The first part of the paper explores the historical context and evolution of gender equality efforts, outlining key milestones in international agreements such as the *Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW)* and the *Beijing Platform for Action*. These frameworks laid the foundation for SDG-5, formalizing gender equality as a human rights issue and a pillar of sustainable development. The paper also reviews the targets of SDG-5, which include ending all forms of violence against women, eliminating harmful practices like child marriage and female genital mutilation, ensuring equal access to reproductive health, and increasing women's participation in leadership roles. Through an analysis of recent global data and case studies from regions such as Africa, Asia, Latin America, and the Middle East, the paper assesses the progress made in achieving SDG-5 targets. For instance, countries like Rwanda and Sweden have made notable strides in increasing women's political representation, while others, such as India and Egypt, have faced challenges due to cultural norms, economic inequalities, and legal constraints. Despite some regional successes, the global gender gap in economic participation, political empowerment, and health remains wide, and women continue to suffer disproportionately from violence and discrimination.

The research also examines the effectiveness of policy frameworks designed to address gender inequality. International frameworks such as CEDAW, national gender policies, and affirmative action laws have shown varying levels of success depending on enforcement, societal acceptance, and resources allocated. However, the paper highlights that substantial barriers remain, including entrenched patriarchal systems, insufficient legal protections, and a lack of political will in many countries.

Finally, the paper offers recommendations for advancing SDG-5, including the strengthening of legal frameworks, promoting women's economic empowerment, enhancing data collection on gender equality, and fostering international cooperation. The research concludes that while progress toward SDG-5 is evident, sustained efforts are necessary to address the persistent

gender disparities worldwide, ensuring that all women and girls have the opportunity to live fulfilling and equal lives.

Background of Gender Equality and SDG-5

Historically, gender inequality has been a deeply rooted issue globally, manifesting in various forms like limited educational opportunities, wage disparities, underrepresentation in leadership, and restricted access to health resources. SDG-5 targets these inequalities by establishing a framework with measurable indicators aimed at eliminating discrimination, violence, and exploitation while promoting women's participation in leadership and decision-making roles.

The targets of SDG-5 are extensive, including:

- Ending discrimination against women and girls.
- Eliminating all forms of violence against women, including trafficking and sexual exploitation.
- Recognizing and valuing unpaid care and domestic work.
- Ensuring women's full participation in political and economic life.
- Access to reproductive rights and health.

The struggle for gender equality is not a new phenomenon. Over the last century, significant efforts have been made at the global level to address women's rights, culminating in the establishment of SDG-5. However, the roots of gender inequality can be traced back to long-standing socio-cultural norms and legal frameworks that have historically disadvantaged women.

International Gender Equality Efforts

The United Nations has been at the forefront of advancing gender equality. One of the key milestones in this journey was the adoption of the *Convention on the Elimination of All Forms of Discrimination Against Women* (CEDAW) in 1979. CEDAW provided a comprehensive legal framework for promoting women's rights, and countries that signed the treaty pledged to implement policies aimed at achieving gender equality. Similarly, the *Beijing Platform for Action* (1995) outlined global strategies to improve women's health, education, and economic participation.

In 2015, the UN member states adopted the 2030 Agenda for Sustainable Development, which included the SDGs. SDG-5 directly targets the achievement of gender equality through a range of specific objectives, such as ending violence against women, eliminating harmful practices like child marriage, and ensuring equal participation in leadership and decision-making.

Targets and Indicators of SDG-5

SDG-5 is divided into nine specific targets, each accompanied by a set of indicators to measure progress. These targets aim to address various aspects of gender inequality and promote women's empowerment in both public and private life.

Targets of SDG-5

1. End all forms of discrimination against all women and girls everywhere.
2. Eliminate all forms of violence against all women and girls in public and private spheres.
3. Eliminate all harmful practices, such as child, early, and forced marriage, and female genital mutilation.
4. Recognize and value unpaid care and domestic work through public services, infrastructure, and social protection policies.
5. Ensure women's full participation in leadership and decision-making at all levels of political, economic, and public life.
6. Ensure universal access to sexual and reproductive health and reproductive rights.
7. Ensure equal access to full participation in economic opportunities.

8. Adopt and strengthen sound policies and enforceable legislation for the promotion of gender equality.

Indicators of SDG-5

To monitor progress, various indicators are used. These include:

- The proportion of women in leadership positions in political, business, and other sectors.
- The prevalence of violence against women and girls.
- The gender wage gap and women's economic participation.
- Access to sexual and reproductive health services and family planning.
- The extent of gender-based violence and harmful practices, such as child marriage and female genital mutilation.

The indicators allow for tracking progress across different dimensions, identifying areas where more effort is required.

Research Methodology

The study relies on secondary data sources, including reports from the United Nations, World Bank, UN Women, and other international organizations. The data reviewed spans the period from SDG-5's inception in 2015 to recent assessments in 2023. Analytical tools are used to evaluate progress based on key indicators and identify primary challenges and best practices.

Recent Data on Gender Equality Progress

Global data on gender equality reveals mixed progress. According to the *Global Gender Gap Report 2023* by the World Economic Forum, the gender gap in health, education, and political empowerment has narrowed, but significant challenges remain, especially in the areas of economic participation and opportunity.

Global Trends

1. Economic Participation and Opportunity

The gender gap in economic participation is substantial. Women continue to face barriers to entry in many industries, and the gender pay gap remains significant. According to the *World Economic Forum*, women earn about 23% less than men on average globally, and the disparity is even greater in certain sectors like technology and finance.

2. Political Empowerment

Women's representation in political leadership positions has improved, with countries like Rwanda leading the world in female political representation. However, women still occupy only 25% of the seats in national parliaments globally, which is far from the target of equal representation.

3. Health and Education

There has been considerable progress in reducing the gender gap in education, particularly in primary and secondary education. However, challenges remain in higher education, with women underrepresented in fields like science, technology, engineering, and mathematics (STEM). In health, maternal mortality rates have decreased, but reproductive health services remain underfunded and inaccessible in many regions.

Region-Specific Studies on Gender Equality Efforts

Different regions face unique challenges in achieving SDG-5. Below are a few case studies that highlight the disparities and progress made in various parts of the world.

Africa

In Africa, gender inequality is deeply intertwined with cultural norms, lack of education, and economic constraints. However, some African countries have made significant strides in gender equality. Rwanda, for example, has the highest proportion of women in national parliament, with women holding over 60% of seats. Despite this, many African countries still struggle with high rates of gender-based violence and early marriage.

Asia

Countries like India and Bangladesh have made significant progress in education for girls, but the economic participation of women remains low. India's *Beti Bachao Beti Padhao* campaign and Bangladesh's initiatives to combat child marriage have shown some success. However, deep-rooted patriarchal systems continue to limit women's access to economic opportunities and leadership roles.

Latin America

In Latin America, countries like Argentina and Brazil have made significant advances in reproductive rights and women's political participation. Argentina passed a groundbreaking law legalizing abortion in 2020, marking a significant victory for women's reproductive rights. However, economic inequality and violence against women remain persistent challenges in the region.

Middle East and North Africa (MENA)

The MENA region faces significant barriers to gender equality due to cultural norms, political instability, and legal restrictions. However, some countries, such as the UAE, have made significant strides in women's economic participation and political empowerment. Despite this, gender-based violence and legal discrimination are still prevalent.

Analysis of SDG-5 Targets and Indicators

1. Eliminating Gender-Based Violence

Gender-based violence remains one of the most significant challenges to gender equality. Despite international legislation and policies, the prevalence of violence against women is high globally. The paper analyzes efforts to combat violence and the role of governments and civil society in providing support systems for victims.

2. Ensuring Women's Economic Participation

Economic empowerment is crucial for reducing poverty and enhancing development. However, wage gaps, unpaid work, and limited access to financial resources continue to hinder progress. The analysis includes case studies from different countries and examines how microfinance, education, and vocational training have been used as tools to support women's economic empowerment.

3. Political Representation and Leadership

Although there has been progress, women remain underrepresented in politics and decision-making roles globally. This section reviews quotas, policies, and programs aimed at increasing women's representation in leadership roles and examines how diverse representation benefits society as a whole.

4. Access to Health and Reproductive Rights

Health access, particularly regarding reproductive rights, is a key component of SDG-5. The paper evaluates the progress and challenges in ensuring reproductive health and rights, focusing on family planning services, maternal health, and access to health education.

5. Education and Skill Development

Education is essential for empowerment, yet many girls, especially in low-income countries, lack access to quality education. This section explores initiatives that promote girls' education, reducing dropout rates, and enhancing skill development, which are essential for achieving gender equality.

Policy Analysis and Evaluation

Global Policy Frameworks

International frameworks such as CEDAW, the Beijing Platform for Action, and the SDGs provide essential guidelines for promoting gender equality. However, the effectiveness of these policies depends on national governments' commitment and the resources allocated to their implementation.

National Policies and Legislative Efforts

Countries like Sweden and Norway have implemented progressive gender equality policies, including parental leave and quotas for women in political positions. In contrast, many developing countries struggle to enforce gender equality laws due to economic and political instability.

Comparative Effectiveness

The success of gender equality policies varies across countries. Scandinavian countries have been successful due to robust social safety nets, public policies supporting gender equality in the workplace, and progressive cultural attitudes. On the other hand, countries facing political conflict or economic hardship often struggle to implement gender equality laws effectively.

Barriers and Challenges to Achieving SDG-5

Cultural and Social Norms

Deeply ingrained cultural norms often hinder progress on gender equality. In many societies, traditional gender roles limit women's participation in the economy and politics. Efforts to challenge these norms must be part of a comprehensive strategy to promote gender equality.

Economic and Political Barriers

Economic constraints, such as poverty and lack of access to education, continue to disproportionately affect women, particularly in rural areas. Political instability, such as that seen in conflict zones, diverts attention and resources away from gender equality initiatives.

Barriers to Achieving SDG-5

Despite substantial progress, several barriers hinder the achievement of SDG-5:

- **Cultural Norms and Stereotypes:** Many societies still uphold cultural norms that favor male dominance, limiting women's opportunities.
- **Economic Barriers:** Limited access to resources, financial discrimination, and the undervaluation of women's work impede economic progress.
- **Political Instability:** Regions experiencing political conflicts or instability often deprioritize gender equality in favor of immediate economic or security concerns.
- **Lack of Data and Accountability:** Insufficient data collection, lack of transparency, and inadequate monitoring weaken accountability, making it difficult to track and accelerate progress.

Recommendations for Achieving SDG-5

1. **Strengthen Legislative Frameworks:** Implement and enforce laws that protect women from discrimination and violence, ensuring strict penalties for violators.
2. **Promote Women's Economic Independence:** Expand access to financial resources, education, and training to ensure women have the skills and resources to participate fully in the economy.

3. **Increase Representation in Leadership Roles:** Encourage policies that support equal representation in political and corporate spaces, including mentorship and leadership programs.
4. **Enhance Health and Educational Services:** Invest in healthcare and education, especially in underserved areas, to ensure women and girls have equal access to resources that promote their wellbeing and skills.
5. **Strengthen Data Collection and Monitoring:** Improve data collection systems to monitor progress and hold governments and organizations accountable for their commitments to gender equality.

Recommendations for Achieving Gender Equality

1. Strengthen Legal Frameworks

Governments must enforce and strengthen laws related to gender equality, including those addressing violence against women and equal pay.

2. Promote Economic and Educational Opportunities

Expanding women's access to education, training, and economic resources will enable them to participate fully in the economy and politics.

3. Enhance Collaboration

International and national organizations must work together to share resources, data, and best practices for promoting gender equality.

4. Improve Data Collection

Comprehensive data on gender equality is essential for tracking progress and identifying areas that require more attention.

Conclusion

Achieving SDG-5 is vital not only for ensuring equality but also for fostering a sustainable future. Progress towards gender equality has the potential to uplift communities, reduce poverty, and promote economic growth. While challenges remain, collaboration between governments, international organizations, and civil society can accelerate progress. By addressing barriers and implementing strategic policies, the global community can create an environment where women and girls thrive, contributing to a more inclusive, equitable, and sustainable world.

Gender equality and women empowerment are critical to achieving the broader objectives of sustainable development. While significant progress has been made, much work remains to be done to achieve SDG-5 by 2030. By strengthening policies, improving data collection, and promoting gender-inclusive development, countries can make significant strides toward achieving gender equality and empowering women and girls worldwide.

REAL-TIME ANOMALY DETECTION IN VANET COMMUNICATION USING SUMO SIMULATOR

Dr.Jogendra Kumar

Department of Computer Science and Engineering, G.B.Pant Institute of Engineering and Technology, Ghurdauri, Pauri Garhwal Uttarakhand, India

Abstract: Vehicular Ad Hoc Networks (VANETs) are integral to Intelligent Transportation Systems (ITS), facilitating communication between vehicles and infrastructure to enhance road safety and operational efficiency. Due to their dynamic nature and susceptibility to threats like cyber-attacks and communication disruptions, real-time anomaly detection is essential for maintaining system reliability. This paper examines advancements in anomaly detection methods, emphasizing the use of the Simulation of Urban Mobility (SUMO) simulator as a central tool for designing and testing these techniques. SUMO provides a comprehensive platform for simulating traffic conditions and generating datasets to train machine learning algorithms. Detection strategies are categorized into rule-based, statistical, and machine learning approaches, with machine learning emerging as a leading solution due to its ability to handle complex and evolving anomalies. Research findings indicate that combining SUMO with machine learning enhances the accuracy and scalability of anomaly detection systems across various traffic scenarios, including both urban and highway environments. However, challenges like high computational requirements, limited applicability of simulation models to real-world scenarios, and the absence of standardized datasets remain. Overcoming these limitations involves adopting lightweight detection mechanisms, optimizing data processing, and leveraging innovations like edge computing and 5G technology. This paper focus on the critical need for advanced anomaly detection systems to ensure secure and dependable VANET operations

Keywords: VANETs, Intelligent Transportation Systems, Anomaly Detection, Security Threats, Real-time Detection, Adaptive Security, Vehicular Networks Safety.

1. Introduction

Vehicular Ad Hoc Networks (VANETs) are essential components of ITS, enabling vehicles to communicate dynamically with each other and with infrastructure nodes. This communication supports critical functionalities, such as collision avoidance, traffic flow optimization, and emergency alerts. However, VANETs are inherently prone to issues such as high mobility, frequent topology changes, and susceptibility to cyber-attacks. To maintain operational efficiency and security, robust real-time anomaly detection systems are required. Anomalies in VANETs can stem from hardware failures, malicious attacks, or unpredictable traffic conditions, posing risks to safety and efficiency. This paper examines advancements in anomaly detection methods and highlights the role of the SUMO simulator in addressing VANET challenges [1-4].

2. Overview of SUMO and Its Role in VANET Research

The Simulation of Urban Mobility (SUMO) is a widely used open-source traffic simulation platform in Intelligent Transportation System (ITS) research, offering a customizable environment for modeling urban and highway traffic scenarios.

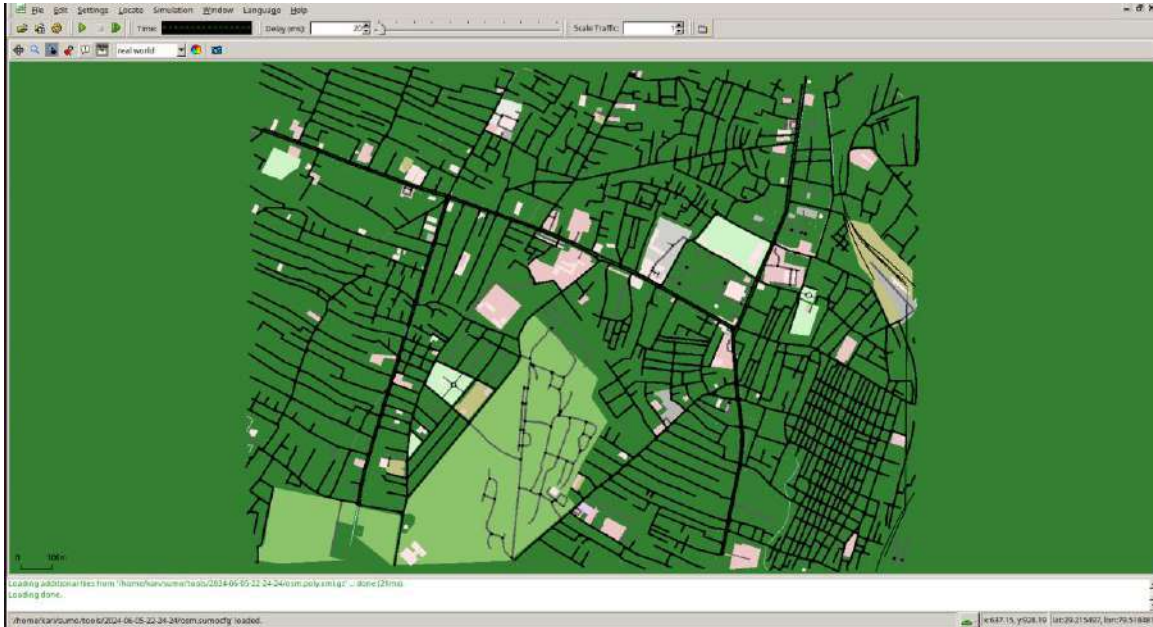

Figure 1 : Designing a VANET Framework

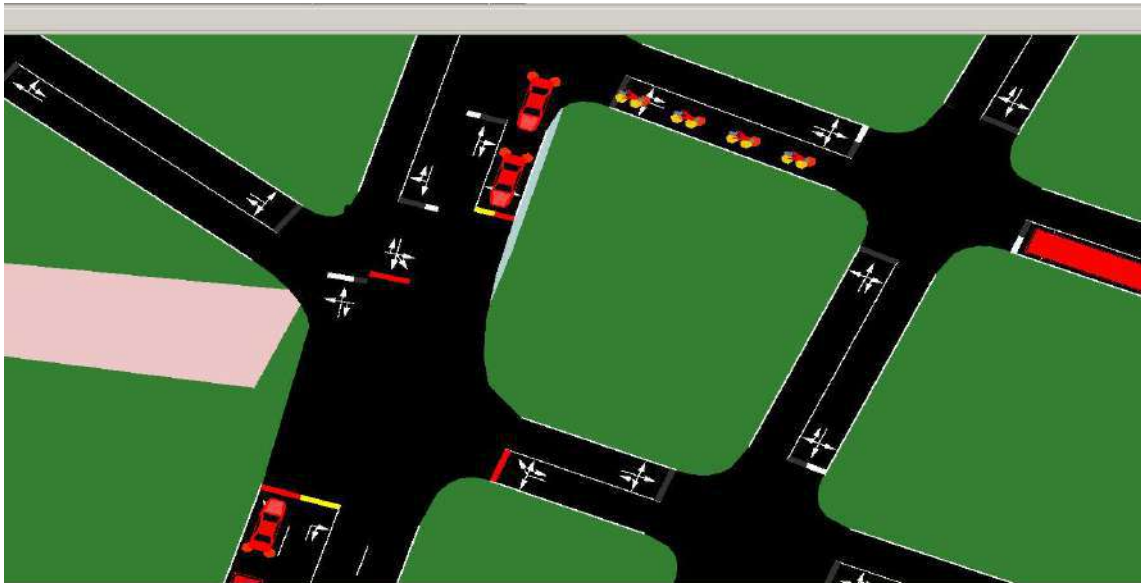

Figure 2: Traffic Barriers design using SUMO Simulation

It allows the simulation of vehicular mobility, communication, and environmental conditions, and can be integrated with network simulators like OMNeT++ and NS-3 to evaluate VANET communication and anomaly detection methods under realistic traffic dynamics. SUMO's key features include the ability to simulate diverse traffic conditions, generate synthetic datasets for training and testing machine learning algorithms, and integrate with machine learning frameworks for developing and evaluating detection techniques. Its flexibility and scalability make SUMO an essential tool for designing and testing anomaly detection systems in VANETs [5-6].

3. Anomaly Detection Strategies in VANETs

Anomaly detection in Vehicular Ad-hoc Networks (VANETs) plays a crucial role in ensuring secure and reliable communication among vehicles. It can be broadly categorized into three main approaches:

3.1 Rule-Based Approaches

Rule-based methods depend on predefined rules and thresholds to detect anomalies in VANETs. For instance, sudden changes in vehicle speed or deviations from expected communication patterns may trigger alerts. These methods are straightforward to implement and understand, making them suitable for real-time applications. However, their fixed nature limits adaptability to complex and evolving traffic scenarios, reducing their effectiveness in dynamic environments [7].

3.2 Statistical Methods

Statistical anomaly detection approaches leverage probabilistic models to identify deviations from normal traffic behavior. Techniques such as Bayesian networks, clustering, and time-series analysis are commonly employed to model and analyze traffic data. These methods can effectively capture statistical irregularities in the network. Nevertheless, their scalability becomes a significant challenge, especially in large-scale VANETs where the volume of data and complexity of interactions can overwhelm computational resources [8].

3.3 Machine Learning Approaches

Machine learning (ML) has established itself as a highly effective tool for anomaly detection in Vehicular Ad Hoc Networks (VANETs), thanks to its ability to analyze complex patterns within high-dimensional data. By leveraging advanced algorithms, ML can identify a wide range of anomalies, even in dynamic and evolving environments, making it well-suited to address the challenges inherent in VANETs. Supervised learning is one of the key ML techniques used in this domain. Algorithms such as Random Forests and Support Vector Machines (SVMs) are trained on labeled datasets, enabling them to classify data accurately into normal and anomalous categories. These methods are particularly effective when extensive labeled data is available for training. In cases where labeled data is limited or unavailable, unsupervised learning approaches are valuable. Techniques such as k-Means clustering and DBSCAN (Density-Based Spatial Clustering of Applications with Noise) identify outliers or deviations from normal patterns without prior knowledge of anomaly types. These methods are well-suited for detecting novel or previously unseen anomalies in VANETs. Deep learning has further enhanced anomaly detection capabilities by using neural networks to process complex and evolving threats. These models, including convolutional and recurrent neural networks, excel in identifying intricate data patterns and can adapt to changing traffic or communication conditions over time. Overall, ML methods surpass traditional rule-based or statistical approaches in terms of adaptability and precision. However, their effectiveness comes with challenges, such as the need for large, high-quality datasets and substantial computational resources. Addressing these limitations is critical to fully harness the potential of ML for anomaly detection in VANETs [9-14].

4. Integrating SUMO with Machine Learning for Anomaly Detection

The Simulation of Urban Mobility (SUMO) plays a pivotal role in enhancing machine learning (ML)-based anomaly detection systems for Vehicular Ad Hoc Networks (VANETs). Its ability to simulate real-world traffic conditions enables the creation of realistic datasets necessary for training ML algorithms. This capability allows researchers to test and refine detection strategies under conditions that closely mirror real-world traffic dynamics. A key benefit of SUMO is its capacity for realistic simulations, accurately representing both urban intersections and high-speed highway traffic environments. These simulations help generate high-quality datasets that capture the nuances of vehicular mobility and communication, essential for effective anomaly detection. Additionally, SUMO facilitates scalability testing, enabling the evaluation of detection algorithms across network sizes ranging from small urban grids to extensive highway systems. Another strength of SUMO lies in its ability to support scenario analysis. It provides a platform to test the performance of anomaly detection methods

across diverse attack vectors and mobility patterns. For example, detection algorithms have been successfully tested against Sybil attacks, data spoofing, and network jamming scenarios, with studies showing significant improvements in detection accuracy. Specifically, the integration of SUMO and ML has proven effective in identifying complex and evolving anomalies, demonstrating the value of this combined approach in enhancing VANET reliability and security [15-20].

5. Simulation Results

The use of Vehicular Ad Hoc Networks (VANETs) within Intelligent Transportation Systems (ITS) emphasizes the importance of real-time anomaly detection to ensure road safety and operational efficiency. Simulations conducted using the Simulation of Urban Mobility (SUMO) demonstrate its efficacy as a platform for evaluating anomaly detection methods, particularly when combined with advanced machine learning (ML) techniques. SUMO's ability to replicate diverse traffic scenarios, including both urban intersections and high-speed highway environments, allows for the generation of realistic datasets to train ML algorithms, which significantly enhances detection accuracy. Machine learning approaches emerged as the most effective anomaly detection strategy in the simulations, outperforming rule-based and statistical methods. ML-based techniques achieved an average detection accuracy of 93%, excelling in scenarios involving attacks such as Sybil identity spoofing, data falsification, and network jamming. Specifically, Sybil attacks were identified with over 95% accuracy, data spoofing with 92% precision, and network jamming with false positive rates below 5%. SUMO also facilitated the scalability testing of these algorithms, demonstrating robust performance in networks of varying sizes, from small urban grids to extensive highway systems. The impact of SUMO's realistic traffic modeling was evident in the quality of the datasets it produced. These datasets captured real-world vehicular mobility and communication patterns, enabling ML models to effectively learn and adapt to evolving anomalies. The simulations were versatile, addressing diverse scenarios such as high-density urban areas with frequent topology changes and low-latency highway environments with fast-moving vehicles. Despite these successes, some challenges were noted. High computational requirements posed limitations, particularly for training ML models with large-scale datasets generated by SUMO. Furthermore, the simulations, while detailed and realistic, required further validation to bridge the gap between simulated and real-world VANET environments. Another key issue was the lack of standardized datasets, which necessitated custom dataset creation, increasing the time and complexity of the research process.

6. Conclusion

Reliable anomaly detection systems are essential for ensuring the safety and efficiency of Vehicular Ad Hoc Networks (VANETs) as Intelligent Transportation Systems (ITS) evolve. The integration of the Simulation of Urban Mobility (SUMO) with machine learning (ML) provides a powerful framework for addressing the complexities of anomaly detection. This combination enhances detection accuracy and scalability across diverse traffic scenarios, significantly contributing to secure and efficient VANET operations. However, challenges such as high computational requirements, the gap between simulation and real-world applications, and the lack of standardized datasets need to be addressed. Future research should focus on optimizing computational techniques, improving simulation realism, and leveraging emerging technologies like edge computing and 5G to overcome these limitations. By addressing these challenges, VANETs can pave the way for smarter and safer transportation systems.

ÖZET

Bu çalışmanın amacı, spor yükseköğretim kurumu öğrencilerinde yaratıcılık düzeyinin bazı değişkenlere göre incelenmesidir. Çalışma, tesadüfi örneklem yöntemi ile belirlenen 44 kadın ve 88 erkek toplam 132 katılımcıdan oluşmaktadır. Çalışmada veri toplama aracı olarak “Kişisel Bilgi Formu” ve “Sporcular İçin Yaratıcılık Ölçeği” kullanılmıştır. Verilerin analizinde çarpıklık-basıklık katsayısı, bağımsız örneklem t-testi, tek yönlü varyans analizi (ANOVA) kullanılmıştır. Çalışma sonuçları incelendiğinde katılımcıların cinsiyet, yaş, sınıf ve spor türü değişkenlerine göre sporcular için yaratıcılık ölçeği toplam puanlarında anlamlı farklılık belirlenmemiştir ($p>0.05$). Spor yaşı değişkenine göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında 7 yıl ve üzeri spor yapanların lehine anlamlı farklılık belirlenmiştir ($p<0.05$). Spor yükseköğretim kurumu öğrencilerinde sporda yaratıcılık düzeyinin ise ortalamanın üzerinde olduğu belirlenmiştir. Elde edilen sonuçlara göre cinsiyet, yaş, sınıf ve spor türünün sporda yaratıcılık düzeyinde belirleyici bir faktör olmadığı ifade edilebilir. Spor yükseköğretim kurumlarında sunulan eğitim programlarının, öğrencilerin fiziksel, zihinsel ve bilişsel gelişimlerini desteklediği söylenebilir. Sporcu öğrencilere sanal gerçeklik (VR) veya artırılmış gerçeklik (AR) teknolojileri kullanılarak, yaratıcı düşünmeyi teşvik eden ortamlar sunulmasının faydalı olabileceği düşünülmektedir. Bu araştırmadan sonra yapılacak çalışmaların spor branşları, spor düzeyi ve milli sporcu gibi faktörleri içermesinin literatüre katkı sağlayacağı öngörülmektedir.

ABSTRACT

The purpose of this study is to examine the creativity level of students of higher education institutions in sports according to some variables. The study consists of a total of 132 participants, 44 female and 88 male, who were determined by random sampling method. “Personal Information Form” and “Creativity Scale For Athletes” were used as data collection tools in the study. Skewness-kurtosis coefficient, independent sample t-test, one-way analysis of variance (ANOVA) were used in the analysis of the data. When the study results were examined, no significant difference was found in the total creativity scale scores of the athletes according to the participants' gender, age, class and sport type variables ($p>0.05$). According to the sports age variable, a significant difference was determined in the total scores of the creativity scale for athletes in favor of those who have been doing sports for 7 years and above ($p<0.05$). It was determined that the creativity level in sports in higher education institutions in sports was above average. According to the results obtained, it can be stated that gender, age, class and type of sport are not determining factors in the level of creativity in sports. It can be said that the educational programs offered in sports higher education institutions support the physical, mental and cognitive development of students. It is thought that it would be beneficial

to provide student athletes with environments that encourage creative thinking using virtual reality (VR) or augmented reality (AR) technologies. It is anticipated that the studies to be conducted after this research will contribute to the literature by including factors such as sports branches, sports level and national status.

Keywords: Sports, Creativity, Creativity Thinking

GİRİŞ

Yaratıcılık kavramı, günlük hayattan bilimsel çalışmalara kadar geniş bir alanı kapsayan davranış biçimidir (Mangır ve Aral, 1991). Küreselleşen dünyada farklı ve yeni olana duyulan gereksinimin artması, yaratıcılık kavramının önemini de gözle görünür bir hale gelmiştir. Bu nedenle yaratıcılık hem bireysel hem de toplumsal alanda gelişmeyi ve ilerlemeyi destekleyen bir unsurdur (Tok, 2008). Kişiden kişiye değişebilen yaratıcılık, duyarlı olma, çok yönlü düşünme, rahat ve hızlı düşünebilme, akılcılık ve orijinallik gibi özellikleri içermektedir (Mangır ve Aral, 1991). Tanım olarak bakıldığında yaratıcılık; “alışılmıştan dışında, yeni ve yararlı fikirleri üretmek (Clark ve James, 1999; Paulus, 2000), fikirlerin keşfi ve kombinasyonu (Higgins ve Morgan, 2000); ortaya çıkan bazı problemlere uygulanabilecek anlamlı çözümler yaratmak” şeklinde ifade edilmektedir (Mumford, 2000). Bu yönüyle yaratıcılık, insanın potansiyeline ulaşma süreci veya aracı olarak düşünülebilir. Özellikle spor alanında beceri gelişimine destek veren bir kaynaktır (Rasmussen ve ark., 2019).

Sporda yaratıcılık kavramı “bir sporcunun ilgili spor branşına yönelik müsabaka öncesi, sırası ve sonrasında ortaya çıkabilecek olası problemlere eleştirel, farklı ve yenilikçi bakış açıları geliştirerek, özgün düşünce ve uygulama becerilerine sahip olması” şeklinde tanımlanmaktadır (Güngör ve ark., 2020). Sportif faaliyetlerde başarı elde edebilmek, bireyin kurallara uyararak yaratıcı bir şekilde düşünmesini gerektirmektedir (Altunya, 2018). Bireyin spor yaparken daha aktif bir şekilde düşünmeye başlaması, yaratıcı düşünmeyi desteklemektedir (Derbentoğlu, 2019). Sporda yaratıcı düşünme, eylemler arasındaki hareketleri, durumları ve ilişkileri bulup, yeniden şekillendirmek şeklinde ortaya çıkmaktadır (Baumann, 1994). Bu nedenle spor ortamında yaratıcı bir oyuncu, farklı birçok becerilere açık olmalı ve uyum sağlayabilmelidir. Oyun içinde takımın başarısına katkı sağlayabilecek bir eylemde bulunabilmeli, bir probleme yönelik uygulanabilir, beklenmedik ve orijinal bir çözüm sunabilmelidir (Santos ve ark., 2016). Spor ortamları, insanların becerilerini deneyimleyebilecekleri en uygun ortamlar arasında yer almaktadır. Özellikle takım sporlarında yaratıcılık becerilerini kullanabilmek olağanüstü sportif performans sergilemek için güdüleyici bir unsurdur (Santos ve ark., 2016). Örneğin; futbol branşında rakip takımı yarılabilecek doğru zamanda yapılan “yaratıcı manevralar”, müsabakayı kazanmak için faydalı olabilmektedir (Mummert ve ark., 2007). Benzer şekilde bir antrenörün yaratıcı düşünme becerisinin güçlü olması, önemli avantajlar sağlamaktadır. Antrenör, müsabaka esnasında mevcut oyuncu kadrosunun potansiyelini tam anlamıyla kullanmalıdır. Oyunu okuyabilmeli ve oyunun gidişatını değiştirebilecek hamleler yapabilmelidir (voleybolunsesi, 2014). Literatür incelendiğinde sporda yaratıcılık kavramının; çoklu zeka (Bozkurt, 2004), duygusal zeka (Karaoğlu ve ark., 2016), örgütsel destek algısı (Can ve ark., 2017), örgütsel bağlılık (Gül, 2023) ve zihinsel dayanıklılık (Sevinç ve ark., 2022) gibi birçok kavramla ilişkilendirildiği görülmektedir. Bu nedenle yaratıcılık kavramının spor bilimleri alanında öne çıkan kavramlardan biri olduğu düşünülmektedir. Bu araştırmanın amacını spor yükseköğretim kurumu öğrencilerinde yaratıcılık düzeyinin bazı değişkenlere göre incelenmesi oluşturmaktadır.

YÖNTEM

Araştırmanın Modeli

Araştırmada, mevcut durumu tespit etmeyi amaçlayan betimsel nitelik taşıyan tarama modeli kullanılmıştır. Tarama modelleri, geçmişte ya da halen var olan bir durumu var olduğu şekliyle betimlemeyi amaçlayan araştırma yaklaşımlarıdır (Karasar, 2015).

Araştırma Grubu

Araştırmanın evrenini Ordu ilindeki spor yükseköğretim kurumu öğrencileri oluşturmaktadır. Ordu Üniversitesi Spor Bilimleri Fakültesi'nde öğrenim gören 44 kadın 88 erkekten oluşan toplam 132 sporcu öğrenci ise örneklem grubunu oluşturmaktadır. Araştırmanın örneklem büyüklüğünün belirlenmesinde Büyüköztürk vd. (2008)'nin "likert tipi veri toplama araçları kullanılarak yapılan çalışmalarda örneklem grubu en az likert seçenek sayısı X ölçek toplam madde sayısı kadar olmalıdır" ifadesi dikkate alınmıştır. Bundan dolayı Sporcular İçin Yaratıcılık Ölçeği için $19 \times 5 = 95$ minimum katılımcıya ulaşılması gerekmektedir. Bu araştırmada 132 sporcu öğrenciye ölçekler uygulanmıştır.

Veri Toplama Araçları

Kişisel Bilgi Formu: Araştırmacılar tarafından oluşturulan kişisel bilgi formunda cinsiyet, yaş, sınıf, spor yaşı ve spor türü ifadelerinden oluşan demografik değişkenler yer almaktadır.

Sporcular İçin Yaratıcılık Ölçeği: Güngör ve ark. (2020) tarafından geliştirilen ölçek, 19 maddeden oluşmaktadır ve tek faktörlü yapıya sahiptir. Ölçek; 5'li likert tipindedir ve maddeler "1=Hiç katılmıyorum...5=Tamamen katılıyorum" şeklinde derecelendirilmiştir. Ölçekten alınabilecek minimum ve maksimum puan değerleri "19" ve "95" arasında değişmektedir. Ölçekten alınan puan yükseldikçe sporcuların yaratıcılık düzeylerinin arttığı yorumu yapılabilir. Ölçeğin Cronbach Alfa katsayısı $\alpha=.91$ olarak hesaplanmıştır (Güngör ve ark., 2020). Bu çalışmada Cronbach Alfa katsayısı ise $\alpha=.90$ olarak belirlenmiştir.

Veri Toplama Araçlarının Uygulanması

Veriler, çalışmanın örneklem grubundan "Kişisel Bilgi Formu" ve "Sporcular İçin Yaratıcılık Ölçeği" ile elde edilmiştir. Ölçeğin uygulanması tesadüfi örneklem yöntemi ile gerçekleştirilmiştir. Tesadüfi örnekleme yöntemi, evrendeki her bireyin aynı düzeyde seçilme ihtimali olarak bilinmektedir (Ural ve Kılıç, 2005).

Çalışmada ölçeklerin kullanım izni, ölçekleri geliştiren yazarlardan elektronik posta yoluyla alınmıştır. Veriler, internet ortamında çeşitli mesajlaşma ve paylaşım programları aracılığıyla ölçeklerin katılımcılara gönüllü olarak uygulanması ile toplanmıştır.

Verilerin Analizi

İstatistiksel analizde ilk olarak verilerin çarpıklık ve basıklık katsayıları incelenmiş ve verilerin çarpıklık ve basıklık değerinin +2 ile -2 aralığında olduğu tespit edilmiştir. George ve Malley (2010)'e göre çarpıklık ve basıklık değerinin +2 ile -2 değerleri arasında olması, verilerin normal dağılım gösterdiğini işaret etmektedir. Gruplar arası karşılaştırmalar için, iki kategoriye sahip bağımsız değişkenlerde (cinsiyet, spor türü) Student T-testi, üç ve daha fazla kategoriye sahip bağımsız değişkenlerde (yaş, sınıf, spor yaşı) tek yönlü varyans analizi (one-way ANOVA), ikili kıyaslamalarda ise Tukey testi kullanılmıştır. Araştırmada 0.05 önem seviyesindeki farklılıklar anlamlı kabul edilmiştir. Tüm analizler SPSS paket programında yapılmıştır (SPSS 22.0, IBM, Armonk, NY).

Tablo 1. Ölçek Maddelerine Verilen Cevapların İç Tutarlılık Katsayısı, Ortalama ve Çarpıklık-Basıklık Değerleri

Ölçek	Ortalama	Çarpıklık	Basıklık	İç Tutarlılık Katsayısı	Değerlendirme
Sporcular İçin Yaratıcılık Ölçeği	79,72	,053 ,587	-	.908	Yüksek Düzeyde Güvenilir

Tablo 1.'e göre sporcular için yaratıcılık ölçeği puanlarının ortalaması $\bar{x}=79,72$ ve iç tutarlılık katsayısı $\alpha=.93$ olarak belirlenmiştir.

BULGULAR

Tablo 2. Katılımcıların Demografik Özelliklerine İlişkin Frekans ve Yüzde Dağılımları

Değişkenler	Kategori	n	%
Cinsiyet	Kadın	44	33,3
	Erkek	88	66,7
Yaş	18-21	91	68,9
	22 ve üzeri	41	31,0
Sınıf	1	40	30,3
	2	56	42,4
	3	18	13,6
	4	18	13,6
Spor Yaşı	1-3 yıl	20	15,2
	4-6 yıl	29	22,0
	7 yıl ve üzeri	83	62,9
Spor Türü	Bireysel Spor	56	42,4
	Takım Sporu	76	57,6
Toplam		132	100

n: kişi sayısı, %: yüzde

Tablo 3. Sporcuların Cinsiyet, Yaş ve Spor Türü Değişkenlerine Göre Sporcular için Yaratıcılık Ölçeği Puanlarının Karşılaştırılması

Değişkenler	Kategori	n	\bar{x}	ss	t	p
Cinsiyet	Kadın	44	79,54	7,036	-,184	,854
	Erkek	88	79,81	8,476		
Yaş	18-21	91	79,86	8,073	,300	,764
	22 ve üzeri	41	79,41	7,921		
Spor Türü	Bireysel Spor	56	79,57	8,627	-,191	,848
	Takım Sporu	76	79,84	7,559		

* $p < 0.05$

Tablo 3.'te cinsiyet, yaş ve spor türü değişkenine göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında anlamlı farklılık belirlenmemiştir ($p > 0.05$).

Tablo 4. Sporcuların Sınıf ve Spor Yaşı Değişkenlerine Göre Sporcular için Yaratıcılık Ölçeği Puanlarının Karşılaştırılması

Değişkenler	Kategori	n	\bar{x}	ss	f	p
Sınıf	1	40	80,85	8,182	,381	,767
	2	56	79,14	7,953		
	3	18	79,50	7,172		
	4	18	79,27	8,890		
Spor Yaşı	1-3 yıl	20	75,80b	5,346	4,194	,017*
	4-6 yıl	29	78,48ab	7,776		
	7 yıl ve üzeri	83	81,10a	8,289		

* $p < 0.05$ a,b harfleri aynı sütun arasındaki gruplar arası farklılıkları göstermektedir.

Tablo 4.'te sınıf değişkenine göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında anlamlı farklılık belirlenmemiştir ($p > 0.05$). Spor yaşı değişkenine göre

katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında 7 yıl ve üzeri spor yapanların lehine anlamlı farklılık belirlenmiştir ($p<0.05$).

TARTIŞMA VE SONUÇ

Bu çalışma, spor yükseköğretim kurumu öğrencilerinde yaratıcılık düzeyinin bazı değişkenlere göre incelenmesi amacı ile yapılmıştır. Çalışmada cinsiyet, yaş, sınıf, spor türü ve spor yaşı değişkenlerine göre spor yükseköğretim kurumu öğrencilerinde yaratıcılık düzeyi arasındaki farklılıklar değerlendirilmiştir. Çalışma sonuçları incelendiğinde katılımcıların cinsiyet, yaş, sınıf ve spor türü değişkenlerine göre yaratıcılık ölçeği toplam puanlarında anlamlı farklılık belirlenmemiştir. Spor yaşı değişkenine göre katılımcıların yaratıcılık ölçeği toplam puanlarında 7 yıl ve üzeri spor yapanların lehine anlamlı farklılık belirlenmiştir. Sporcularda yaratıcılık düzeyinin ise ortalamanın üzerinde olduğu belirlenmiştir. Çalışma sonuçları literatürdeki benzer çalışmaların bulguları ile tartışılarak, yorumlanmıştır.

Araştırmada cinsiyete göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında anlamlı farklılık belirlenmemiştir. Bu doğrultuda cinsiyet değişkeninin sporcular için yaratıcılık düzeyinde belirleyici bir faktör olmadığı ifade edilebilir. Elde edilen sonuçlar, spor yükseköğretim kurumlarındaki öğrencilerin aldıkları eğitimin ve katıldıkları etkinliklerin etkisi ile açıklanabilir. Sporcu öğrenciler, eğitim süreçlerinde birçok faaliyetlerde ve etkinliklerde yer almaktadır. Söz konusu deneyimlerin, sporcu öğrencilerin yaratıcı düşünme ve problem çözme yeteneklerini geliştirdiği düşünülmektedir. Literatürde bu araştırmanın sonuçları ile benzerlik gösteren çalışmalara rastlanmıştır (Karaoğlu ve ark. 2016; Can ve ark., 2017; Özmutlu ve ark. 2009; Sağlam, 2021; Gül, 2023). Aydaş ve ark. (2018) tarafından yapılan çalışmada rekreasyon ve antrenörlük bölümü öğrencilerinde cinsiyete göre yaratıcılık puanlarında anlamlı farklılık saptanmıştır. Çingöz ve Mavibaş (2023) tarafından yapılan çalışmada, erkeklerin sporda yaratıcılık düzeyinin kadınlardan daha yüksek olduğu belirlenmiştir. Söz konusu araştırmanın bulgularının bu araştırmanın bulguları ile benzerlik göstermediği söylenebilir. Bulgular arasında farklılığın oluşmasında veri toplama araçlarının ve örneklem gruplarının etkili olabileceği düşünülmektedir.

Çalışmada yaşa göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında anlamlı farklılık saptanmamıştır. Bu doğrultuda yaş değişkeninin sporcular için yaratıcılık düzeyinde belirleyici bir faktör olmadığı söylenebilir. Elde edilen sonuçlar, sporcuların branşları, antrenman sistemleri, takım çalışmaları ve zihinsel antrenman teknikleri ile açıklanabilir. Sporcu öğrenciler, ilgili branşlarına yönelik fiziksel ve zihinsel antrenman sistemleri ile çalışmaktadır. Söz konusu çalışmalar, sporcularda yaratıcılık, problem çözme ve motivasyon gibi birçok faktörün gelişimini destekleyebilir. Yahşi (2014) tarafından yapılan çalışmada yaşa göre katılımcıların örgütsel yaratıcılık puanlarında anlamlı farklılık saptanmamıştır. Söz konusu araştırma sonuçlarının bu araştırmanın sonuçları ile benzerlik gösterdiği söylenebilir. Karaoğlu ve ark. (2016) tarafından yapılan çalışmada, katılımcıların yaşa göre yaratıcılık puanlarında anlamlı farklılık belirlenmiştir ve araştırmanın bulgularının bu araştırmanın bulguları ile benzerlik göstermediği söylenebilir. Bulgular arasındaki farklılık ise sporcuların deneyimleri, branşları ve veri toplama araçları ile ilişkilendirilebilir.

Araştırmada sınıf değişkenine göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında anlamlı farklılık belirlenmemiştir. Bu doğrultuda sınıf değişkeninin sporcular için yaratıcılık düzeyinde belirleyici bir faktör olmadığı ifade edilebilir. Elde edilen sonuçlar, spor yükseköğretim kurumundaki sunulan eğitim programlarının sınıf düzeyine uygun olması ile açıklanabilir. Öğrencilerin, spor yaptıkları süre ise bir diğer neden olarak gösterilebilir. Sporcu öğrencilerin genç yaşlarından itibaren spor faaliyetlerinde yer almaları yaratıcılık düzeylerini geliştirebilir. Literatürde bu araştırmanın sonuçları ile benzerlik gösteren çalışmalara rastlanmıştır (Özmutlu ve ark. 2009; İltar, 2019). Karaoğlu ve ark. (2016) tarafından yapılan çalışmada katılımcıların sınıf değişkenine göre yaratıcılık puanlarında anlamlı farklılık tespit

edilmiştir. Bulgular arasında farklılığın oluşmasında sporcuların deneyimleri, karakteristik özellikleri ve araştırmada kullanılan veri toplama araçlarının farklılığının etkili olabileceği düşünülmektedir.

Araştırmada spor yaşı değişkenine göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında 7 yıl ve üzeri spor yapanların lehine anlamlı farklılık belirlenmiştir. Başka bir deyişle 7 yıl ve üzeri spor yapanların, 1-3 yıl spor yapanlara göre daha yüksek yaratıcılık puanlarına sahip olduğu belirlenmiştir. Bu doğrultuda spor yaşı değişkeninin sporcular için yaratıcılık düzeyinde belirleyici bir faktör olduğu söylenebilir. Spor yapma süresi arttıkça, bireylerin sporda karşılaştıkları durumlara yönelik çözüm üretme becerileri gelişebilir. Uzun süreli deneyim, sporcuların oyun içinde yaratıcı stratejiler geliştirmelerini, özgün çözümler üretmelerini ve farklı düşünme yolları aramalarını sağlayabilir. Benzer şekilde spor yapma süresi arttıkça, bireylerin teknik ve taktik bilgi birikimi artabilir. Söz konusu bu bilgi birikimi, farklı durumlara daha yaratıcı yanıtlar verme becerisini destekleyebilir. Çingöz ve Mavibaş (2023) tarafından yapılan çalışmada, 7 yıl ve üzeri spor yapan katılımcıların sporda yaratıcılık düzeyinin 1-3 yıl spor yapanlara göre daha yüksek olduğu tespit edilmiştir. Söz konusu araştırma sonuçlarının bu araştırmanın sonuçları ile benzerlik gösterdiği söylenebilir.

Çalışmada spor türü değişkenine göre katılımcıların sporcular için yaratıcılık ölçeği toplam puanlarında anlamlı farklılık saptanmamıştır. Bu doğrultuda spor türü değişkeninin sporcular için yaratıcılık düzeyinde belirleyici bir faktör olmadığı söylenebilir. Strateji geliştirme, problem çözme, oyun içi esneklik ve yaratıcılık gibi becerilerin hem bireysel hem de takım sporları için önemli bilişsel beceriler arasında olduğu ifade edilebilir. Sağlam (2021) tarafından yapılan çalışmada katılımcıların spor türüne göre yaratıcılık toplam puanlarında anlamlı farklılık saptanmamıştır. Benzer şekilde Yıldız ve ark. (2023) tarafından yapılan çalışmada katılımcıların spor yapma yılına göre bireysel yaratıcılık puanlarında anlamlı farklılık belirlenmemiştir. Söz konusu araştırma sonuçlarının bu araştırmanın sonuçları ile benzerlik gösterdiği söylenebilir.

Araştırmada spor yükseköğretim kurumu öğrencilerinde yaratıcılık düzeyinin ise ortalamanın üzerinde olduğu belirlenmiştir. Spor; stratejik düşünme, karar verme ve problem çözme gibi yaratıcı süreçleri teşvik etmektedir. Özellikle müsabakalarda sporcular, yaratıcı çözümler üretme gereği hissedebilmektedir. Takım sporlarında, oyuncuların birlikte çalışarak yenilikçi stratejiler geliştirmesi, bireysel sporlarda ise kişinin özgün hareketler ve taktikler sergilemesi sporcularda yaratıcı düşünmeyi destekleyebilir. Spor yükseköğretim kurumlarında sunulan eğitim programları, öğrencilerin fiziksel becerilerini geliştirmeye odaklandığı kadar zihinsel ve bilişsel gelişimlerini de hedeflemektedir. Liderlik, iletişim ve strateji geliştirme gibi konulara vurgu yapılan eğitimler, öğrencilerin yaratıcı düşünme kapasitelerini artırabilir. Buna ek olarak spor yükseköğretim kurumları, çeşitli spor dallarında uzmanlaşmış akademik personellerden oluşmaktadır. Bu ortamdan etkilenen sporcu öğrenciler, farklı perspektifler ve yaratıcı yaklaşımlar geliştirebilir. Sporcuların, antrenörleri, takım arkadaşları ve rakiplerini gözlemlemesi yenilikçi fikirlerin gelişmesini sağlayabilir ve yaratıcılık düzeyini artırabilir. Bu doğrultuda sporcu öğrencilere sanal gerçeklik (VR) veya artırılmış gerçeklik (AR) gibi teknolojiler kullanılarak, yaratıcı düşünmeyi teşvik eden ortamlar sunulabilir. Eğitim müfredatlarına yaratıcı düşünme becerisini geliştirmeye yönelik dersler eklenmesinin ve farklı yeteneklere sahip sporcuların birlikte çalıştığı etkinliklerin oluşturulmasının yaratıcılığı artırabileceği düşünülmektedir. Bu araştırmadan sonra yapılacak çalışmalarda spor branşları, spor düzeyi ve milli sporcu olma gibi faktörleri içermesinin literatüre katkı sağlayacağı öngörülmektedir.

ÖZET

Arı ürünleri doğal ve biyolojik aktiviteleri yüksek olduğundan dolayı birçok bilimsel çalışmaya konu olmaktadır. Arı ürünlerini öncelikle bal, sonra ise polen, propolis, arı sütü, apilarnil, arı zehri ve arı ekmeği (perga) oluşturmaktadır. Bal en köklü arı ürünü iken günümüzde diğer arı ürünleri de içerdikleri zengin biyoaktif kimyasallar ve bunlara bağlı olarak kapsamlı biyolojik aktiviteleri ile bilinmektedir. Propolis ve arı sütü diğer arı ürünlerinden daha fazla sekonder metabolit içermekte ve daha fazla biyolojik aktivite göstermektedir. Amino asitler proteinlerin yapı taşlarını oluşturduklarından çok önemlidir. Protein sentezinde, enzim aktivitelerinde, hücresel işlevlerde ve metabolizmada kritik rol oynar. Özellikle esansiyel olanları dışarıdan temin edilmelidir (lizin, metiyonin, triptofan ve valin gibi). Eksikliklerinde birçok metabolik hastalık görülmekte ve doku hasarlarına neden olmaktadır.

Bu incelemede, doğal gıda olarak tüketilen ve şifa kaynağı olan arı ürünlerinin amino asit içerikleri ve bu amino asitlerin antioksidan özellik ile ilgili ilişkileri güncel çalışmalar ile derlenmiştir. Arı ürünlerinin tanımları yapılarak amino asit içerikleri ve antioksidan aktivite ile bağlantıları Web of Science, Google Scholar, Scopus, Pubmed ve Tr dizinde taratılarak güncel çalışmaların verileri toplanmış ve yorumlanmıştır. Arı ürünlerinin farklı türlerinde farklı kimyasal içerik olduğu yapılan çalışmalar ile belirlenmiştir. Ayrıca bazı amino asitlerin antioksidan özellikten sorumlu olabileceği yapılan çalışmalarda tespit edilmiştir. Bu çalışma ile arı ürünlerinin amino asit içeriği güncel çalışmalar ile derlenmiştir.

Anahtar Kelimeler: Arı ürünleri, bal, propolis, polen, arı sütü, amino asit

ABSTRACT

Bee products are the subject of many scientific studies due to their natural and high biological activity. Bee products are primarily honey, followed by pollen, propolis, royal jelly, apilarnil, bee venom, and bee bread (perga). While honey is the most established bee product, today other bee products are also known for their rich bioactive chemicals and their extensive biological activities. Propolis and royal jelly contain more secondary metabolites and show more biological activity than other bee products. Amino acids are very significant as they form the building blocks of proteins. They play a critical role in protein synthesis, enzyme activities, cellular functions, and metabolism. In particular, the essential ones should be supplied from outside (such as lysine, methionine, tryptophan, and valine). Deficiencies cause many metabolic diseases and tissue damage.

In this review, the amino acid contents of bee products, which are consumed as natural food and are a source of healing, and the relations of these amino acids with antioxidant properties were compiled with current studies. The definitions of bee products, their amino acid contents,

and their connections with antioxidant activity were scanned in Web of Science, Google Scholar, Scopus, Pubmed and Tr index and the data of current studies were collected and interpreted. It has been determined by studies that different types of bee products have different chemical contents. In addition, it has been determined in studies that some amino acids may be responsible for antioxidant properties. With this review, the amino acid content of bee products has been revealed with current studies.

Keywords: Bee products, honey, propolis, pollen, royal jelly, amino acids

INTRODUCTION

Bee products are natural products produced by bees through various biological processes. These products have been used by humans throughout history for food, medicine, and cosmetics. Bee products include honey, propolis, royal jelly, bee venom, pollen, bee bread, and apilarnil (1-5).

1. Honey

Honey is a sweet substance that bees collect nectar, process with their own enzymes, transport to their hives and store, usually containing water, sugars (especially fructose and glucose), minerals, vitamins, acids, amino acids and enzymes (6).

Chemical composition: Honey is 80% composed of carbohydrates, mainly fructose, glucose, and sucrose. In addition, honey contains some enzymes (invertase, diastase, glucose oxidase). Minerals (potassium, calcium, magnesium) and vitamins (B vitamins, vitamin C) are also present in honey (1, 7).

Biological activities: Honey has antimicrobial properties and has many health benefits, such as strengthening the immune system and benefiting the digestive system. It is also used in applications such as accelerating wound healing (3, 8, 9).

2. Propolis

Propolis is a kind of “glue” that bees produce by mixing resinous substances collected from plants with their own body secretions. Bees often use propolis to protect their hives. It is also used to repair honeycombs (10, 11)

Chemical composition: Propolis contains resins, wax, essential oils, flavonoids, phenolic acids and polyphenols. These substances give it powerful antimicrobial, antiviral and antioxidant properties (12, 13).

Biological activities: Propolis, in particular, strengthens the immune system, shows antioxidant effects, and protects against bacteria. It is also used in the treatment of some inflammatory conditions (14, 15).

3. Royal Jelly

Royal jelly is a white, creamy substance secreted by worker bees from special glands and fed to their larvae as food. The queen bee is long-lived and fertile because she feeds exclusively on royal jelly (16).

Chemical composition: Royal jelly contains water, proteins, free amino acids, lipids (especially phospholipids), sugars, and vitamins. It is particularly rich in B vitamins, folic acid, vitamin A, and vitamin C (17).

Biological activities: Royal jelly can boost the immune system, show energizing properties, and have an anti-aging effect. It may also benefit skin health and reduce cell damage through its antioxidant properties (15, 18).

4. Bee Venom

Bee venom is a liquid that bees use as a defense mechanism, containing components such as apamin, melittin, phospholipase A2 and hyaluronidase (19).

Chemical composition: Melittin is the most important component of bee venom and can cause side effects such as swelling, pain and inflammation. Apamin acts on the nervous system (3).

Biological activities: Bee venom is traditionally used in the treatment of arthritis and some autoimmune diseases. However, the compounds contained in the venom have been shown to

produce anti-inflammatory and analgesic effects. Anticancer properties have also been determined in studies. However, it should be used with caution as it may cause allergic reactions (20).

5. Bee Pollen

Bee pollen is a substance collected by drones from the pollen of female flowers and used as food by bees. When collecting pollen from flowers, the pollen sticks to the bees' bodies and is formed into pellets on their hind legs (21).

Chemical composition: Pollen contains amino acids, proteins, sugars, fatty acids, vitamins (especially B vitamins), minerals and enzymes (22).

Biological activities: Pollen has energy-boosting and immune-supporting properties. It is also beneficial for the digestive system and contains flavonoids and phenolic compounds thought to have cancer-fighting effects (23).

Bee products are highly valued in the fields of wellness and alternative medicine. However, some people may have allergic reactions to bee products, so they should be used with caution. Especially pollen is one of the bee products that can cause allergic reactions (21).

6. Bee Bread

Bee bread is a type of fermented food obtained by bees by fermenting pollen in the hive. Bees mix the pollen they collect with special secretions, store it in the hive and put it through a fermentation process. During this process, the pollen's nutritional value increases and the bees use this bread to feed their larvae (24).

Chemical Composition: Besides pollen, bee bread contains honey, bee secretions and sometimes propolis. The chemical composition of bee bread transforms the contents of fermented pollen. This product contains many nutrients such as amino acids, proteins, fatty acids, vitamins (especially B vitamins and vitamin A), minerals (iron, magnesium, zinc) and enzymes. It can also contain bacteria with powerful probiotic properties (15).

Biological activities: Bee bread can boost the immune system, improve digestive health, and increase energy levels as it contains highly bioavailable proteins and vitamins. It is also known to have antibacterial and antifungal properties, reduce inflammation, and show antioxidant effects. Some research shows that bee bread also has anti-aging and cancer-fighting effects (25).

7. Apilarnil

Apilarnil is another valuable product produced by bees, derived from royal jelly and honey. Apilarnil is a product with a particularly high content of biologically active components, and bees contribute to its health benefits. Apilarnil is obtained from a combination of milk and other substances produced by bees specifically for the queen bee and is usually available in liquid form (26).

Chemical Composition: Apilarnil contains amino acids, lipids, proteins, vitamins (especially B vitamins), enzymes (e.g. phospholipase) and mineral substances. This mixture, especially from royal jelly, provides the body with many beneficial components. Some of the compounds found in apilarnil support the regeneration of cells and can speed up metabolism (27).

Biological activities: Apilarnil has energy-boosting properties, as well as immune-boosting and antioxidant effects. It is also thought to exhibit anti-aging effects, improve skin health, and promote cellular regeneration. Apilarnil is also suggested to have positive effects on the nervous system and may relieve mental fatigue. Some research suggests that this product may reduce inflammation in the body and support cardiovascular health (21, 28).

