0004-2962-0112

Abstracts:

Halal lifestyle has become a widespread global trend among millennials and Gen Z in Indonesia, not only as religious compliance but also as a modern identity that supports health, sustainability and ethical consumption. This study analyzes the differences in motivations and preferences between millennials who are more focused on health and religious compliance, and Gen Z who tend to be pragmatic with an emphasis on environmental sustainability and animal welfare. Data was obtained through an online survey of 400 respondents as well as in-depth interviews with 20 participants. The results show that social media is the main channel for both generations to obtain information about halal products, with Gen Z also utilizing digital platforms to express their identity. The recommendation for the industry is to customize marketing strategies based on the characteristics of each generation, with a focus on health for millennials and sustainability for Gen Z. This study highlights the potential growth of the halal economy in Indonesia through the implementation of an adaptive and inclusive halal lifestyle, which aligns with contemporary issues and strengthens Indonesia's identity in the global arena.

Keywords:

Halal lifestyle, global trends, millennial generation, Gen Z, Indonesia, sustainability, halal economy, social media.

1. Introduction

In recent decades, the halal lifestyle has experienced significant development, not only as a religious demand but also as a global trend adopted by the wider community, including by millennials and Gen Z. (Astuti, 2020). Halal is now not just a consumption requirement, but has covered various aspects of life such as tourism, lifestyle, beauty, fashion, and the financial sector. (Bella-Salsa et al., 2023). This lifestyle is even accepted by non-Muslims who see it as a symbol of health, safety, and ethical consumption. (Adinugraha et al., 2019).. Indonesia, as the country with the largest Muslim population in the world (Humaida et al., 2020)Indonesia, as a country with the world's largest Muslim population (Humaida et al., 2020), plays an important role in adopting and developing the concept of halal, especially among the younger generation who consider halal lifestyle as part of their modern identity (Sissoko & Prasetyawati, 2022)..

Millennials and Gen Z, born between 1981-1996 and 1997-2012 respectively, are the main targets in the development of halal trends due to their characteristics that are adaptive to technology, globalization, and openness to new values. (Indarta et al., 2021). These two generations grew up in the digital era, where information and foreign cultures can be accessed quickly through social media and other digital platforms. (Ramadani, 2023). This has also influenced their perception of the halal lifestyle, which is now seen as a contemporary trend that can sit alongside other modern lifestyles (Langi, 2023).

Millennials and Gen Z are referred to as a generation that is often mentioned as having a high awareness of sustainability and ethics in consumption, millennials and Gen Z in Indonesia show great interest in products that reflect these values, including halal products. (Laili & Canggih,

2021a).. Research shows that the consumption of halal products for the younger generation is not only a matter of religious compliance, but also a form of preference for safe, healthy and ethical products. (Saifuddin, 2021). According to a report from State of the Global Islamic Economy Report (2023) the halal market is expected to continue to grow to reach USD 3.2 trillion by 2024, indicating high demand for halal products and services around the world, including Indonesia.

While millennials and Gen Z share a common interest in the halal lifestyle, there are fundamental differences in the motivations and ways in which millennials and Gen Z in Indonesia adopt this concept. Millennials tend to view the halal lifestyle as a more traditional and personalized form of compliance, while Gen Z sees it more in terms of aesthetics and self-expression through social media. (Laili & Canggih, 2021b).. The Gen Z generation, which is called more pragmatic, also tends to associate the halal lifestyle with global issues such as environmental sustainability and animal welfare. (Arif Nursetyo et al., 2024)..

In Indonesia, the application of halal lifestyle among millennials and Gen Z has a considerable influence on the development of the national halal economy. (Sariati, 2019). As Indonesia's population is dominated by young age groups, increased awareness of the halal lifestyle among millennials and Gen Z is believed to be able to drive the halal industry sector more broadly. This phenomenon creates opportunities for the government and businesses to encourage halal products that suit the needs and values desired by these two generations. (Nusran et al., 2021). This study aims to further examine how the halal lifestyle is adopted by millennials and Gen Z in Indonesia, and explore the differences in motivations, perceptions, and preferences between the two. This study is expected to make a significant contribution to academics, practitioners, and policy makers in developing effective strategies in promoting halal lifestyle as an inclusive, modern, and global trend.

2. Research Methods

This study uses a quantitative and qualitative approach (mixed methods), which allows for the collection of both numerical and narrative data to provide a comprehensive picture of halal lifestyle trends among millennials and Gen Z in Indonesia. Quantitative data was collected through an online survey targeting 400 millennial and Gen Z respondents in major cities in Indonesia. The sample was selected using a stratified random sampling technique to ensure a balanced representation of each generational group. The questionnaire included questions about motivations, consumption habits, and views on halal products as well as sources of information that influence halal lifestyles.

In-depth interviews were conducted with 20 purposively selected participants, namely respondents who showed a high interest in the halal lifestyle. Quantitative data analysis was conducted using descriptive statistical methods, while qualitative data was analyzed using thematic analysis to identify key themes related to motivations, preferences, and social factors that influence halal lifestyles among millennials and Gen Z. This mixed methods approach is expected to provide an in-depth understanding of the factors driving halal lifestyles as a global trend in Indonesia. This mixed methods approach is expected to provide an in-depth understanding of the factors driving the halal lifestyle as a global trend in Indonesia. (Creswell, 2018).

3. RESULT AND DISCUSSION

From a survey conducted on 400 millennial and Gen Z respondents in various major cities in Indonesia, there are several key findings related to preferences and motivations in adopting a halal lifestyle. The survey results show that 70% of respondents stated that they actively choose halal products in their daily lives. Of this number, 55% came from millennials, while 45% from Gen Z. Millennials show a greater tendency to purchase halal products due to health and religious compliance factors. (Agus Mahardiyanto et al., 2022) While Gen Z shows high interest

in halal products that are also environmentally friendly and support animal welfare (Agus Mahardiyanto et al., 2022). (Ismoyo et al., 2020)..

80% of the respondents use social media as their primary source of information on halal products and lifestyle, with 60% of them being Gen Z. This finding shows that the role of digitalization, especially social media, is crucial in disseminating information and influencing the adoption of halal lifestyle among the younger generation. (Aji et al., 2023).

Figure 1. Density visualization of Halal lifestyle based on authors

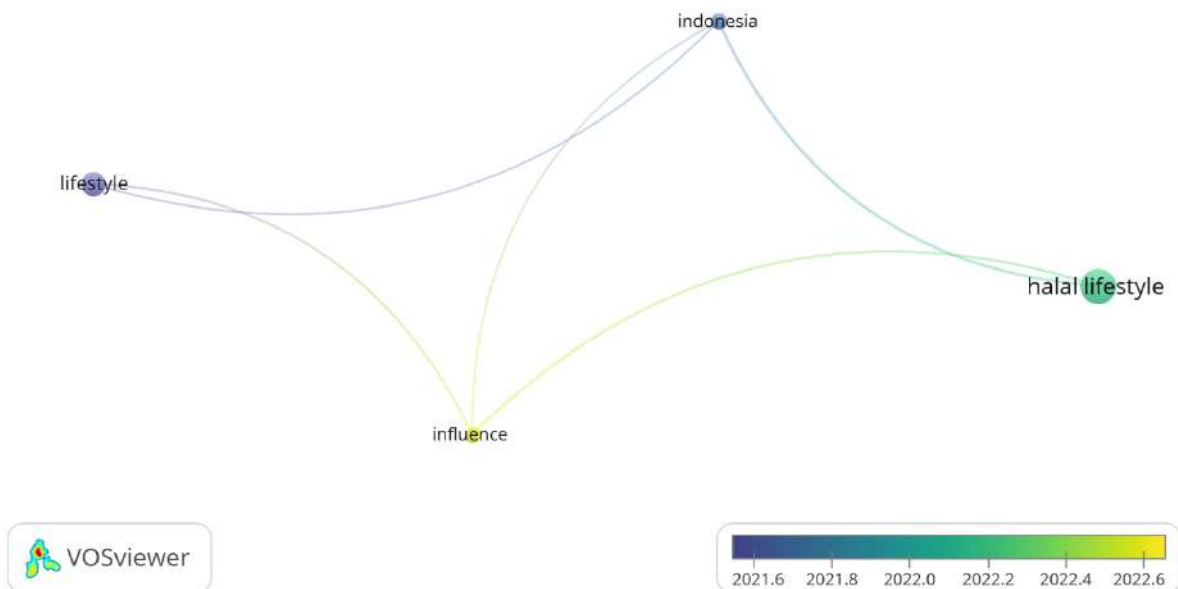

Figure 2. overlay visualization of halal lifestyle, lifestyle, and influence based on title

There are significant differences in the motivations and factors influencing halal lifestyle adoption between millennials and Gen Z. For millennials, halal lifestyle is mainly associated with health aspects and adherence to religious values. This research confirms previous findings from Prasetiyawan & Nurhidayah (2020) which stated that millennials tend to see halal products as a symbol of health and safety.

Gen Z shows a broader view of the halal lifestyle. They not only consider the religious aspect, but also the ethical, sustainability and social impact of the products they consume. This is in accordance with the study of Mansyuroh (2020) which found that Gen Z is more pragmatic in choosing halal products and often associates them with the value of sustainability and social responsibility. This factor makes Gen Z more critical in choosing halal products that not only meet halal criteria but also have a positive impact on the environment and society.

Digitalization is an important factor in the adoption of halal lifestyle in both generations. Social media and digital platforms provide quick access to information on halal products and communities of like-minded individuals. For Gen Z, social media is not only a source of information, but also a means to express themselves and reinforce their identity as a generation that cares about responsible consumption. Meanwhile, for millennials, social media serves as a channel to find practical information related to halal products and share consumption experiences with relevant communities. (Revia & Irwansyah, 2020).

This difference in motivation and perspective has an impact on the way the halal industry targets the two generations. Products aimed at millennials tend to emphasize the health and safety benefits of products, while products aimed at Gen Z emphasize sustainability and ethical aspects. This strategy is in line with the findings of Sitti Aisya & Fahreza Najmi (2023) which show that young consumers tend to be more selective and critical of the products they consume, especially in terms of social and environmental impacts.

The results of this study show that halal lifestyle among young Indonesians is not only influenced by religious values but also by the development of global trends that prioritize sustainability, health, and ethics. This confirms that halal lifestyle has evolved into a lifestyle that is relevant and aligned with contemporary issues such as climate change, ethical consumption, and health.

The implication for the Halal Industry in Indonesia is that with the differences in characteristics between millennials and Gen Z, the halal industry in Indonesia needs to consider marketing approaches that are suitable for each generation. For example, in marketing halal products to millennials, companies can emphasize health and safety aspects, such as being free from harmful chemicals and hygienically produced. (Nurhidayana & Juniarti, 2021). Meanwhile, products for Gen Z should emphasize sustainability aspects, such as environmentally friendly packaging, production practices that support animal welfare, and transparency in the production process. (Wiratih et al., 2021).

This research shows the importance of collaboration between the halal industry and the government to strengthen education on the benefits of a halal lifestyle. The government can organize campaigns involving influencers from millennials and Gen Z to raise awareness of the importance of halal lifestyle, not only as part of religious compliance, but also as a way to support sustainability and social responsibility.

The results of this study not only provide an in-depth understanding of the motivations and preferences of halal lifestyles among the younger generation, but also offer strategic recommendations for the industry and stakeholders to capitalize on the growing potential of the halal market in Indonesia. Halal lifestyles that are inclusive and adaptive to modern values can become one of the significant economic forces for Indonesia in the future. (Baehaqi, 2018).

4. Conclusion

This research shows that halal lifestyle has developed into a widely accepted global trend, especially among millennials and Gen Z in Indonesia. Both generations are adopting the halal lifestyle not only as a religious observance but also as part of a modern identity that reflects the values of health, sustainability and ethical consumption. Millennials tend to view halal lifestyle as a form of personal responsibility regarding health and safety, while Gen Z is more critical, seeing halal lifestyle as an opportunity to support environmental sustainability and animal welfare.

Digitalization plays an important role in the spread of halal lifestyles, with social media being the main source of information for both generations. For Gen Z, social media also serves as a means to express identity and spread awareness of responsible consumption. As for millennials, social media is more of a platform to share practical experiences related to halal products.

The implications of this study direct the halal industry to develop different marketing strategies for each generation. Products for millennials should emphasize health and safety aspects, while for Gen Z, sustainability and transparency in production are more important. In addition, collaboration between the halal industry and the government is also needed to strengthen halal lifestyle education among the younger generation through campaigns involving relevant influencers.

This research not only highlights the different motivations of millennials and Gen Z in adopting halal lifestyle but also shows that halal lifestyle has become an inclusive trend that contributes to the national halal economy. Halal lifestyle that is responsive to modern values has great potential to contribute to the growth of the halal economy in Indonesia as well as strengthen cultural and religious identity in the global arena.

FORMATION OF INTELLECTUALLY COMPETENT GENERATION IN THE EDUCATIONAL SYSTEM.

Dilafruz Ismoilova

Teacher of Chirchik State Pedagogical University, Uzbekistan

Muxlisa baxt

Student of Chirchik State Pedagogical University, Uzbekistan

Abstract

In their professional practice, the teacher considers each student as a whole individual, addressing certain contradictions and working towards the integration of systems. In this context, the teacher must possess a level of knowledge that enables them to understand and interpret the world. Furthermore, based on the knowledge and experiences they have acquired, the teacher continuously refines their actions and behavior, while also engaging in self-awareness and self-evaluation.

The pedagogical environment of the school exerts a significant influence on the development of newly appointed teachers. During this process, the teacher is expected to cultivate professional self-understanding, including awareness of their desires, aspirations, and perceptions, as well as the ability to mitigate potential negative consequences. Additionally, the teacher's competencies in resolving various situations among students, grounded in pedagogical expertise, are enhanced and further developed.

Key terms: Student community, community, community development, individual, social relationships, social relations, a well-rounded person, continuous education, behavior, upbringing, activity, family, family environment, educational tools, society, and so on.

The primary goal of the national model for education and personnel training is to develop an independent, critical thinker who is a free individual. The expansion of social relations necessitates the preparation of the rising generation for a highly complex relational process, ensuring their overall maturity. A psychologically, intellectually, and physiologically mature individual is capable of protecting themselves from life's contradictions, particularly from the influence of disruptive ideologies, unhealthy lifestyles, and engaging in illegal activities.

Furthermore, an individual's intellectual potential is a key factor in ensuring the social and economic development of society.

In the context of the ongoing formation of a democratic and legal society in the Republic of Uzbekistan, the current conditions allow the younger generation to form and express independent, free thought, providing them with the ability to respond to events and developments in a personally meaningful way. The development of a personal perspective on the changes occurring in social existence is one of the critical indicators of individual activity. Moreover, an individual who possesses independent thinking is able to freely express and manifest their potential and abilities.

The primary goal of the educational reforms being successfully implemented is to raise an independent, free-thinking, well-rounded individual and a qualified specialist. The issue of forming a complete individual has always been placed on the social agenda as an important task throughout history. Specifically, in Zoroastrianism, the foundation of perfection is considered to be composed of good thoughts, good words, and good deeds (actions). In Islamic teachings, the main criterion for maturity is knowledge and being knowledgeable.

In the works of Eastern thinkers, special attention is given to the portrayal of the ideal, complete individual. Specifically, Abu Nasr al-Farabi emphasizes that the formation of a complete individual and the creation of a virtuous community (a mature society) are two interconnected and integral directions of education. According to the scholar, a virtuous society can only be established through the efforts and actions of a complete individual. For this reason, he argues that the leader of a country must embody the highest human virtues. In his treatise *On the Intellect*, Abu Nasr al-Farabi outlines twelve virtues that should be manifested in the character of a leader. In our view, these virtues should be reflected in the character of every modern individual, as they guarantee a balanced life and contribute to achieving success in organizing specific professional activities.

Abu Rayhan al-Biruni also considers knowledge to be the foundation of perfection and emphasizes that ignorance is the root cause of all vices. According to the scholar, the key qualities that must manifest in the character of a complete individual include morality, integrity, fairness, entrepreneurship, self-restraint, humility, conscience, prudence, as well as being just and virtuous.

Abu Ali ibn Sina also highlights knowledge as the primary criterion for achieving perfection. He asserts that the just nature of a knowledgeable person further ensures their advancement, and he emphasizes that justice is a key indicator of spiritual satisfaction (mental tranquility).

In the works of Alisher Navoi, the issue of the complete individual occupies a central position, and he attempts to embody his ideal of the perfect person through the characters in his works. According to the thinker's views, the complete individual should possess the following qualities: intelligence, morality, knowledge, creativity, talent, wisdom, humility, humaneness, generosity, patience, justice, compassion, health, physical strength, courage, and bravery.

Abdulla Avloni is the East with his views on raising a perfect person while enriching the thoughts of his thinkers, he believes that the qualities of patriotism and discipline should also be manifested in the form of a perfect human being. As a passionate advocate for the nation's future, the scholar regards the development of the national language as a key factor in ensuring the spiritual progress of society.

The role and importance of the community in raising a perfect human personality. The development of the student is a significant process. It is well known that throughout a person's life, both their physical and psychological aspects undergo change; however, during the periods of schooling and adolescence, development is particularly intense. During these years, the student experiences growth and transformation, both physically and psychologically, that contributes to their maturity as an individual. The education provided during this time has a targeted effect, helping the student to mature as a member of society and to find their appropriate place within the complex system of social relations.

To correctly identify and assess a person's virtues, it is necessary to observe them within different social contexts and situations. Only then can the individual's social behavior, moral character, and human virtues be fully realized. Therefore, in order to effectively address the task of developing the individual, it is crucial to understand the factors that influence their behavior, the nature of these factors, and the individual's characteristics.

The following factors affect the student's maturity, mentality, and character formation: biological factor, social factor and upbringing. Central Asian thinkers such as Al-Farabi and Abu Ali Ibn Sina also paid attention to the importance of factors affecting human upbringing. Al-Farabi emphasized the importance of education in human development and said: In order to become a "decent person," a person has two opportunities: the opportunity to receive

education and upbringing. Theoretical perfection is achieved through education, while upbringing is a way to hide moral values and practical activity in communication with people, he says. Abu Ali Ibn Sina helped to clarify the issues of ethics and moral education on the basis of philosophical pedagogy. In particular, he focused on the role of parents in family education, saying:

Upon the birth of a child, the first step is for the father to give the child a good name, and then to raise them with proper education and upbringing. The idea that a family will be happy if it utilizes good methods of education is an important concept to consider.

The development and maturity of a student's personality are influenced by factors such as heredity, environment, and upbringing. When we speak of the influence of heredity on the development of a student's personality, it refers to the biological traits that are passed down from parents, which are expressed as similar characteristics in the child. Each student inherits certain biological traits from their parents (such as body structure, hair color, eye color, skin tone, height, and others) when they are born. These traits are part of the physical characteristics of the individual. In addition to these, the characteristics of the central nervous system's functioning are also inherited, which are considered physiological traits.

The Influence of the Environment on Human Perfection. One of the factors influencing human perfection is the environment. The environment refers to the set of external events and circumstances that affect a person in an unplanned or spontaneous manner. This includes the natural environment, the social environment, and the family environment. Together with these, the family conditions also have a significant influence. This is because a student first encounters their parents and relatives, observing and learning from them.

The social environment plays a crucial role in the development of a student's personality, as it shapes the individual's behaviors and perceptions. In this environment, the relationships of work and the social laws that regulate them have a profound effect. As a result of these relationships, the student gains experience and knowledge essential for life. The impact of the social environment on human perfection varies across different historical periods and has different effects on various social groups.

SEMENTO-OSSEÖZ DİSPLAZİ: VAKA RAPORU VE LİTERATÜR DERLEMESİ CEMENTO-OSSEOUS DYSPLASIA: A CASE REPORT AND LITERATURE REVIEW

Dilber ÇELİK

Ağız, Diş ve Çene Cerrahisi Uzmanı, Sağlık Bilimleri Üniversitesi Gülhane Diş Hekimliği
Fakültesi Ağız, Diş ve Çene Cerrahisi Anabilim Dalı

ÖZET

AMAÇ: Semento-osseöz displazi (SOD), çenelerin diş taşıyan bölgelerinde gözlenen neoplastik olmayan fibroosseöz lezyonlardır ve trabeküler kemik yapısının fibröz doku ve sementoid doku ile yer değiştirmesiyle karakterizedir.

Bu olgu sunumunda amaç, SOD'un klinik, radyolojik ve histopatolojik bulgularını değerlendirip tedavi planı oluşturmaktır. Bu amaçla kapsamlı literatür taraması yapılmıştır. Kadınlarda erkeklerden daha sık görülür ve posterior mandibulada meydana gelir. Tutulum yeri ve derecesine bağlı olarak, histomorfolojileri aynı olmasına rağmen periapikal, fokal ve florid alt tiplere ayrılır. Lezyon, çoğunlukla asemptomatiktir ve spesifik bir tedavi olmaksızın kendi kendini sınırlar. Lezyonun hipovaskülaritesi sekonder enfeksiyon ve osteomyelit riskini artırır. **OLGU:** Bu olguda, mandibular molar bölgedeki SOD vakası rapor edilmiştir. Kırk yaşında kadın hasta yaklaşık bir yıldır devam eden sağ mandibular molar bölgede ağrı şikâyeti ile kliniğimize başvurmuştur.

Sağ mandibular 1. molar dişin çekim boşluğunda vestibül kemiğin palpasyonda sert, hareketsiz, ağrılı ve mukoza renginin eritemli olduğu tespit edilmiştir. Lezyon lokal anestezi altında kürete edildi ve histopatolojik inceleme sonucu benign SOD ile uyumlu olarak rapor edildi. Hastanın yaklaşık 1 yıllık takibi sonucunda klinik ve radyografik olarak nüks gözlenmedi. Bu lezyonun etiolojisinin ve patogenezinin henüz bilinmemesine rağmen, periodontal ligamentten köken aldığı düşünülmektedir.

SONUÇ: SOD genellikle asemptomatiktir ancak hastaların klinik ve radyolojik muayeneleri dikkatli yapılmalıdır. Hastanın bulgularına göre, düzenli kontrol ile takip ya da cerrahi tedavi sonrası düzenli takipler yapılmalıdır. Olası komplikasyonlar göz önüne alındığında, gereksiz cerrahi müdahalelerden kaçınmak için lezyonlar ve ayırıcı tanılar hakkında kapsamlı bilgi sahibi olmak şarttır. Fibro-osseöz lezyonların tanı ve takibi için CBCT'nin uygun bir görüntüleme yöntemi olduğu unutulmamalıdır.

Anahtar Kelimeler: Semento-osseöz displazi, fibro-osseöz lezyon, mandibula, ayırıcı tanı.

ABSTRACT

BACKGROUND: Cemento-osseous dysplasia(COD) is a non-neoplastic fibroosseous lesion that occurs in the tooth-bearing areas of the jaws and is characterized by replacement of the trabecular bone structure with fibrous tissue. The aim of this case report is to evaluate the clinical, radiologic and histopathologic findings of COD and to formulate a treatment plan. For this purpose, a comprehensive literature review was performed. Generally it occurs posterior mandible with greater frequency in women than men. Although their histomorphology is the same, they are subdivided into periapical, focal and florid subtypes depending on the site and degree of involvement. The lesion is usually asymptomatic and self-limiting without specific treatment. Hypovascularity of the lesion increases the risk of secondary infection and osteomyelitis.

CASE:In this case, we report a case of COD in the mandibular molar region. A 40-year-old woman presented to our clinic with a complaint of painful, swelling in her right mandibular first molar that had been persisting for one year. The lesion in the vestibular bone in the extraction cavity of the right mandibular 1st molar was found to be hard, immobile, painful and normal mucosa color on palpation. The lesion was curetted under local anaesthesia and histopathological examination was reported as benign COD. No recurrence was observed after approximately 1 year of follow-up. Although the aetiology and pathogenesis of this lesion is not yet known, it is thought to originate histogenetically from the periodontal ligament.

Conclusions:COD is usually asymptomatic, but clinical and radiologic examinations should be performed carefully. According to the findings of the patient, regular follow-up with regular follow-up or regular follow-up after surgical treatment should be performed. Given the potential complications, a thorough knowledge of the lesions and their differential diagnosis is essential to avoid unnecessary surgical interventions. It should not be forgotten that CBCT is an appropriate imaging method for the diagnosis and follow-up of fibro-osseous lesions.

Keywords: Cemento-osseous dysplasia, fibroosseous lesion, mandible, differential diagnosis.

GİRİŞ

Semento-osseöz displazi (SOD), çenenin benign fibro-osseöz lezyonlarından [1]. Lezyonun konumuna bağlı olarak periapikal, fokal veya florid olarak sınıflandırılabilir. Alveolar kemikte ve mandibular kanalın üzerinde konumlanır. Komşu dişler vitaldir ve periodontal ligamentten kaynaklanır.

SOD lezyonlarına klinik ve radyolojik değerlendirme sonrasında biyopsi gereksinimi olmaksızın tanı konulabilmektedir. Lezyonun radyografik özellikleri tanıda büyük rol oynamaktadır. Artan densisite ve kalsifikasyon lezyonun maturasyonu hakkında bilgi vermektedir.

Radyografik incelemede lezyon erken evrede radyolüsent görünür, ancak olgunlaştıkça, miks bir radyolüseni görünümü kazanır ve ilerleyen evrede radyolüsent bir hale ile çevrili radyopak görünüm alır [2].

SOD tanısı konulan hastalarda cerrahi müdahaleye gerek duyulmaksızın rutin dental muayeneler ile takip önerilmektedir.

VAKA

40 yaşında bayan hasta mandibulada sağ posterior diş bölgesinde ağrı şikayetiyle Sağlık Bilimleri Üniversitesi Diş Hekimliği Fakültesi Ağız, Diş ve Çene Cerrahisi Anabilim Dalı'na başvurdu. Hastanın sistemik olarak bir şikayeti yoktu. Ekstraoral muayenede herhangi bir patolojiye rastlanmadı. İntraoral muayenede iyi bir oral hijyen ile birlikte dil, dudak, yanak mukozasını normaldi. Ağızda bulunmayan 46 numaralı diş boşluğunda dişeti mukozasının eritemli ve palpasyonda ağrılı olduğu tespit edildi.

Hastadan alınan panoramik radyografide mandibular sağ birinci molar dişin kökünün olması beklenen alanda alveolar kemikte sklerotik sınırlı radyolüsen hale ile çevrili radyopak görüntü veren lezyon tespit edildi (Şekil 1). Mandibular kemikte trabekülasyon kaybı yoktu. Alınan tomografide koronal ve sagittal kesitlerde çekilmiş olan mandibular sağ birinci molar diş bölgesinde yaklaşık 11x11x7,5 mm çapında radyopak sınırları düzensiz lezyon izlendi. Vestibül ya da lingual kortikal kemikte ekspansiyon görülmedi (Şekil 2). Lezyonun mandibular sinir ile ilişkisi yoktu. Komşu dişlere yapılan vitalite testinde pozitif cevap alındı. Mandibular sinir ve diğer anatomik yapılar korunarak lezyonun tamamı cerrahi olarak çıkarıldı, etrafındaki trabekülasyonunda hafif bozulmuş olan kemik kürete edildi.

Yapılan histopatolojik inceleme sonucunda kesitlerde, geniş, birbirleriyle anastomoslaşmış trabeküler kemik yapıları izlendi. Bazı alanlarda sferuler görünümde kemik üretimi tespit edildi. Histopatolojik inceleme sonucunda lezyona SOD tanısı konuldu. Lezyonun konumu ve odak sayısı dikkate alındığında ise fokal SOD tanısı konuldu. Hastadan 1 yılın sonunda alınan

kontrol radyografisinde bölgede yeni kemik oluşumu tespit edildi (Şekil 3). Lezyonun klinik veya radyografik nüks bulgusu olmadan yapılan tedaviye iyi bir yanıt verdiği görüldü.

TARTIŞMA

SOD, normal kemiğin kemik ve sementuma benzeyen fibröz ve kalsifiye doku ile sürekli olarak yer değiştirdiği non-neoplastik fibro-osseöz lezyonlar olup en sık Afrikalılarda, ardından Asyalılarda görülmektedir. SOD lezyonları kadınlarda daha sık görülmekte olup; vakaların çoğunluğu dördüncü ve beşinci dekatta izlenmektedir. Sıklıkla posterior mandibula yerleşimlidir.[2], [3]. Vakamızda da hastamız kadın olup lezyona 4.dekatta ve çekilmiş mandibular sağ birinci molar diş bölgesinde rastlanıldı.

SOD'nin etiyojisi hala tam olarak bilinmemektedir. Periodontal ligament elemanlarının veya hormonal disbalansların neden olabileceği öne sürülmüştür [4], [5].

Fokal SOD ve periapikal SOD lezyonları aynı klinik, radyolojik ve histolojik özellikleri taşırlar. Ayırıcı tanıda, periapikal SOD bilateraldir ve mandibular anterior dişlerin apekslerinde görülür. Florid SOD ise lezyonlar dişli alanlarda, bilateral, daha yaygın sklerotik yığınlar halinde görülür. Mandibulada maksillaya göre daha fazla izlenmekle beraber maksilla ve mandibulada aynı anda tutulum gözlenebilmektedir [6]. Fokal SOD, mandibular posterior bölgede unilateral ,genellikle tek bir dişle ilişkili olarak görülür. Vakamızda da lezyon literatürle uyumlu olarak mandibulada posterior diş bölgesinde ve unilateral olarak görüldüğünden fokal SOD olarak adlandırıldı [7], [8], [9].

Fokal SOD genellikle asemptomatiktir ve lezyon semptomatik olmadığı sürece biyopsi gerektirmez. Çene kemiğinde ekspansiyon veya ağrı gibi şikayetler olabilir. Şiddetli vakalarda, donuk ağrı, lokalize kemik ekspansiyonu veya drenaj gözlenebilir[10].Bizim vakamızda da ilgili bölgede hastada ağrı şikayeti olduğundan lezyon cerrahi olarak çıkarılarak patolojiye gönderildi.

Histopatolojik olarak fokal SOD olgun veya olgunlaşmamış kemiğin irregular trabekülasyonunu içeren, benign fibröz stroma ve sement benzeri materyalleden oluşan heterojen lezyonlardır [11]. Yapılan histolojik inceleme sonucunda lezyonun fokal SOD ile uyumlu olduğu görülmüştür. Fokal SOD ayırıcı tanısı yapılırken lezyonun gelişim aşaması da dikkate alınmalıdır.

Klinik ve radyografik özellikler SOD tanısı için patolojik doğrulama olmaksızın için yeterli olabilir. Tanı ve takipte CBCT yararlı olduğu bildirilmiştir [12].

Bununla birlikte, SOD'un erken dönemde teşhis edilen radyolüsent görüntü apeks ile ilişkili lezyonların ayırıcı tanısı periapikal granüloma veya periapikal kist ile benzerlik gösterebilir[13]. Ayırıcı tanıda SOD lezyonlarının gözleendiği dişlerin genellikle vital ve asemptomatik olduğu unutulmamalıdır. Sekonder enfeksiyon olmadığı takdirde ağrı veya klinik semptomla karşılaşmaz. Fokal SOD genellikle ekspansiyona neden olmazken ekspansiyon görülen nadir olgularda da yavaş büyüme eğilimi görülmektedir.

Ossifying fibrom, büyük boyutlara ulaşan ve çenelerin ekspansiyonuna, fasiyal asimetriye ve dişlerde yer değişimine neden olan radyolüsens bir lezyon olup gerçek bir neoplazmdır. Fokal SOD ise benign non-neoplastik bir lezyon olup genellikle çenelerde ekspansiyona ve dişlerde yer değişimine neden olmaz. Bizim vakamızda ekspansiyon ve dişlerde yer değişikliğine rastlamadık.

Lezyonun osteolitik aşamada iken kronik osteomyelit ile ayırıcı tanısı yapılmalıdır. Ara ve geç dönemde ise florid veya periapikal SOD'un, kronik skleroze osteomyelit, ossifying fibroma, cementifying fibroma, osteoblastoma ve ameloblastoma ile ayırıcı tanısı yapılmalıdır.

Sementifying fibrom ve sementoblastoma da semental orijinli gerçek bir neoplazmlardır. Sementoblastoma diş kökünden orijin alır ve radyografide diş kökleri ile yakın ilişkili ince radyolüsens hat ile çevrili radyoopak yığınlar olarak görülür[14]. Bizim vakamızda lezyon diş kökleriyle ilişkili değildi.

Odontomalar, mezenşimal ve epitelyal dental materyaller içeren en yaygın bening odontojenik tümörlerdir. Kompaund odontomalar sıklıkla anterior maksillayı etkileyen ve radyografide diş benzeri uniloküler, radyoopak alanlar içeren lezyonlardır. Kompleks odontomalar ise daha yavaş büyüyen, agresif olmayan ve mandibulada molar bölgede yaygın olarak gözlenen lezyonlardır.[15], [16].Bizim vakamızda da lezyon posterior mandibula bölgesinde konumlanmıştı ancak radyolojik olarak diş benzeri yapılar gözlenmedi.

Osteoid osteomalar, çoğunlukla uzun kemiklerde yaşamın ikinci ve üçüncü dekatında görülen bening lezyonlardır. Maksillofasiyal bölgede nadir görülürler. Osteoblastomalar ise çok sayıda osteoblast içeren kemik ve osteoid formasyonu ile karakterize yavaş büyüyen ve bening neoplazmlardır. Fokal SOD ise çene kemiklerinde sık rastlanılan daha geç yaşlarda karşımıza çıkan lezyonlardır. Bizim vakamızda da hastamız kliniğimize başvurduğunda 4.dekattaydı.

Fokal SOD vakalarının ara dönemde ameloblastoma ile radyografik olarak ayırıcı tanısı yapılmalıdır. Ancak ameloblastoma lokal olarak yıkıcı bir lezyon olup diş köklerinde rezorpsiyona yol açar. Fokal SOD ise kök rezorpsiyonuna yol açmaz ve asemptomatik olup genellikle tedavi gerektirmezler.

SONUÇ

Mevcut literatür bilgileri ışığında SOD lezyonlarına asemptomatikse ve enfeksiyon söz konusu değilse cerrahi olarak müdahale edilmemelidir. Olası komplikasyonlar göz önüne alındığında, gereksiz cerrahi müdahalelerden kaçınmak için lezyonlar ve ayırıcı tanıları hakkında kapsamlı bilgi sahibi olmak şarttır. Semento-osseöz lezyonların tanı ve takibi için CBCT'nin uygun bir görüntüleme yöntemi olduğu unutulmamalıdır.

Gelecekte, tüm bu tedavilerin etkinliğinin değerlendirilmesi ve uygun tedavi yönteminin belirlenebilmesi açısından uzun vadeli takipleri içeren çalışmalara gereksinim olduğunu düşünmekteyiz.

PARESTEZİ İLE BİRLİKTE GÖRÜLEN RADİKÜLER KİST: OLGU SUNUMU
RADICULAR CYST WITH PARESTHESIA: A CASE REPORT

Dilber ÇELİK

Ağız, Diş ve Çene Cerrahisi Uzmanı, Sağlık Bilimleri Üniversitesi Gülhane Diş Hekimliği
Fakültesi Ağız, Diş ve Çene Cerrahisi Anabilim Dalı

ÖZET

AMAÇ: Radiküler kistler, çenelerde en sık görülen odontojenik kistlerdir. Bütün kistlerin yaklaşık %70'ini oluştururlar. Radiküler kistler, sıklıkla maksilla anterior bölgede ve 30-50 yaş aralığında görülürler. Radiküler kistler, devital pulpalı sürmüş dişlerin apikalinde radyolüsent lezyonlardır. Yavaş büyüyen bu kistler, büyük boyutlara ulaşana ve enfekte olana kadar sıklıkla asemptomatiktir. Radiküler kistler, erkek bireylerde daha fazla görülür.

OLGU: Bu olguda, panoramik radyografi ve BT sonrası teşhis ettiğimiz mandibulada radiküler kisti vakası rapor edilmiştir. 49 yaşında kadın hasta, alt çenede ağrı ve parestezi ile kliniğimize başvurmuştur. Klinik muayenede mandibulanın sol tarafındaki bukkal mukozada renk değişikliği tespit edildi. Panoramik radyografide 35 numaralı dişle ilişkili sınırları düzgün, uniokuler radyolüsent bir lezyon görüldü. Üç boyutlu BT'de, mandibulanın sol tarafındaki bukkal korteksin rezorbe olduğu görüldü. Klinik muayene ve radyolojik inceleme sonrasında kist ön tanısı konuldu.

Kist, lokal anestezi altında enükle edilerek 35 numaralı diş çekildi. Histolojik inceleme sonrası radiküler kist tanısı konulmuştu. Histolojik kesitlerde non-keratinize birkaç sıralı odontojenik epitel ile döşeli kistik lezyon izlenmişti. Kist duvarında kronik inflamasyon mevcut olduğu görülmüştü. İşlemden sonra herhangi bir komplikasyon gözlenmedi. Postoperatif 1.hafta sonunda yapılan kontrolünde parestезinin azaldığı, postoperatif 1.ay yapılan kontrolde parestезinin tamamen ortadan kalktığı görüldü. 8.ay sonunda klinik ve radyolojik olarak yapılan takip sonucunda ilgili bölgede parastezinin geçtiği ve iyileşmenin normal olduğu tespit edilmişti.

SONUÇ: Odontojenik kistlerin ayırıcı teşhisinde; genellikle kistin yeri ve komşu dişlerle ilişkisi önemlidir. Ancak bazı durumlarda histopatolojik tetkik ile kesin tanı konulabilmektedir. Lezyonların kesin tanısı için rutin takip ve histopatolojik inceleme önemlidir. Bizim vakamızda da olduğu gibi, radikuler kistlerin diş komşuluğundaki anatomik yapılarda yarattığı basınç artışına bağlı parestezi ya da rezorpsiyon gözlenebilir. Radiküler kistlerin, klinik olarak agresif seyredebileceği unutulmamalıdır. Bu nedenle, cerrahi planlama ve takipler dikkatli yapılmalıdır.

Anahtar Kelimeler: parestezi, radiküler kist, odontojenik kist, enükleasyon.

ABSTRACT

OBJECTIVES: Radicular cysts are the most common odontogenic cysts in the jaws. They constitute approximately 70% of all cysts. Radicular cysts are frequently seen in the anterior region of the maxilla and in the age range of 30-50 years. Radicular cysts are radiolucent lesions apical to erupted teeth with devital pulp. These slow-growing cysts are often asymptomatic until they reach a large size and become infected. Radicular cysts are more common in male individuals. They usually appear in the third decade of life.

CASE: In this case, we report a radicular cyst of the mandible diagnosed after panoramic radiography and CT scan. A 49-year-old woman presented to our clinic with pain and paresthesia in the mandible. Clinical examination revealed discolouration of the buccal mucosa on the left side of the mandible. Panoramic radiography showed a unilocular radiolucent lesion

with smooth borders associated with tooth number 35. Three-dimensional CT scan showed resorbed buccal cortex on the left side of the mandible. After clinical examination and radiological examination, a preliminary diagnosis of cyst was made. The cyst was enucleated under local anaesthesia and tooth number 35 was extracted. After histological examination, radicular cyst (inflammatory odontogenic cyst) was diagnosed. Histological sections showed a cystic lesion lined with several rows of non-keratinized odontogenic epithelium. Chronic inflammation was observed in the cyst wall. No complications were observed after the procedure. It was observed that the paresthesia decreased at the end of the 1st postoperative week and completely disappeared at the 1st postoperative month. At the end of the 8th month, clinical and radiological follow-up showed that the paresthesia had disappeared and healing was normal.

CONCLUSION: In the diagnosis of odontogenic cysts, the location of the cyst and its relationship with the neighbouring teeth are generally important. However, in some cases, a definitive diagnosis can be made by histopathological examination. As in our case, displacement and resorption may be observed in the anatomical structures in the neighbourhood of the cysts due to increased pressure. It should be kept in mind that radicular cysts may be clinically and biologically aggressive. Therefore, surgical planning should be done carefully.

Keywords: paresthesia, radicular cyst, odontogenic cyst, enucleation.

GİRİŞ

Radiküler kistler, en sık görülen odontojenik kistlerdir. Çenelerde görülen bütün kistlerin yaklaşık %70'ini oluştururlar[1]. Erkeklerde kadınlara oranla daha sık görülür. Radiküler kistler sıklıkla maksilla anterior bölgede ve devital pulpalı sürmüş dişlerin apeksleriyle ilişkilidir .30 -50 yaş aralığında görülürler [2]. Kistler, büyük boyutlara ulaşip enfekte olana kadar sıklıkla asemptomatiktir. Kistler ağrısız büyürler fakat büyüdükçe çenede, yüzde ve komşu anatomik yapılarda hasara neden olabilirler. Kistler benzer klinik ve radyolojik görünümleri nedeniyle yanlış teşhis edilebilirler. Ancak klinik ,radyolojik ve histopatolojik inceleme ile kesin tanı koymak mümkündür. Bu vaka raporunda parastezinin eşlik ettiği bir radiküler kistin enükleasyon ile tedavisi anlatılmaktadır.

VAKA

49 yaşında bayan hasta mandibulada sol premolar diş bölgesinde ağrı şişlik ve parestezi şikayetleriyle Sağlık Bilimleri Üniversitesi Diş Hekimliği Fakültesi Ağız, Diş ve Çene Cerrahisi Anabilim Dalı'na başvurdu. Hastanın herhangi bir sistemik öyküsü yoktu. Muayenede mandibulada 35 numaralı diş bölgesinde ekstraoral şişlik görüldü. İntraoral muayenede iyi bir oral hijyen ile birlikte dil, dudak, yanak mukozası normaldi. Ağızda 35 numaralı dişin dişeti mukozasının eritemli ve palpasyonda ağrılı olduğu tespit edildi. 35 numaralı dişte lüksasyon ve perküsyonda hassasiyet gözlemlendi. Hastadan alınan panoramik radyografide mandibulada 35 numaralı dişle ilişkili alveolar kemikte sklerotik sınırlı radyolüsens görüntü veren lezyon tespit edildi (Şekil-1).

Alınan tomografide aksiyel, koronal ve sagittal kesitlerde 35 numaralı dişin kökünü çevreleyen radyolüsens lezyon izlendi. Vestibül ya da lingual kortikal kemikte ekspansiyon görülmedi(Şekil-2).Yapılan vitalite testi sonucunda 35 numaralı dişin devital, komşu dişlerin vital olduğu izlendi. Lezyonun enükleasyonu planlandı. Operasyon esnasında lezyonun vestibul kemikte destrüksiyona neden olduğu izlendi. 35 numaralı diş çekildi. Mandibular sinir ve diğer anatomik yapılar korunarak lezyonun tamamı cerrahi olarak çıkarıldı. Yapılan histopatolojik inceleme sonucunda mikroskopik kesitlerde, non-keratinize çok katlı yassı epitelle döşeli kist izlendi. Kist duvarında çok yoğun mononükleer inflamatuvar hücre infiltrasyonu izlendi. Histopatolojik inceleme sonucunda lezyona radiküler kist tanısı konuldu. İşlemden sonra herhangi bir komplikasyon gözlenmedi. Postoperatif 1.hafta sonunda yapılan kontrolde

parestezinin azaldığı, postoperatif 1.ay kontrolünde parestezinin tamamen ortadan kalktığı görüldü (Şekil-3). 8.ay kontrolünde parastezinin tamamen ortadan kalktığı tespit edildi. Lezyonun klinik veya radyografik nüks bulgusu olmadan yapılan tedaviye iyi bir yanıt verdiği izlendi (Şekil-4).

TARTIŞMA

Radiküler kistler, çenelerde gözlenen en yaygın odontojenik kistlerdir. Pulpa bölgesinden gelen enflamatuvar uyarıcı periapikal bölgeye ulaşarak malassezin epitelyal hücre kalıntılarının uyarılmasına neden olur ve bu uyarıcı tedavi edilmezse sonunda radiküler kistler oluşur [3], [4]. Radiküler kist, rutin radyografik incelemede rastlantısal olarak ya da akut semptomların açığa çıkmasıyla teşhis edilmektedir [5].

Radyografik olarak radiküler kist, etkilenen dişin apeksiyle yakından ilişkili radyoopak sklerotik kenar ile iyi sınırlı yuvarlak veya oval uniloküler radyolüsensi olarak karşımıza çıkar. Kisti çevreleyen ince bir radyoopak çizgi (sklerotik sınır) de tanıyı kesinleştirmek için kullanılabilir önemli radyografik belirteçlerdir [6], [7].

Doğru tanıya ulaşmak için pulpa testine, radyografilere ve histopatolojik değerlendirmeye başvurulabilir. Yapılan çalışmalar, lezyonun tanısının radyografik ve klinik değerlendirmenin yeterli olmadığını sonucuna varılmıştır. Bizim çalışmamızda, lezyonun kesin tanısı histopatolojik değerlendirilme sonrasında konulmuştur.

Lezyon agresif olduğunda veya uzun süre tedavi edilmediğinde yavaş ve ağrısız büyümesi nedeniyle, kemikte ekspansiyona, kök rezorpsiyonuna, dişlerde mobiliteye ve dişlerin yer değiştirmesine sebep olabilir. Kist enfekte olduktan sonra açığa çıkan ağrı ve şişlik bulguları ise genellikle hastanın kliniğe başvurmasına yol açmaktadır[8].Bizim vakamızda da hastamız şişlik ve ağrı şikayetiyle kliniğimize başvurdu.

Radiküler kistlerin Periapikal granülomu ile ayırıcı tanısında zorluklar yaşanmaktadır. Lezyon ikisinde de devital dişlerin apeksinde açığa çıkmaktadır ve radyolojik olarak da ikisinde de uniloküler radyolüsent alanlar olarak görülür [9], [10].

Radiküler kistler genellikle periapikal granülomlardan daha büyük görünse de boyut kesin bir tanı kriteri olarak düşünülmelidir. Periapikal granülomlar genellikle küçüktür ve radyoopak sınırı yoktur. Radyolüsent bölgenin etrafındaki sklerotik alan bulunmaz. Ayırıcı tanıda histopatolojik inceleme şarttır. Bizim vakamızda lezyon uniloküler ve radyoopak sınırı vardı.

Mandibulada anterior bölgede gözlenen lezyonlarda periapikal tip semento-osseöz displazi ile ayırıcı tanı da göz önünde bulundurulmalıdır. İki lezyonun radyografik bulgularındaki uniloküler radyolüsensi görünümünden kaynaklı benzerlikler sebebiyle teşhiste hatalar olabilir. Lezyonla ilişkili diş yapılacak olan elektrikli pulpa testinde Periapikal COD'deki diş genellikle termal veya elektrikli pulpa test yöntemine yanıt verir. Literatürde, Periapikal semento-osseöz displazi vakalarında hatalı radiküler kist tanısı konulmuş olan birkaç vaka bildirilmiştir [11].