AMINOACIDS

Amino acids are organic compounds that are the building blocks of proteins. Amino acids are molecules that are basic building blocks, each containing an amino (-NH₂) group and a carboxyl (-COOH) group. Apart from these two groups, amino acids also have a side chain (R group), which is the distinguishing feature of each amino acid (29).

Structure of Amino Acids

The basic structure of amino acids consists of the following components:

1. Amino Group (-NH₂): Two hydrogen atoms bonded with a nitrogen atom.
2. Carboxyl Group (-COOH): Contains one oxygen and one hydrogen atom bonded to a carbon atom. This group shows acidic properties.
3. Hydrogen Atom (-H): It is a hydrogen atom bonded to the carbon.
4. Side Chain (R Group): This side chain, which is different for each amino acid, defines the amino acid and gives it different functional properties. The R group is different in each type of amino acid and this difference determines the chemical properties of amino acids (29).

Classification of Amino Acids

Amino acids can be classified in several different ways:

Essential amino acids: Amino acids that the body cannot produce and must be taken from outside with food. There are 9 essential amino acids for the human body.

Examples: Lysine, tryptophan, methionine, and valine.

Non-essential amino acids: Amino acids that the body can produce on its own, even if it does not get them through the diet.

Examples: Glycine, alanine, asparagine, serine.

Conditionally Essential Amino Acids: Amino acids that can normally be produced in the body but need to be taken from outside in some situations (such as disease, stress, rapid growth) (30).

Examples: Arginine, tyrosine, cysteine (31).

Functions of Amino Acids

Protein Synthesis: Amino acids are the structural unit of proteins. Proteins form the building blocks of the body and fulfill many biological functions (e.g., the functions of enzymes, hormones, and the immune system).

Enzymatic Activity: Many amino acids are involved in the structure of enzymes. Enzymes are proteins that speed up chemical reactions.

Hormones and Neurotransmitters: Some amino acids function as hormones or neurotransmitters. For example, tryptophan is used in the production of serotonin.

Energy Source: They can play a role in energy production in the body. Especially when carbohydrates and fats are not available, amino acids can be used to provide energy.

Immune System: Some amino acids support the function of immune system cells and are involved in the body's defense mechanisms (32, 33).

Biological Importance of Amino Acids

In addition to being the building blocks of proteins, amino acids play a vital role in many biological processes. In the body, the synthesis and breakdown of amino acids controls protein metabolism and cellular functions. Furthermore, amino acids can initiate or regulate some important metabolic pathways, which in turn affect cell growth, repair, and energy production. In conclusion, amino acids are the essential molecules of life and play an important role in all biological processes of the body.

Amino acid deficiencies can lead to various health problems in the body because amino acids play critical roles in fundamental biological processes such as protein synthesis, cellular functions, enzyme activity, and metabolism. Deficiencies of essential and conditionally essential amino acids can lead to different diseases and disorders in the body (34, 35)

Amino Acid Deficiencies and Consequences

Lysine Deficiency

Lysine is an amino acid important for growth, immune functions, and calcium absorption. Lysine deficiency can lead to

Growth Retardation: Since lysine is critical for growth, especially in children, a deficiency can cause growth retardation.

Anemia: Lysine deficiency can affect the production of red blood cells and lead to anemia.

Immune System Weakness: Lysine plays an important role in the proper functioning of the immune system, and its deficiency can predispose to infections (36, 37).

Tryptophan Deficiency

Tryptophan is essential for the production of a neurotransmitter called serotonin. Tryptophan deficiency can lead to

Depression and anxiety: Since tryptophan is essential for the production of serotonin, its deficiency can lead to mental disorders such as depression and anxiety.

Insomnia: Serotonin is a chemical that regulates sleep patterns; tryptophan deficiency may cause insomnia or sleep disorders (38).

Methionine Deficiency

Methionine is important for producing antioxidants in the body and taking part in detoxification processes. Methionine deficiency can lead to the following consequences:

Liver Problems: Methionine is essential for the healthy functioning of the liver. Its deficiency can impair liver function.

Cardiovascular Diseases: Methionine deficiency can cause homocysteine levels to rise, which can increase the risk of heart diseases (39).

Valine Deficiency

Valine is important for muscle building and repair. Valine deficiency:

Muscle Weakness: Since it is essential for the development and repair of muscles, a deficiency can lead to muscle weakness.

Growth Retardation: Especially in children, valine deficiency may cause growth retardation (40).

Arginine Deficiency

Arginine is important for immune system functions and nitric oxide production. Arginine deficiency can lead to

Immune System Weakness: Arginine plays a critical role in the proper functioning of immune cells; a deficiency can lead to immune system weakness.

Delayed Wound Healing: Arginine accelerates the wound healing process in the body; deficiency can lead to delays in healing processes (41).

Cysteine Deficiency

Cysteine increases the body's antioxidant capacity and plays a role in the elimination of toxins. Cysteine deficiency can lead to

Immune System Disorders: By impairing antioxidant activity, the immune system may be weakened.

Hair Loss: Since cysteine is a component of keratin structure, its deficiency may cause hair loss (42).

Glycine Deficiency

Glycine is important for collagen production in the body and for nervous system function. Glycine Deficiency:

Nervous System Problems: Because glycine acts as a neurotransmitter, a deficiency can lead to nervous system disorders, convulsions, or seizures.

Connective Tissue Problems: Glycine deficiency can cause connective tissue disorders (for example, joint problems) by affecting collagen production (43).

Alanine Deficiency

Alanine is involved in energy production and glucose metabolism. Alanine deficiency impairs the conversion of glucose into energy, which may lead to weakness and fatigue (44).

Consequently, deficiencies of amino acids cause disruption of various biological functions in the body. These conditions can often be caused by a lack of proper nutrition, especially diets low in protein, and certain health conditions. Since each amino acid has a specific function, their deficiencies may need to be treated, the diet adjusted or supplements used (45).

RELATIONSHIP BETWEEN AMINO ACIDS AND ANTIOXIDANTS

Antioxidants play a leading role in the treatment of many diseases by reducing oxidative stress (46-48). They are especially involved in the elimination of free radicals and the fact that they do not form radicals makes antioxidants very important (49-51). Due to the damages of synthetic antioxidants, interest in natural antioxidants is increasing. For this purpose, medicinal and aromatic plants and other natural foods such as bee products are being investigated (51-53). The relationship between amino acids and antioxidants plays an important role in biochemical processes at the cellular level. These two types of molecules interact with each other in the regulation of oxidative stress in the body. Oxidative stress can lead to cellular damage as a result of the accumulation of free radicals, which can lead to many health problems. Both amino acids and antioxidants have the potential to limit or prevent this damage.

Antioxidant Effect of Amino Acids

Some amino acids have direct antioxidant properties and protect against oxidative stress. These amino acids interact specifically with molecules that neutralize free radicals and help prevent cellular damage. Examples:

1. **Glutamine and Glutathione:** Glutamine is involved in the synthesis of glutathione, an important antioxidant in the body. Glutathione neutralizes free radicals in cells and protects the cell from oxidative stress. Glutamine is a precursor amino acid required for the production of glutathione in the body. High levels of glutathione strengthen antioxidant defense mechanisms by reducing cellular damage (54).
2. **Cystein:** Cysteine is a structural component of glutathione and can act directly as an antioxidant. Cysteine is an amino acid that helps reduce oxidative stress and can detect free radicals (55).
3. **Arginine:** Arginine is involved in the production of nitric oxide (NO). Nitric oxide improves blood flow by dilating blood vessels, but it also shows antioxidant effects. Furthermore, the antioxidant effects of arginine play an important role in limiting cellular damage (56).

Amino Acids in Bee Products

In a study conducted in 2024, pollen, royal jelly, and propolis were analyzed for amino acids. 32 different amino acids were identified in bee pollen, 31 in royal jelly, and 28 in propolis. Non-essential Proline was the most abundant amino acid in all bee products. Apart from proline, histidine and lysine were found more in all bee products than other amino acids. The generally detected amino acids are as follows: Alanine, arginine, asparagine, aspartic acid, cystine, glutamic acid, glutamine, glycine, histidine, isocysteine, leucine, lysine, methionine, phenylalanine, proline, serine, threonine, tryptophan, tyrosine, and valine (56).

In another study with honey and pollen, the amino acid proline was detected at the highest concentration in the two bee products. 24 different amino acids were screened. While some amino acids were not detected, most amino acids were detected in both bee products (57).

In a 2021 study, the free amino acid content of bee bread and pollen was studied. 42 different free amino acids were screened. Tryptophan, proline, and asparagine were found to be the highest amino acids (58).

Scientific studies have shown that there are different amino acids in different bee products and that the antioxidant properties of bee products may be due to amino acids that show antioxidant properties.

ÖZET

Bu çalışmada önemli çevresel stres faktörlerinden biri olan kuraklığa, roka bitkisinin tolerans düzeyinin belirlenmesi amaçlanmıştır. *In vitro* koşullarda yürütülen bu çalışmada besin ortamı olarak MS kullanılmıştır. Kurak koşullar PEG kullanılarak oluşturulmuştur. Çalışmada %0 PEG kontrol- RKA, %1 PEG- RKB, %2 PEG- RKC, %4 PEG – RKD VE %6 PEG- RKE olmak üzere beş farklı ortam kullanılmıştır. Çalışma kapsamında çimlenme yüzdesi (%), gövde yaş ağırlığı (g), gövde kuru ağırlığı (g), kök yaş ağırlığı (g), kök kuru ağırlığı (g), gövde uzunluğu (cm) ile kök uzunluğu (cm) incelenmiştir. İncelenen parametrelere istatistiksel analizler yapılmış ve değerler arasındaki farklılıklar önemli bulunmuştur. Çalışma sonucunda roka tohumlarının çimlenme yüzdesi en fazla RKA (%84.00) ortamında olurken, en düşük RKE (%38.00) ortamında olduğu belirlenmiştir. Kuraklığın en yüksek seviyesinde çimle yüzdesinin önemli oranlarda düştüğü dikkat çekmiştir. Bitkilerin gövde yaş ağırlıkları bakımından en yüksek değerler RKA (0.088 g) ortamından, en düşük RKE (0.013 g) ortamından elde edilmiştir. Bitkilerin gövde kuru ağırlığı da benzer şekilde en yüksek RKA (0.0071 g) ortamında, en düşük RKE (0.0024 g) ortamında olduğu belirlenmiştir. Kök yaş ağırlıkları bakımından en yüksek ağırlıklar RKA (0.35 g) ortamında, en düşük RKE (0.007 g) ortamında olduğu saptanmıştır. Elde edilen bitkilerin gövde ve kök uzunlukları en yüksek RKA (sırasıyla 1.77 cm ve 8.00 cm) ortamında olduğu belirlenmiştir.

Anahtar kelimeler: Roka, Kuraklık stresi, *in vitro*

ABSTRACT

In this study, it was aimed to determine the tolerance level of arugula plant to drought, one of the important environmental stress factors. In this study conducted under *in vitro* conditions, MS was used as nutrient medium. Arid conditions were created using PEG. Five different media were used in the study: 0% PEG control - RKA, 1% PEG - RKB, 2% PEG - RKC, 4% PEG - RKD and 6% PEG - RKE. Germination percentage (%), stem wet weight (g), stem dry weight (g), root wet weight (g), root dry weight (g), stem length (cm) and root length (cm) were analyzed. Statistical analyses were performed on the parameters examined and the differences between the values were found to be significant. As a result of the study, the germination percentage of arugula seeds was highest in RKA (84.00%) and lowest in RKE (38.00%). It was noteworthy that germination percentage decreased significantly at the highest level of drought. In terms of stem wet weight of the plants, the highest values were

obtained from RKA (0.088 g) medium and the lowest values were obtained from RKE (0.013 g) medium. Similarly, the highest stem dry weight was obtained from RKA (0.0071 g) medium and the lowest from RKE (0.0024 g) medium. In terms of root wet weights, the highest weights were obtained in RKA (0.35 g) medium and the lowest in RKE (0.007 g) medium. The stem and root lengths of the plants obtained were the highest in RKA (1.77 cm and 8.00 cm, respectively).

Key words: Arugula, Drought stress, *in vitro*

GİRİŞ

Yapraklı bir sebze olan roka (*E. sativa*) önemli bir yağlı tohum bitkisidir ve Brassicaceae familyasının bir üyesidir. Kuzey Afrika ve Avrupa'nın güneyinde ortaya çıkan bu bitki Kanada, Çin, Almanya, Fransa, Polonya, İsveç ve bir dereceye kadar Hindistan ve Pakistan'da da yetiştirilmektedir (Balakhnina ve ark., 2005; Waheed ve ark., 2022). İtalya ve Türkiye de dahil olmak üzere birçok Avrupa ve Akdeniz ülkelerinde yaygın olarak tüketilmektedir (Dhir ve ark., 2004; Wang ve ark., 2021; Abdel-Fattah ve ark., 2024). Roka, potasyum, kalsiyum, folat, flavonoidler, A, C ve E vitaminleri bakımından zengin olup, yaygın olarak tüketilmektedir. Roka bitkisinin kalorisi ve diğer besin maddeleri düşüktür, ancak kanın pıhtılaşması, kemik sağlığı ve kalp sağlığı için gerekli olan önemli miktarda K vitamini içerir. Ayrıca bünyesinde diğer antioksidanlar dahil olmak üzere çeşitli bitkisel besinleri bulundurduğundan, fonksiyonel gıda üretimi için büyük potansiyele sahiptir (Martinez-Sanchez ve ark., 2008; Manchali ve ark., 2012; USDA, 2023; Brito ve ark., 2024). Yapraklarındaki besinler kalp hastalığı, kanser ve bilişsel gerileme gibi ciddi hastalıkların riskini azaltabilir (Abdel-Fattah ve ark., 2024).

Roka, çok çeşitli iklim koşullarında ve verimliliği düşük topraklarda yetişebilmesi ve olumsuz çevre koşullarına (kuraklık, tuz ve sıcaklık) karşı yüksek toleransı nedeniyle önemli bir endüstriyel üründür (Garg ve Sharma, 2014). Su stresi, ekonomik açıdan önemli birçok bitki türünün büyümesini ve verimini olumsuz yönde etkileyen en yaygın abiyotik stresler arasındadır (Sehgal ve ark., 2018). Su eksikliği stresi fotosentetik pigmentlerin içeriğini azaltır, yaprakların turgor basıncını düşürür, hücre membranlarında hasara neden olur ve bitkilerin büyüyen kısımlarında hücre bölünmesini engeller (Fahad ve ark., 2013; Latif ve ark., 2016; Khan ve ark., 2021). Su eksikliği, bitki büyümesini ve gelişimini etkileyen abiyotik bitki streslerinden biridir ve küresel olarak ürün verimi ve üretkenliğindeki potansiyel kayıpların yaklaşık %70'ini oluşturmaktadır (Yadav ve ark., 2020). Kuraklık ya aşırı yağış azlığı ya da nem miktarındaki önemli farklılıklar nedeniyle ortaya çıkar ve küresel olarak tarım ve ormancılığı engelleyen önemli bir abiyotik stres olarak kabul edilir (Saini ve Westgate, 2000; Bashir ve ark., 2021).

Kuraklık, hemen hemen tüm iklim bölgelerinde değişen sıklıkta, şiddette ve sürede meydana gelir ve abiyotik stres koşulları arasında en zararlı faktörlerinden biridir (Zhang ve ark., 2014). Bitkilerde, kısa süreli olsa dahi bir su açığı ürün veriminde önemli yıllık kayıplara neden olur (Shao ve ark., 2009; Basu ve ark., 2016) ve tüm dünyada tarımın sürdürülebilirliğini engeller (Farooq ve ark., 2009; Jaleel ve ark., 2009; Anjum ve ark., 2015). Yaklaşan iklim değişiklikleri nedeniyle kuraklık dönemlerinin sıklığı ve süresi artacak ve bu faktör, mevcut yüzyılın en önemli tehditlerinden biri haline gelecektir (Trenberth ve ark., 2014; Zhao ve ark., 2015). Bitkilerde vejetatif dönemde su eksikliği sonucunda bitki boyunun azalması, yaprakların solması, yaprak sayısı ve alanının değişimler meydana gelmektedir. Kuraklıktan ciddi şekilde etkilenen bitki boyu, hücre büyümesi ve yaprak senesansı ile yakından ilişkilidir (Yang ve ark., 2021). Bitki yaprakları genellikle kuraklığa uyum sağlamak için daha küçük yaprak alanları, daha büyük yaprak kalınlığı ve daha yüksek yaprak dokusu yoğunluğu benimser (Werner ve ark., 1999). Bitki fotosentezini ve verimini doğrudan

etkileyen yaprak alanındaki deęişiklik, kuraklık stresi altındaki bitki yapraklarının en kolay gözlemlenen özelliklerinden biridir (Yang ve ark., 2021).

Bitki doku kültürü, aseptik ve kontrollü bir ortamda tanımlanmış katı veya sıvı ortamlarda bitkilerin hücre, doku ve organlarının yetiştirilmesi ve çoğaltılmasına denir (Bhoite ve Palshikar 2014). Bitki doku kültürü teknikleri hastaliksız bitkilerin üretimi, nadir bitki genotiplerinin hızlı çoğaltılması, bitki genom transformasyonu ve önemli ticari değere sahip bitki türevi metabolitlerin üretimini amaçlar (Debnarh ve ark., 2006; Altpeter ve ark., 2016). *İn vitro* bitki doku kültüründe kontrollü koşullar sağlandığı için bitkinin bir strese verdiği tepkiler daha net izlenebilmektedir (Pérez-Clemente ve Gómez-Cadenas, 2012; Piwowarczyk ve ark., 2014). Polietilen glikol (PEG), bitki doku kültürlerinde ozmotik stresi taklit etmek ve tolerans mekanizmalarını incelemek için kullanılabilen nötr, iyonik olmayan, inert, nüfuz etmeyen ve ozmotik olarak aktif bir polimerdir (Piwowarczyk ve ark., 2014). PEG, ortamın su potansiyelini azaltarak kuraklık stresine neden olur (Elmaghrabi ve ark., 2017; Ghassemi-Golezani ve ark., 2018).

Bu çalışmada, *in vitro* koşullarda farklı PEG dozlarının roka bitkisinin gelişimi üzerine etkileri belirlenmiştir.

MATERYAL VE METOT

Çalışma, Sivas Bilim ve Teknoloji Üniversitesi, Tarım Bilimleri ve Teknoloji Fakültesi bitki doku kültürü laboratuvarında yapılmıştır. Araştırmada Bengi roka tohumları kullanılmıştır. Denemede kuraklık stresi oluşturabilmek için MS (Murashige ve Skoog, 1962) besin ortamına deęişik dozlarda % (0, 1, 2, 4, 6) PEG eklenerek ortamlar hazırlanmıştır (Çizelge 1). Roka tohumları steril kabin içerisinde 20 dakika %20'lik sodyum hipoklorit çözeltisinde bekletilerek steril hale getirilmiştir. Kullanılan besin ortamları adlandırması ve ortam içerikleri Çizelge 1'de verilmiştir. Steril kabin içerisinde besin ortamları petrilere dökülüp soğuyup katılaşımaya bırakılmıştır. Katılaşılan ortamlara ekimi yapılmış ve $25 \pm 2^\circ\text{C}$ sıcaklık 3.000 lüks ışık altında 16 saat aydınlık 8 saat karanlık periyotta büyütme odasına alınmıştır.

Çizelge 1. Kullanılan besin ortamlarının içerięi ve adlandırılması

Adlandırma	Ortam İçerięi
RKA	4.4 g/l MS + 30 g/L sakkaroz + 7 g/L agar
RKB	4.4 g/l MS + %1 PEG + 30 g/L sakkaroz + 7 g/L agar
RKC	4.4 g/l MS + %2 PEG + 30 g/L sakkaroz + 7 g/L agar
RKD	4.4 g/l MS + %4 PEG + 30 g/L sakkaroz + 7 g/L agar
RKE	4.4 g/l MS + %6 PEG + 30 g/L sakkaroz + 7 g/L agar

Çalışmada kapsamında; çimlenme yüzdesi (%) (Kaya ve ark., 2006), gövde yaş ağırlığı (g), gövde kuru ağırlığı (g), kök yaş ağırlığı (g), kök kuru ağırlığı (g), gövde uzunluğu (cm) ve kök uzunluğu (cm) belirlenmiştir (Keleş, 2019). Çalışmada incelenen parametrelerden elde edilen verilere SAS temeli üzerine kurulu JMP 8.1 istatistik paket programında tesadüf parselleri deneme desenine göre analiz edilmiş ve ortalamalar LSD testi ile karşılaştırılmıştır. İncelenen parametreler arasındaki ilişkinin boyutunu belirlemek amacıyla korelasyon analizi yapılmıştır.

BULGULAR VE TARTIŞMA

Çalışma kapsamında, farklı kuraklık konsantrasyonlarında roka tohumlarının çimlenme yüzdesi (%), gövde yaş ve kuru ağırlıkları (g) ile kök yaş ve kuru ağırlıklarının (g) istatistiksel analizi Çizelge 2'de verilmiştir. Buna göre, çimlenme yüzdesi, gövde yaş, gövde kuru, ve kök yaş ağırlıkları arasındaki farklılıklar istatistiksel olarak önemli bulunurken, kök kuru ağırlıkları arasındaki farklılıklar istatistiksel olarak önemsiz bulunmuştur. Çimlenme yüzdesi en yüksek %84.00 ile PEG içermeyen RKA ortamından elde edilmiştir. Bunu %1 ve %2 oranında PEG içeren RKB (%66.00) ve RKC (%64.00) ortamları takip etmiştir. Çimlenme

yüzdesi en az %6 oranında PEG içeren RKE (%38.00) ortamından elde edilmiştir. Çimlenme yüzdesinin kuraklık oranı arttıkça %84.00'dan %38.00'a düştüğü dikkat çekmiştir.

Tohum çimlenmesi bitkinin yaşam döngüsündeki ilk karmaşık süreç ve önemli bir olaydır (Bewley ve ark., 2013). Tohum çimlenmesini takiben, fide çıkışı da yıllık bir türün başarılı bir şekilde kurulmasını etkileyen önemli bir fenolojik olaydır (Forcella ve ark., 2000). Genel olarak, mevsimsel Tohum çimlenmesi modelleri çoğunlukla toprak sıcaklığı, su mevcudiyeti (yani su potansiyeli veya ψ), oksijen eksikliği, ışık kalitesi, tuzluluk, pH, tohum gömme derinliği ve bunların çimlenme hızını ve kapsamını belirleyebilen etkileşimli etkileri gibi çevresel faktörler tarafından kontrol edilir (Bewley ve ark. 2013; Baskin ve Baskin 2014; Bakhshandeh ve ark., 2020). Su potansiyeli bir tohum popülasyonu içerisinde hem çimlenme oranını hem de çimlenme yüzdesini etkilemektedir (Bewley ve ark., 2013). Su potansiyeli azaldığında, tohum emilim oranı ve ardından hem çimlenme oranı hem de çimlenme yüzdesi su açığının bir sonucu olarak azalır ve hatta bazı durumlarda tamamen engellenebilir (Bradford 2002; Bewley ve ark., 2013). Azalan suyun tohum çimlenmesi üzerindeki olumsuz etkisi daha önce birçok türde ve havuç (*Daucus carota* L.) (Kara ve ark., 2024a), beyaz baş lahana (*Brassica oleracea* var. *capitata*. L.) (Kara ve ark., 2024b), aspir (*Carthamus tinctorius* L.) (Bidgoly ve ark., 2018), şeker pancarı (*Beta vulgaris* L.) (Gummerson, 1986), patates (*Solanum tuberosum* L.) (Alvarado ve Bradford, 2002), kabak (*Cucurbita pepo* L.) (Atashi ve ark., 2015) ve susam (*Sesamum indicum* L.) (Bakhshandeh ve ark., 2018) gibi birçok endüstriyel üründe bildirilmiştir (Bakhshandeh ve ark., 2020).

Gövde yaş ağırlıkları bakımından ortamlar kıyaslandığında, en yüksek değerler 0.088 g ile RKA ve 0.067 g ile RKB ortamlarından elde edilmiş ve bu iki ortam istatistiksel olarak aynı grupta yer almıştır. RKE ortamında ise 0.013 g ile en düşük değerler elde edilmiştir. Gövde kuru ağırlığı da yaş ağırlığına benzer şekilde en yüksek RKA (0.0071 g) ve RKB (0.0064 g) ortamlarında gelişen bitkilerden elde edilmiş ve bu iki ortam istatistiksel olarak aynı grupta yer almıştır. Gövde kuru ağırlığı en düşük 0.0024 ile RKE ortamında gelişen bitkilerden elde edilmiştir. Kök yaş ağırlıkları bakımından bitkiler kıyaslandığında en yüksek değer 0.035 g ile RKA ortamında gelişen bitkilerden elde edilmiştir. Bunu sırasıyla 0.024 g ile RKB ve 0.016 g ile RKC ortamları takip etmiştir. En düşük kök yaş ağırlığı 0.011 g ile RKD ve 0.007 g ile RKE ortamlarında olduğu dikkat çekmiştir. Bu iki ortam arasındaki farklılıklar istatistiksel olarak önemli bulunmamıştır. Kök kuru ağırlığı bakımından ortamlar arasındaki farklılıklar istatistiksel olarak önemli bulunmasa da en yüksek değer 0.0020 g ile RKA ortamından, en düşük değer 0.0007 g ile RKE ortamından elde edilmiştir.

Zare ve Malekpoor-Sharahki (2021), tuzluluk (0, 50, 100, 150, 200, 250, 300, 350 ve 400 Mm) ve kuraklık stresinin (0, -0.2, -0.4, -0.6, -0.8, -1 ve -1.2 MPa) dört Brassicaceae familyası yabancı otunun (Roka (*Eruca sativa*), Sarı Hardal (*Hirschfeldia incana*), Yabancı Hardal (*Sinapis arvensis*) ve Ağaç Hardalı (*Erysimum repandum*) tohum çimlenmesi üzerine etkilerini araştırmayı amaçlamışlardır. Çalışma sonucunda, kuraklık stresi arttıkça çimlenme, canlılık indeksi ve çimlenme oranının azaldığını ve -1.2 MPa kuraklık stresinde çimlenmenin olmadığını bildirmişlerdir. Dört yabancı otta çimlenme için %50 azalma Roka, Sarı Hardal, Yabancı Hardal ve Treacle Hardal sırasıyla -1, -0.49, -0.76 ve -0.41 MPa kuraklık stresinde tahmin edilmiştir. Roka, Sarı Hardal, Yabancı Hardal ve Ağaç Hardalı için çimlenme oranını %50 azaltmak için gereken kuraklık stresi sırasıyla -0.85, -0.35, -0.28 ve 0.22 MPa olarak tahmin edilmiştir. Dört yabancı otta çimlenme oranı, çimlenme yüzdesine kıyasla tuzluluk ve kuraklık streslerinden daha fazla etkilenmiştir.

Çizelge 2. Farklı kuraklık dozlarının rokanın çimlenmesi ve bitki gelişimi üzerine etkileri

Dozlar	Çimlenme yüzdesi (%)	Gövde yaş ağırlığı (g)	Gövde kuru ağırlığı (g)	Kök yaş ağırlığı (g)	Kök kuru ağırlığı (g)
RKA	84.00a	0.088a	0.0071a	0.035a	0.0020
RKB	66.00b	0.067a	0.0064a	0.024ab	0.0015
RKC	64.00b	0.042b	0.0044b	0.016bc	0.0012
RKD	44.00c	0.032bc	0.0039bc	0.011c	0.0008
RKE	38.00d	0.013c	0.0024c	0.007c	0.0007
LSD	4.60***	0.022**	0.0017*	0.011*	Ö.D.

Farklı kuraklık dozlarının roka bitkisinin gövde ve kök uzunlukları (cm) üzerine etkileri Çizelge 3'te verilmiştir. Buna göre bitkinin gövde uzunluğunun 1.77 cm ile 0.57 cm arasında değiştiği belirlenmiştir. Gövdesi en uzun bitkiler RKA (1.77 cm) ortamında gelişmiş ve bunu RKB (1.60 cm) ortamı takip etmiştir. En kısa gövde uzunluğu ise RKD (0.80 cm) ile RKE (0.57 cm) ortamlarında gelişmiştir. Farklı kuraklık dozlarının kök uzunlukları üzerine etkileri incelendiğinde, kök uzunluklarının 8.00 ile 3.50 cm arasında değiştiği dikkat çekmiştir. RKA (8.00 cm), RKB (7.50 cm), RKC (7.17 cm) ve RKD (7.00 cm) ortamlarında gelişen bitkilerin kök uzunlukları istatistiksel olarak aynı grupta yer almış ve bu ortamlardan elde edilen bitkilerin en uzun köklere sahip olduğu belirlenmiştir. Yapılan bir çalışmada kurak koşulların, bitki büyümesini gözle görülür bir şekilde azalttığı bildirilmiştir (Rahman ve ark., 2024). Bitki boyundaki azalma esas olarak hücre büyümesinin azalması, yaprak dökülmesinin artması ve kuraklık koşulları altında bozulmuş mitozdan kaynaklanmaktadır (Yang ve ark., 2021). Bazı çalışmalar zambak (Li ve ark., 2020), mısır (Anjum ve ark., 2017), baston (Misra ve ark., 2020) ve pirincin (Patmi ve ark., 2020) bitki boyunun kuraklık stresi altında önemli ölçüde azaldığını bildirmiştir.

Zare ve Malekpoor-Sharahki (2021) yaptıkları çalışmada, kurak ortamda roka fidelerinin büyüme testi sonucunda normal fide yüzdesinin – 0.54 MPa'ya kadar sabit kaldığını (%95) ve kuraklık konsantrasyonu arttıkça fide gelişiminin azaldığını bildirmişlerdir. Aynı çalışmada kuraklık stresi arttıkça fidelerde kök ve sürgün uzunluklarında azalmalar olduğunu da bildirmişlerdir. Fallahi ve ark. (2015) roka fidelerinin sürgün uzunluğundaki azalma miktarının -1 MPa'da %77 olduğunu bildirmişlerdir. Kayacetin ve ark. (2018), yabancı hardalda kuraklığın -1 MPa'ya kadar azaldığında sürgün uzunluğunun %90 azaldığını tespit etmişlerdir. Genel olarak, tohum çimlenmesinin ve fide büyümesinin azalması, çimlenme sırasında tohumların su emiliminin azalmasından kaynaklanıyor olabilir ve bu da hidrolizin azalması ve tohum rezervinin kullanımı gibi metabolik süreçleri olumsuz yönde etkilemiştir (Toosi ve ark. 2014). Bu çalışma sonucunda elde edilen sonuçlar literatürle benzerlik göstermektedir.

Çizelge 3. Farklı kuraklık dozlarının roka bitkisinin gövde ve kök uzunlukları (cm) üzerine etkileri

Dozlar	Gövde uzunluğu (cm)	Kök uzunluğu (cm)
RKA	1.77a	8.00a
RKB	1.60ab	7.50a
RKC	1.27b	7.17a
RKD	0.80c	7.00a
RKE	0.57c	3.50b
LSD	0.37***	2.17*

Çizelge 4’te farklı kuraklık dozlarının roka bitkisinde incelenen özellikler arasındaki korelasyon analizi verilmiştir. Çizelge’ e göre, çimlenme yüzdesiyle gövde uzunluğu (0.9090), gövde yaş ağırlığı (0.8503), gövde kuru ağırlığı (0.8157), kök yaş ağırlığı (0.8289), arasında pozitif güçlü korelasyon vardır. Kök yaş ağırlığı ve kök uzunlukları arasında pozitif zayıf (0.3741) korelasyon vardır. Gövde yaş ağırlığı ile gövde kuru ağırlığı (0.8907), kök yaş ağırlığı (0.8897), gövde uzunluğu (0.8463) arasında pozitif güçlü korelasyon vardır. Kök kuru ağırlığı ile kök uzunluğu (0.3741) pozitif zayıf (0.3741) korelasyon vardır.

Çizelge 4. Farklı kuraklık dozlarının pırasa bitkisinde incelenen özellikler arasındaki korelasyon analizi

	Çimlenme yüzdesi	Gövde yaş ağırlığı	Gövde kuru ağırlığı	Kök yaş ağırlığı	Kök kuru ağırlığı	Gövde uzunluğu	Kök uzunluğu
Çimlenme yüzdesi	1.0000	0.8503	0.8157	0.8289	0.6841	0.9090	0.6654
Gövde yaş ağırlığı		1.0000	0.8907	0.8897	0.8050	0.8463	0.6674
Gövde kuru ağırlığı			1.0000	0.8729	0.7453	0.7565	0.6577
Kök yaş ağırlığı				1.0000	0.7688	0.7344	0.4950
Kök kuru ağırlığı					1.0000	0.6374	0.3741
Gövde uzunluğu						1.0000	0.7007
Kök uzunluğu							1.0000

SONUÇ

In vitro koşullarda farklı kuraklık stresi koşullarında roka bitkisi gelişimi üzerine yapılan çalışmada çimlenme yüzdesi (%), gövde yaş (g), gövde kuru (g), kök yaş (g) kök kuru (g) ağırlıkları, gövde uzunluğu (cm) ve kök uzunluğu (cm) incelenmiştir. Çimlenme yüzdesi en yüksek %84.00 ile PEG içermeyen RKA ortamından, en düşük %38.00 ile RKE ortamında bulunmuştur. Gövde yaş ağırlığı en yüksek değer 0.088 g ile RKA en düşük 0.013 ile RKE ortamında belirlenmiştir. Gövde kuru ağırlığı en yüksek RKA (0.0071 g), en düşük RKE (0.0024 g) ortamında tespit edilmiştir. Gövde uzunluğu en yüksek RKA (1.77 cm) en düşük RKE (0.57 cm) ortamında görülmüştür. Kök uzunluğu en yüksek değer diğer incelenen parametrelerde olduğu gibi RKA (8.00 cm) ortamında saptanmıştır. Çalışma sonucunda kuraklık konsantrasyonları arttıkça çimlenme yüzdesi, gövde yaş-kuru, kök yaş-kuru ağırlığı ve gövde-kök uzunluğu üzerinde azaltıcı etkide bulunmuştur.

ÖZET

Teknolojinin hızla gelişmesiyle artan çevre kirliliği, doğal kaynakların giderek tükenmesi, ekonomik zorluklar, depremler ve salgın hastalıklar gibi küresel sorunlar nedeni ile insanlar sağlıklı, doğal, düşük maliyetli ve estetik olarak çağa hitap eden mekân arayışlarına yönelmiştir. Bu bağlamda, insanlarla birlikte varoluşun ilk gününden beri neredeyse yaşayan ve günümüze kadar varlığını sürdüren geleneksel ve sürdürülebilir bir yapı malzemesi olan kerpiç, yeniden ilgi odağı haline gelmiştir. Kerpiç yapılar, yaşam döngüleri boyunca enerji tüketimleri az ve düşük maliyetlidir. Kolayca temin edilebilir doğal malzemelerle, basit bir üretim süreci ile hazırlanabilir. Kullanım sürecinde bina içindeki kullanıcıya uygun iç mekân konfor koşulu sağlar. Bu avantajlarına rağmen, kerpiç yapıların basınç dayanımının düşük ve suya karşı dayanımının zayıf olması, malzeme kullanımının günümüzde kırsal bölgelerde sınırlı kalmasına neden olmuştur. Ancak günümüzdeki çevresel, sosyal ve ekonomik koşullar, kerpiç malzemenin yapı için yararlı yönlerini tekrar ön plana çıkarmıştır. Kerpicin bu zayıf yönlerini geliştirilmesi ile ilgili, kerpiç yapıların yapım tekniklerine ve yapılarının tasarımına yönelik çağdaş yöntem ve tekniklerin araştırıldığı çeşitli çalışmalar yapılmaktadır.

Bu çalışmada geleneksel kerpiç malzemesinin geliştirilmesi ve kullanılmasına yönelik yenilikçi yaklaşımların incelenmesi ve çağdaş yapı uygulamalarının bu yaklaşımlar kapsamında ele alınması amaçlanmıştır. Çalışmada literatür analizi yöntemiyle çağdaş yöntem ve teknikler incelenmiştir. Katkı maddeleri ile kerpiç malzeme özelliklerinin iyileştirilmesi, destek sistemler ile kerpiç yapıların güçlendirilmesi ve yenilikçi üretim teknikleri gibi uygulamalarının yaygın olduğu belirlenmiştir. Elde edilen bulgular, kerpiç yapıların sürdürülebilir mimarlık ve yapı teknolojileri alanında önemli bir potansiyel taşıdığını göstermektedir.

Anahtar Kelimeler: Kerpiç, Yenilikçi Yaklaşımlar, Sürdürülebilirlik, Çevre Dostu Malzemeler, Yapı Teknolojileri

ABSTRACT

Due to the increasing environmental pollution with the rapid development of technology, the gradual depletion of natural resources, economic challenges, earthquakes, and epidemics, and global issues such as epidemics, people have sought to healthy, natural, low-cost, and aesthetically appealing spaces. In this context, adobe, a traditional and sustainable building material that has lived with humans almost since the first day of existence and has continued to exist until today, has regained attention. Adobe structures have low energy consumption and low cost throughout their life cycles. They can be produced using easily accessible natural materials through a simple production process and provide suitable indoor comfort conditions for occupants during the usage process. Despite these advantages, the low compressive strength of adobe structures and their weak resistance to water have limited their use to rural areas today.

However, current environmental, social and economic conditions have brought the beneficial aspects of adobe material as a building material to the forefront again. Various studies are being conducted to improve these weak aspects of adobe, investigating contemporary processes and design of their structures.

This study aims to examine innovative approaches to the development and use of traditional adobe material and to evaluate contemporary construction practices within the scope of these approaches. Contemporary methods and techniques were analyzed in the study through a literature review. It was determined that applications such as improving adobe material properties with additives, reinforcing adobe structures with support systems, and producing adobe materials with innovative production techniques are widespread. The findings indicated that adobe structures have significant potential in the field of sustainable architecture and construction technologies.

Keywords: Adobe, Innovative Approaches, Sustainability, Eco-Friendly Materials, Construction Technologies

1.GİRİŞ

Teknolojinin gelişmesi ile çeşitli yapı malzemeleri üretilmiş, ancak bu durum çevre kirliliğinin artmasına neden olmuştur. Yeryüzündeki enerji kaynaklarını korumak ve gelecek nesiller için yaşanılabilir bir dünya bırakmak amacıyla, birçok ülke araştırmalar yaparak üretiminde ve kullanımında daha az enerjiye ihtiyaç duyan yapı malzemelerine yönelmiştir (LEBLEBİCİER & AKINCI, 2021).

Doğadan elde edilen ve geçmişten günümüze kullanımı devam eden kerpiç malzeme, ekonomik olması, üretiminde tesis gerektirmemesi, kolay erişilebilirliği ve sürdürülebilir olması nedeni ile yeniden ön plana çıkmıştır (Kalyoncu vd., 2020). Ses yutuculuğu ve ısı depolama kapasitesinin yüksek olması, ısı geçişlerine karşı dengeli bir ortam sağlaması da olumlu özelliklerindedir. Bu olumlu özelliklerinin yanı sıra basınç dayanımının düşük olması ve suya karşı direncinin zayıf olması, kerpiç malzemenin kullanımını sınırlayan olumsuz özellikler arasında yer almaktadır (GÜNERİ MERVE, 2023). Aynı zamanda malzeme olanaklarının yetersiz görülmesi, malzemeye duyulan güvensizlik ve çağdaş mimari tasarım olanaklarının yeterince bilinmemesi nedeni ile hem kentsel hem de kırsal mimaride kerpiç yapıların kullanımı azalmaktadır (GELİRLİ NİTELİK Dilara, 2022). Bu bağlamda, kerpiç yapıların olumsuz yönlerinin geliştirilmesine yönelik çalışmalar yapılmakta ve çağdaş yapım yöntemleri araştırılmaktadır (YARDIMLI, 2021). Bu çalışmada, geleneksel kerpiç malzemesine yönelik yenilikçi yaklaşımlar incelenmiştir.

2.KERPİÇ MALZEMEYE YÖNELİK YENİLİKÇİ YAKLAŞIMLAR

Bu çalışmada, kerpiç yapılara yönelik yenilikçi yaklaşımlar; kerpiç malzemenin içeriğinin geliştirilmesi, kerpiç yapıların destek sistemler ile güçlendirilmesi, kerpiç malzemenin farklı üretim teknikleri kullanılarak uygulanmasıdır. Ayrıca, son on yıla ait literatür araştırmaları incelenmiştir.

2.1. Kerpiç Malzemenin İçeriğinin Geliştirilmesi

Kerpiç üretimi, kil içerikli kumlu toprak ile suyun, saman gibi lifli katkı maddelerinin karıştırılmasıyla gerçekleştirilir. Bu karışım, çeşitli boyutlardaki kalıplara dökülüp sıkıştırıldıktan sonra, kuruması için uygun koşullarda bekletilir. Anadolu'nun farklı bölgelerinde, kerpiç üretiminde kullanılan katkı maddeleri değişmekte; yün, kıl, alçı, kireç, kül, bitki sapları ve saman gibi maddeler nemi dışarı atarak çatlak oluşumunu engellemektedir. Kerpiç, çeşitli kil içerikli toprakla üretilebilir, ancak toprak ve katkı malzemelerinin türleri ve miktarları, uygulanan kalıp yöntemi ve kurutma süresi kerpicingin dayanıklılığını etkilemektedir (Şimşek Tolacı & Hürmüzlü, t.y.).

Kerpiç yapılarda yapısal çatlaklar, doğal afetler, nem sızıntısı gibi ani kuvvetler özellikle depremlere karşı onları savunmasız hale getiren ana nedenlerdir. Kerpiç malzemelerin güçlendirilmesi ve takviye edilmesi ile ilgili çalışmalar yapılmaktadır (Savary vd., 2020). Tablo1’de bu çalışmalarda kullanılan katkı maddeleri ve çalışmaların bulguları sunulmaktadır.

Tablo 1: Katkı maddeleri ile kerpiç yapıların geliştirilmesi üzerinde yapılan çalışmalar

Katkı Maddesi	Bulgular
Polipropilen Lif	Lif oranı ve boyu arttıkça basınç dayanımlarının katkısız numunelere kıyasla %11,67 ile %44,93 arasında bir artış gösterdiği görülmüştür. Ayrıca, eğilme hasar yüklerinin ise katkısız numunelere göre %43,19 ile %250,05 arasında arttığı belirlenmiştir (BERKGİL & AYZAZ, 2020).
Palmiye Lif	Lif takviyeli kerpiç tuğlaların, takviyesiz alternatiflerine göre daha iyi bir performans sergilediğini göstermektedir. Kerpiç tuğlaların çekme dayanımının, lif içeriği arttıkça yükseldiği ve en yüksek basınç dayanımının %0,25 lif içeriğine sahip örneklerde elde edildiği belirlenmiştir (Eslami vd., 2022).
Cam Elyaf Takviyesi	Kerpiç içeriğine %10 cam elyaf takviyesi eklenmesi, katkı maddesi içermeyen kerpiçle karşılaştırıldığında en iyi performansı sergilemiştir. Bu takviye, %239 oranında büzülme azalışı, %6 hacim yoğunluğu azalışı, %21 termal iletkenlik azalışı, suya batırıldığında kütle kaybı azalışı ve %45 basınç dayanımı artışı sağlamıştır (Gandia vd., 2019) .
Ayçiçeği Sapı	Ayçiçeği sapı ilavesinin numunelerin mekanik özelliklerini ve dayanıklılık parametrelerini güçlendirdiğini göstermektedir. Yapı malzemesi olarak en uygun oran %0,5 ayçiçeği sapı ilavesi olarak belirlenmiştir. Ayrıca, suya dayanıklılık açısından en etkili oran ise %1,25 ayçiçeği sapı ilavesi olmuştur (GÜNERİ MERVE, 2023)
Muz Lifi	Lif takviyeli numuneler, takviyesiz numunelere göre sırasıyla %53 çekme dayanımı ve %33 basınç dayanımı iyileşmesi göstermiştir. Lif takviyeli kerpiç numunenin, takviyesiz numuneye göre %18,42 daha fazla termal dirence sahip olduğu tespit edilmiştir. Çalışma, kerpiç duvar birimlerine dahil edilmek üzere muz yalancı sap lifini (%0,5-0,75 oranında) önermektedir (Ige & Danso, 2021)
Hibiskus Lifi	Hibiskus lifi eklenmesi, numunelerin fiziksel ve mekanik özelliklerini iyileştirmiştir. 30 mm uzunluğundaki liflerin %0,2–0,6 ağırlıkça eklenmesi, preslenmiş kerpiç bloklarındaki gözenek boyutlarını azaltmış ve mekanik özelliklerin iyileştirilmesine katkı sağlamıştır (Millogo vd., 2014).
Pirinç Samanı Külü	Kerpiç tuğlada, %20 pirinç saman külü ve %10 sodyum hidroksit kullanımı, düşük ısı iletkenliği ve neme dayanıklı, maksimum basınç dayanımına sahip hafif kerpiç tuğlalar üretmek için verimli olabileceği sonucuna ulaşılmıştır(Morsy vd., 2022).
Hindistan Cevizi Lifi ve Çimento	%0,6 ağırlıkta hindistan cevizi lifi ve %4 ağırlıkta çimento içeren kerpiç blokların mekanik ve termal özelliklerinin olumlu olarak etkilendiği gözlemlenmiştir (Sanou vd., 2024).
Hurma Lifi	Hurma lifi, kerpiç harcına eklenmiş ve hurma yaprağı lifi katkılı kerpiç numunelerinin 50.0 kgf/cm ² basınç dayanımı ve suya karşı dayanım açısından daha üstün performans sergilediği gözlemlenmiştir (ELBORGY Rasha, 2019)
Neem Ağaç Lifi	Neem lifleri, %0 ile %4 arasında değişen oranlarda kerpiç harcına eklenmiştir. Bu atık liflerin eklenmesi, kerpicin su direncini artırmış ve mekanik ile termal özelliklerini güçlendirmiştir (Babé vd., 2021).
Pomza, Alçı,Sönmüş Kireç, Volkanik Tüf, Organik Lif	Optimum oranlarda hazırlanan kerpiç malzemedde, %6 pomza, %10 alçı, %2 sönmüş kireç, %10 volkanik tüf ve %3 organik lif (keten) kullanıldığında, malzemenin basınç dayanımının oldukça yüksek, ısı iletkenlik katsayısının ise düşük olduğu gözlemlenmiştir (LEBLEBİCİER & AKINCI, 2021).

Çamur, Uçucu Kül ve Lif	%50 ağırlıkça çamur, %35 çimento, %15 uçucu kül ve %0,5 polipropilen lifleri eklenerek hazırlanan malzemenin hem eğilme hem de basınç dayanımlarını artırdığı, bu sayede tuğla ürününün kırılma ve büzülme oranlarını azalttığı gözlemlenmiştir (Minh Trang vd., 2021a).
--------------------------------	--

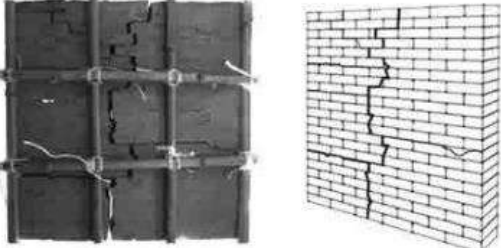

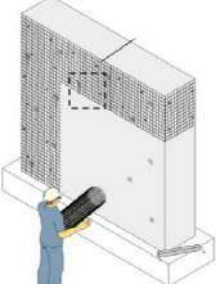

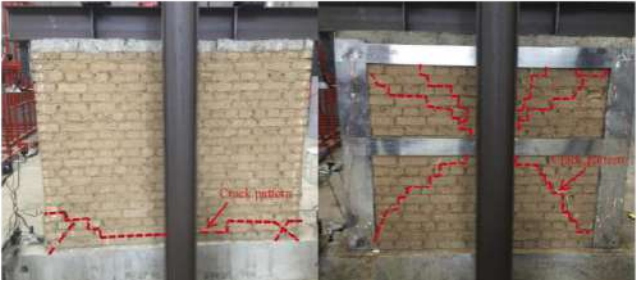

Yapılan incelemeler sonucunda kerpiç malzemeye farklı katkı maddelerinin eklenmesinin, kerpiçin mekanik dayanımını, su direncini ve termal özelliklerini iyileştirmede etkili olabileceği görülmüştür. Bu katkılar özellikle malzemenin dayanıklılığı artırarak, kerpiçin kullanım alanlarını genişletmeye yardımcı olabilir. Ayrıca, doğal ve yerel malzemelerle yapılan bu tür iyileştirmeler, çevresel sürdürülebilirlik açısından da önemlidir.

2.2. Destek Sistemler ile Kerpiç Yapıların Güçlendirilmesi

Kerpiç yapılar, uygun şekilde tasarlanıp güçlendirilmezse, depremler gibi doğal afetlere karşı dayanıklılık göstermeyerek ciddi hasarlara ve yıkımlara neden olabilir. Depremler, kerpiç yapıların zayıf yönlerini ortaya çıkarmış, bu da büyük maddi kayıplara, can kayıplarına ve evsizliğe sebep olmuştur. Bu sorunu çözmek için araştırmacılar, çeşitli güçlendirme ve iyileştirme tekniklerini geliştirmektedir (Aizaz vd., 2024). Kerpiç yapıların olumsuz özelliklerinin destek sistemleri ile iyileştirilmesine yönelik yapılan bazı çalışmalar Tablo 2’de verilmektedir.

Tablo 2: Destek sistemler ile kerpiç yapıların geliştirilmesi üzerine yapılan çalışmalar

Kullanılan Sistem	Bulgular
<p>Bambu şerit örgü ve kurutulmuş jüt ipliği ile güçlendirilmiş kerpiç duvarların düzlem içi davranışları incelenmiştir (Aizaz vd., 2024)</p>  <p>Şekil 1: Bambu ve Jüt ipliği ile güçlendirilmiş duvar (Aizaz vd., 2024)</p>	<p>Numuneler basınç dayanımı, elastiklik modülü, kesme dayanımı, sertlik modülü ve enerji emilimi gibi önemli mekanik özellikleri belirlemek için analiz edilmiştir. Bambu şerit tekniği bu özellikleri sırasıyla %30, %19, %96, %82 ve %195 oranında iyileştirmiştir. Kurutulmuş jüt ipliği sarma tekniği, aynı özellikler için %40, %69, %102, %110 ve %314'lük artışlarla daha da büyük iyileştirmeler göstermiştir (Aizaz vd., 2024)</p>
<p>Kenevir lifli halatlar kullanılarak kerpiç duvar örgüsünün düzlem dışı güçlendirilmesi ile ilgili deneysel çalışma yapılmıştır (Abdulla vd., 2021)</p>  <p>Şekil 2: Kenevir lifli halatlarla güçlendirilmiş bir kerpiç duvar paneli (Abdulla vd., 2021)</p>	<p>Bir dizi normal ve güçlendirilmiş kerpiç panel, yatak bağlantılarına hem paralel hem de dik olarak bükülmeye maruz bırakılmıştır. Halat takviyeli paneller, güçlendirilmemiş panele göre 10 kata kadar daha fazla deformasyon kapasitesine ulaşmıştır (Abdulla vd., 2021).</p>

<p>Bambu tozu ve bambu destekler ile kerpiç yapıların güçlendirilmesi ile ilgili çalışma yapılmıştır (Paradiso vd., 2019)</p>  <p>Şekil 3: Bambu destekler ile güçlendirilmiş kerpiç duvar (Paradiso vd., 2019)</p>	<p>Bambu tozu kerpiç tuğlalar için karışımda katkı maddesi olarak kullanılabilir. Küçük ağırlık yüzdesinde (%3 kullanılan toprağın ağırlığı), test edilen numunelerin basınç dayanımı %20'ye kadar artmıştır. Bambu destekler ise yapının çökmesini önlemek için önemlidir ve bu destekler kerpiç duvarın deformasyonunu azaltarak yapıya gelen sismik enerjiyi emdiği sonucuna ulaşılmıştır(Paradiso vd., 2019)</p>
<p>Çelik ve sentetik ağlar eklenen kerpiç yapıların sismik değerlendirmesi yapılmıştır (Reyes vd., 2019).</p>  <p>Şekil 4: Örnek ağ yerleşimi(Reyes vd., 2019)</p>	<p>Çalışmada farklı numunelere yerleştirilmiş ağların, özellikle düşük eksenel yük seviyelerinde çatlama sonrası sınırlama sağlayarak kalın toprak duvarların düzlem içi kesme mukavemetini ve düzlem dışı kapasitesini artırmada etkili olabileceği bulunmuştur (Reyes vd., 2019).</p>
<p>İnce duvarlı çelikle güçlendirilmiş kerpiç duvarın sismik davranışının değerlendirilmesi yapılmıştır (Zhang vd., 2020).</p>  <p>Şekil 5: İnce duvarlı çelikle güçlendirilmiş duvar (Zhang vd., 2020)</p>	<p>Donatılmış duvarın sismik davranışının, donatısız duvara göre daha iyi olduğunu göstermiştir. Çatlama yükü, nihai yük, süneklik katsayısı ve enerji tüketimi sırasıyla %43,34, %79,10, %440 ve %560 artmıştır. İnce duvarlı çelik uygulaması kerpiç duvarın sismik performansını önemli ölçüde artırmıştır. (Zhang vd., 2020)</p>

İncelenen çalışmalar, çoğunlukla sınırlı sayıda test edilmiş duvar paneline yöneliktir. Ancak çalışmaların sonuçların doğrulanması ve desteklenmesi için gerçek ölçekli numuneler kullanılarak daha fazla deneysel teste ihtiyaç vardır.

2.3. Kerpiç Malzemenin Farklı Üretim Teknikleri

Kerpiç malzemenin yapıda kullanımı, iklim koşulları, doğal şartlar ve yapım teknolojisi gibi faktörlere bağlı olarak değişiklik gösterir. Kerpiç yapım teknikleri üç başlıkta sınıflandırılabilir. Geleneksel yöntemle kerpiç tuğla üretimi, kerpiç harcının kalıplara dökülüp şekillendirilmesi ve ardından gölgede ve güneşte kurutulmasıyla gerçekleştirilir. Tokmıklama (dövme) yöntemiyle kerpiç üretiminde, tuğla üretimi ve duvar örme işlemleri bir arada yapılır. Karışım, tek bir seferde kalıp içine sıkıştırılarak düzgün yüzeyler elde edilir. Püskürtme yöntemi ise, beton teknolojisinde kullanılan cihazlarla kerpiç karışımının basınçla püskürtülmesiyle uygulanır. Bu yöntemde, karışım oranı ve yoğunluğu, cihazın basıncına göre ayarlanır ve tekrar sıkıştırma yapılmadığı içim üretim süreci hızlanır (Kalyoncu vd., 2020)

Son yıllarda inşaat sektöründe, daha hızlı üretim süreçlerine odaklanan araştırmalar artmıştır. Mimarlar ve mühendisler, istedikleri verimliliği ve form çeşitliliğini sağlamak amacıyla çözüm önerileri sunarak çağdaş üretim süreçlerine daha fazla yönelmektedirler. Bu durum, yerel mimari özelliklerden faydalanarak daha esnek ve modern inşaat sistemlerinin geliştirilmesinin önemini ortaya koymuştur (Gomaa vd., 2022). Toprak yapılar içinde farklı modern üretim teknikleri üzerine çalışmalar yapılmaktadır (Tablo 3).

Tablo 3: Kerpicing farklı üretim tekniklerine yönelik yapılan çalışmalar

Kullanılan Sistem	Bulgular
<p>Kerpicing Kalıp Makinesi ile Üretimi</p>  <p>Şekil 6: Kalıp makinesi ile kerpiç blok üretimi (Kontovourkis & Konatzii, 2021)</p>	<p>Çalışmanın amacı, geleneksel yöntemlerin aksine uyarlanabilir kalıp döküm tekniği ile özelleştirilmiş tuğla üretme potansiyelini detaylı bir şekilde göstermektedir. Uyarlanabilir kalıbın, karbondioksit emisyonları, enerji tüketimi ve üretim maliyetleri açısından sağladığı olumlu sonuçlar bu yaklaşımın geleneksel kalıplara göre daha verimli olduğunu göstermektedir. Bu tür uygulamalar, inşaat sektöründe özel yapı bileşenlerinin üretiminde çevre dostu ve sürdürülebilir yöntemlerin kullanımına olanak sağlayabilir (Kontovourkis & Konatzii, 2021).</p>
<p>Hidrolik Pres Makinesi ile Kerpiç Bloklarının Üretimi</p>  <p>Şekil 7: Hidrolik pres makinesi ile kerpiç blok üretimi (Minh Trang vd., 2021b)</p>	<p>Bu çalışmada, manuel statik pres teknolojisi ile iki delikli tuğla üretimine odaklanılmıştır. Tuğla üretimini geliştirmek, daha kaliteli, pürüzsüz ve çeşitli tasarımlar oluşturmak amacıyla titreşimli pres teknolojisinin kullanılması önerilmektedir. Ayrıca, çalışmada, yeraltı suyu arıtma tesisinden çıkan çamur, bir termik santralden elde edilen uçucu kül ve lif içeriği, geleneksel bir bileşen olan kil yerine alternatif agregalar olarak kullanılmıştır. Bu malzemeler belirli oranlarda kerpice eklenerek, basınç ve eğilme dayanımında iyileşme sağlanmıştır (Minh Trang vd., 2021b).</p>
<p>Kerpicing 3D Baskı Makinesi ile Üretimi</p>  <p>Şekil 8: 3 d baskı ile kerpiç üretimi (Gomaa vd., 2022)</p>	<p>Bu makalede, dijital üretim teknolojilerinin kerpiç bloklarının üretimini daha verimli hale getirebileceği vurgulanmaktadır. Bu teknolojiler, geleneksel yöntemlerle yapılan kerpiç bloklara kıyasla daha tutarlı boyutlar ve artırılmış dayanıklılık sunabilir. Ayrıca, yerel malzemeler kullanılarak sürdürülebilir inşaat çözümleri sağlanabilir. Kerpicing dijital üretimi, sürdürülebilir inşaat ve enerji verimliliği açısından önemli bir adım olarak öne çıkmaktadır (Gomaa vd., 2022).</p>

3.YENİLİKÇİ YAKLAŞIMLAR İLE KERPIÇ YAPILAR

Bu bölümünde, kerpiç malzemeye ilişkin yenilikçi yaklaşımlar ele alınarak modern kerpiç yapılar incelenmiştir. Malzeme içeriğinin geliştirilmesi, alternatif üretim sistemlerinin

kullanılması, farklı taşıyıcı sistemler ile entegrasyonu ve modern mimari tasarım öğeleri ile güncel talepleri karşılayabilecek şekilde üretilmesi esasları değerlendirilmiştir.

3.1. Centinela Chapel / Meksika / 2014

Şekil 9 : Centinela Chapel yapısı ve detay çizimi (Web 1)

Proje temel malzemeler olan kerpiç ve çeliğin yapısal özelliklerinden faydalanarak gerçekleştirilmiştir. Tasarımda, 13 metre uzunluğunda bir açıklık ve 8 metre yüksekliğinde çift kerpiç duvar kullanılmıştır. Kerpiç karışımında, bölgedeki toprakla birlikte, kilin bağlayıcılığını artırmak ve çatlamayı önlemek amacıyla agave lifinden elde edilen bir atık malzeme olan "bagazo" kullanılmıştır (Web 1).