Bir diğer ayırıcı tanı gerektiren antite de lateral radiküler kistlerdir. Lateral aksesuar kanallar nedeniyle etkilenen dişin lateral tarafı boyunca ayrı radyolüsent alanlar olarak görünür. Lateral radiküler kistler etkilenen dişin lateralinde konumlanır. Radiküler kist, termal testlere yanıt vermez, ancak lateral periodontal kistler termal testlere ve elektrikli pulpa testlerine yanıt verir. Bizim vakamızda literatürle uyumlu olarak lezyon dişin apikali ile ilişkiydi.

Radiküler kistlerin tedavi seçenekleri arasında lezyonla ilişkili dişlerin kök kanal tedavilerinin yapılarak kök ucu rezeksiyonu ile ağızda bırakılarak lezyonun enükleasyonu, marsüpiyalizasyon ve sonrasında enükleasyon veya enükleasyon ile birlikte lezyonla ilişkili dişlerin çekimi yer almaktadır. Mevcut literatür incelemesinde tedavi tercihinde araştırmacılar kistin enükleasyonu konusunda hem fikirdir[12].

Ancak lezyonun boyutu ve konumu her zaman buna müsaade etmemektedir. Anatomik yapılara zarar verme olasılığı söz konusu olduğunda daha konservatif bir tedavi yöntemi olan, büyük kistlerin dekompresyonunu hedefleyen marsüpralizasyon tekniği tercih edilmektedir. Bu

tekniklerin avantajları arasında düşük morbidite, anatomik yapıların korunması ve kemik bütünlüğünün korunması yer almaktadır. Bu tekniklerinin en büyük dezavantajları ise patolojik dokunun tam olarak incelenmeden uzun süre dokuda kalması, kavitenin düzenli olarak irrigasyonunun yapılması için takip gerekliliği ve hastanın tedaviye devamlılığının sağlanmasıdır [13]. Cerrahi olarak yetersiz enükleasyon ve küretajın rezidüel kiste neden olabileceği unutulmamalıdır[14]. Vakamızda da lezyonun boyutunu ve sınırlarını göz önünde bulundurarak, tedavi seçeneği olarak enükleasyonu tercih ettik.

Literatürde radiküler kistin epitelinde mataplazik değişimler sonucu squamoz karsinom vakalarının gözleendiği nadirde olsa bildirilmiştir [15]. Bu nedenle kistik lezyonlara yaklaşımda farkındalığımız her zaman yüksek olmalıdır.

SONUÇ

Mevcut literatür bilgileri ışığında radiküler kistlerin, tanı ve tedavi planlamasında iyi bir radyografik ve klinik değerlendirmeyle beraber histopatolojik inceleme de gerekmektedir. Uzun süre asemptomatik olan patolojik lezyonların saptanmasında dikkatli bir muayene, belirli bir düzeyde klinik tecrübe ve tedavi deneyimi gerekmektedir. Kesin tanının konulabilmesi için lezyonların klinik, radyolojik ve histopatolojik olarak bir bütün olarak değerlendirilmesi şarttır. Ayırıcı tanının gereksiz tedavilerin ve olası komplikasyonların önüne geçebileceği unutulmamalıdır.

ÖZET

Bilindiği gibi öğrenme-öğretme sürecinde ölçme ve değerlendirme önemli bir gerekliliktir. Hemen hemen tüm derslerde her ne kadar alternatif ölçme araçlarının kullanılmasından bahsedilse de çoktan seçmeli sorular, ölçme ve değerlendirme sürecinde önemli bir rol oynamaktadır. Bu bağlamda, araştırmanın amacı staj okullarına giden matematik öğretmen adaylarının çoktan seçmeli soruları hazırlamada çeldirici tercih sebeplerinin araştırılmasıdır. Bu amaç doğrultusunda İstanbul ilindeki bir eğitim fakültesine devam eden öğretmen adaylarıyla bu araştırma gerçekleştirilmiştir. Veri toplamada en az 10 tane çoktan seçmeli sorudan oluşan 1. dönem 1. yazılı sınavı ve sınavın değerlendirme anahtarını kaynaklarıyla birlikte oluşturmaları istenmiştir. Verilerin analizinde doküman analizi kullanılmıştır. Bulgular; örneklemdaki öğretmen adaylarının çoktan seçmeli soruları hazırlamada çeldirici tercih sebeplerinin yanı sıra hazırladıkları soruların puanlama ve cevap anahtarını doğru hazırlama ve zorluk düzeyine ilişkin görüşlerini içermektedir. Ayrıca öğretmen adaylarının çoktan seçmeli soruları hazırlarken yararlandıkları kaynaklar da incelenmiş ve bu doğrultuda da değerlendirmeye yer verilmiştir. Verilerin analizi sonucunda bu araştırma kapsamındaki öğretmen adaylarının en fazla işlem hatasına yönelik sorular hazırladıkları görülmüştür. Bununla birlikte, araştırma grubundaki öğretmen adaylarının soru hazırlamada orta zorluk seviyesinde ve genellikle özel yayınevi kaynaklarından faydalandıkları tespit edilmiştir. Araştırma bulgularının, özellikle matematik öğretmen adayları tarafından hazırlanan çoktan seçmeli sorulara ilişkin bir öngörü taşıyacağı düşünülmektedir. Bulguların değerlendirilmesi sonucunda gerek bu araştırmaya gerekse yapılacak olası araştırmalara yönelik önerilere yer verilmiştir.

Anahtar Kelimeler: Matematik Öğretmen Adayı, Çoktan seçmeli sorular, Soru hazırlama, Ölçme ve değerlendirme

ABSTRACT

As is well-known, assessment and evaluation are critical components of the teaching and learning process. Although the use of alternative assessment tools is frequently emphasized in nearly all subjects, multiple-choice questions continue to play a significant role in this process. In this context, the purpose of this study is to examine the reasons behind the

distractor choices made by mathematics teacher candidates when designing multiple-choice questions during their internship at schools. The study was conducted with teacher candidates enrolled in an education faculty in Istanbul. As part of data collection, participants were asked to create a first term, first written exam consisting of at least 10 multiple-choice questions, along with an answer key and references for their questions. Document analysis was employed to analyze the data. The findings reveal insights into the distractor preferences of the teacher candidates when preparing multiple-choice questions, as well as their perspectives on the difficulty of creating accurate scoring and answer keys. Furthermore, the study examined the resources used by the teacher candidates while preparing their questions and provided evaluations based on these resources. The analysis showed that the teacher candidates most frequently designed questions targeting procedural errors. Additionally, it was found that the participants generally created questions of moderate difficulty and primarily relied on materials from private publishing companies. The results of this study are expected to offer valuable insights into the design of multiple-choice questions by mathematics teacher candidates. Based on the findings, recommendations are provided for both this study and future research.

GİRİŞ

Günümüz bilgi ve teknoloji çağında, problem çözebilen bireylerin yetişmesine yönelik disiplinler arası bir öğrenme ve öğretim anlayışı söz konusudur. Bu bağlamda matematik, gerek bir disiplin gerekse disiplinler arası ilişki olarak oldukça önemlidir. Dolayısıyla matematik eğitiminin bireylerin öğrenme ve öğretme sürecinde oldukça önemli bir rol oynadığı söylenebilir. Eğitimin önemli bir bileşeni ise ölçme ve değerlendirme olup, matematik eğitim sürecinde de önemli bir işlevi bulunmaktadır.

Bilindiği üzere bir eğitim programı, tüm öğrencilerin programda amaçlanan hedeflere ulaşmasına bağlı olarak başarılı olarak nitelendirilmektedir (Demirel, 2010). Öğrenme-öğretme sürecinde; öğrencilerin başarılarının saptanarak eksikliklerinin belirlenmesi, öğretim yöntemlerinin etkinliğinin anlaşılması, programın zayıf ve kuvvetli yanlarının ortaya çıkarılması gibi amaçlarla ölçme ve değerlendirme yapıldığı bilinmektedir (MEB, 2005). Bu bağlamda ölçme ve değerlendirme kavramı oldukça önemli bir bileşendir. Çünkü ölçme ve değerlendirme etkinliklerinde; öğrencilerin bilgi, beceri, ilgi ve yetenekleri yönünden tanınarak bulunduğu seviyeden daha iyi bir seviyeye gelmesi için rehberlik edilmesi amacı güdülmektedir (Göçer, 2018). Dolayısıyla öğrencilerin başarıları, rehberlik ve yönlendirme, eğitim programının etkililiği ve öğretim süreci hakkında verilen kararların gerçekçi olmasının ölçme ve değerlendirme ile sağlandığı söylenebilir (Yaşar, 2008).

Ölçme ve değerlendirme; eğitim süreci içinde öğrencilerin eğitimle beklenen özellikleri kazanıp kazanmadıklarını belirleme noktasında önemli bir yere sahip olup (Atılğan, 2011), öğretim sürecinin ayrılmaz bir parçasıdır (Heritage, 2007). Öğrencilerin öğrenme düzeylerinin iyileştirilerek geliştirilmesi ve kazanımlara ulaşma düzeylerini tespit ederek öğrenciler hakkında karar verilmesinde ölçme ve değerlendirmeden yararlanılmaktadır (Şimşek, Bars & Zengin, 2017). Bu durumda ölçme ve değerlendirme sürecinin çıktılarının; eğitimin niteliği, öğrenci performansı ve varılan son durum hakkında önemli bir veri sunarak eğitim sürecinin verimliliğine ve niteliğine ilişkin dönüt mekanizmasını oluşturduğu açıkça görülmektedir (Öksüz & Güven Demir, 2019).

Ölçme değerlendirilmede çeşitli teknikler kullanıldığı ve genellikle açık uçlu sorular, doğru-yanlış testleri ve çoktan seçmeli testlerle yapıldığı bilinmektedir (Turan-Oluk & Ekmekci, 2017). Çoktan seçmeli soruların; başarıyı ve kavram yanılgılarını ortaya koymak amacıyla (Küçükahmet, 2002) ve okullarda yapılan sınavlardan üniversiteye giriş sınavlarına kadar birçok alanda tercih edildiği bilinmektedir (Nacaroğlu, Bektaş & Kızıkan, 2020). Bu bağlamda, çoktan seçmeli testler; hızlı ve kolay uygulanabilmesi, pek çok kişiye aynı anda sunulabilmesi, maliyetinin uygunluğu, geçerlik ve güvenilirliğinin yüksek olabilmesi açılarından göz önüne alındığında en yaygın kullanım alanına sahiptir (Güngörmez & Akgün, 2018; Haladyna, 1997; Nacaroğlu, Bektaş & Kızıkan, 2020; Özcan, Boz & Özkaya, 2020).

Öğrenme-öğretme sürecinde, ölçme ve değerlendirme uygulamaları genellikle öğretmenler tarafından gerçekleştirilmektedir. Dolayısıyla öğretmenlerin, etkili bir ölçme ve değerlendirme süreci için ölçme ve değerlendirme konularında iyi yetişmiş olmaları gerekir (Aydın, 2019). Başarılı bir matematik eğitimi için öğretmenlerin büyük bir öneme sahip olduğu bilinmektedir (Özgen & Pesen, 2010). Bu bağlamda, geleceğin matematik öğretmeni olacak adaylarla çalışılmasının önem ve gereğinden hareketle bu araştırma planlanmıştır. Araştırma bulgularının, özellikle matematik öğretmen adayları tarafından hazırlanan çoktan seçmeli sorulara ilişkin bir öngörü taşıyacağı düşünülmektedir

Bu araştırmanın amacı, staj okullarına giden ortaokul matematik öğretmen adaylarının çoktan seçmeli soruları hazırlamada tercih sebeplerinin araştırılmasıdır. Bu amaçla aşağıdaki problemlere cevap aranmıştır:

- 1- Öğretmen adaylarının çoktan seçmeli soruları hazırlamada çeldirici tercih sebepleri nedir?
- 2- Öğretmen adaylarının soruları hazırlarken yararlandıkları kaynaklar nelerdir?
- 3- Öğretmen adaylarının hazırladıkları soruların zorluk düzeyine ilişkin görüşleri nasıldır?

YÖNTEM

Araştırma Modeli

Bu çalışma nitel araştırma yöntemlerinden doküman incelemesi deseniyle gerçekleştirilmiştir. Doküman incelemesi, araştırmaya söz konusu olan bir ya da birkaç duruma ilişkin bilgi içeren yazılı materyallerin veya bir zaman dilimine ilişkin dokümanların detaylı bir şekilde analiz edilmesini sağlar (Yıldırım & Şimşek, 2006). Bu çalışmada da ortaokul matematik öğretmen adaylarının çoktan seçmeli soruları hazırlamada tercih sebeplerine ilişkin görüşlerine açıklık getirmek için doküman analizi kullanılmıştır.

Çalışma Nesnesi

Araştırmada, 2023-2024 bahar yarıyılında İstanbul ilindeki bir üniversitenin İlköğretim Matematik Öğretmenliği programı dördüncü sınıfında öğrenim gören 19 öğretmen adayının hazırladığı 205 adet çoktan seçmeli soru incelenmiştir.

Verilerin Toplanması ve Analizi

Veri toplamada; staj okullarına giden matematik öğretmen adaylarının, en az 10 tane çoktan seçmeli sorudan oluşan 1. dönem 1. yazılı sınavı ve sınavın değerlendirme anahtarını kaynaklarıyla birlikte oluşturmaları istenmiştir. Toplamda oluşturulan 205 çoktan seçmeli soru; çeldirici tercih sebepleri, soru hazırlanırken yararlanılan kaynaklar ve zorluk düzeyi açısından değerlendirilmiştir. Veriler iki araştırmacı tarafından da bağımsız olarak değerlendirilmiştir. Sonuçlar karşılaştırıldığında elde edilen bulguların birbiriyle %99 oranında örtüştüğü görülmüştür.

BULGULAR

Araştırmanın birinci problemine ilişkin olarak, öğretmen adaylarının çoktan seçmeli soruları hazırlamada çeldirici tercih sebeplerine ilişkin bulgular Tablo1’de verilmiştir.

Tablo 1. Çeldirici tercih sebepleri.

Çeldirici sebepleri	Frekans
İşlem hatası	167
Kavram yanlışlığı	139
Yanlış/eksik anlama	89
Bilgi eksikliği	74
Dikkatsizlik	71
Yazılmamış	14
TOPLAM	554

Tablo 1 incelendiğinde bu araştırma kapsamındaki öğretmen adaylarının çoktan seçmeli soruları hazırlamada çeldirici tercih sebeplerinin en fazla işlem hatası ile ilgili olduğu görülmüştür. İkinci olarak en fazla çeldirici sebebinin kavram yanlışlığı olduğu görülmektedir. Diğer çeldirici tercihleri ise yanlış/eksik anlama, bilgi eksikliği, dikkatsizlik şeklindedir. 14 soru için bir çeldirici tercihi yapılmamıştır.

Araştırmanın ikinci problemine ilişkin olarak, öğretmen adaylarının soruları hazırlarken yararlandıkları kaynaklara ilişkin bulgular Grafik 1’de verilmiştir.

**Grafik 1.** Soru hazırlamada kullanılan kaynakların dağılımı.

Grafik 1 incelendiğinde bu araştırma kapsamındaki matematik öğretmen adaylarının toplam 205 çoktan seçmeli soruyu hazırlamada genellikle özel yayınevi kaynaklarından faydalandıkları görülmektedir. Diğer soru hazırlama kaynaklarının ise MEB ile ilgili kaynaklar olduğu görülmektedir. 10 sorunun adayın kendisi tarafından hazırlandığı ifade edilmiş olup, staj öğretmeninden yararlanılan bir kaynak kullanılmadığı görülmüştür.

Araştırmanın üçüncü problemine ilişkin olarak, öğretmen adaylarının soruların zorluk düzeyine ilişkin görüşleri incelendiğinde zorluk düzeyi ortalaması 2,16 olarak bulunmuştur. 6 aday zor, 10 aday orta ve 3 aday da kolay seviyede olduğunu belirtmiştir. Buna göre araştırmaya katılmış olan öğretmen adaylarının genellikle orta seviyede çoktan seçmeli sorular hazırladıkları söylenebilir.

SONUÇ VE TARTIŞMA

Staj okullarına giden matematik öğretmen adaylarının çoktan seçmeli soruları hazırlamada çeldirici tercih sebeplerinin araştırılması amacıyla gerçekleştirilen bu çalışmada, en fazla işlem hatasına yönelik ve orta zorluk seviyesinde soruların hazırlandığı sonucuna ulaşılmıştır. Bununla birlikte, araştırma grubundaki öğretmen adaylarının soru hazırlarken genellikle özel yayınevi kaynaklarından faydalandıkları belirlenmiştir.

Çoktan seçmeli sınavlarda çeldiricilerin yazılma amacı, soru ile yoklanan bilgi veya becerilere sahip olmayanlar veya doğru cevabı bilmeyenlerin aklını çelmek, onları “yanıltmak” amacıyla (Baştürk, 2014). Ancak, tecrübeli tecrübesiz pek çok kişinin soru yazması gibi nedenlerden dolayı çeldiricilerin, doğru bilenleri yanlış yapmaya sevk etmek ve aldatmak amacıyla yazıldığına da rastlanılmaktadır (Doğan, 2007; Akt, Baştürk, 2014). Bu çalışmada en fazla işlem hatasına yönelik çeldirici yazılmasının bir nedeni olarak araştırma grubundaki adayların tecrübesizliğinden kaynaklandığı söylenebilir. Diğer bir neden ise araştırmanın ikinci bulgusu olan, öğretmen adaylarının soru hazırlarken genellikle özel yayınevi kaynaklarından faydalanmalarından kaynaklı olabilir. Çünkü özel kaynaklardan yararlanılarak oluşturulan soruları yazanların tecrübeli ya da tecrübesiz olduğu bilinmemektedir. Bu durum araştırılmaya değer bir bulgu olduğunu düşündürmektedir.

Araştırma bulguları ışığında aşağıdaki öneriler verilebilir:

- Tüm staja giden öğretmen adaylarını kapsayacak ve farklı programları da içeren benzer araştırmalar yapılabilir.
- Bu araştırma, farklı değişkenler de göz önüne alınarak ve daha geniş örnekleme nicel olarak yapılandırılabilir.
- Öğretmen adayları staja başlamadan çoktan seçmeli soruları nasıl hazırlamaları gerektiğine yönelik çalışmalar yapılabilir.

ÖZET

Ülkemizin jeolojik konumu nedeniyle yüzölçümünün büyük bir kısmı deprem kuşağında yer almaktadır. Son zamanlarda yaşanan büyük depremler, bir deprem ülkesi olduğu gerçeğini büyük yıkım ve kayıplarla birlikte bir kez daha hatırlatmıştır. Bu noktada, 6 Şubat 2023'te Kahramanmaraş merkezli 11 ili etkileyen ve etkilediği bölgelerde büyük maddi ve manevi yıkımlara yol açan son depremin, depremi yaşayan afetzedeler üzerindeki etkileri halen devam etmekte olup, açılan maddi ve manevi uçurumların henüz kapatılmadığı görülmektedir. Bu çalışmada, afet sosyolojisinin temel konularından biri olan deprem olgusuna kadınların gözünden ve deprem sonrası değişen alışkanlıklara toplumsal cinsiyet perspektifinden bakılmaktadır. Bu noktada 6 Şubat 2023'te yaşanan Kahramanmaraş merkezli deprem sonrasında Hatay'ın Antakya ilçesinde yaşayan 11 kadınla yüz yüze görüşmeler yapılmış ve deprem öncesi ve sonrası kadınların rol ve sorumlulukları, yaşadıkları yerler, deprem sürecinin çocukları üzerindeki etkileri, afet sonrası kendilerinden beklenen toplumsal beklentiler ve geleceğe ilişkin düşünceleri tartışılmıştır. Bu noktada depremin travmatik etkilerinin hala devam ettiği, geleceğe ilişkin umutsuzluk içinde oldukları, deprem öncesi kadınların ev işleri, çocuk bakımı gibi sorumluluklarının deprem sonrası artarak devam ettiği sonucuna varılmıştır.

Anahtar Kelimeler: *Toplumsal cinsiyet, kadın, toplumsal cinsiyet rolleri, afet*

CHANGING HABITS OF WOMEN AFTER THE EARTHQUAKE CENTRED IN KAHRAMANMARAŞ ON 6 FEBRUARY 2023: ANTAKYA CASE

ABSTRACT

Due to the geological location of our country, a large part of its surface area is located in the earthquake zone. Recent major earthquakes have once again reminded the fact that we are an earthquake country with great destruction and losses. At this point, the effects of the recent earthquake on 6 February 2023, which affected 11 provinces centred in Kahramanmaraş and caused great material and moral destruction in the regions it affected, are still continuing on the disaster victims who experienced the earthquake, and it is seen that it is not yet possible to close the material and moral gaps opened. This study looks at the earthquake phenomenon, which is one of the main topics of the sociology of disasters, through the eyes of women and the changing habits after the earthquake from a gendered perspective. At this point, face-to-face interviews were conducted with 11 women living in Antakya district of Hatay after the Kahramanmaraş-centred earthquake on 6 February 2023, and the roles and responsibilities of women before and after the earthquake, the places where they lived, the effects of the earthquake process on their children, the social expectations expected from them after the disaster and their thoughts about the future were discussed. At this point, it was concluded that the traumatic effects of the earthquake are still continuing, that they are in despair about the future, and that women's

responsibilities such as housework and child care before the earthquake continue to increase after the earthquake.

Keywords: *Gender, women, gender roles, disaster*

GİRİŞ

Deprem; yerkürenin fay hattındaki toplanmış olan enerjinin uygun bulunduğu yerde boşalması sonucu ortaya çıkan sarsıntılar olarak tanımlanmaktadır. Deprem ülkesi olan ülkemizde 1999 yılında meydana gelen Marmara depremi ve 1939 yılında meydana gelen Erzincan Depremi en yıkıcı depremler arasında yer almaktadır (Artantaş ve Gürsoy, 2024,195). 6 Şubat 2023 tarihinde Kahramanmaraş merkezli olarak meydana gelen ve 11 ili etkileyen deprem de tarihsel anlamda ülkemizdeki en yıkıcı depremlerden birisi olarak kabul edilmektedir. Yerkürenin kırım fayı üzerinde biriken biçim değiştirme enerjisinin hareketi sonucu meydana gelen depremler su taşkını, heyelan, çığ, yangın gibi diğer doğal afetleri de tetikleyebilmektedir. Böyle durumlarda can ve mal kayıplarında çok ciddi artışlar meydana gelebilmektedir (Akkaya ve Polat, 2024,17). Doğal afetler, gerçekleşmesi her an ihtimal dâhilinde olan dünya yaşamının zorunlu bir parçasıdır. İçinde yaşadığımız coğrafya da önemli deprem kuşaklarından birisi olup en son 6 Şubat 2023 tarihinde yaşanan ve 11 ili etkileyen ardışık depremler bölgede önemli can ve mal kayıplarına neden olmuştur (Şipal, 2023, 821-822).

Tarihsel süreçte ülkemizde meydana gelen yıkıcı depremler neticesinde birçok insan hayatlarını kaybetmiş ya da yaralanmıştır. Hayatta kalanlar yaşamlarını devam ettirmek için buldukları yerden kısa ya da uzun süreli ayrılmak zorunda kalmıştır (Tiryaki Yenilmez, 2023, 43). Örneğin, 2011 Van depremi, 2020 İzmir depreminden sonra bölgeden, göç hızlarında artışın olduğu tespit edilmiştir (Peker ve Şanlı, 2022, 141). Deniz vd.'nin (2017) 2011 yılında Van ilinde meydana gelen depremin neden olduğu göç, göçün boyutu ve etkilerini inceledikleri çalışmalarında; depremden sonra ortaya çıkan barınma sorununun ve hava koşullarının aniden kötüleşmesinin halkı Van'dan başka illere doğru göçe zorladığı, yapılan çalışmaya katılanların %49'unun depremden sonra hanelerinden başka illere göç edenlerin olduğunu söylemiş olduğu tespit etmişlerdir. Görüldüğü üzere doğal afetler; göç konusunda itici bir güç oluşturmakta olup depremedeler hayata yeniden tutunabilmek adına zorunlu olarak yer değişikliği gerçekleştirmektedirler (Karazincir, 2024, 369).

Doğal afetler, ekonomik ve psikososyal faktörlerin yanı sıra çevresel açıdan da olumsuz etkilere sahiptir. Toprak erozyonu, su kaynaklarının kirlenmesi, hava kirliliği, orman yangınları gibi durumlar ekosistemin dengesini bozarak biyoçeşitliliğe zarar vermektedir (Tan Gülünay, Anar, Anar, Çelik, Çelik, 2023, 96). Bunların yanında depremler fiziki olarak yaralanmalar, kayıplar ve ölümün yanı sıra sosyal, ekonomik ve psikolojik sorunları da meydana getiren önemli doğa olaylarıdır. Depremden sonra akla ilk olarak doğal olarak can ve mal kayıpları gelse de depremden sonra hayatta kalan bireylerde ruhsal açıdan derin izler oluşabilmektedir (Altun, 2018, 13-14). Önder (2022: 76) 2020 İzmir depremi sonrasında depremedelerin travma sonrası stres bozukluğunu incelediği çalışmasında demografik bilgileri incelendiğinde özellikle kadın katılımcıların daha fazla oranda travma sonrası stres bozukluğu ve psikolojik dayanıklılıklarında düşüklük tespit edilmiştir. Ayrıca depremde kendisi ya da yakını yaralanan ve hayatını kaybeden katılımcıların travma sonrası stres bozukluğu düzeylerinin daha yüksek olduğu sonucuna ulaşılmıştır.

Doğal afetlerin birbiriyle ilişkili olan ekonomik, sosyal ve psikolojik sonuçları bulunmaktadır (Altun, 2018, 6; Gülyol, 2024, 40). Depremle birlikte ev ve iş yerlerinin yıkılmasıyla hem insanlar barınma sorunu yaşamakta hem de iş gücü aksamakta bu durumsa bağlantılı olarak ulaşım, ithalat ve ihracatı etkilemektedir. Depremden sonra insanların başka yerlere göç etmesi sonucundaysa sosyal yapı değişmekte bu durum salgın hastalıklar, fırsatçılık, yağmacılık ve sosyal eşitsizliğe neden olmaktadır (Gülyol, 2024, 42).

Depremlerin ekonomik ve psikososyal etkilerini genel anlamda şu şekilde açıklamak mümkündür:

Ekonomik Etkileri

Afetlerin enerji, altyapı, ulaşım ve endüstri gibi alanlarda olan etkisi birincil (doğrudan ve dolaylı) ekonomik etkiler, afetten bir süre sonra meydana gelen fiyatların genel düzeyinde, ödeme dengelerinde, büyüme ve istihdam düzeylerinde meydana gelen etkileriyle ikincil ekonomik etkileri olarak kabul edilmektedir. İkincil ekonomik etkiler arasında bütçe açığı, kamu harcamaları, borç dengesindeki bozulmalar, enflasyon oranlarındaki etkiler sayılabilir (Altun, 2018, 8). Yerel ve ulusal ekonomilere büyük bir baskı oluşturan doğal afetlerin ekonomik sonuçları; mevcut kaynakların yeniden onarımı ve inşasına tahsis edilmesi afetten sonraki ekonomik kalkınmanın gecikmesine neden olur. Üretimin durması, ticaretin aksaması, turizm sektöründe azalma ve iş kayıplarıyla birbiriyle bağlantılı ekonomik olumsuzluklardır (Tan Gülünay, Anar, Anar, Çelik, Çelik, 2023, 96).

Doğa kaynaklı afetlerin ekonomik sonuçlarının etkileri doğrudan ve dolaylı olmak üzere gruplandırılmaktadır (Avdar ve Avdar, 2021, 10-11). Doğrudan maliyetler afetlerin meydana geldiği yerdeki fiziki sermayeyi tahrip etmesi olarak tanımlanırken, dolaylı maliyetler doğrudan maliyetlerin neden olduğu artıç maliyetleri kapsamaktadır. Afetler meydana geldikleri yerlerde afet sonrası dönemde kamu harcamalarında öngörülmesi imkansız ciddi artışlarla birlikte afetin meydana geldiği yerlerdeki vergi ve kamu gelirlerinin azalmasına da neden olmaktadır.

Psikososyal Etkileri

Travmatik durumların bireysel etkileri her birey için yapılarına bağlı olarak farklı olabilmekte; aynı travmatik olayı yaşayanlar farklı tepkiler verebilmektedirler (Tanhan ve Kayri, 2013, 1013). Alpullu ve Yılgin (2024)'ın yaptıkları araştırmada kadınların erkeklere nazaran travma ile başa çıkma düzeylerinin daha düşük olduğu sonucuna ulaşılmıştır. Cengiz ve Peker (2023) deprem sonrası yetişkinlerin depresyon seviyelerinin yaş, cinsiyet ve eğitim düzeyi aralıklarına göre inceledikleri çalışmalarında yetişkin bireylerin depresyon seviyelerinin cinsiyete göre farklılık gösterdiğini, kadınların depresyon düzeylerinin erkeklere göre daha yüksek olduğunu, ayrıca üniversite mezunu bireylerin depresyon puanlarının ilkökul ve lise mezunu bireylerden belirgin şekilde daha yüksek olduğunu tespit etmişlerdir.

Afetlerden etkilenenler birincil mağdurlar (afeti yaşayanlar), ikincil mağdurlar (birincil mağdurların aileleri ya da bireysel bağı olan kişiler), üçüncül mağdurlar (afetzedelere yardım götüren kişiler) ve dördüncü mağdurlar (afeti kitle iletişim araçlarından takip eden bireyler) olarak dört gruba ayrılmaktadır (Akyılmaz ve Karka, 2011, 6). Doğal afeti yaşayan kişilerde şok, öfke, korku hali, suçluluk, yas, kızgınlık, karamsarlık, panik ve utanç hali gibi duygusal tepkiler görülürken, hafıza kaybı ya da hafızayla ilgili sorunlar, karar vermede zorlanma, konsantrasyon bozukluğu, kendini suçlama gibi yanlış inanların geliştirilmesi, kendine saygı duymama, kendini suçlama gibi bilişsel tepkiler, deprem anını hatırlamaktan kaçınma, ani irkilmeler gibi davranışsal tepkiler ve uyku düzeninde bozulmalar (aşırı uyku ya da hiç uyuyamama), baş ağrısı, tedirginlik, başışıklık sisteminde bozulmalar, gerginlik, baş dönmesi, bulantı gibi fiziksel tepkiler de görülebilmektedir.

1. Afetlerde Toplumsal Cinsiyet Eşitsizliği ve Kadının Konumu

Kadınlar toplumsal cinsiyet rollerinden dolayı dezavantajlı grupta görülmekte olup afet sonrasında da psikolojik, fiziksel ya da cinsel şiddete maruz kalmaları nedeniyle beden ve zihinsel bütünlükleri olumsuz olarak etkilenmektedir. Ayrıca kadınlar; normal yaşam döngülerinin bozulması, yaşadıkları ortamın güvenli olmaması nedeniyle üreme/cinsel sağlık anlamında da sorunlar yaşayabilmektedirler (Kara ve Nazik, 2023, 113). Kadınların afetlerden erkeklere göre daha çok etkilendiği bilgisiyle birlikte afetlerden sonra kadınların ortalama

yaşam sürelerinin kısaldığı ve sosyo-ekonomik olarak görece daha düşük seviyelerde olan kadınların afetin ölümcül etkilerinden daha fazla etkilendikleri tespit edilmiştir (İpekçi, 2023, 149).

Dünyanın birçok yerinde meydana gelen afetler, bireylerin sırf insan olmalarından kaynaklı sahip olduğu özgürlük ve güvenlik gibi önemli konularda bireylerin yoksun kalmasına neden olduğu gibi bireylerin sağlık, eğitim, çalışma, sosyal ve ekonomik haklarına da ulaşmayı zorlayıcı hale getirmiştir (Düger ve Yaman, 2022, 934). Dezavantajlı gruplar, literatürde kırılgan gruplar olarak tanımlanmakta olup kadınlar cinsiyet temeli eşitsizlikler ve toplumsal cinsiyet rolleri nedeniyle kırılgan grupların başında gelmektedirler (Arıca, Çakır ve Kağnıcı, 2023, 178-179). Kadınların toplumsal cinsiyet eşitsizliği nedeniyle meydana gelen sorunlarının çözülmemesi nedeniyle afet süreci ve sonrasında beden ve psikolojik sağlıklarına olumsuz etki edecek durumlarla karşılaşmakta, bu durum ise yaşam kalitelerinin azalmasına neden olmaktadır (Demirci ve Avcu, 2021, 90). Kadınlara toplumsal cinsiyet kalıplarıyla yüklenen bazı davranış kalıpları nedeniyle afet sonrasında temel ihtiyaçlarını karşılamakta zorlanma, zorla evlendirilme, psikolojik, fiziksel ve cinsel şiddet gibi olumsuz durumlarla karşılaşmalarına neden olmaktadır (Kara ve Nazik, 2023, 106).

Yapılan uluslararası araştırmalar kadın ve erkeklerin afetlerden etkilenme derecelerinin ve bu süreçle başa çıkma mekanizmalarının farklı olduğunu göstermektedir (Gündüz, 2022, 441). Toplumdaki statü ve toplumsal cinsiyet rolleri sebebiyle kadınlar afetlerde korunması gereken olarak görülürken bütünsel afet yönetimindeyse bilişsel farkındalıkları ve sahip oldukları becerilerle sürece katkı sağlayıcı olarak görülmektedirler. Doğal afetlerden kadın ve erkeklerin farklı düzeylerde etkilenme nedenleri arasında toplumsal cinsiyet rolleri bulunmaktadır. Az gelişmiş, gelişmemiş ve gelişmekte olan ülkelerde toplumsal cinsiyet eşitsizliklerinin yoğun olması nedeniyle gelişmiş ülkelere nazaran afetlerin yıkıcı etkileri daha yoğun görülmektedir. Bunun nedeni ise bireylerin kaynaklara erişimde zorlanması, afet sırasında afetten kaçacak yetenek ve güce, afetten sonrada gerekli imkânlarla sahip olamamalarıdır (İlgın ve Karagül, 2022, 86).

Gündüz (2022, 454)'in toplumsal cinsiyet perspektifinden 2010 Haiti depremi ve 2011 Japonya depremlerinin kadınlara etkisini incelediği araştırmasında; gündelik yaşamda ekonomik, sosyal ve politik olarak dezavantajlı durumda olan kadınların afetten sonra da olumsuz olarak etkilendiklerini, cinsiyet ayrımına maruz kaldıklarını, yoksullukla mücadele ettiklerini, Japonya'da afetten sonra kadınların geçici barınma merkezlerinde yemek hazırlamak üzere görevlendirildiklerini, erkeklerden böyle bir şey beklenmediğini, kadınların emekleri için para almadıkları, erkeklerinse çöpleri toplama ve çıkarma gibi işleri yaptıkları için para aldıkları tespit edilmiştir. Japonya depremi geleneksel kalıpların yaygın olduğu bir bölgede yaşandığı için kadınların toplumsal cinsiyet rollerini depremden sonra da devam ettirdiği, Haiti'de zaten depremden önce de kayıt dışı istihdam, gelir eşitsizliği ve yoksulluk içinde olan kadınların depremden sonra da aynı sorunları yaşamaya devam ettikleri anlaşılmaktadır.

Yapılan araştırmadan da görüldüğü üzere afetlerin etkileri mevcut toplumun sosyal yapısına göre değişmekte olup vatandaşların cinsiyet, yaş, eğitim, sağlık, okuryazarlık ve gelir durumları gibi toplumun sosyal özellikleri afetlerden etkilenme düzeylerini belirlemektedir. Toplumsal cinsiyetten kaynaklı roller, toplum tarafından kadın ve erkeğe biyolojik cinsiyetlerinden dolayı yüklenen farklı sorumlulukları ifade etmekte olup bu roller sonucu kadının sosyo ekonomik olarak bağımlı rolde olması ve bunun sonucu ortaya çıkan sosyal sorunlar afetlerin kadınlar üzerindeki etkilerini daha da arttırmaktadır (Okay ve İlkaracan, 2018, 2-3)

Toplumsal cinsiyet eşitsizliği yaklaşımına göre sosyo ekonomik olarak düşük seviyede olan az gelişmiş ülkelerde yaşayan kadınlar; geleneksel rolleri, ekonomik yoksunlukları nedeniyle afetlerden daha fazla etkilenebilmektedir. Afetlerden kaynaklı stres ve sosyoekonomik stres etkenleri bir araya geldiğinde ise toplumsal cinsiyet kırılganlığına sebep olabilmektedir. Geleneksel rollerin yaygın olduğu kadın erkek eşitliğinin daha az olduğu ülkelerde ise

afetlerden sonra kadın ve erkek ölüm oranı farklılıkları daha fazla olup kadınların afetten sonra yaşasa dahi istismar ve şiddete daha fazla maruz kalmaktadırlar (Dursun, 2020, 67-68). Literatüre bakıldığında Akbaş ve Taşbaş'ın (2024) 6 Şubat 2023 tarihli Kahramanmaraş depreminden etkilenen Osmaniye Düziçi'nde yaşayan kadınlarla yaptıkları görüşme verilerinde, toplumsal cinsiyetten kaynaklı roller ve toplumsal cinsiyet eşitsizliği nedeniyle afetlerden sonra dahi kendi kararlarını eşlerinden bağımsız alamadıkları ve bu durumu kültürel kodlar nedeniyle içselleştirdikleri için kadınların bunun farkında olmadıkları tespitinde bulunmuşlardır.

Kadınların afetlerde toplumsal cinsiyet eşitsizliği temelinde ele alınan sosyal zarar görülebilirliğini etkileyen etmenleri şöyle sıralamak mümkün; (Ünür, 2021; Yalçın, 2020, 30-32) **Kadınlara yüklenen hane halkının bakım ve sorumluluğu** çocukların ve yaşlıların bakımından sorumlu tutulan kadınların afet durumunda kendilerinden önce sorumlu olduğu bireyleri düşünmesi nedeniyle hayatlarını riske atmaları

Eğitim seviyesi: Okuma yazması olmayan ya da eğitim seviyesi düşük olup afet konusunda yeterli bilince sahip olmayan kadınlar uyarı mekanizmalarını ve yönlendirmeleri tam anlayamadıkları ya da afetten sonra nereden destek alacaklarını bilemedikleri için eğitim seviyesi yüksek olanlara nazaran daha fazla ölüm oranına sahiptirler.

Toplumsal norm, inanış ve kültüre dayalı giyim kodları; kadınların gecelik dışarı çıkarsa toplum tarafından ayıplanacağını düşünmesi ya da inanış gereği başörtüsü takan kadınların başörtülerini almak için afet anında zaman kaybetmesi kadınların can kaybını arttırmaktadır.

Psikolojik etkiler: Afetlerin akabinde kadınlar daha fazla ruhsal sağlık sorunu yaşamaktadırlar. Ailelerine karşı bakım sorumlulukları nedeniyle ailevi ihtiyaçları kendi ihtiyaçlarının önüne koymaları, mağduriyet seviyelerini arttırmaktadır.

Afet sonrası güvenlik riski: Afet akabinde oluşan güvenlik açığı nedeniyle kadınlar ve kız çocukları insan kaçakçılığı şiddet, taciz ve tecavüzle daha fazla karşı karşıya kalmaktadırlar.

Ekonomik etkiler: Ekonomik sıkıntılar gereği evdeki kişi sayısını azaltmak adına küçük kız çocukları erken yaşta evliliklere zorlanabilmektedir. Afetlerdeki yardımlara ulaşma noktasında kadınlar geri planda bırakılmakta ya da eşi afet sırasında vefat eden kadınlar mirastan mahrum bırakılabilmektedir.

Kadınlar afetten sonra psikolojik sorunların yanında toplumsal cinsiyet rollerinden kaynaklı da sorun yaşamaktadırlar. Bu rollerden kaynaklı olarak ekonomik ve sosyal haklara, bilgi ve kaynaklara ve sağlık hizmetlerine erişim noktasında eşitsizliklere uğramaktadırlar. Kadınların afet sonrasında yaşadıkları sorunlar; üreme sağlığında yaşanan sorunlar, kadına yönelik şiddet, göç, insan ticareti, erken yaşta ve zorla evlilik, eğitimin kesintiye uğraması, iş yükü, yoksulluk, psiko-sosyal etki, aile desteğinden yoksunluk vb. şeklinde özetlenebilir (Demir ve Gerçek Öter, 2023, 333-334). Bu süreçte kadınların psikolojik sağlamlıkları da stresle baş etme mekanizmalarında oldukça önemli bir etkidir (Aydın ve Aytaç, 2023, 2203).

2. Araştırma Konusu, Kapsamı ve Yöntemi

Araştırma nitel araştırmanın bir örneğini oluşturmakta olup katılımcılara amaçlı rastgele örneklem tekniğiyle ulaşılmıştır. Nitel araştırmalarda; araştırılan konu hakkında katılımcının öznel görüşü baz alınarak, gerekirse ilave sorular da sorularak derin bir kavrayışa ulaşma çabası bulunmaktadır (Karataş,2015,63). Amaçlı rastgele örneklem seçiminde evrenden belirlenen örneklem grubu içinde araştırmaya en çok katkı yapacağı düşünülen kişiler araştırmaya dahil edilmektedir (Baltacı,2018,258).

Bu çalışma, 6 Şubat 2023 tarihli Kahramanmaraş merkezli depremlerin Hatay'ın Antakya ilçesinde yaşayan kadın katılımcıların toplumsal cinsiyet rolleri üzerinde herhangi bir değişim meydana getirip getirmediğinin belirlenmesi amacı ile yapılmıştır. Bu sebeple deprem sırasında Antakya ilinde ikamet eden ve depremi Antakya'da yaşayan 11 kadın katılımcıyla yüz yüze derinlemesine görüşmeler yapılmıştır. Bu araştırma kapsamında katılımcılara depreme

nerede yakalandıkları, depremden sonra ne yaptıkları ve nereye gittikleri, depremde yakınlarını kaybedip kaybetmedikleri ve maddi kayıpları, eşlerinin iş durumları, çocuklarının depremden etkilenme dereceleri, depremden önceki ve depremden sonraki sorumluluklarının neler olduğu ve gelecek beklentileri sorulmuştur.

3. ARAŞTIRMA VE BULGULAR

Katılımcılardan en küçüğü 31, en büyüğü 58 yaşında olup grubun yaş ortalaması 43'tür. Katılımcıların 4'ü lisans, 1'i ön lisans, 3'ü lise ve 3'ü ilkokul mezunudur. Katılımcıların 9'u evli olup 1'i bekar, 1 katılımcının da eşi vefat etmiştir. Katılımcıların 5'i ev hanımı ve 1'i emekli olduğu için çalışmamakta olup geri kalan 5 katılımcının düzenli bir işi ve geliri bulunmaktadır. 5 katılımcının eşlerinin memur, 2'sinin belediyede işçi, 1 kişinin emekli, 1'nin de mali müşavir olduğu öğrenilmiştir. Eşleri memur, işçi ve emekli olan katılımcıların eşleri bu sürede düzenli maaş aldıklarını ve bir süre çalışmadıklarını ifade etmiştir. Eşi mali müşavir olup ofisi olan katılımcıysa; bu süreçte eşinin ofisinin yıkıldığını ve ekonomik açıdan zorlandıklarını belirtmiştir.

Katılımcılardan 5 kişi depremde kayıvalide, kuzenler, onların çocukları gibi yakın akrabalarını kaybettiğini, 6 katılımcı yakın akrabalarından herhangi bir kayıplarının olmadığını belirtmiştir. Ancak tüm katılımcılar akraba olmasa da iş yerinden, komşularından sevdiği insanları kaybetmenin de onlara derin bir hüznün verdiği, insanların aile olarak vefat ettiklerini bu durumun acılarını daha da arttırdığını belirtmiştir.

3.1. Deprem Anı ve Sonrası

Katılımcılara deprem anı ve sonrasında neler yaşadıkları, neler hissettikleri sorulduğunda öncelikle evlerinden zor şartlar altında çıksalar da enkazda kalmadan çıktıklarını, bir süre olayı anlamlandırmaya çalıştıklarını belirtmiştir. Mevsimin kış olması ve o gecenin çok fazla yağmurlu olması nedeniyle evlerinde çıkmak zorunda kaldıkları için çok mağdur olduklarını ancak canlarını kurtarmış olmanın mutluluğunu da yaşadıklarına vurgu yapmış olmaları düşündürücü bulunmuştur:

Depremden sonra evden çıkmaya çalıştık ama kapı kilitlendi. Kapıyı bir şekilde kırıp açtık. Evden çıktıktan sonra oğlumun yanına gittik. Çünkü o gece babaannesinde kalmıştı. Kayıvalidemim evine giderken tekrar depreme yakalandık dışarda. Kayıvalidemlerin evine gittiğimizde ev yıkılmıştı. Oğlum, kayınpederim ve kayıvalidem enkazda kaldılar. Kayınpederim ve oğlum enkazdan çıktı ancak kayıvalidemi kaybettik. (K1)

Deprem olduğu andan itibaren evden çıkmaya çalıştık ama koridordan dışarıya gelmekte zorlandık. Kafamıza tuğlalar yağıyordu sanki. Dış kapıyı açmaya çalıştığımızda dış kapının önüne vestiyer devrilmişti. Eşim ayakkabılığı kaldırmaya çalıştı. Ben çok telaşlandım elim ayağıma dolandı eşime destek olamadım. Dışardan sesler duyuyorduk. Bağırışmalar, ağlamalar. Ben eşime balkondan atlayalım dedim o anki telaşla. Ben ilk şaşkınlığı atınca gücümü topladım ve eşime vestiyeri çekmesi için yardım ettim ve küçücük bir delikten dışarı çıktık. Apartmanın merdivenleri parçalanmıştı. Nasıl çıktık bilmiyorum. Dışarı çıktığımızda dışarıyı kıyamet gibiydi. Yağmur, yıkılan evler, elektrik yoktu zaten. K8

Kapının önünde eve geçmeyi umuyordum. Durumun vahametinin farkına varmadığım için eşime sabah kaçta eve geçeriz diye sordum. Gece vakti daha evin halini görmediğim için evin iç duvarlarını patladığını, yıkıldığını bilmiyordum. Zaten sabah bir türlü olmadı. Sabah hava aydınlanınca evden bir şeyler alalım dedik. Evin halini gördüğümüzde eve geçilmeyeceğini anladık. Şok geçirdim. Çocuklarım ve küçük yeğenlerim yanımdaydı. Açlar çocuklara yitecek bir şeyler bulmaya çalıştık. Kapının önünde ateş yaktık. Arabaya geçtik. Benzin yok diye klimayı da açamadık. Hava çok soğuktu. Evden bir şekilde yorgan aldık. Arabada kaldık. Çocuklar

anne ben üşüdüm anne ayaklarım acıdı diyordu sürekli. Bu sırada Antakya 'da ne elektrik ne su hiçbiri yok, tuvalet ihtiyacımızı dahi karşılayamıyorduk. K9

Görüldüğü üzere katılımcılar evlerinden çıktıktan sonra felaketin büyüklüğünü tahmin edemedikleri için bir süre olayı anlamlandırmaya çalıştıkları, bir katılımcının durumu tam olarak anlamlandıramadığı için depremden hemen sonra eve dahi geçmeyi düşündüğü öğrenilmiştir. Katılımcıların yaşadıkları süreç farklı olsa da hepsinin ortak görüşü, deprem gecesi olan hava şartlarının zaten olumsuz olan süreci daha da olumsuz hala getirdiğidir. Çünkü hava şartlarının kötü olması bazı katılımcıların telaşla evden çıkarken araba anahtarlarını yanlarına almadıkları/alamadıkları için dışarda yağmurda kalmalarına sebep olmuş ve sürecin travmatik etkilerini ve zorluklarını arttırmıştır.