3.2. Mud House / Hindistan/ 2022

Şekil 10 : Mud House yapısı (Web 2)

Tasarım, geleneksel inşaat tekniklerinden faydalanarak çamur, geri kazanılmış taş ve yerel yabani otlar kullanılarak gerçekleştirilmiştir. Bu doğal malzemeler, evin sıcak aylarda pasif soğutma yoluyla serin kalmasını sağlamaktadır. Duvarlar, çamur ve doğal bağlayıcılarla karıştırılmış topraktan yapılırken, karışıma Hindistan'a özgü bir bitki olan neem ve jaggery (şeker kamışı şekeri) gibi yenilebilir maddeler eklenerek böcekleri uzaklaştıran doğal bir koruma etkisi yaratılmıştır (Web 2).

3.3. Kampala Konut Projesi /Uganda/ 2022

Şekil 11 : Kampala konut projesi görselleri (Web 3)

Kampala konutları sıkıştırılmış toprak tuğlalarla inşa edilmiştir. Eko bloklar, %90 yerel toprak, %10 çimento, kireç, kum ve su karışımından yapılmıştır. Bu malzeme, çimento bloklardan daha dayanıklı, sürdürülebilir ve %30 daha az karbondioksit salınımına neden olan bir termal ve akustik yalıtıktır. Evin çatısı, büyük bir oluklu demir ve ahşap yapı ile tasarlanmıştır. Çatıda, güneş panelleri bulunmaktadır, ayrıca yağmur suyunu su kulelerinde toplanmasına yardımcı olur. Tasarımda sürdürülebilir mimarinin pasif sistemleri kullanılmıştır (Web 3).

3.4. San Pedro de Atacama'da Bir Kilise /Şili /2014

Şekil 12 : Kilise projesi (Web 4)

Şili'deki kilise duvarları halat örgü sistemi ile güçlendirilerek restore edilmiştir. Tasarım, kerpiç tuğlaların boyutlarına uygun aralıklarla dikey ve yatay olarak uygulanan ve deprem durumunda binanın çökmesini engelleyen bir halat sisteminden oluşmaktadır. Halatın düşük maliyetli ve kolay erişilebilir bir malzeme olması hem çökmeyi önlemesi hem de deprem sırasında yapı davranışlarını iyileştirmesi yönünden avantajlar sağlamaktadır (Web 4).

3.5.-Gaia / İtalya/ 2016

Şekil 13 :Gaia proje görselleri (Web 5)

Gaia, ana bağlayıcı olarak ham toprağın kullanıldığı bir sürdürülebilir mimari örneğidir. Özellikle pirinç üretim zincirinden elde edilen doğal atık malzemelerin kullanımıyla, biyoklimatik ve sağlıklı bir tasarım anlayışı benimsenmiştir. 3d makina ile üretilen yapıda kullanılan malzeme içeriği, %25'i sahadan alınan toprak (%30 kil, %40 silt ve %30 kum), %40'ı saman, %25 pirinç kabuğu ve %10 hidrolik kireçten oluşmaktadır. Ev, neredeyse sıfır çevresel etkiye sahip olup, enerji verimliliği ve iç mekân sağlığı açısından yüksek performanslı bir yapıdır. Duvar işçiliğiyle birkaç haftada inşa edilen bu yapı hem kış hem de yaz aylarında içeride ılıman ve konforlu bir sıcaklık sunmaktadır (Web 5).

3.6.-Tecla / İtalya /2021

Şekil 14 :Tecla proje görselleri (Web 6)

Tecla, yerel malzemeler, biyoiklimsel prensipler ve inşaat uygulamalarını birleştiren yenilikçi bir konut örneğidir. Neredeyse sıfır emisyonlu olan bu proje, yerel malzemeler ve ham toprak kullanarak düşük karbon salınımı sağlamakta ve atıkları azaltmaktadır. Proje, toprağın su ve pirinç kabuklarıyla beton mikserinde karıştırılmasıyla ilerler; bu karışım, duvarları oluşturacak kadar katılaşır. WASP tarafından geliştirilen Crane WASP adlı 3D yazıcı teknolojisiyle, konut modülleri birkaç gün içinde inşa edilebilmektedir. Büyük göçler veya doğal afetler gibi küresel krizlere karşı sürdürülebilir konut çözümleri sunmayı amaçlamaktadır (Web 6).

4.SONUÇ

Bu çalışmada, kerpiç kullanımını sınırlayan olumsuz özelliklerin iyileştirilmesine yönelik yenilikçi yaklaşımlar ele alınmıştır. Söz konusu yaklaşımlar, kerpiç malzeme içeriğinin geliştirilmesi, destek sistemleri ile güçlendirilmesi, farklı üretim tekniklerinin uygulanması ve yenilikçi tasarım yaklaşımlarının benimsenmesi başlıkları altında değerlendirilmiştir. Çalışma kapsamında ele alınan araştırmalar, kerpiç malzeme içeriğinin geliştirilerek ve destek sistemleri ile güçlendirilerek basınç ve dayanım özelliklerinin artırılabilirliğini, ayrıca farklı üretim teknikleri ile daha hızlı, düşük maliyetli ve çevre dostu bir şekilde üretilebileceğini ortaya koymuştur.

Güncel projelere bakıldığında, dünyada kerpiç yapıların hala yaygın olarak üretildiği ve kullanıldığı görülmektedir. Bu projelerde geleneksel kerpiçten daha gelişmiş malzeme içerikleri, yenilikçi destek elemanları ve 3D yazıcı teknolojisi kullanılarak, daha hızlı üretilebilen yapılar inşa edilmiş ve yapısal performans artırılmıştır. İncelenen araştırmalar ve gelişen teknolojiler, kerpicin bu olumsuz özelliklerini aşma noktasında önemli adımlar atılmasına olanak tanımakta ve kerpicin dezavantajlı özelliklerinin geliştirilebileceğini göstermektedir. Geleneksel ve ekolojik bir yapı malzemesi olan kerpiç hem çevre dostu hem de ekonomik bir yapı malzemesi olarak gelecekte daha geniş bir kullanım alanına sahip olabilir.

ÜNİVERSİTE ÖĞRENCİLERİNİN SİBER FLÖRT İSTİSMARI YAŞAMA DURUMLARINA KİŞİLİK ÖZELLİKLERİNİN ETKİSİ
THE EFFECT OF PERSONALITY TRAITS ON UNIVERSITY STUDENTS' CYBER DATING ABUSE

Eda GÜNGÖR

Öğretim Görevlisi, Tokat Gaziosmanpaşa Üniversitesi Tıbbi Hizmetler ve Teknikler Bölümü

ÖZET

Araştırma; üniversite öğrencilerinin siber flört istismarı yaşama durumlarına kişilik özelliklerinin etkisini belirlemek amacıyla kesitsel türde yapılmıştır.

Araştırma; 616 üniversite öğrencisinin katılımıyla kişisel bilgi formu, Siber Flört İstismarı Ölçeği (SFİÖ) ve Beş Faktör Kişilik Özellikleri Ölçeği (BFKÖÖ) kullanılarak toplanmıştır. Verilerin değerlendirilmesinde frekans, yüzde, ortalama, standart sapma, ortanca (min-max), Independent Sample t Test, Spearman korelasyon ve regresyon analizleri yapılmıştır.

Araştırmaya katılan öğrencilerin yaş ortalaması 20.37 ± 3.19 , %64.9' u kadın, %44.3' ünün şuan bir ilişkisi yok ancak daha öncesinde bir ilişkisi olduğu belirlenmiştir. Cinsiyete göre SFİÖ tüm alt boyutlarında anlamlı farklılık saptanmıştır ($p < 0.01$) ve tüm alt boyutlarda erkeklerin puan ortalamaları kadınlara oranla daha yüksek bulunmuştur. Uyumluluk kişilik özelliği ile SFİÖ tüm alt boyutları arasında istatistiksel olarak negatif yönde anlamlı bir ilişki ($p < 0.01$) varken; sorumluluk kişilik özelliği ile doğrudan saldırganlığa maruz kalma arasında negatif yönde anlamlı bir ilişki ($p < 0.05$); nörotiklik kişilik özelliği ile izleme ve kontrole maruz kalma ($p < 0.05$), nörotiklik ile izleme ve kontrol uygulama arasında ise pozitif yönde anlamlı bir ilişki ($p < 0.01$) bulunmaktadır. BFKÖÖ alt boyutlarından uyumluluk kişilik özelliğinin SFİÖ alt boyutları olan doğrudan saldırganlık ve izleme/kontrol davranışı üzerinde negatif yönde, nörotiklik kişilik özelliğinin de pozitif yönde anlamlı bir etkisi vardır.

BFKÖÖ ve SFİÖ alt boyutları arasında anlamlı bir ilişki bulunmuştur. Sonuç olarak nörotiklik ve sorumluluk kişilik özelliklerinin siber flört istismarı ile arasında bir ilişki olduğu belirlenmiştir. Bu bağlamda öğrencilere yönelik istismar davranışları, risk faktörleri ve istismarın sonuçlarını içeren eğitim programlarının düzenlenmesinin toplumda farkındalık yaratması adına faydalı olacağı düşünülmektedir.

Anahtar Kelimeler: Siber Flört, Siber Flört İstismarı, Siber Flört Şiddeti, Beş Faktör Kişilik Özellikleri, Kişilik Özellikleri

ABSTRACT

The research was conducted as a cross-sectional study to determine the effects of personality traits on university students' cyber dating abuse. The research was conducted with the participation of 616 university students using a personal information form, the Cyber Dating Abuse Scale (CDAS) and the Five Factor Personality Traits Scale (FFTSS). Frequency, percentage, mean, standard deviation, median (min-max), Independent Sample t Test, Spearman correlation and regression analyses were performed to evaluate the data.

The mean age of the students participating in the study was 20.37 ± 3.19 , 64.9% were female, 44.3% were not currently in a relationship but had a relationship before. A significant difference was found in all sub-dimensions of the CDAS according to gender ($p < 0.01$) and the mean scores of men were found to be higher than those of women in all sub-dimensions. While there is a statistically significant negative relationship ($p < 0.01$) between the agreeableness personality trait and all sub-dimensions of the CDAS; there is a negative significant relationship ($p < 0.05$)

between the conscientiousness personality trait and exposure to direct aggression; there is a positive significant relationship ($p<0.01$) between the neuroticism personality trait and exposure to monitoring and control ($p<0.05$), and between neuroticism and the exercise of monitoring and control. Among the sub-dimensions of the FFTSS, the agreeableness personality trait has a negative effect on the CDAS sub-dimensions of direct aggression and monitoring/control behavior, while the neuroticism personality trait has a positive significant effect.

A significant relationship was found between the sub-dimensions of FFTSS and CDAS. As a result, it was determined that there was a relationship between neuroticism and conscientiousness personality traits and cyber dating abuse. In this context, it is thought that organizing training programs that include abusive behaviors, risk factors and consequences of abuse for students will be beneficial in terms of raising awareness in society.

Key words: Cyber Dating, Cyber Dating Abuse, Cyber Dating Violence, Five Factor Personality Traits, Personality Traits

GİRİŞ

Flört şiddeti son yıllarda ciddi bir problem haline gelen ve yaygınlığı giderek artan bir toplum sağlığı sorunu olarak kabul edilmektedir. (Vagi et al., 2013). Flört şiddeti, diğer şiddet türlerinde olduğu gibi fiziksel, cinsel, psikolojik, duygusal ve sosyal birçok boyutun yanı sıra kontrol ve izleme gibi davranışları da içermektedir. Kontrol ve izleme davranışlarını gerçekleştirmenin bir yolu da dijital iletişim teknolojilerinin kullanılmasıdır (Baker&Carreno, 2016). Gelişen yeni iletişim teknolojileri, dijital medya; insanların yaşamlarında öncelikli bir yer haline gelerek, bireylerin bilgi ve deneyimlerini paylaşabileceği, sosyal etkileşimlerini arttırabileceği, her an iletişim kurabileceği, flört ilişkileri geliştirip sürdürebileceği bir platform haline gelmiştir. (Burke et al., 2011; Valkenburg&Peter, 2011; Donat Bacıoğlu, 2022).

Gelişen teknoloji ile birlikte bireylerin anlık iletişim araçlarını kullanımları artmış ve sosyal ağ kullanımları da kişilerarası ilişkileri önemli ölçüde etkiler hale gelmiştir. Teknolojinin gelişmesi bir yandan iletişim kurma biçimine önemli katkı sağlarken bir yandan da partnerler arasındaki şiddet ortamına zemin oluşturmuştur (Barlett&Gentile, 2012). Anlık iletişim araçları ve sosyal ağ kullanımının artması ile birlikte flört ilişkileri de yüz yüze etkileşimden dijital ortama doğru taşınmıştır. Bununla birlikte, yüz yüze ilişkilerdeki çatışmalar ve şiddet, dijital ortamda sürdürülen ilişkilerde de görülmeye başlamıştır (Kowalski&Limber, 2007).

Dijital flört şiddeti, dijital ortamda partnere zarar vermek amacıyla bireylerin partnerlerine karşı uyguladıkları her türlü söz, tutum ve davranışları kapsamaktadır (Borrajo et al., 2015). Literatürde dijital flört şiddeti yerine elektronik saldırganlık, dijital flört istismarı, siber saldırganlık, siber zorbalık, siber istismar şeklinde farklı tanımlar da kullanılmaktadır. Flört şiddetinin bir türü olan siber flört istismarı (Zweig et al., 2014), romantik ilişkide partnerlerden birinin, diğerini sosyal medya veya teknolojik yollar (telefon çağrıları, e-mail, sms) aracılığıyla tehdit, şantaj, kontrol, takip veya rahatsız ederek zarar vermesini içeren her türlü faaliyet olarak ifade edilmektedir (Zweig et al., 2013; Van et al., 2018; Cebecioğlu&Altıparmak, 2017). Araştırmalar, genellikle siber flört istismarının yaygınlık oranlarına dikkati çekmektedir (Zweig et al., 2013; Borrajo et al., 2015; Stonard et al., 2017). Borrajo ve arkadaşları (2015), üniversite öğrencilerinin yaklaşık %50'sinin siber flört şiddetine dahil olduğunu bildirmektedir. Zweig, Dank, Yahner ve Lachman (2013) tarafından 5647 ortaokul ve lise öğrencisi ile yürütülen araştırmada öğrencilerin %26'sının bir önceki yıl siber flört istismarı mağduru olduğu ve kız öğrencilerin erkek öğrencilere göre daha fazla mağduriyet bildirdiği tespit edilmiştir. Öztürk ve Bilican-Gökkaya (2022) tarafından üniversite öğrencilerinin flört şiddeti mağduriyetleri ve mücadele stratejilerini belirlemek amacıyla yapılan araştırma sonuçlarına

göre katılımcıların en sık maruz kaldıkları davranışlar sosyal medya hesaplarının kontrol edilmesi (%74,52), sürekli nerede olduklarının konum veya fotoğraf istenerek teyit edilmesi (%53,47) olarak tespit edilmiştir. Cinsiyete göre maruz kalınan davranışlar incelendiğinde ise erkeklerin en sık sürekli nerede olduklarının sorulması (%52,8) ve sosyal medya hesaplarının kontrol edilmesi (%40,8) kadınların ise neredeyse tamamının (%94) sosyal medya hesaplarının kontrol edilmesi şeklinde şiddete maruz kaldıkları belirlenmiştir. Toplu-Demirtaş ve arkadaşlarının (2022) üniversite öğrencileri ile yaptıkları araştırma sonuçlarına göre ise katılımcıların %67'sinin son 6 ay içinde ilişkilerinde en az bir kez siber taciz edici davranışta bulunduğu tespit edilmiştir. Duerksen ve Woodin (2019) tarafından 17-25 yaş aralığında olan genç yetişkinlerle yapılan araştırma sonuçlarına göre ise, %62,5 katılımcının partneri tarafından hem şahsen hem de teknoloji kullanımı ile flört şiddetine maruz kaldığı belirlenmiştir.

Şiddet; kişisel, ailesel, sosyal ve çevresel birçok faktörden etkilenmektedir. Siber istismarın insanlar üzerinde yarattığı etkiler kişiler arasında farklılıklar göstermektedir (Cebecioğlu&Altıparmak, 2017). Bu bağlamda kişilik özelliklerinin siber istismar üzerinde önemli etkiye sahip olduğunu söylemek mümkündür. Ryen, Weikel ve Sprechini (2008) yaptıkları araştırmada narsizm kişilik özelliğine sahip bireylerin olumsuz bir geri bildirim aldıklarında öfke ve saldırganlık içeren davranışlarla karşılık verdiklerini belirtmişlerdir. Kişilik bozuklukları ve düşük benlik saygısına sahip olmak flört şiddeti uygulayan veya mağduru olan bireyler için bir risk faktörüdür (Kızmaz, 2006). Ulu (2016) tarafından lise öğrencilerinde kişilik özellikleri ve şiddet arasındaki ilişkiyi belirlemek üzere yapılan araştırma sonuçlarına göre uyumluluk ve sorumluluk kişilik özelliklerinin şiddet eğilimini negatif yönde yordadığı; nörotiklik ve dışa dönüklüğün ise pozitif yordadığı tespit edilmiştir. Siber flört istismarı, şiddetin diğer türleriyle yüksek oranda ilişkilidir (Zweig et al., 2013). Siber flört istismarının erken dönemde yaşanması, gelecekte de çok yönlü istismar içeren ilişkiler yaşanması için bir risk faktörüdür (Stonard et al., 2017). Dijital iletişim araçlarının kullanımına bağlı olarak siber flört kötüye kullanımı/mağduriyet olaylarının oldukça sık görülmesi nedeniyle, siber flört istismarı uygulayıcısı/mağduriyeti ile ilişkili olabileceği düşünülen kişilik özelliklerini incelemek önemli görülmüştür. Türkiye'de son yıllarda siber flört istismarının yaygınlığına ve sonuçlarına yönelik çalışmalara odaklanılmakta (Fidan&Yeşil, 2018; Erdem ve ark., 2018; Koçak&Can, 2019; Bakır&Kalkan, 2019; Toplu-Demirtaş ve ark., 2020; Donat Bacıoğlu, 2022; Toplu-Demirtaş ve ark., 2022) ve konuya yönelik araştırmalar çok yeni ve sınırlı sayıda bulunmaktadır.

Bu araştırma; siber flört istismarına dikkat çekmek, farkındalık yaratmak, üniversite öğrencilerinde siber flört istismarı sıklığını belirlemek ve kişilik özellikleri ile arasındaki ilişkiyi belirlemek amacıyla yapılmıştır.

Araştırma sorusu; "Üniversite öğrencilerinin siber flört istismarı yaşama sıklığı nedir?" ve "Üniversite öğrencilerinin siber flört istismarı yaşama durumlarına kişilik özelliklerinin etkisi var mıdır?" olarak belirlenmiştir.

MATERYAL VE METOD

Araştırma tipi

Bu araştırma; üniversite öğrencilerinin siber flört istismarı yaşama durumlarına kişilik özelliklerinin etkisini belirlemek amacıyla kesitsel türde yapılmıştır.

Araştırmanın Yapıldığı Yer ve Zaman

Araştırma 01.11.2022-01.02.2023 tarihleri arasında Tokat Gaziosmanpaşa Üniversitesi (TOGÜ) Erbaa yerleşkesinde öğrenim gören üniversite öğrencilerine yapılmıştır.

Araştırmanın Evren ve Örneklemi

Araştırmanın örneklem büyüklüğünün hesaplanması için G Power güç analizi 3.1.9.7 programı kullanılmıştır. Araştırmanın ana çıktılarında siber flört istismarı puanlarının iki grup arasındaki farkları göz önünde bulundurularak yapılan hesaplama göre %95 güç ve %95

güven aralığında 0.5 etki düzeyinde 580 birey alınması gerektiği belirlenmiştir (Biolcati et all., 2022; Bakır&Kalkan, 2019). Çalışma 616 katılımcı ile tamamlanmıştır.

Araştırmaya Dahil Edilme Kriterleri

Bu araştırmanın dahil edilme kriterleri; TOGÜ Erbaa yerleşkesinde öğrenim görüyor olmak ve yaşamının bir döneminde flört ilişkisi yaşamış olmak olarak belirlenmiştir.

Araştırmanın Değişkenleri

Bağımlı Değişkenler; siber flört yaşama durumları, Siber Flört İstismarı Ölçeği toplam puan ortalaması ve alt boyutlar puan ortalamaları

Bağımsız Değişkenler; Beş Faktör Kişilik Ölçeği toplam puan ortalaması ve alt boyutlar puan ortalamaları ve cinsiyet

Veri Toplama Araçları

Kişisel Bilgi Formu: Yaş, doğum yeri, okulu, öğrenim gördüğü program, romantik ilişki durumuna yönelik sorular (ilişki süresi, görüşme sıklığı, iletişim şekli vb.), internet kullanımına ilişkin soruları (kullanım amacı, sıklığı vb.) içeren toplam 13 adet sorudan oluşmaktadır.

Siber Flört İstismarı Ölçeği (SFİÖ): SFİÖ teknoloji vasıtasıyla flört ilişkilerinde partnerler arasında uygulanan ve maruz bırakılan şiddetin ölçülmesi amacıyla Borrajo, Gamez-Guadix, Pereda ve Calvete (2015) tarafından geliştirilmiştir. Ölçeğin Türkçe uyarlama ve geçerlilik-güvenilirlik çalışması Bakır ve Kalkan (2019) tarafından yapılmıştır. SFİÖ; 20 madde ve 2 alt boyuttan oluşan 6'lı likert tipte bir ölçektir. Ölçekteki maddelerden ilk seçenek şiddete maruz kalmaya ikinci seçenek ise şiddet uygulamaya yönelik sorulmuştur. Doğrudan Saldırganlık ve İzleme/Kontrol olmak üzere iki alt boyuttan oluşan ölçekte her alt boyutta ortalama değerlerin yükselmesi siber flört istismarı uygulama veya maruz kalma davranışının arttığına işaret etmektedir.

Beş Faktör Kişilik Ölçeği (BFKÖ): Ölçek Benet-Martinez ve John (1998) tarafından “Beş Faktör Envanteri” (The Big Five Inventory) ismiyle geliştirilmiştir. Ölçeğin Türkçeye uyarlaması Sümer ve Sümer (2005) tarafından yapılmıştır. BFKÖ; 5 alt boyut, 44 maddeden oluşan 5'li likert tipte bir ölçektir. Ölçekte “nörotiklik” ve “dışadönüklük” alt boyutları 8'er madde, “uyumluluk” ve “sorumluluk” alt boyutları 9'ar madde ve “açıklık” alt boyutu ise 10 madde ile ölçülmektedir.

Verilerin Analizi

Verilerin analizinde Statistical Package for the Social Sciences (SPSS) 25 programı kullanılmıştır. Demografik değişkenlerin analizi için frekans ve yüzde değerleri, ölçeklere ait verilerin analizi için de ortalama, standart sapma, ortanca (min-max) hesaplamaları yapılmıştır. Ayrıca katılımcıların siber flört istismarına maruz kalma ya da uygulayan olma durumlarına göre kişilik özelliklerinin farklılaşıp farklılaşmadığı Independent Sample t Testi ile analiz edilmiştir. Siber flört istismarı ile kişilik özellikleri arasındaki ilişkinin incelenmesinde ise korelasyon ve regresyon analizleri yapılmıştır.

Araştırmanın Sınırlılıkları

Bu araştırma yalnızca TOGÜ Erbaa yerleşkesinde yalnızca ulaşılabilen ve çalışmaya katılmayı kabul eden üniversite öğrencilerine uygulanmıştır.

Araştırmanın Etik İlkeleri

Araştırmanın yürütülmesi için Tokat Gaziosmanpaşa Üniversitesi Sosyal ve Beşeri Bilimler Araştırmaları Etik Kurulu'ndan (2022/14.14) etik kurul izni, Tokat Gaziosmanpaşa Üniversitesi Erbaa yerleşkesinde bulunan yüksekokul müdürlükleri ve fakülte dekanlıklarından kurum izni alınmıştır. Araştırmaya katılan öğrencilere araştırmanın amacı açıklanmış olup gönüllü olanlar araştırmaya dahil edilmiştir.

BULGULAR**Tablo 1.** Katılımcıların Sosyo-Demografik Özelliklerinin Dağılımı (n=616)

Değişkenler			
Yaş	(min 17; max 56)	ort. 20.37±3.19	
		n	%
Cinsiyet			
Kadın		400	64.9

Sigara		207	96.7
Alkol		60	28.0
Uyuşturucu (keyif verici) madde		12	5.6
Psikiyatrik ilaç		17	7.9

Not: n=616, * Birden fazla seçenek işaretlenmiştir.

Katılımcıların sosyo-demografik özelliklerine ilişkin dağılımı Tablo 1' de sunulmuştur. Buna göre araştırmaya katılan öğrencilerin yaş ortalaması 20.37±3.19, %64.9' unun kadın olduğu belirlenmiştir. Katılımcıların %44.3' ü şuan bir ilişkisinin olmadığını fakat yaşamının herhangi bir döneminde bir ilişkisi olduğunu, %49.5' i partneri ile dijital iletişim araçları aracılığıyla günde 3 saatten az iletişim kurduklarını ifade etmişlerdir. Katılımcıların %64.7' si müzik dinlemek amacıyla internet kullandıkları belirlenmiştir. Madde kullanım durumlarına bakıldığında ise katılımcıların %65.2' sinin hiçbir madde kullanmadığı, kullananların ise %96.7' sinin sigara kullandığı görülmektedir.

Tablo 2. Cinsiyet Değişkeni İle SFİÖ Alt Boyut Puan Ortalamalarının Karşılaştırılması

SFİÖ Alt Boyutları	\bar{x}		SS		t	p
	Kadın	Erkek	Kadın	Erkek		
DSMK	1.1673	1.3792	.47147	.78425	-3.633	.000**
DSU	1.1489	1.2959	.42290	.72872	-2.727	.007**

İKMK	1.6378	2.0340	.77098	1.06778	-4.817	.000**
İKU	1.7178	1.9645	.78349	.97275	-3.208	.001**

DSMK: Doğrudan Saldırganlığa Maruz Kalma; DSU: Doğrudan Saldırganlık Uygulama; İKMK: İzleme ve Kontrolde Maruz Kalma; İKU: İzleme ve Kontrol Uygulama, \bar{x} : aritmetik ortalama, SS: Standart sapma, t: Independent sample t test kritik değeri, p: test olasılık düzeyi, * $p < .05$, ** $p < .01$

Cinsiyet değişkenine göre SFİÖ alt boyut puan ortalamaları ve BFKÖ alt boyut puan ortalamalarının karşılaştırılması için yapılan Independent Sample t Test analizi sonuçları Tablo 3'te gösterilmiştir. Buna göre cinsiyete göre SFİÖ tüm alt boyutlarında anlamlı farklılık saptanmıştır ($p < .01$). SFİÖ tüm alt boyutlarında erkeklerin puan ortalamaları kadınlara oranla daha yüksek bulunmuştur.

Tablo 3. SFİÖ ve BFKÖ Alt Boyutları Arasındaki İlişki

	1	2	3	4	5	6	7	8	9
1 DSMK	1								
2 DSU	.652**	1							
3 İKMK	.481**	.443**	1						
4 İKU	.413**	.437**	.856**	1					
5 Dışadönüklük	-.28	-.70	-.010	-.50	1				
6 Uyumluluk	-.224**	-.269**	-.160**	-.148**	.273**	1			
7 Sorumluluk	-.087*	-.058	.025	.029	.262**	.236**	1		
8 Nörotiklik	.063	.016	.099*	.131**	.100*	.229**	.278**	1	
9 Açıklık	-.061	-.093	.013	-.006	.527**	.405**	.375**	.313**	1

DSMK: Doğrudan Saldırganlığa Maruz Kalma; DSU: Doğrudan Saldırganlık Uygulama; İKMK: İzleme ve Kontrolde Maruz Kalma; İKU: İzleme ve Kontrol Uygulama, * $p < .05$, ** $p < .01$ anlamlılık düzeyini göstermektedir.

Spearman korelasyon analizi sonuçlarına göre siber flört istismarı ile beş faktör kişilik özellikleri boyutları arasında istatistiksel olarak anlamlı ilişki bulunan ikili değişkenler şu şekildedir: uyumluluk kişilik özelliği ile DSMK, DSU, İKMK ve İKU alt boyutları arasında istatistiksel olarak negatif yönde anlamlı bir ilişki ($p < .01$) varken; sorumluluk kişilik özelliği ile DSMK arasında negatif yönde anlamlı bir ilişki ($p < .05$); nörotiklik kişilik özelliği ile İKMK ($p < .05$), İKU arasında ise pozitif yönde anlamlı bir ilişki ($p < .01$) bulunmaktadır. Siber flört istismarı ile beş faktör kişilik özellikleri ve bunların boyutları arasındaki diğer ikili ilişkiler istatistiksel olarak anlamsızdır ($p > .05$).

Tablo 4. BFKÖ Alt Boyutlarının SFİÖ Alt Boyutları Üzerindeki Etkisi

	Bağımsız Değişkenler	Bağımlı Değişkenler	β	t	p	Ayr. R ²	F
1	Dışadönüklük		.080	1.700	.090		
	Uyumluluk		-.247	-5.632	.000**

	Sorumluluk		-.003	-.064	.949		

	Nörotiklik		.123	2.902	.004**		
	Açıklık		-.097	-1.862	.063		
	Dışadönüklük		.052	1.088	.277		
	Uyumluluk		-.247	-5.611	.000**		
3	Sorumluluk	İKMK	.024	.563	.574	.045	6.850
	Nörotiklik		.093	2.168	.031*		
	Açıklık		.041	.771	.441		
	Dışadönüklük		.004	.078	.938		
	Uyumluluk		-.214	-4.844	.000**		
4	Sorumluluk	İKU	.035	.814	.416	.041	6.251
	Nörotiklik		.130	3.025	.003**		
	Açıklık		.015	.276	.783		

DSMK: Doğrudan Saldırganlığa Maruz Kalma; DSU: Doğrudan Saldırganlık Uygulama; İKMK: İzleme ve Kontrolde Maruz Kalma; İKU: İzleme ve Kontrol Uygulama, Not: β : Standardize edilmiş Beta katsayısı, R2: Belirlilik katsayısı, F: F testi istatistiği, * $p < .05$, ** $p < .01$ anlamlılık düzeyini göstermektedir.

Araştırma modelinin bağımsız değişkeni olan BFKÖ ölçeği alt boyutları dışadönüklük, uyumluluk, sorumluluk, nörotiklik ve açıklığın bağımlı değişken olan SFİÖ alt boyutları doğrudan saldırganlık ve izleme/kontrol davranışı üzerindeki açıklayıcılık durumlarını belirlemek amacıyla yapılan çoklu doğrusal regresyon analizine ait sonuçlar Tablo 5'te görülmektedir. Buna göre; BFKÖ alt boyutlarından uyumluluk kişilik özelliğinin SFİÖ alt boyutları olan doğrudan saldırganlık ve izleme/kontrol davranışı üzerinde negatif yönde, nörotiklik kişilik özelliğinin de pozitif yönde anlamlı bir etkisi vardır.

TARTIŞMA

Araştırmada cinsiyete göre siber flört istismarı ölçeği alt boyut puan ortalamaları arasında istatistiksel olarak anlamlı farklılık saptanmıştır ($p < .01$). Buna göre erkek öğrencilerin doğrudan saldırganlık davranışlarına hem maruz kalma hem de uygulama düzeylerinin kadın öğrencilere göre daha yüksek olduğu saptanmıştır. Literatürde araştırma sonuçlarını destekleyen çalışmalara rastlanmaktadır. Erkeklerin kadınlara oranla daha fazla mağduriyet bildirdikleri (Kellerman, Margolin, Borofsky, Baucom ve Iturralde; 2013), daha fazla doğrudan saldırganlık davranışına maruz kaldıkları ve uyguladıklarına (Bakır ve Kalkan, 2019) ilişkin araştırmalar literatürde yer almaktadır. Cinsiyete göre izleme ve kontrol alt boyutunda da anlamlı farklılıklar gözlenmektedir. Araştırma sonucuna göre erkekler kadınlara oranla daha fazla izleme ve kontrol davranışına maruz kaldığı aynı zamanda da bu davranışı kadınlara oranla daha fazla uygulayan konumunda olduğu belirlenmiştir. Literatürde erkeklerin kadınlardan daha fazla mağduriyet bildirdiğini destekleyen çalışmalara rastlanmaktadır (Burke, vd, 2011; Martinez-Pecino & Durán, 2019; Kaplan, 2022). Zweig ve arkadaşları (2013) ise siber flört istismarında kadınların daha fazla uygulayan, erkeklerin daha fazla maruz kalan olduklarını bildirmiştir. Literatürde kadınların daha fazla istismara maruz kaldığını bildiren çalışmalar (Bennet, vd, 2011; Burke, vd, 2011; Haynie, Farhat, Brooks-Russell, Wang, Barbieri ve Iannotti, 2013; Zweig ve diğerleri, 2013) olduğu gibi cinsiyetin siber flört istismarı ile ilişkili olmadığını ifade eden çalışmalar da mevcuttur (Reed vd, 2017).

Araştırmada beş faktör kişilik özellikleri alt boyutlarından olan uyumluluğun doğrudan saldırganlık ve izleme kontrol davranışı ile negatif yönde anlamlı bir ilişkisi olduğu tespit edilmiştir. Buna göre uyumluluk arttıkça doğrudan saldırganlık ve izleme kontrol davranışlarında hem uygulamanın hem de maruz kalmanın azaldığı söylenebilmektedir. Uyumlu bireyler arkadaş canlısı, kibar, hoşgörü sınırı geniş, güven verici, bağışlayıcı, saf ve dürüst olarak tanımlanmaktadır (Burger, 2006; Tatlılıoğlu, 2014). Dolayısı ile uyumlu kişilik özelliğine sahip bireylerin partnerleri ile olan ilişkilerinde hoşgörülü ve daha ılımlı yaklaşımlar

sergileyerek istismar edici davranışları uygulayan taraf olmadıkları söylenebilir. Aynı zamanda kişilerarası ilişkideki sevecen, içten, dürüst ve güven verici tavırları sayesinde partnerleri tarafından doğrudan saldırganlığa ya da izleme kontrol davranışlarına maruz kalmadıkları düşünülmektedir.

Araştırmada beş faktör kişilik özellikleri alt boyutlarından olan nörotiklik kişilik özelliğinin izleme kontrol davranışı ile pozitif yönde anlamlı bir ilişkisi olduğu belirlenmiştir. Bireyin nörotiklik düzeyi arttıkça izleme kontrol davranışının da arttığı söylenebilmektedir. Literatürde de benzer sonuçlara rastlanmaktadır (Ulloa ve ark., 2016; Yöyen, 2017; Ulu, 2016; Öngün, 2016). Ulloa ve ark. (2016) “nevrotiklik”, “dışadönüklük” ve “gelişime açıklık” kişilik özelliklerinin partner şiddeti için birer risk faktörü olduğunu bildirmiştir. Yöyen’in (2017) çalışmasında da şiddet türleri ile “nevrotik” kişilik özelliği arasında anlamlı ve pozitif bir ilişki bulunmuştur. Ulu (2016) lise öğrencileri ile yaptığı çalışmada şiddet eğilimi ve kişilik özellikleri arasındaki ilişkiyi incelemiş ve araştırma sonucunda şiddet eğilimi ile nörotiklik arasında pozitif yönde anlamlı bir ilişki olduğunu bildirmiştir. Araştırma sonuçları literatür tarafından da desteklenmektedir. Nörotiklik kişilik özelliğine sahip bireyler duygusal olarak dengesiz, genellikle endişeli, aşırı korumacı ve güven vermeyen bireyler olarak tanımlanmaktadır (Tatlıoğlu, 2014). Bireyin duygusal dünyasındaki bu gelgitlerin ikili ilişkilerine de yansıdığı, gergin ve kaygılı hallerinin partneri tarafından şüpheli algılanmasına neden olarak güvensizlik yaratabilmektedir. Partnerde oluşan bu güvensizliğin de bireyin zaman zaman izleme kontrol davranışına maruz kalmasına neden olduğu söylenebilir. Nörotik bireylerde sürekli var olan bir aşağılık duygusu ve kaygı hali hakimdir, duygularını kontrol etmekte ve kendilerini dizginlemek konusunda her zaman başarılı olamazlar (Tatlıoğlu, 2014; Özdelikara, Taştan ve Arslan, 2021). Nitekim araştırma sonuçları da bunu destekler niteliktedir. Sonuçlara göre nörotiklik puan ortalamasının artması bireyin izleme kontrol davranışlarını da arttırmaktadır. Dijkstra ve Barelds (2008) nörotik kişilik özelliğine sahip bireylerin kıskançlık duygularının yoğun olduğunu, partnerlerinin sadakatsizliği ile ilgili daha fazla endişelendiklerini, partnerlerinin karşı cinsle iletişim kurmasını engellemeye yönelik girişimlerde bulduklarını ve böyle bir durum ile karşılaştıklarında da daha yoğun tepki verdiklerini ifade etmiştir. Dolayısıyla nörotik kişilik özelliğine sahip bireylerdeki kıskançlık duygusunun bireyi partnerine karşı izlem ve kontrol davranışı sergilemeye teşvik ettiği düşünülmektedir.

Araştırmada beş faktör kişilik özellikleri alt boyutlarından olan sorumluluğun siber flört istismarı alt boyutlarından doğrudan saldırganlığa maruz kalma ile negatif yönde anlamlı bir ilişkisi olduğu belirlenmiştir. Buna göre sorumluluk puan ortalaması düşük olan bireylerin doğrudan saldırganlığa maruz kalma durumları artmaktadır denilebilir. Ulu (2016) yaptığı çalışmada şiddet eğilimi ile sorumluluk arasında negatif yönlü düşük bir ilişki olduğu bildirmiştir. Sorumlu kişilik özelliğine sahip bireyler; disiplinli, bağımlı, azimli iken; düşük sorumluluğa sahip bireyler hedeflerine ulaşma konusunda pek fazla istikrar göstermeyen, dikkati kolay dağılan ve güvenilir olarak tanımlanmaktadırlar (Tatlıoğlu, 2014). Dolayısı ile ilişkilerinde sorumluluktan kaçan ve kararlılık sergilemeyen bireyin partneri tarafından da güvensiz olarak tanımlanacağı düşünülmektedir. Flört ilişkilerinde yaşanan bu güvensizliğin de partnerin istismar eğilimini arttırdığı söylenebilir.

Araştırmada beş faktör kişilik özellikleri ölçeği alt boyutlarından uyumluluk kişilik özelliğinin siber flört istismarı ölçeği alt boyutları olan doğrudan saldırganlık ve izleme/kontrol davranışı üzerinde negatif yönde, nörotiklik kişilik özelliğinin de pozitif yönde anlamlı bir etkisi vardır. Literatürde aynı ölçüm araçlarını kullanarak yapılan çalışmaya rastlanılmamıştır. Ancak farklı ölçüm araçları kullanılarak yapılmış olan çalışmalarda benzer sonuçlara ulaşılmıştır. Ulu’nun (2006) farklı bir ölçüm aracı kullanarak kişilik özellikleri ile şiddet eğilimi arasındaki ilişkiyi incelediği çalışmada uyumluluk kişilik özelliğinin şiddet eğilimini negatif yönde, nörotiklik kişilik özelliğinin ise pozitif yönde yordadığı belirtilmiştir. Özdelikara ve arkadaşlarının (2021)

yaptığı çalışmada da nörotiklik ve dışadönüklük kişilik özelliklerinin şiddet eğilimi üzerinde pozitif yönde; uyumluluk ve sorumluluk kişilik özelliklerinin ise şiddet eğilimi üzerinde negatif yönde etkisi olduğu ifade edilmiştir.

SONUÇ VE ÖNERİLER

Araştırma, üniversite öğrencilerinde siber flört istismarı ile kişilik özelliklerinin ilişkisini ortaya koymaktadır. Siber flört istismarı, dijital flört şiddeti her geçen gün artmaya devam eden toplumsal bir sorun olarak karşımıza çıkmaktadır. Bireylerin siber flört istismarına ilişkin farkındalıklarının artırılması ve istismar ile ilişkili olan tüm risk ve koruyucu faktörlerin tanımlanması oldukça önem arz etmektedir. Kişilik özellikleri ile istismar arasındaki ilişkinin bilinmesi, istismar ile negatif ilişkisi olan kişilik özelliklerinin güçlendirilmesi ve pozitif yönde ilişkili olan kişilik özelliklerinin ön plana çıkarılması teşvik edilmelidir. Bu noktada ruh sağlığı çalışanlarına, koruyucu ruh sağlığı kapsamında risk altındaki bireyleri tespit etmek ve önleme çalışmaları yapmak, şiddet uygulama potansiyeli olan bireylerin önceden tespit edilerek istismarı önleme müdahalelerinin planlanması, istismara maruz kalanlara müdahale etmek, istismarın tekrarlanmasını önlemek ve maruz kalanların ruh sağlığını iyileştirmek gibi birçok önemli görev düşmektedir. Konu ile ilgili araştırmaların artırılmasının önemli olduğu düşünülmektedir. Ayrıca öğrencilerin ruh sağlığının korunması ve sürdürülmesi amacıyla okullarda destekleyici programlar oluşturulması ve yaşamın her anında ortaya çıkabilecek siber flört istismarı konusunda toplumda farkındalık oluşturularak derinlemesine araştırma yapılması önemli görülmektedir. Siber flört istismarı ile ilgili hazırlanacak eğitim programları ile aile, çevre, okul, iş, vb. tüm sosyal ortamlarda toplumsal farkındalık oluşturulacağı düşünülmektedir. Araştırmanın daha geniş kitlelere ve farklı bölüm öğrencilerine uygulanıp sonuçlarının değerlendirilmesi önerilebilir.

ÖZET

Günümüzde gelişmekte olan ve gelişmiş ülkelerde en sık görülen ve en ağır sağlık sorunlarından biri haline gelen kardiyovasküler hastalıklar, bulaşıcı olmayan hastalıklardan kaynaklanan tüm ölümlerin yaklaşık yarısını oluşturmaktadır. Psikosomatik hastalık olarak kabul edilen kardiyovasküler hastalıkların ortaya çıkmasında hem biyolojik hem de psikolojik pek çok faktör rol oynamaktadır. Özellikle psikolojik faktörler, mortalite ve morbiditenin en önemli yordayıcıları olarak bilinmektedir. Yapılan araştırmalarda kardiyovasküler hastalığa sahip olan bireylerde, ölüm korkusu, kaygı, belirsizlik, stres, üzüntü, içe kapanma, sosyal yaşamda bozulmalar ve depresyon gibi psikososyal sorun yaşandığı belirtilmektedir. Bireyin hastalık ile beraber yaşamında olup biten tüm bu değişikliklere psikososyal açıdan uyum sağlaması, hastalığın tedavisini, prognozunu ve bireyin yaşam kalitesini de etkilemektedir. Bu doğrultuda bireylerin yaşam kalitelerinin artırılması hem de bütüncül bakımın sağlanması açısından psikolojik tepkilerin ele alınması, psikososyal gereksinimlerin karşılanması ve varsa psikiyatrik bozuklukların tedavi edilmesi gerekmektedir. Bu maksatla gerçekleştirilen psikolojik müdahaleler, bireylerin psikososyal strese karşı baş etmesine, duygudurum belirtilerinin azalmasına, sağlıklı yaşam biçimi davranışları etmesine ve yaşam tarzı değişikliklerine uyum geliştirmesine etki ederek yaşam kalitesinin artmasına ve kardiyovasküler hastalıklardan korunmaya destek olabilmektedir.

Araştırmalar, kardiyovasküler hastalıklarda klinik tedavi ile birlikte uygulanan psikolojik müdahalelerin de etkili olduğunu göstermektedir. Bireylere uygulanabilecek en etkili psikolojik müdahaleler; stres azaltma programları, meditasyon, nefes egzersizleri, yoga, kas gevşeme teknikleri, birey/grup terapileri, bireysel davranışçı terapiler ve farkındalık temelli terapiler olarak bildirilmiştir. Bunlara ek olarak son yıllarda popülerlik kazanan ve klinik hastaların tedavisinde etkililiği kanıtlanmış olan Kabul ve Kararlılık Terapisi (ACT); üçüncü dalga terapiler arasında en yaygın kullanılan psikolojik müdahalelerden biri olarak kabul edilmektedir. ACT; bireylerin duygu, düşünce, dürtülerini değiştirmeye çalışmadan onları oldukları gibi kabul etmelerini veya gerekli değişiklikleri yapmaya kendilerini adamalarını sağlayan ve kendileri için değeri olan davranışsal hedefleri seçmekte özgür bırakan bir yaklaşım olarak tanımlanmaktadır.

Kardiyovasküler hastalara uygulanan ACT'in; psikolojik sıkıntının iyileştirilmesinde, tedaviye uyumun artırılmasında, sağlıklı yaşam biçimi davranışlarının kazandırılmasında, belirsizlik ve deneyimden kaçınma davranışlarının kontrolünde, olumsuz duyguların düzenlenmesinde, ağrının ve anksiyetesinin azaltılmasında etkili olduğu ifade edilmektedir.

Anahtar Kelimeler: Kardiyovasküler Hastalıklar, Psikososyal Müdahale, Psikiyatri Hemşireliği, Kabul ve Kararlılık Terapisi, ACT

ABSTRACT

Cardiovascular diseases, which have become one of the most common and severe health problems in developing and developed countries today, account for approximately half of all deaths from non-communicable diseases. Many biological and psychological factors play a role in the emergence of cardiovascular diseases, which are considered psychosomatic diseases. Psychological factors in particular are known to be the most important predictors of mortality and morbidity. Studies have shown that individuals with cardiovascular disease experience psychosocial problems such as fear of death, anxiety, uncertainty, stress, sadness, introversion, disruptions in social life, and depression. The individual's psychosocial adaptation to all these changes that occur in their life along with the disease also affects the treatment of the disease, its prognosis, and the individual's quality of life. In this context, in order to increase the quality of life of individuals and to provide holistic care, psychological reactions should be addressed, psychosocial needs should be met and psychiatric disorders, if any, should be treated. Psychological interventions carried out for this purpose can help individuals cope with psychosocial stress, reduce mood symptoms, adopt healthy lifestyle behaviors and adapt to lifestyle changes, thus increasing quality of life and supporting protection from cardiovascular diseases.

Studies show that psychological interventions applied together with clinical treatment in cardiovascular diseases are also effective. The most effective psychological interventions that can be applied to individuals are reported as stress reduction programs, meditation, breathing exercises, yoga, muscle relaxation techniques, individual/group therapies, individual behavioral therapies and mindfulness-based therapies. In addition, Acceptance and Commitment Therapy (ACT), which has gained popularity in recent years and has proven effective in the treatment of clinical patients, is considered one of the most widely used psychological interventions among third-wave therapies. ACT is defined as an approach that allows individuals to accept their feelings, thoughts, and impulses as they are without trying to change them, or to commit themselves to making the necessary changes, and leaves them free to choose behavioral goals that are valuable to them.

It is stated that ACT applied to cardiovascular patients is effective in improving psychological distress, increasing compliance with treatment, gaining healthy lifestyle behaviors, controlling uncertainty and experience avoidance behaviors, regulating negative emotions, and reducing pain and anxiety.

Key Words: Cardiovascular Diseases, Psychosocial Intervention, Psychiatric Nursing, Acceptance and Commitment Therapy, ACT.

GİRİŞ

Kardiyovasküler Hastalıklar

Günümüzde gelişmekte olan ve gelişmiş ülkelerde en sık görülen ve en ağır sağlık sorunlarından biri haline gelen kardiyovasküler hastalıklar, bulaşıcı olmayan hastalıklardan kaynaklanan tüm ölümlerin yaklaşık yarısını oluşturmaktadır (Son vd., 2019; Chandrababu vd., 2019; Sheibani vd., 2019). Dünya Sağlık Örgütü (DSÖ) verileri, kardiyovasküler hastalıkların dünya çapında en önemli ölüm nedeni olduğunu göstermektedir (Dünya Sağlık Örgütü [DSÖ], 2020). DSÖ verilerine göre dünya genelinde bulaşıcı olmayan hastalıklar nedeniyle meydana gelen ölümlerin başında 17.9 milyon ölüm oranı ile kardiyovasküler hastalıklar (KVH) gelmektedir (DSÖ, 2020). Kardiyovasküler hastalıkların 2030 yılına kadar dünya çapında 23 milyondan fazla ölüme (yaklaşık% 30,5) neden olacağı tahmin edilmektedir (Safarzafegan ve Mohammadifard, 2020). Türkiye İstatistik Kurumu (TÜİK) 2023 Ölüm Nedeni İstatistikleri verilerine göre Türkiye’ de KVH kaynaklı mortalite oranı %3.6’ dır. Bu verilere göre KVH kaynaklı ölümlerin %42.4’ ü iskemik kalp hastalıkları, %24.1’i serebrovasküler hastalıklar ve %18.6’ sı diğer kalp hastalıkları nedeniyle gelişmektedir (Türkiye İstatistik Kurumu [TÜİK], 2023).

ARAŞTIRMA ve BULGULAR

Kardiyovasküler Hastalıklarda Risk Faktörleri ve Ruh Sağlığı Üzerindeki Etkileri

Psikosomatik olarak kabul edilen kardiyovasküler hastalıkların ortaya çıkmasında biyolojik ve psikolojik faktörlerin birlikte rol aldığı bilinmektedir (Ahmad Khani vd., 2017). Kardiyovasküler hastalık için risk faktörleri arasında aile öyküsü, hiperkolesterolemi, metabolik sendrom, kronik böbrek hastalığı, kronik iltihaplı hastalık, erken menopoz, preeklampsi gibi yüksek riskli hamilelik, yüksek riskli ırk / etnik köken (Örneğin Güney Asya'nın ataları) yer almaktadır (Arnet vd., 2019; Aghel Masjedi vd., 2020).

Yaşam tarzı faktörleri de kardiyovasküler hastalığa neden olabilir. Bunlar beslenme, diyet, egzersiz, fiziksel aktivite, fazla kilo ve obezite, tip 2 diabetes mellitus, hipertansiyon ve tütün kullanımını içerir (Arnet vd., 2019; Aghel Masjedi vd., 2020). Aynı zamanda fiziksel hastalıkların hastalıkların yanı sıra sağlıksız beslenme, tütün, alkol gibi zararlı alışkanlıklar ve fiziksel hareketsizlik gibi sağlıkla ilgili bireysel davranışlar da önemli risk faktörleri arasında yer almaktadır (Vaccarino vd., 2020; Son vd., 2019).

Son yıllarda yapılan araştırmalar, tıbbi ve klinik değişkenlere ek olarak depresyon, anksiyete, kişilik tipi (A ve D), saldırganlık, düşmanlık ve öfke gibi zihinsel değişkenlerin de koroner arter hastalığının görülme sıklığı ve yaygınlığında rol oynayabileceğini göstermektedir (Mohamadi vd., 2018). Dahası, öfke, saldırganlık, duygusal baskılama ve kişinin duygularını kontrol

edememesi, karamsarlık, depresyon ve anksiyete gibi bazı faktörler, kardiyovasküler hastalıklarla pozitif olarak ilişkilendirilmektedir (Sheibani vd., 2019). Yapılan araştırmalar, ruh sağlığının temel bileşeni olan depresyon ve anksiyetenin, KVH'nin başlangıcı, seyri ve prognozu üzerinde etkileri olduğunu göstermektedir (Amiri vd., 2017; Sheibani vd., 2019). Kardiyovasküler hastalıklar bireylerin aile ve sosyal yaşamlarını, bağımsızlığını, yaşam kalıplarını, işlerini, gelir seviyelerini ve genel olarak yaşam kalitelerini etkilemektedir. Aile ve sosyal yaşantıdaki rol değişimleri bireylerde sosyal izolasyon ve depresyonu da beraberinde getirmektedir. Ayrıca çalışmalar, hastalık semptomlarının sıklığı ve şiddetinin bireylerde ölüm korkusunu tetiklediğini ve buna bağlı ruhsal bozukluklar yaşanabileceğini bildirmektedir (Amiri vd., 2017). Kardiyovasküler hastalık tanısı sonrası depresyon yaşayan bireylerde ölüm riskinin ve fiziksel semptomların arttığı, tedaviye uyum ve yaşam kalitesinin ise azaldığı bildirilmiştir (Amiri vd., 2017).

Sağlıklı yaşam biçimi davranışları da dahil olmak üzere yaşamın her alanında insanın davranış ve inançları, zihinsel/duygusal prosedürlerden ve kişinin düşünme biçiminden etkilenmektedir (Heidari vd., 2020). Dolayısı ile bu noktada uygulanacak olan psikolojik müdahaleler; bireylerin psikososyal stresle baş etmesine, duygudurum belirtilerinin azalmasına, sağlıklı yaşam biçimi davranışları kazanmasına ve yaşam tarzı değişikliklerine uyum geliştirmesine etki ederek yaşam kalitesinin artmasına ve kardiyovasküler hastalıklardan korunmaya destek olabilmektedir (Kalyoncuoğlu vd., 2017; Heidari vd., 2020).

Kabul ve Kararlılık Terapisi ve Kardiyovasküler Hastalıklarda Kullanımı

Araştırmalar, tedaviye ek olarak kalp hastalarına yönelik psikolojik müdahalelerin de göz önünde bulundurulması gerektiğini göstermektedir (Pasandideh ve Zare, 2016; Aghel Masjedi vd., 2020). Bireylere uygulanabilecek en etkili psikolojik müdahaleler; birey/grup terapileri, bireysel davranışçı terapiler, stres azalma programları, meditasyon, otojenik eğitimler, nefes egzersizleri, yoga, kas gevşeme teknikleri, bilinçli farkındalık temelli terapilerdir (Kalyoncuoğlu vd., 2017).

Günümüzde üçüncü kuşak terapiler sıklıkla tercih edilen yöntemler arasında yer almaktadır. Diyalektik Davranışçı Terapi (DBT), Farkındalık Temelli Bilişsel Terapi (MBCT), Fonksiyonel Analitik Psikoterapi (FAP) ve Kabul ve Kararlılık Terapisini (ACT) içermektedir (Sheibani vd., 2019; Aghel Masjedi vd., 2020). ACT, son yıllarda popülerlik kazanan ve klinik hastaların tedavisinde etkili olabilen üçüncü dalga terapiler arasında en yaygın kullanılanlardan biridir (Sheibani vd., 2019; Heidari vd., 2020; Aghel Masjedi vd., 2020). ACT, kronik hastalığı olan hastalarda sağlıklı davranışların teşvik edilmesine ve ruh sağlığının iyileştirilmesine önemli ölçüde katkıda bulunan bir modeldir.

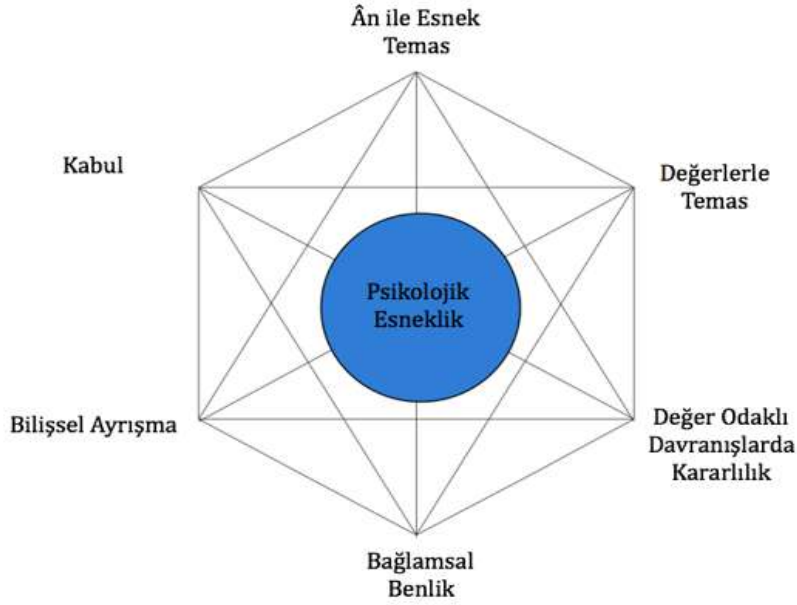

Bilişsel davranışçı terapiler (BDT) ailesinde yer alan ACT; bilişi dikkate alarak davranış değişikliği geliştirmeyi hedeflemektedir (Yavuz, 2015; Kul ve Türk, 2020). BDT' den ayrılan en önemli yanı semptomlara odaklanarak çözüm bulmak yerine; semptomların etyolojine, mekanizmasına ve sonuçlarına bakarak işlevsel sürece odaklanıyor olmasıdır (Yavuz, 2015; Kul ve Türk, 2020).

ACT, insanların birçok hissini, duygusunu veya iç düşüncesini rahatsız edici bulduğunu ve sürekli olarak bu içsel deneyimleri değiştirmeye yada bu deneyimlerden kurtulmaya çalıştığını varsaymaktadır. ACT' ye göre bu durumu kontrol etme çabaları etkisizdir ve kişinin başlangıçta kaçınmaya çalıştığı hisleri, duyguları ve düşünceleri daha da yoğunlaştırmaktadır. ACT, bireylerin duygu, düşünce, dürtülerini değiştirmeye çalışma çabasında olmak yerine; düşüncelerini ve duygularını kabul etmelerini ve gerekli değişiklikleri yapmaya kendilerini adamalarını sağlayan ve kendileri için en önemli veya değeri olan davranışsal hedefleri seçmekte özgür kılan bir yaklaşımdır (Boostani vd., 2017; Heidari vd., 2020; Kul ve Türk, 2020). ACT'de beklenen değişimlerin ana özü, eylemlerdeki ve sözlü davranışlardaki değişikliklerdir (Mohamadi vd., 2019). Bu tedavide bireye, istenmeyen zihinsel deneyimlerden (düşünceler ve duygular) kaçınmak veya onları kontrol etmek için yapılan eylemlerin etkisiz olduğu veya tam tersi sonuçlar doğurduğu ve gerçekte deneyimleri şiddetlendirdiğini fark etmesi sağlanarak bunların ortadan kaldırılması için herhangi bir tepki (iç veya dış) vermeden bu deneyimleri ve getirilerini tamamen kabul etmesi gerektiği öğretilmektedir (Mohamadi vd., 2018).

ACT, bireylerin bilişlerini yeniden yapılandırmaya odaklanmak yerine, kişinin duyguları ve düşünceleri ile psikolojik bağını güçlendirmeyi ve psikolojik esnekliklerini artırarak hastaların daha değerli ve tatmin edici bir yaşam sürmelerine yardımcı olmayı amaçlamaktadır (Sheibani vd., 2019; Heidari vd., 2020; Aghel Masjedi vd., 2020). ACT'nin temel amacı psikolojik esnekliği artırmaktır; yani, rahatsız edici düşüncelerden, hislerden, anılardan veya arzulardan kaçınmak amacıyla harekete geçmek veya eylemsiz kalmak yerine farklı seçimleri değerlendirerek bireyde gerçek bir karar verme yeteneği geliştirmeyi amaçlamaktadır (Amiri vd., 2017).