3.2. Depremın Diğer Yüzü: Maddi Kayıplar

Yapılan görüşmelerde; 8 katılımcı evlerinin deprem anında yıkılmasa da ağır hasarlı olduğunu ve deprem sonrasında kullanılamaz hale geldiğini aktarmıştır. 3 katılımcı evlerinin hafif ya da orta hasarlı olduğunu şu an evlerinin içine geçilebilecek durumda olduğunu aktarmıştır. Evleri ağır hasarlı olan katılımcılar bunun yanında binalarının ağır hasarlı olması nedeniyle oradan gelen kira gelirlerini de kaybettiklerini, bu durumun zaten zor olan ekonomik şartları daha da zor hale getirdiğini belirtmiştir.

Evimiz ağır hasarlı. Önceden 4 katlı evin bir katında kendimiz otururduk, diğer 3 katı kiraya verirdik. Maddi kaybımız da oldu. Bir de hırsızlar dadandı. Biz eşyalarımızın bir kısmını çıkardık, bir kısmını da evin yanında depomuz var oraya kaynak makinesiyle kilitleyip bıraktık ama hırsızlar mahallede kimse olmadığını bildiğinden depoya girmişler. Oradaki kombimiz, dolabımızı çaldılar. K3

Evimiz ağır hasarlı ne olacağı belli değil. Eşyalarımız çalındı. Depremden çok sonra ev ağır hasarlı olsa da çocuğa eşya almak için eşim eve girdi. Ancak çok az eşyayı aldı. Sonra alırsız dedik ancak biz cesaret edene kadar kıyafetlerim dahil tüm eşyalarımız çalındı. Sadece beyaz eşya ve yatak çıktı. K1

Depremın maddi kaybı sadece yıkılan evlerle sınırlı kalmamakta, aynı zamanda eşya kaybı da olmaktadır. Evleri ağır hasarlı olup yıkılmayan/çökmeyen depremzedeler evlerinden eşyalarını çıkartmak istemişler. Havanın soğuk olması sebebi ile hayatta kalabilmek için eşyalarını almaya ihtiyaç duymuşlar. Bu durum depremin manevi hasarının yanında maddi anlamda da yıkıcılığını ortaya koymaktadır. İnsanlar depremden sonra kuracakları hayatı bir nebze de olsa evlerinden kurtaracakları eşyalarla kolaylaştırmak istemiş olmalarına rağmen eşyalarına ulaşmakta yaşamış oldukları güçlükler ve eşyalarının çalınması zor olan şartlarını daha da zorlaştırmıştır.

Evimiz hafif hasarlıydı evimizde maddi hasar oluştu. Onun haricinde deprem sonrası evimize iki defa hırsız girdi. Hırsızlık sebebiyle de yine maddi zarar gördük. K11

Görüşmecilerin ifadelerinden de anlaşılacağı gibi evleri ağır hasarlı olup içinden eşyaları çalınan katılımcıların yanında evi hafif hasarlı olsa da evleri tadilat gerektirdiği için ya da eve geçinceye kadar depremin artçılarından emin oldukları süreç içinde hırsızların eşya almak için evlerine girmesi, yine maddi anlamda bir külfet getirmiş ve süreci iyice zorlaştırmıştır.

Ofisim yıkıldı. İç piyasada alacağım paralar kaldı. Müvekkillerim de depremzedeydi. Yeni gelecek işlerin yüzde doksanında para alamayacağım iş geldi. Para istediğimde herkes evimi kaybettim diyor. Müvekkil portföyüm gitti. Avukat olarak önceki dosyaların ileriye dönük 4-5

yılı var Mersin'den Antakya'ya sürekli git gel yaptım, para almadığım dosyalar için de ekstra maddi kaybım oldu. K4

Evleri yıkılan olduğu kadar avukat olması ve bu nedenle serbest çalışması sebebiyle ofisi de yıkılan katılımcının uzun vadede oluşturduğu müvekkil çevresinin depremde olması ekonomik olarak kendisini zor duruma sokmuştur. Görüşmeler yapılırken pek çok serbest meslek çalışanın benzer problemler yaşamış olduğu tespit edilmiştir. Katılımcı cevaplarından görüldüğü üzere maddi kayıplar yalnızca evlerin yıkılmasıyla sınırlı kalmayıp depremedelerin kira gelirlerini kaybetmiş olmaları, hırsızlık mağduru olmaları tekrar ev ve eşya sahibi olmak zorunda olmaları gibi pek çok farklı şekilde gerçekleşmiştir.

3.3. Depremden Sonrası: Yeni Bir Hayat Kurma Çalışmaları

Doğal afetlerin yerleşim bölgesi ya da yerleşim bölgelerinin yakınlarında meydana gelmesiyle birlikte göç sorunu ortaya çıkmakta; felaketin büyüklüğüne göre insanlar yaşadıkları yeri terk etmek zorunda kalmaktadırlar (Deniz, Yıldız, Parin ve Erdoğan, 2017, 1427). Benzer şekilde görüşme grubundaki katılımcılardan 3'ü, depremde sonra Antakya'da kaldıklarını ve birkaç gün sokakta yaşadıkları Hatay'ın farklı ilçelerine gittiklerini belirtmiştir. Yapılan görüşme esnasında bu 3 katılımcıdan 2'sinin Hatay'da olan 6,4'lük depremde sonra il dışına gittiği öğrenilmiştir.

Deprem olduğunda 8,5 aylık hamileydim doğumum çok yakındı. Bu sebeple bir yere gidemedik. Önce annemlerin evinin önünde ateş yaktık ve araçlarda kaldık. Ancak hamile olduğum için çok zorlandım ve eşim, annem, babam ve kardeşlerimle Hatay'ın ilçesindeki evimize döndük. Oradaki evimiz sağlamdı. Depremden kısa bir süre sonra da doğum yaptım. Stresim o kadar çoktu ki erken doğum oldu ve kızım bir süre kuvözde kaldı. Hatay'da 6,4'lük büyük deprem olunca çocuklarım için de korktuğum için Ankara'da devletin ayarladığı misafirhanelerde kaldık. K2

8 katılımcıysa birkaç gün sokakta kaldıktan sonra elektrik ve suyun olmaması, hijyen koşullarının yetersiz olması ve küçük çocukları olması sebebiyle Konya, Ankara, Mersin gibi illere gittiklerini, burada misafirhanelerde kaldıklarını ifade etmişlerdir.

Depremden sonra 3-4 gün sokaklarda kaldık ama çocuklarım küçük, üşüyorlar, elektrik, yiyecek ve su yok, şartlar çok ağırdı bu yüzden Ankara'ya gidip konuk evinde 4 aya yakın kaldık. K11

İlk 2-3 gün görüncemlerin evlerinin önündeki boş arazide kaldık, arabamız yoktu diye onlara sığındık ama ortam kalabalık, şartlar ağır bu yüzden Hatay'dan Ankara'ya kalkan araçlar var onlarla Ankara'ya gittik. K6

Afetlerden sonra kız çocukları ve kadınlar sosyal ve ekonomik faktörlerden dolayı; su, gıda, giyim, barınma, temel sağlık hizmetlerine erişme ile ilgili büyük sorunlar yaşamaktadırlar (Düger ve Yaman, 2022, 945). İnsanın yaşaması için temel kaynaklardan olan su, afet anında ve sonrasında bulunmamaktadır. Bu durum kısa ve uzun vadede hijyen sorununa neden olmakta ve salgın riskini de arttırmaktadır. Katılımcılar yaşam şartları elverişsiz olduğu için buldukları yerde birkaç gün kalsalar da uzun vadede barınamayacaklarını anladıkları için güvenli bölgelere göç etmek zorunda kaldıklarını belirtmişlerdir.

3.4. Konteynerde Yaşam

Katılımcılardan 3'ü konteynerde kalmakta olup 8 katılımcı depremden sonra kiralık ev bulup orada kaldıklarını belirtmiştir. Konteynerde kalan katılımcılar yaşadıkları zorlukları şu şekilde aktarmışlardır:

Özel hayatım yok. Çok zor. Ağlanacak halimize gülüyoruz, bir odada ben, eşim ve 2 çocuk var. Yemek aynı yerde pişiyor, aynı yerde uyuyorsun. Eşinle bile tartışamıyorsun. Bağırabiliyorsun. Dip dibe herkes. K5

Zorluk mu (gülüyor) hangi birini anlatayım kadının en büyük alışkanlığı temizlik ama burada alan kısıtlı istediğin yemeği yapamıyorsun elektrikli ocak var tezgâh yok. Çocuğun, karı kocanın kendine ait alanı yok. Çocuğun ders çalışacak ortamı yok kıyafetini bile istediğin gibi giyemiyorsun. Alan çok dar. Bir yere hazırlanacağı zaman çakışıyoruz. K6

Katılımcının “kadının en büyük alışkanlığı temizlik” cümlesiyle içselleştirmiş olduğu toplumsal cinsiyet rollerini felaketler sonrasında oluşan olumsuz ortamlarda da sürdürmeye çalıştığını ortaya koymaktadır. Düzenli ev hayatındaki alışkanlıklarını konteynerde yaşarken de sürdürme gayreti içinde olduğu ifadelerinden de anlaşılmaktadır.

Alışılan düzenden vazgeçip yeni bir düzene istek dışı ayak uydurmaya çalışmak yeterince zor bir durumken bunun deprem gibi bir afet sonucunda olması süreci kabullenmeyi zorlaştırmaktadır. Konteynerde yaşamak bir süre sonra tercih edilir olsa da insanların evdeki rahatlığı ve düzeni bulmakta zorlanmalarına, benimsenen aile hayatlarında yaşanan aksamaları kabullenmelerinde güçlük yaşamalarına neden olmaktadır. İnsan her ne kadar toplumsal bir varlık olsa da özel hayat, insanın ailesi dışındaki bireylerden dahi soyutlanıp, kendi kabuğuna çekildiği ve gerçekten kendisini olabildiği alan olduğu için konteynerlerin fiziki şartları bu durumu imkansız hale getirmektedir.

3.5. Kadının Sorumluluk Alanı

Katılımcıların hepsi ev içi sorumluluk olarak yemek, temizlik, çocukların bakımı gibi konuların onların rutin sorumlulukları olduğunu ifade etmiş olup bu konuda bazı katılımcıların ifadeleri şu şekilde tespit edilmiştir:

Annem ve babamın annesi olduğumu düşünüyorum aslında. Anne babaya evlatlık yapan çocuklar olur ben anne babama annelik yapıyorum. Yemek temizlik değil ama annemin sosyal hayatıyla ilgili yapacağı her şeyi ben yapıyorum. Abilerimden değil benden istiyor. Aslında abilerim de bende çalışıyoruz şartlar eşit ama annem benden beklenti içinde. Onların konfor alanını arttırınca onlar için benden beklentiye girmek alışkanlığa döndü. K4

Doğal afet sonrasında daha fazla belirgin hale gelen cinsiyete dayalı şiddet ve ayrımcılık, çocuk ve kadınların afetlerde erkeklere nazaran daha savunmasız olmaları, kadın ve erkek arasındaki fizyolojik ve biyolojik farklılıklar ve mevcut toplumsal norm, değere ve kültürel yapılardan kaynaklanmaktadır (Düger ve Yaman, 2022, 938). Katılımcı kadının ifadelerinden de anlaşıldığı gibi afet öncesi ya da afet sonrası fark etmeksizin kadından beklenen ailenin ev içi sorumluluğunu almak ve bunun devam etmesini sağlamaktır. Kadınlar her ne kadar iş hayatına girseler de toplumsal kodlar gereği önceliği evdeki işlere ya da anne babalarının taleplerine cevap vermeleri ve bu konuda herhangi bir bahaneye sığınmaması beklenmektedir. Yine toplumsal cinsiyet öğretilerinden hareketle erkeklerin önceliği iş hayatları yani kamusal alan olduğu için özel alanla ilgili taleplerde ilk olarak kadınlar akla gelmektedir.

Çocuklar, temizlik ve yemek bende. Bazen eşim yardımcı oluyor. Maddi anlamdaysa sorumluluk eşimde K5

Ev işi garanti. Temizlik ütü yemek çocukla alakalı işler. Okula hazırlama servis beslenme ders eşimle ortak. Çok büyük temizlik yapınca eşim yardımcı oluyordu. K6
Eşim sadece işe gidiyor. Bunun dışında her şey bende. Pazara gitme, çarşı, çocukların okulu, derslerinin takibi, birine misafir, düğüne gidilecek her şeyi ben düşünüyordum. Eşim benim işim çok yoğun deyip çekiliyor. Son 3 yıldır araba kullanmaya başladım. Eşim işte araba işte sen,, arabayı kullanıyorsun git işini hallet gel diyordu. K9

Yapılan görüşmelerde kadınların eğitim durumu ve yaş gibi unsurların fark etmeden hepsinin ev işleri ve çocukların bakımı ile ilgili sorumlulukları içselleştirdikleri görülmektedir. Bu durumu iki katılımcının eşlerinin ev işlerine “yardımcı olmak” tabiriyle ifade ettikleri dikkati çekmektedir. Bu ifadelerden hareket ile kadınların ev işlerini kendi sorumluluk alanlarında gördükleri ve bu durumu kabullenerek normalleştirdikleri söylenebilir.

3.6.Makus Talih: Depremden Sonra Devam Eden Sorumluluklar

Katılımcıların depremden sonra ev işleri, temizlik gibi sorumluluklarının devam ettiği dikkati çekmektedir. Bir katılımcı depremden sonra ruh halinin olumsuz olması sebebiyle eşinin kendisine çocukla ilgilenme ve temizlik noktasında katkıda bulunduğunu ifade etmiştir. Katılımcılar bunlarla birlikte deprem sonra o kargaşada dahi yemek yapılmasının kendilerinden beklenildiğini; çocuklarının dahi yemek, uyku, dinlenme gibi ihtiyaçları için babalarına değil kendilerine geldiğini ifade etmişlerdir. 1 numaralı katılımcının görüşleri de bu durumu net bir şekilde ortaya koymaktadır:

Depremden sonraki süreçte özellikle kayınbabam enkazdan çıkana kadar oğlumun bütün sorumluluğu bendeydi. Eşimin ailesi enkazda kaldığı için hastane süreci vardı. Depremden sonra köyde kaldığımız süreçte, ortam kalabalık bir de o hengâmede milleti doyurmak zorundasın, yemek hazırlamak zorundaydık. Köydeydik evin düzenini sağlıyorsun çocuğa bakıyorsun. Köyde kalabalıktık. Erkeklerden değil kadınlardan bekleniyor yemek gibi işler. K1

Afeti yaşayan kadınlardan henüz kendi travmalarını atlatamadan diğer aile üyelerinin bakımını sağlaması beklenmekte, diğer aile üyelerinin sorumluluğunu yüklenmeleri istenmekte, bütün bunların üstüne annelik rolü yüklenen kadınların duygusal olarak kendilerini güçlü kalabilmek zorunda hissetmeleri, duygusal olarak kendilerini baskılamalarına yol açmaktadır (Demirci ve Avcu, 2021).

Depremden sonra aynısı katlanarak devam etti. Depremden sonra evin önünde ocak kurduk çünkü yine insanlar yemek bekledi mecbur yapacağız. Eşimden değil benden beklendi çocuklar anne ne yiyeceğiz dedi. Taşların üzerinde yemek yaptık. K3
Ben temizlik takıntılıyım. Konteyner küçük olsa da yağ çözle duvarları siliyordum. Alan dar temizlik alanım kısıtlı olunca ben geriliyordum. Depremden sonra iyice temizliğe sardım. Hiçbir şey bulamazsam dışarıyı yıkayıp çamaşır asıyordum. Son zamanlarda artık duvardaki en ufak çizik bile psikolojimi bozuyordu. Takıntı haline geldi. K6
Deprem öncesindeki ev sorumlulukların aynen devam ediyor. Bununla birlikte en ufak sarsıntıda çocuklarımı toparlayıp evden çıkma sorumluluğu da bana yüklendi K11

Kadının sadece kadın olmasından kaynaklı maruz kaldığı şiddet, ayrımcılık, fiziksel ve duygusal yönden zarar vermek, tehdit etmek özgürlüklerinin kısıtlanması gibi davranışlar toplumsal cinsiyete dayalı şiddeti ifade etmektedir (Düger ve Yaman, 2022, 937). Katılımcılar afetten sonra da afet öncesi kendilerine yüklenen sorumlulukların artarak devam ettiğini, çocuklarının yemek gibi konularda “anne ne yiyeceğiz” diyerek yine kendilerinden beklenti

içine girdiklerini aktarmışlardır. Bu durum aslında yetişilen aile içinde öğrenilen toplumsal cinsiyet kalıplarını da ortaya koymaktadır.

Toplumsal cinsiyet eşitsizliğinin belirleyicileri öğrenim, gelir, meslek ya da yapılan işler (Şimşek, 2011, 120). Toplumsal cinsiyet eşitsizliğiyle temel hak ve özgürlüklerinden mahrum kalan kadın, mevcut toplumsal koşullarda ataerkil kültürün etkisiyle ev ve çocuk sorumluluklarını sürekli üreterek bir döngü içinde devam ettirmektedir. Toplumsal cinsiyet eşitsizliğinin pekiştirdiği kadınlar açısından dezavantajlılık durumu, afetlerde de konumunu koruyarak kadınların kırılabilirliğini artırmaktadır. (Akbal ve Taşbaş, 2024, 652).

3.7. Deprem Sonrası Çocukların Durumu

Doğal afetler can ve mal kayıplarına, yaralanmalara, ekonomik kayıplara neden olan ve kontrol edilemeyen doğa olaylarıdır. Doğal afet sonucu afeti yaşayan herkes etkilenirse de mevcut riski öngörme, tehlike anında direnme, başa çıkma ve tehlikeden kurtulma kapasiteleri diğer gruplara göre daha az olduğu için damgalanmak, dışlanma, yerinden olma, kaybolma gibi travmatik süreçleri özellikle savunmasız gruplar olan çocuklar, engelliler ve yaşlılar bu süreçten daha fazla etkilenmektedir (Şevik, 2023, 50). Bu konudaki katılımcı görüşleri şöyledir:

*Oğlum (6 yaş) enkaz kaldı. Depremden sonra da bir süre parmak emdi. İlk gittiği evlerde o gece orada kalıyorsak bu ev yıkılacak mı diye sordu. Yüksek seslerden korkmaya başladı. Bir keresinde telefon şarj olmuyordu. Oğlum telefon bozulduğu için telefon patlayacak sandı, çocuk korkuyor diye evden çıktık. Oğlum asansöre yalnız binmekten ya da karanlıktan da korkar oldu. Oyun terapistine götürdük. Şu an daha iyi. **K1***

*Büyük kızım (4 yaş) altına kaçırılmaya başladı. Bir şey anlatırken heyecanlandığında kekeleyor. Ekran bağımlılığı çoğaldı. Yıkılmış ev gördüğünde heyecanlı tepki veriyor. Bebeklerini konuştururken depremle ilgili oyun kuruyor. Biraz daha hırçın bir çocuk oldu. **K2***

*Korkmalar başladı. Yalnız kalamıyorlar. Kapının önüne bile tek çıkamıyorlar hep bir korku var. Elektrik kesilince büyük kızım ağlamaya başlıyor anne deprem mi olacak diye. **K5***

Doğal afetlerin 1 yıl, 3 yıl hatta 8 yıl gibi uzun süreli ruhsal etkileri bulunmakta olup bu ruhsal etkiler kaygı bozuklukları, özellikle depresyon, psikosomatik rahatsızlıklar ve travma sonrası stres bozukluğu gibi psikolojik rahatsızlıklarla kendini göstermektedir. Doğal afetlerden etkilenme durumu bireysel farklılıklardan dolayı kişiden kişiye değişen bir süreç olup bazı bireylerin bu durumlara beklenenden daha az tepkiler verdikleri de araştırmalarla ortaya konulmuştur (Yöndem ve Eren, 2008, 61; Berkay vd., 2003, 3).

*Küçük oğlum Ankara'da çok zorlandı. Orada arkadaş edinemedi. Antakya'ya döndük Antakya'da da arkadaş edinemedi. Eski arkadaşlarını aradı. Hiç evden dışarı çıkmadı. Yalnız ve karamsar bir çocuk oldu. Büyük oğlum da Ankara'da kalmak istemiyordu. Mutsuzdu. Dönmek istiyorlardı. **K9***

*Çocuklarımla fiziksel sağlıkları yerinde çok şükür. Benim 4 kızım (18, 17, 15, 7 yaş) var. Deprem anında hepsi benimle birlikteydi. Depremi yaşadığı korku sebebiyle psikolojik olarak etkilendiler. Çocuklarımla hepsinde uyku problemi oldu. Uykudan ara ara atılarak uyanıyorlar. Deprem sonrası enkaz görmekten ve yıkıntı evlerden çıkan cesetler sebebiyle o günlerden itibaren mutsuz bir ruh halindeler. Deprem olduğunda bir kızım üniversite sınavına hazırlanıyordu. Deprem sebebiyle hazırlıkları sekteye uğradı. Bu sebeple ilk sene sınavda istediği sonucu alamayınca 1 sene daha sınava hazırlanmak durumuna kaldı. Çocuklarımla deprem sonrasında yağmur yağdığı ve elektrik kestiğinde korku hali oluştu. Ayrıca depremden sonra dışarı çıkıp gezmek istemiyorlar. Ayrıca gece banyo yapmaktan çekinmeye başladılar. **K11***

Orman yangınları, depremler, tsunami gibi beklenmedik anlarda meydana gelen doğa olayları bireyler üzerinde fiziksel etkilerinin yanı sıra psikolojik etkilere de sebep olmaktadır. Doğal afet yaşayan kişilerde özellikle travma sonrası stres bozukluğu gibi ruh sağlığı sorunları da yaşanmaktadır. Bireylerde stres yaratan bu durumlar, bireyleri fiziksel, mental ve davranışsal olarak etkilemekte, travmalara sebebiyet vermektedir (Cankardaş ve Sofuoğlu, 2019, 152). Afetlerden sonra oluşan ruhsal sorunlar ve bunların belirtileri afetzedenin; yaşına cinsiyetine medeni durumuna, afetten sonra can ve mal kaybının olup olmadığına, eskiden herhangi bir sağlık sorunu olup olmadığına göre değişiklik göstermektedir (Taşçı ve Özsoy, 2021, 489). Katılımcılara çocuklarının deprem sonrası tepkileri sorulduğunda hepsinde depremden sonra korku, endişe ve kaygı halinin devam ettiği, o ana kadar olmayan ya da yaşlarından beklenmeyen davranışlar sergilemeye başladıkları öğrenilmiştir. Psikolojide gerileme olarak adlandırılan genellikle stres altında ya da zorlanma durumunda çocuğun daha sevgi dolu ve güvenli olduğunu hissettiği yıllarına geri dönmek adına kullanılan bu savunma mekanizması, depremden ifadelerinde de görülmektedir. Katılımcı cevaplarından da görüldüğü üzere çocuklar o ana kadar yapmadıkları ya da bebeklik çağında yapıp bıraktıkları davranışları- parmak emme, alta kaçırmaya-deprem gibi istenmeyen durumlar, stres ve kaygı nedeniyle ortaya çıkmaktadır. Yetişkinlerin dahi baş etmekte zorlandığı bir süreç olan deprem süreci çocuğu, yaşı doğrultusunda kaldıramayacağı bir yükün altında sokmakta ve çocuğun olumsuz ruhsal ya da davranışsal tepkiler vermesine neden olmaktadır. (Toker Arslan ve Sözer Çapan, 2018, 1808).

3.8. Deprem Sonrası Hayata Bakış Açıları

Katılımcıların hepsinin depremden sonra hayata bakış açıları ve alışkanlıkları konusunda değişim yaşadıkları öğrenilmiştir. Katılımcılar, deprem sonrasında ya evlerinin kalabalıklaştığı ya da önceden daha doyumsuz olduklarını düşünerek minimal bir yaşam tercih ettiklerini belirtmişlerdir. Bu konudaki bazı katılımcı görüşleri şöyledir:

Gece evde tek kalamıyorum. Bir şeye uzun süre odaklanamıyorum. Çünkü kendimi dinliyorum gece sık uyanıyorum. K2

İnsanlara çok eğer verip küçük şeylere üzüldüğümü gördüm ama şu an kendimden ve çocuklarımdan daha önemli bir şey yokmuş onu anladım. Önceden markaya da önem verirdim şimdi 6 çay bardağıyla da geçinebiliyormuşuz onu anladım. Mesela önceden 2 yemek takımım vardı üçüncüsü de lazım diyordum. Şimdi çok şükür bir terliğim var yeter diyorum. K5

Kaygılarım çok. Uyuyacağım zaman ya bir şey olursa yatmaya geçince beynimde tekrar o anı hala yaşıyordum. Deprem olacak sanıyorum. Uzandığımda bir yer devrilirse nasıl kaçırım diye plan yapıyorum telefonsuz yatmıyorum enkazda kalırsam ışık açarım diye. Üstümü kıyafetimi önemsemiyorum. Kıyafetime bakmıyorum saçımı boyamıyorum vazgeçtim. Yaşamın tadını alamıyorum. İçimden gelmiyor kendime bakmak. Yaşama sevinci kalmadı. K7

Depremden önce daha girişkendim. Şimdi kendimi daha pasifize olmuş hissediyorum. Çünkü depremden dolayı iş yerime uzak bir yerde ev tuttuğum için emekli olmak zorunda kaldım. Deprem olmasa emekli olmayı düşünmüyordum. Deprem öncesinde her şey yolunda ve normaldi. Şu anda içimde korkular var. Kendi evini kendinin hissetmiyorsun. Sanki her an elinden gidecekmiş gibi hissediyorsun. K8

İşe gittiğimde aklım sürekli evde çocuklarda kalıyor. Önceden ev için ihtiyaçları fazla fazla alıyordum ancak deprem sonrası ölümün yakın olduğunu hissetmiş olmam sebebiyle olsa gerek günlük ihtiyaç kadar alışveriş yapıyorum evde fazladan erzak/kıyafet bulundurma alışkanlığımı bıraktım. K11

Sahiplenme duygusu insanın konfor alanında yaşadığı ortamı ve durumu benimsemesi sonucu oluşmaktadır. İrade dışında yapmaya mecbur bırakılan şartlarda sahiplenme duygusu

azalmaktadır. Deprem sonrası zorunlu yer değiştirme sonucunda insanlar akıllarından dahi geçmeyen yerlerde ve şartlarda yaşamaya mecbur kalmaları, bu sahiplenme duygusunun azalmasına sebebiyet vermektedir.

3.9.Gelecekte Beklenti

İçinde bulunduğumuz coğrafya özelinde depremler ancak genel tabiriyle doğal afetler, yaşamın parçası olmuş özellikle gençlerde gelecek kaygılarının oluşmasına neden olmuştur (Yılmaz ve Çetinkaya, 2024, 18). Literatüre bakıldığında Yılmaz ve Çetinkaya'nın (2024) yaptıkları araştırmada depremin oluşu ve gelecek kaygısı arasında anlamlı bir ilişki tespit edilmiştir. Depremi yaşayanlarda ortaya çıkan endişe, korku, kaygı, travma ve güvensizlikle birlikte psikolojik olarak bireylerin davranışları etkilenmiş; sosyal ilişkilerde, kurumlarda ve rollerde değişimler meydana gelmiştir (Tazefidan, 2024, 63). Tan Gülünay, Anar, Anar, Çelik ve Çelik (2023)'in Kahramanmaraş merkezli 6 Şubat 2023 tarihinde meydana gelen deprem sonucunda Samsun iline göç eden öğrencilerin yaşadıkları sorunları tespit etmek için öğrenci, öğretmen ve velilerle yaptıkları çalışmada; öğrenciler farklı bir ortama girdikleri ve deprem kaynaklı korkuları olduğunu; veliler korku, sinir, içe kapanma ve uyum sağlamakta zorlandıklarını, öğretmenlerse depremde öğrencilerin derslere odaklama, adaptasyon ve dikkat dağınıklığı konularında sorun yaşadıklarını ifade etmişlerdir. Katılımcıların literatürle uyumlu olarak gelecekte bahsetme noktasında çekimser davrandıkları, umutsuz oldukları ve şu an sahip olduklarını da sahiplenirken tekrar kaybetme korkusu yaşadıkları gözlenmiştir:

Çok umutsuzum. Hala da daha kötü şeyler olabileceğini düşünüyorum. Depremden sonra hayattan alabileceğim en kötü tecrübeyi aldığımı düşünüyorum. Hala da daha kötüsü olabilir. Bazense iyi şeyler de olabilir diyorum. Bir kısır döngüdeyim aslında mutlaka hayatımda güzel şeyler olmak zorunda gibi düşünüyorum çünkü hayat akıyor. K4

Hatay için ümitliyim umarım toparlanır. Geleceğe dair plan yapamıyorum her dakika bir şey olabilir gibi geliyor. Bir hafta sonra deprem olur evime geçemem gibi düşünüyorum. Hayal kurmaya çalışıyorum ama artçı deprem oluyor böyle olunca umudum kırılıyor ve yine başa dönüyoruz gibi geliyor. K5

Geleceğe dair umudum isteğim yok ilerde bunu yaparım diye bir hayalim kalmadı. K7

Antakya'nın yeniden toparlanabilmesi ve eski hayatımıza dönebileceğimiz konusunda çok ümitli değilim. Şu an Antakya'da her yer inşaat alanı, havası çok kirli altyapı hizmetleri çok zayıf, sosyal alan konusunda ciddi eksikler var. Bu eksikliklerin giderileceği ve sağlıklı huzurlu bir ortamda eski günlerdeki yaşantımıza döneceğimiz konusunda ümidim çok zayıf. Halen ara ara ilimizde ve çevre illerde de depremler olmaya devam ediyor. Daha büyük bir deprem olacağı konusunda ciddi endişeler de taşımaktayım. K11

Aydın ve Aytaç (2023) 6 Şubat 2023 Kahramanmaraş depreminin psikososyal etkilerini araştırdıkları ve katılımcı grubunu kadınların oluşturduğu araştırma sonucuna göre kadınların endişe, kaygı, korku seviyelerinin yüksek olduğu, hayata dair beklentilerinin azaldığı, depresyon seviyelerinin yükseldiği, dini duygu ve inanç değerlerinin yükseldiği, uzun vadedeki gelecek planları için umutsuz oldukları tespit edilmiştir. Bu çalışma verileri de katılımcıların hepsinde Antakya için bir nebze umut olsa da kendileri adına umutsuz oldukları, geleceğe dair plan kurmaktan ya da kendileri için hayal kurmaktan vazgeçtiklerini ortaya koymaktadır.

SONUÇ

Deprem nedenlerine çözüm bulunamasa da binaların deprem sırasındaki ve sonrasındaki sürecini düzenlemek mümkündür. Deprem ülkesinde binaların sağlam ve sağlıklı yapılması, toplanma alanlarının belirlenmesi, depremden sonra gelecek yardımların sağlıklı bir şekilde organize edilmesi önem arz etmektedir.

Afetler meydana geldikten sonraki süreçte afet yönetimindeki başarısızlık, toplumun kırılganlık düzeyiyle ilişkili olup kadınlar, yaşlılar, çocuklar ve engelliler gibi dezavantajlı gruplar, diğer gruplara nazaran bu süreçten daha fazla etkilenmektedirler (Akbal ve Taşbaş, 2024, 652). Depremın zamansız meydana gelmesi, devamında oluşan artçı depremler, deprem bölgesinde yaşayan bireylerin günlük hayata adapte olmasını zorlaştırmaktadır. Deprem olma olasılığı içinde sürekli tetikte olan birey, günlük hayat rutinlerine geri dönememekte ya da bu rutinelere geri dönmekte zorlanmaktadır. (Karabacak Çelik, 2023, 578). Depremın psikolojik etkileri kısa sürede geçmemekte bireyin günlük yaşantısını olumsuz yönde etkilemektedir.

Antakya’da yapılan bu araştırma sonuçlarına bakıldığında da katılımcıların hepsinin depremin üzerinden 1,5 yıl geçmesine rağmen gece sık uyanma, uykuya geçmekte zorlanma, gece olası bir depremde kaçabilecekleri yeri belirleme, deprem anında şiddetli yağmur yağması ve anında elektriklerin kesilmesi nedeniyle, yağmur yağdığına ya da elektrik kesildiğinde kaygı durumunun artması, gibi etkilerin halen mevcut olduğu, katılımcıların çocuklarında da benzer travmatik etkilerin halen devam ettiği; arkadaş edinmekte zorlanma, akademik başarıda azalma, deprem sonucunda başka bir ile göç edilmişse oranın yaşam şartlarına uyum sağlamada zorlanma, özellikle okul öncesi yaş grubunda gerileme (regresyon) sebebiyle alt ısılatma ya da parmak emme gibi davranışların görülmesi gibi olguların arttığı tespit edilmiştir.

Bunlarla birlikte katılımcılardan konteynerde yaşayanlar, konteynerdeki yaşam şartlarının olumsuzluğundan, eski ile karşılaştırıp mutsuz olduklarından bahsetmişlerdir. Katılımcıların hepsinin gelecekte beklenen konusunda umutsuz oldukları, geleceğe dair plan yapmakta zorlandıkları ve bu konuda çekimser oldukları, depremin travmatik etkilerini halen yaşadıkları belirlenmiştir. Katılımcıların evleri ağır hasarlı olanların maddi kayıpları olduğu gibi, evlerinden kira gelirli elde edenlerin de yine maddi kayıplarının arttığı öğrenilmiştir.

Kadınların deprem öncesinde evde sorumlu olduklarını düşündükleri yemek, temizlik ve çocuk bakımı gibi sorumlulukların artarak devam ettiği, özellikle depremin ilk zamanlarında yemek bulma noktasında çocuklarının ve aile fertlerinin bu taleplerini kendilerine iletmelerinin gerginliğini yaşamış oldukları anlaşılmaktadır. Toplumsal cinsiyet rollerinin afetler sonrasında da hem kadınlar hem de aile fertleri tarafından devam ettiriliyor olduğu ifadelerle ortaya konulmuştur.

Toplumsal cinsiyet kalıpları toplumsallaşma sürecinde öğrenilen, geleneksel ataerkil toplumlarda özel alandaki sorumluluğu kadınların aldığı, kamusal alandaki sorumluluğun ise erkeklerle bağdaştırıldığı bir olgudur. Deprem süreci öncesinde kadınların özel alanda devam eden rol ve sorumlulukları, depremden sonra da devam etmiş, bu sorumluluklara ek olarak aile bireylerinin kaygılarını azaltmaya çalışma, onlara ruhsal olarak destek olma gibi yeni sorumluluklar yüklenmiş olduğu anlaşılmaktadır.

ÖZET

Kahramanmaraş merkezli 6 Şubat 2023 depremi 11 ili etkilemiş ve depremi yaşayan bireylerin toplumsal yaşamlarında önemli değişimler meydana gelmiştir. Toplumun kadın ve erkeklerden beklentileri deprem öncesinde olduğu gibi toplumsal cinsiyet rolleri çerçevesinde şekillenmeye devam etmiştir. Buna göre büyük bir depremin psikososyal ve ekonomik etkileri hem bireyler hem de toplum üzerinde varlığını sürdürürken, erkeklerin toplumsal cinsiyet rollerine uygun olarak ailenin ekonomik kaygılarını giderecek şekilde, asgari düzeyde de olsa hanenin ekonomik ihtiyaçlarını karşılayabilmesi beklenmektedir. Deprem sonrası işyerlerinin yıkılması, erkeklerin aile üzerindeki en büyük gücü olan ekonomik geliri elde tutma olanağını azaltmış ve kısıtlamıştır. Çalışma kapsamında deprem sırasında Antakya'da bulunan 10 erkek katılımcı ile yüz yüze derinlemesine görüşmeler yapılmış, deprem sırasında ve sonrasında iş ve gelir kaybının etkileri sosyolojik açıdan açıklanmaya çalışılmıştır. Çalışmanın verileri, serbest meslek sahibi olan ve kendi işyerlerine sahip olan katılımcıların, eski düzenlerine mümkün olan en kısa sürede dönmeye çalıştıklarını, güvenliklerini sağladıktan sonra öncelikle işyerlerini düzene sokarak iyileştirmeye çalıştıklarını ve bunu cinsiyet rollerinin sorumluluğuyla yaptıklarını ortaya koymuştur.

Anahtar Kelimeler: *Toplumsal cinsiyet, erkek, deprem, afet*

AFTER THE 6 FEBRUARY EARTHQUAKE, ECONOMIC CONCERNS OF EARTHQUAKE VICTIM MEN: THE CASE OF ANTAKYA

ABSTRACT

The 6 February 2023 earthquake centred in Kahramanmaraş affected 11 provinces and significant changes occurred in the social lives of individuals who experienced the earthquake. The expectations of the society from women and men continued to be shaped within the framework of gender roles as before the earthquake. Accordingly, while the psychosocial and economic effects of a major earthquake continue to exist on both individuals and society, men are expected to be able to meet the economic needs of the household, albeit at a minimum level, in a way to eliminate the economic concerns of the family in accordance with gender roles. The destruction of workplaces after the earthquake reduced and restricted the ability of men to hold the economic income, which is the greatest power of men over the family. Within the scope of the study, face-to-face in-depth interviews were conducted with 10 male participants who were in Antakya during the earthquake, and the effects of the loss of work and income during and after the earthquake were tried to be explained from a sociological perspective. The data of the study revealed that the participants, who were self-employed and had their own workplaces, were trying to return to their old order as soon as possible, and after ensuring their safety, they

first tried to improve their workplaces by putting them in order, and that they did this with the responsibility of their gender roles.

Keywords: *Gender, man, earthquake, disaster*

GİRİŞ

Deprem; tabiatın değişimi adına bir hareketlilik halidir (Canbulut ve Temiz, 2024, 59). Depremler yeryüzünde yalnızca sarsıntılara neden olmaz aynı zamanda insanların bir arada yaşadığı toplumsal yapı ve kurumların da önemli değişimler yaşamalarında etkili olurlar. Bu bağlamda deprem can ve mal kayıplarıyla birlikte alt yapı sorunlarını da beraberinde getirmektedirler. Ekonomik açıdan zarar gören insanların bir kısmı para kazanmak ve yaşamlarını yeniden kurmak için başka yerlere göç etmek zorunda kalabilmektedirler (Bozkurt, 2023, 93). Bireysel sorunların yanı sıra depremler sonrasında salgın hastalıklar, yağmacılık, fırsatçılık ve sosyal eşitsizlikler gibi toplumsal sorunlar da çıkabilmektedir (Fırat, 2022, 48).

Depremler sonucu insanların ailelerini, arkadaşlarını ve evlerini kaybetmesi, maddi yönden dezavantajlı duruma düşmeleri gibi istenmeyen durumlar ve bunların yansımaları da yaşanabilmektedir. Tüm bunların yanında depremedelerin yaşadıkları yerden göç etmeyi çözüm olarak görüp göç etmeleri ile birlikte yeni gittikleri yerde deprem korkusu yaşamamakla birlikte farklı toplumsal sorunlar da yaşayabilmektedirler. (Tiryaki Yenilmez, 2023, 40). İstisnaları olmakla beraber deprem sonrası çoğunlukla ülke içi göç meydana gelmektedir. Tarihsel sürece bakıldığında fay hattı üzerinde yer alan bölgelerde deprem meydana gelmiş, şehirler yıkılmış, birçok insan vefat etmiş, hayatta kalanlar depremin yıkıcı etkilerinden korunmak adına ülke içine geçici ya da kalıcı olarak göç etmek zorunda kalmışlardır (Ökten Sipahioğlu, 2024, 295). Bu durum elbette göç edilen bölgede sağlık, eğitim ve konut gibi hizmetlerde aksamalara yol açmakta, ekonomik zorluklar gibi sorunları da beraberinde getirmekte ve zaman içinde bölgeye göç eden depremedelere karşı ayrımcılık, huzursuzluk ve güvensizlik gibi sorunlara da zemin hazırlamaktadır (Ökten Sipahioğlu, 2024, 308).

Afet ve Acil Durum Yönetimi Başkanlığı (AFAD) depremi “Yer kabuğu içindeki kırılmalar nedeniyle aniden ortaya çıkan titreşimlerin dalgalar şeklinde yayılarak yeryüzünü sarsma” hali olarak tanımlar (Afad,2019). Yapılan çalışmalar doğal afetlerden en çok etkilenen grupların başta çocuklar olmak üzere, gençler ve yaşlılar olduğunu ortaya koymaktadır. Çocukların özellikle yaş grubu, cinsiyeti, ailede kayıp olup olmaması, ailenin tepkisi, ekonomik koşullar ve sosyal destek sistemlerinin var olup olmaması çocukların tepkisini farklı düzeylerde etkilemektedir (Erkan, 2010, 56).

Depremler; can ve mal kaybına sebep olan, bireylerin yaşamlarını derinden etkileyen yer kürede meydana gelen, yıkıcı etkilere sahip olan karşı konulamaz önemli doğa olayları olarak kabul edilmektedir. Ülkemizde; Cumhuriyet tarihinde 1939 Erzincan ve 1999 Marmara Depremleri, en yıkıcı etkilere sahip olan depremler olup bunların yanında 1992 Erzincan, 1995 Dinar, 1998 Adana-Ceyhan, 2011 Van, 2020 Elazığ ve İzmir depremleri binlerce kişinin yaşamını etkilenmiştir (Çalışkan ve Kaya, 2021, 1054). Tarihsel açıdan bakıldığında 1900–2012 yılları arasında ülkemizde 225 büyük deprem meydana gelmiş olup resmî sonuçlara göre bu depremlerde toplamda 86 bin 644 insanımız hayatını kaybetmiş, 566 bin yıkık veya ağır hasarlı konut ortaya çıkmıştır.

Ülkemizdeki depremlere can kaybı ve hasarlı binalar açısından bakıldığında 1939 Erzincan depremi ile 1999 Gölcük merkezli Marmara depreminin ilk sıralarda yer aldığı dikkati çekmektedir. 1939 Erzincan depreminde 116 bin 720 bina ağır hasar görmüş ve 32 bin 962 kişi vefat etmiştir. 1999 Marmara depremindeyse 112 bin 724’ü yıkık ve ağır hasarlı olmak üzere toplam 376 bin 479 konut ve işyerinde hasar saptanmış ve resmi rakamlara göre 17 bin 408 ve/veya 17 bin 480 kişi vefat etmiştir (TMMOB, 2012,8). 23 Ekim 2011 tarihinde merkez üssü Van’ın Tabanlı köyü olan 7,2 büyüklüğündeki deprem de ülkemizdeki en büyük depremlerden

birisi olarak kabul edilmektedir. Sadece ilk yıkıcı deprem anında değil, sonrasında yaşanan artçılarda da benzer şartlar oluşmakta, bu da mağduriyetlerin devam etmesinde etkili olmaktadır. 23 Ekim depremin ardından benzer şekilde 9 Kasım 2011 tarihinde yine Van'da 5,6 büyüklüğünde bir deprem meydana gelmiştir. Bu iki deprem ve artçı depremler, maddi ve manevi anlamda bölgede büyük yıkımlara yol açmıştır (TMMOB, 2012, 19).

Depremler sonucunda meydana gelen ölümler bireylerin toplumla ilişkilerini, karar verme becerilerini önemli oranda etkilemektedir. Toplum özü gereği değişim ve dönüşe açık dinamik bir yapıdır. Ancak toplumlar her ne kadar değişime açık olsalar da kendi içlerinde oturtmuş oldukları düzenleri bulunmaktadır. Afetler ise toplumda hali hazırda mevcut olan düzeni olumsuz yönde etkilemektedirler. Meydana gelen kaos ortamı, can ve mal kayıpları bireylerin günlük rutinlerini ve alışageldik düzenlerini bozmaktadır. Ani gelişen bu felaketlerin sonucunda toplumsal yapı sarsılarak toplumsal düzen ciddi düzeyde bozulabilmektedir (Tazefidan, 2024, 63).

Depremin Ekonomik Etkileri

Depremin ekonomik etkilerini doğrudan ve dolaylı etkiler olarak iki gruba ayırabilmek mümkündür. Depremlerin doğrudan etkilerini can kayıpları, binaların hasar görmesi veya yıkılması, araçların hasar görmesi, eşyaların enkaz altında kalmasıyla meydana gelen mal kayıpları, bölgede çalışanların ücret kayıpları, işletme sahiplerinin üretim ve gelir kayıpları, yollar, köprüler gibi ulaşım ve altyapı kayıpları vb. şeklinde özetlemek mümkün. Depremlerin dolaylı etkilerini ise deprem bölgesindeki üretim ve vergi gibi gelir kaynaklarında azalma, bölgedeki üretimin durması ya da azalmasıyla birlikte ihracatın azalması, istihdam ve işgücü sorunları, enflasyon artışı, depremlerden sonraki beslenme ve barınma sorunlarından kaynaklı salgın hastalıklardaki artışlar vb. şeklinde belirtmek mümkün (Artantaş ve Gürsoy, 2024, 197). Peker ve Şanlı (2022)'nin 2020 Elazığ depremini yaşayan depremlilerle yapmış oldukları görüşme sonuçları, depremden sonra iş yerlerinde meydana gelen maddi ve manevi kayıpların işsizliği arttırmış olmasından kaynaklı sebeplerle ekonomik alanda büyük kayıpların ve dolayısı ile de ekonomik dengesizliklerin yaşandığını ortaya koymaktadır.

Depremin Psikososyal Etkileri

Travmalar genellikle hayatın olağan akışını derinden etkileyen savaş, saldırı, doğal afet veya kazalar sonucunda ortaya çıkmaktadır. Ani gelişen bu travmatik süreçler, bireylerin ruhsal dünyalarını olumsuz yönde etkilemektedir (Karabacak Çelik, 2023, 576). Bireylerin yapıları birbirlerinden farklı olduğu için yaşanan travmatik olaylara aynı tepkileri vermeleri beklenemez. Bireysel farklılıklar ve yaşanmışlıklar bazı bireylerin yoğun stres sonucu içine kapanıp sorunları görmezden gelmelerine, bazılarının ise aşırı tepkiler göstermelerine sebep olabilmektedir (Kirman, 2023, 19). Afetler ve özellikle de son dönemde yaşanan depremler sonrasında bu farklılıklar çok net bir şekilde görüldü.