Psikolojik esneklik, bireyin kendi içsel yaşantılarına farkındalık ve açıklıkla yaklaşarak âna temas halinde olması, değer verdiği şeyler doğrultusunda davranışlar sergilemesi ve bu davranışlarında da kararlılık göstermesi durumu olarak tanımlanmaktadır. Bir diğer ifadeyle, bireyin daha anlamlı ve dolu bir yaşam sürmesi için ona engel teşkil eden duygu, düşünce ve deneyimlerini fark etmesini sağlayarak; bu zorlayıcı duygu durumları değiştirmeye, kontrol etmeye ya da yoğunluklarını, sıklıklarını azaltmaya çalışmadan davranışları üzerindeki

etkilerini zayıflatmak ve yaşamında değer verdiği alanlardaki davranışlarında adanmışlık göstermesini sağlamak temel amaçtır (Yavuz, 2015; Kul ve Türk, 2020). ACT' in amacı bireylerin psikolojik esneklik düzeyini yükseltmektir. Psikolojik esneklik düzeyi yüksek olan birey; zorlayıcı duygu, durum, düşünce ve anılarının farkında, onları kontrol etmeye ya da yoğunluğunu azaltmaya çalışmadan değerleri doğrultusundaki davranışlara odaklanabilmektedir. ACT'de psikolojik esnekliğin yükseltilmesi için 'Esnek Altıgen Modeli' adı verilen 6 ana aşamadan oluşan terapötik süreç uygulanmaktadır: an ile esnek temas, kabul, bilişsel ayrışma, bağlamsal benlik, değerlerle temas ve değer odaklı davranışlarda kararlılık.

Şekil 1. Kabul ve Adanmışlık Terapisinin Psikolojik Esneklik Modeli (Harris, 2016)

Kabul: İçteki istenmeyen deneyimlere yer açma ve onları kucaklama, onları değiştirmeye ya da ortadan kaldırmaya çalışmadan, onlara karşı mücadeleyi bırakma istekliliği olarak ifade edilmektedir (Prevedini vd., 2011). Kabul, terapinin temel süreçlerinden biridir. ACT'ye göre bireye acı veren, onu zorlayan düşünce, duygu, anı, dürtü ve fiziksel hislerden kurtulma, uzaklaşma amacı ile sergilenen davranışlar işlevsizdir ve yaşantısal kaçınmaya hizmet etmektedir. ACT, bu kaçınma davranışlarına alternatif olarak kabul sürecini önermektedir. Kabul süreci; bu olumsuz deneyimlerin (duygu, düşünce, anı, dürtü vb.) zihinde belirip kaybolmasına izin vererek bireyin daha anlamlı bir yaşam sürmesine, değerleri doğrultusunda davranışlar sergilemesine, zihinsel ve fiziksel dikkatini kendi yaşamı için daha önemli gördüğü alanlara yöneltmesine ve seçim yapabilmesine imkan tanımaktadır (Yavuz, 2015; Kul ve Türk, 2020).

Bilişsel Ayrışma: Bazı durumlarda bireylerin bilişleri onların davranışlarını etkilemekte ve denetim altına almaktadır. Hatta öyle ki bu bilişsel süreçler sadece bir düşünce ve içsel yaşantının bir parçası olmaktan çıkarak gerçek ile eş değer tutulmaktadır. ACT; bu şekilde bilişsel birleşme yaşayan bireylerin düşünce, inanç ve anılarla arasına psikolojik mesafe koymasına yardımcı olan ve bireyin bilişin kontrolü altında olmasını engellemeye yönelik bilişsel ayrışma müdahale tekniklerinin kullanılmasını önermektedir (Prevedini vd., 2011; Yavuz, 2015; Kul ve Türk, 2020).

Bağlamsal Benlik: Birey, yaşantılarını duyu organları vasıtasıyla algıladığı fiziksel bir benliğe; düşünme, hatırlama, yargılama gibi zihinsel yetiler aracılığıyla algıladığı düşünsel bir benliğe hem de bu iki benliği perspektif olarak izleyen gözlemleyen (bağlamsal) bir benliğe sahiptir (Harris, 2016). Bağlamsal benlik, kişinin benliğiyle ilgili tüm tanımlardan ve hikayelerden, onlarla tartışmadan, ne yaptığını, ne düşündüğünü, ne hissettiğini gözlemlemeyi öğrenerek kendisi ile dış dünya arasına bir sınır çizerek buradan kendisini gözleme sürecidir (Prevedini vd., 2011; Kul ve Türk, 2020). Bağlamsal benliğe yönelik yapılan müdahale teknikleri bireyin benlik ile ilişkili çıkarımlar yapmasına, hikayeler ile ilişkilendirme yapmasına engel olmaktan ve benliğini yargısızca kabul ederek içsel yaşantısına “ben, şimdi, burada” şeklinde temas etmeyi öğretmektedir (Yavuz, 2015; Kul ve Türk, 2020).

Şimdiki Anla Temas: Deneyimlenen zorlu süreçlerde genellikle bireyler şu andan soyutlanarak geçmiş ve geleceğe odaklanarak eyleme geçmektedirler. Geçmişte deneyimlenen süreçlerin korkuları ve geleceğin fazlaca düşünülmesi ile gelişen kaygılar arasında sıkışıp kalan birey şimdiki ana ve yaşadıklarına odaklanmakta güçlük çekmekte ve yaşamın içindeki güzellikleri de kaçırmaktadır. An ile temas etmek; geçmişte kalmak yerine, burada ve şimdi olanlara psikolojik olarak dahil olmak, kişinin ne yaptığının, ne yaşadığının bilincinde ve farkında olmasını ifade etmektedir (Prevedini vd., 2011; Yavuz, 2015; Kul ve Türk, 2020). Bu amaçla yapılan ACT müdahaleleri sayesinde bireyler içinde buldukları ana gönüllü ve esnek biçimde odaklanmakta; geçmişin gölgesinden ve geleceğin kaygılarından bağımsız olarak kendi değerleri doğrultusunda işlevsel davranış sergileme potansiyeline sahip olmaktadır (Yavuz, 2015).

Değerlerle Temas: Değerler; kişinin farklı yaşam alanlarında, etik ve ahlaki zorunlulukların ötesinde, önemli olduğuna inandığı, yaşamında ne yapmak, neyi temsil etmek, nasıl biri olmak istediği ile ilişkili olan, birey tarafından seçilmiş yaşam hedefleri olarak tanımlanmaktadır (Prevedini vd., 2011; Yavuz, 2015; Kul ve Türk, 2020). ACT’deki tüm müdahaleler kişinin değerleri doğrultusunda planlanmaktadır ve değerler tüm müdahalelerin varlık amacı olarak kabul edilmektedir (Prevedini vd., 2011; Yavuz, 2015).

Değer Odaklı Davranışlarda Kararlılık: ACT' nin hedeflerinden en önemlisi bireyin değerlerini belirlemesine yardımcı olmak ve değerlerini davranışlarının seçiminde kendine referans olarak kullanmasını sağlamaktır. Bireyin sadece değerlerini keşfetmesi yaşamını daha anlamlı kılmak için yeterli değildir. Belirlenen değerler ile temas halinde olması, bu noktada eyleme geçmesi ve davranışını sürdürmesi aynı zamanda da gerektiği noktalarda uygun değişimler yapabilme esnekliğine ve kararlılığına sahip olması gerekmektedir (Yavuz, 2015; Kul ve Türk, 2020).

Terapinin en önemli avantajı; bireye artan psikolojik kabul ve şimdiki zamanla iletişim gibi yeni ve belirli becerileri öğrenme fırsatı vermesidir ve bu aynı zamanda bireyin zihinsel deneyimlerde kaçınmasını değil, aynı zamanda bu deneyimlerle esnek ve şefkati bir biçimde yüzleşmesini sağlamasıdır. Bireyin gerçek dünyada daha bağımsız ve bilinçli hareket etmesini sağlayacak şekilde, zihinsel deneyimlerin bilişsel olarak ayrılması ve bu deneyimler üzerindeki aşırı konsantrasyonun azalması, onu stres, öfke, saldırganlık ve düşmanlıktan uzak, öz şefkatli ve yaşamının kontrolünü kendi yönetimine almasını sağlayarak daha doyumlu bir yaşam sürmesine destek olmaktadır (Mohamadi vd., 2018).

SONUÇ

ACT, bireylerin stresli olaylara karşı tutum ve algılarını kontrol etmede yüksek düzeyde etkili terapiler arasında yer almaktadır (Darvish Baseri ve DashtBozorgi, 2017).

ACT'deki terapötik müdahaleler, kaçınma modellerinde, kabulü iyileştirmede, değerleri ve hedefleri netleştirmede, yaşam kalitesini iyileştirmede ve sorunlara karşı dayanıklılıkta etkili olabilmektedir (Mohamadi vd., 2019). Ruhsal sağlık olmadan biyolojik, psikolojik ve sosyal faktörlere bağlı diğer becerilerin doğru şekilde işlev göremeyeceği veya maksimum kapasiteye ulaşamayacağı bilinmektedir. Birçok araştırmacı, psikolojik müdahalelerin kardiyovasküler hastalıklarda tedavi planının bir parçası olması gerektiğini ileri sürmektedir. Araştırmalar, ACT' nin öfke, anksiyete, depresyon, takıntı, sosyal fobi, uyuşturucu kullanımı ve psikozlar dahil çok çeşitli psikolojik sorunlara uygulandığını ve semptomların şiddetini azaltarak olumlu sonuçlara ulaşıldığını göstermektedir (Sheibani vd., 2019; Mohamadi vd., 2019).

ACT' in; psikolojik sıkıntının iyileştirilmesi ve tedaviye uyumun artırılmasında (Rahnama vd., 2017), kronik ağrılı hastalarda ağrıya bağlı anksiyetenin azaltılmasında (Anvari vd., 2014), hoşgörüsüzlük, belirsizlik ve deneyimden kaçınma davranışlarının kontrolünde, yaygın anksiyete bozukluğu semptomlarının azaltılmasında (Fayazbakhsh ve Mansouri, 2019) ve bilişsel duygu düzenlemede (Zargar vd., 2019), kardiyak cerrahi hastalarının anksiyetesinin azaltılmasında (Mohamadi vd., 2018) etkili olduğu ifade edilmektedir. Birçok hastalıkta ve durumda da etkin olduğu yapılan çalışmalarla ortaya konulmuştur. Ayrıca ACT müdahalesinin

özellikle hastalık komplikasyonlarından kaynaklanan psikolojik sorunlar yaşayan hastalarda psikolojik bozukluklarla başa çıkmak için çok iyi bir terapötik yaklaşım olduğu da bildirilmiştir (Twohig vd., 2006). En önemli ve güçlü yanlarından biri de tüm gelişim dönemlerine uygulanabiliyor olması ve yalnızca tedavi edici değil aynı zamanda önleyici bir sağlık hizmeti olarak da etkili olmasıdır.

ÖZET

Grafen (Gr), bal peteği benzeri altıgen bir kafeste düzenlenmiş tek bir karbon atomu katmanından oluşan iki boyutlu bir malzemedir. Grafen kuantum noktaları (GQD'ler), nanometre ölçeğinde ve boyutları nedeniyle kuantum sınırlama etkileri gösteren karbon bazlı küçük parçacıklardır ve grafen ailesinin bir üyesidir. Bu çalışmada, p-Si üzerinde üretilen Gr-tabanlı diyot ve p-Si üzerinde üretilen GQD-tabanlı diyot yapısının akım-gerilim (I-V) performansları incelenerek karşılaştırılmıştır. Her iki diyot yapısında da aynı kalınlıklarda Al ohmic (124 nm) ve Schottky (128 nm) kontaklar fiziksel buhar biriktirme tekniği (PVD) kullanılarak alınmıştır. Bu diyot yapılarının I-V özellikleri karanlık ortamda ölçülmüş ve elektriksel özellikleri oda sıcaklığında karakterize edilmiştir. Her iki diyotun da idealite faktörü (n), seri direnç (R_s) ve bariyer yüksekliği (Φ_b) gibi elektriksel özellikleri, Termiyonik Emisyon (TE) teorisi, Norde ve Cheung yaklaşımlarından elde edilmiştir. Bu yöntemlere göre Gr-tabanlı diyotun hesaplanan Φ_b değerleri sırasıyla 0,69 eV, 0,71 eV ve 0,68 eV olarak bulunmuştur. GQD-tabanlı diyotun hesaplanan Φ_b değerleri ise sırasıyla 0,76 eV, 0,82 eV ve 0,66 eV olarak hesaplanmıştır. Gr-tabanlı diyotun doğrultma oranı (RR) ± 3 V'da yaklaşık 10^3 olarak hesaplanmıştır, GQD-tabanlı diyotun RR'si ± 5 V'da yaklaşık $2,8 \times 10^4$ olarak hesaplanmıştır. Elde edilen sonuçlar hazırlanmış olan her iki diyotun da Schottky davranışına sahip olduğunu göstermektedir.

Anahtar Kelimeler: Grafen, Grafen Kuantum Noktalar, Schottky Diyot, I-V özellikleri

ABSTRACT

Graphene (Gr) is a two-dimensional material made up of a single layer of carbon atoms organized in a hexagonal lattice that resembles a honeycomb. Graphene quantum dots (GQDs) are small carbon-based particles that exhibit quantum confinement effects due to their nanometer-scale dimensions and are a member of the graphene family. In this study, the current-voltage (I-V) performances of Gr-based diode fabricated on p-Si and GQDs-based diode structure fabricated on p-Si were investigated and compared. In both diode structures, Al ohmic (124 nm) and Schottky (128 nm) contacts with the same thickness were obtained by using the physical vapor deposition technique (PVD). I-V properties of these diode structures were measured in the dark, and their electrical properties were characterized at room temperature. Electrical properties such as ideality factor (n), barrier height (Φ_b) and series resistance (R_s) of both diodes were obtained from the Thermionic Emission (TE) theory, Cheung and Norde approaches. According to these methods, the calculated Φ_b values of the Gr-based diode were found to be 0.69 eV, 0.68 eV, and 0.71 eV respectively. The calculated Φ_b values of the GQDs-based diode were 0.76 eV, 0.66 eV, and 0.82 eV respectively. The Gr-based diode's rectification

ratio (RR) was calculated as approximately 10^3 at ± 3 V, and the rectification ratio (RR) of the GQDs-based diode was calculated as approximately 2.8×10^4 at ± 5 V. The obtained results show that both prepared diodes have Schottky behavior.

Keywords: Graphene, Graphene Quantum Dots, Schottky Diode, I-V properties

GİRİŞ

İki boyutlu (2D) malzeme ailesinin en önemli üyelerinden biri olan grafen (Gr), fizik ve malzeme bilimlerinde önemli bir ilgi odağı haline gelmiştir. Grafen, üstün fiziksel ve mekanik özellikleri sayesinde en dikkat çekici iki boyutlu malzemelerden biridir. Yüksek elektriksel ve termal iletkenlik, yüksek taşıyıcı hareketliliği ve mekanik direnç gibi özelliklerin yanı sıra, son derece şeffaf bir malzeme olma özelliği de gösterir. Grafenin yapısı, yalnızca deneysel çalışmalarla değil [1,2], aynı zamanda teorik analizlerle de [3,4] farklı yönleriyle incelenmiş ve birçok yeni çok işlevli özellik ortaya konmuştur. Özellikle grafen/yarı iletken (Gr/S) yapısının, 3 boyutlu bir yarı iletken ile enerji bandı boşluğu bulunmayan 2D bir malzeme arasındaki arayüzü incelemek için ideal bir platform olarak keşfedilmesiyle, bu yapı son yıllarda yoğun şekilde araştırılmaya başlanmıştır [5]. Gr/Si yapısı, Gr durumlarının düşük yoğunluğu ile indüklenen Schottky bariyerinin modülasyonu aracılığıyla, termiyonik emisyon (TE) teorisiyle açıklanmıştır. Bu teori, Gr/S yapısının akım-gerilim (I-V) özelliklerinin metal-yarı iletken yapılarla benzerlik gösterdiğini ortaya koymaktadır [5,6]. Gr/S Schottky yapıları, fotoalgılama [7,8], iletişim [9], güneş hücreleri [10] ve kimyasal ve biyolojik sensörler [11,12] gibi birçok uygulamada yaygın olarak kullanılmaktadır. Literatürde, Gr-tabanlı yapıların farklı yarı iletken malzemelerle birleşiminden elde edilen sonuçlar da bildirilmiştir [13–16].

Kuantum noktaları (KN'ler), optik ve elektronik özelliklerinin parçacıkların şekli ve boyutlarıyla belirlendiği, benzersiz özelliklere sahip nanokristalin yarı iletken malzemelerdir. Bu parçacıkların çapları genellikle 10-75 atom uzunluğunda olup, yaklaşık 2-15 nm arasında değişebilmektedir. Küçük boyutları, yüksek bir yüzey/hacim oranı sağlamaktadır; bu da onları, bireysel moleküller ve hacimli yarı iletkenler arasında önemli bir konumda tutmaktadır [17,18]. KN'ler, periyodik tablonun III-V ve II-VI grubu elementlerinden elde edilebilir [19]. Hemen hemen tüm yarı iletken metal bileşiklerinden KN'ler üretmek mümkündür. Kuantum noktalarının boyutunu değiştirerek bant aralıkları da modifiye edilebilir. Kuantum kısıtlamasının etkisiyle, KN'lerin boyutundaki değişiklikler, yaydıkları radyasyonun rengini de etkiler [20–22]. KN'lerin tüm görünür frekanslarda ve hatta kızılötesi bölgelerde radyasyon yayması, kontrol edilebilir bir süreç olarak gerçekleştirilmiştir. Bu özellikleri sayesinde, KN'ler LED'ler, elektronik cihazlar, güneş panelleri, bilgisayar uygulamaları ve tıbbi görüntüleme süreçleri gibi birçok alanda büyük potansiyel taşımaktadır [23–25]. Son yirmi yılda, inorganik yarı iletken KN'ler oldukça ilgi çekici malzemeler olsa da bazı kısıtlamalara sahiptir [26]. Bu bağlamda, grafen kuantum noktalarının (GQD'ler) bu sınırlamaları daha etkili bir şekilde aşabileceği öne sürülmüştür. GQD'ler, çeşitli çözücülerde çözünürlük, iyi fotokimyasal kararlılık, düşük toksisite, heteroatom katkılama ve kenarlarda fonksiyonel grupların eklenebilmesi gibi avantajlara sahiptir [27]. Ayrıca, GQD'ler 30 nm'den küçük ve birkaç atom kalınlığındadır. Büyük yüzey alanları, konjuge π - π bağları, yüksek mekanik mukavemet, yüksek elastikiyet, termal kararlılık ve grafen gibi üstün elektriksel iletkenlik özellikleri ile öne çıkmaktadır [28]. Tek veya birkaç grafen tabakasından elde edilen GQD'ler, aynı zamanda yarı iletken özellikler sergiler. Sıfır boyutlu bir malzeme olarak, GQD'ler fotoalgılama [29–31], ışık yayan diyotlar [32,33], fotovoltajik hücreler [34,35], biyosensörler [36,37], biyogörüntüleme [38–41] ve benzer birçok alanda geniş bir kullanım yelpazesi sunmaktadır [42,43].

Bu çalışmada, I-V özellikleri incelenmiş olan Al/Gr/Al₂O₃/p-Si [44] ve PEI/N/GQD/p-Si [45] yapılarına ait diyot parametreleri ve arayüz özellikleri karşılaştırılmıştır. Çalışmada, söz konusu yapıların bariyer yüksekliği (Φ_b), idealite faktörü (n) ve seri direnç (R_s) gibi elektriksel parametreleri, akım-gerilim (I-V) karakteristikleri kullanılarak analiz edilmiştir.

ARAŞTIRMA VE BULGULAR

Grafen Tabanlı ve GQD Tabanlı Schottky Diyotların Üretimi

Gr-tabanlı Schottky diyotlarının üretimi, bu çalışmada p-tipi Si (100) alttaşı üzerinde Al/Gr/Al₂O₃/p-Si hetero-yapılarının oluşturulmasıyla gerçekleştirilmiştir. %99,999 saflıkta alüminyum (Al) metal kullanılarak fiziksel buhar biriktirme (PVD) tekniği ile alttaşın tüm arka yüzeyinde 124 nm kalınlığında bir ohmik kontak oluşturulmuştur. Ardından, p-tipi Si yüzeyi üzerine %99,9 saflıkta 17 nm kalınlığında bir Al₂O₃ tabakası biriktirilmiştir. Daha sonra, Al/Gr/Al₂O₃/p-Si hetero-yapısı üzerine ara katman olarak Gr sentezlenmiştir; bu işlem, kimyasal buhar biriktirme (CVD) tekniği ile gerçekleştirilmiştir. CVD yöntemiyle bakır (Cu) folyo üzerine Gr biriktirilmiş ve ardından Gr nanotabakaları Al₂O₃/p-tipi Si alttaşına transfer edilmiştir. Son aşamada, %99,99 saflıkta Al metal, 1 mm çapında bir metal maske kullanılarak termal buharlaştırma yöntemiyle Gr filmi üzerine 128 nm kalınlığında doğrultucu kontaklar olarak biriktirilmiştir. Yapının oda sıcaklığındaki elektriksel özelliklerini incelemek için I–V ölçümleri yapılmıştır [44].

GQD tabanlı Schottky diyotlarının üretiminde, ilk olarak diyot yapısını oluşturmak için PEI/N/GQD'ler hidrotermal yöntemle başarılı bir şekilde sentezlenmiştir. Çalışmada, p-tipi Si (100) alttaşı kullanılmış ve Schottky ile ohmik kontaklar için %99,999 saflıkta Alüminyum (Al) tercih edilmiştir. İlk olarak, PVD tekniği ile %99,999 saflıkta 124 nm kalınlığında Al ohmik kontaklar biriktirilmiştir. Ardından, PEI/N/GQD çözeltileri, p-tipi Si alttaşı üzerine spin kaplama yöntemiyle uygulanmıştır. Son olarak, 128 nm kalınlığındaki %99,99 saflıkta Al metal doğrultucu kontak noktaları, 1 mm çapında bir metal maske kullanılarak PVD yöntemiyle GQD/p-Si yapısı üzerine biriktirilmiştir. Yapının oda sıcaklığındaki elektriksel özelliklerini incelemek için I–V ölçümleri gerçekleştirilmiştir [45].

Grafen Tabanlı ve GQD Tabanlı Schottky yapılarının elektriksel özellikleri

Gr-tabanlı ve GQD-tabanlı Schottky yapıların idealite faktörü (n), seri direnç (R_s), bariyer yüksekliği (Φ_b) ve doğrultma oranı (RR) gibi diyot parametreleri, TE teorisi, Norde yöntemi ve Cheung yöntemi kullanılarak incelenmiştir. Al/Gr/Al₂O₃/p-Si yapısına ait ln(I)–V grafiği Şekil 1'de sunulmuştur. Şekil 2 ise Al/PEI/N/GQD/p-Si yapısının ln(I)–V grafiğini göstermektedir. İki Schottky yapısı için oda sıcaklığı (300 K)'de elde edilen diyot parametreleri, karşılaştırmalı olarak Tablo 1'de sunulmuştur.

Şekil 1. Al/Gr/Al₂O₃/p-Si yapısının ln(I)–V grafiği [44].

Şekil 2. Al/PEI/N/GQD /p-Si'nin ln(I)-V grafiği [45].

Tablo 1. Oda sıcaklığında Al/Gr/Al₂O₃/p-Si ve Al/PEI/N/GQD /p Si yapılarının diyet parametrelerinin karşılaştırılması

Diyotlar	n	Φ_b (eV)	$R_s(\Omega)$	RR	Kaynakça
Al/Gr/Al ₂ O ₃ /p-Si	3.89 (TE) 3.89 (Cheung)	0.69 (TE) 0.71 (Norde) 0.68 (Cheung)	9.60 (Norde) 9.12- 5.94 (Cheung)	10^3 ± 3 V	[44]
Al/ PEI/N/GQD /p Si	3.71 (TE) 9.20 (Cheung)	0.76 (TE) 0.82 (Norde) 0.66 (Cheung)	5.45 (Norde) 0.14 – 0.11 (Cheung)	2.8×10^4 ± 5 V	[45]

Gr-tabanlı diyet için TE, Norde ve Cheung yaklaşımlarıyla elde edilen Φ_b değerleri sırasıyla 0,69 eV, 0,71 eV ve 0,68 eV olarak bulunmuştur. GQD-tabanlı diyet için ise Φ_b değerleri sırasıyla 0,76 eV, 0,82 eV ve 0,66 eV olarak hesaplanmıştır. Gr-tabanlı diyetin doğrultma oranı (RR) ± 3 V'da yaklaşık 10^3 , GQD-tabanlı diyetin doğrultma oranı ise ± 5 V'da yaklaşık $2,8 \times 10^4$ olarak bulunmuştur. Elde edilen sonuçlar, GQD-tabanlı yapıda TE yöntemine göre doğrultma oranının daha iyi olduğunu göstermektedir.

SONUÇ

Bu çalışmada, başarıyla üretilen Gr ve GQD-tabanlı Schottky yapılar incelenmiştir. Üretilen her iki diyetin diyet parametreleri, TE teorisi, Norde ve Cheung yaklaşımları kullanılarak karşılaştırılmıştır. Elde edilen sonuçlar, her iki diyetin de Schottky davranışı sergilediğini ortaya koymaktadır. Gr-tabanlı Schottky yapısında elde edilen bulgular, üretilen yapının, Gr ve Si alt tabakası arasında yerleştirilen Al₂O₃ ara katmanına dayalı güneş hücreleri ve transistörler gibi çeşitli uygulamalarda kullanılmaya uygun olduğunu göstermektedir. GQD-tabanlı

Schottky yapısında elde edilen bulgular ise karbon-tabanlı elektronik uygulamalar için önemli bir kullanım potansiyeline sahip olduğunu işaret etmektedir.

Bölümü

1. ÖZET

Yapay zekâ (YZ), çevrelerini algılayarak ve büyük miktarda bilgi ve veriyi işleyip yorumlayarak fiziksel veya dijital boyutta eylemler gerçekleştiren sistemlerdir. YZ sistemleri, çevrenin ve sonuçların önceki eylemlerden nasıl etkilendiğini analiz ederek davranışları uyarlayabilir. Türk Dil Kurumu'na göre de YZ; bir bilgisayarın, bilgisayar kontrolündeki bir robotun veya programlanabilir bir aygıtın insana benzer biçimde algılama, öğrenme, fikir yürütme, karar verme, sorun çözme, iletişim kurma vb. işlevleri sergileyebilme yeteneğidir. Bu tanımlama daha da genişleterek karar verme, planlama imkânı sağlama gibi ifadelerle de genişletilebilir. Üretken yapay zekâ ise; yazılı metin, görüntü, ses gibi değişik veri türlerini işleyerek orijinal içerik oluşturmaya yarayan yapay zekâ teknolojisidir. Özgün içerikler üretiyor olması üretken yapay zekâyı diğer sistemlerden bu anlamda ayırmaktadır.

Bu çalışmada kullanıcıların üretken yapay zekâ kullanımının kabulünü etkileyen faktörlerin ortaya çıkarılması amaçlanmıştır. Bu amaç doğrultusunda nitel araştırma yöntemi kullanılmıştır. Doküman analizi olarak literatür taraması yapılmıştır. Kullanıcıların üretken yapay zekâ uygulamalarını kabulünü etkileyen faktörleri ortaya çıkarmak için 2019 - 2024 yılları arasında konu ile ilgili yapılmış çalışmalar taranmıştır. Literatür taraması sonucu 42 çalışmaya ulaşılmıştır. Çalışmalar incelenmiş ve sonucunda kullanıcıların üretken yapay zeka kabulünü etkileyen faktörlerin algılanan kullanım kolaylığı, algılanan fayda, performans beklentisi, sosyal etki, kişisel davranışsal niyet, çaba beklentisi, hedonik motivasyon, kolaylaştırıcı koşullar, davranışsal ve bilişsel tutum, algılanan güven derecesi, algılanan davranışsal tutumlar, algılanan merak olduğu görülmüştür.

Anahtar Kelimeler: Yapay zekâ, üretken yapay zekâ, kullanıcı kabulü, faktörler.

DETERMINING THE FACTORS AFFECTING USERS' ACCEPTANCE OF GENERATIVE ARTIFICIAL INTELLIGENCE

ABSTRACT

There are many different definitions of artificial intelligence today. However, according to the Turkish Language Association, artificial intelligence is defined as the ability of a computer, a computer-controlled robot, or a programmable device to perceive, learn, reason, make decisions, solve problems, communicate, etc. in a human-like manner. This definition can be further expanded with expressions such as decision-making and planning. Productive artificial intelligence, on the other hand, can be defined as artificial intelligence technology that processes different types of data such as written text, images, and sound to create original content. The fact that it produces original content distinguishes productive artificial intelligence from other systems in this sense.

This study aims to reveal the factors affecting users' acceptance of the use of generative artificial intelligence. The qualitative research method was used for this purpose. A literature review was conducted as a document analysis. To reveal the factors affecting users' acceptance of productive artificial intelligence applications, studies on the subject between 2019 and 2024 were reviewed. As a result of the literature review, 42 studies were found. The studies were examined and as a result, it was seen that the factors affecting users' acceptance of productive artificial intelligence are perceived ease of use, perceived benefit, performance expectancy, social influence, personal behavioral intention, effort expectancy, hedonic motivation, facilitating conditions, behavioral and cognitive attitude, perceived degree of trust, perceived behavioral attitudes, perceived curiosity.

Keywords: Artificial intelligence, productive artificial intelligence, user acceptance, factors.

2. GİRİŞ

Yapay zekâ, bilgisayarların ve makinelerin insan öğrenmesini, kavramasını, problem çözmesini, karar vermesini, yaratıcılığını ve özerkliğini simüle etmesini sağlayan bir teknolojidir. AI ile donatılmış uygulamalar ve cihazlar nesnelere görebilir ve tanımlayabilir. İnsan dilini anlayabilir ve yanıt verebilirler (Russell & Norvig, 2021). Teknoloji hızla ilerlediğinden ve bu durumdan uzak kalmanın mümkün olmadığından, yapay zekâ uygulamalarının önemi ve buna bağlı olarak kullanımı da giderek artmaktadır. Özellikle üretken yapay zekâ; veri işleme, tahmin yapma ve yaratıcı içerik üretme konularında çok önemli nitelikte ve tüm bireylerin hayatını kolaylaştıracak gelişmelere yol açmaya devam etmektedir. Bu teknolojiler, yalnızca iş yaşamında var olan süreçleri değil, aynı zamanda bireylerin günlük yaşamlarını da çok ciddi ölçüde değiştirmekte ve dönüştürmektedir.

Üretken yapay zekâ, makinelerin insan benzeri düşünme ve yaratma yeteneğine sahip olmalarını sağlayarak, sanatı, yazılı içerikleri, müziği, eğitimi ve aslında her alanda daha fazlasını üretme kapasitelerini artırmaktadır. Ayrıca insan konuşma kalıplarını yakından taklit eden doğal ve organik etkileşimler yaratmada mükemmeldir. Örnek olarak ChatGPT, Canva AI, DALL-E ve Google Gemini verilebilir. Üretken YZ, bilgisayarların metin, ses ve video dosyaları, resimler ve hatta kod gibi mevcut içerikleri kullanarak yeni olası içerikler oluşturmasını sağlayan gözetimsiz ve yarı gözetimli makine öğrenme algoritmalarını ifade eder. Ana fikir, gerçek gibi görünecek tamamen orijinal eserler üretmektir. Bu doğrultuda, üretken yapay zekânın kabulü, kişiler tarafından kullanım sıklığı ve etkileri üzerine yapılan araştırmalar, hem akademik hem de iş hayatının çeşitli alanlarında büyük bir ilgi görmektedir. Üretken yapay zekâ teknolojileri, kişilerin günlük hayatlarında ve iş dünyasında da giderek daha fazla yer edinmektedir. Bu teknolojilerin kabulü ve etkili kullanımını sağlamak için, çeşitli faktörlerin rolü önemlidir.

Bu çalışmanın araştırma sorusu aşağıdaki şekildedir:

Kullanıcıların üretken yapay zekâ uygulamaları kabulünü etkileyen faktörler nelerdir?

Bu çalışmanın amacı, üretken yapay zekâ teknolojilerinin kabulünü etkileyen faktörleri anlayabilmek, belirleyebilmek ve bu faktörlerin nasıl yorumlanacağı konusunda farklı çalışmalara da yol gösterici olmasını sağlamaktır. Çalışma, literatür taraması ile desteklenecek olup, birçok açıdan üretken yapay zeka kabulünün dinamiklerini anlamayı ve aktarmayı hedeflemektedir. Sonuç olarak, bu çalışma, üretken yapay zekâ uygulamalarının kabulünü etkileyen faktörleri anlamak için önemli bir belge niteliğindedir.

2.1.Yapay Zekâ

Genel olarak tanımlama yapmak gerekirse; yapay zekâ, makinelerin insan benzeri düşünme, öğrenme, problem çözme ve karar verme yetenekleri geliştirmesine yönelik teknik ve yöntemlerin bütünü olarak gösterilebilir. Aslında yapay zekâ, yapılan tanımlamalardan daha geniş bir kapsama sahiptir. Belirtilen tanımın dışında farklı alt alanları ve uygulama alanlarını da içerir. Alt alanlarından bir tanesi makine öğrenmesidir. Makine öğrenmesi verilerden öğrenme

anlamına gelir ve yapay zekânın en yaygın biçimleri arasında yer almaktadır. Makine öğrenmesinin alt dalı ise derin öğrenme olarak karşımıza çıkmaktadır. Derin öğrenme de görüntü tanıma ve doğal dil işleme gibi alanlarda daha sık kullanılmaktadır. Doğal dil işleme de ana alt alanlardan bir tanesi olarak gösterilebilir. Chatbotlar bu alana verilebilecek en güzel örnek olabilir.

Yapay zekânın temel bileşenleri veri, algoritmalar ve hesaplama gücü olarak belirtilebilir. Veri, yapay zekânın en temel bileşenidir. Verinin olmadığı bir ortamda yapay zekânın varlığından da bahsedilemez. Bu doğrultuda kapsamlı ve doğru veri yapay zekânın etkililiğini artıracaktır. Algoritma ise verilen analiz edilebilmesi için kullanılan formüllere verilen isimdir. Yapay zekâ genelde büyük veri setleriyle çalıştığı için hesaplama gücü de bu noktada gerekmektedir.

Yapay zekânın hayatımızda popüler hale gelmesi özellikle 2010'lu yıllarda olmuştur. Bu dönemde, makine öğrenimi ve derin öğrenme gibi teknolojilerin hızlı ilerlemesiyle birlikte, yapay zekâ uygulamaları ve ürünlerinin yaygınlaşması başlamıştır. Örneğin, Apple'nin Siri ve Amazon'un Alexa gibi sesli asistanlar, sosyal medya beslemeleri ve otomatik araçlar gibi teknolojiler, yapay zekânın günlük hayatta ve iş dünyasında kullanımını büyük ölçüde artırmıştır. Bu teknolojiler, yapay zekânın potansiyelini ve etkisini geniş ve farklı kitlelere sunarak, bu alanın popülerliğini giderek artırmıştır. Günümüzde yapay zekânın neredeyse kullanılmadığı alan bulunmamaktadır. Sağlık, pazarlama, finans, müşteri hizmetleri, eğitim gibi birçok sektörde aktif olarak kullanılmaktadır.

Bunların yanında yapay kullanımında bazı etik ve sosyal sorunlar ortaya çıkabilmektedir. Bunlara örnek olarak gizlilik, işgücü etkisi ve toplumsal adaletsizlik gösterilebilir. Verilerin toplanması ve kullanılmasının etik ve gizlilik anlamında bir tereddütte yol açtığı düşünülmektedir. Yapay zekânın hayatımızdaki yeri ile birlikte de iş kaybı korkuları açığa çıkabilmektedir. Son olarak algoritmaların taraflı sonuçlar vermesinin toplumsal adaletsizliğe neden olabilme ihtimalini de ortaya çıkarmaktadır.

2.2. Üretken Yapay Zekâ

Üretken yapay zekâ ise insan benzeri dil yeteneklerine sahip yapay zekâ sistemleridir. Genellikle derin öğrenme ve sinir ağları kullanarak eğitilirler ve veriyi işleyerek anlamlandırılabilir, üretebilir veya dönüştürebilirler (Bozkurt, 2023, s.3). Üretken yapay zekâ, yapay zekâ alanının önemli bir alt dalıdır ve makinelerin insan gibi düşünebilme, öğrenebilme ve problem çözebilme yeteneklerini geliştirmeye, ilerletmeye yönelik bir teknik ve yöntemler bütünü olarak ifade edilebilir.

Üretken yapay zekâ, makinelerin belirli görevleri yerine getirebilme, insan benzeri düşünme yetenekleri gösterme ve öğrenme süreçlerini taklit etme yeteneğidir. Bu verileri işleyerek ve bu verilerden çıkarımlar yaparak belirli bir amaca ulaşmayı, gerekli hallerde karar vermeyi hedefler. Üretken yapay zekâ da yapay zekâ ile aynı ana alt alanları içermektedir. Yine temel bileşenleri de yapay zekâ ile aynıdır. Birbirinden ayrı düşünemediğimiz ve değerlendiremediğimiz için de uygulama alanları da birbiriyle benzerlik göstermektedir.

Üretken yapay zekâyâ ilişkin düzenlenen bir araştırma raporunda da çarpıcı sonuçlar ortaya çıkmıştır. Deloitte'nin Dijital Tüketici Trendleri Araştırması 2023 raporunda katılımcıların %40'ının üretken yapay zekâ araçları hakkında bilgi sahibi olduğu belirtilmektedir. Katılımcıların büyük kısmı üretken yapay zekâyı kişisel nedenlerle kullanmakta olup, iş ve eğitim öne çıkan kullanım amaçları arasındadır. Aynı rapora göre katılımcılar, üretken yapay zekâ araçlarının mevcut işlerini kopyalayabileceğini ve işgücü talebinde bir azalmaya yol açabileceğini düşünmektedir. Üretken yapay zekâ uygulamalarının önümüzdeki dönemde iş gücü talebini düşüreceğine inananların oranının %71 seviyesinde olduğu da belirtilmektedir. En çarpıcı sonuçlardan biri de katılımcıların %57'sinin yoğun saatlerde yapay zekâ uygulamalarını kullanabilmek ve daha hızlı yanıt alabilmek için ödeme yapmaya istekli olmasıdır (Deloitte, 2023).

“Her yıkıcı teknolojiye olduğu gibi üretken yapay zekâ da iş dünyasında sağladığı önemli avantajların yanında dezavantajları da beraberinde getirmektedir” (Ünal, Kılınc, 2024, s.11). Dolayısıyla üretken yapay zekâ kullanımının ve sistemlerinin de hem yararlarından hem de zararlarından bahsetmek mümkündür.

Çalışma kapsamında yapılan literatür taramasında, üretken yapay zekânın sağladığı faydalar ve zararlar hakkında genel ifadelerin/çıkarımların yer aldığı Tablo 1 sunulmuştur.

Tablo 1. Üretken Yapay Zekânın Sağladığı Faydalar ve Zararlar

ÜRETKEN YAPAY ZEKÂ			
SAĞLADIĞI FAYDALAR		GETİRDİĞİ ZARARLAR	
1	İnsan Hatalarını Azaltması	1	İş Gücü Etkileri
2	Tekrarlanan Görevleri Otomatikleştirmesi	2	Etik ve Sosyal Sorunlar
3	Hızlı Karar Vermeyi Sağlaması	3	Güvenlik Tehditleri
4	7/24 Hızlı ve Kolay Erişim İmkânı Sağlaması	4	Uygulama Zorlukları
5	Zaman Ve Maliyet Tasarrufu Sağlaması	5	Tarafsızlık Sorunları
6	Büyük Veriyi Yönetmesi	6	Yasal ve Politik Sorunlar
7	Rekabet Avantajı Sağlaması	7	Toplumsal Değişimler

Tablo 1 incelendiğinde üretken yapay zekâ uygulamalarının sağladığı faydalar kadar getireceği düşünülen zararlar olduğu da görülmektedir. Özellikle üretken YZ, daha sıradan ve tekrarlayan görevleri otomatikleştirmeye olanak tanıdığından, insanların problem çözme, yaratıcılık ve ilişki kurma gibi katma değerli görevler için daha fazla zamanı olacaktır. Diğer taraftan etik, sosyal, yasal ve politik sorunları da beraberinde getireceği açıktır. Çığır açan her teknolojiye olduğu gibi, üretken YZ'nin faydalarını ve risklerini anlamak, potansiyelini en üst düzeye çıkarmak için çok önemlidir.

3. YÖNTEM

3.1. Araştırmanın Yöntemi

Bu çalışmada nitel araştırma yöntemi kullanılmıştır. Aynı zamanda doküman analizi olarak literatür taraması yapılmıştır. Kullanıcıların üretken yapay zekâ uygulamalarını kabulünü etkileyen faktörleri ortaya çıkarmak için 2019 - 2024 yılları arasında konu ile ilgili yapılmış çalışmalar taranmıştır. Literatür taraması sonucu 42 çalışmaya ulaşılmıştır.(Aburbeian, 2022; Aharony, 2024; AYYOUB, 2023; Baytak, 2023; Brachten ve Kissmer ve Stieglitz, 2021; Bozkurt, 2023; Choi ve Park ve Suh, 2023; Du ve Lv, 2024; Duong ve Vu ve Ngo, 2023; Eksail ve Afari, 2020; Faruk ve Rohan ve Ninrutsirikun ve Pal, 2023; Gao ve Xie ve Zuo ve Zeng ve Wang, 2023; Ghimire ve Edwards, 2024; Goyal ve Kaur ve Mago, 2023; Gupta, 2024; Gupta ve Yang, 2024; Huy ve Nguyen ve Vo-Thanh ve Thinh ve Thi Thu Dung, 2024; Kang ve Choi ve Kim, 2024; Kanont ve Pingmuang ve Simasathien ve Wisnuwong ve Wiwatsiripong ve Poonpirome ve Khlaisang, 2024; Koponen, 2023; Ma ve Wang ve Li ve Pang ve Wang,D, 2024; Ma, 2024; Ma ve Huo, 2023; Menon ve Shilpa, 2023; Mustafa ve Garcia, 2021; Norizan ve Zamri, 2024; Rath ve Tripathy ve Jain, 2023; Sallam ve Salim ve Barakat ve Al-Mahzoum ve Al-Tammemi ve Malaeb ve Hallit, 2023; Schreiberlmayr ve Mara, 2022; Singh, 2022; Skjuve ve Brandtzæg ve Følstad, 2024; Stevens ve Stetson, 2023; Teerawongsathorn, 2023; Weizheng ve W. A. N. G ve Xiaojun ve Jingjing, 2024; Xia ve Chen, 2024; Xu ve Zhang ve Li ve Yoo ve Pan, 2023; Yilmaz ve Yilmaz, 2023; Yin ve Han ve Ryu ve Hua, 2023; Yoon ve Wang, 2023; Zou ve Huang, 2023).

3.2. Literatür Taraması Sonucu

Kullanıcıların üretken yapay zekâ uygulamalarını kabulünü etkileyen faktörleri ortaya çıkarmak için 2019 - 2024 yılları arasında konu ile ilgili yapılmış çalışmalar taranmıştır. Literatür taraması Web of Science, EBSCO, Science Direct ve Scopus gibi veri tabanlarındaki arama motorları

öncelikle tercih edilmiştir. Anahtar kelimeler olarak “üretken yapay zeka kullanıcı kabulü”, “üretken yapay zeka kullanıcı kabulü etkileyen faktörler” ve “üretken yapay zeka kullanıcı faktör” kullanılmıştır. Anahtar kelimeler ile veri tabanları tarandıktan sonra, elde edilen sonuçlar kategorilere göre dikkatlice değerlendirilip seçilmiştir. İlk olarak 75 çalışmaya ulaşılmıştır. Çalışmaların sonuç bölümleri özenle gözden geçirilmiş ve hariç tutma işlemi başarıyla tamamlanmıştır. Çalışmalar bu çalışmanın amacına uygun olmak üzere düzenlenmiştir. Literatür taraması sonucu 42 çalışmanın bu çalışmanın amacına uygun olduğuna karar verilmiştir. Ulaşılan çalışmalar detaylı olarak incelenmiş ve kullanıcıların üretken yapay zeka kabulünü etkileyen faktörlerin algılanan kullanım kolaylığı, algılanan fayda, performans beklentisi, sosyal etki, kişisel davranışsal niyet, çaba beklentisi, hedonik motivasyon, kolaylaştırıcı koşullar, davranışsal ve bilişsel tutum, algılanan güven derecesi, algılanan davranışsal tutumlar, algılanan merak olduğu görülmüştür. Çalışmalarda üretken yapay zekânın kabulünü etkileyen birden fazla faktörün bir arada olabileceği de görülmüştür.

4. BULGULAR

Bu bölümde literatür taraması sonucu kullanıcıların üretken yapay zeka kabulünü etkileyen faktörler (algılanan kullanım kolaylığı, algılanan fayda, performans beklentisi, sosyal etki, kişisel davranışsal niyet, çaba beklentisi, hedonik motivasyon, kolaylaştırıcı koşullar, davranışsal ve bilişsel tutum, algılanan güven derecesi, algılanan davranışsal tutumlar, algılanan merak) sunulmuştur.

4.1. Algılanan Kullanım Kolaylığı

Bir sistemin, ürünün ya da hizmetin kullanan kişi tarafından ne kadar kolay kullanılabilmesine ilişkin hissettiği bir kavram olarak açıklanabilir. Bir kişinin bir sistemi kullanırken ne derecede bir zorluk hissettiğini değerlendirme aracı gibi de düşünülebilir. Kullanılan üretken yapay zekâ uygulamaları için yüksek algılanan kullanım kolaylığı, kullanıcıların bu sistemleri tercih etmesini sağlayacaktır. Bunun tam aksi ise sistemden uzaklaşmaya sebep olacaktır.

Üretken yapay zekâ teknolojilerinin kullanımı kolay olduğunda, kullanıcıların bu teknolojileri daha kolay kabul etmeleri beklenir. Kolaylık, kullanıcı dostu ara yüzler ve basit kullanım süreçleri ile sağlanabilir. Mustafa ve Garcia (2021) çalışmalarında da üretken yapay zekâ kullanımını etkileyen faktörlerden birinin algılanan kullanım kolaylığı olduğunu belirtmektedir.

4.2. Algılanan Fayda

Kullanıcıların üretken yapay zekâ teknolojilerinden kendisine sağlayacağı faydaları ne kadar etkili bir şekilde algıladığını ifade eder. Algılanan fayda bir kullanıcının bir sistemi ya da hizmeti neden tercih ettiğini anlamada önemli bir etkiye sahiptir. Algılanan fayda, kullanıcıların davranışsal niyetlerini ve kullanım isteklerini olumlu/olumsuz yönde etkilemektedir.

Brachten ve Kissmer ve Stieglitz (2021) sohbet robotlarının kullanım kabulüne ilişkin bir araştırma yapmıştır ve bu çalışmada kullanıcıların bir aracın kendileri için yararlı olduğuna ikna olmalarının önemli olduğu sonucuna ulaşmışlardır.

4.3. Performans Beklentisi

Kullanıcıların bir sistemin işlevselliği, belirli bir görevi yerine getirme kapasitesine dair inançları ve değerlendirmeleri olarak tanımlanabilir. Bu kavram ise teknoloji kabulünde çok önemli bir yere sahiptir. Yüksek performans beklentisi kullanıcının sistemi daha istekli olarak kullanmasına önemli ölçüde katkı sağlar.

Xia ve Chen (2024) yaptıkları çalışmada, performans beklentisi ve antropomorfizmden oluşan bileşik bir faktörün, tutumlara birincil olumlu katkıda bulunduğu ve aralarında güçlü bir ilişki olduğunu belirtmişlerdir.

4.4. Sosyal Etki

Bireylerin veya grupların davranışlarını, tutumlarını ve düşüncelerini başkalarının davranışları, tutumları ve düşünceleri tarafından nasıl şekillendirildiğini ifade eden bir kavramdır. Bu etki,

kişilerin karar vermesinde, üretken yapay zeka sistemlerinin kullanımının teşvik edilmesinde çok kritik bir öneme sahiptir. Zira bu etki, kişilerin düşüncelerini değiştirmede önemli rol oynamaktadır. Sosyal etkinin analiz edilmesi, kullanıcıların yapay zeka sistemlerini kullanmasındaki davranışlarını daha iyi anlamamız için bize yardımcı olabilir.

Ek olarak AYYOUB'un (2023) yükseköğretim alanında yaptığı çalışmada sosyal etki, algılanan fayda, bireysel yaratıcılık ve ekonomik faktörlerin teknoloji altyapısı ve etik hususlarla nasıl iç içe geçtiğini ortaya koymuştur.

4.5. Kişisel Davranışsal Niyet

Bir kişinin bir davranışı gerçekleştirme yönündeki isteğini ifade eden bir kavram olarak karşımıza çıkmaktadır. Bir sisteme ya da davranışa yönelik düşünce ve hislerin bir sonucu olarak da ifade edilebilir. Kişisel davranışsal niyet, bireylerin belirli bir davranışı ya da eylemi gerçekleştirme yönündeki isteklerini ve bu istekleri doğrultusundaki planlarını ifade eden önemli bir kavramdır.

Schreibelmayr ve Mara (2022) 165 katılımcı ile yaptıkları araştırmada, insan benzerliği ile kullanıcı kabulü arasında pozitif bir ilişki olduğunu belirtmişlerdir. Üretken yapay zeka teknolojilerinin insan davranışlarına benzerliği kişisel davranışsal niyeti de olumlu anlamda etkilemektedir.

4.6. Çaba Beklentisi

Bireylerin belirli bir davranışı ya da eylemi gerçekleştirmek için ne kadar çaba harcamaları gerektiğine dair sahip oldukları inanç ve değerlendirmeleri ifade eder. Aynı zamanda hedefe ulaşılan kadar ne kadar zaman ve kaynak harcamaları gerektiğine dair sahip oldukları algı olarak da ifade edilebilir. Yüksek çaba beklentisi, bir sistemin kullanılmasında kişilerin daha istekli olmasına neden olabilmektedir.

Duong, Vu ve Ngo (2023) yaptıkları araştırmada çaba beklentisinin ChatGPT kullanımına yönelik davranışsal niyetleri ve gerçek kullanımı olumlu yönde etkilediğini ortaya koymuştur.

4.7. Hedonik Motivasyon

Hedonik motivasyon, kişilerin davranışlarını, deneyimlerinden elde edecekleri haz veya tatmin düzeyine göre şekillendirmesi anlamına gelir. Bu motivasyon, kişilerin zevk aldığı aktiviteleri seçmesini ve deneyimlemekten keyif aldığı uygulamalara yönelmesini içerir. Bu motivasyon türü birçok alanda etkili olabilmektedir. İnsanların nasıl motivasyon sağladığını anlamak kritik bir öneme sahiptir.

Norizan ve Zamri(2024) yaptıkları araştırmalarında performans beklentisi, çaba beklentisi, kolaylaştırıcı koşul, hedonik motivasyon ve kişisel yenilikçiliğin kullanıcıların bu araçları kullanmaya yönelik davranışsal niyetlerini olumlu yönde etkilediğini tespit ettiklerini belirtmiştir.

4.8. Kolaylaştırıcı Koşullar

Kişilerin bir sistemi kullanmasını kolaylaştıran faktörler olarak tanımlanabilir. Ayrıca bireylerin belirli bir davranışa yönelmesini kolaylaştıran unsurlar olarak da ifade edilebilir. Kolaylaştırıcı koşullar bir sistemin daha az çaba ile fayda sağlamasını teşvik etmektedir. Kolaylaştırıcı koşulların sağlanması üretken yapay zeka sistemlerinin kullanılmasına ilişkin karar verme süreçlerini etkiler ve davranış değişikliğine de sebep olabilir.

Goyal ve Kaur ve Mago'nun (2023) üniversite öğrencileri ile yaptığı araştırma sonucunda, çaba beklentisi ve kolaylaştırıcı koşulların kullanıcıların niyetini doğrudan ve algılanan güvenilirlik ve tutum yoluyla dolaylı olarak önemli ölçüde etkilediğini ortaya koymuştur.

4.9. Davranışsal ve Bilişsel Tutum

Tutum, bir bireyin belli bir tutum nesnesinden hoşlanma veya hoşlanmama derecesini temsil eden kurgusal bir yapıdır. Davranışsal tutum ve bilişsel tutum, kişilerin belirli bir nesneye, duruma veya konuya yönelik tutumlarını anlamak için kullanılan iki ana bileşen olarak ifade edilebilir. Bu tutumlar, insanların nasıl düşündüğünü, hissettiğini ve davrandığını etkileyen önemli

unsurlardır. Davranışsal tutum, bireylerin bir konuya karşın nasıl davranış sergileyeceklerine dair eğilimleridir. Bilişsel tutum ise kişilerin belirli bir konu hakkında sahip oldukları inançlar, düşünceler ve bilgi parçaları olarak açıklanabilir. Bilişsel tutum, kişilerin bir konuya dair düşünce çerçevesini oluşturur ve genellikle kişinin tutumlarının mantıksal temellerini temsil eder.

Ma ve Huo (2023) kullanıcıların ChatGPT'yi benimseme isteklerine ilişkin yaptıkları araştırmada, bilişsel tutumun ChatGPT'yi kabul etme isteklerinin birincil öncüsü olduğunu belirtmişlerdir.

4.10. Algılanan Güven Derecesi

Bir kişinin sistem hakkında ne kadar güven duyduğunu gösteren bir kavramdır. Algılanan güven derecesi, kişilerin bir duruma ya da sisteme karşı hissettikleri güvenin seviyesi ile ilişkilidir. Bir duygu ölçüsü olarak da ifade edilebilir. Kullanıcıların üretken yapay zekâ teknolojilerine olan güveni, bu teknolojilerin kabulünde önemli bir faktördür. Güven ise teknolojinin güvenilirliği ve hassasiyeti ile sağlanabilir.

Koponen (2023) yaptığı araştırmada, üretken yapay zekânın kabulünü etkileyen yedi faktör (Performans Beklentisi, Çaba Beklentisi, Akran Sosyal Etkisi, Üstün Sosyal Etki, Tutum, Güven ve Davranışsal Kullanım Niyeti) tespit etmiştir. Bunların arasında algılanan güven de yer almaktadır ve tutum üzerinde anlamlı bir etkiye sahip olduğu belirtilmiştir.

4.11. Algılanan Davranışsal Tutumlar

Kişilerin bir durum ya da sisteme yönelik takındıkları tutumların davranışsal yansıması olarak ifade edilebilir. Bu kavram kişilerin üretken yapay zekâ kullanımına yönelik eğilimlerini etkilemektedir. Bu tutumun yüksek olması kişilerin belirli bir davranışı gerçekleştirme ihtimalini artırabilmektedir.

Lu, He, Yu, Pan ve Fu'nun (2024) öğretmenlerin üretken yapay zekâ teknolojisini kullanma istekliliği ve bunu etkileyen faktörler üzerine yaptığı çalışmada, öğretmenlerin bireysel davranışsal niyetlerini etkileyen faktörleri, özellikle de öğretmenlerin ihtiyaçlarının ve değer yargılarının göz önüne alınmasının bu teknolojilerin kullanım eğilimini daha ileriye götürebileceği aktarılmıştır.

4.12. Algılanan Merak

Kişilerin belirli bir konu, nesne veya durum hakkında sahip oldukları ilgi ve öğrenme isteği düzeyini ifade eden bir kavramdır. Kişilerin yeni bir şeyler öğrenme ve keşfetme isteğini bu kavram ifade edebilir. Merak, kişileri yeni bir şeyler öğrenmeye ve keşfetmeye sevk eden bir duygudur. Üretken yapay zekâ araçlarının merak edilmesi de kişilerin kullanım eğilimini etkilemektedir. Algılanan merak öğrenme ve gelişimde önemli bir etkiye sahiptir.

Aburbeian ve Owda'nın (2022) yaptığı araştırmada, algılanan zevk ile teknoloji kullanımına yönelik tutum ve davranışsal niyet arasında pozitif yönde bir ilişkiye ulaşılmıştır.

5. SONUÇ

Bu araştırma, üretken yapay zekâ teknolojilerinin ve sistemlerinin kabulünü etkileyen faktörler belirlenmiştir. Bu faktörler, üretken yapay zekâ teknolojilerinin daha etkili bir şekilde kabul edilmesi ve kullanılmasında yardımcı olabilir. Üretken yapay zekânın daha geniş kitleler tarafından kullanılabilmesi için uygulama alanlarının genişletilmesi, kullanıcı dostu ara yüz tasarımlarının geliştirilmesi, etik ve sosyal anlamda güvenilir sistemlerin kurulması ve kişilere yönelik teknolojik eğitimlerin ve farkındalığın artırılması önerilmektedir.

ABSTRACT

With the rapidly increasing production of plastics, a significant amount of plastic waste is generated every year. The degradation of plastics into smaller sizes (microplastics (MPs) ve nanoplastics (NPs)) causes changes in their chemical and physical properties; they pose a significant threat to the environment. It is essential to determine the toxicity caused by microplastics and nanoplastics on poultry, which are important protein sources that are consumed frequently due to their low cost all over the world. In this study, the effects of microplastics and nanoplastics on poultry were investigated. Within the scope of the research, search engines such as Scopus, Web of Science, Google Scholar, and PubMed were utilized. The findings show that both microplastics and nanoplastics accumulate in various organs of poultry and cause toxicity in these organs and harm the animals. This situation will lead to livestock losses in both small rural farms and large enterprises, and thus to large economic losses. In addition to consumed water and feed resources, the risk of animals ingesting or coming into contact with small-sized plastics in animal farms, as well as the risk of these particles being present and accumulating in animal products such as meat and eggs, cannot be ignored. The potential damage to humans, who are usually the last link in the food chain, from the meat, eggs, offal, and other products of these poultry is at high levels. In this context, it is recommended that the use of plastics be reduced and that more attention be paid to the disposal of plastics in order to minimize the risk for the environment.

Keywords: Poultry, chicken, toxicity, microplastics, nanoplastics.

INTRODUCTION

Plastics are widely used today due to their low price, durability, and lightweight (Meng et al., 2020). Due to the enormous demand for plastics in everyday life, the global production of plastics is constantly increasing. The fact that approximately half of the plastics produced are single-use (Chen et al., 2021), increases plastic pollution to a tremendous levels. Plastic waste takes more than 1000 years to decompose because it is corrosion-resistant, chemically stable, and difficult to degrade, and in many parts of the world plastic waste is mismanaged (Shen et al., 2019). This leads to the accumulation of plastics in terrestrial, aquatic, and atmospheric environments or all types of environmental settings such as landfills, aquatic ecosystems, and agroecosystems (Adam et al., 2021; Kumar et al., 2021; Shen et al., 2019; Wang et al., 2021). Plastic waste will cause great harm to our lives as it will cause pollution of water resources, destruction of ploughed land, and even leakage into food webs (Jiao et al., 2021).

Plastics are affected by weathering and solar radiation and break down into smaller fragments such as microplastics (MPs) and nanoplastics (NPs). MPs formed by the breakdown of plastics are particles ranging in size from 1 µm to 5 mm (Thompson, 2015; Sun et al., 2019). NPs are particles ranging in size from 1-1000 nm and can exhibit a colloidal behavior (Gigault et al., 2018). NPs originate from the degradation of MPs as well as from their production for specific functions such as personal care products, food packaging, textiles,

pharmaceuticals, and air filters. The breakdown of plastics into smaller sizes leads to changes in their chemical and physical properties (Fotopoulou and Karapanagiotti, 2017). These plastics, which pose a great threat to the environment (Chae and An, 2020; Sun et al., 2020; Kumar et al., 2021), also adversely affect animals and animal products.

METHODOLOGY

Within the scope of the study, searches were made in search engines such as Scopus, Web of Science, Google Scholar, and PubMed by entering phrases such as microplastics, nanoplastics, poultry, effects of microplastics on poultry, and effects of nanoplastics on poultry and the results of the online scientific publications obtained were compiled.

RESULTS and DISCUSSION

Although microplastics and nanoplastics and their effects on aquatic invertebrates and fish have been well studied, little is known about their effects on warm-blooded animals. Poultry is now the most consumed meat species worldwide (Lu et al., 2024). Poultry meat and eggs, which play a very crucial role in the human diet, are important sources of protein. Poultry meat has surpassed red meat in terms of production and consumption figures and has become an indispensable alternative food in closing the protein deficit (Anonymous, 2016). In this case, it is important to investigate plastic toxicity in poultry.

In addition to consumed water and feed resources, the risk of animals ingesting or coming into contact with small-sized plastics in animal farms, as well as the risk of these particles being present and accumulating in animal products such as meat and eggs, cannot be ignored (Da Costa Filho et al., 2021). Animal products will cause potential accumulation in organisms at higher trophic levels along the food chain. Shelver et al. (2024) reported that when [14C]-polystyrene microplastics were administered to chickens, most of the microplastics were excreted in the feces, but small amounts of microplastics accumulated in the blood, tissues, and eggs. In a study, it was determined that MPs were found in eggs with an amount of approximately 11.67 particles per egg and the amount of MPs in egg yolk was higher than in egg white (Liu et al., 2022). This is the biggest evidence that people will be exposed to plastics even after consuming only eggs. The presence of plastics in chicken meat, chicken offal, and eggs can have adverse consequences for human health (Duis and Coors, 2016).

Consumption of plastics by poultry will lead to the accumulation of plastics in poultry meat, offal, and eggs, causing potential health risks and even deaths. This will lead to livestock losses in both small rural farms and large enterprises, and thus to large economic losses. Therefore, it is important to investigate the hazards of plastics on poultry. In this context, most studies have shown MP toxicity and very few have shown NP toxicity. In one study, a significant decrease in microbial diversity and abundance in the stomach of chickens exposed to MPs for 28 days was detected and damage to chicken organs such as intestine, liver, kidney, and spleen was reported (Li et al., 2023). MPs have been shown to interfere with the proper functioning of the liver by disrupting digestive metabolism in the chicken intestine (Yin et al., 2023). Hou et al. (2022) reported that microplastic degraded the testicular tissue of roosters and caused inflammatory infiltration in the testicular tissue. It was determined that damage and mitochondrial disorders occurred in the kidney tissue of chickens exposed to MPs and the blood-urine barrier was disrupted (Meng et al., 2022). MPs are generally thought to penetrate the blood barrier, liver, and intestines and enter the heart, brain, liver, kidney, and gastrointestinal tract (Auta et al., 2017). Animal studies have shown that MPs smaller than 10 μm in diameter can pass through the cell membrane, enter the circulatory system via the blood and reach the lungs (Wu et al., 2022). MPs destroy the metabolism of lung cells, leading to lung dysfunction (Xu et al., 2021). Exposure to microplastics led to changes in gut microbial diversity and metabolic disorders in the gut, cardiac pathological damage, and myocardial

pyrosis in chickens (Li et al., 2023; Zhang et al., 2022). MPs have been noted to lead to excessive production of reactive oxygen species (ROS). Lu et al. (2024) showed that exposure to microplastics can result in endoplasmic reticulum stress, lung stress, inflammation, and pyroptosis in broilers. Zou et al. (2023) reported that exposure to MP significantly reduced the growth performance of chickens and may reduce gut microbial abundance and trigger gut microbial dysbiosis. Meng et al. (2022) found that exposure to polystyrene MPs caused kidney damage in chickens. Zhang et al. (2022) observed that MPs caused severe pathological damage and ultrastructural changes in the heart, mitochondrial lesions, induced myocardial pyroptosis, and inflammatory cell infiltration. These studies show how toxic MPs are to chickens. In addition, considering that NPs can easily pass through cell membranes due to their smaller size, the toxicity of NPs is striking in this case. Studies investigating the toxicity of NPs on chickens are more limited compared to MPs. In one study, NPs were reported to cause heart defects in chick embryos (Wang et al., 2023). Wang et al. (2023) applied polystyrene nanoplastic (PSNP) to chicken embryos and found that 25 of 50 treated embryos survived 24 hours after exposure and 22 of the survivors had neural tube defects. Wang et al. (2024a) applied PSNP to chicken embryos and found that accumulation occurred in the heart, intestine, liver, brain, kidney, lung, and eye and that accumulation was especially high in the heart, liver, and kidney. In a study in which PSNP was administered to chicken embryos, dose-related mortality, malformations, developmental delay and skeletal abnormalities were noted in chicken embryos four days after exposure (Wang et al., 2024b). The consequences of PSNP exposure in chicken embryos include malformations of the central nervous system, heart, and other organs (Nie et al., 2021; Wang et al., 2023).

CONCLUSION

Due to the rapid development of the global plastics industry and the mismanagement of plastic waste, urgent solutions are needed against plastic pollution, which has raised public concern. Poultry meat, poultry offal, and eggs are among the most consumed protein sources worldwide, as they are cheap and provide high amounts of protein. With the increasing awareness of plastic pollution worldwide and the increasingly detailed study of its toxic effects on humans, this problem needs to be solved urgently, considering that these foods that people frequently consume will cause bioaccumulation in humans.

DEPREM BÖLGESİNDE BULUNAN OKUL ÖNCESİ ÖĞRETMENLERİNİN KİŞİSEL DUYGU DÜZENLEME STRATEJİLERİ ÜZERİNE BİR İNCELEME

Elif Nazlı PÜSKÜLLER

Yüksek lisans öğrencisi, Üsküdar Üniversitesi, Sağlık Bilimleri Fakültesi, Çocuk Gelişimi
Nurper ÜLKÜER

Profesör Doktor, Üsküdar Üniversitesi, Sağlık Bilimleri Fakültesi, Çocuk Gelişimi

ÖZET

Duygu düzenleme stratejileri bireylerin yoğun duygusal tepkilerini yönetmek, duygusal dengeyi sağlamak ve stresle başa çıkmak için kullandıkları yöntemlerdir. Bu stratejiler bireyin hem kendisiyle hem de çevresiyle daha uyumlu bir ilişki geliştirmesine katkı sağlamaktadır.

Deprem gibi travmatik olaylar sonrasında öğretmenlerin bireysel duygu yönetiminde başvurdukları yöntemlerin kendi psikolojik iyilik halleri ve sınıf içi rolleri üzerinde önemli etkileri bulunmaktadır. Özellikle okul öncesi öğretmenlerinin duygu düzenleme becerileri hem kendilerinin hem de öğrencilerinin psikolojik iyilik halini koruyabilmeleri açısından büyük önem taşır. Duygu düzenleme, bireylerin olumsuz duygularla başa çıkmasına ve daha işlevsel bir yaşam sürmelerine olanak tanır.

Bu çalışmada 6 Şubat 2023 depremini yaşamış olan ve hala deprem bölgesinde görev yapmakta olan okul öncesi öğretmenlerinin afet sonrası sürece uyum sağlayabilme kapasitelerini anlamak ve destekleyici mekanizmalar geliştirmeye yönelik öneriler sunmak amacıyla kendi duygu düzenleme stratejilerine yönelik görüşleri incelenmiştir.

Çalışmada deprem bölgesinde bulunan 35 okul öncesi öğretmeni ile online odak grup görüşmeleri gerçekleştirilmiştir. Elde edilen veriler betimsel analiz ve kodlama tekniği ile MAXQDA 24 programı ile analiz edilmiştir.

Elde edilen bulgular, öğretmenlerin bir kısmının etkili duygu düzenleme stratejileri ile travma sonrası duygusal denge sağladığını gösterirken bazı öğretmenlerin yetersiz baş etme mekanizmaları nedeniyle yoğun stres ve tükenmişlik yaşadığını ortaya koymuştur.

Bu sonuçlar afet sonrası öğretmenlere yönelik psikolojik destek programlarının geliştirilmesinin önemini vurgulamaktadır.

Anahtar Kelimeler: Deprem, duygu düzenleme stratejileri, okul öncesi öğretmeni.

Bu bildiri, Prof. Dr. Nurper Ülküer danışmanlığında Elif Nazlı Püsküller tarafından devam etmekte olan “Deprem Bölgesinde Bulunan Okul Öncesi Öğretmenlerinin Kendi Duygu Düzenleme Becerilerine Yönelik Görüşlerinin İncelenmesi” adlı yüksek lisans tezi kapsamındaki çalışmadan türetilmiştir.

ABSTRACT

Emotion regulation strategies are the methods that individuals use to manage their intense emotional reactions, maintain emotional balance and cope with stress. These strategies contribute to developing a more harmonious relationship with oneself and one's environment.

After traumatic events such as earthquakes, the methods used by teachers in individual emotion management have significant effects on their psychological well-being and classroom roles. The emotion regulation skills of preschool teachers are crucial for protecting both their own psychological well-being and that of their students. Emotion regulation enables individuals to cope with negative emotions and lead a more functional life.

This study examined the views of preschool teachers who experienced the February 6, 2023 earthquake and are still working in the earthquake zone. The study aims to analyze teachers'

emotion regulation strategies and their capacity to adapt to the post-disaster process and to provide suggestions for developing supportive mechanisms.

In the study, online focus group interviews were conducted with 35 preschool teachers in the earthquake region. The data obtained were analyzed by descriptive analysis and coding technique with the MAXQDA 24 program.

The findings revealed that while some of the teachers achieved emotional balance after the trauma with effective emotion regulation strategies, some teachers experienced intense stress and burnout due to inadequate coping mechanisms.

These results emphasize the importance of developing psychological support programs for teachers after disasters.

Keywords: Earthquake, emotion regulation strategies, preschool teacher.

This paper is derived from the research conducted by Elif Nazlı Püsküller under the supervision of Prof. Dr. Nurper Ülküer within the scope of her master's thesis titled "Investigation of Preschool Teachers' Opinions on Their Emotion Regulation Skills in Earthquake Region".

GİRİŞ

Afetler, insanların yaşamlarını, sağlık durumlarını, sosyal düzenlerini ve ekonomik koşullarını ciddi şekilde etkileyen beklenmedik ve ani olaylardır (UNDHA, 1992). Erozyon, sel, kuraklık ve yanardağ patlamaları gibi afetler genellikle belirli bir bölgeyle sınırlı kalırken şiddetli depremler çok daha geniş bölgelerde etkili olarak, çok sayıda insanın ve diğer canlıların zarar görmesine neden olabilmektedir (Aslander ve Berkant, 2023).

Depremler, yer kabuğu içerisinde meydana gelen beklenmedik sarsıntılardır ve genellikle yer kabuğundaki levhaların hareketleri sonucu oluşur (Aydın ve Akyol, 2022:10; Akt. Polat ve Sarıçam, 2024).

Türkiye, coğrafi konumu nedeniyle deprem riski yüksek bir ülkedir. Kuzey Anadolu ve Doğu Anadolu fay hatları üzerinde yer alması sebebiyle tarih boyunca birçok yıkıcı deprem yaşamış olup bu depremler fiziki ve psikolojik derin etkiler bırakmıştır (Göver, 2023). Kuzey Anadolu fay hattı 1939 Erzincan ve 1999 Marmara depremlerine, Doğu Anadolu fay hattı ise 2011 Van ve 2023 Kahramanmaraş depremlerine neden olmuştur. 6 Şubat 2023'te Kahramanmaraş merkezli 7.7 ve 7.6 büyüklüğündeki depremler, 11 ili etkileyerek 50 binden fazla can kaybına ve 115 binden fazla yaralanmaya yol açmıştır (AFAD, 2023).

Depremler hem maddi hem de manevi açıdan büyük yıkımlara yol açmakta ve insanların yaşamlarında derin izler bırakmaktadır. Özellikle depremden doğrudan etkilenen bireyler, fiziksel kayıpların yanı sıra psikolojik, sosyal ve mesleki alanlarda da zorlayıcı deneyimler yaşamaktadırlar. Depremden etkilenen kişilerde depresyon, travma, stres ve çaresizlik gibi ruhsal sorunlar ortaya çıkabilmektedir (Şevik Kaçmaz ve Kaçmaz, 2023).

Depremin etkilerini en yoğun hisseden kesimlerden biri de eğitim sürecinin temel aktörleri olan öğretmenler ve öğrenciler olmaktadır. Aile kayıpları, evlerin ve okulların yıkılması gibi travmatik durumlar, öğretmen ve öğrencilerin sonraki süreçte ciddi sorunlarla karşılaşmasına neden olmuştur (Yıldız, 2000). Özellikle okul öncesi öğretmenleri bu sürecin hem kendileri hem de öğrencileri üzerindeki olumsuz etkilerini derinden hisseden meslek grubu olarak karşımıza çıkmaktadır.

Duygular bireylerin kararlarını, buldukları ortama uyum sağlamalarını ve yaşamlarının tüm alanlarını etkilemektedir (Greenberg, 2014). Deprem sonrası insanların normal yaşamlarına dönmeleri, onların iyilik hallerine daha hızlı ulaşmalarını sağlamaktadır. Bu durum özellikle küçük çocuklar için kritik bir öneme sahiptir. Okullar, çocuklara yalnızca öğrenme ortamı sunmakla kalmayıp güvenli bir alan oluşturarak genel iyilik hallerini desteklemektedir. Özellikle okul öncesi öğretmenlerinin duygu düzenleme becerileri hem kendilerinin hem de öğrencilerinin psikolojik iyilik halini koruyabilmeleri açısından büyük önem taşır. Duygu

düzenleme, bireylerin olumsuz duygularla başa çıkmasına ve daha işlevsel bir yaşam sürmelerine olanak tanır. Okul öncesi dönemdeki çocukların duygusal gelişiminde rol model olan öğretmenlerin duygu düzenleme becerileri, çocukların psikososyal gelişimi üzerinde doğrudan etkili olmaktadır. Öğretmenlerin bu becerileri hem eğitim ortamında hem de özel hayatlarında verimli iletişim ve mesleki performans açısından kritik bir rol oynamaktadır.

Bu çalışmanın amacı okul öncesi öğretmenlerinin travmatik olaylar karşısında kullandıkları duygu düzenleme stratejilerini incelemek ve bu stratejilerin etkilerini değerlendirmektir. Okul öncesi öğretmenleri gibi toplumu şekillendiren bireylerin, afet sonrası kendi duygu düzenleme stratejilerini geliştirme becerileri hem bireysel hem de profesyonel anlamda kritik bir öneme sahiptir. Bu doğrultuda çalışmanın bir diğer amacı okul öncesi öğretmenlerinin deprem gibi travmatik süreçlerde karşılaştıkları zorlukları anlamak ve duygu düzenleme becerilerinin geliştirilmesine yönelik öneriler sunmaktır. Aynı zamanda bu çalışma, afet sonrası süreçlerde öğretmenlerin mesleki ve kişisel dayanıklılıklarını destekleyecek programların geliştirilmesine katkı sağlamayı amaçlamaktadır.

1.Afetler

Afetler, ani ya da yavaş gelişen, insan kaynaklı veya doğal sebeplerle meydana gelen, toplumun kapasitesini aşan, birçok alanda kayıplara neden olan olaylardır (IFRC, 2023).

Afetlerin etkileri genellikle fiziksel ve ekonomik kayıplar üzerinden değerlendiriliyor olsa da psikolojik ve sosyal etkileri daha derin ve uzun vadeli sonuçlar doğurmaktadır. Özellikle afetlerin bireylerin ruh sağlığı, toplumsal bağlar ve sosyal düzen üzerindeki etkileri iyileşme süreçlerini ciddi şekilde etkilemektedir.

Afet türleri doğal afetler, insan kaynaklı afetler ve teknolojik afetler olarak sınıflandırılmaktadır.

Doğal Afetler: Deprem, sel, volkanik patlama, kasırga, kuraklık gibi doğanın kendisinden kaynaklanan olaylardır.

İnsan Kaynaklı Afetler: Savaş, terör saldırıları, sanayi kazaları, kimyasal sızıntılar gibi insan eylemlerinin neden olduğu afetlerdir.

Teknolojik Afetler: Gelişen teknolojinin yanlış ya da kötü kullanımı sonucu oluşan afetlerdir. Nükleer saldırılar, siber saldırılar gibi.

1.1.Deprem

Depremler, yer kabuğundaki gerilmelerin ani bir şekilde serbest kalmasıyla ortaya çıkan doğa olaylarıdır. Genellikle önceden bir uyarı vermedikleri için ciddi tehlike oluştururlar. Ölüm, yaralanma, mal kaybı, altyapı hasarı gibi fiziksel etkilerle birlikte ikincil tehlikeler (binaların çökmesi, yangın, tsunami) nedeniyle kayıpların artmasına sebep olabilir (IFRC, 2023).

Depremlerin etkisi sadece fiziksel değil aynı zamanda psikolojik, sosyal, toplumsal ve ekonomik boyutlarda da olmaktadır. Deprem sonrasında sevilenlerin kaybı, bireylerde ve topluluklarda derin travmalar yaratabilir. Eğitim hizmetleri de deprem nedeniyle sekteye uğrayabilir; okulların kapanması ve eğitimdeki aksaklıklar öğretmenleri ve öğrencileri etkileyerek duygusal sorunların artmasına yol açabilir (Demirtaş, Doğru, Kılıç, 2023).

6 Şubat 2023'te yaşanan Pazarcık merkezli 11 ili etkileyen depremler hem çok fazla can kaybına hem de büyük maddi ve manevi kayıplara neden olmuştur. Artçı depremler nedeniyle binalar kullanılamaz hale gelmiş, temel ihtiyaçların karşılanmasında ve altyapı hizmetlerinde ciddi sorunlar yaşanmıştır. İnsanlar yakınlarının kaybı ve temel ihtiyaçlara erişim zorlukları nedeniyle travma, stres, anksiyete ve depresyon gibi psikolojik sorunlarla karşı karşıya kalmıştır. Eğitim ve sağlık hizmetlerindeki aksaklıklar ise toplumsal iyileşmeyi daha da zorlaştırmıştır (ECPC, 2023; Demirtaş, Doğru, Kılıç, 2023).

Afetler yaşamın bir parçası olsa da afetzedeler üzerinde derin duygusal izler bırakır. Bu etkilerin boyutu, afet türü, süresi, kayıpların büyüklüğü ve bireylerin stresle başa çıkma mekanizmalarına bağlı olarak değişiklik göstermektedir (Bağbancı, 2015).

2.Duygu

Duygular bireyin belirli bir olay ya da durum karşısında uyandırdığı izlenimlerle ortaya çıkar ve bireyin duygusal tepkilerini şekillendirir. Duygular sadece anlık tepkiler değil aynı zamanda bireyin genel psikolojik durumunu etkileyen dinamik bir süreçtir (Sille, 2016). Duygular deneyimleri anlamlandırmaya yardımcı olan hızlı bir tepki sistemi olarak bireyin çevresindeki olayları algılamasını, anlamlandırmasını ve uygun tepkiler geliştirmesini sağlar (Cole, vd., 2004, Akt. Burak, 2019).

Denham'a (1998) göre; duygular bireyin hem kendisini hem de çevresini nasıl algıladığını büyük ölçüde etkiler. Bu süreç bireyin düşüncelerini, davranışlarını ve kararlarını yönlendirir. Bir durum karşısında verilen duygusal tepki, o durumun nasıl algılandığı ve yanıtladığı üzerinde belirleyici bir rol oynar.

Duygular yaşamın her anında karşılaşılan durumlarda önemli bir role sahiptir ve toplumsal yaşamın temel taşlarını oluşturur (Özbayrak, 2006; Ersan, 2017). Duygular olumlu ve olumsuz olarak kategorize edilebilir. Olumlu duygular bireyi harekete geçiren bir rol üstlenirken (Holder, 2012; Kedek, 2020) olumsuz duygular tehlikeli durumlarda bireyin savunma mekanizmalarını harekete geçirerek uygun tepkiler vermesini sağlar (Kaya-Bican ve Sarıtaş-Atalar, 2017).

Duygular bireylerin davranışlarını ve düşüncelerini şekillendiren temel zihinsel ve fizyolojik süreçlerdir. Duyguları ifade etme bireyin yaşadığı duyguları yüz ifadesi, ses tonu ve mimikleri aracılığıyla dışa vurabilme yeteneğidir. Bu ifade biçimi kızgınlık, şaşkınlık, korku ve üzüntü gibi duyguları çevreyle etkili bir şekilde paylaşılmasını sağlar. Duygusal iletişim, bireylerin sosyal ilişkilerini güçlendirmekte ve empati kurulmasına katkıda bulunmaktadır (Ersan, 2017; Kutlu, 2021).

Duygular insan deneyiminin zenginliğini ve çeşitliliğini yansıtan karmaşık ve çok boyutlu süreçlerdir. Temel duygular evrensel ve biyolojik olarak belirlenmişken, karmaşık duygular öğrenilmiş ve sosyal etkileşimlerle şekillenmiştir. Pozitif ve negatif duygular arasındaki denge bireyin yaşam kalitesini ve psikolojik iyi oluşunu doğrudan etkilemektedir.

2.1.Duygu Düzenleme

Duygu düzenleme becerisi bireyin duygusal tepkilerini yönetme, düzenleme ve yönlendirme yeteneğidir. Bu beceri stres, hayal kırıklığı, öfke veya mutluluk gibi duyguların kontrol edilmesini sağlar ve bireyin sosyal ilişkilerini düzenlemede kritik bir rol oynar. Duygu düzenleme becerisine sahip bireyler, daha sağlıklı ilişkiler kurarak toplumsal uyum ve etkileşimi arttırabilir ve böylece genel yaşam kalitesini de yükseltebilirler (Halberstadt vd., 2015; Sille, 2016).

Thompson (1994) duygu düzenlemeyi üç ana bileşene ayırır; bireyin duygusal tepkilerini fark etmesi ve gözlemlemesi, bu tepkileri değerlendirmesi ve mevcut duruma göre uyarlaması. Duygu düzenleme bireyin çeşitli durumlar karşısında duygusal tepkilerini yönetme ve ayarlama becerisini ifade eder. Campos vd., (1994) bu beceriyi nörofiziksel ve bilişsel süreçlerdeki tahrik edici durumlara karşı duyguları değiştirme yeteneği olarak tanımlar. Hubbard ve Coice (1994) ise bunu bireyin duygusal tepkisini değiştirme becerisi olarak açıklar.

Duygu düzenleme becerisi duyguları bastırmak ya da yok etmek yerine duruma göre ayarlayabilme yeteneğini ifade eder. Bu beceri bireyin olumlu ve olumsuz duygular arasında denge kurmasını sağlar ve zamanla kendiliğinden gelişebilen bir süreç haline gelebilir. Ancak duygu düzenleme her zaman istenen sonuçları vermeyebilir. Bir duyguyu arttırmaya çalışırken diğerlerini göz ardı etmek beklenmedik sonuçlara yol açabilir.

Öğretmenlerin duygu düzenleme stratejileri hem kendi duygusal durumlarını hem de öğrencilerle etkili iletişim kurmaları açısından kritik bir öneme sahiptir. Bu beceriler öğretmenlerin sınıf ortamında karşılaştıkları zorluklara uygun duygusal tepkiler geliştirmelerini sağlar, böylece hem mesleki başarılarını arttırır hem de öğrencilerin duygusal ve akademik gelişimlerine katkıda bulunur. Sutton ve Wheatley (2003), öğretmen ve öğrencilerin

duygularının sınıf içindeki etkileşimleri, motivasyonu, problem çözme becerilerini ve öğrenme stratejilerini etkilediğini belirtmiştir.

Öğretmenlerin duyu düzenleme stratejileri geliştirmelerinde duygusal zekâ, sosyal destek, stres yönetimi ve mesleki eğitim gibi faktörler etkili olmaktadır. Kriz durumları öğretmenlerin bu stratejileri daha etkin şekilde kullanmalarını gerektirir.

6 Şubat 2023 depreminin ardından Türkiye’de eğitim öğretim faaliyetleri ciddi şekilde etkilenmiştir. MEB (2023) verilerine göre deprem bölgesindeki 11 ilde yardım, barınma ve hasar tespit çalışmaları nedeniyle eğitim öğretime şubat ayı sonuna kadar ara verilmiş, 1 Mart 2023’te yeniden başlamıştır. Bu süreç il, ilçe ve okul temelli değerlendirmelerle şekillendirilmiştir. Deprem bölgesi dışındaki illerde ise eğitim öğretim 20 Şubat tarihinde başlamıştır.

Deprem etkileri sık yaşanan artçı sarsıntılar nedeniyle uzun süre devam etmiş olup, bu durum eğitim faaliyetlerinin planlanmasını ve uygulanmasını zorlaştırmıştır. Artçı sarsıntılar fiziksel zararları arttırmanın yanı sıra okul yöneticileri ve öğretmenler üzerinde çeşitli travmalara yol açmıştır. Demirtaş, Doğru ve Kılıç (2023) bu durumun eğitim süreçlerini ve eğitim kalitesini olumsuz etkilediğini vurgulamaktadır. Ayrıca deprem ve artçı sarsıntılar eğitim çalışanlarının psikolojik ve duygusal durumlarını etkileyerek eğitim faaliyetlerini daha da zorlaştırmıştır.

ARAŞTIRMA VE BULGULAR

Araştırma 2024 yılı içerisinde, depremi yaşamış olan, Adana ve Hatay illerinde bulunan 35 okul öncesi öğretmeni ile gerçekleştirilmiştir.

Araştırmada katılımcıların duyu ve düşüncelerini detaylı bir şekilde anlamak amacıyla nitel araştırma yöntemi kullanılmıştır. Nitel araştırma, bir konu hakkında farklı görüşlerin bütüncül bir yaklaşımla ele alınmasıdır (Yıldırım ve Şimşek, 2008). Araştırmada nitel yöntemlerden biri olan odak grup görüşmesi kullanılmıştır. Bu yöntem bir moderatör eşliğinde açık uçlu soruların sorulduğu, küçük gruplar üzerinde yapılan bir görüşme tekniğidir (Şahin, Suher, Bir, 2009).

Araştırmada evren, deprem bölgesinde bulunan ve depremi yaşamış olan okul öncesi öğretmenlerinden oluşmaktadır. Çalışmanın örneklemini amaçlı örnekleme ve gönüllü kartopu örnekleme yöntemiyle seçilen 35 okul öncesi öğretmeni oluşturmaktadır. Amaçlı örnekleme, araştırılan konu hakkında derinlemesine bilgiye sahip olduğu düşünülen bireylerin seçilmesini hedefler (Sıgır, 2019; Akt. Yeşildağ, 2021). Kartopu örnekleme ise konu hakkında en fazla bilgiye sahip bireylerin önerileriyle zincirleme şekilde diğer bireylere ulaşarak örneklemin genişletildiği bir yöntemdir (Yazıcıoğlu ve Erdoğan, 2004, s. 45, Akt. Ersan, 2017).

Araştırmada verileri toplamak amacıyla Duygu Düzenleme Becerilerine Yönelik Anket Formu ve Kişisel Bilgi Formu kullanılmıştır.

Verilerin analizi için betimsel analiz ve kodlama yöntemleri kullanılmıştır. Betimsel analiz, toplanan verilerin derinlemesine incelenerek sunulmasını sağlar (Ültay, Akyurt& Ültay, 2021). Kodlama ise verilerin anlamlı bir bütün oluşturması veya temalarının belirlenmesi amacıyla uygulanır. Verilerin analizi için MAXQDA 2024 yazılımı kullanılmıştır. Bu program nitel ve karma araştırmalarda farklı veri setlerini sistematik olarak analiz etme ve görselleştirme imkânı sunar. Görüşmeler öğretmenlerin onayıyla kaydedilmiş, yazıya aktarılmış ve MAXQDA 24 ile analiz edilmiştir.

Araştırmanın nitel kısmında araştırma problemine açıklık getirmesi adına yapılan görüşmelerden elde edilen bulgular bu başlık altında sunulmuştur. Çalışmaya toplamda 35 öğretmen dahil olmuştur. Öğretmenler odak grup görüşmesinde bulunmuştur. Toplamda 6 grup oluşturulmuştur.

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler temasında rutin davranışları sürdürme çabası, olağan duruma alışma, eğitim vermeye devam etme, depremedelere yardım etme, dua ve teslimiyet, sosyal aktivitelere katılma, duygusal farkındalık ve anlayışlı olma kodları bulunmaktadır.

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde katılımcılar rutin davranışları sürdürme çabası ile ilgili yoğun olarak görüş bildirmişlerdir. Katılımcılar deprem sonrası rutin davranışlarını sürdürme çabası içinde olduklarını ifade etmiştir. Konuyla ilgili E5 ve F2 kodlu katılımcılar şunlardan bahsetmiştir:

“Kendimizi çok fazla veremiyorduk, eski öğrencilerimiz aklımıza geliyordu. Eski yıllarıma göre ilk 1-2 hafta zorlandım. Biraz daha zor bir yıl başlangıcı oldu benim için. Sonrasında resmi olmayan ama destekleyici yollar izledim, kendimi biraz daha rahatlatmak açısından. Kendime daha fazla fayda sağlayabileceğim video tarzı şeyler izledim. 3. Haftadan itibaren kendimi çocuklara tam olarak vermeye başladım.” (E5)

“Yani şey aslında şöyle biz daha çok şey yaptık rutinimizi yakalamaya çalıştık yani atıyorum hani oyunla yenmeye çalıştık derken sabahtan akşama kadar oyun oynamadık aslında ne yaptık atıyorum her gün saat 9 da çocuklarla kahvaltıya geçiyorsak 9 da yine kahvaltımıza geçtik dedik ki biz rutinimizi tekrar yakalayalım ne yaptık yemekhanemize tekrar gittik normal işte oyun saatimize tekrar geçtik.” (F2)

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde katılımcıların görüş bildirdikleri bir diğer konu olağan duruma alışmadır. Katılımcılar deprem sonrası olağan duruma alıştıklarını ifade etmiştir. Konuyla ilgili A3 ve D6 kodlu katılımcılar şunlardan bahsetmiştir:

“Sanki o anı hiç yaşamamışız gibi sanki o süreç hayalmiş gibi geliyor mesela bazen. Kendimi iyi hissetmeye çalıştığım zaman bunu düşünüyorum. Bu gerçek değildi bunları yaşamadık gibi. Böyle yok saymak gibi bir şey oluyor. Bunun haricinde yani çok yaralarımızı sardığımızı da düşünmüyorum. Daha dün bana liseye giden oğlum diyor ki anne diyor ne yapacağız diyor. Yani biz burada durmaya devam ettik. Çoğu insan gitti öğretmen arkadaşlarımız da gitti.” (A3)

“Geçen senenin 2. Döneminde başladığımızda evet olmuştu aslında. Daha tedirgindik, çocuklar da çok tedirgindi. Çocuklar sürekli o günle ilgili anısını anlatıyorlardı. Şu anda artık alışıldı buna çok şükür artık bir düzene bindi. Eskiye döndük artık.” (D6)

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde katılımcıların görüş bildirdikleri bir diğer konu eğitim vermeye devam etmedir. Katılımcılar deprem sonrası eğitim vermeye devam etmelerinin kendilerine iyi geldiğini ifade etmiştir. Konuyla ilgili A3 ve A4 kodlu katılımcılar şunlardan bahsetmiştir:

“Kendi açımdan da okul beni rahatlatan bir yer şu anda. Yani biraz kendimi unuttuğum çocuklarla hani bize bir şeyler yapan onlar ama biz bir şeyler yaptığımızda kendimizi iyi hissederez ya ben o çocuklara bir şey yaptığımı hissettiğim için çok mutlu oluyorum şu anda. O yüzden bana iyi geliyor okula gitmek. Sanki birilerine yararlı oluyorum. Elimi uzatabilmek çok güzel.” (A3)

“Çocuklar her şeyi okulda unutuyorlar zaten. Biz de okula gittiğimizde onların yanında her şeyi unutuyoruz. Arkadaşın dediği gibi bize terapi gibi geliyor orası. Onların yanında ister istemez ne üzülebiliyorsun üzüntünü gösteremiyorsun gülüyorsun sonra artık gerçekten gülüyorsun. Onların yanında onlar gibi oluyoruz. Mutlu oluyoruz. Onlar da birbirlerini gördüklerinde ortamı yaşadıklarında falan mutlu oluyorlar zaten. Okul bir nevi terapi oluyor onlar için bizim için de bence. Bizim okulumuz zaten arkadaşın dediği gibi iyi zarar görmedi şükür. O konuda şanslı mahallenin çocukları. Bu sevinebileceğimiz bir nokta oluyor artık.” (A4)

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde katılımcıların görüş bildirdikleri bir diğer konu depremedelere yardım etmedir. Katılımcılar deprem sonrası depremedelere yardım etmenin kendilerine iyi geldiğini ifade etmiştir. Konuyla ilgili F2 kodlu katılımcı şunlardan bahsetmiştir:

“Deprem geçti biz iki hafta içerisinde belki daha kısa süre içerisinde diyelim biz sürekli depremedelere okulumuzu sığınak olarak açtık ve gönüllü olarak ailelerimizle okulda kalan arkadaşlarımız oldu orda hani depremede arkadaşlara her türlü atıyorum barınma yeme içme

onların çocuklarıyla işte boyama oyunlar yani hiç bırakmadık bunu aslında onlarla kendimizi iyileştirmişiz diyebiliriz 4 haziran yine savaş mağduru çocuklar için gün vardı Maraş'taydık mesela ve şey süreç içerisinde bunun hayatın ne kadar önemli bir gerçeği olduğunu ve bunu hani biz korkarak saklanarak değil de bizzat onlara yardım ederek işin içinde olduğumuzda daha da güçlenerek çıktığımızda yani ben o şekilde hissediyorum.” (F2)

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde katılımcıların görüş bildirdikleri bir diğer konu sosyal aktivitelere katılmadır. Katılımcılar deprem sonrası sosyal aktivitelere katılmanın kendilerine iyi geldiğini ifade etmiştir. Konuyla ilgili D4 ve E3 kodlu katılımcılar şunlardan bahsetmiştir:

“Bu süreçten sonra ben özellikle yogaya gitmeye başladım. Pilatese gidiyorum. Folklor oynuyorum. Sosyal aktivitelerle kendimi teskin ediyorum.” (D4)

“Arkadaşlarımla bir arada olup sevdiğim aktiviteler yaparak bu travmayı atlatmaya çalıştım. Sportif faaliyetlere katıldım, arada at binmeye gidiyorum. Bana iyi gelen şeyleri yaparak atlatmaya çalıştım.” (E3)

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde katılımcıların görüş bildirdikleri bir diğer konu anlayışlı olmadır. Katılımcılar deprem sonrası anlayışlı olduklarını ifade etmiştir. Konuyla ilgili A2 kodlu katılımcı şunlardan bahsetmiştir:

“Ben aslında diğer arkadaşlara göre bir tık daha şey olduğunu düşünüyorum tabi ki o olumsuz ruh hali falan var ama önceden gerek veli gerek çocuklarda bazı şeylere kızırken birazcık daha bende tam tersi anlayış içimde beliriyor. Yani en küçük bir şeyde aklıma ya onlar deprem yaşadı ki benim daha düne kadar çadırda konteynırda kalan öğrencilerim vardı. Karşında onlar olursa tahammülsüzlük olamıyor maalesef. Bir tık daha anlayış daha alttan alma oldu yani bende bu sene.” (A2)

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde katılımcıların görüş bildirdikleri bir diğer konu duygusal farkındalıktır. Katılımcılar deprem sonrası duygusal farkındalık kazandıklarını ifade etmiştir. Konuyla ilgili A4 kodlu katılımcı şunlardan bahsetmiştir:

“Aslında biz farkında olmadan belki etkilemiştir bilmiyorum belki biraz hayata bakış açımız biraz farklı oldu belki biraz daha agresifleşmiş de olabiliriz. Ben biraz daha kendimi daha mutsuz hissediyorum. Sonra kendime geliyorum yaprak kendine gel falan diye. Öyle bir şey fark ettim yani biraz daha mutsuz olmuşum ama onu bastırmaya çalışıyorum. Farkındayım bunun. Olmaması gerektiğini anlıyorum.” (A4)

Kişisel Duygu Düzenleme Stratejilerine İlişkin Görüşler kategorisinde öğretmenlerin görüş bildirdikleri bir diğer kod dua ve teslimiyettir. Öğretmenler deprem sonrası bolca dua ettiklerini ifade etmiştir. Konuyla ilgili C2 ve D6 kodlu öğretmenler şunlardan bahsetmiştir:

“Dua ettim, Allah'a sığındık. Allah'a inandık. Ne yaparsak yapalım bir dakika bir saniye sonramızı biliyor muyuz? Nefes alabilecek miyiz? Onun haricinde çok fazla bir şey düşünmedim. Her şey Allah'tan geliyor. Teslimiyet yani. Başka hiçbir şey yok bende.” (C2)

“Güçlü yönlerimiz arkadaşın dediği gibi gerçekten çok acizmişiz yani gerçekten o kadar çaresiz hissettim ki kendimi o deprem sırasında. Güçlü yönlerimse iyi ki Allah inancım varmış, ona sığındık. Çok şükür Rabbim yaşamamızı nasip etti. Yani bunlar.” (D6)

TARTIŞMA VE SONUÇ

Deprem gibi büyük afetler sonrasında okul öncesi öğretmenlerinin duygu düzenleme stratejileri hem kendi duygusal sağlıkları hem de öğrencilerle etkili iletişim kurabilmeleri açısından kritik öneme sahiptir. Bu stratejiler öğretmenlerin stresle başa çıkma yöntemlerini, duygusal yüklerini yönetmelerini ve profesyonel gelişimlerini destekler. Deprem sonrası okul öncesi öğretmenlerinin duygusal durumları mesleki yaşamlarını ve öğrencilerle ilişkilerini önemli ölçüde etkilemiştir. Öğretmenler bu süreçte duygusal dengesizliklerle başa çıkabilmek için çeşitli duygu düzenleme stratejileri geliştirmiş ancak bazı durumlarda bu stratejiler yetersiz kalarak mesleki tükenmişlik, motivasyon kaybı ve duygusal çöküntüye neden olmuştur.

Araştırma, öğretmenlerin duygusal ve psikolojik iyileşme süreçlerinde şu stratejileri benimsediğini ortaya koymaktadır:

- Günlük rutinleri sürdürme: Düzeni koruma ve normalleşme sürecine destek olmuştur.
- Olağan duruma alışma: Duygusal dengeyi sağlamak için kullanılmıştır.
- Eğitime devam etme: Hem öğretmenlerin hem de öğrencilerin normalleşmesine katkıda bulunmuştur.
- Yardım faaliyetlerine katılım: Hem kişisel iyilik hali hem de toplumsal sorumluluk açısından etkili olmuştur.
- Sosyal etkinliklere katılma: Sosyal bağları güçlendirerek duygusal destek sağlamıştır.
- Empati ve anlayış sergileme: Duygusal destek mekanizmalarını güçlendirmiştir.
- Dua ve teslimiyet: Ruhsal iyileşme sürecinde dini ritüeller içsel huzuru sağlayıp kaygı düzeylerinin azalmasına yardımcı olmuştur.

Bu stratejiler öğretmenlerin deprem sonrası zorluklarla başa çıkma kapasitelerini arttırmış ve duygusal iyilik hallerine olumlu etkiler sağlamıştır. Bu çalışma, kişisel duygu düzenleme stratejilerinin travmatik olaylara karşı etkili bir başa çıkma yöntemi olduğunu göstermektedir. Kriz ve travma dönemlerinde öğretmenlerin olağan duruma alışma ve rutin davranışları sürdürme çabası duygu düzenleme becerileri için önemlidir. Olağan duruma alışma deprem gibi travmatik olaylardan sonra öğretmenlerin kendilerini güvende hissetmeleri ve duygu dengelerini yeniden sağlamalarını ifade eder. Rutin davranışların sürdürülmesi öğretmen ve öğrencilerin normalleşme sürecini hızlandırır, psikolojik istikrar sağlar ve belirsizlik ortamında güven hissini pekiştirir.

Bölgede görev yapan öğretmenlerin yaşadığı psikolojik ve sosyal sorunlar, depremin profesyonel yaşantılar üzerindeki derin etkilerini gözler önüne sermektedir (Polat, Sarıçam, 2024; Cengiz, Peker, 2023; Çıtak, 2023). Araştırmalar duygu düzenleme becerisi iyi olan bireylerin problem davranış sergileme olasılığının daha düşük olduğunu göstermektedir (Ünsal, 2010; Kurt, 2015; Şahin, 2019). Bu bulgular duygu düzenleme stratejilerinin bireylerin davranışları üzerindeki belirleyici etkisini ortaya koymaktadır.

Araştırmada etkili duygu düzenleme stratejilerine sahip bireylerin daha az olumsuz tepki verdiği ve olumlu, uyumlu davranışlar sergilediği görülmüştür. Bu durum duygu düzenleme stratejilerinin kişisel gelişim ve toplumsal yaşam üzerindeki önemini göstermektedir.

Bulgulara dayalı olarak öğretmenlerin duygu düzenleme becerilerini geliştirmek için psikososyal destek ve olağan durumlara adaptasyon eğitimleri düzenli aralıklarla yapılmalıdır. Ayrıca yeni afetlere hazırlık için bu tür faaliyetlerin yaygınlaştırılması gereklidir. Depremin duygusal etkileri uzun süreli ve çok boyutludur. Bu etkiler fiziksel yıkımlardan daha derin ve kalıcı olabilir. Bu nedenle öğretmenlerin profesyonel psikolojik desteğe erişiminin kolaylaştırılması sağlanmalıdır.

Bu öneriler öğretmenlerin afet sonrası travma ve duygusal zorluklarla daha etkili bir şekilde başa çıkmasına ve normalleşme sürecinin desteklenmesine katkı sağlayacaktır.

ÖZET

Wilhelm Wundt ile temelleri atılan Jean Piaget ile olgunlaştırılan gelişim psikolojisi alanındaki çalışmalar Türk akademisyenler tarafından yoğun ilgi görmüştür. Gelişim psikolojisi, yüksek lisans ve doktora çalışmalarında da sıkça kullanılan psikolojinin alt alanlarından biridir. Bu araştırmada Türkiye’de gelişim psikolojisi alanında yapılmış olan lisansüstü tezler yapısal ve içeriksel olarak analiz edilmiştir. Araştırmanın genel amacı , bu alanda yapılan akademik çalışmaların genel eğilimlerini ve odak noktalarını ortaya koymaktır. Alana ilgi duyanlara, gelişim psikolojisi hakkında tez üretmeyi düşünen araştırmacılara genel bir bakış sunmayı hedeflemektedir. 1987-2024 yılları arasındaki lisansüstü tezlerde Yükseköğretim Kurulu (YÖK) Ulusal Tez Merkezi veri tabanında gelişmiş tarama yapılmıştır. Tarama sonucunda, SPSS 20 programı kullanılarak Türkiye’de gelişim psikolojisi alanında yapılan 201 adet lisansüstü tezin yazar cinsiyeti, tez tarihi, tez türü, tam metine ulaşım, tez yazım dili, çalışma grubu, araştırma türü, veri toplama tekniği ile tezlerin konu başlıkları ve içerikleri açısından istatistiksel olarak analizi yapılmıştır. Araştırma, kullanılan frekans, ki-kare, çapraz tablolar, Phi, Cramer’s V ve beklenmedik durum katsayısı analizleriyle belirtmiş olduğumuz kriterlerin birbirleriyle ilişkilerine de odaklanır. Bulgular sonucunda, aynı yaş grubu üzerine benzer konuların çalışılmış olduğu ve tez başlıklarının da birbirine benzemeye başladığı gözlemlenmiştir. Ayrıca, yaşlılık dönemi gelişimi üzerine çalışmaların oldukça az olduğu kanısına varılmış olup bu konu üzerinde çalışmaların artması gerektiği önerisinde bulunmaktadır. Ayrıca makale içerisinde belirtilen akademiye hiyerarşik cinsiyet eşitsizliğinin olup olmadığı gibi önemli noktaların altı çizilmiştir ve bu sorunlara bazı öneriler sunulmuştur. Literatüre kazandırmış olduğumuz bu çalışma ile; alana bilgi birikimi oluşturmak, konu tekrarına düşülmesini önlemek, önceki çalışmalar hakkında genel bir izlenim sunmak ve çalışmalar hakkında karşılaştırma yapma imkanı sağlamak amaçlanmıştır. **Anahtar Kelimeler:** Gelişim Psikolojisi, Lisansüstü Tezlerin Analizi, İstatistik, SPSS

ABSTRACT

Studies in the field of developmental psychology, whose foundations were laid by Wilhelm Wundt and matured by Jean Piaget, have attracted great attention from Turkish academics. Developmental psychology is one of the subfields of psychology that is frequently used in MSc and PhD studies. In this research, graduate theses written in the field of developmental psychology in Türkiye were analyzed structurally and contextually. The general purpose of the research is to reveal the general trends and focal points of academic studies in this field. It aims to provide an overview to those who are interested in the field and to researchers who are considering producing a thesis on developmental psychology. An advanced search was made in the database of the Council of Higher Education (YÖK) National Thesis Center for

graduate theses between 1987 and 2024. As a result of the scanning, the gender of the author, thesis date, thesis type, access to the full text, thesis writing language, working group, research type, data collection technique and subject headings and contents of 201 graduate theses made in the field of developmental psychology in Türkiye using the SPSS 20 program. Statistical analysis was carried out in terms of the research also focuses on the interrelationships of the criteria we have specified with the frequency used, chi-square, cross-tabulations, Phi, Cramer's V and contingency coefficient analyses. As a result of the findings, it was observed that similar topics were studied on the same age group and the thesis titles started to resemble each other. In addition, it has been concluded that there are very few studies on the development of old age and it is suggested that studies on this subject should be increased. In addition, important points such as whether there is hierarchical gender inequality in the academy are underlined in the article and some suggestions are offered for these problems. With this study that we have contributed to the literature; It is aimed to create knowledge in the field, to prevent repetition of the subject, to present a general impression about previous studies and to provide the opportunity to make comparisons about studies.

GİRİŞ

Çok sayıda bilim adamının yaşam sürecini gelişim yönünden incelemesi, gelişimin çeşitli düzeyleri arasındaki bütünleştirici ilişkileri gerektirdiğini vurgulayan bir çerçeveye dayanmaktadır (Lerner, 1998). Wilhelm Wundt'un temellerini attığı, Piaget'in olgunlaştırıp psikoloji alanına kazandırdığı gelişim psikolojisi; insanın döllemeden ölüme kadar olan gelişimini inceleyen bir bilim alanıdır. Bu alan temelde, gelişim yönünden birey içi ve bireyler arası değişimlere odaklanır (Iheanacho vd., 2023a). Bu değişiklikler sıklıkla yaşam boyu gözlemlendiği için, yaşam boyu gelişme olarak tanımlanır (Iheanacho vd.,2023b). Büyüme ve gelişme kavramları sıklıkla birbirlerinin yerine kullanılan sözcükler olarak görülür. Ancak psikolojide bu kavramlar birbirinden ayrılır. Büyüme kavramı; daha çok fiziksel büyüme açıklanırken kullanılır. Bebek, doğumdan ilk yaşına kadar, 3 katı ağırlığa ve neredeyse 2 katı uzunluğa ulaşır (Feldman,2017). Buna büyüme sıçraması denir. Bebeklik ve çocukluk çağında yapısal olarak hızlı değişimler başlar ve bu gelişim aslında ölene kadar devam eder. Aralarındaki fark, insanın yaşlandıkça bu büyüme hızının azalmasıdır. Gelişme kavramı ise zaman içinde yapıların korunması, değişim mekanizmaları, psikolojik büyüme işlevleri ve bireysel çeşitliliği içerir (Kagan, 1980). Aynı zamanda yaşa bağlı davranış, kişilik, duygusal ve birçok içsel etmeninde değişimini ifade eder (Baillargeon, 1987). Bu tanımlara bakıldığında; gelişim süreci, artan büyüme gibi basit bir hareket değildir (Baltes,1987). Gelişim incelenirken yalnız fiziksel gelişim değil; bilişsel, duygusal, cinsel, inançsal, sosyal, davranışsal ve daha birçok alt alanda araştırmalar yapılmaktadır. "İnsan sadece biyolojik olarak varlığını sürdürmekle değil, aynı zamanda kendisini insan yapan değerlerin geliştirilmesiyle de uğraşan bir varlıktır." (Karüzümcüoğlu, 2019). Bu sebeple gelişim psikolojisi, psikoloji ve tıbbın pek çok alt alanıyla da birlikte ele alınmaktadır. Bu makalede de, Türkiye'de gelişim psikolojisi alanında yapılmış olan lisansüstü tezlerinin içerik olarak sınıflandırılması sağlanmıştır. Ayrıca bu çalışma, yapılan tezleri farklı değişkenler açısından da incelemeyi amaçlamaktadır. Yayımlanan tezlerin kapsamlı bir analizinin yapılması, alana daha iyi bir bakış sunulmasına ve bu alandaki Türk akademik çalışmalarının gidişatının, yönelimlerinin ve odak noktalarının daha iyi kavranmasını sağlayacaktır. Ayrıca makale içerisinde belirtilen akademi hiyerarşik cinsiyet eşitsizliğinin olup olmadığı gibi önemli noktaların altı çizilirken, gelecek çalışmalar için de önemli bir bilgi birikimi sağlayacaktır. Bu kapsamda istatistiksel analiz yapılırken 9 soru başlığı altında incelenmiştir. Bunlar;

1. Yazarların cinsiyet dağılımı nasıldır?
2. Tezlerin lisansüstü çeşitliliği (Yüksek lisans, doktora, tıpta uzmanlık) nasıl dağılım göstermiştir?
3. Tezlerin yıllara göre dağılımı nasıldır?
4. Tezlerin tam metine ulaşım durumu nedir? Ve yıllara göre bu dağılım etkilenmiş midir?
5. Lisansüstü tezlerin araştırma türleri nelerdir? Ve nasıl dağılmıştır?
6. Lisansüstü tezlerin veri toplama teknikleri nelerdir? Ve nasıl dağılmıştır?
7. Tezlerin yazım dili çeşitliliği nasıl dağılmıştır?
8. Tezlerin çalışma alt grupları nelerdir? Hangi alt grupta daha çok çalışma yapılmıştır?
9. Tezlerin konuları hangi alt alanlara ayrılmaktadır? Konu dağılımı ve içerikleri nasıldır?
Hangi yaş grubunda hangi konular daha çok çalışılmıştır?

Bu konu başlıkları içerisinde de farklı alt grupların birbirleriyle anlamsal ilişkisine bakılmıştır. Böylece, veri istatistiği farklı yönlerle incelenerek daha güvenilir ve nitelikli sonuçlara ulaşmamızı sağlamıştır.

ARAŞTIRMANIN AMACI VE ÖNEMİ

Araştırmanın konusu "Türkiye’de Gelişim Psikolojisi Alanında Lisansüstü Tezlerinin İstatistiksel Olarak İncelenmesidir”. Araştırmanın genel amacı ise, bu alanda yapılan akademik çalışmaların genel eğilimlerini ve odak noktalarını ortaya koymaktır. Alana ilgi duyanlara, gelişim psikolojisi hakkında tez üretmeyi düşünen araştırmacılara genel bir bakış sunmayı hedeflemektedir. Bu araştırma, lisansüstü tezlerin yazar cinsiyeti, tez tarihi, tez türü, tam metine ulaşım, tez yazım dili, çalışma grubu, araştırma türü, veri toplama tekniği ile konu başlıkları ve içerikleri alt alanları gibi unsurları istatistiksel olarak analiz ederek, gelişim psikolojisinin Türkiye'deki akademik seyrini anlamayı hedefler. Bu literatür çalışmasında yer verilen alt başlıklar ile gelişim psikolojisi tezleri hakkında detaylı demografik ve analitik incelemeler sunmuştur. Böylece; bilgi birikimi oluşturmak, konu tekrarına düşmemek, önceki çalışmalar hakkında genel bir izlenim edinmek ve çalışmalar hakkında karşılaştırma yapma imkanı ile gelecek çalışmalara ışık tutmaktadır. Ayrıca, makale içinde vurgulanan akademik alandaki eksiklikler ve eşitsizlikler hakkında olası çözüm önerileri geliştirerek bu sorunlara dikkat çekmeyi amaçlamaktadır.

YÖNTEM

Bu çalışma gelişim psikolojisi alanıyla ilgili hazırlanmış Yükseköğretim Kurulu (YÖK) Ulusal Tez Merkezi veri tabanında yer alan tezlerin belge analizi yapılarak incelenmesine dayanan bir literatür araştırması ve analizidir. Nitel araştırma yöntemlerinden biri olan doküman analizi, görsel ya da yazılı bir dokümanın bir dizi bilimsel yaklaşımla analiz edilmesi ve veri toplanmasını sağlar (Özveren,2021). Ele aldığımız 201 gelişimsel psikoloji lisansüstü tezinde cinsiyet, tez tarihi, tez türü, tam metine ulaşım, tez yazım dili, çalışma grubu, araştırma türü, veri toplama tekniği ve konu alt alanlarında analiz yapılmıştır. Analiz için SPSS 20 programı kullanılmış olup frekans ve ki-kare istatistik testleri kullanılarak verilerin anlamlılık değerlerine bakılmıştır. Ayrıca, farklı gruplar arasındaki anlamsal ilişki gücünü tespit etmek için çapraz tablolar, Phi, Cramer’s V ve beklenmedik durum katsayısı testleri gibi alt analiz türleri de kullanılmıştır. Bu sayede verilerimizin istatistiksel olarak daha güvenilir ve anlamlı sonuçlar vermesi sağlanmıştır. Bu çalışmanın amacı, Türkiye’de gelişim psikolojisi alanında lisansüstü çalışma eğilimlerini belirlemektir. Elde edilen veriler ve analizler, önümüzdeki yıllarda yapılacak tez çalışmalarına yol gösterecektir.

Verilerin Toplanması ve Analizi

Çalışma amacı doğrultusunda YÖK Ulusal Tez Merkezi’nde yer alan gelişim psikolojisi tezleri gelişmiş tarama motoru kullanılarak araştırmaya dahil edilmiştir. Tarama sonucunda alanla

ilgili 1987-2024 yılları arasında 171'i yüksek lisans, 29'u doktora ve 1 tanesi tıpta uzmanlık tezi olmak üzere toplam 201 adet lisansüstü teze ulaşılmıştır. Sisteme dahil edilmesine rağmen konu ile alakası olmayan 2 adet yüksek lisans tezi çalışma kapsamına alınmamıştır. Tarama sonucunda bulunan lisansüstü tezler içerik analizine tabi tutulmuştur. İçerik analizi toplam 9 kriterle sınırlandırılmıştır. Bunlar; yazarın cinsiyeti, tez tarihi, tez türü, tam metine ulaşım, tez yazım dili, çalışma grubu, araştırma türü, veri toplama tekniği ve konudur. Belirtilen kategorilerin verileri tasnif edilerek spss programında frekans, ki-kare, çapraz tablolar, Phi, Cramer's V ve beklenmedik durum katsayısı testlerine tabi tutularak analiz edilmiştir. Analiz sonuçlarına göre Bar ve histogram tabloları sayesinde veriler görsel olarak da tanımlanmıştır. Bulgular bölümünde ilgili grafik ve tablolar gösterilecek ve yorumlanacaktır.

BULGULAR

Tablo 1

Lisansüstü Tez Yazarlarının Cinsiyet Dağılımı

	Grup	Frekans	Yüzde	Geçerli Yüzde	Kümülatif Yüzde
Grup	Kadın	147	73,1	73,1	73,1
	Erkek	54	26,9	26,9	100,0
	Total	201	100,0	100,0	

Şekil 1

Lisansüstü Tez Yazarlarının Cinsiyet Dağılımı

Türkiye’de gelişim psikolojisi alanında hazırlanan lisansüstü tez yazarlarının dağılımını gösteren Tablo 1 ve Grafik 1’e göre alanda hazırlanan lisansüstü çalışmaların 147’si kadın yazarlar tarafından 54’ü erkek yazarlar tarafından kaleme alınmıştır. Gelişim psikolojisi alanında yapılan tez çalışmalarında kadın üstünlüğü gözle görülür şekilde fazla olsa da genel akademik tabloya bakıldığında nicel ve nitel durum kadınlar lehine değildir. Ünlü vd., (2021a) tarafından 2015-2021 yılları arasında lisansüstü kayıta cinsiyet dağılımı istatistiğine göre erkek lehine fark bir miktar azalmış olsa da halen sayısal olarak erkek egemenliğinden bahsetmek mümkündür. Çalışmayla ilgili tablo aşağıda verilmiştir.

Tablo 2

Lisansüstü Kayıtta Cinsiyet Dağılımı (Ünlü vd., 2021a)

Yıllar	Yüksek Lisans			Doktora		
	Kadın	Erkek	Toplam	Kadın	Erkek	Toplam
2015-2016	42.531	71.228	113.759	6003	8189	14.192
2016-2017	40.354	75.069	115.423	5267	7191	12.458
2017-2018	41.864	89.364	131.228	7673	9100	16.773
2018-2019	53085	66871	119.956	9296	10.966	20.262
2019-2020	58.741	69.386	128.127	10.394	10.500	20.894
2020-2021	69.781	81.918	151.699	9324	9552	18876

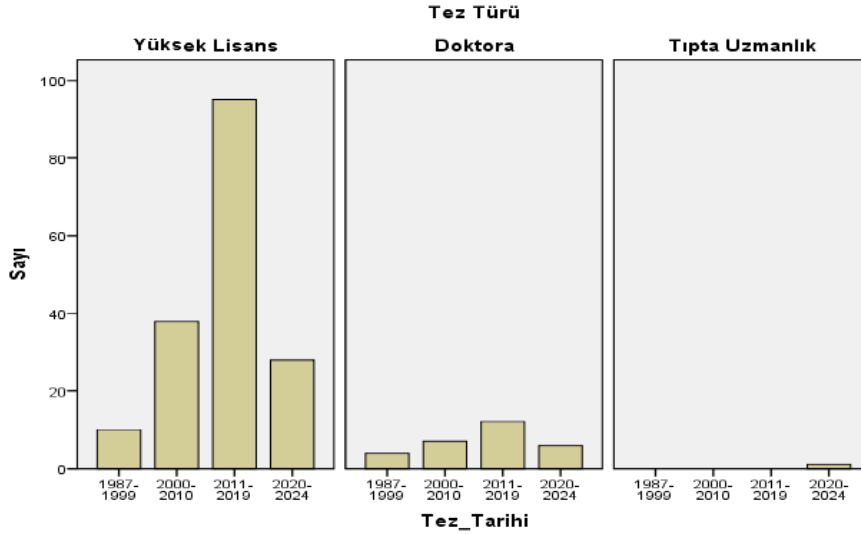

Tablo 3

Lisansüstü Tezlerin Yıllara ve Türlerine Göre Dağılımı

Tez Tarihi	Sayı	Tez Türü			Total
		Yüksek Lisans	Doktora	Tıpta Uzmanlık	
1987-1999	14	10	4	0	14
2000-2010	45	38	7	0	45
2011-2019	107	95	12	0	107
2020-2024	35	28	6	1	35
Total	201	171	29	1	201

Şekil 2

Lisansüstü Tezlerin Yıllara ve Türlerine Göre Dağılımı

Türkiye’de gelişim psikolojisi alanında hazırlanan lisansüstü tezlerinin tür ve yıl dağılımlarını gösteren çapraz tablo ve grafiğe göre, 171 yüksek lisans, 29 doktora ve 1 adet tıpta uzmanlık tezi bulunmaktadır. Yıllara göre 1987-1999 yılları arasında 14, 2000-2010 yılları arasında 45, 2011-2019 yılları arasında 107, 2020-2024 yılları arasında ise toplam 35 tane doktora ve yüksek lisans tezi yapılmıştır. Yüksek lisans tezlerinin oranı %85 ile en başta yer alırken, yıllara göre dağılıma bakıldığında 2011-2019 yılları arasında %53 oranla en fazla tez yazılan yıl kategorisi olarak kayda alınmıştır. Bulunan analiz sonucuna göre her yıl artmakta olan lisansüstü tez sayısı gözle görülür bir farkla 2020-2024 yılları arasında düşüş göstermiştir.