Depremi yaşamadan önce insanlar çoğunlukla yaşamlarını derinden etkileyecek travmatik süreçler yaşamadıkları için dünyayı güvenli bir alan kabul etmektedirler. Oysa bir anda yaşanan depremler sonrasında aile fertleri, yakın arkadaşlar ve sevdiklerinin ölümü hiç beklemedikleri bir durum ortaya koymaktadır. Yaşanılan yalnızlık duygusu ve güven kaybı hayatlarında belirleyici bir unsura dönüşebilmektedir. Güven duygusu zamanla inşa edildiği için aniden yıkılması nedeniyle mevcut duruma adapte olmak oldukça zor olmaktadır. Geçmişte yaşanan anılar ve mevcut gerçeklik arasında kalanlar, çelişkili duygu durumları karşısında çeşitli ruhsal sorunlar yaşayabilmektedirler (Nakajima, 2012, 151). Belirsiz durumlar bireylerin stres düzeylerini tetikleyerek arttırmakta ve bu strese bazı psikolojik sorunlar da eşlik edebilmektedir. Doğal afetler, aniden meydana geldikleri için bireylerin güven duygularını zedelemektedir. Depremin neden olduğu psikolojik yıkımı bireyler birebir tecrübe edebildikleri

gibi yakınlarının başına gelmesi ya da medya ve sosyal medyadan gördüklerinin olumsuz etkisi ile de yaşayabilmektedirler (Gülyol, 2024, 39).

Fiziksel yaralanmaların yanı sıra depremden sonra depremzedelerin korku, depresyon, anksiyete ve travma sonrası stres bozukluğu yaşıyor oldukları tespit edilmiş olup depresyon ve travma sonrası stres bozukluğunun eş tanı olarak görüldüğü ve bu etkilerin uzun süreli olarak yaşandığı tespit edilmiştir (Yorulmaz, Yastıbaş Kaçar ve Çıvgın, 2024, 2). Bozkurt (2023) 6 Şubat 2023 depremini yaşayan Nurdağı, İslâhiye, Hatay, Kahramanmaraş ve Elbistan'da yaşayan depremzedelerle yapılan görüşmeler sonucunda deprem sonrasında yaşanan can ve mal kayıpları nedeniyle depremzedelerde korku, depresyon ve stres gibi şikayetlerin olduğunu, bazı depremzedeler için hayatın anlamsızlaştığını, bu kişilerde; kaygı, uykusuzluk, sinir hali saldırganlık, unutkanlık, konsantrasyon bozuklukları gibi olumsuz duygu durumlarının tespit edildiğini ortaya koymuştur.

Depremzedeler; depremin can ve mal kaybına neden olmasıyla birlikte; ikametgahın zarar görmesi veya yıkılması, aile ve arkadaş kaybı, iş hayatının belirsizliği gibi nedenlerden dolayı psikolojik olarak zorlu bir dönem yaşamaktadırlar. Depremzedeler, evlerinin durumu ve toplanma yerleri ile ilgili belirsizlik, yakınlarını, evlerini, işlerini, sosyal yaşam alanlarını kaybetme ya da kaybetme korkusu ile birlikte ruhsal olarak zorlu bir süreç yaşamaya başlamaktadırlar (Taşçı ve Özsoy, 2021, 489). Cosgun ve Cömert (2023); 2020 yılındaki İzmir depremini yaşayan bireylerle yaptıkları araştırmada, kadınların travma sonrası stres bozukluğu gösterme düzeylerinin erkeklere nazaran daha yüksek olduğu sonucuna ulaşmışlardır. Bu da toplumsal cinsiyet rollerinin yaşamış oldukları travmanın şeklinin belirlenmesinde önemli bir unsur olduğuna da işaret etmektedir.

1. Araştırma Konu, Kapsam, Yöntem ve Tekniği

Araştırma kapsamında nitel araştırma yöntemi kullanılmış olup katılımcılara yönelik yarı yapılandırılmış bir görüşme formu hazırlanmıştır. Nitel araştırmalar; katılımcıların belirli bir olaya ya da araştırılan konuya ilişkin düşüncelerinin tümevarım ya da tümdengelim yoluyla anlamlandırılarak yorumlanmasıdır (Creswell, 2023, 45). Katılımcılara amaçlı rastgele örneklem tekniğiyle ulaşılmıştır. Amaçlı örneklem tekniğinin kullanılmasının nedeni bu tekniğin konu hakkında bilgisi ve ilgili kişilerin deneyimlerinin anlaşılmasına yöneliktir (Sığırı, 2021, 126). Bu çalışmada da 6 şubat deprem gerçeği ile karşı karşıya kalmış olan erkekler arasından görüşmeci olmayı kabul edenlerle yarı yapılandırılmış görüşmeler gerçekleştirilmiştir. Araştırma kapsamında görüşmeler, 10 erkek katılımcıyla yüz yüze ve telefon aracılığıyla yapılmıştır.

Katılımcılara deprem anında nerede oldukları, deprem süreci ve sonrasında ne hissettikleri, depremde birinci ya da ikinci derece akrabalarından herhangi bir kayıp yaşayıp yaşamadıkları, buldukları yeri ne zaman terk ettikleri, depremden sonra nereye yerleştikleri, deprem sonrası maddi kayıpları, şu an ne işle meşgul oldukları, depremin çalışma düzenine olan etkileri, gelecekte beklentileri vb. sorulmuştur. Depremzede erkeklerle yapılan görüşme verileri sosyolojik bakış açısı ile değerlendirilmeye çalışılmıştır.

2. ARAŞTIRMA VE BULGULAR

Katılımcıların tamamı 6 Şubat 2023 tarihli Kahramanmaraş merkezli depremi Antakya'da yaşayan kişilerden oluşmaktadır. Katılımcıların en küçüğü 33 en büyüğü 64 yaşında olup grubun yaş ortalaması 44 olarak tespit edilmiştir. Katılımcıların 8'i evli olup, 1 katılımcısının eşinin vefat ettiği, 1 katılımcının da depremden önce eşinden boşandığı öğrenilmiştir. Katılımcıların 1'i ilkökul, 1'i ortaokul, 1'i lise, 3'ü ön lisans, 3'ü lisans ve 1'i de doktora mezundur. 1 katılımcı hariç hepsinin farklı sayıda çocuğu bulunmaktadır. Katılımcılardan 3'ü memur olup diğer 7 katılımcı ise serbest meslek sahibidir.

Görüşmeciler arasında birinci ya da ikinci derece akrabalarından anne, kayınvalide, kuzen ya da kuzen çocukları gibi kayıp yaşayan 7 katılımcı bulunmakta olup 3 katılımcı ise aile bireylerinden olmasa da arkadaş çevrelerinden kayıplarının olduğunu bu kayıpların da kendilerini çok üzdüğünü ve olumsuz şekilde etkilediğini belirtmişlerdir.

Yapılan görüşmelerde katılımcılardan serbest meslek sahibi olanların hepsinin çalıştıkları iş yerlerinin yıkıldığı ve 5 katılımcının süreç içinde iş yerlerini kendilerince güvenli gördükleri yerlerde yeniden kurdukları, 1 katılımcının kendi mesleğini bırakarak başka bir ilde farklı bir sektörde çalıştığı, 1 katılımcının da yine il değişikliği yaparak aynı mesleğini devam ettirdiği öğrenilmiştir.

2.1. Deprem ve Sonrası

Katılımcılara deprem anında nerede oldukları, nasıl davrandıkları, depremden sonra buldukları yeri ne zaman terk ettikleri, deprem sürecinde ve sonrasında hisleri sorulmuştur. Katılımcılardan 7'si depremden sonra barınma ihtiyacı, hijyen koşulları, yiyecek-ıçecek ihtiyacı, çocuklarının olması gibi nedenlerle depremden bir süre sonra şehir dışına gittiklerini, 3 katılımcıysa köye gitme alternatifleri olduğu için Antakya sınırları içinde kaldığını belirtmiştir.

“Depremden sonra eşim ve çocuğumla hemen evden çıktık. Sabah nasıl oldu bilmiyorum. Hava soğuk olunca eve bir şeyler almaya geçtik ama evin durumunu görünce eve bir daha geçemeyeceğimizi anladım. Yemek bulmaya çalıştık, ısınmak için ateş yaktık. Evden aldığımız battaniyeyle arabada uyuduk. Şehirde birkaç gün kalıp yemek, ısınma ve barınmada sorun yaşayınca şehri terk ettik.” K1

“Çocuklarım ve eşimle çıktıktan sonra ne olduğunu anlamaya çalıştık. Elektrikler kesilmişti her yer karanlık o bir yandan, şiddetli yağmur bir yandan çok zorlandık. İlk geceyi arabamızda geçirdik. Sonra birkaç gün evin önünde ateş yaktık arabalarda kaldık. Hatay'ın başka bir ilçesinde kızım var oraya gittik. Ancak 15 gün sonra tekrar deprem olunca Ankara'daki misafirhaneye yerleştik”. K2

“Uyuyorduk önce ne olduğunu anlamaya çalıştık ancak çok şiddetli sarsıntılar yaşadık. Ne olduğunu anlayamadan evden çıkmaya çalıştık. Kafamıza evden tuğlalar yağıyordu. Şaşkındık ama hayatta kalmaya da çalışıyorduk. Depremden sonra barınacak yerimiz yoktu ve yemek bulmakta zorlandığımız ve yaşımız da ileri olduğu için Ankara'ya gittik.” K3

“Sallantıya uyandık. Annem ve babamda uyandı. Yataktan koşup babamların odasına gittim onlar kalktı biz hep beraber dışarı çıktık biz dışarı adım atar atmaz büyük deprem oldu her birimiz bir tarafa düştü. Ben bir ses duydum. Annemin sesiydi. Annemin sağ ayağına duvar düşmüştü. Ben annemi kaldırdım. Annemin ayağı büyük ihtimale kırıldı. Sallanırken güvenli alana götürmeye çalışırken annemi tam kaldıramadım. Bana yardım edecek kimse yoktu. Arkadaşım karşı evdeydi o geldi. Annemi güvenli alana götürdük. Arkadaşımın ailesini kurtarma çalıştık. Tekrar bir sallantı daha oldu. 1 saat sonra annem kalp krizinden vefat etti.” K4

“İlk başta kendimiz koruyacak alan yarattık, eşim ve çocuğumu korumaya çalıştım. Deprem bitince evin aşağısına indik. Herkes gibi şoktaydık ne hissedeceğimizi bilmiyordum. Köye gittik orada okulun bahçesindeki çardakta ve arabada 3-4 gün kaldık. Sonrasında Ankara'da arkadaşımın evi vardı, kullanmıyordu oraya yerleştik.” K6

Yaşanılan deprem felaketi sonrası katılımcıların ifadelerinden, öncelikle ne yaşandığını anlamlandırmaya çalıştıklarını, depremin üzerinden birkaç gün geçtikten sonra asgari yaşam standartlarını sağlayabilmek için şehir dışı ya da yakın köylerde kalabilecekleri uygun yerler olduğunu öğrendiklerinde hızlıca riskli bölgeden ayrılmaya çalıştıkları anlaşılmaktadır. Yine görüşmeci ifadelerinden, deprem anında kendilerinin ve ailelerinin sağ ve sağlıklı olup olmadıklarını kontrol ettikleri, sonrasında yardıma ihtiyaç duyanlara zihinlerinde oluşturmuş

oldukları önem sırasına göre yardımcı olmaya çalıştıkları anlaşılmaktadır. Öncelikle depremin boyutlarını, can ve mal kaybı olup olmadığını anladıktan sonra genellikle geçici de olsa aile bireylerine güvenli bir yerleşim imkânı sağlayabilmek için çaba sarf ettiklerine vurgu yapmış oldukları dikkati çekmektedir.

2.2. Depremden Sonra Ekonomik Durum

Görüşme grubundaki erkeklere depremden sonra ekonomik durumlarını nasıl değerlendirdikleri sorulmuştur. Katılımcılardan 3'ü memur oldukları için düzenli maaşlarının yattığını belirtmiş olup gelir konusunda önemli bir sıkıntı yaşamadıklarını belirtmiştir. 7 katılımcı serbest meslek sahibi olmaları nedeniyle bu süreçte ekonomik gelir kaynaklarının kesildiğini belirterek birikmiş paralarından harcama yaptıklarını ifade etmişlerdir. Ancak süreç içinde ailelerinin geçimi konusunda kendilerini son derece güvensiz hissettiklerine vurgu yapmış oldukları dikkati çekmiştir. Bu konuda bazı katılımcı görüşleri şu şekilde tespit edilmiştir:

“Birikmiş param vardı. Depremden sonra bazı mükelleflerden de ödeme aldım. Bilgisayardan çalışmaya başlayınca eskisi gibi olmasa da para kazanmaya başladım.” K1

“Ayakkabı işine girdim internet üzerinden al sat yapıyordum. Sonra ayakkabı işini askıya aldım. Köfteci dükkânı açtım köyde. Ama malzeme tedarikinde sorun yaşıyordum dükkân açmaya karar verdim ve Reyhanlı'da dükkân açtım. Köfteci açarken bile sadece masa sandalye bulabildim. Köfte pişirecek araçların tedarikini çok zor yaptım.” K4

“40 gün sonra işe başladım. Bu süreçteyse hem birikmiş param vardı hem de eş dost yardım etti. Eşim de çalışıyordu eşimin çalıştığı firma deprem dolayısıyla maddi yardım gönderdi.” K6

“Kendi imkânlarımla geçici süreli iş yeri kurdum. Cadde kenarına iş yeri yaptık 1 sene çalıştık. Daha sonra sağlam bulduğumuz yere geçtik.” K8

Katılımcıların cevapları incelendiğinde öncelikle barınma sorununu hallettikten sonra özellikle serbest çalışanların kendi işlerini devam ettirebilmenin yollarını araştırmış oldukları dikkati çekmektedir. Bu durum hem bir hayatta kalma mücadelesi hem de toplumun erkekten beklediği evi geçindirme sorumluluğuyla ilişkilendirilebilir. Toplumsal cinsiyet rollerini öğrenirken erkeklerin, evin ekonomik ihtiyaçlarının karşılanması ve aile bireylerinin güvenliğinin sağlanmasının birincil görevleri olduğunu öğrenerek yetiştirilmeleri, afetler gibi çok özel şartlarda da bu sorumluluklarını sürdürmelerinde etkili olmuş görünüyor.

2.3. Çalışma Düzeni Değişiklikleri

Katılımcılardan 3'ü memur olup düzenli hesaplarına yatan maaşları sayesinde ihtiyaçlarını mümkün olduğu oranda karşılayabildiklerini belirtmiştir. Serbest meslekle uğraştıklarını ifade eden katılımcılar ise depremden dolayı iş yerleri/ofislerinin yıkıldığını, bu sürede birikmiş para ve yardımlarla geçimlerini sürdürmeye çalıştıklarını ifade etmişlerdir. Yapılan görüşmelerde; serbest mesleğe sahip olan katılımcıların bir süre sonra konteyner ya da kendilerince güvenli olduklarını düşündükleri bir yerde iş yerlerini tekrar açtıkları, şehir dışına gitseler dahi bir iş bularak ekonomik ihtiyaçları karşılamaya gayret ettikleri anlaşılmaktadır.

“Ofisim vardı. Ancak artık ofisim yok. Bilgisayarlı evden çalışma yöntemine geçtik. 8-9 ay evden çalıştık sonrasında yeniden ofis açtık. Yeniden uygun bir yer aldım. Eski ofisim kadar olmasa da idare ediyor. Bana eski ofisi kur deseler 400 bine kuramam. Deprem öncesinde düzenli ödemeler alıyordum, ancak depremden sonra alamadım. Ödemeler yüzde 80'den yüzde 20'ye indi. Ödemeleri tahsilde zorluk yaşıyorum. Gecikmeli alıyorum. O da benden kaynaklı olmadığı için bende tahribat yaratmıyorum. Ancak içinde yine de bir endişe var. Zamanında borcumu alamama, para kazanamama endişesi var o da moral bozuyor.” K1

“Memur olduğum için idari izinliydim. Zamanla esnek mesai oldu şimdi tam mesaiye geçtik. Memur olmanın rahatlığı maaşını alıyor olmak. Ben aslında deprem olmasaydı mart ayında emekli olacaktım. Ama ev yıkıldığı eşim çalışmadığı ve sorumlu olduğum çocuklarım olduğu için şu an çalışmak zorundayım. Şu an Hatay’ın bir ilçesinde yaşıyorum. Her gün Antakya’ya git gel yapıyorum. Bu durum yaşım gereği beni çok yoruyor. Emekli de olamam. Maddi kaybım olur.” K2

Toplumun erkekten beklediği davranış ve sorumluluğu öncelikli olarak evi geçindirmesi olduğu için deprem sürecinde de olsa erkeklerin bu sorumluluklarını yerine getirme gayreti içinde oldukları ifadelerine de yansımış görünmektedir.

“Ben ayakkabı imalatçısı ustabaşiyim. İş yerim yıkıldığı için şu an işsizim. Sağlık sorunlarımdan dolayı ameliyat oldum, çalışmıyorum. Önceden kendime ait ayakkabı imalathanem vardı. Ekonomik olarak iyi kazanıyordum. Depremden sonra iş yerim yıkıldı. Depremden sonra geçinmek için lokantada işe girdim. Ama ayağımdan ameliyat olmam gerektiği için şu an çalışmıyorum ama iyileşince yine mutlaka işe döneceğim. Bir şekilde çalışıp geçinmek zorundayım.” K5

“Daha önceden kendi iş yerim vardı. Çalışma saatlerimi ben belirlerdim. Patron olduğum için rahattım. Şu an Ankara’da çalışıyorum. Ama patron ben olmayınca elbette birilerine hesap vermek zorundasın. Çalışma saatlerine uymak zorundayım. İlk süreçte alışamadım. Yıllardır kendi iş yerim olduğu için çok rahattım.” K6

“Kurumsal sayılacak 3 mağazamız vardı önceden. Şu an 2 mağazamız var ama maddi sebeplerden çalışan alamıyoruz. Önceden patron bendim artık çalışan gibi oldum.” K8

Daha önceki iş yerlerinde iş kuran konumunda olup iş yerinin sahibi olan bireyler için kendi iradeleri dışında gerçekleşen iş ya da çalışma düzeni değişikliği bir nevi statü kaybını da beraberinde getirmektedir. Katılımcıların ekonomik kaygılarının ruhsal olarak kendilerini olumsuz yönde etkilediği, bu durumun gelecek kaygısına sebep olduğu ve iş konusunda eski hale gelebilmek adına çok çaba sarf ettikleri anlaşılmaktadır.

“Serbest meslek bir ay fazla bir ay eksik kazanırsın. Düşük kazanınca ben nerde yanlış yapıyorum diye düşünülüyor. Memur olsak daha mı iyiydi diye düşünüyorum bazen. Ama mesleği sevince göğüs gerebiliyorum. Kazancım rızkım bu kadarmış diyorum.” K4

“Çöküntü halindeyim. Eşimi kaybettiğim için toparlanmak kolay değil. Kimse birden düzelmez. Zaman her şeyin ilacı derler ama yıkım büyük ben eskisi gibi olacağına inanmıyorum. Eski neşe dostluk akrabalıklar bence bitti. Herkes gittiği şehirde düzen kuracak baya dağılmalar oldu.” K5

“Gelecek kaygısı yaşıyorum. Kirayı nasıl ödeyeceğim diye düşünüyorum bu da özgüvenimi düşürüyor.” K7

“Sürekli iş yeri değiştirince maddi kayıp da oluyor. İşlerimi eskisi gibi yoluna sokmak için sürekli arayış içindeyim. Tetikteyim. Ruhsal yorgunluğa sebep oluyor.” K8

Habitus sosyal yapıların içselleştirilmesini sağlamakta olup bu durum bireylerin davranışlarını kısıtlayan sınırların içselleştirilmesini, bir anlamda geleneklerin yaratılmasını sağlayan yapıcı bir roldedir. Bu içselleştirme yoluyla birey, düşünmesine gerek olmadan toplumsal yapının kendisinde beklediği davranışı üretebilmektedir (Karademir ve Kaya, 2020, 657). Toplumun da erkekten beklentisi düzenli bir iş ve gelirin olması, evinin geçimini sağlaması olduğu için bireylerin depremden sonraki süreçte bir an önce iş konusunda eski düzenlerine dönme, her ne kadar yardımlar yapılıyor olsa da kendi işlerini kurarak kendi kazançlarını elde etme eğiliminde oldukları öğrenilmiştir.

2.4. Gelecekte Beklenti ve Değişen Alışkanlıklar

Katılımcılara geleceğe dair beklentileri sorulduğunda öncelikle Antakya'nın eski düzenine kavuşması yönünde beklentilerinin olduğunu vurgulamaları dikkat çekici bulunmuştur. Kendilerine dair beklentilerinin ne veya neler olduğu sorulduğunda da hepsinin ailelerinin mutlu olması ve en kısa süre içinde ekonomik kaygılarını aşmayı, eski düzenlerine dönmeyi istedikleri öğrenilmiştir. Katılımcıların erkek olması ve toplumsal cinsiyet rollerinin kendilerine yüklemiş olduğu sorumlulukları özel durumlarda da devam ettirme isteklerinin bu düşüncelerinde etkili olduğu düşünülmektedir. Toplumsallaşma süreci içinde öğrenilenlerin içselleştirilmiş olmasının insanların düşünce ve davranışlarını da şekillendirdiği katılımcı ifadelerine de yansımış görünmektedir:

“Antakya için 5 yıl içinde bir beklentim yok. Gelir ve gideri idame ettiriyorsam normalin üstü gibi hissediyorum. Antakya şu an inşaat alanı ve bu durum küçük esnafa yansımıyor. Büyük firmalar kazanıyor küçük firmalar kazanamıyor. Ruhsal olarak maddi kayıpta herkesin başına geldi benim de başıma geldi gibi hissediyorum. Şu an ofisimi toplamaya çalışıyorum. Ben şu an maddi olarak kazandığım için herhangi bir eksiklik hissetmiyorum. İşim gereği illa ki bir yerden kazanırım gibi düşünüyorum.” K1

“Artık evde bir şey saklamıyorum. En değerli eşyalarımız evdeydi. Duygusal yönde değişim yaşadım. Eskiden birikim yapayım sonra harcarım derdim ama şu an direk anında yaşamak istiyorum. Depremden önce biriktireyim biraz daha çalışayım toparlayayım derdim. Şu an imkanın varsa yap. Ertelememek lazım diye düşünüyorum.” K4

“Memleketimizin ayağa kalması düzelmesi. Yeniden Antakya'ya dönmek. Kaygılarım da var. Ekonomik olarak kaygılarım var. Ekonomik kaygılarımı bir an önce aşabilmek istiyorum.” K6
“İşlerimin oturması sonrasında daha mutlu hayat sürmek istediklerimi daha rahat yapabilmek istiyorum. Depremden önce spora gidiyordum hiç aksatmazdım, her şeye, yediğime vb. dikkat ederdim. Arkadaşlarım ararsa spora gideceğimi söyleyip gitmezdim, kurallarım vardı. Depremden sonra yarın ölüm var canım ne istiyorsa, imkanım neyse onu yapacağım dedim. Depremden sonra 2 -3 defa yurtdışına gittim geziyorum. Kendime daha çok zaman ayırıyorum.” K7

“Yani gelecekte aslında çok bir beklentim yok. Oğlum iyi bir hayat sürsün diye bir şeyler yapmaya çalışıyorum. Bu sebeple de ekonomik olarak çalışmam lazım.” K10

Görüşmeler gerçekleştirilirken katılımcıların hepsi depremden sonra düzenlerinin alt üst olduğunu, zorunlu olarak buldukları evleri, şehirleri terk etmenin kendilerini duygusal olarak yıpratmış olduğunu belirtmekle birlikte depremden sonra kendilerine ve isteklerine daha çok zaman ayırdıklarına dikkat çekmişlerdir. Ancak görüşmeler sırasında katılımcıların hayatı güzel yaşamaya özen göstermeye özen göstermelerine rağmen bunu aile fertleri ve yakınlarındaki insanlar için de istiyor oldukları anlaşılmıştır.