Tablo 4

Tez Tarihi ve Tez Türü Arasında Simetrik Ölçüler Tablosu

		Değer	Approx. Sig.
Nominal ile Nominal	Phi	,203	,220
	Cramer's V	,143	,220
	Beklenmedik Durum Katsayısı	,199	,220
N geçerli durum		201	

Tablo 5

Tez Tarihi ve Tez Türü Arasında Ki-Kare Tablosu

	Değer	df	Asymp. Sig. (2-tarafli)
Pearson Chi-Square	8,256 ^a	6	,220
Likelihood Ratio	6,644	6	,355
Linear-by-Linear Association	,071	1	,789
N geçerli durum	201		

Yukarıda verilen Simetrik ölçüler ve Ki-Kare anlamlılık testlerine göre tez türü ve tez tarihi arasında anlamsal bir ilişki yoktur. İki değişken arasında doğrusal bir ilişki yoktur. Tez türü artış ve azalış oranının yıllara göre anlamlı bir değeri yoktur.

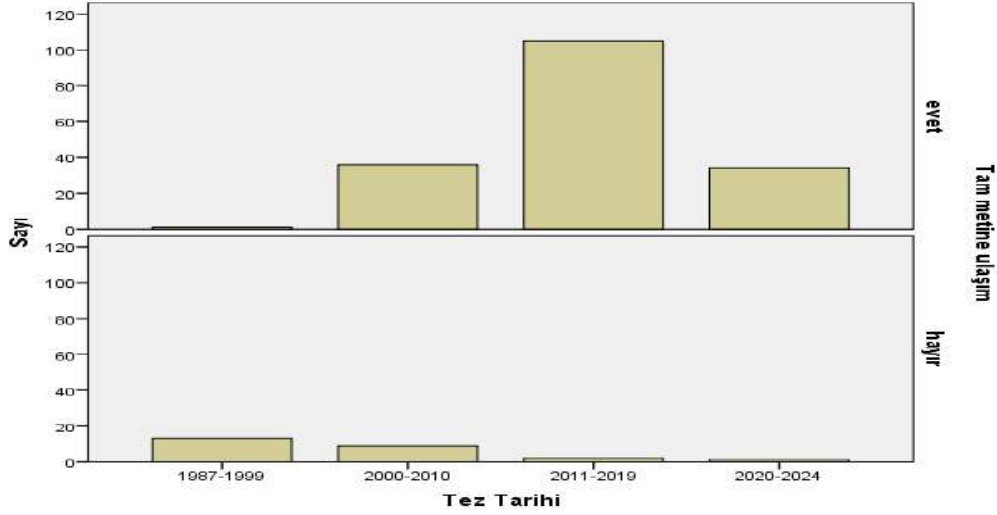

Tablo 6

Lisansüstü Tezlerinin Tam Metnine Ulaşımı ve Tarihlerlere Göre Dağılımı

Sayı		Tammetine ulaşım		Total
		evet	hayır	
Tez_Tarihi	1987-1999	1	13	14
	2000-2010	36	9	45
	2011-2019	105	2	107
	2020-2024	34	1	35
Total		176	25	201

Şekil 3

Lisansüstü Tezlerinin Tam Metnine Ulaşımı ve Tarihlerlere Göre Dağılımı

Tez veri tabanında kayıt altına alınan ve SPSS programıyla incelenen 201 lisansüstü tez çalışmasının toplam 25'inin metnine sistem üzerinden erişim sağlanamazken, 176'sına erişim sağlanabilmektedir. Tablo ve grafik verilerinden yıllara göre oranlarına bakıldığında 1987-1999 yılları arasında tam metnine ulaşım neredeyse hiç yokken, ilerleyen zamanlarda erişim sıkıntısı ortadan kalkmaya başlamıştır.

Tablo 9

Lisansüstü Tezlerin Araştırma Türü ve Tekniği Açısından Dağılımı

		Veri_Toplama_Tekniği							Total	
		literatür	anket	görüşme	gözlem	deney	anket+ölçek	anket+gözlem		
Araştırma_Türü	Nicel	0	17	0	19	12	18	81	0	147
	Nitel	27	0	14	0	0	0	0	0	41
	Karma	0	3	1	1	1	1	3	3	13
Total		27	20	15	20	13	19	84	3	201

Herhangi bir araştırma yönteminin iki ana bileşeni veri toplama ve analiz yöntemleridir. Bununla birlikte, araştırma yöntemlerinin veri toplama tekniğine göre kategorize edilmesi ve adlandırılması gerekir (Chu & Ke, 2017). Araştırma yöntemini nicel veya nitel olarak etiketlemek yerine verilerin toplama yöntemiyle birlikte kategorize edilmesi daha mantıklı olabilir (Sak vd.,2021). Bu görüşten yola çıkarak araştırma kapsamında gelişimsel psikoloji alanında yapılan tezlerin araştırma türleri ve veri toplama teknikleri alt alanlara ayrılarak tasnif edilmiştir. Bu tasnif işleminden sonra iki kıstasın anlamsal ilişki değerlerine bakılmıştır. Analiz sonuçlarına göre; en çok ölçek çalışması yapılırken, araştırmalarda nicel yöntem %73 oranıyla ilk sırada kullanılmıştır.

Tablo 10

Araştırma Türü ve Tekniği Arasında Simetrik Ölçüler Tablosu

		Değer	Approx. Sig.
Nominal ile Nominal	Phi	1,102	,000
	Cramer's V	,779	,000
	Beklenmedik Durum Katsayısı	,740	,000
N Geçerli Durum		201	

Tablo 11

Araştırma Türü ve Tekniği Arasında Ki-Kare Tablosu

	Değer	df	Asymp. Sig. (2- tarafli)
Pearson Chi-Square	243,931 ^a	14	,000
Likelihood Ratio	220,572	14	,000
Linear-by-Linear Association	38,456	1	,000
N Geçerli Durum	201		

Simetrik ölçüler testine göre Cramer's V ve Beklenmedik Durum Katsayısı testleri değerleri 0 ve 1 arası olduğu için değer iki değişken arasında güçlü bir ilişkiyi ifade eder. Değer 1'e yaklaştıkça anlamsal ilişki artmaktadır. Ancak Phi katsayısının 1den büyük olması yani 0-1 arasında olmaması hücre frekanslarına bir dengesizlik olabileceği ihtimalini doğurur. Bu yüzden anlamsal ilişki yorumlamasına dikkat edilmelidir. Buna rağmen simetrik ölçüler testinde 3 önemlilik değeri 0.000 olması yani $p < 0.05$ değerinde olması araştırma türü ve tekniği arasında pozitif yönde güçlü bir ilişki olduğunu kanıtlar. Ki-Kare tablosuna göre; iki değişken arasında doğrusal bir ilişkinin anlamlı olduğunu, gözlemlenen ve beklenen frekanslar arasında güçlü bir anlamsal ilişki olduğunu göstermektedir.

Tablo 12

Lisansüstü Tezlerinin Yazım Dili Tablosu

	Frekans	Yüzde	Geçerli Yüzde	Kümülatif Yüzde
Türkçe	158	78,6	78,6	78,6
İngilizce	41	20,4	20,4	99,0
Almanca	1	,5	,5	99,5
Fransızca	1	,5	,5	100,0
Total	201	100,0	100,0	

Şekil 4

Lisansüstü Tezlerin Yazım Dili Grafiği

Ulusal Tez Merkezi sisteminden alınan gelişim psikolojisi tez veri tabanına göre 201 lisansüstü tezin yazım dili tercihleri analiz edilmiştir. Yapılan frekans analizi sonucunda yaklaşık %79 oranla en çok Türkçe dili tercih edilmiştir. İngilizce dilinde ise toplam 41 gelişim psikolojisi tezi yazılmıştır.

Şekil 5

Tezlerin Yıl ve Dillere Göre Dağılımı

Tezlerin dil tercihlerinin yıllara göre dağılıma bakıldığında; her zaman türkçenin daha yaygın kullanılan bir yazım dili olduğu anlaşılmaktadır. Ancak bunun sebebi elbette ki, tezlerin Türkiye’de yapılmış ve yayımlanmış olmasından kaynaklanmaktadır. İngilizce dil tercihine bakıldığında ise her yıl aralığında kullanımının biraz daha azaldığı kanısına varabiliriz. Yök’ün 17.11.2023 tarih ve 651317 sayılı yazısı gereğince “Lisansüstü tez yazım dilinin program dilinde yazılmasına ve önceki kararların iptali” konusunda kararı gelecekte yazılacak olan, yüksek oranda ingilizce ve diğer dillerde tez yazımını nicel anlamda

azaltabileceği gözlemi yapılabilir. Ancak sunulan tezin daha doğru bir sonuç vermesi için karar sonrası yayımlanan tüm lisansüstü tezlerin istatistiksel olarak incelenmesi gerekmektedir.

Tablo 13

Lisansüstü Tezlerde Çalışma Grubu Analizi

	Frekans	Yüzde	Geçerli Yüzde	Kümülatif Yüzde
0-6	65	32,3	32,3	32,3
6-12	32	15,9	15,9	48,3
12-15	21	10,4	10,4	58,7
15-18	28	13,9	13,9	72,6
18-30	25	12,4	12,4	85,1
30-45	6	3,0	3,0	88,1
45-80+	4	2,0	2,0	90,0
Bebeklikten gençliğe gelişim dönemleri	5	2,5	2,5	92,5
Karma yaş grubu	15	7,5	7,5	100,0
Total	201	100,0	100,0	

Şekil 6

Lisansüstü Tezlerde Çalışma Grubu Dağılım Grafiği

Araştırma kapsamında incelenen 201 tez toplam 9 yaş grubuna indirildi. Yaş grupları; 0-6, 6-12, 12-15, 15-18, 18-30, 30-45, 45-80+, bebeklikten gençliğe ve karma yaş grubu olarak farklı gelişimsel dönemlere bölündü. Ve analiz sonucunda hangi yaş grubuna yönelik daha çok çalışma yapıp yapılmadığını araştırmak amaçlandı. Araştırma sonuçları bar grafiği ile görsel olarak desteklendi. SPSS programında yapılan frekans verilerine göre; gelişim psikolojisi alanında en çok tercih edilen lisansüstü tez araştırma konusu takriben %32lik oranla 0-6 yaş grubu olmuştur. Yetişkinlik ile yaşlılık dönemi arasında adlandırabileceğimiz, çoğunlukla 65 yaş üstü grubu içeren, 45-80+ yaş grubuna ise ilgi en az seviyede olmuştur.

Şekil 7**Lisansüstü Tezlerin Konu Dağılımı**

Gelişim psikolojisi alanında yapılan lisansüstü tez çalışmaları YÖK Ulusal Tez Merkezi veri tabanı üzerinden konu başlıkları ve içerik analizine tâbi tutulmuştur. İnceleme sonucunda 29 ana alt başlık belirlenirken, 20 adet çalışmayla dil gelişimi alanı en çok tercih edilen konu olurken, ergen asiliği ve psikolojik direnç konusunda yalnızca 2 çalışma yapılmıştır. Dil gelişiminde sonra ise en çok ebeveynlerin çocuk yetiştirme tutumu alanında gelişim psikolojisi çalışması yapılmıştır.

201 adet lisansüstü tez 29 konu başlığı altında derlendi ve konu kategorileri aşağıda tablo halinde aktarılmıştır. Konu başlıklarına göre bazı tez-içerik örneklerine yer verilmiştir.

Tablo 14**Lisansüstü Tezlerin Konu ve İçerik Analizi**

Konu Başlıkları	İçerik
Edebiyat	Çocuk edebiyatının çocuğun dil, kişilik ve bilişsel gelişim üzerine etkileri, roman karakter analizi, modern gençlik ve ergenlik üzerine edebi eser incelemeleri, edebi eserlerde gelişim alanlarının incelenmesi
Mekan	Hikayelerde görsel öğeler, mimari tasarım sürecinde bedensel deneyim ve uzamsal düşünme, çocuğun kaldığı ortamın gelişime etkisi, mekânsal davranışın gelişim psikolojisi üzerinden okunması, mimari tasarım sürecinde bedensel deneyim ve uzamsal düşünme, yuva çocuklarının gelişimi
Din	Gelişim psikolojisinde kriz dönemleri ve din ile ilişkisi, yanlış inanç kavrayışı, çocukların ahlaki ve geleneksel norm ihlallerine ilişkin beklentilerinde inancın rolü, emeklilerde başa çıkma ve dindarlık ilişkisi, ölüm düşüncesi
Ebeveyn ve Çocuk İletişimi	Anne ve çocuk iletişimi, baba ve çocuk iletişimi, ebeveyn davranışları, mahremiyet ihlali ve ergenin psikolojik uyumu, ebeveynlik özyeterlik algıları ve sözel iletişim
Bilişsel Gelişim	Bilgi işleme kapasitesinin obsesif-kompulsif belirtiler ve disosiyasyonla ilişkisi, formel işlem düşüncesinin gelişim düzeyi, ketleyici kontrol becerisi, fin görevi, otobiyografik bellek, annelerin kullandıkları zihinsel durum ifadeleri, estetik algı
Dil Gelişimi	Anadil öğretiminde karşılaşılan problemler ve çözüm önerileri, eylem kipleri kullanım gelişimi ve kullanılan eylemlerin yapısı, olaylardan elde edilen çıkarımsal kanıtların dilde kodlanması, arka planda açık olan

	medyanın dil gelişimine etkisi, davranış yönetimi ve manevi yaklaşım, iki dilliliğin zihin kuramı gelişimi üzerine etkisi
Kimlik Gelişimi	Kimlik ve toplumsal cinsiyetin ayrışması ve bütünleşmesinin anlaşılması, ego kimlik statülerinin psikolojik doğum sırası açısından incelenmesi
Duygusal Gelişim	Gelişimsel oyun terapisi, duygu gelişimini desteklemeye yönelik psikoeğitim programı, duygu düzenleme becerileri ve psikolojik sağlık, kuşaklararası farklılıklar
İstismar	Ebeveynlerin çocuk istismarına yönelik farkındalıkları ve cinsel eğitime yönelik tutumlarının incelenmesi, cinsel eğitim, çocukluk istismar ve ihmalinde psikolojik sağlamlığa yönelik çocukluk dönemi destekleyici ve koruyucu faktörleri, cinsel istismara uğramış gençlerin sosyodemografik, gelişimsel, ruhsal ve psikososyal farklılıkları
Psikolojik İyi Oluş	Bilgiğin prosedürel analizi ve iyi oluşla ilişkisi, psikolojik iyi oluş düzeylerini yordamada bağlanma tarzları ve bilişsel duygu düzenlemenin rolünün incelenmesi
Kültürel Gelişim	Uzaktan kültürleşme, ahlaki değer farklılıklarının kültürel gelişimle ilişkisi, küreselleşme, kültürel değişim ve ebeveynlik
Mültecilik	Mülteci çocukların yaşadığı hak ihlalleri, göçmen ergenlerin dayanıklılık özellikleri, zorunlu göç yaşamış çocuklarda sosyal anksiyete
Gelişimsel Psikolojisi	Müzik Enstrüman çalmanın gelişim üzerinde etkileri, gösterip yaptırmaya dayalı müzik öğretimi
Sınav ve Gelecek Kaygısı	Belirsizliğe karşı tahammülsüzlük, ileriye yönelik kariyer kaygısı ve sınav kaygısı arasındaki ilişki üzerinde psikolojik direnç ve başa çıkma stratejilerinin aracı rolü, merkezi sınavlara hazırlanma sürecindeki durumluk kaygı düzeyleri
Eğitim Programının Öğrenme ve Gelişim Üzerine Etkileri	Müfredatın öğrenme gelişimi açısından incelenmesi, ders kitapları incelemesi, öğretmen görüşleri incelenmesi
Koruma ve Bakım Altında Bulunan Çocukların Psiko-Sosyal Gelişimi	Anneleri ile ceza infaz kurumlarında kalan 0-6 yaş çocukların gelişimi, çocuk bakım elemanlarının sosyal sorun çözme becerilerinin rolü, kurum bakımı deneyimi olan yetişkinlerin adil dünya inançları ve bağlanma stillerinin bazı değişkenler açısından incelenmesi, korunmaya muhtaç çocukların öz saygı duygusu
Bağlanma	Benlik kavramı, bağlanma türleri, kıskançlık düzeyi ile bağlanma davranışı, benlik saygısı, duygusal zekâ arasındaki ilişki, problem çözüm becerileri ve bağlanma stilleri arasındaki ilişki
Suç-Suçlama ve Suçluluk Davranışının Gelişimi	Suçluluk atfetme anlayışının gelişimi, utanç ve suçluluk duygularına yatkınlık, sosyal anksiyete ve suçluluk duygusu arasındaki ilişki, bağlanma ve saldırganlık davranışları, adaletsizlik yargısı
İnternet Kullanımı	Youtube ve youtuber olmak üzerine bir inceleme, video oyunu oynamanın etkileri, internet kullanım amaçları ve akademik başarı, sanal zorbalık, internet kullanımının gelişime etkileri
Ahlaki Gelişim	Ebeveyn çocuk-değer algısı, ahlaki yargıları etkileyen faktörler
Akran Zorbalığı	Erken okula başlamak ve akran zorbalığına maruz kalma düzeyleri, akran zorbalığı ve sosyal beceri arasındaki ilişki
Ebeveyn Kontrolü-Otoritesi ve Psikososyal Gelişim	Anneden algılanan kontrolün ergenin psikososyal işlevselliği ile ilişkisi, ebeveyn kontrolünün çocuklarda yeme tutumlarına etkisi, demokratik-otoriter ebeveyn tutumlarının çocuk yılmazlık düzeyine etkisi, denetimin karar verme tutumuna etkisi
Gelişimsel ve Travmatik Sorunlar	Travma sonrası duygusal stres, öğrencilerin yaşadıkları gelişimsel ve travmatik sorunlar, travma sonrası gelişimi etkileyen faktörler, kaza sonrası travma ve gelişim

Sosyal ve Davranışsal Gelişim	Sosyal ve davranışsal gelişim ile ilişkili mikro ve makro etkenler, anne destekli, anne desteksiz sosyal beceri eğitimi alan ve almayan okul öncesi çocukların sosyal beceri düzeyleri ve benlik kavramlarının karşılaştırılması
Yaşam Döngüsü Gelişimi	Bireylerin yaşam yapılarının incelenmesi, yetişkinlik kriterlerinin ve yetişkinlik statülerinin incelenmesi, yeni yaş dönemi
Evlilik Çatışması	Eşler arası ilişki ve ergenin uyumu, eşler arası çatışmanın çocuğun akademik başarı üzerinde etkisi, boşanma sürecinde olan ebeveynlerin çocuklarının kabul/red düzeyleri, çocuklarda sosyal uyum
Zihinsel Engelli Çocukların Gelişimi	Zihinsel engelli çocuk sahibi annelerin aile işleyişi ve algısı üzerinde etkisi, annelerin stres yönetimi
Ebeveynlerin Çocuk Yetiştirme Tutumu	Çocuk yetiştirme stilleri ile suçluluk, utanç ve yalnızlık arasındaki ilişki, çocukların cinsiyet rollerinin ebeveyn tutumları açısından incelenmesi, benlik saygısı, çalışan/çalışmayan anne ayrımı, depresyonlu olmayan annelerin ebeveynlik özyeterlik algıları, empati becerileri, çocuk yetiştirme tutumunun kişilik gelişimine etkisi
Ergen Asiliği ve Psikolojik Direnç	Lise öğrencilerinin ergen asiliği, duygusal istismar ve psikolojik dayanıklılıkları arasındaki ilişki, sorunlu ergenlerin yaşam doyumu

Tablo 15

Yaş Grubuna Göre En Çok Çalışılan Konular

YAŞ GRUBU	EN ÇOK ÇALIŞILAN KONULAR	TOPLAM
0-6	Dil Gelişimi, Bilişsel Gelişim	65
6-12	Dil Gelişimi, Evlilik Çatışması	32
12-15	Ebeveynlerin Çocuk Yetiştirme Tutumu, Sosyal ve Davranışsal Gelişim	21
15-18	İnternet Kullanımı, Suç ve Suçluluk Gelişimi	28
18-30	Ebeveynlerin Çocuk Yetiştirme Tutumu, Bilişsel Gelişim	25
30-45	Kültürel Gelişim	6
45-80+	Dini Konular	4
Bebeklikten Gençliğe	Duygusal Gelişim, Din	5
Karma Yaş Grubu	İnternet Kullanımı, Gelişimsel Müzik Psikolojisi	15

Türkiye’de gelişim psikolojisi alanında yapılaş olan lisansüstü tezlerin detaylı içerik analizi tablo 14’te yapılmıştır. SPSS programında yapılan çapraz tablolar, ki-kare ve simetrik ölçüler analizlerine göre; yaş grubu ve konu kategorileri ilişkiel anlamda ele alınmıştır. Çıkan sonuçların daha anlaşılır hale gelebilmesi için, tüm analizlerin birleşmesinden daha basit bir tablo oluşturulmuştur. Tablo sonuçlarına göre, 0-6 yaş grubu en çok dil gelişimi ve bilişsel gelişim alanları altında incelenmiştir. Ayrıca toplamda en çok çalışma yapılan grup olmuştur. Bu grubun ardından dil gelişimi ve evlilik çatışması alanlarında 32 çalışmayla 6-12 yaş grubu gelmektedir. Tabloya genel bir bakış sunmak gerekirse, tez çalışmaları en çok okul öncesi ve ilkökul çağı çocukları kapsamakta olup dil gelişimi, bilişsel gelişim ve evlilik çatışması konularını çoğunlukla işlemektedir.

TARTIŞMA

Lisansüstü Tezlerde Dil Tercihi Değerlendirmesi

Araştırmamız kapsamında lisansüstü tez yazımlarında yabancı dil tercihinin yıllara göre azalma gösterdiği anlaşılmaktadır. Bu tablonun bir yorumu olarak; Yök'ün 17.11.2023 tarih ve 651317 sayılı yazısı gereğince "Lisansüstü tez yazım dilinin program dilinde yazılmasına ve önceki kararların iptali" konusunda kararı gelecekte yazılacak olan, yüksek oranda İngilizce ve diğer dillerde tez yazımını nicel anlamda azaltabileceği gözlemi yapılabilir. Ancak bu tezimizin doğruluğunun kontrolü için Yök'ün bahsi geçen kararı sonrası yayımlanan tüm lisansüstü tezlerin istatistiksel olarak incelenmesi gerekmektedir. İngilizce'nin yazım dilinde kullanımın azlığına başka bir etken olarak da yüksek lisans ve doktora programlarında İngilizce eğitim ve program türlerinin azlığı gösterilebilir. Yüksek Lisans öğrencileriyle yapılan bir araştırmada; öğrencilerin %75'i derslerde yabancı kaynak kullanımı, İngilizce dersi ve programa girişte dil şartı gibi etmenlerin makale yazımına katkıda bulunacağını ifade etmektedir (Sezgin vd., 2011). Sakarya Üniversitesinde yapılan bir araştırmaya göre ise; öğrencilerin %60'nın yabancı dilde sıkıntı yaşadığı saptanmıştır (Akgün vd., 2011). Bu durum, lisansüstü programlarda yabancı dil eğitimine önem gösterilmesinin altının çizmektedir.

Lisansüstü Tez Sayılarının Değerlendirmesi

Araştırma sonucunda da bahsedildiği üzere, 2011-2019 yılları arasındaki lisansüstü tezlerin artışındaki ivme 2020-2024 yıllarına bakıldığında hızlı bir düşüş yaşamıştır. Bu duruma sebep olarak, Karadeniz Teknik Üniversitesi, Fen Bilimleri Enstitüsü son 5 yılın lisansüstü eğitimden ayrılma sebeplerini yayımlamıştır. Yayımlanan sebepler şu şekilde sıralanmıştır; mezun olmada başarısızlık, tezsiz yüksek lisans programlarına geçiş, yabancı dil hazırlık sınıfında başarısızlık, bilimsel hazırlık sınıfında başarısızlık, ders aşamasında başarısızlık, tez aşamasında başarısızlık, doktora tez ve yeterlilik aşamasında başarısızlık, bölümler arası geçiş ile ayrılma, yatay geçiş, yeni bir üniversiteye transfer, vefat, kendi isteği ile ayrılma ve diğer nedenler (KTÜ, 2021). Oransal olarak ise sırasıyla en çok, ders ve tez aşamasında başarısızlığın ardından kendi isteği ile ayrılma nedeni gelmektedir. Yüksek lisans programlarında mezun olan öğrenci oranı, kayıtlı öğrencilerin %20si kadardır. Bu sorunun en büyük nedenlerinden biri yüksek lisans programlarının hedefleri ile öğrencilerin yüksek lisans yapma amaçlarının uyuşmamasıdır. (Nas vd.,2016). Bu uyuşmazlık öğrencilerin lisansüstü programlarının müfredatını ve amaçlarını başlangıçta bilmemesinden kaynaklanmaktadır. Bunlara ek olarak, lisansüstü eğitimin terk sebepleri arasında, akademik uyum, aile desteği, çalışma durumu, derslere devam, sosyal uyum, ulaşım sorunları, sağlık sorunları ile eğitim ve öğretimin niteliği vardır (Deniz, 2019a). Bu araştırmanın sonucuna göre, öğrencilerin büyük bir çoğunluğu lisansüstü eğitimlerine devam etmek istemektedir. Bu sebeple sorunların çözümü için akademik hazırlık programları, öğretim üyelerinin hem nicel durumunun hem nitel özelliklerinin geliştirilmesi, lisansüstü eğitim anlayışının değişmesi, danışman desteği, öğrencilerin kendilerini geliştirmesi için eğitime katılımı vb. gibi çözüm önerileri alandaki mezun oranı ve tez sayılarındaki düşüşün önüne geçmeye faydalı olacaktır (Deniz, 2019b).

Çalışma Grubu ve Konu İçerik Değerlendirmesi

Genel bir kanı olarak, çocukluk, insan yaşamında eğitim ve öğretimin başladığı yaş dönemidir. Bu nedenle, "çocuklar eğitimin ilk öznelerinden sayılırlar" (Koru ve Gündüz., 2022a). Çocukluk çağı çalışmaları, hem alanın temel tezlerine yönelik boşlukları hedef aldığı hem de çocukların toplumsal hayattaki konumlarını belirlediği için tartışmaya açılması gerekli görülmektedir (Koru ve Gündüz.,2022b). Özellikle okul öncesi dönem ve beraberindeki süreçte ergenlik çağı ile ilgili çalışmalar literatürde çoğunluğu oluşturmaktadır. Ancak, yaşlılık dönemi alanında psikolojisi çalışmalarına bakıldığında durum aynı değildir. 2000-2010 yılları arasında kapsayan bir literatür araştırmasına göre, 10 yıllık süreçteki lisansüstü tez ve makalelerde

yalnızca 21 adet çalışma saptanmıştır (Ünalın, 2021). Arařtırımamız kapsamında yař aralıđını geniř bir baremde almamıza rađmen yařlılık dđnemi geliřiminde yayımlanan tez sayısı yalnızca 4 tanedir. Bu durumdan anlařıldıđı üzere hem psikolojinin genelinde hem de geliřim psikolojisi özelinde yařlılık dđnemi üzerine yapılan çalışmaların artması akademik alan için önem arz etmektedir. Makalenin sonu kısmında belirtilen makale isim ve konu tekrarları da aynı yař grubunun sürekli olarak alıřılmasından kaynaklanabilmektedir. Elbette ki yapılan lisansüstü tezler farklı ayrıntılara odaklanmaya alıřmıştır. Ancak, arařtırma sonucunda edinilen sonu ve analizlere göre makale isim ve ierik bđlđmlerinin ođunlukla benzediđi gözlemlenmektedir.

Arařtırmacı Cinsiyet Oranlarının Deđerlendirmesi

Bu Arařtırmada geliřim psikolojisi alanında kadın arařtırmacı oranı daha fazladır. Ancak, genel tabloya baktığımızda, Türkiye’de lisansüstü programlarda erkeklerin lehine bir eřiřsizlik vardır (Ünlü vd., 2021b). Yüksek Öđretim Bilgi Yönetim Sisteminden alınan güncel verilere göre her yıl cinsiyet arasındaki fark azalsa da nicel olarak fark halen mevcuttur. Akademide, hem lisansüstü eđitimde hem de öđretim üyesi sayılarındaki cinsiyet eřiřliğinde kısmen artıř gözlemlenmiştir. Buna rađmen; akademik yükselmeye genel tabloya bakıldıđında akademik hiyerarři aısından durum aynı deđildir (Tekindal vd.,2023a). Kadınların akademik yolculuklarında ve iř hayatında ilerlemelerinin önünde toplumsal cinsiyet eřiřsizliđi ve kalıplařmış stereotipler yatmaktadır. Geleneksel cinsiyet algısına sahip toplumlarda, eđer kadın alıřıyorsa, hem ev iřleri hem de alıřma hayatını tek başına sırtlaması beklenmektedir. Bu beklenti, kadınların eđitim ve alıřma yařamlarının önünde bir bariyer olarak karřlarına çıkmaktadır (Ünlü vd.,2021c). Kadınlar sadece sosyal evrelerinde deđil alıřma alanlarında da benzer engellerle karřılařırlar. Cinsiyete dayalı iř bđlümü ayrımı, kadınların “yapabileceđi” iřlerde görev alması anlamına gelmektedir (Bora, 2021). Yani bu ayrım “erkek iři” olarak algılanan yöneticilik pozisyonları gibi iřlerde az oranda bulunmalarına sebep olmaktadır (Karatepe ve Arıbař,2017). Aynı ayrım akademide de söz konusudur. Akademide kadın akademisyenlerin yönetim kadrolarında temsillerinin ok sınırlı olduđu ve yalnızca belirli pozisyonlarda alıřtıkları belirtilmektedir (Er, 2008). Buna örnek olarak, Tekindal vd.(2023b) yaptıđı arařtırmada rektörlük, dekanlık, senato ve yönetim kurullarında, yükseköđretim kurulu gibi üst yönetim kadrolarında kadın varlıđı oldukça azdır. Yükseköđretim Denetleme Kurulu'nun 17 üyesi arasında tek bir kadın üyenin bile olmaması, Türkiye’de kadınların akademide yönetim kademelerindeki sınırlı rolünü göstermektedir (Tekindal vd., 2023c). Kadınların iř hayatında cam tavanı kıramadıklarını ve akademi de dahil birok iř alanında eril egemen bir yapının varlıđından bahsetmek mümkündür. Bu ayrıma karři, toplumsal algılara yönelik farkındalık alıřmaları bu stereotipleri azaltmaya ve özellikle iř hayatında cinsiyetsiz bir alıřma ortamı sunmaya faydalı olabilir.

SONU

Türkiye’de geliřim psikolojisi alanında hazırlanan lisansüstü tezlerin büyük ođunluđunun nicel arařtırma veri toplama yöntemlerinden ölek tekniđine dayanarak tamamlandıđı görülmektedir. 2011-2019 yılları arasında tez sayısının pik yaptıđını ve yüksek lisans tezlerinde sayısal üstünlük sađlandıđı anlařılmaktadır. 1987-1999 yılları arasında yapılan tezlerden yalnızca 1 tanesine ulařım varken, 2024 yılına kadar olan süreçte tam metine ulařım oranı oldukça yükselmiştir. Bu artıřa, iinde bulunduđumuz teknoloji ađını sebep olarak gösterebiliriz. Lisansüstü tezlerin yazım dilinin frekans analizlerine göre %79 oranla Türke’nin tercih edilmesi öngörülen bir sonutur. Toplam 41 adet İngilizce dilinde yüksek lisans tezi vardır. Ancak, Őekil 5 grafiđine göre, son yıllarda tez yazımında İngilizce’nin azaldıđı görülmektedir. alıřmada yapılan yazar cinsiyet analizine göre geliřim psikolojisi alanında yapılan tezlerde kadın yazar oranı erkeklere göre daha fazladır. Lakin, sadece bir alandaki cinsiyet oranına bakılarak cinsiyet eřiřliđi hakkında yorum yapmak mümkün deđildir. Geliřim psikolojisi, yařam boyu geliřim süreçlerini inceleyen bir dal olsa da , alanda yapılmıř olan lisansüstü tezler en ok 0-6 yař grubu üzerinde yođunlařmıştır. Piaget’nin ocukluk geliřim

dönemlerini amprik bir yöntemle ortaya atması bu alanda yapılan çalışmaları arttırmıştır. Bu sebeple, tez çalışmalarında da en çok ilk çocukluk dönemi ve gelişimi ele alınmaktadır. Ancak, bu döneme gösterilen rağbet, yaşlılık dönemi gelişim sürecine aynı şekilde gösterilmemektedir. Çocukluk dönemi hakkında yapılan tez ve araştırmaların bu denli çok olması beraberinde bazı problemleri de getirmektedir. Örneğin; yapılan çalışmalar isim ve içerik olarak birbirine benzemeye başlamıştır. Bu makalede de yapılan analizle belirli konulara ilişkin tekrarın altı çizilmek istenmektedir. Türkiye’de ki gelişim psikolojisi alanında yapılan lisansüstü tezlerin konu analizine göre; çocukluk çağı araştırmalarında dil gelişimi, bilişsel gelişim, evlilik çatışması ve ebeveyn tutumu ele alınmaktadır. Yök tez veri tabanında ki makale isimlerine baktığımızda, bu alanda yapılan çalışmaların belirli konu başlıkları altında sıkça tekrar edildiği anlaşılmaktadır. Bu tekrarlar en çok; anne/ebeveynlik öz-yeterlik algıları, benlik saygısı, ana dil öğretiminde karşılaşılan problemler, akran zorbalığı, bağlanma, çocuk yetiştirme stilleri ve ebeveyn tutumları, evlilik çatışması, dil anlama becerileri, cinsel istismar ve inanç gelişimi alanındadır. SPSS frekans analiz sonuçlarına göre, ahlaki gelişim, travma sonrası gelişim, ergen asiliği, psikolojik direnç, ve zihinsel engelli çocukların gelişimi hakkında lisansüstü tez içeriği oldukça azdır. Lisansüstü tez yazımlarında alanda eksik olarak görülen konuların çalışılması tek bir alana yoğunlaşılmasından daha faydalı olacaktır. Elbette, alanda yapılan çalışmaların artmasının bir mahsuru yoktur. Ancak, makale ve tezlerin belirli yaş grupları ve sürekli aynı konular etrafında incelenmesi akademik olarak farklı alanların gelişmesinde negatif bir etken olacaktır.

ÖZET

Bakır bazlı alaşımlar; ısıl ve elektriksel iletkenlik, korozyon direnci ve ucuz imalatları özelliklerinden dolayı farklı endüstriyel uygulama alanlarına sahiptir. Cu-Zn alaşımları ise prinç olarak endüstriyel uygulamalarda sıkça kullanılmaktadır. Hatta, ikili alaşımların özelliklerini geliştirmek için üçlü ve daha fazla alaşım sistemleri oluşturulmaktadır. Böylece kullanılmak istenilen alana uygun özelliklere sahip malzemeler elde edilmektedir. Bu çalışmada da üçlü alaşım sistemi üzerine bazı fiziksel özellikler araştırılmıştır. Bu sebeple; bu çalışmada, Cu-Zn-Al ve Cu-Zn-Ni (% ağırlıkça) alaşımlarında termal etkiler sonucunda alaşımların mikro yapılarında meydana gelen değişimlerin morfolojik ve termal özellikleri çeşitli fiziksel yöntemlerle tespit edildi. Alaşımların morfolojik yapıları taramalı elektron mikroskopu (SEM) ile incelenmiştir. Yine alaşımın termal özellikleri Diferansiyel Tarama Kalorimetresi (DSC) ile incelenmiştir. Yüzeysel incelemelerinde elde edilen örnekler hızlı ve yavaş soğutmaya maruz bırakılarak, alaşımlarda oluşan yapılar kıyaslanmıştır. Elektron mikroskop incelemelerinden; hızlı soğutmaya maruz bırakılan Cu-Zn-Al alaşımında austenite yapı ile birlikte çökelti faz elde edilmiştir. Çökeltilerin köşeli bir şekilde meydana geldiği görülmüştür. Cu-Zn-Ni alaşımında ise austenite yapı gözlemlenmiştir. Fakat bu alaşımda Austenite yapı içerisinde hiç çökelti oluşmadığı da belirlenmiştir. Al elementi ile Ni elementini kıyasladığımızda; Ni elementinin çökeltileri ortadan kaldırdığı görülmüştür. DSC yönteminden alaşımların; austenite başlama sıcaklığı (A_s), austenite bitiş sıcaklığı (A_f) ve entalpi değerleri $5\text{ }^\circ\text{C}$ ısıtma/soğutma hızında belirlenmiştir. DSC incelemelerinden Ni elementinin faz dönüşüm sıcaklıklarını düşürdüğü bulunmuştur.

Anahtar Kelimeler:Cu-bazlı alaşımlar, Isıl işlemler, SEM, DSC.

ABSTRACT

Copper based alloys have different industrial application areas due to their thermal and electrical conductivity, corrosion resistance and cheap manufacturing properties. Cu-Zn alloys are frequently used in industrial applications as brass. In fact, ternary and more alloy systems are formed in order to improve the properties of binary alloys. Thus, materials with properties suitable for the desired area of use are obtained. In this study, some physical properties of the ternary alloy system were investigated. For this reason; in this research, the morphological and thermal properties of the changes that occurred in the microstructures of the alloys as a result of thermal effects in Cu-Zn-Al and Cu-Zn-Ni (% by weight) alloys were determined by various physical methods. The morphological structures of the alloys were examined by scanning electron microscope (SEM). Again, the thermal properties of the alloy were examined by Differential Scanning Calorimetry (DSC). The samples obtained in surface examinations were

exposed to fast and slow cooling and the structures formed in the alloys were compared. From the electron microscope examinations; In the Cu-Zn-Al alloy subjected to rapid cooling, a precipitate phase was obtained together with the austenite structure. It was observed that the precipitates were formed in an angular shape. In the Cu-Zn-Ni alloy, an austenite structure was observed. However, it was also determined that no precipitate was formed in the austenite structure in this alloy. When we compared the Al element with the Ni element; it was seen that the Ni element eliminated the precipitates. Austenite starting temperature (A_s), austenite ending temperature (A_f) and enthalpy values of the alloys were determined from the DSC method at a heating/cooling rate of 5°C. From the DSC examinations, it was found that the Ni element reduced the phase transformation temperatures.

Keywords: Cu-based alloys, Heat treatments, SEM, DSC.

1. INTRODUCTION

Shape memory alloys are important and useful smart materials due to their unique shape memory effect, thermal, mechanical and electrical properties, and due to these superior functional properties, they are used in numerous high-tech industrial and daily application areas such as actuators, sensors, medical, solar energy, automotive, aviation and space, telecommunications, robotics, building-architecture, energy conversion, textiles and continue to develop until today (Long et.al, 2021; Jani et.al 2014; Sutou, Kainuma, Ishida, 1999; Obrado, 1999). Shape memory alloys are generally referred to as nickel-titanium (NiTi), copper-based (Cu-based) and iron-based (Fe-based) alloy systems and are often obtained by doping with three, four and, more doping elements (Askeland, 1990; Nishiyama, 1978). Martensitic transformation in single phase β -CuZn alloys has been extensively studied in the last decades, and the transformation properties, crystal structure, shape-memory effect (SME) and superelasticity (SE) have been reported (Pops and Massalski, 1964; Ahlers, 1986; Cornelis and Wayman, 1974; Schroeder, Cornelis, Wayman; 1976). However, only a few studies have been conducted on the study of dual phase α/β CuZn alloys (Hsu, Wang, Wayman, 1991), and they revealed that the presence of α particles in the β matrix causes the deterioration of the shape memory properties, i.e., the recoverable strain resulting from SME and SE is reduced. In CuZnAl SMAs, elements such as Co, Ti, B, Zr and V are used as grain refiners. The effectiveness and mechanism of grain refinement vary depending on the alloy composition and the type of grain refiner element added (Sampath, 2007; Sampath, 2006).

Due to their shape memory effects, shape memory alloys have been the subject of extensive studies. Many studies have been conducted to date by taking advantage of their elastic or superelastic properties, but since the details of their microstructures and the crystal structure of the martensite phase vary depending on the composition of the prepared alloy, studies on this subject are still ongoing (Kozlova and Titenko, 2006). For this reason, heat treatment was applied to the Cu-Zn-Al and Cu-Zn-Ni alloys to be examined in this study; the morphological and thermodynamic properties of the structural transformations that may occur with this effect were investigated using various physical methods.

2. EXPERIMENTAL PROCEDURE

The alloys examined in this study were Cu, Zn, Al and Ni elements in powder form with a purity level of 99.9 %, brought together in different proportions, melted at high temperatures and cast into cylindrical rods with a diameter of 1 cm and a length of 10 cm. The weight percentages of the alloys were determined as Cu-26.42%Zn-6.43%Al (alloy 1) and Cu-11.43%Zn-6.68%Ni (alloy 2) from the samples cut from the rods using the IXRF (Integrated X-ray Fluorescence Systems) system and the EDS technique. For surface examinations to be carried out with SEM and EDS, it was made homogeneous (800 °C, 30 min.) by heat treatment and then quickly cooled by throwing it into ice water. For Differential Scanning Calorimetry (DSC) measurements, 1 mg of powder was obtained from each sample obtained by heat

treatment using a fine-toothed file. DSC curves of these samples were taken to determine their transformation temperatures. In these measurements, the heating rate was taken as 5 °C/min. Electron microscopy experiments were performed with a FEI / Quanta 450 FEG model electron microscope. DSC measurements were taken with DSC TA Q20 model DSC in nitrogen gas atmosphere.

3. RESULTS AND DISSUCSION

SEM images of alloys 1 and 2 are given in Figure 1. As can be seen from Figure 1(a), copper-rich α precipitates were detected randomly distributed among the grains in alloy 1. In addition, it was observed that α precipitates were formed in diagonal morphology within the main phase (β) (Sampath, 2007; Hsu, Wang, Wayman, 1999; Adachi, Perkins;1986). When the SEM image of alloy 2 was examined, an austenite structure was observed without any precipitate formation. Unlike alloy 1, Ni caused the precipitate structure to disappear in alloy 2.

Figure1. SEM images of alloys (a) alloy 1 and (b) alloy 2.

The transformation temperatures and enthalpy values of alloys 1 and 2 were investigated by DSC method. DSC curves of the alloys are given in Figure 2, respectively.

Figure 2. DSC curves obtained at a heating/cooling rate of 5°C/min for (a) alloy 1 and (b) alloy 2.

The transformation temperatures and enthalpy values obtained from these curves are listed in Table 1. When the table is examined, the transformation temperatures of Alloy 2 are obtained lower than those of Alloy 1. As a result, Ni added to Alloy 2 increased the transformation temperatures (Table 1).

Table 1. Enthalpy change values and DSC peak analyses for the alloy 1 and alloy 2.

Alloys	Heating/cooling rate (°C/min.)	A _s (°C)	A _f (°C)	A _{max} (°C)	ΔH _{A→M} (J/g)
Cu-Zn-Al	5	212.22	275.15	247.08	0.924
Cu-Zn-Ni	5	249.44	325.16	278.85	1.584

4. Conclusions

In this study, the structural and thermal properties of Cu-Zn-Al and Cu-Zn-Ni (% by weight) alloys were investigated and the obtained results were compared. Electron microscope study showed that α -precipitates were formed in angular and irregular morphology in Cu-Zn-Al alloy. In addition, it was determined that α -precipitate phase did not form in Cu-Zn-Ni alloy and austenite phase was formed. When the alloys were compared, it was seen that Ni prevented the formation of precipitate phase. According to the data obtained from DSC results, it was determined that Ni addition increased the transformation temperatures. In addition, DSC results showed that the alloys have high transformation temperatures. Therefore, the obtained Cu-Zn-Al and Cu-Zn-Ni alloys can be used in high temperature applications.

ÖZET

Cu-Zn ve Cu-Al bazlı sistemlerdeki Cu bazlı alaşımlar, yaygın olarak kullanılan Ti-Ni SMA'lara kıyasla düşük maliyetleri nedeniyle şekil hafızası etkisi (SME) ve süperelastisite (SE) özelliklerinin pratik olarak kullanılması için ticari olarak ilgi çekicidirler. Cu bazlı alaşımlar genellikle Cu-Zn, Cu-Al ve Cu-Sn gibi çift alaşım sistemleri olarak üretilir. Bu alaşımlar arasında Cu-Sn iyi termoelastik dönüşüm göstermez. Ayrıca, Cu-Sn alaşımı kırılğan olması nedeniyle oldukça sınırlı bir uygulamaya sahiptir. Potansiyel kullanımlar ve özellikler, Cu-Zn alaşımlarına Al, Si, Sn veya G ve Cu-Al alaşımlarına Ni, Be, Zn ve Mn eklenerek iyileştirilir. Bu çalışmada; beta faz bölgesinde homojenleştirme işlemine tabi tutulan ve kontrollü olarak fırında yavaş olarak soğutulan Cu-Zn-Al ve Cu-Zn-Ni alaşımları çalışılmıştır. Alaşımların fiziksel özellikleri taramalı elektron mikroskobu (SEM) ve diferansiyel taramalı kalorimetre (DSC) ile incelenmiştir. Taramalı elektron mikroskop deneylerinden her iki alaşım için austenite tane yapısı elde edilmiştir. Yüzey incelemelerinden; Cu-Zn-Al alaşımında martensite fazın meydana geldiği bulunmuştur. Cu-Zn-Al alaşımında martensite faz β_1' plaka morfolojide gözlemlenmiştir. Cu-Zn-Ni alaşımında ise austenite fazın meydana geldiği belirlenmiştir. Çalışılan alaşımlar kıyaslandığında Al ve Ni meydana gelen fazlarda farklılık meydana getirmiştir. Her iki alaşımın dönüşüm sıcaklığı DSC ile incelendi. DSC gözlemlerinden; austenite ve martensite başlama ve bitiş sıcaklıkları belirlendi. Hatta, DSC analizlerinden, Cu-Zn-Ni alaşımının yüksek sıcaklık şekil hafızası özellikleri gösterdiğini tespit edilmiştir.

Anahtar Kelimeler:Cu-Zn, Austenite, Entalpi, Şekil Hafıza Etkisi.

ABSTRACT

Cu-based alloys in Cu-Zn and Cu-Al based systems are commercially attractive for practical use of shape memory effect (SME) and superelasticity (SE) properties due to their low cost compared to widely used Ti-Ni SMAs. Cu-based alloys are generally produced as binary alloy

systems such as Cu–Zn, Cu–Al and Cu–Sn. Among these alloys, Cu–Sn does not show good thermoelastic transformation. Moreover, Cu–Sn alloy has quite limited application due to its brittleness. Potential uses and properties are improved by adding Al, Si, Sn or G to Cu–Zn alloys and Ni, Be, Zn and Mn to Cu–Al alloys. In this study; Cu-Zn-Al and Cu-Zn-Ni alloys subjected to homogenization process in beta phase region and slowly cooled in a controlled furnace were studied. Physical properties of the alloys were investigated by scanning electron microscope (SEM) and differential scanning calorimetry (DSC). Austenite grain structure was obtained for both alloys from scanning electron microscope experiments. From surface examinations; it was found that martensite phase occurred in Cu-Zn-Al alloy. Martensite phase was observed in β_1' plate morphology in Cu-Zn-Al alloy. It was determined that austenite phase occurred in Cu-Zn-Ni alloy. When the alloys studied were compared, Al and Ni caused differences in the phases formed. Transformation temperature of both alloys was examined with DSC. Austenite and martensite starting and ending temperatures were determined from DSC observations. Moreover, it was determined from DSC analysis that Cu-Zn-Ni alloy exhibited high temperature shape memory properties.

Keywords:Cu-Zn, Austenite, Enthalpy, Shape Memory Effect.

1. INTRODUCTION

Recently, technology has affected people's daily lives and made life easier and faster, and the advancement of technology depends on the basic materials that science and researchers use in technology and their development. One of the materials that play an important role in the development of technology is Shape Memory Alloys (SMAs), a special class of smart materials that can memorize their normal shapes after being distorted (Lagoudas, 2008; Kök, Durgun, Özen, 2019; Askeland, 1990; Nishiyama, 1978). In addition, due to their two important properties (superelasticity (SE) and shape memory effect (SME)), they have more applications in some technological fields such as automotive, textile, bioengineering, aerospace and robotic actuator system (Mohammed et.al., 2019; Qader, 2019; Adıgüzel, 2007). It is known that the thermodynamic and kinetic properties of the martensitic transition in Cu-based shape memory alloys are very sensitive to the thermomechanical history of the system. Martensitic transformations are of diffusionless characteristics and the product phase in question carries the same properties of the ordered parent phase before the transformation due to these properties. β -phases of Cu-based alloys have an irregular b.c.c structure (A_2) at high temperatures and two order transitions occur during the cooling processes: $A_2 \rightarrow B_2$ (CsCl type order) and $B_2 \rightarrow DO_3$ (Fe_3Al type order) or $B_2 \rightarrow L_{21}$ (Cu_2AlMn type order). Martensitic transformations occurring with the transition from the B_2 or DO_3 (L_{21}) ordered structure are called 9R and 18R long periodic stacked ordered structures (Adıgüzel, 2007; Ortin, Planes, 1989). In Cu-based shape memory alloys, large grain size after the β -phase transition process can be prevented by adding grain refinement elements such as Zr and Ti to the alloy structure. Such elements cause precipitate formation along grain boundaries that prevent grain development during the β -phase transition. For the Cu-Zn-Al alloy examined in the study, it was determined that α -precipitates could be prevented because there was not enough time for diffusion after cooling in water at 820 °C immediately after the β -phase transition process. In addition, the application of a critical amount of deformation contributes to the solid-solid state transitions before martensite. Dislocations affected by cold working can prevent the transformation of austenite to martensitic lattice. Dislocations can change the characteristic temperatures of martensitic transformation (Spielfeld and Hornbogen, 1995).

Copper-based alloys; have different technical application areas due to their superior properties. Therefore, studies are still being carried out on various ternary alloy systems to improve the properties of binary alloys. In addition, other elements can be added to these alloys to better improve their thermal and mechanical properties for special purposes. Thus, studies on the production of materials with suitable properties and the development of their physical properties continue as a process. Therefore, in this study, the microstructures and thermodynamic properties of Cu-Zn-Al and Cu-Zn-Ni alloys were studied. The weight ratios of the elements in the compositions of the studied alloys were investigated using electron dispersive spectroscopy (EDS) technique, the microstructure was investigated using scanning electron microscope (SEM) and the thermal properties were investigated using differential scanning calorimetry (DSC).

2. EXPERIMENTAL PROCEDURE

Polycrystalline Cu-Zn-Al (alloy 1) and Cu-Zn-Ni (alloy 2) alloys used in this study were prepared by using Cu, Al, Zn and Ni elements in powder form with 99.9 % purity. The weight percentages of the alloys were determined as Cu-26.42%Zn-6.43%Al (alloy 1) and Cu-11.43%Zn-6.68%Ni (alloy 2) (% by weight) by EDX method. The alloys were subjected to homogenization process at 800 °C for 30 minutes. The homogenized samples were cooled to room temperature in a controlled manner in the furnace. After the heat treatment, the surfaces of the samples were etched in a solution consisting of 10 ml of HCl, 48 ml of methanol and 2.5 g of (FeCl₃-6H₂O). Electron microscope experiments were performed with a FEI/Quanta 450 FEG model electron microscope. DSC measurements were taken with DSC TA Q20 model DSC in nitrogen gas atmosphere at 5 °C heating/cooling rate.

3. RESULTS AND DISSUCSION

Surface examinations of the alloys were taken with a scanning electron microscope (SEM). SEM photographs of the alloys are given in Figure 1. When Figure 1 is examined; It was determined that the martensite phase formed in Alloy 1, while the Austenite phase formed in Alloy 2 (Aldirmaz, Guler, Guler, 2017; Aldirmaz and Aksoy, 2014; Aldirmaz et.al., 2018; Aldirmaz, et. al., 2019). The martensite phase formed in Alloy 1 was determined as a thick plate martensite phase (Aldirmaz et.al., 2019; Sampath and Chandran, 2013; Grgurić, et.al., 2018). These plates can also be clearly seen in the SEM photographs. No precipitate phase was observed for both alloys.

(a)

(b)

Figure 1. SEM photographs of alloys (a) alloy 1, and (b) alloy 2.

Phase transformations in Cu-Zn-Al and Cu-Zn-Ni alloys were investigated by making thermal measurements with differential scanning calorimetry (DSC). The DSC measurement results of the alloys taken with a heating and cooling rate of 5 °C/min. are given in Figure 3.

(a)

(b)

Phase transformation temperatures of the alloys studied with DSC during heating and cooling were obtained. These temperatures are austenite start (A_s), austenite finish (A_f), martensite start (M_s) and martensite finish temperature (M_f). In addition, the energy value (enthalpy: ΔH) required for the transformation to occur was also determined. The measured phase transformation temperatures; austenite onset (A_s), austenite finish (A_f), martensite onset (M_s) and martensite finish (M_f) are presented in Table 1.

Table 1. Phase transformation temperatures for the worked alloys.

Alloys	Heating/cooling rate (°C/min.)	A_s (°C)	A_f (°C)	A_{max} (°C)	M_s (°C)	M_f (°C)	$\Delta H_{M \rightarrow A}$ (J/g)	$\Delta H_{A \rightarrow M}$ (J/g)
Cu-Zn-Al (alloy 1)	5	-	-	-	48.21	60.95	0.48	-
Cu-Zn-Ni (alloy 2)	5	251.3	330.9	279.9	-	-	-	4.63

4. CONCLUSIONS

The surface and thermal analysis results of the produced Cu-Zn-Al and Cu-Zn-Ni alloys are summarized as follows.

1. All alloys were first polished and then etched with an etching solution to examine the surface morphology. Surface morphology and chemical analysis of etched alloys were performed by SEM-EDX measurements. Al and Ni additive elements created differences in the formed phases. From SEM observations, martensite phase was observed in Cu-Zn-Al alloy, while austenite phase was obtained in Cu-Zn-Ni alloy. Martensite phase occurred in the form of thick plates.
2. According to DSC results, Cu-Zn-Ni alloy (austenite phase) showed the transformation temperatures over 100 °C.

3. Transformation temperature values for Cu-Zn-Ni alloy were determined as values greater than 100 °C, which indicates that the alloys exhibit high temperature shape memory effect. Therefore, Cu-Zn-Ni alloy can be preferred in high temperature applications.

ÖZET

Müzik terapi, eski çağlarda hastalıkların tedavi edilmesi amacıyla kullanılmış, daha sonrasında ise bir bilim alanı haline gelerek klinik ortamlarda yerini almıştır. Terapilerde seçilen müzik ve kullanılan uygulama için belirli bir yöntem olmakla beraber, terapistin seansın hedef ve amaçlara göre belirlediği model doğrultusunda müzik ve materyal seçimi yaptığı bilinmektedir. Müzik terapi, anksiyete, depresyon, konuşma bozuklukları gibi gelişimsel ve davranışsal sorunların yanı sıra çeşitli fizyolojik problemlerde de tamamlayıcı tıp kapsamında kullanılmaktadır.

Geçmişten günümüze başta yetişkinlerde sıklıkla kullanılırken, gelişen terapi yöntemleriyle birlikte çocukluk dönemine dair çalışmalarda da yerini almıştır. Özellikle otizm, DEHB, disleksi, dil ve konuşma bozuklukları, özel öğrenme güçlüğü ve travma sonrası stres bozukluğunu desteklemek amacıyla çocuklarda sıklıkla uygulanmaktadır. Terapi süreçleri bireysel olarak yönlendirilebildiği gibi grup çalışmalarıyla da düzenlenebilmektedir. Motor becerilerin gelişimi için ritim ve hareket temelli yaklaşımlara; algı, hafıza ve duygusal gelişimi desteklemek için melodi ve armoni çalışmalarına; dil ve ifade becerilerinin güçlenmesi için vokal egzersiz gibi yöntemlere başvurulmaktadır. Bu sayede kognitif beceri, nöroplastisite, sosyal etkileşim ve özgüven gelişimi; öğrenme motivasyonu ve akademik başarıda artış sağlanabilmektedir. Tüm bu gelişimler çocuğun yaşı, fiziksel gelişimi, tanı ve müdahalenin uzunluğu, ailesi ve çevresinin sosyo-kültürel yapısına göre değişkenlik göstermekte olup belirli bir standarda sahip değildir. Süreç, terapistler ve sağlık profesyonellerinin etkileşimli iş birliği ile sağlandığı zaman daha verimli sonuçlar vermektedir.

Bu araştırma, ülkemizde çocuklar üzerine yapılan müzik terapi alanlarını, yöntemlerini ve etkilerini incelemek, Türkiye’de bu alanda literatüre girmiş makale ve tezlerde hangi özel gereksinimli çocukların, hangi yöntemlerle, hangi yaş gruplarında, hangi materyallerle çalışıldığını tespit etmek amacıyla yapılmıştır. “Müzik terapisi ve çocuk” çerçevesinde taranan 5 çalışma bu araştırmanın örneklemini oluşturmaktadır. Bu bağlamda ülkemizde yapılan çalışmalar ele alınarak gerekli karşılaştırmalar yapılmıştır.

Anahtar Kelimeler: müzik terapisi, çocuk, özel eğitim, otizm, kaygı

ABSTARCT

Music therapy was used in ancient times for the treatment of illnesses and later evolved into a scientific field, finding its place in clinical settings. It is observed that there is no specific method for the music and applications chosen in therapies, and it is known that the selection of music and materials is made based on the model determined by the therapist. Music therapy is used within the scope of complementary medicine not only for developmental and behavioral issues such as anxiety, depression, and speech disorders but also for various physiological problems.

From past to present, music therapy was predominantly used for adults, but with the development of therapeutic methods, it has also found its place in studies focused on childhood. It is particularly applied to support children with autism, ADHD, dyslexia, speech and language disorders, learning disabilities, and post-traumatic stress disorder. Therapy sessions can be conducted individually or organized as group activities. Rhythm and movement-based approaches are used to develop motor skills; melody and harmony exercises support perception, memory, and emotional development; and vocal exercises strengthen language and expression skills. Through these methods, improvements can be achieved in cognitive skills, neuroplasticity, social interaction, and self-confidence, as well as increased learning motivation and academic success. All these developments vary depending on the child's age, physical development, diagnosis, duration of intervention, and the socio-cultural structure of their family and environment, and they do not follow a specific standard. The process yields more effective results when facilitated through interactive collaboration between therapists and healthcare professionals.

This research aims to examine the fields, methods, and effects of music therapy for children in our country. It seeks to identify which special needs children, using which methods, in which age groups, and with which materials, were studied in articles and theses included in Turkey's literature on this topic. Five studies reviewed within the framework of "music therapy and children" constitute the sample of this research. In this context, studies conducted in our country were analyzed, and necessary comparisons were made.

Keywords: music therapy, children, special education, autism, anxiety

GİRİŞ

Müzik, insanlığın varoluşundan bu yana duygu ve düşüncelerin etkili bir aktarım biçimi olarak kullanılmıştır. İnsanlar kendilerini daha iyi ifade edebilmek, isteklerini anlatmak ve iyi hissedebilmek için sese ihtiyaç duyarlar (ÇADIR & AVCIOĞLU, 2013). İlk zamanlarda doğa sesinden yararlanan insanoğlu, zamanla sesin farklı boyutlarını keşfetmiş, bunların yanı sıra ses üretimlerini destekleyecek aletler icat etmiştir. Bu sayede müzik, bir ifade biçimi olmakla beraber birçok farklı alana entegre edilerek kullanım alanı genişletilmiştir. Her yaştan bireyin bu tür gereksinimleri için müzikal yöntemler kullanması kaçınılmaz bir gerçeklik oluşturmuştur.

Müzik, insanın ruhsal ve zihinsel gelişiminde oynadığı rol nedeniyle, tarih boyunca önemli bir eğitim aracı olarak görülmüştür. Ünlü birçok düşünür, müziğin bireyin karakterini şekillendirmede ve sağlıklı bir yaşam sürdürmesinde ne denli etkili olduğunu vurgulamışlardır. Eflatun'un "Müzik, eğitimin temel araçlarından biridir. Sadece bir eğlence unsuru değil, aynı zamanda güzelliği, iyiliği ve eğitimi destekleyen bir unsurdur." sözü, müziğin eğlenceyi aşan derin anlamını ortaya koyar. Bu anlayış, müziğin bireyleri daha erdemli, dengeli ve topluma faydalı bireyler haline getirdiği düşüncesini yüzyıllar boyunca taşımıştır (TOZAR, 2003).

Özellikle sanatsal yönü ön plana çıksa da müziğin insan sağlığına olan etkisi de birçok çalışmaya konu olmuştur. Antik Çağ'dan Selçuklu'ya, Osmanlı'dan günümüze kadar asırlardır bir tamamlayıcı tıp uygulaması olarak yerini almaktadır (YILDIRIM, 2021). Dünya Sağlık Örgütü tarafından da kabul gören Geleneksel ve Tamamlayıcı Alternatif Tıp (GETAT) yöntemleri arasında yer alan müzik terapi; fizyolojik, psikolojik, gelişimsel ve davranışsal birçok problemde tamamlayıcı bir yöntem olarak ön plana çıkmaktadır (BİRKAN, 2014).

Günümüzde müzik terapi her yaş grubu için farklı yöntem ve planlamalarla alanında uzman terapistler tarafından gerçekleştirilmektedir (YILMAZ & CAN, 2019). Müziğin henüz anne karnında başlayan etkisi, çocukluk çağında da gelişimi destekleyen önemli bir araçtır (AKSOY, BULUT, & BULUT, 2022). Özellikle erken çocukluk döneminde; çocukların bilişsel, sosyal, duygusal, dil ve motor becerilerinin gelişimine olumlu katkılar sağlamaktadır (DELEŞ & KAYTEZ, 2014). Bununla birlikte, sağlık sorunları olan ya da sağlıklı gelişim göstermeyen çocuklar için de müzik terapiden yararlanılmaktadır. Tarih boyunca yapılan araştırmalar, müziğin çocukların motor becerilerini geliştirmek, yaşam kalitesini artırmak, işlevselliği sağlamak, ağrıyı hafifletmek ve adaptasyon süreçlerini kolaylaştırmak gibi çeşitli amaçlarla kullanıldığını ortaya koymuştur (GÜMÜŞ, ve diğerleri, 2020).

Müzik terapide temelde kullanılan mevcut yöntemler aktif ve pasif olarak sınıflandırılır. Aktif yöntemler; danışanın veya hastanın müziği ve müzik aletlerini deneyimlemesi, sıkıntılarını anlatmaya teşvik ederek kendi müziğini oluşturması, müzik ve ritmin vücut hareketleriyle de desteklenmesiyle uygulanır. Pasif yöntemler; danışanın daha çok dinleyici pozisyonunda olduğu, terapistin yönlendirmesiyle müziğe uyum sağlaması ve kendilerini müziğin akışına bırakmasıyla uygulanır (YILMAZ & CAN, 2019).

Müzik terapinin bu gibi dezavantajlı çocuklarda nasıl sonuçlar sağladığı çeşitli anket ve analizlerle ortaya konmuştur. Bu etkiler çocukların sosyal ve emosyonel sorunlarında daha efektifken genel yaşam kalitesinde istatistiksel olarak anlamlı bir fark oluşturmamaktadır (ÖLÇER, 2018). İşeri ve arkadaşlarının, otizmli çocuklarda müzik terapinin etkinliğini ve nörohormonal tepkilerini incelediği çalışmalarında müzik terapisinin hiperkinezik hareketlilik ve tekrarlayıcı davranışları azalttığını, sosyal etkileşim ve sözel iletişimi artırdığını gözlemlemiş, otizm belirtilerinin şiddetinde anlamlı bir azalma kaydetmişlerdir. Ancak, kortizol, ACTH, adrenalin ve noradrenalin gibi stres hormonları düzeylerinde anlamlı bir değişiklik gözlemlenememiştir (İŞERİ, ve diğerleri, 2014).

Türkiye'de müzik terapinin çocuklar üzerindeki etkileri konusunda gerçekleştirilen çalışmalar, uluslararası literatürle paralel bir gelişim sergilemekle birlikte, Eren ve Sağlam'ın (2023) belirttiği gibi, ulusal düzeyde bu alandaki araştırmaların daha sistematik ve kapsamlı bir şekilde ele alınması gerekliliği devam etmektedir (EREN & SAĞLAM, 2023). Bu araştırma, bu ihtiyaca yönelik bir adım olarak, Türkiye'de müzik terapinin çocuklar üzerindeki etkilerini analiz etmeyi amaçlamaktadır.

Çalışmanın temel amacı, Türkiye'de müzik terapisi alanında yapılmış beş akademik çalışmayı detaylı bir şekilde inceleyerek, özel gereksinimli çocuklar için kullanılan terapi yöntemleri, materyal seçimleri ve müdahale sonuçlarını sistematik bir şekilde değerlendirmektir. Araştırma, mevcut uygulamaların etkinliğini ortaya koymanın yanı sıra, bu alandaki standartların geliştirilmesine de katkı sağlamayı hedeflemektedir.

ARAŞTIRMA VE BULGULAR

1. Araştırmanın Yöntemi

Bu araştırmada “Müzik terapisi ve çocuk” anahtar kelimeleri ile tarama yapılmıştır. Tarama geçmişte ya da halen var olan bir durumu var olduğu şekliyle betimlemeyi amaçlayan araştırma yöntemidir (KARASAR, 2012). Taramalar sonucu elde edilen veriler belirli kriterlere göre incelenmiştir. Bu kriterler, çocuklarla doğrudan ve etkileşimli yapılan müzik terapi uygulamalarını içeren ve nicel araştırma yöntemler kullanarak yürütülen çalışmaları kapsamaktadır. Bu doğrultuda beş çalışmaya ulaşılmıştır.

2. Problem Cümlesi

Ülkemizde çocuklara uygulanan müzik terapi çalışmaları yapılmakta mıdır?

2.1. Alt Problemler

1. Çalışmalarda, müzik terapinin kullanım amacı nedir?
2. Çalışmalarda, katılımcıların yaş ve cinsiyet dağılımı nasıldır?
3. Çalışmalarda, katılımcılar hangi özel gereksinime sahiptir?
4. Çalışmalarda hangi ölçekler kullanılmıştır?
5. Çalışmalarda kullanılan müzik terapi yöntemleri nelerdir?

3. Bulgular

Bu çalışmaların temel bilgileri aşağıda yer alan Tablo 1.'de yıllara göre sunulmuştur.

Tablo 1.

Çalışma Başlığı	Türü	Yılı	Araştırmacılar
Music Therapy and Hormonal Responses in Autism	Makale	2014	E. İşeri E. Güney R. O. Güvenç A. A. Güvenç M. F. Ceylan E. Çırak B. Çaycı B. Bahar Ş. Şener
Müzik Terapinin Cerrahi Uygulanan 6-12 Yaş Arası Çocuklarda Anksiyete, Korku ve Ağrı Yönetimine Etkisi	Yüksek Lisans Tezi	2016	Ö. Bahadır
Serebral Palsili Çocuklarda Nörolojik Müzik Terapi Eğitiminin Yaşam Kalitesi, Katılım ve Günlük Yaşam Aktiviteleri Üzerine Etkisi	Yüksek Lisans Tezi	2018	G. Ölçer
Otizm spektrum bozukluğu olan çocuklarda müzik terapinin otizm belirtileri ve yaşam kalitesine etkisi	Makale	2019	N. Yurteri M. Akdemir
Müzik Terapi Uygulamalarının Çocuklarda Sosyal Kaygı Üzerine Etkisi	Doktora Tezi	2023	N. Bahadır

Tablo 1 incelendiğinde, yapılan çalışmaların iki tanesinin makale, iki tanesinin yüksek lisans tezi ve birinin doktora tezi olduğu görülmektedir. Çalışmalar 2014 ve 2023 yılları arası yapılmıştır. Makalelerden bir tanesi İngilizce olarak yazılmıştır.

Bu araştırmada yer alan her bir alt problem seçilen 5 çalışma üzerinden karşılaştırılmalı olarak incelenmiş ve her biri tablolar halinde sunulmuştur.

Tablo 2.

Çalışmalarda müzik terapinin kullanım amacı

Çalışma Başlığı	Amaç
Music Therapy and Hormonal Responses in Autism	OBS tanısı almış çocukların belirtileri ve hormon düzeylerinde olabilecek değişiklikleri incelemek
Müzik Terapinin Cerrahi Uygulanan 6-12 Yaş Arası Çocuklarda Anksiyete, Korku ve Ağrı Yönetimine Etkisi	Cerrahi müdahale görmüş çocuklarda yaşanan korku ve ağrıyı azaltmak
Serebral Palsili Çocuklarda Nörolojik Müzik Terapi Eğitiminin Yaşam Kalitesi, Katılım ve Günlük Yaşam Aktiviteleri Üzerine Etkisi	Serebral Palsi tanısı almış çocukların yaşam kalitesini ve günlük yaşamsal aktivitelerini araştırmak
Otizm spektrum bozukluğu olan çocuklarda müzik terapinin otizm belirtileri ve yaşam kalitesine etkisi	OBS tanısı almış çocukların davranış ve yaşam kalitelerinde olabilecek değişiklikleri incelemek
Müzik Terapi Uygulamalarının Çocuklarda Sosyal Kaygı Üzerine Etkisi	Çocuklarda sosyal kaygıyla ilintili davranışların azaltılması

Tablo 2.'ye bakıldığında müzik terapinin farklı amaçlarla kullanıldığı görülmektedir. "Music Therapy and Hormonal Responses in Autism" isimli çalışmada otizmlı çocukların belirti ve hormon düzeyindeki değişiklikler incelenmişken, "Müzik Terapinin Cerrahi Uygulanan 6-12 Yaş Arası Çocuklarda Anksiyete, Korku ve Ağrı Yönetimine Etkisi" isimli çalışmada cerrahi müdahale sonrası korku ve ağrıyı azaltmaya yönelik bir uygulama hedeflenmiştir. "Serebral Palsili Çocuklarda Nörolojik Müzik Terapi Eğitiminin Yaşam Kalitesi, Katılım ve Günlük Yaşam Aktiviteleri Üzerine Etkisi" adlı çalışmada günlük aktivite ve yaşam kalitesini araştırmak, "Otizm spektrum bozukluğu olan çocuklarda müzik terapinin otizm belirtileri ve yaşam kalitesine etkisi" çalışmasında otizmlı çocukların yaşam kalitelerini arttırmak ve "Müzik Terapi Uygulamalarının Çocuklarda Sosyal Kaygı Üzerine Etkisi" çalışmasında sosyal kaygıya bağlı olan davranışların azaltılması amaçlanmıştır. Bu verilere bakıldığında, çalışmalarda müzik terapinin, özel gereksinimli çocukların yaşadığı psikolojik ve fiziksel zorlukları hedef alarak iyileşmelerine katkı sağlamak amacıyla kullanıldığı anlaşılmaktadır.

Tablo 3.

Katılımcı sayısı, yaş ve cinsiyet dağılımı

Çalışma Başlığı	Yaş Grubu	Cinsiyet Dağılımı (E/K)	Katılımcı Sayısı
Music Therapy and Hormonal Responses in Autism	6-10 yaş	6 E / 4 K	10
Müzik Terapinin Cerrahi Uygulanan 6-12 Yaş Arası Çocuklarda Anksiyete, Korku ve Ağrı Yönetimine Etkisi	6-12 yaş	49 E / 11 K	60
Serebral Palsili Çocuklarda Nörolojik Müzik Terapi Eğitiminin Yaşam Kalitesi, Katılım ve Günlük Yaşam Aktiviteleri Üzerine Etkisi	4-12 yaş	10 E / 10 K	20

Otizm spektrum bozukluğu olan çocuklarda müzik terapinin otizm belirtileri ve yaşam kalitesine etkisi	7-8 yaş	Erkek	24
Müzik Terapi Uygulamalarının Çocuklarda Sosyal Kaygı Üzerine Etkisi	9-16 yaş	2 E / 10 K	12

Tablo 3 incelendiğinde çalışmaların katılımcılarının yaş aralıklarının 4 ile 16 arasında değiştiği görülmektedir. Cinsiyet dağılımı açısından bazı çalışmalarda dengeli bir dağılım yapılmışken, bazılarında bir cinsiyet daha ağırlıktadır. Katılımcıların 91'inin erkek 35'inin Kız olduğu tespit edilmiştir. Katılımcı sayıları açısından bakıldığında en yüksek popülasyonun 60 kişi ile cerrahi süreçteki çocuklar üzerine yapılan çalışma olduğu kaydedilmiştir.

Tablo 4.

Katılımcıların özel gereksinimleri

Çalışma Başlığı	Özel Gereksinim Türü
Music Therapy and Hormonal Responses in Autism	Otizm Spektrum Bozukluğu
Müzik Terapinin Cerrahi Uygulanan 6-12 Yaş Arası Çocuklarda Anksiyete, Korku ve Ağrı Yönetimine Etkisi	Cerrahi Operasyon
Serebral Palsili Çocuklarda Nörolojik Müzik Terapi Eğitiminin Yaşam Kalitesi, Katılım ve Günlük Yaşam Aktiviteleri Üzerine Etkisi	Serebral Palsili
Otizm spektrum bozukluğu olan çocuklarda müzik terapinin otizm belirtileri ve yaşam kalitesine etkisi	Otizm Spektrum Bozukluğu
Müzik Terapi Uygulamalarının Çocuklarda Sosyal Kaygı Üzerine Etkisi	Sosyal Kaygı Bozukluğu

Tablo 4'e bakıldığında, çalışmalarda farklı özel gereksinim türleri olan çocuklarla müzik terapinin etkisinin araştırıldığı görülmektedir. Yapılan iki çalışmada Otizm Spektrum Bozukluğunu ele alırken, diğer çalışmalarda cerrahi operasyon geçiren, Serebral Palsili ve kaygı bozukluğu olan çocuklar üzerinde çalışıldığı görülmektedir. Bu çeşitlilik ile müzik terapinin farklı özel gereksinim türlerine yönelik etkilerinin araştırılmasına olanak sağladığı düşünülebilir.

Tablo 5.

Çalışmalarda kullanılan müzik terapi yöntemleri

Çalışma Başlığı	Yöntem
Music Therapy and Hormonal Responses in Autism Müzik Terapinin Cerrahi Uygulanan 6-12 Yaş Arası Çocuklarda Anksiyete, Korku ve Ağrı Yönetimine Etkisi	Aktif ve Pasif müzik terapi yöntemi uygulanmış, Pasif müzik terapi yöntemi uygulanmış, çocuğun seçtiği müzik kendisine dinletilmiştir.
Serebral Palsili Çocuklarda Nörolojik Müzik Terapi Eğitiminin Yaşam Kalitesi, Katılım ve Günlük Yaşam Aktiviteleri Üzerine Etkisi	Aktif ve Pasif müzik terapi yöntemi uygulanmış, doğaçlama yöntemi kullanılmıştır.
Otizm spektrum bozukluğu olan çocuklarda müzik terapinin otizm belirtileri ve yaşam kalitesine etkisi	Doğaçlama müzik terapi yöntemi kullanılmıştır.
Müzik Terapi Uygulamalarının Çocuklarda Sosyal Kaygı Üzerine Etkisi	Doğaçlama ve Şarkı Sözü Oluşturma yöntemi kullanılmıştır.

Tablo 5 incelendiğinde, yapılan çalışmaların birinde pasif yöntem, ikisinde hem aktif hem pasif yöntemlerin kullanıldığı ve diğer iki çalışmada doğaçlama ve şarkı sözü oluşturma gibi aktif yöntemlerin kullanıldığı görülmektedir.

Tablo 6.

Çalışmalarda kullanılan araştırma yöntemleri ve ölçekler

Çalışma Başlığı	Araştırma Yöntemi	Kullanılan Ölçekler / Testler
Music Therapy and Hormonal Responses in Autism	Deneysel, Pre-post ölçüm	Çocukluk Otizmi Değerlendirme Ölçeği (ÇODÖ), Hormon ölçümleri (Kortizol, ACTH, Adrenalin, Noradrenalin)
Müzik Terapinin Cerrahi Uygulanan 6-12 Yaş Arası Çocuklarda Anksiyete, Korku ve Ağrı Yönetimine Etkisi	Kontrollü Deney, Pre-post ölçüm	ÇADİ, Tıbbi İşlemler Korku Ölçeği, Visual Analog Skala (VAS), FLACC (Face-Legs-Activity-Cry-Consability Pain Scale)
Serebral Palsili Çocuklarda Nörolojik Müzik Terapi Eğitiminin Yaşam Kalitesi, Katılım ve Günlük Yaşam Aktiviteleri Üzerine Etkisi	Kontrollü Deney, Pre-post ölçüm	Serebral Palsi Yaşam Kalite Anketi (CPQOL), Çocuk ve Adölesan Katılım Anketi (CASP), Çocuklar için Fonksiyonel Bağımsızlık Ölçeği (WeeFIM)
Otizm spektrum bozukluğu olan çocuklarda müzik terapinin otizm belirtileri ve yaşam kalitesine etkisi	Deneysel, Pre-post Ölçüm	Otizm Davranış Kontrol Listesi (ODKL), Çocuklar için Yaşam Kalitesi Ölçeği (ÇİYKÖ)

Tablo 6'ya bakıldığında, çalışmaların ikisinde deneysel, ikisinde kontrollü deneysel ve birinde karma yöntem (yarı-deneysel nicel ve olgubilimi nitel desen) kullanıldığı görülmektedir. Çalışmaların tümünde pre-post ölçüm yapılmış, müzik terapi öncesi ve sonrasındaki değişiklikler ölçülmüştür.

SONUÇ

Bu araştırma ile çocuklar üzerine yapılan müzik terapi alanları, yöntemleri ve etkileri ülkemizde yapılan çalışmalar bazında incelenmiştir. Türkiye’de bu alanda literatüre girmiş makale ve tezlerde belirlenen özel gereksinimli çocukların, hangi yöntemlerle, hangi yaş gruplarında, hangi materyallerle çalışıldığı karşılaştırılmıştır.

Birinci alt probleme dair bulgular, müzik terapinin özel gereksinimli çocukların psikolojik ve fiziksel sorunlarını hedef alarak bu alanlarda gelişim sağlamak için uygulandığı ortaya çıkmıştır. İkinci alt probleme dair bulgular, katılımcı yaşlarının 4 ila 16 arasında değiştiğini ve cinsiyet dağılımında bazı çalışmaların dengeli olmadığını göstermektedir. Üçüncü alt probleme yönelik olarak, müzik terapinin otizmden serebral palsiye, cerrahi süreçlerden kaygı bozukluğuna kadar farklı gereksinim gruplarında etkilerinin araştırıldığı tespit edilmiştir. Dördüncü alt probleme dair bulgular, çalışmalarda kullanılan yöntemlerin çeşitlilik gösterdiğini, hem aktif hem pasif yöntemlerin kullanıldığını ortaya koymaktadır. Beşinci alt probleme ilişkin olarak, deneysel ve yarı-deneysel gibi farklı araştırma desenlerinin tercih edildiği ve tüm çalışmalarda pre-post ölçümlerin yapıldığı anlaşılmaktadır.

Ülkemizde Çocuklara Uygulanan Müzik Terapi Yaklaşımları ve Karşılaştırılması isimli araştırmanın sonucunda ülkemizde yapılan çalışmaların sınırlı olduğu tespit edilmiştir. Çocuklara yönelik sosyal fiziksel bilişsel psikolojik alanlarda araştırmaların artırılması gerektiğini göstermektedir.

ÖZET

Dünya genelinde yaşlı nüfusunun çoğalması ile bu bireylere yönelik yapılan fiziksel, zihinsel ve psikolojik çalışmalarda artış görülmektedir. Bu çalışmaların yöntemleri günden güne çeşitlilik oluşturmaktadır. İnsanın gelişim evreleri göz önünde bulundurulduğunda, yaşlılık süreci genel olarak fiziksel zorlanma, zihinsel karışıklık, ruhsal çöküntünün daha çok yaşandığı bir zaman dilimidir. Bu zaman diliminde karşımıza çıkan en önemli değişim unsuru uyku kalitesidir. Uyku insan hayatında önemli bir rol oynamaktadır. Yaşlı bireylerin yaşamakta olduğu uyku problemleri, yaşam standartlarını önemli ölçüde etkilemektedir. Günümüzde bu tarz problemlere yönelik yapılan çalışmalarda destekleyici tedavi yöntemlerinden birisi de müzik terapisi. Müzik terapisi, ilaç tedavisi, bilişsel davranışçı terapi gibi diğer tedavi yöntemleriyle birlikte kullanılmaktadır. Özellikle ilaçların yan etkileri nedeniyle zorlanan yaşlı bireyler için müzik terapisi, güvenli ve konforlu bir yöntem olabilmektedir. Bu terapi yönteminde kullanılan müzik türlerinin yaşlılar üzerindeki etkileri kişiden kişiye değişkenlik göstermekle birlikte, yaşlı bireylerin psikolojik ve fizyolojik tepkileri incelenip veriler elde edilmektedir. Yaşlı bireyler ile yapılan çalışmalarda bu popülasyon “Geriatrı” olarak adlandırılmaktadır. Geriatride yaşam kalitesinin iyi seviyede sürdürülebilmesi için bu bireylerin yeterli saat aralığında uykularını almaları gerekmektedir. Bu çalışmanın amacı, yaşlılarda uyku takibinin belli bir düzene girmesi için çalışılan müzik terapi yöntemlerinin sonuçlarını incelemektir. Fizyolojik ve psikolojik mekanizmalarla uyku kalitesini arttıran müzik terapisi, yaşlıların genel sağlık durumlarını iyileştirmek adına önemli bir araçtır. Gelecekte yapılacak kapsamlı araştırmalarla, müzik terapisinin uyku bozukluklarının tedavisindeki yeri daha iyi anlaşılıp, tedavi planları geliştirilebilir.

Anahtar Kelimeler : Yaşlılık, Müzik Terapisi, Uyku, Uyku Bozukluğu

ABSTRACT

With the increase in the elderly population worldwide, there has been a rise in physical, mental, and psychological studies conducted for this group. The methods used in these studies are diversifying day by day. Considering the stages of human development, old age is generally a period marked by more physical strain, mental confusion, and emotional distress. One of the most significant changes during this period is sleep quality. Sleep plays an important role in human life. Sleep problems experienced by elderly individuals significantly affect their quality of life. Today, one of the supportive treatment methods used for such problems is music therapy. Music therapy is used alongside other treatment methods such as medication and

cognitive-behavioral therapy. Especially for elderly individuals who struggle due to the side effects of medications, music therapy can be a safe and comfortable approach. The effects of the types of music used in this therapy may vary from person to person, but data is obtained by examining the psychological and physiological responses of elderly individuals. In studies conducted with elderly individuals, this population is referred to as "Geriatrics." To maintain a good quality of life in geriatrics, it is essential for these individuals to get adequate sleep during the night. The aim of this study is to examine the results of music therapy methods used to regulate sleep patterns in the elderly. Music therapy, which enhances sleep quality through physiological and psychological mechanisms, is an important tool for improving the overall health of elderly individuals. With future comprehensive research, the role of music therapy in the treatment of sleep disorders can be better understood, and treatment plans can be developed.

Keywords: Aging, Music Therapy, Sleep, Sleep Disorders

GİRİŞ

Müzik, insanın duygularını ifade ettiği, stresini attığı ve hatta bedensel sağlığını iyileştirdiği evrensel bir dildir. Peki, müzik, yaşlı bireylerin sıklıkla yaşadığı uyku sorunlarına çözüm olabilir mi? Bu çalışma, müzik terapisinin yaşlı bireylerin uyku kalitesi üzerindeki etkilerini ve bu terapinin yaşam kalitesine olan katkısını araştırmaktadır.

Yaşlılık

Yaşlılık, biyolojik, psikolojik ve sosyal olarak karmaşık bir süreçtir. Kesin bir yaş sınırı vermek yerine, genellikle kronolojik yaş, biyolojik yaş ve psikolojik yaş olmak üzere üç boyutuyla ele alınır;

Kronolojik Yaş: Doğum tarihinin günümüz tarihine olan uzaklığıdır.

Biyolojik Yaş: Vücut organlarının ve sistemlerinin işlevselliğine göre belirlenir. Kronolojik yaşıyla aynı olmak zorunda değildir.

Psikolojik Yaş: Kişinin duygusal, zihinsel ve sosyal olgunluk düzeyidir.

Bu üç boyutun bir araya gelmesiyle kişi yaşlılık sürecine adım atar. Ancak yaşlılık, sadece fiziksel bir gerileme değil, aynı zamanda sosyal, duygusal ve zihinsel bir dönüşüm sürecidir. (Asi Karakaş, S., & Durmaz, H. 2017).

Kentleşmenin artması ile ataerkil aile, çekirdek aile yapısına hızlanarak dönüşmüştür. Zaman içerisinde çocuklar ile yaşanan sorunlar veya eşlerden birinin ölümü gibi durumlar sebebiyle oluşan yalnızlık, huzurevlerinde yaşayan yaşlıların sayısını günden güne arttırmaktadır. (Altan Sarıkaya ve Oğuz, 2016).

İnsan yaşamının her döneminde önemli bir yere sahip olan müziğin, kronik hastalıkların çoğaldığı yaşlılık döneminde nörolojik, mental ve psikolojik yönden pek çok olumlu etkisinin olduğu düşünülmektedir.

Müzik Terapi

“Müzik terapi” hastaların, danışanların ve ihtiyaç duyanların sağlığı için tedavi ve bakım anlamını taşıyan “terapi” kelimesi ve ses ve ritmin bir ahenk içinde duyurulması anlamında kullanılan “müzik” kelimelerinin birlikte kullanılmasıyla oluşmuştur (Birkan, 2014). Dünya Müzik Terapisi Federasyonu’na göre müzik terapi; “Bir kişi veya grubun fiziksel, duygusal, sosyal ve kognitif ihtiyaçlarını karşılamak amacıyla gereksinim duyduğu iletişim, ilişki, öğrenme, ifade, mobilizasyon, organizasyon ve diğer ilgili terapötik etkenleri geliştirmek ve artırmak için müziğin ve/veya müzikal elemanların (ses, ritim, melodi ve armoni) eğitim almış bir müzik terapisti tarafından tasarlanarak kullanılması” olarak tanımlanmıştır (World Federation of Music Therapy, 2011). Müzik terapi; müzik dinleme ve dinletmenin yanında iletişim kurma ve psikolojik tedavi için de yaklaşık 2500 senedir kullanılan bir yöntemdir. Müzik, son yıllarda “müzik terapi” adı altında özel bir tedavi aracı olarak ele alınmış olup, bilimsel ve metodolojik olarak kullanılmaya başlanmıştır (Ak, 2016).

Müzik terapinin geçmişi çok eskilere dayanmaktadır. Tarihi kayıtlara göre, Homeros ameliyatlarda, Aesculapius ise işitme bozukluklarının tedavisinde müzikten yararlanmışır. Antik Yunan filozofu

Eflatun, MÖ 400'lü yıllarda, müziğin bireyin psikolojik durumunu etkileyerek hoşgörü ve rahatlama sağladığına dair görüşler ileri sürmüştür (Karamızrak, 2014).

Eski yüzyıllarda makamların hangi vakitlerde uygulanması gerekliliği ünlü düşünür Farabi tarafından ruha etkilerini de belirterek şu şekilde sınıflandırmıştır; (Kaçar Yahya, 2008).

‘Rast: Seher vaktinde dinlenmesi daha etkindir ve mutluluk verir.

Rehavi: Seher vaktinde dinlenmesi daha etkindir ve sonsuzluk hissi verir.

Köçek: Hassasiyet ve duyarlılık hissi verir.

Büzürk: Çekingenlik duygusu verir.

İsfahan: Güven hissi verir.

Neva: Ferahlık hissi verir.

Uşşak: Mutluluk verir.

Zirgüle: Uyku hali verir.

Saba: Cesaret, kuvvet ve azim verir.

Buselik: Kuvvet verir.

Hüseyni: Huzur ve rahatlık verir.

Hicaz: Alçakgönüllülük duygusu verir.

Nihavend: Sakinlik ve huzur verir '(Kaçar Yahya, 2008; Erer ve Atıcı, 2010; Gökalp, 2015).

Günümüzde müzik terapide bir çok müzik türü kullanılmakla beraber aktif pasif yapılan çalışmalarda sözlü enstrümantel ve ritimsel eserler de kullanılmaktadır.

Müzik Terapisi ve Yaşlılık

Müzik insan yaşamının her döneminde önemli bir yere sahiptir (Gençel 2006). Yener'in (2011) belirttiğine göre Dr.Frederick Times'ın (1999) hazırladığı rapora göre yaşlıların müzikle ilgilenmeleri onları daha sağlıklı kılmaktadır. Müzik ile yaşlıların yalnızlık, depresyon, anksiyete gibi şikayetlerinde azalma gözlenmektedir (Knight 2011). Müzik, yaşlı bireyin kendisine olan güvenini artırır. Bu güven artışındaki neden müziğin yaşlıların bağımsızlık hissini arttırmasından kaynaklanmaktadır (Duygu K. 2014).

Müzik terapi, yaşlı bakım evlerinde ve sağlık kuruluşlarında sıklıkla kullanılan bir yöntemdir. Müzik dinlemek, şarkı söylemek, enstrüman çalmak gibi aktiviteler, yaşlıların yaşam kalitesini arttırmaya ve daha sağlıklı bir yaşama kavuşmalarına yardımcı olur

İlgili Araştırmalar

Yapılan bilimsel çalışmalar, müzik terapinin sağlık üzerindeki faydalarını ortaya koymuştur. Örneğin, Amaral ve arkadaşlarının 2016 yılında gerçekleştirdiği kapsamlı bir inceleme, müziğin kan basıncını düşürücü etkisi olduğunu kanıtlamıştır. Bekiroğlu (2011) tarafından yürütülen çalışmada, klasik Türk müziğinin yaşlı hipertansif bireylerde sistolik kan basıncı üzerindeki hipotansif etkisi

incelenmiş ve anlamlı bir düşüş olduğu belirlenmiştir. Chan ve arkadaşları (2010) tarafından yürütülen çalışmada, müzik terapinin yaşlı hastalarda uyku kalitesi ve depresyon skorları üzerindeki pozitif etkileri incelenmiş ve anlamlı bir iyileşme olduğu belirlenmiştir (Sağlık Bilimleri Üniversitesi Hemşirelik Dergisi Sayı: 2, 113-114, 2019). Altan Sarıkaya ve Oğuz (2016) tarafından yürütülen çalışmada, kognitif ve duyuşsal bozuklukları olan yaşlı bireylerde müzik terapisinin uyku kalitesi üzerindeki etkileri incelenmiş ve anlamlı bir iyileşme olduğu belirlenmiştir. İki haftalık bir müzik terapisi programına katılan 117 depresyon hastası üzerinde yapılan çalışmada (Werner ve ark., 2015), depresyon belirtilerinde önemli bir azalma gözlemlenmiştir. Stresle başa çıkmak için müzik terapisi etkili bir yöntem olabilir. Gökalp (2015) bu bulguyu destekleyen bir çalışma yapmıştır.

ARAŞTIRMA VE BULGULAR

1. Araştırma Yöntemi

Bu çalışmada, 'müzik terapisi', 'yaşlılık', 'uyku' ve 'uyku bozukluğu' kavramları üzerine kapsamlı bir literatür taraması ve tarihsel tarama yönetimi ile gerçekleştirilmiştir. Bu araştırmanın amacı yaşlı bireylere yönelik, doğrudan ve etkileşimli müzik terapi uygulamalarını kullanan çalışmaları belirlemektir. Bu sayede, müzik terapinin yaşlıların uyku kalitesi üzerindeki etkileri hakkında daha derinlemesine bilgi edinme hedeflenmektedir.

2. Problem Cümlesi

Müzik terapisi, yaşlı bireylerin uykuya dalma sürelerini kısaltmakta ve genel uyku kalitesini iyileştirmekte midir?

2.1.1 Alt Problem Cümleleri

1.Farabi'nin uyku halini sağlayan makam olarak önerdiği zirgüle, yapılan araştırmalar sonucu bunu destekler mi ?

2.Yaşlıların uyku kalitesini arttırmak için hangi makam kullanılmalıdır?

3. Bulgular

Bu araştırma, Nihan Altan Sarıkaya ve Oğuz Sıdika'nın 2016 yılında "Huzurevinde Kalan Yaşlılarda Pasif Müzikoterapinin Uyku Kalitesi Üzerine Etkisi" başlıklı makaleden alınarak bulgular elde edilmiştir.

Tablo 1. Yaşlı bireylerin bireysel özelliklerinin dağılımı (n=31)

Bireysel özellikler	n	%
Yaş (aralık: 64—91)		
80 yaş ve altı	13	41.9
81 yaş ve üzeri	18	58.1
Cinsiyet		
Kadın	20	64.5
Erkek	11	35.5

8th INTERNATIONAL HALICH CONGRESS ON MULTIDISCIPLINARY SCIENTIFIC RESEARCH

Medeni durumu		
Evli	6	19.4
Bekar	10	32.2
Dul	15	48.4
Gelir durumu		

Orta	31	100
Öğrenim durumu		
İlköğretim	13	41.9

Sigara içme		
Kullanıyorum	6	19.4
Kullanmıyorum	25	80.6
Alkol kullanma		
Kullanıyorum	29	93.5
Kullanmıyorum	2	6.5

Tablo 1'e bakıldığında elde edilen bulgulara göre, müzik terapisi yaşlıların uyku kalitesini iyileştirmede önemli bir potansiyele sahiptir. Çalışmaya katılanların büyük bir kısmı 81 yaş ve üzeri olup, yaşlı nüfusun genel özelliklerini yansıtmaktadır. Katılımcıların çoğunluğu kadınlardan oluşmaktadır. Katılımcıların büyük bir kısmı kronik hastalıklara sahip ve düzenli ilaç kullanmaktadır. Bu durum,

yaşlılık döneminde sıklıkla görülen sağlık sorunlarına işaret etmektedir. Katılımcıların çoğunluğu orta gelir düzeyine sahip ve sosyal güvencesi bulunmaktadır. Ancak, eğitim düzeyi genel olarak ilkokul seviyesinde kalmıştır.

Tablo 2. Yaşlı bireylerin uyku özelliklerinin dağılımı (n=31)

	n	%
Yatma zamanı		
Saat 22:00'dan önce	11	35.5
Saat 22:00–23:00	14	45.2
Saat 23:00–24:00	6	19.3
Uykuya dalma gücü		
30 dk. dan daha az	21	67.8
30 dk. ve üzeri	10	32.2
Sabah uyanma zamanı		
Sabah saat 06:00'dan önce	2	6.4
Saat 06:00–07:00 arası	20	64.6
Saat 07:00 ve üzeri	9	29.0

Gece uyanma durumu		
Hiç uyanmama	10	32.3
Haftada birden az	10	32.3
Haftada bir veya birden fazla	10	32.3
Haftada üç veya daha fazla	1	3.1

Tablo 2'ye bakıldığında Çalışmaya katılan yaşlıların büyük bir kısmı uykuya dalma güçlüğü, gece uyanmaları gibi uyku sorunları yaşamaktadır. Çalışmaya katılan yaşlı bireylerin çoğunluğu (yaklaşık %65) sabah 06:00-07:00 saatleri arasında uyanmakta ve uyku süresince sık sık uyanma yaşamaktadır.

Tablo 3. Yaşlı bireylerin uyumadan önce yaptığı alışkanlıklar ve müzik hakkındaki görüşlerinin dağılımı (n=31)

Uyumadan önce yapılan alışkanlıkların durumu		
Var	12	38.7
Yok	19	61.3

Alışkanlıklar*		
Tv seyredirim	8	25.8
Sohbet ederim	5	16.1
Müzik dinlerim	2	6.4

Kitap okurum	1	3.2
Kalkıp dolaşırım	1	3.2
Müzik dinlemekten hoşlanma durumu		
Evet	27	87.1
Hayır	4	12.9
Uyumadan önce müzik dinleme durumu		
Evet	26	83.9
Hayır	5	16.1

Hoşlanılan müzik türü		
Türk Sanat Müziği	20	64.5
Türk Halk Müziği	6	19.4
Klasik müzik	3	9.7
Pop müzik	2	6.5

Tablo 3'e bakıldığında katılımcıların önemli bir kısmı uykuya dalmadan önce televizyon izlemek veya sohbet etmek gibi aktiviteler yaparken, yaklaşık %85'i müzik dinlemeyi tercih etmekte ve özellikle Türk Sanat Müziği'ni sevmektedir. Aynı araştırmada yaşlı bireylere dinletilen müziğin seçimi öncesi, Türk Musikisini Araştırma ve Tanıtma grubu (TÜMATA) derneği ile görüşülmüştür. Derneğin yönlendirmesi ve literatür bilgisi doğrultusunda 'Uşşak' makamı dinletilmiştir.

Müzik Terapisi Öncesi (PMTÖ): Araştırmaya katılan yaşlı bireylerin yaklaşık yarısı (%51.6) uyku kalitesini kötü olarak değerlendirmiştir. Bu durum, yaşlı nüfusunda sıklıkla görülen uyku problemlerinin varlığını göstermektedir.

Müzik Terapisi Sonrası (PMTS): Pasif müzik terapisi uygulandıktan sonra, katılımcıların önemli bir kısmı (%64.5) uyku kalitesini iyi olarak değerlendirmiştir. Bu durum, müzik terapisinin uyku kalitesi üzerinde olumlu bir etki yarattığını göstermektedir.

Müzik terapisi öncesi ve sonrası karşılaştırıldığında, katılımcılar genel olarak uyku kalitesini daha iyi olarak değerlendirmişlerdir. Ancak, uyku kalitesinin farklı alt boyutlarına bakıldığında daha detaylı bir tablo ortaya çıkmıştır.

Özellikle, uykuya dalma süresi üzerindeki etkisi dikkat çekicidir. Müzik terapisi sonrasında katılımcılar daha kısa sürede uykuya dalmışlardır. Bu bulgu, müziğin gevşeme ve rahatlama sağlaması sayesinde uyku başlangıcını kolaylaştırdığını göstermektedir.

SONUÇ

Huzurevinde kalan yaşlılarda pasif müzikoterapinin uyku kalitesine etkisi isimli araştırmada; pasif müzik terapisinin yaşlı bireylerin uyku kalitesi üzerindeki olumlu etkilerini ortaya koymuştur. Elde edilen bulgulara göre, müzik terapisi uygulanan grupta uykuya dalma süresi

kısalmış ve genel olarak uyku kalitesi iyileşmiştir. Bu durum, müziğin sağladığı gevşeme ve rahatlama etkisiyle uyku düzeninin düzenlendiğini göstermektedir.

Araştırmada, pasif müzik terapisinin uyku kalitesinin farklı boyutları üzerindeki etkileri incelendiğinde çarpıcı sonuçlar elde edilmiştir. Ancak, uyku kalitesinin tüm boyutlarında aynı düzeyde iyileşme görülmemiştir.

Müzik terapisinin uykuya dalma süresi üzerindeki etkisi daha belirginken, toplam uyku süresi, uyku bozuklukları gibi diğer boyutlarda istatistiksel olarak anlamlı bir farklılık bulunamamıştır. Bu durum, müzik terapisinin uyku sorunlarının tümünü çözmek yerine, belirli bir alanda daha etkili olabileceğini göstermektedir.

Araştırmada, katılımcıların uyku ilacı kullanımına müdahale edilmediği için bu değişkenin analizlere dahil edilmemesi, sonuçların yorumlanmasında bir sınırlama olarak değerlendirilebilir. Uyku ilaçlarının müzik terapisinin etkileri üzerindeki potansiyel etkileşimi, gelecekteki çalışmalarda daha detaylı incelenebilir.

Öte yandan, öznel uyku kalitesi, toplam uyku süresi, uyku bozukluğu gibi diğer alt boyutlarda istatistiksel olarak anlamlı bir farklılık bulunamamıştır. Bu durum, müzik terapisinin uyku kalitesinin tüm yönlerini eşit derecede etkilemediğini göstermektedir.

Birinci ve ikinci alt problem cümlelerinden elde edilen bulgulara göre Farabi'nin sınıflandırdığı makamlarda uşşak mutluluk verip zirgüle uyku hali verirken “Huzurevinde kalan yaşlılarda pasif müzikoterapinin uyku kalitesine etkisi” isimli araştırmada uşşak makamının kullanıldığı ve yaşlı hastaların daha rahat uykuya daldığı tespit edilmiştir, bu durumda Farabi'nin listelediği makamların günümüzde tekrar değerlendirilmesi gerektiği ve farklı popülasyonlardaki uyku sorunları için kullanılması konusunda araştırmaların yapılması düşünülebilir.

Sonuç olarak, bu araştırma makam müziği dinletilerek uygulanan pasif müzik terapisinin yaşlı bireylerin yaşam kalitesini arttırmada etkili olduğunu göstermiştir. Müzik terapisinin uyku sorunlarının çözümünde daha etkin kullanılabilmesi için kapsamlı çalışmalar yapılması gerekmektedir.

ÖZET

Bu çalışmanın amacı, sporcularda temporomandibular eklem disfonksiyonu (TMED), yaralanma geçmişi, alt ekstremite fonksiyonları üzerindeki ilişkileri incelemektir. TMED'in kas kuvveti ve denge üzerindeki etkisine dair bulgular sınırlıdır. Hamstring kas kuvveti, sporcularda yaralanma riskini azaltma ve performansı artırmada önemlidir. Bu çalışma, TMED'in şiddeti ve yaralanma geçmişi fiziksel performans üzerindeki etkilerini ortaya koymayı hedeflemiştir. Çalışmaya toplam n=172 sporcu katılmıştır (basketbol n=32, futbol n=95, voleybol n=25, hentbol n=20). Sporcuların yaş ortalaması 21.21±1.84 olup yaş aralığı 18-26 olarak belirlenmiştir. Çalışmaya katılan bireylerin yaralanma geçmişi, var veya yok olarak sorgulanmış ve gruplandırılmıştır.

TMED varlığı, Fonseca Anamnestik Anketi ile değerlendirilmiş ve sporcuların %35'inde hafif, %20'sinde orta, %10'unda şiddetli TMED tespit edilmiştir. Hamstring kas kuvveti, Nordic Hamstring Exercise (NHE) sırasında IVMES H-Bord cihazı ile ölçülmüş ve TMED kategorileri arasında anlamlı bir fark bulunmamıştır ($p>0.05$, $p>0.05$, $p>0.05$). Squat Jump Double Testi sonuçları, sıçrama performansının TMED veya yaralanma geçmişiyle ilgili belirgin bir farklılık göstermediğini ortaya koymuştur ($p>0.05$, $p>0.05$, $p>0.05$).

MANOVA analizleri, Fonseca durumu ve yaralanma geçmişi hamstring ve sıçrama kuvvetleri üzerinde anlamlı bir etkisi olmadığını göstermiştir (Fonseca Durumu: $p=0.269$, $p=0.269$; Yaralanma Geçmişi: $p=0.536$, $p=0.536$). Regresyon analizlerinde, Injury_Status değişkeninin hamstring kuvveti üzerinde yalnızca marjinal bir etkisi bulunmuştur (Max_Left için $p=0.082$, $p=0.082$, Max_Right için $p=0.059$, $p=0.059$). Lojistik regresyon sonuçları, bu değişkenlerin yaralanma durumunu öngörmedeki yetersizliğini vurgulamıştır (Pseudo $R^2=0.0136$, $R^2=0.0136$).

Bu çalışma, TMED, hamstring kuvveti ve sıçrama performansı arasında anlamlı bir ilişki olmadığını göstermektedir. Sporcularda performans ve yaralanma riskinin daha iyi anlaşılabilmesi için farklı parametrelerin dahil edildiği kapsamlı çalışmalara ihtiyaç vardır. Bu bulgular, spor performansını artırmak için multidisipliner yaklaşımların önemini vurgulamaktadır.

Anahtar kelimeler: Hamstring Kuvveti; Temporomandibular Eklem Disfonksiyonu; Yaralanma Geçmişi; Sıçrama Performansı; Sporcular

ABSTRACT

The aim of this study is to examine the relationships between temporomandibular joint dysfunction (TMJD), injury history, and lower extremity functions in athletes. Evidence on the impact of TMJD on muscle strength and balance is limited, but it is thought to indirectly affect

athletic performance. Hamstring muscle strength plays a critical role in reducing injury risk and enhancing performance in athletes. This study aims to clarify the effects of TMJD severity and injury history on physical performance. A total of n=172 athletes participated in the study (basketball n=32, football n=95, volleyball n=25, handball n=20). The average age of the participants was 21.21±1.84 years, with an age range of 18-26 years. The injury history of participants was assessed and grouped as either present or absent.

TMJD presence was evaluated using the Fonseca Anamnestic Index, and 35% of athletes were found to have mild TMJD, 20% moderate TMJD, and 10% severe TMJD. Hamstring strength was measured during the Nordic Hamstring Exercise (NHE) using the IVMES H-Bord device, and no significant differences were observed between TMJD categories ($p>0.05$). Jump performance was assessed using the Squat Jump Double Test, and no significant differences in performance were found between TMJD or injury history groups ($p>0.05$).

MANOVA analyses showed no significant effects of Fonseca condition or injury history on hamstring and jump strength metrics (Fonseca Condition: $p=0.269$; Injury History: $p=0.536$). Regression analyses indicated a marginal influence of Injury_Status on hamstring strength (Max_Left: $p=0.082$, Max_Right: $p=0.059$). Logistic regression revealed that these variables were insufficient in predicting injury status (Pseudo $R^2=0.0136$).

This study demonstrates no significant relationship between TMJD, hamstring strength, and jump performance. To better understand performance and injury risk in athletes, further comprehensive studies involving additional parameters are required. These findings highlight the importance of multidisciplinary approaches to optimizing athletic performance.

Key words: Hamstring Strength; Temporomandibular Joint Dysfunction; Injury History; Jump Performance; Athletes

1. GIRIS

Temporomandibular eklem disfonksiyonu (TMED), kas-iskelet sistemi fonksiyonlarını, postürü ve dolayısıyla atletik performansı etkileyebilen çok faktörlü bir durumdur. TMED; ağrı, eklem sesleri ve sınırlı mandibular hareket açıklığı ile karakterizedir ve kraniyofasiyal bölgenin ötesinde sistemik etkiler gösterebilir. TMED'in alt ekstremite fonksiyonları üzerindeki etkilerine dair çalışmalar mevcut olsa da, bu etkilerin elit sporculardaki yansımaları henüz yeterince anlaşılamamıştır (1)

Sporcularda hamstring kas kuvveti, hem yaralanmaların önlenmesi hem de fiziksel performansın artırılması için kritik bir öneme sahiptir. İki eklemlilikli bir kas grubu olan hamstringler, sprint, sıçrama ve yavaşlama gibi patlayıcı hareketlerde rol oynar ve bu hareketler basketbol, futbol, voleybol ve hentbol gibi spor dallarında temel bir gerekliliktir. Hamstring kuvvetindeki zayıflık veya dengesizlikler, sporcularda hem yaralanma riskini artırmakta hem de performans göstergelerini olumsuz etkileyebilmektedir (2)

Son dönemde yapılan çalışmalar, TMED ile alt ekstremite kas-iskelet disfonksiyonları arasında bir bağlantı olabileceğini ve bunun nörolojik veya biyomekanik yollarla gerçekleşebileceğini öne sürmüştür (3). Örneğin, bazı araştırmalar, kraniyofasiyal disfonksiyonların postüral kontrol, kas aktivasyon desenleri ve kuvvet üretim kabiliyeti üzerinde etkili olabileceğini göstermiştir (3). Ancak TMED'in hamstring kuvveti ve sıçrama performansı gibi spesifik performans parametreleri üzerindeki etkileri hala tartışmalıdır.

Yaralanma geçmişi, atletik performansı ve rehabilitasyon süreçlerini etkileyen önemli bir faktördür. Geçirilmiş yaralanmalar, kuvvet, propriosepsiyon ve nöromüsküler koordinasyon üzerindeki kronik eksikliklere yol açarak tekrarlayan yaralanma riskini artırabilmektedir.⁴ Yaralanma geçmişinin, TMED ile birlikte, diğer biyomekanik parametrelerle nasıl etkileştiğini

anlamak, kapsamlı rehabilitasyon ve yaralanma önleme stratejilerinin geliştirilmesi açısından önemlidir (4).

Fonseca Anamnestik Anketi (FAI), TMED şiddetini değerlendirmek için sıklıkla kullanılan bir ölçektir. Bu yöntem, TMED’i kategorize etmek için pratik ve etkili bir yol sunarak, performans sonuçlarıyla ilişkilerini araştırma imkânı sağlamaktadır (2). Ancak, TMED değerlendirmelerini Nordic Hamstring Exercise (NHE) testi gibi objektif alt ekstremite performans ölçüleriyle entegre eden araştırmalar sınırlıdır (5).

Bu çalışma, TMED, yaralanma geçmişi, hamstring kuvveti ve sıçrama performansı arasındaki ilişkileri araştırmayı amaçlamaktadır. Güçlü istatistiksel analizler kullanarak, TMED şiddeti ve yaralanma geçmişinin önemli performans göstergeleri üzerindeki potansiyel etkilerini aydınlatmayı hedeflemektedir. Bu bulgular, atletik performansın optimize edilmesi için multidisipliner yaklaşımların önemine ışık tutabilir.

2. MATERYAL VE YONTEM

Araştırma Tasarımı ve Katılımcılar

Bu çalışma, kesitsel gözlemsel bir araştırma olarak tasarlanmış ve sporcularda temporomandibular eklem disfonksiyonu (TMED), yaralanma geçmişi, hamstring kas kuvveti ve sıçrama performansı arasındaki ilişkileri değerlendirmek amacıyla gerçekleştirilmiştir. Araştırmaya toplamda 172 aktif olarak spor yapan spor bilimleri öğrencileri ve katılımcılar basketbol (n=32), futbol (n=95), voleybol (n=25) ve hentbol (n=20) branşlarından seçilmiştir. Katılımcıların yaş ortalaması 21.21 ± 1.84 yıl olarak hesaplanmış ve yaş aralığı 18-26 yıl olarak belirlenmiştir. Çalışmaya dahil edilecek sporcularda en az üç yıl düzenli antrenman geçmişine sahip olma şartı aranmıştır. Bu kriter, sporcuların branşlarında belirli bir seviyeye ulaşmış olmalarını ve çalışmanın hedef popülasyonunu doğru temsil etmelerini sağlamak amacıyla belirlenmiştir.

Katılımcılar seçilirken dışlama kriterleri özenle uygulanmıştır. Sistemik hastalıkları olan (örneğin diyabet, hipertansiyon veya romatolojik hastalıklar), akut yaralanmalara sahip olan veya çalışmanın uygulanmasını ve sonuçlarını etkileyebilecek nörolojik, kardiyovasküler ya da kas-iskelet sistemi bozuklukları olan sporcular araştırma dışında tutulmuştur. Bu kriterler, çalışma verilerinin güvenilirliğini artırmak ve TMED ile performans parametreleri arasındaki ilişkilerin daha net bir şekilde incelenmesine olanak tanımak için uygulanmıştır.

Araştırma protokolü, Kütahya Dumlupınar Üniversitesi Etik Kurulu tarafından onaylanmış ve Helsinki Bildirgesi’ne uygun olarak yürütülmüştür (Etik Kurul Tarih ve Sayısı: 05.07.2024-321). Çalışmaya katılmayı kabul eden tüm sporculara araştırmanın amacı, yöntemi ve olası riskleri detaylı olarak açıklanmıştır. Katılımcılardan yazılı bilgilendirilmiş onam alınmış ve tüm verilerin gizliliği korunmuştur. Çalışma süresince elde edilen veriler yalnızca bilimsel amaçlarla kullanılmıştır.

Katılımcılar, yaş, cinsiyet ve spor branşına göre dengeli bir dağılım oluşturacak şekilde seçilmiştir. Ancak futbol branşından katılımcılar, çalışma popülasyonunun yaklaşık %55’ini oluşturarak diğer branşlara kıyasla daha geniş bir grubu temsil etmiştir.

Sonuç olarak, bu çalışmada belirlenen yöntemler ve katılımcı seçimi süreci, TMED ve fiziksel performans parametreleri arasındaki ilişkilerin kapsamlı bir şekilde incelenmesini sağlamak için tasarlanmıştır. Seçim kriterleri, çalışma popülasyonunun güvenilir bir şekilde tanımlanmasını ve elde edilen sonuçların bilimsel geçerliliğini desteklemiştir.

Değerlendirme Yöntemleri

-Temporomandibular Eklem Disfonksiyonu (TMED), katılımcıların kendi bildirimlerine dayalı olarak Fonseca Anamnestik Anketi (FAI) ile değerlendirilmiştir (3). FAI, TMED belirtilerinin varlığını, şiddetini ve bireyin yaşam kalitesi üzerindeki etkilerini ölçmek için yaygın olarak kullanılan, geçerliliği ve güvenilirliği kanıtlanmış bir öz-bildirim aracıdır. Anket,

çene ağrısı, eklem sesleri, çene hareketlerinde kısıtlılık ve stres gibi faktörleri kapsayan bir dizi sorudan oluşmaktadır. Katılımcılar, her soruya “Evet” (10 puan), “Bazen” (5 puan) veya “Hayır” (0 puan) şeklinde yanıt vererek toplamda 0 ile 100 arasında bir skor elde eder. Bu skorlar, TMED şiddetini belirlemek için kullanılır. Toplam skorlarına göre katılımcılar hafif, orta veya şiddetli TMED olarak sınıflandırılmıştır. Hafif TMED, daha çok çene yorgunluğu veya hafif ağrılar gibi belirtilerle ilişkilendirilirken, orta TMED daha belirgin ağrılar, çene hareketlerinde kısıtlılık ve sık eklem sesleri ile karakterizedir. Şiddetli TMED ise yoğun ağrılar, ciddi hareket kısıtlılıkları ve sürekli eklem sesleri gibi belirgin belirtilerle kendini gösterir. Bu değerlendirme yöntemi, bireylerin TMED düzeylerini anlamak ve tedavi planlamasında rehberlik etmek için oldukça etkili bir araçtır.

Yaralanma Geçmişi Değerlendirmesi, katılımcıların yaralanma geçmişi, yapılandırılmış birebir görüşmeler ve takım tıbbi kayıtlarının ayrıntılı incelenmesi yoluyla değerlendirilmiştir. Yapılandırılmış görüşmelerde, sporcuların geçmişte yaşadıkları yaralanmaların türü, lokalizasyonu, şiddeti, rehabilitasyon süreçleri ve spora dönüş süreleri gibi ayrıntılı bilgiler toplanmıştır. Bu görüşmeler sırasında, katılımcılara spesifik sorular yöneltilerek yaralanma öyküleri detaylı bir şekilde sorgulanmıştır. Sorular, kas-iskelet sistemi yaralanmaları, cerrahi müdahaleler, tedavi ve rehabilitasyon süreçleri ile ilgili geçmişteki deneyimlerini kapsamıştır. Ayrıca, sporcuların sakatlık nedeniyle antrenman veya maçlardan uzak kaldıkları süreler ve bu sürelerin spora dönüş süreçlerine etkileri analiz edilmiştir.

Elde edilen veriler doğrultusunda, katılımcılar yaralanma durumlarına göre iki ana gruba ayrılmıştır:

1. **Yaralanma Öyküsü Olanlar:** Bu gruba, geçmişte bir veya birden fazla yaralanma yaşayan sporcular dahil edilmiştir. Yaralanmaların tekrarlayan nitelikte olması, rehabilitasyon süreçlerinin uzunluğu ve yaralanmaların atletik performans üzerindeki kalıcı etkileri dikkate alınmıştır.
2. **Yaralanma Öyküsü Olmayanlar:** Bu gruba, herhangi bir yaralanma yaşamamış veya hafif düzeyde yaralanma öyküsü bulunan, ancak bu durumun performansını veya spor kariyerini olumsuz etkilemediği belirlenen sporcular dahil edilmiştir.