Tüm bunların yanında 3 katılımcı, yaşları gereği gelecekte beklentilerinin olmadığını, hayatlarının geri kalan kısmını huzurlu bir şekilde yaşamak istediklerini belirtmiştir. Bu katılımcıların, kendilerine dair gelecek beklentilerini en alt seviyeye indirirken çocuklarının ve ailelerinin geleceği için beklentilerini daha yüksek tuttuklarını ifadelerine dayanarak söylemek mümkün.:

“Şehrin toparlanmasını istiyorum. Bir de evimizi yeniden onarıp geçmek istiyorum. Kendimle ilgili bu yaşta sonra çok bir beklentim çok çocuklarımın rahat etmesini isterim.” K2 (58 yaş)

“Üniversitenin depremde yoğun zarar görmesi sebebiyle uzaktan eğitim yapıyoruz. Deprem bölgesine öğrenci gelmek istemiyor. Üniversitenin ve şehrin bir an önce toparlanmasını

diliyorum. Kendimle ilgili gelecekte fazla bir beklentim yok. Kalan ömrümde ailem ve ben rahat yaşamak istiyorum.” K3 (64 yaş)

“Ben bu yaştan sonra beklentim yok. Çocuk çocuk evlendi. Hayat nasıl giderse gider. Önceden hedeflerim vardı. Düzenim vardı. Düzen olmayınca hedef de olmuyor. Alışkanlığım aile iş düzenim dağıldı. Düzenim kalmadı ailem dağıldı. Aile ortamım kalmadı.” K5 (56 yaş)

Bozkurt (2023) 6 Şubat 2023 tarihli depremi yaşayan depremzedelerle yaptığı araştırmada, depremzedelerin en büyük sorunları arasında ev ve iş yerlerinin kaybetmeleri neticesinde “gelecek kaygısı”nın öne çıktığını tespit etmiştir. Aynı şekilde Akkaya ve Polat (2024) Hatay’da depremi yaşayan halk kütüphanesi çalışanlarıyla yaptıkları görüşmeler neticesinde tüm katılımcılarda geleceğe dair endişe, dış dünyaya kapanma ve iç motivasyonda azalma faktörlerinin etkisiyle kaygı düzeylerinde artış tespit edilmiştir.

Yapılan araştırmalarla benzer bulgular ortaya koyan katılımcıların ifadeleri, gelecek kaygılarının ön planda olduğunu ortaya koymaktadır. Kaygı seviyesinin yüksek olmasında yaşamış oldukları şehrin harap olmuş olması, eski düzenlerine dönebilmelerinin oldukça zor olduğuna inanıyor olmaları etkili olmuş görünüyor. Yaşanılan şehirde insanların satım alma güçlerinin düşmüş olması, çalışılan sektöre bakılmaksızın serbest meslekle uğraşan kişileri de doğrudan etkilemiş, ekonomik kazançlarını azaltmıştır. Eskiye göre geliri azalanlar özellikle de ailelerinin geçiminden kendilerini mecbur hisseden erkekler, güvensizlik duygusunu daha kuvvetli hissetmektedirler. Görüşme verileri genel olarak değerlendirildiğinde genç yetişkin erkeklerin gelecek kaygılarının daha yüksek, 55 yaşının üzerindeki erkeklerin ise gelecek beklentilerinin oldukça düşük olduğunu söyleyebilmek mümkündür.

SONUÇ

Deprem beklenmedik bir anda meydana gelmesi, devamında yaşanan artçı şoklar, bozulan toplumsal ve ekonomik hayat, deprem bölgesinde yaşayan bireylerin günlük hayata adapte olmasını zorlaştırmaktadır. Deprem olma olasılığı içinde sürekli tedirginlik yaşayan bireylerin günlük hayat rutinlerine geri dönmeleri zor olmakta ya da bu rutinlere geri dönmeleri zaman almaktadır. (Karabacak Çelik, 2023, 578). Depremi nedenlerine çözüm bulunamasa da binaların deprem öncesi, deprem anı ve sonrasında süreci düzenlemek mümkündür. Bunda elbette binaların sağlam ve sağlıklı yapılması, toplanma alanlarının belirlenmesi, iletişimin devamlılığın sağlanması, şehre gelen alternatif güvenli yolların tesis edilmesi, depremden sonra gelecek yardımların sağlıklı bir şekilde organize edilmesi de son derece önemli olmaktadır.

Yapılan araştırmada katılımcıların depremin ilk şokunu atlatıp yaşananları anlamlandırdıktan sonra hayatta kalabilme iç güdüsüyle hareket ettikleri, alternatif yollar aradıkları öğrenilmiştir. Bazı katılımcılar depremin yıkıcı etkisi geçinceye kadar şehir dışına gitmeyi ya da köyleri olup da kalabilecekleri görece daha güvenli evleri olanların köylerine geçici süre için de olsa gitmeyi tercih ettikleri bilgisine ulaşılmıştır. Katılımcılar, barınma sorununu çözdükten sonra geçimlerini nasıl sağlayacaklarını planladıklarını, bunun için mevcut mesleklerine devam edemeyenlerin yeni bir iş arayışına girdiklerini, gerekirse sektör değiştirdiklerini söylemişlerdir. Görüşmeler sırasında katılımcıların bu tutumlarının tercih değil toplumsal cinsiyet rollerinin yaşama yansıyan pratikleri olduğu bilgisine ulaşılmıştır.

Bireyler, kendi habituslarında toplumun onlardan beklediği rol ve sorumluluk bilinciyle yaşamakta, gerekli ya da zorunlu durumlarda da habituslarını ihtiyaçları doğrultusunda şekillendirmektedirler. Katılımcılar habituslarını toplumun beklediği rol ve sorumluluklar doğrultusunda evi geçindirme prensibi ve temeliyle oluşturmuş olup deprem bu duruma bir ölçüde ket vurmuş olsa da katılımcıların mevcut mesleklerini yapamaları dahi alternatif yollarla yeni işlere girerek ailelerinin geçimini sağlamaya gayret ettikleri tespit edilmiştir.

Katılımcıların gelecekte beklentilerinin de yaşları doğrultusunda olduğu görülmektedir. Yaş grubu ortalama 50’nin altında olan katılımcıların işlerine devam etme, çalışma konusunda daha

motivasyonlarının yüksek olduğu görülürken, 55 yaşın üzerindeki katılımcıların bu konudaki motivasyonlarının daha düşük olduğu, ancak çocuklarının geleceğine dair konularda motivasyon seviyelerinin yükseliyor olduğu tespit edilmiştir.

Tüm bunlarla birlikte tüm katılımcıların ekonomik kaygılarının halen devam ettiğini, şu an para kazansalar dahi elde ettikleri iş, ev ya da eşyanın da her an bir afet sonucu gidebileceği endişesiyle yaşamlarını sürdürüyor olduklarını söylemek mümkün.

Nitel araştırma yöntemiyle hazırlanan bu çalışmamızda katılımcıların toplumsal cinsiyet rolleri doğrultusunda kendi habituslarını kurdukları, depremle bu habitus belirli oranda bozulmuş olsa dahi kendilerine yüklenen evi geçindirme rol ve sorumluluğuna devam ettikleri, en azından devam edebilmek için çeşitli yollara başvurmaya çalıştıklarını söylemek mümkündür.

ABSTRACT

Digital marketing encompasses methods including affiliate, mobile, video, content, social media, and internet marketing, and it combines electronic technology with conventional marketing concepts. Adopting digital marketing can improve national growth and business performance. The success of the hotel and tourism industries, consumer happiness, and digital marketing are all examined in this review article. The study's goal is to examine how customer satisfaction functions as a mediator in the relationship between digital marketing and the performance of the hotel and tourism sector in north eastern Nigeria. The study examines secondary data from books, journal articles, newspapers, and conference papers in addition to drawing on the author's expertise, insights, and experiences in digital marketing in the hospitality and tourism sector. The report outlines the digital resources that businesses can employ, such as social media, mobile devices, video, and the internet, and demonstrates how these technologies can be used to persuade, inform, and inspire consumers. Consequently, the analysis shows that the performance of the hotel and tourism sector can be impacted by digital marketing. Similarly, the outcome shows that the relationship between digital marketing and the performance of the hospitality and tourism industry is partially mediated by consumer happiness. As a result, digitization can improve costs, earnings, competitive advantage, and customer pleasure. According to this study, digital marketing can help promote hospitality-related goods. Additionally, digital marketing supports economic growth and climate action as sustainable development goals. According to the study's findings, digital marketing should be adopted by hospitality companies in order to improve performance and advance national development.

Keywords: digital marketing, customer satisfaction, performance of hospitality and tourism industry

Introduction

Digital marketing tactics are essential for improving the performance of the travel and hospitality sector, which raises consumer happiness and efficiency and indirectly influences a community's economic growth (Adam et al., 2020; Mwalukasa, 2024). In digital marketing, offerings that are valuable to customers are created, communicated, delivered, and exchanged through the use of information and communication channels (ICT) (Strauss & Frost, 2014).

Digital marketing has the potential to improve visibility, draw in more clients, boost business growth, and increase individual community awareness of tourism items (Jermstittiparsert & Srisawat, 2019; Kerdpitak, 2022). Customer satisfaction is directly impacted by effective and efficient supply chain procedures, which also result in reduced expenses, enhanced customer loyalty and trust, and better performance (Wahyuddin et al., 2020). In the tourism business,

outbound tour operators and destination management firms work together to generate distinctive travel packages, and tour and hotel operators involve a variety of stakeholders in the planning and delivery of travel packages to clients (González-Torres et al., 2021).

Customer loyalty and retention rates in e-commerce businesses are also significantly influenced by a positive customer experience across the entire journey, which includes elements like order fulfillment, transparency, delivery options, returns and refunds, product quality, communication, personalization, sustainability, inventory management, and continuous improvement (Camilleri, 2022). The tourism industry can achieve sustainable growth and success by incorporating digital marketing tactics into their supply chain operations (Adam et al., 2020). Researchers have found that managing the supply chain for tour operators presents a number of difficulties, such as seasonal variations and erratic demand patterns (González-Torres et al., 2021) as well as interruptions brought on by natural disasters and geopolitical events (Gössling et al., 2020).

Since perceptions of tourist destination online content (TDOC) have a direct impact on travelers' intents to visit a destination, digital marketing techniques are essential components of the hospitality tourism sector (Mocanu & Szakal, 2024). Repeat business is influenced by travelers' happiness with their initial trip to the destination and the digital marketing platforms they use to exchange experiences (Armutcu et al., 2023). To place their goods and services in specialized markets, businesses are using a digital marketing mix, which is an online marketing approach that includes the most popular digital marketing techniques: affiliate marketing, social media marketing, email marketing, content marketing, mobile marketing, and search engine optimization (Kumar, 2021). By allowing businesses to reach their target audience through mobile devices, mobile marketing strategies are crucial to their online advertising. However, creating mobile-friendly websites with innovative content requires constant monitoring and updates (Efendioğlu, 2023; Tong et al., 2020).

Therefore, hotels need to use data analytics and engage in digital marketing to be competitive in today's digital landscape. Effective digital marketing makes it feasible to increase revenue, cultivate a loyal client base, and improve the hotel's online reputation. In recent years, there has been a greater emphasis on customer satisfaction, which is the degree to which customers are happy with a company's goods and services. When the client actively participates in the delivery process, the service provider's power to affect the customer's experience is reduced or eliminated, claim Kathiravan and Prabu (2024). A service's intangibility, inseparability, heterogeneity, and perishability are some of its most distinctive features. Because services are intangible, it can be difficult for a company to understand how clients assess and rank their quality.

Despite the many advantages that digital marketing offers, the best marketing plans frequently call for a combination of traditional and digital techniques that are adapted to the unique needs and circumstances of each company. As a result, it is crucial to comprehend the special opportunities and difficulties presented by this blend, especially when discussing the competitive environment where comparable brands and products coexist. It is imperative to look into how hotels and tourist destinations can successfully combine and balance traditional and digital marketing strategies to keep a competitive edge in customer acquisition and retention for improved performance as the hospitality and tourism sector adjusts to changing consumer behaviors influenced by technological trends. Therefore, the purpose of the study is to review previous study on the mediating effect of customer satisfaction in the relationship between digital marketing and performance of hospitality and tourism industry in North East, Nigeria.

Literature Review

Kathiravan and Prabu (2024) investigate the connection between hotel customers' contentment and digital marketing. Surveys of hotel guests and in-depth interviews with hotel

managers will be used as research approaches in order to accomplish this goal. This chapter attempts to offer insights into how hotel management and marketers can employ digital marketing tactics to enhance visitor satisfaction in Chennai by examining the data gathered. The primary goal of the study is to find out how customer satisfaction is affected by digital marketing strategies used by Chennai's hotel industry. Utilization, benefits and drawbacks, and perception will be the sub-variables of digital marketing, which will be the independent variable. The dependent variable, on the other hand, will be customer satisfaction, which includes sub-variables like general satisfaction and the decisions made by customers while booking hotels. A questionnaire will be given to 404 hotel visitors in the Chennai region in order to collect data for this descriptive study.

According to Arlindo and Gupron (2024), stakeholders (government, businesspeople, suppliers, consumers, and so forth) are paying close attention to the issue of customer satisfaction. Their improved comprehension of the idea of contentment as a tactic to prevail in more competitive business environments is the cause of this. For business owners and managers, customer happiness is crucial in this situation since satisfied consumers will tell other prospective customers about their expectations, enhancing the company's credibility. This study is divided into multiple sections. Orientation to the digital marketing concept is the first emphasis of the literature review. Second, the study's research approach and hypotheses are founded on a review of prior research, including the connection between customer happiness and digital marketing, both directly and indirectly through the reputation of the business. Theoretical studies and prior research have led to the conclusion that digital marketing affects customer satisfaction both directly and indirectly through the company's reputation.

Mwalukasa (2024) uses the Resource-Based View theory as a guide to examine how Tanzanian tour operators' supply chains operate in relation to digital marketing strategies. With a sample size of 230 companies, the study uses a convergent parallel mixed-method design and a sampling frame of 543 tour operators. Both structured questionnaires and interview guides were used in the data gathering process. Descriptive statistics and structural equation modeling were then used for analysis. The results show a strong positive correlation between the supply chain performance of tour operators and digital marketing tactics. According to the findings, artificial intelligence should be incorporated into the mix of digital marketing tactics to improve analytics and enable tailored communications. In order to improve the quality of their websites and social media platforms and make sure that visitors are presented with up-to-date content that captures their attention, tour operators must hire knowledgeable information and communication technology specialists and implement ongoing training programs. Tour operators should concentrate on boosting website traffic and paying close attention to internet reviews in order to improve the delivery of their products and services.

Significant improvements in personalized messaging, improved analytics, and more successful marketing strategies are all made possible by the integration of AI with marketing strategies. It also makes it possible to process vast amounts of data, recognize trends, and forecast consumer behavior (Khatri, 2021). Through the use of suitable analytical methods, online reviews are essential to tourists' decision-making process and provide tour operators with strategic data regarding company performance (Oliveira et al., 2020). The importance of traveler references and online reviews is also highlighted by Pabel and Prideaux (2016) in virtual communities such as Trip Advisor, which offer travelers and their partners a global platform with consumer-generated content, price comparison tools, online reservations, and related services, as well as access to reviews on nearby tourist attractions (Hasni et al., 2022).

METHOD

To determine the extent to which this idea has evolved, digital marketing use the conceptual qualitative descriptive approach in an attempt to improve consumer happiness through the company's image. By describing the kinds, designs, or research designs that are typically employed to investigate study objects that are unregulated, like in experiments, and that are found in natural settings. A literature review that is in line with methodological presumptions is also used to bolster the current findings. This implies that in order to prevent researcher-directed inquiries, this approach must be used inductively.

Result

According to the findings of the literature research, digital marketing may have an impact on the hotel and tourism sector's performance. Similarly, the outcome shows that the relationship between digital marketing and the performance of the hospitality and tourism industry is partially mediated by consumer happiness. As a result, digitization can improve costs, earnings, competitive advantage, and customer pleasure.

Conclusion

As a result, digitization can improve costs, earnings, competitive advantage, and customer pleasure. According to this study, digital marketing can help promote hospitality-related goods. Additionally, digital marketing supports economic growth and climate action as sustainable development goals. According to the study's findings, digital marketing should be adopted by hospitality companies to improve performance and advance national development.

GENDER EQUALITY AND WOMEN EMPOWERMENT TARGET OF UNITED NATIONS & SUSTAINABLE DEVELOPMENT GOAL (SDG-5)

Dr. Neha

Associate Professor

Swami Vivekanand Subharti University, Meerut-250005 India

Abstract

Gender equality and women empowerment have been on the top of the agenda globally. Achieving gender equality and empowering all women and girls has been mentioned by the United Nations in its Sustainable Development Goal (SDG-5) as a target. Various efforts and initiatives have been taken at global, regional and local level to eliminate gender inequality. Women in India have been stereotyped and discriminated since ancient times due to the patriarchal mindset. Social evils such as sati, purdah system, female foeticide, female infanticide, dowry, domestic violence have been faced by women. Various constitutional and legal provisions have been framed to eliminate such evils. In contemporary times, women have become sensitised about their rights and have come a long way in terms of women empowerment. Various schemes have been launched by central and state governments for emancipation of women. However, the patriarchal mindset still exists and gender biasness is still experienced by women both in public and private space. The paper attempts to analyse the level of women empowerment in different states of India. The study is based on the secondary data collected from various government sources. An analysis of the reasons responsible for the trends has also been done. It has been found in the study that female literacy has a positive bearing on the health and decision-making of females. Also, government support in the form of infrastructure and schemes act as a catalyst in women empowerment. Women-centric organisations and Self Help organisations have promoted economic empowerment and decision-making of females.

Women empowerment and gender equality has become the pivot of all global agendas. The struggle for ending gender inequality and achieving emancipation of women is long drawn. Moreover, women empowerment is considered as a pre-requisite for the attainment of sustainable development (UNFPA, [2021](#)). Gender equality and empowering women are not only an end in themselves but also a means to achieve a prosperous, peaceful, sustainable and inclusive world. United Nations have organized four conferences on women's issues. The 4th conference popularly known as The Beijing Platform for action is a landmark event as it focuses on twelve critical areas of women's concern and imagines a world where each woman and girl can exercise her freedom of choices (UN Women, [2014](#)). The sustainable development goal mentions achieving gender equality and empowering all women and girls as a specific objective to be achieved by 2030. (Women and Health, [2021](#)). Several conventions such as Elimination of All Forms of Discrimination against women, Convention on Political Rights of women, Declaration on the Elimination of violence against women have been adopted to end gender discrimination (International conventions on women, [2020](#)).

Though numerous efforts have been initiated for providing a discrimination free world to women but the statistics throughout the world still paints a gloomy picture. According to UNDESA, one in three women (736 million) have been subjected to physical and or sexual violence at least once in their lifetime, since the age of 15. Also, according to a statistic, only 28% of women held managerial positions throughout the world. Moreover, it was also pointed out that the burden of unpaid domestic care and work is lopsided which further increased during the pandemic (UNDESA, [2020](#).) According to Global Gender Gap Report, the

COVID 19 pandemic has increased the time period for gender parity to be achieved from 99.5 years to 135.6 years (World Economic Forum, 2021).

Indian constitution treats its women at par with men through various constitutional (Article 14, 15, 42) and legal provisions (Planning Department, 2021). Moreover, it provides for affirmative action in favour of women to end the age-old discrimination and provide equal opportunities. 73rd and 74th constitutional Amendments provide reservation to women in local bodies so as to make them politically empowered and have a say in decision-making (Hazarika, 2011). Numerous women targeted schemes have been launched since Indian Independence such as Pradhan Mantri Janani Suraksha Yojana, Beti Bachao Beti Padhao, Ujjawala, SwadharGreh, Pradhan Mantri Matru Vandana Yojana etc. (MOW & CD, 2021). However, even after more than seven decades of independence and numerous initiatives, the Indian women face lot of discrimination and injustice. The longstanding and intergenerational cycles of gender biasness impacts both the present as well as the future of the country. (Pradhan, 2020). According to recent report released by World Economic Forum, India has slipped 28 places and ranked 140th among 150 nations in global gender gap. The gap in India has widened to 62.5% due to various factors such as decrease in women's labour force participation, inadequate representation of women in politics and leadership roles, lagging female to male literacy rates (Shettigar & Mishra, 2021). The major hindrance in achieving gender equality lies in the implementation of laws and schemes coupled by the gendered vision of patriarchy (Saxena, 2019).

The present paper attempts to examine the educational, health, economic, political and socio-cultural status of women in different states of India. The papers also aim to analyse the overall level of women empowerment achieved by the states. Moreover, the papers also attempt to scrutinize the reasons responsible for the emerging trends in different states.

Keywords: SDG-5, gender equality, women empowerment, United Nations, sustainable development, global targets, Patriarchal, Gender biasness.

Introduction

Gender equality and women empowerment are fundamental human rights and crucial components of a sustainable future. The United Nations, recognizing the persistent inequality faced by women and girls globally, established Sustainable Development Goal 5 (SDG-5) with the aim to "Achieve gender equality and empower all women and girls." This goal aims not only to address gender-based disparities but also to promote the active participation of women in all aspects of economic, social, and political life. This paper explores SDG-5, its progress, challenges, and its impact on global development, aiming to provide a comprehensive analysis of its role in advancing equality.

Gender equality and women empowerment are crucial elements for promoting peace, justice, and prosperity. The United Nations (UN), through the Sustainable Development Goals (SDGs), emphasizes gender equality as a fundamental human right and essential for achieving a more sustainable and just world. The fifth SDG (SDG-5), specifically targets the achievement of gender equality and empowerment of women and girls in all spheres of life by 2030. However, despite substantial progress, gender inequality remains pervasive in many regions, influenced by cultural norms, economic disparities, and political barriers.

This paper aims to analyze SDG-5's targets and indicators, highlighting key progress and challenges in the global pursuit of gender equality. The research will incorporate recent data on gender equality, review region-specific case studies, and assess the impact of national and international policy frameworks. By doing so, it provides a comprehensive understanding of the status of gender equality worldwide and the policies that are working to close the gender gap.

This paper examines the United Nations' Sustainable Development Goal 5, focused on achieving gender equality and empowering all women and girls by 2030. We explore the historical context of gender equality, its global significance, and specific targets and indicators outlined in SDG-5. Through analysis of recent data, challenges, and case studies, this paper evaluates the progress of SDG-5 and its role in shaping a more equitable world. The paper also addresses the key barriers to achieving this goal and recommends strategies for accelerating progress.

Gender equality and the empowerment of women are critical elements in the pursuit of sustainable development, global peace, and justice. The United Nations (UN), through its 2030 Agenda for Sustainable Development, has made achieving gender equality a central focus by setting out Sustainable Development Goal (SDG)-5. This goal aims to eliminate all forms of discrimination, violence, and harmful practices against women and girls while ensuring their full participation in economic, political, and social life. The importance of SDG-5 lies not only in its transformative potential to ensure equal rights but also in its ability to advance broader global objectives, such as poverty eradication, improved education, and economic growth.

Despite substantial global progress in gender equality over recent decades, significant disparities remain, especially in developing regions, where women continue to face barriers to education, healthcare, economic opportunities, and political representation. This research paper seeks to provide a comprehensive examination of SDG-5 by analyzing its targets, indicators, progress, challenges, and policy frameworks. It emphasizes the importance of a multi-faceted approach to gender equality that involves legal reforms, economic empowerment, educational access, and cultural shifts.