-Eksantrik hamstring kas kuvveti, Nordic Hamstring Exercise (NHE) sırasında IVMES H-Bord cihazı (IVMES, Ankara, Türkiye) kullanılarak değerlendirildi. Bu cihaz, eksantrik kuvvet ölçümünde yüksek güvenilirlik (ICC = 0.90–0.97) ve geçerlilik sunmaktadır (7). Ölçüm, hamstring kaslarının yük altında uzamaya karşı direnç gösterme kapasitesine odaklanmış olup, özellikle yüksek yoğunluklu atletik hareketler sırasında yavaşlama ve yaralanma önleme açısından kritik bir değerlendirmedir. Test öncesinde, katılımcıların harekete alışmalarını sağlamak ve doğru teknik kullanımını teşvik etmek amacıyla bir aşinalık aşaması uygulanmıştır. Bu aşamada, katılımcılar üç submaksimal tekrar gerçekleştirmiştir. Test aşamasında ise, her bir tekrar arasında iki dakika dinlenme süresi olacak şekilde üç maksimal eksantrik tekrar yapılmıştır. Katılımcılar, dizlerini 90° fleksiyonda tutarak dik diz çökme pozisyonunda hareketlerine başlamış, ayak bilekleri ise lateral malleol üzerine yerleştirilen desteklerle sabitlenmiştir. Gövde ve kalça pozisyonlarını nötr tutarak öne eğilme hareketi yapmış, mümkün olan en yavaş hızla maksimum direnç göstermiştir. Hareketin analizi için anatomik referans noktalarına reflektif işaretleyiciler yerleştirilmiş ve 50 Hz hızında video kayıtları alınmıştır. Kalça fleksiyonunun 20°'yi aşması, öne eğilme hızının 20–40°/s aralığı dışında olması veya iniş sırasında kontrol kaybı ya da aşırı lumbar hareket gözlemlenmesi durumunda tekrarlar geçersiz sayılmıştır. Geçerli tekrarlar için sağ ve sol hamstring kaslarının maksimum kuvveti, ortalama kuvveti ve kuvvet dengesizlikleri kaydedilmiş ve üç geçerli denemenin ortalama değerleri analizlerde kullanılmıştır. Bu kapsamlı değerlendirme, eksantrik hamstring kuvvetinin detaylı bir analizini sunmuş ve atletik performansın artırılması ile yaralanma riskinin azaltılmasına yönelik önemli bilgiler sağlamıştır.

Şekil 1. Nordic Hamstring Egzersizi sırasında IVMES H-Bord cihazı kullanılarak yapılan eksenrik hamstring kuvveti değerlendirmesi.

-Sıçrama Performansı, Squat Jump Double testi kullanılarak değerlendirildi. Bu test, dikey kuvvet üretimini ölçmek için güvenilir ve geçerli bir yöntemdir (ICC = 0.91–0.96) (8). Katılımcılar, dizleri 90° fleksiyonda sabit bir çömelme pozisyonunda, kolları sallama etkisini ortadan kaldırmak için ellerini kalçalarına yerleştirerek teste başladılar. Bu pozisyondan, maksimum çabayla dikey olarak sıçradılar ve her iki ayağın da aynı anda yerden ayrılması sağlandı (Şekil 2). Squat Jump testi, İVMES Athlete hareket sensörlü cihazı kullanılarak gerçekleştirildi. Gelişmiş hareket sensörleriyle donatılmış olan bu cihaz, ölçüm sırasında stabilite ve doğruluğu sağlamak için katılımcının beline kemerle sabitlenerek yerleştirildi. Sistem, test sırasında tüm hareketleri algılamak ve kaydetmek üzere tasarlanmıştır. Katılımcılar Squat Jump hareketini gerçekleştirdiler ve denemeler arasında elde edilen en yüksek dikey sıçrama yüksekliği kaydedildi. Bu yöntem, alt ekstremitte patlayıcı gücünü ölçmek için hassas ve güvenilir veri toplanmasını sağladı. Yorgunluğu en aza indirmek için denemeler arasında katılımcılara 1-2 dakika dinlenme süresi verildi. Doğru formu sağlamak amacıyla sıçramadan önce herhangi bir karşı hareket yapılması engellendi (9).

Şekil 2. Squat Jump Double Testi

İstatistiksel Analiz Yöntemi

Çalışmada elde edilen veriler SPSS 28.0 yazılımı ile analiz edilmiştir. Katılımcıların demografik ve performans verileri, tanımlayıcı istatistiklerle özetlenmiştir. TMED şiddeti ve yaralanma geçmişinin hamstring kuvveti ve sıçrama performansı üzerindeki etkileri Çok Değişkenli Varyans Analizi (MANOVA) ile değerlendirilmiştir. Bağımlı değişkenler

(Max_Left, Max_Right ve sıçrama performansı), bağımsız değişkenler (TMED şiddeti ve yaralanma geçmişi) ile ilişkilendirilmiş, normallik ve varyans eşitliği varsayımları doğrulanmıştır.

Regresyon analizleri, TMED şiddeti ve yaralanma geçmişinin hamstring kuvvetini öngörme gücünü test etmiş; yaralanma geçmişinin yalnızca marjinal düzeyde anlamlı etkisi saptanmıştır. Lojistik regresyon, TMED şiddeti ve yaralanma geçmişinin yaralanma durumu üzerindeki etkilerini değerlendirmiş; düşük Pseudo R² değeri, bu değişkenlerin öngörü gücünün zayıf olduğunu göstermiştir. Tüm analizlerde anlamlılık düzeyi $p < 0.05$ olarak belirlenmiş, TMED ve yaralanma geçmişinin hamstring kuvveti ve sıçrama performansı üzerinde anlamlı bir etkisi olmadığı görülmüştür.

3. BULGULAR

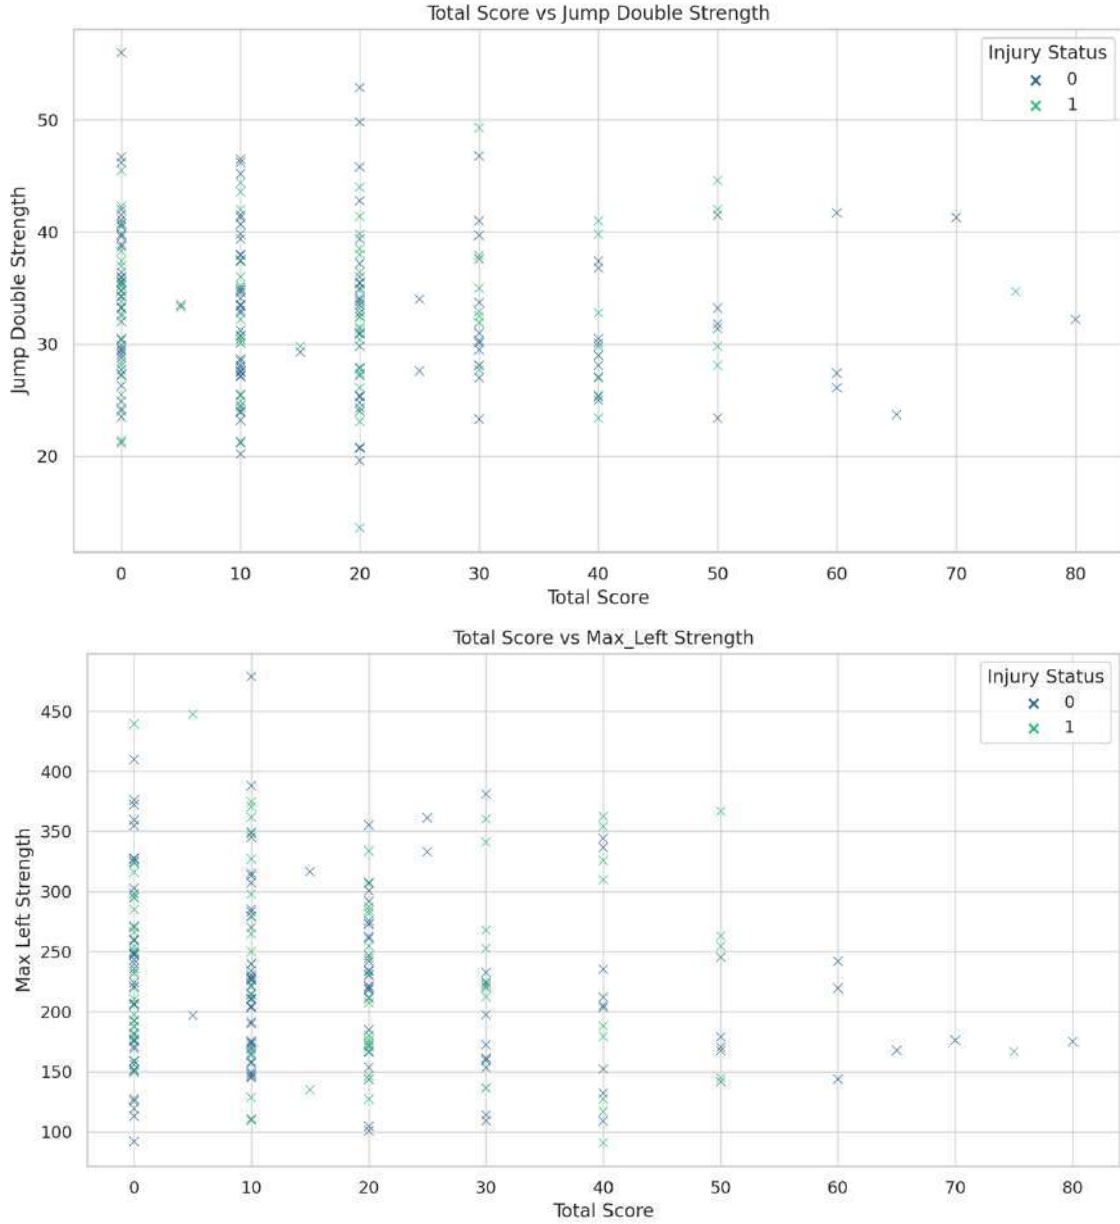

TMED (Temporomandibular Eklem Disfonksiyonu) varlığı, Fonseca Anamnestik Anketi ile değerlendirilmiştir. Bu ankete göre sporcuların %35'i hafif, %20'si orta ve %10'u şiddetli TMED kategorisinde yer almıştır. Bu, toplam katılımcıların yarısından fazlasının bir dereceye kadar TMED yaşadığını göstermektedir. Hamstring kas kuvveti ölçümleri Nordic Hamstring Exercise (NHE) sırasında IVMES H-Bord cihazı kullanılarak gerçekleştirilmiştir. TMED kategorileri arasında hamstring kas kuvveti açısından anlamlı bir fark bulunamamıştır ($p > 0.05$). Bu sonuç, TMED varlığının hamstring kas kuvvetine doğrudan bir etkisi olmadığını düşündürmektedir (Şekil 3).

Şekil 3. TMED kategorileri ve hamstring kas kuvveti arasındaki ilişki

Sıçrama performansı Squat Jump Double Testi ile değerlendirilmiştir. Test sonuçlarına göre, sıçrama performansı TMED kategorileri veya yaralanma geçmişine göre belirgin bir farklılık göstermemiştir ($p>0.05$). Bu bulgu, TMED veya yaralanma geçmişinin sporcuların alt ekstremitte patlayıcı gücüne etkisinin sınırlı olabileceğini göstermektedir.

MANOVA analizleri, Fonseca Anamnestik Skoru (TMED durumu) ve yaralanma geçmişinin hamstring kuvveti ve sıçrama performansı üzerindeki etkilerini değerlendirmiştir. Sonuçlar, her iki değişkenin de bu parametreler üzerinde anlamlı bir etkisi olmadığını göstermiştir (Fonseca Durumu: $p=0.269$; Yaralanma Geçmişi: $p=0.536$). Bu durum, TMED ve yaralanma geçmişinin birlikte ele alındığında hamstring kas kuvveti ve sıçrama performansına anlamlı bir katkıda bulunmadığını ortaya koymaktadır.

Şekil 4. Fonseca Anamnestik Skoru (TMED durumu) ve yaralanma geçmişinin hamstring kuvveti ve sıçrama performansı üzerindeki etkilerini

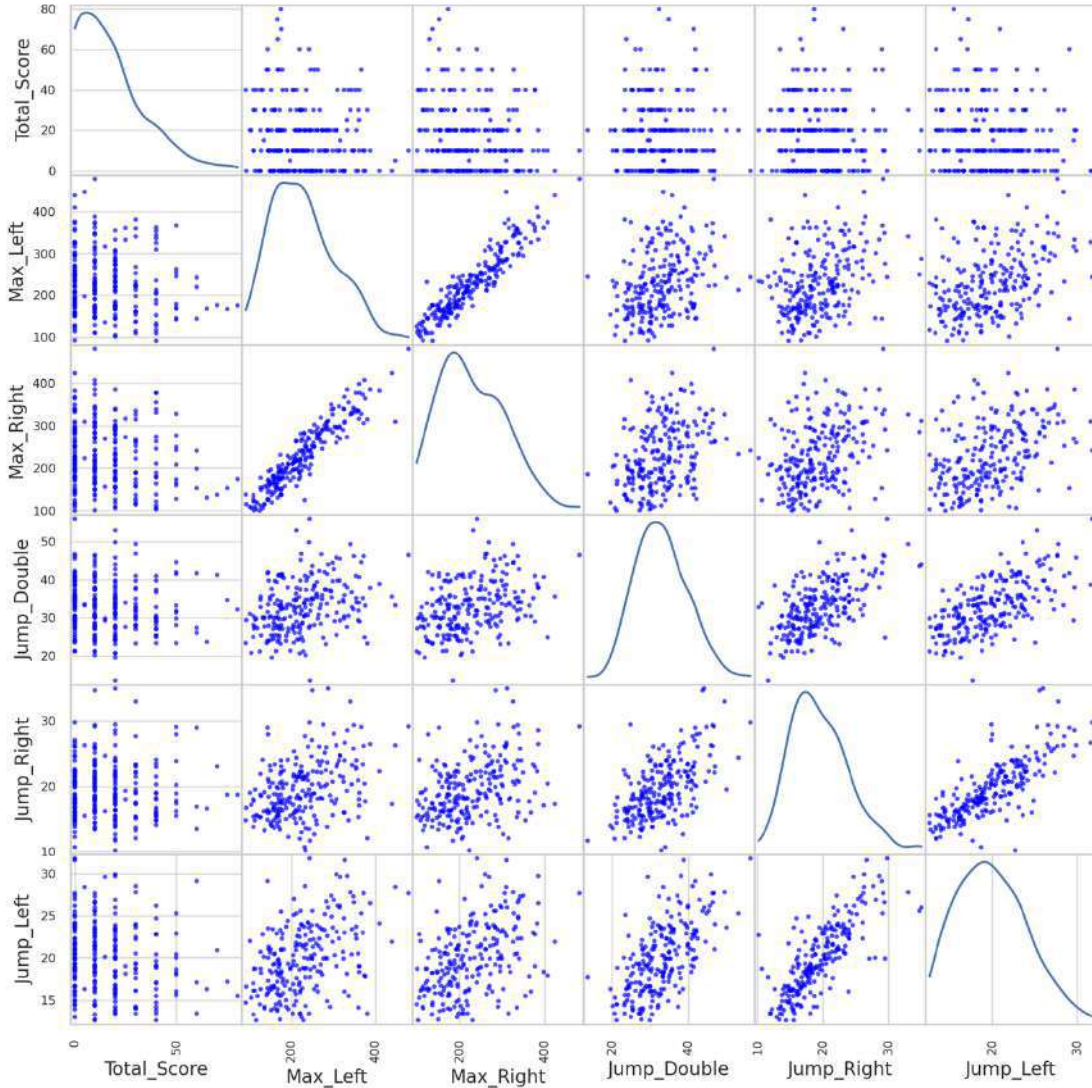

Şekil 5. Yaralanma geçmişi (Injury_Status) değişkeninin hamstring kuvveti üzerinde logistic regresyon modeli

Regresyon analizlerinde, yaralanma geçmişi (Injury_Status) değişkeninin hamstring kuvveti üzerinde yalnızca marjinal bir etkisi olduğu belirlenmiştir (Max_Left için $p=0.082$, Max_Right için $p=0.059$). Ancak bu etkiler istatistiksel anlamlılık sınırında kaldığı için klinik anlamda önemli bir sonuç olarak değerlendirilemez. Ayrıca, Total_Score ve Fonseca_Condition değişkenlerinin hamstring kuvveti üzerindeki etkilerinin anlamlı olmadığı gözlemlenmiştir.

Lojistik regresyon analizlerinde, Total_Score, Max_Left, Max_Right, Jump_Double, Jump_Right ve Jump_Left değişkenlerinin hiçbirinin yaralanma durumunu anlamlı şekilde öngöremediği bulunmuştur ($p>0.05$). Modelin genel uyumu düşük (Pseudo $R^2=0.0136$) olup, bu parametrelerin yaralanma durumunu açıklamakta yetersiz olduğunu göstermektedir (Şekil 5 ve Şekil 6). Bu sonuçlar, TMED ve yaralanma geçmişinin sportif performans üzerindeki etkilerini daha iyi anlamak için ek değişkenlerin ve daha geniş bir örneklemin incelenmesi gerektiğini işaret etmektedir.

Scatter Matrix of Strength Metrics and Total Score

Şekil 6. Güç Metrikleri ve Toplam Skor Dağılım Matrisi

Bu grafik, güç metrikleri ve toplam skor arasındaki ilişkileri görselleştirmektedir. **Max_Left** ve **Max_Right** değişkenleri arasında güçlü bir pozitif korelasyon bulunmakta, bu da sol ve sağ hamstring kuvvetlerinin birlikte arttığını göstermektedir. Benzer şekilde, **Jump_Right** ve **Jump_Left** arasında da güçlü bir pozitif ilişki vardır, bu da sağ ve sol bacak atlama performanslarının paralel olduğunu ortaya koymaktadır. Ancak, **Total_Score** değişkeni, diğer metriklerle anlamlı bir ilişki göstermemektedir; bu durum, toplam skorun bağımsız bir şekilde değişebileceğini düşündürmektedir. Genel olarak, hamstring kuvvetleri ve atlama performansı ölçümleri kendi içinde ilişkili olsa da, bu metriklerin toplam skor üzerindeki etkisi sınırlı görünüyor (Şekil 6).

TARTISMA

Bu çalışma, temporomandibular eklem disfonksiyonunun (TMED) ve yaralanma geçmişinin hamstring kas kuvveti ve sıçrama performansı üzerindeki etkilerini incelemiştir. Bulgular, TMED şiddeti ve yaralanma geçmişinin bu parametreler üzerinde anlamlı bir etkisinin olmadığını göstermektedir. Sonuçlar, TMED'in alt ekstremite fonksiyonlarına olan etkilerinin genellikle sınırlı olduğunu öne süren mevcut literatürle uyumludur (10, 11). Özellikle,

Minervini ve arkadaşlarının (2023) yaptığı sistematik derleme ve meta-analiz, TMED'in postür ve kas kuvveti üzerindeki etkilerinin nörolojik ve biyomekanik mekanizmalara bağlı olabileceğini ancak doğrudan performans ölçümlerine yansımadağını vurgulamaktadır (10).

TMED'in nöromüsküler sistem üzerindeki etkileri, denge ve postür kontrolü gibi parametrelerle ilişkilendirilmiştir (12). Öztürk ve arkadaşlarının (2024) retrospektif çalışmasında, TMED'in kraniofasial sistemle sınırlı kalmayıp alt ekstremitte fonksiyonlarını etkileyebileceği öne sürülse de, bu etkilerin sporcularda fiziksel performansa nasıl yansıdığı belirsizdir (11). Mevcut çalışma, bu etkinin elit sporcularda ölçülebilir bir fark yaratmadığını göstermektedir, ki bu bulgu, Oltramari-Navarro ve arkadaşlarının (2017) yaşlı bireylerde TMED ve postüral dengesizlik arasındaki ilişkiyi değerlendirdiği çalışmayı desteklemektedir (12).

Hamstring kas kuvvetinin spor performansı ve yaralanma önleme açısından önemi iyi bilinmektedir (13). Croisier ve arkadaşlarının (2008) profesyonel futbolcular üzerinde yaptığı prospektif çalışma, hamstring kuvvet dengesizliklerinin yaralanma riskini artırabileceğini göstermiştir (13). Ancak, bu çalışmada yaralanma geçmişinin hamstring kuvveti üzerindeki etkisinin yalnızca marjinal düzeyde olduğu bulunmuştur. Bu durum, Petersen ve arkadaşlarının (2011) eksantrik kuvvet antrenmanının yaralanma önleme üzerindeki etkisini vurguladığı çalışmayı tamamlayıcı niteliktedir; yaralanmaların yalnızca kas kuvveti ile açıklanamayacağı ve daha karmaşık faktörlerin etkili olduğu öne sürülmektedir (14).

Sıçrama performansı, genellikle alt ekstremitte patlayıcı gücünün bir göstergesi olarak değerlendirilir (15). Bu çalışmada, TMED ve yaralanma geçmişinin sıçrama performansı üzerindeki etkilerinin belirgin olmaması, TMED'in patlayıcı güç parametreleriyle doğrudan ilişkili olmadığını düşündürmektedir. Park ve arkadaşlarının (2024) sıçrama performansı ve alt ekstremitte kuvveti arasındaki ilişkiyi incelediği çalışma, bu sonuçlarla tutarlılık göstermektedir (15).

TMED'in nörolojik ve biyomekanik yollarla spor performansı üzerindeki potansiyel etkilerini değerlendiren Freiwald ve arkadaşlarının (2022) çalışması, TMED'in sporcular arasında heterojen etkiler gösterebileceğini belirtmektedir (16). Bu nedenle, TMED'in performans üzerindeki etkilerini daha iyi anlamak için postüral stabilite, propriosepsiyon ve nöromüsküler kontrol gibi ek parametrelerin incelenmesi gerekmektedir (17).

Sonuç olarak, bu çalışma, TMED ve yaralanma geçmişinin hamstring kuvveti ve sıçrama performansı üzerindeki etkilerinin sınırlı olduğunu göstermektedir. Ancak, bu bulgular, TMED'in sistemik etkilerini daha kapsamlı bir şekilde incelemek için daha geniş örneklem gruplarının ve farklı metodolojilerin kullanılmasının gerekliliğini vurgulamaktadır. Sporcuların performansını optimize etmek ve yaralanma riskini azaltmak için multidisipliner yaklaşımlar, bu tür çalışmalardan elde edilen sonuçlarla desteklenmelidir.

ÖZET

Bir güç sisteminde üretilen gerçek gücün sürekli değişen tüketime göre ayarlanmasına sekonder frekans yönetimi (SFY) denir. SFY güç sistemi tasarımı ve operasyonunda oldukça önemli bir mekanizmadır. Üretim-tüketim dengesinin sağlanmasıyla sistem frekansı her an sabit tutulur. Zira frekans ile sistemin güvenliği, güvenilirliği ve üretilen gücün kalitesi yakından etkilenir. Bu çalışmada iki bölgeyi çok kaynaklı bir güç sisteminde SFY ele alınmıştır. Sekonder denetleyici olarak PD-PID denetleyici tasarlanmış ve önerilmiştir. Denetleyiciden mümkün olan en fazla faydayı sağlamak için denetleyici parametre ayarı sürüngen arama algoritması (SAA) ile gerçekleştirilmiştir. Güç sistemi modeli MATLAB/Simulink ortamında kurulmuş, SAA ise MATLAB/M-file ortamında yazılmıştır. Elde edilen sonuçlar diğer çalışmalarda yayımlanan sonuçlarla karşılaştırılmıştır. Karşılaştırma sonuçlarına göre önerilen denetleyicinin frekans ve bağlantı hattı güç tepkilerindeki salınım, yerleşme zamanı, maksimum pozitif aşım ve maksimum negatif aşım gibi zaman alanı performans kriterleri açısından benzer yaklaşımlardan daha iyi performans sunduğu görülmüştür.

Anahtar Kelimeler: sekonder frekans yönetimi, enterkonnekte güç sistemi, PD-PID denetleyici, sürüngen arama algoritması, optimizasyon

ABSTRACT

In a power system, regulating the real output power generation with respect to the continuously changing consumption is called secondary frequency management (SFM). SFM is a quite important mechanism in power system design and operation. By keeping the generation-consumption balance, the system frequency is maintained constant at any time because the system security, reliability and the quality of power generated are closely affected by frequency. In this work, SFM in a two-area multi-source power system is considered. As a secondary controller, PD-PID controller is designed and proposed. To obtain the possible maximum benefit from the controller, controller parameter setting is accomplished by reptile search algorithm (RSA) is used. The power system model is constructed in MATLAB/Simulink platform and the RSA is written in MATLAB/M-file script. The obtained results are contrasted against the results published in other studies. As per the comparison results, it is seen that the proposed controller offers better performance than similar approaches with regard to the time-domain performance criteria such as oscillation, settling time, maximum overshoot and maximum undershoot in the frequency and tie-line power responses.

Keywords: secondary frequency management, interconnected power system, PD-PID controller, reptile search algorithm, optimization

1. GİRİŞ

Güç sistemlerini optimum çalışma durumunda tutmak için alt sistemlerin denetlenmesi gerekmektedir. Bütün elektrik enerjisi üretim merkezleri birbirlerine ve enterkonnekte sisteme bağlı olduğu için her bir sistem aynı frekansa sahiptir. Bundan dolayı güç sistemlerinin verimli ve kararlı çalışabilmesi için frekans sabit kalmalıdır. Güç sistemlerinin sabit frekansta çalışabilmesi güç dengesi ile mümkündür [1]. Güç dengesinde üretilen aktif güç toplamı, sistemdeki kayıp ve iletim hatları üzerinden geçen güç toplamına eşit olmalıdır. Frekansı etkileyen en önemli parametrelerden biri aktif güçtür. Kastedilen güç dengesi, aslında aktif güç dengesini sağlayarak olacaktır. Üretilen enerji fazla ise frekans değeri artacaktır. Tüketilen enerji fazla ise bu kez frekans değeri azalacaktır. Tüketilen enerjinin karmaşık ve sürekli değiştiği günümüz dünyasında üretilen ve tüketilen güç arasındaki dengeyi sağlayabilmek için etkin ve hızlı cevap üretebilecek bir denetime ihtiyaç vardır.

İki veya daha fazla bölgenin birbirlerine bağlı/enterkonnekte güç sistemlerinde sistem frekansında meydana gelen değişimlerin kontrol edilmesi ve iletim hatlarındaki yüklenmelerin belirlenen değerler içinde kalacak şekilde generatörlerin aktif güç çıkışlarının ayarlanması sekonder frekans yönetimi (SFY) veya otomatik üretim denetimi (OÜD) olarak adlandırılır [2]. Dolayısıyla SFY'nin görevi sistemde yük talebinin değişmesi durumunda veya meydana gelen herhangi bir bozucu etki anında veya parametre belirsizliklerinde sistem frekansını önceden belirlenmiş nominal seviyede tutmak ve farklı enerji üretim tesisleri arasındaki güç akışını kontrol etmektir [3]. Bu sayede üretilen gücün kalitesi artarak güç sisteminin güvenliği, güvenilirliği ve kararlılığı iyileştirilmiş olacaktır.

Literatürde SFY ile ilgili çok çeşitli çalışmalar bulunmaktadır. Bu çalışmalarda denetleyici parametrelerinin optimizasyonu sürecinde aday çözümlerin uygunluğunu/kalitesini değerlendirmek için genelde dört amaç fonksiyonunun kullanıldığı göze çarpmaktadır. Bunlar; zaman ağırlıklı mutlak hatanın integrali (Integral Time-Weighted Absolute Error (ITAE)), hata karelerinin integrali (Integral Squared Error (ISE)), zaman ağırlıklı hata karelerinin integrali (Integral Time-Weighted Squared Error (ITSE)) ve mutlak hatanın integrali (Integral Absolute Error (IAE)) olarak sayılabilir. Bu hedef fonksiyonları içerisinde ITAE'nin minimizasyonu sistem cevabında yerleşme zamanı ve aşım bakımından iyileşme sağlamaktadır [4].

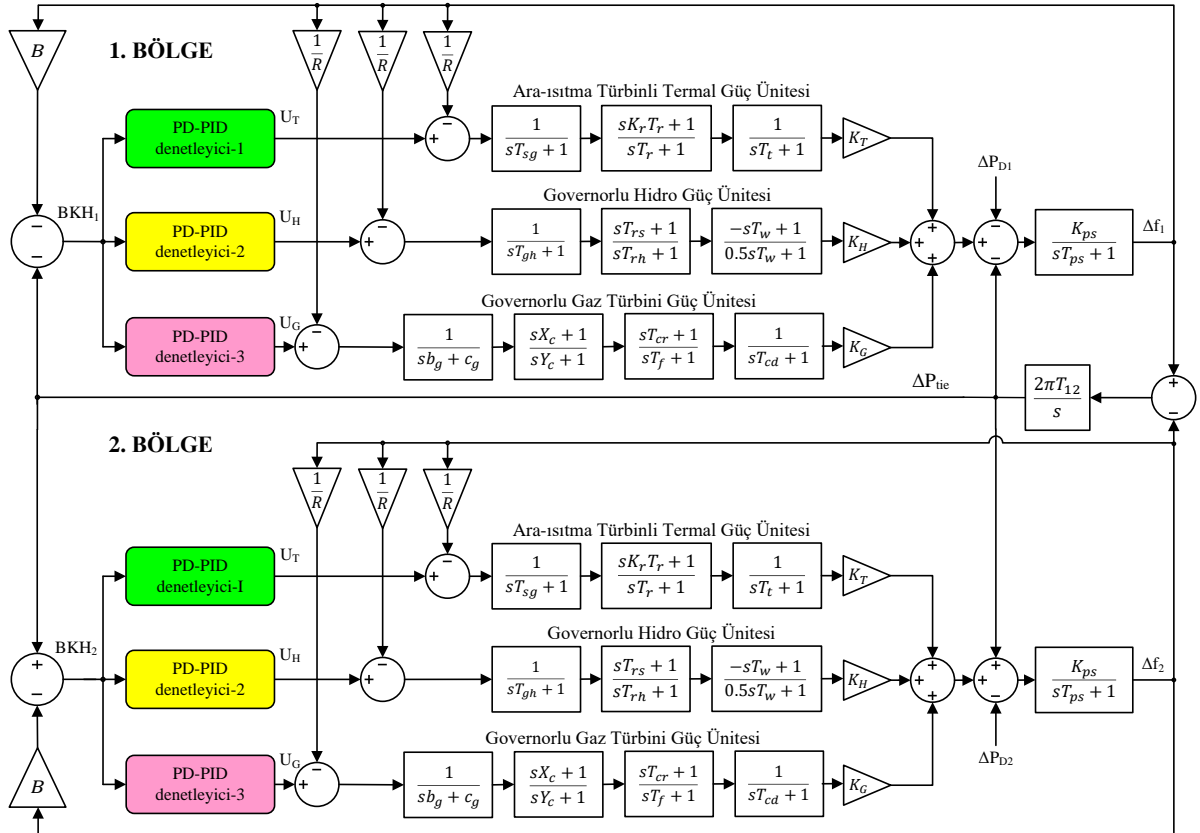

Bazı çalışmalarda ITAE amaç fonksiyonu kullanılarak bakteriyel besin arama algoritması (BBAA) [5], hibrit bakteriyel besin arama algoritması-parçacık sürü optimizasyonu (hBBAA-PSO) [6] ve diferansiyel gelişim algoritması (DGA) [7] ile klasik PI denetleyici parametreleri elde edilmiştir. Hibrit stokastik fraktal arama algoritması-desen arama tekniği (hSFAA-DA) [8] ve DGA [9, 10] ile ITAE amaç fonksiyonu kullanılarak PID denetleyici parametreleri elde edilmiştir. Bir başka etkili çalışmada geliştirilmiş stokastik fraktal arama algoritması PID denetleyici parametrelerinin en uygun değerlerinin bulunmasında kullanılmıştır [11]. Bu çalışmada ITAE amaç fonksiyonundan farklı olarak daha makul yeni bir amaç fonksiyonu önerilmiştir. [12] ve [13] numaralı çalışmalarda öğretim-öğrenmeye dayalı optimizasyon algoritması (ÖÖOA) ile ITAE amaç fonksiyonu yardımıyla PID ve iki serbestlik dereceli PID (2SD PID) denetleyici parametreleri elde edilmiştir. [14]'de hibrit parçacık sürü optimizasyonu-desen arama (hPSO-DA) tekniği ile ITAE amaç fonksiyonu kullanılarak bulanık PI denetleyici parametreleri elde edilmiştir. Bir başka çalışmada çılgınlığa dayalı parçacık sürüsü optimizasyonu (CRAZY-PSO) ile ISE ve ITSE amaç fonksiyonları yardımıyla PI denetleyici parametreleri elde edilmiştir [15]. [16]'da ise geliştirilmiş gri kurt optimizasyon (GGKO) algoritması kullanılarak ITAE amaç fonksiyonu ile PI, PID ve eklemeli PI-PD denetleyici parametrelerinin en uygun değerleri bulunmuştur. Bu algoritmaların birbirlerine göre üstünlükleri olduğu gibi dezavantajları da vardır. Bu üstünlükler ve dezavantajlar, uygulanan probleme göre de değişmektedir. Çözülmesi istenen probleme uygun optimizasyon tekniği seçildiği takdirde, problemin çözülmesi daha hızlı olacaktır ve daha doğru sonuçlar elde edilecektir. Ayrıca literatür çalışmalarında elde edilen sonuçların optimum sonuçlar olduğu

kesin değildir ve amaç fonksiyonu değerinin azaltılabildiği ölçüde sistem performansı daha da iyileştirilebilir.

Bu çalışmada iki bölgeli çok kaynaklı bir güç sisteminde SFY ele alınmıştır. Sekonder denetleyici olarak PD-PID denetleyici tasarlanmış ve önerilmiştir. Denetleyicinin optimal parametre ayarı için sürüngen arama algoritmasından (SAA) faydalanılmıştır. Güç sistemi modeli MATLAB/Simulink ortamında oluşturulmuş, SAA kodları ise MATLAB/M-file ortamında hazırlanmıştır. Elde edilen sonuçlar başka çalışmalarda yayımlanan sonuçlarla karşılaştırılmıştır. Analizlerde frekans ve bağlantı hattı güç tepkilerindeki salınım, yerleşme zamanı, maksimum pozitif aşım ve maksimum negatif aşım gibi zaman alanı karakteristik parametreleri performans göstergeleri olarak dikkate alınmıştır.

2. İKİ BÖLGELİ ÇOK KAYNAKLI GÜÇ SİSTEMİNİN TRANSFER FONKSİYONU MODELİ

Bu bölümde iki bölgeli çok kaynaklı güç sisteminin benzetim çalışmalarında kullanılan dinamik modeli verilmiştir. Şekil 1’te bu modelin SFY tasarımı ve analizi için yaygın olarak kullanılan transfer fonksiyonu modeli görülmektedir. Bu sistem iki ayrı çok kaynaklı bölgenin birbirlerine AA bağlantı hattı ile bağlanmasıyla oluşturulur. Her bölge termal ünite, hidro ünite ve gaz ünitesi olmak üzere üç farklı üniteye sahiptir. Sistemdeki her kontrol bölgesinin 5 girişi 2 çıkışı bulunmaktadır. Örneğin; 1. bölgenin girişleri denetleyici çıkışları U_T , U_H ve U_G , yük değişimi ΔP_{D1} ve iki bölge arasındaki bağlantı hattı güç değişimi ΔP_{tie} ’dir. Çıkışlar ise frekans değişimi Δf_1 ve bölge kontrol hatasıdır (BKH_1).

Şekil 1. İki bölgeli çok kaynaklı güç sistemi modeli

Her ünitenin üretilen güce katkı miktarı K_T , K_H ve K_G sabitleriyle belirlenmektedir. B frekans yönelim faktörüdür. Termal ünite için sistem parametreleri şu şekildedir: R hız regülâtör sabiti, K_T ünitenin katılım faktörü, T_{sg} hız regülâtörü süresi, K_r ara-ısıtma kazancı, T_r ara-ısıtma zaman sabiti ve T_t buhar türbini zaman sabitidir. Hidro ünite için sistem parametreleri şu şekildedir: K_H ünitenin katılım faktörü, T_{gh} hidro-türbin hız regülâtörünün ana servo zaman sabiti, T_{rs} hidro

türbin hız regülatörünün sıfırlama süresi, T_{rh} geçici düşüş zaman sabiti ve T_w cebri borudaki suyun nominal başlangıç zamanıdır. Gaz ünitesi için sistem parametreleri şu şekildedir: K_G ünitenin katılım faktörü, c_g gaz türbini valfi konumlandırıcısı, b_g valf konumlandırıcısının gaz türbini sabiti, X_c ve Y_c sırasıyla gaz türbini hız regülatörünün sağlama ve gecikme süresi sabiti, T_{cr} gaz türbininin yanma reaksiyonu zaman gecikmesi, T_f yakıt zaman sabiti ve T_{cd} kompresör deşarj hacmi zaman sabitidir. Benzetim çalışmalarında kullanılan parametre değerleri şu şekilde ayarlanmıştır: $f = 60$ Hz, $B = 0.4312$ p.u MW/Hz, $R = 2.4$ Hz/p.u, $T_{sg} = 0.08$ s, $K_r = 0.3$, $T_r = 10$ s, $T_t = 0.3$ s, $T_{gh} = 0.2$ s, $T_{rs} = 5$ s, $T_{rh} = 28.75$ s, $T_w = 1$ s, $b_g = 0.05$ s, $c_g = 1$, $X_c = 0.6$ s, $Y_c = 1$ s, $T_{cr} = 0.01$ s, $T_f = 0.23$ s, $T_{cd} = 0.2$ s, $K_T = 0.543478$ p.u, $K_H = 0.326084$ p.u, $K_G = 0.130438$ p.u, $K_{ps} = 68.9566$ Hz/p.u, $T_{ps} = 11.49$ s, $T_{12} = 0.0433$ p.u MW/rad.

3. SÜRÜNGEN ARAMA ALGORİTMASI

Sürüngen arama algoritması (SAA) 2022 yılında ortaya atılmış nispeten yeni metasezgisel, popülasyon tabanlı bir algoritmadır [19]. Algoritmada sürüngen familyasından olan timsahların çevreleme/kuşatma mekanizmaları, avlanma taktikleri ile sosyal davranışları bilgisayar ortamında taklit edilerek problem çözülmeye çalışılmaktadır. Timsahların davranışları iki sınıfta inceleyebilir: (i) yiyeceği çevreleme/kuşatma (ii) yiyeceği avlama. İlk sınıf arama uzayının keşfini sağlarken ikinci sınıfta elde edilen çözümlerden yola çıkarak sömürü gerçekleştirilmektedir. Keşif ile sömürü karakteristik özellikleri arasındaki denge algoritmanın performansı açısından büyük rol oynar. Bu bakımdan keşif ya da sömürü yeteneğinin tek başına iyi olması elde edilen sonuçların kaliteli olması için yeterli değildir. SAA üç alt başlık altında incelenecektir.

2.1. Algoritmanın başlatılması

Diğer algoritmalarda olduğu için SAA optimizasyon işlemine belli sayıda aday çözümlerle başlar. Çözümler arama uzayında rastgele üretilir. Bunun için Eş. 1 kullanılır.

$$X = LB + rand \cdot (UB - LB) \quad (1)$$

Eş. 1'de X aday çözümlerden (timsahlar) oluşan popülasyonu, $rand$ $[0, 1]$ 'da üretilen bir rastsal sayıyı, LB ve UB sırasıyla problemin alt ve üst sınırlarını göstermektedir.

2.2. Kuşatma fazı (keşif)

Bu fazda algoritmaya keşif yeteneği kazandırılmaya çalışılır. Kuşatma davranışına göre timsahların kuşatma sırasında yüksek yürüyüş ve göbek yürüyüş olmak üzere iki tipik hareketleri bulunur. Her ikisi de arama uzayında geniş ölçekte arama yapmayı sağlarlar. Timsahların kuşatma davranışı Eş. 2'de verilen basit bir bağıntı ile modellenmiştir.

$$x_{i,j}(t+1) = \begin{cases} best_j(t) \cdot -\eta_{i,j}(t) \cdot \beta - R_{i,j}(t) \cdot rand, & t \leq T/4 \\ best_j(t) \cdot x_{r_1,j} \cdot ES(t) \cdot rand, & t > T/4 \text{ \& } t \leq T/2 \end{cases} \quad (2)$$

Eş. 2'de t iterasyon sayısını ve T maksimum iterasyon sayısını göstermektedir. $best_j(t)$ elde edilen en iyi çözümün j . pozisyonunu, $rand$ $[0, 1]$ 'da üretilen bir rastsal sayıyı, $\eta_{i,j}(t)$ kuşatma operatörünü, β keşif denetleyici hassas bir parametreyi, $R_{i,j}(t)$ iterasyon sayısına bağlı olarak çözüm uzayını daraltan değişkeni, r_1 bir tamsayıyı, $x_{r_1,j}$ rastgele seçilen r_1 . çözümü göstermektedir. Evrimsel algı ($ES(t)$) fonksiyonu iterasyon sayısına bağlı olarak -2 ile 2 arasında rastgele biçimde azalan sayı üretir. $\eta_{i,j}(t)$, $R_{i,j}(t)$ ve $ES(t)$ Eşitlikler 3-5 ile hesaplanırlar.

$$\eta_{i,j} = best_j(t) \cdot P_{i,j} \quad (3)$$

$$R_{i,j} = \frac{best_j(t) - x_{r_2,j}}{best_j(t) + \varepsilon} \quad (4)$$

$$ES = 2 \cdot r_3 \cdot \left(1 - \frac{t}{T}\right) \quad (5)$$

Eş. 4'te ε epsilon değeridir. $P_{i,j}$ en iyi çözüm ile eldeki çözümün j . pozisyonları arasındaki yüzdelik farktır ve Eş. 6'da verilen bağıntı ile hesaplanır.

$$P_{i,j} = \alpha + \frac{x_{i,j} - \text{mean}(x_i)}{\text{best}_j(t) \cdot (UB_j - LB_j) + \epsilon} \quad (6)$$

Eş. 7’de α keşif hassasiyetini ayarlayan bir parametredir ve algoritmada 0.1 olarak ayarlanmıştır. $\text{mean}(x_i)$ ifadesi Eş. 7’de verilmiştir.

$$\text{mean}(x_i) = \sum_{j=1}^n x_{i,j} \quad (7)$$

2.3. Avlanma fazı (sömürü)

Bu fazda algoritmanın sömürücü davranışı (avlanma) ortaya konulmuştur. Bu davranışa göre timsahların avlanma sırasında sergilendikleri iki davranış bulunur. Bunlardan ilki avlanma koordinasyonuyken diğeri avlanma iş birliğidir. Her iki davranışla algoritmanın belli bir alanda yaptığı arama işleminin konsantrasyonunun (sömürü) artması amaçlanır. SAA’da bu fazla ilişki bağıntı Eş. 8’deki gibi verilmiştir.

$$x_{i,j}(t+1) = \begin{cases} \text{best}_j(t) \cdot P_{i,j}(t) \cdot \text{rand}, & t > T/2 \text{ \& } t \leq 3T/4 \\ \text{best}_j(t) - \eta_{i,j}(t) \cdot \epsilon - R_{i,j}(t) \cdot \text{rand}, & t > 3T/4 \text{ \& } t \leq T \end{cases} \quad (8)$$

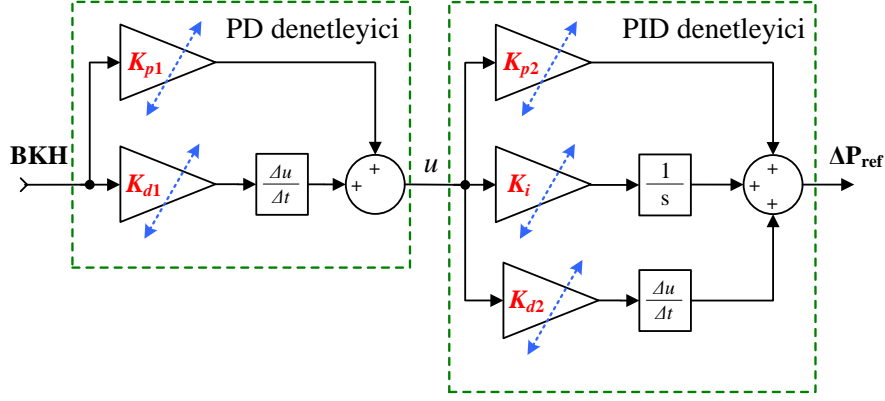

Eşitlikler 2 ve 8’den açıkça görünüyor ki toplam iterasyon sayısı iki eşit parçaya bölünmüştür. $t \leq T/2$ iken çözüm uzayının bilinmeyen, potansiyeli yüksek noktalarının keşfi için kuşatma fazı etkin iken $t > T/2$ iken ataktan hemen önce yiyeceğe olabildiğince yakın olabilmek için avlanma fazı çalışır. Bu durum aşağıdaki şekilde gösterilmiştir.

Şekil 2. Doğadaki timsahların hareketi (a) $t \leq T/2$ iken kuşatma (b) $t > T/2$ iken avlanma [17] no’lu kaynaktaki blok diyagram kullanılarak SAA, MATLAB/M-file ortamında kodlanmıştır ve optimizasyon çalışmaları gerçekleştirilmiştir.

4. ÖNERİLEN DENETLEYİCİ YAPISI VE OPTİMİZASYONU

Önerilen denetleyici yapısı Şekil 3’de görülmektedir. Burada PD denetim organı ile PID denetim organının ard arda, eklemeli şekilde bağlandığı görülmektedir. Başka bir deyişle PD denetleyicinin çıkışı u , PID denetleyicinin giriş sinyali olarak görev yapmaktadır. BKH sinyali tasarlanan denetleyici ile işlendikten sonra güç sistemi için gerekli referans sinyal ΔP_{ref} üretilmektedir. PD-PID denetleyiciden maksimum performans elde etmek için denetleyici parametreleri K_{p1} , K_{d1} , K_{p2} , K_i ve K_{d2} ’nin en iyi şekilde ayarlanması gerekir. Bu çalışmada bu parametreler deneme-yanılma yoluyla değil, SAA ile optimal şekilde ayarlanmaya çalışılmıştır.

Şekil 3. PD-PID denetleyicinin yapısı

Optimizasyon işlemlerinde amaç fonksiyonunun çok iyi tanımlanması gerekir. Yanlış, eksik tanımlanmış bir amaç fonksiyonu, seçilen algoritma çok etkili çalışsa da elde edilen sonuçların arzu edilen amaçlardan uzak olmasına neden olacaktır. Kontrol sistemlerinde sıklıkla kullanılan dört tür amaç fonksiyonu vardır. Bunlar IAE, ISE, ITSE ve ITAE performans kriterleridir. Bu fonksiyonlarının matematiksel ifadeleri sırasıyla Eşitlikler 9-12’de verilmiştir. Bu eşitliklerde; t zamanı, T benzetim süresini, Δf_1 ve Δf_2 bölgelerdeki frekans değişimlerini ve ΔP_{tie} iki bölgeyi birbirine bağlayan iletim hattındaki güç değişimini göstermektedir. SFY çalışmalarında ITAE’nin diğer integral tabanlı hata kriterlerine göre daha iyi sonuçlar ürettiği görülmüştür [18, 19].

$$IAE = \int_0^T (|\Delta f_1| + |\Delta f_2| + |\Delta P_{tie}|). dt \quad (9)$$

$$ISE = \int_0^T [(\Delta f_1)^2 + (\Delta f_2)^2 + (\Delta P_{tie})^2]. dt \quad (10)$$

$$ITSE = \int_0^T [(\Delta f_1)^2 + (\Delta f_2)^2 + (\Delta P_{tie})^2]. t. dt \quad (11)$$

$$ITAE = \int_0^T (|\Delta f_1| + |\Delta f_2| + |\Delta P_{tie}|). t. dt \quad (12)$$

Yürütülen algoritmada ITAE değerinin minimizasyonu ile salınım/sapma miktarı küçük, 0 p.u referans değere en küçük oturma zamanı ile çabucak yerleşen cevap eğrilerinin elde edilmesi amaçlanmıştır. Optimizasyon problemindeki kısıtlar denetleyici parametrelerinin alt ve üst sınırlarıdır. Optimizasyon problemi basitçe Eş. 13’deki gibi tanımlanabilir.

Aşağıdaki eşitsizlik kısıtlarını dikkate alarak ITAE değerini minimum yap

Eşitsizlik kısıtları:

$$\left. \begin{array}{l} K_{p1}^{min} \leq K_{p1}^* \leq K_{p1}^{max} \\ K_{d1}^{min} \leq K_{d1}^* \leq K_{d1}^{max} \\ K_{p2}^{min} \leq K_{p2}^* \leq K_{p2}^{max} \\ K_i^{min} \leq K_i^* \leq K_i^{max} \\ K_{d2}^{min} \leq K_{d2}^* \leq K_{d2}^{max} \end{array} \right\} \quad (13)$$

Eş. 13’de min ve max üst indisleri denetleyici parametrelerinin sırasıyla alt ve üst sınırlarını göstermektedirler. Bu çalışmada sınırlar -3 ve 3 olarak ayarlanmıştır. Optimizasyon sonrasında minimum ITAE değerini veren K_{p1}^* , K_{d1}^* , K_{p2}^* , K_i^* ve K_{d2}^* değerleri denetleyici parametrelerinin optimal değerleri olarak düşünülmüş ve benzetim çalışmalarında kullanılmışlardır.

5. BENZETİM SONUÇLARI

Transfer fonksiyonu Şekil 1’de gösterilen sistemde iki bölge benzer olduğu için bu bölgelerde kullanılan denetleyiciler de benzer kabul edilmişlerdir. Bu manada toplam 15 parametrenin belli koşullar altında en iyi değerlerinin bulunması gerekmektedir. 1. Bölgedeki basamak yük değişiminin %2 ($\Delta P_{D1}=0.02$ puMW), diğer bölgedeki yük değişiminin sıfır olduğu ($\Delta P_{D2}=0$ puMW) kabul edilerek SAA ile optimizasyon gerçekleştirilmiştir. Algoritmaya ait yakınsama

grafiği Şekil 4'te verilmiştir. Başlangıçta ITAE değeri 0.6543 iken bu değer başarılı şekilde yürütülen optimizasyon ile 0.04976 değerine kadar düşürülmüştür.

Şekil 4. Optimizasyon sürecine ilişkin SAA yakınsama grafiği

Elde edilen denetleyici parametreleri Tablo 1'de verilmiştir. Bu parametreler kullanılarak elde edilen Δf_1 , Δf_2 ve ΔP_{tie} sinyallerinin oturma zamanı (ST), maksimum negatif aşım (US), maksimum pozitif aşım (OS) ve ITAE değerleri de bu tabloda gösterilmiştir. Oturma zamanı için ± 0.0004 tolerans bant kullanılmıştır. Aynı zamanda elde edilen sonuçların literatüre katkısını göstermek için çeşitli çalışmalarla benzer şartlarla karşılaştırmalar yapılmıştır. Bu çalışmalar diferansiyel gelişim algoritması (DGA) [9]/geliştirilmiş gri kurt optimizasyon (GGKO) algoritması [16]/hibrit stokastik fraktal arama algoritması-desen arama (hSFA-DA) tekniği [8] ile ayarlanan PID denetleyici ve yusufoçuk arama algoritması (YAA) ile ayarlanan kesirli dereceli PID (KDPID) denetleyicidir [18]. KDPID denetleyici, geleneksel tam dereceli PID denetleyicilere göre fazladan iki parametreye ihtiyaç duyar ve performansı daha iyidir ancak tasarımı nispeten karmaşıktır.

Tablo 1'de verilen ITAE değerleri incelendiğinde SAA ile ayarlanan PD-PID denetleyicinin diğer yaklaşımlara nazaran daha düşük ITAE değeri sunduğu görülür (ITAE=0.04976). Bu sonuç cevap eğrilerinin iyileştiği anlamına gelir. Nitekim önerilen yaklaşım ile elde edilen ST/US/OS gibi zaman alanı karakteristik değerlerinin literatürde bulunan diğer sonuçlardan daha iyi olduğu görülmüştür (ST: $\Delta f_1=4.49$, $\Delta f_2=3.19$, $\Delta P_{tie}=2.64$; US: $\Delta f_1=0.0185$, $\Delta f_2=0.0055$, $\Delta P_{tie}=0.0016$; OS: $\Delta f_1=4.61E-04$, $\Delta f_2=1.85E-04$). Ayrıca SAA tabanlı KDPID denetleyici, ΔP_{tie} cevap eğrisi için daha düşük OS değeri sunmuştur. Son olarak, GGKO tabanlı PID denetleyici tepkilerinin yavaş olduğu, 0 p.u değeri aşmadan referans değere oturduğu gözlemlenmiştir. Bundan dolayı OS değerleri ölçülemediğinden Tablo 1'de n/a olarak işaretlenmiştir.

Tablo 1. Denetleyici parametreleri ve ST/US/OS/ITAE değerleri

Algoritma: Denetleyici	DGA: PID [9]	GGKO: PID [16]	hSFA-DA: PID [8]	YAA: KDPID [18]	SAA: PD-PID [Önerilen]	
Denetleyici parametreleri	Ünite 1: Termal $K_p=0.7790$ $K_i=0.2762$ $K_d=0.6894$ Ünite 2: Hidro $K_p=0.5805$ $K_i=0.2291$ $K_d=0.7079$ Ünite 3: Gaz $K_p=0.5023$ $K_i=0.9529$ $K_d=0.6569$	Ünite 1: Termal $K_p=1.7502$ $K_i=-0.0087$ $K_d=0.7499$ Ünite 2: Hidro $K_p=0.3110$ $K_i=0.3102$ $K_d=0.0034$ Ünite 3: Gaz $K_p=0.0091$ $K_i=1.2409$ $K_d=0.6901$	Ünite 1: Termal $K_p=-1.7074$ $K_i=-1.9589$ $K_d=-1.3934$ Ünite 2: Hidro $K_p=-0.7453$ $K_i=0.1375$ $K_d=-0.9896$ Ünite 3: Gaz $K_p=-1.8253$ $K_i=-1.6813$ $K_d=-0.1628$	Ünite 1: Termal $K_p=1.9998$ $K_i=2.0000$ $K_d=1.9999$ $\lambda=0.5021$ $\mu=0.2386$ Ünite 2: Hidro $K_p=1.2029$ $K_i=1.1908$ $K_d=-0.4375$ $\lambda=0.5072$ $\mu=0.3748$ Ünite 3: Gaz $K_p=0.9272$ $K_i=2.0000$ $K_d=1.9999$ $\lambda=1.2105$ $\mu=1.2682$	Ünite 1: Termal $K_{p1}=3.0000$ $K_{d1}=3.0000$ $K_{p2}=3.0000$ $K_i=3.0000$ $K_{d2}=3.0000$ Ünite 2: Hidro $K_{p1}=-0.0737$ $K_{d1}=-0.8894$ $K_{p2}=-3.0000$ $K_i=3.0000$ $K_{d2}=0.1603$ Ünite 3: Gaz $K_{p1}=3.0000$ $K_{d1}=3.0000$ $K_{p2}=3.0000$ $K_i=3.0000$ $K_{d2}=-3.0000$

Tablo 1’de sunulan denetleyici parametreleri kullanılarak benzetim çalışmaları gerçekleştirilmiş ve elde edilen Δf_1 , Δf_2 ve ΔP_{tie} tepkileri [0, 30]s için Şekil 5’te verilmiştir. Şekil’den açıkça anlaşılacağı üzere 1. Bölge’deki 0.02 puMW’lık basamak yük değişimiyle frekans ve bağlantı hattı güç değişim eğrileri önce düşmüş, akabinde toparlanak referans değere oturmuşlardır. Başka bir deyişle; artan yük miktarına karşı önce frekans düşmüş, sonrasında enerji üretim tesisleri çıkışlarındaki güç miktarlarını artırarak frekans değerini nominal değere geri getirmişlerdir. Önerilen denetleyici ile elde edilen tepkiler incelendiğinde diğerlerine göre daha hızlı toparlandıkları, önemsiz bir aşım ile referans 0 p.u değere çabucak yerleştikleri görülmüştür.

Şekil 5. 1. Bölge'de 0.02 puMW'lık basamak yük değişimi sonrası elde edilen cevap eğrileri
(a) Δf_1 (b) Δf_2 (c) ΔP_{tie}

Son olarak iki bölgedeki p.u cinsinden güç üretimlerine dair eğriler elde edilmiş ve Şekil 6'da verilmiştir. İlk olarak 1. bölgedeki toplam güç çıkışı kararlı durumda $\Delta P_{g1}=0.02$ puMW olarak elde edilmiştir. Bu güç değeri 1. bölgeden talep edilen güce eşittir ($\Delta P_{D1} = \Delta P_{g1}=0.02$ puMW). Üretim ve tüketimin dengelendiği anda bölge frekanslarındaki salınım ve bölgeler arasındaki güç alışverişi sona erer. Şekil 6(b)'de 2. bölge'de meydana gelen güç değişim eğrileri verilmiştir. Buna göre; bu bölgede yük talebi olmadığı için ($\Delta P_{D2}=0$ puMW) bölgedeki enerji üretim tesislerinde üretilen toplam gücün kararlı durumda sıfır olduğu görülmektedir ($\Delta P_{gTermal-1} = \Delta P_{gHidro-1} = \Delta P_{gGaz-1}=0$ puMW). Sonuç olarak bu bölgede de önerilen SAA tabanlı PD-PID denetleyici üretim/tüketim dengesini sağlamıştır ($\Delta P_{D2} = \Delta P_{g2}=0$ puMW).

Şekil 6. 1. Bölge'de 0.02 puMW'lık basamak yük değişimi sonrası bölgelerdeki enerji üretim tesislerindeki toplam güçlerin değişimi (a) $\Delta P_{g[1.Bölge]}$ (b) $\Delta P_{g[2.Bölge]}$

6. SONUÇLAR

Güç sistemlerindeki yükler sürekli devreye girip çıkarak frekansta ciddi değişimlere neden olmaktadır. Frekans regülasyon problemi olabildiğince hızlı çözümlenmelidir, aksi halde güç sisteminin güvenliği, güvenilirliği ve üretilen gücün kalitesi düşer. Bu ise SFY için tasarlanan denetleyiciye ve bu denetleyicinin parametrelerin uygun şekilde ayarlanmasıyla mümkündür. Çalışmada sekonder denetleyici olarak PD-PID denetleyici tasarlanmış ve denetleyici parametreleri deneme-yanılma yöntemine başvurmadan SAA yaklaşımı ile elde edilmiştir. Ortaya konulan yöntemin performansı iki bölgeli çok kaynaklı güç sistemi üzerinde test edilmiştir. Elde edilen benzetim sonuçları literatürde bulunan sonuçlarla benzer şartlarda karşılaştırılmıştır. Karşılaştırma sonuçlarına göre önerilen yaklaşımın diğer yöntemlere kıyasla ST/US/OS/ITAE gibi zaman alanı performans kriterleri açısından daha iyi sonuçlar sunduğu görülmüştür. Önerilen SAA tabanlı PD-PID denetleyici ile sistem tepkileri hızlı toparlanarak referans değere çabucak oturmaktadırlar.

ÖZET

Fotovoltaik hücre modellenmesi ve akım-gerilim (I-V) karakteristik eğrileri ile model parametrelerinin elde edilmesi fotovoltaik sistemlerin etkinliği açısından önemli yer tutmaktadır. Bu çalışmada güneş hücresinin efektif şekilde modellenmesi ve iki diyotlu eşdeğer devre modelindeki parametrelerinin hassas şekilde belirlenmesi için sürüngen arama algoritması (SAA) kullanılmış ve önerilmiştir. 2022 yılında ortaya konulan SAA'nın farklı optimizasyon problemlerine makul derecede çözümler ürettiği görülmüştür. Sayısal sonuçlar R.T.C. France marka silikon güneş hücresine ait deneysel veri seti kullanılarak elde edilmiştir. Farklı algoritmalarla yapılan karşılaştırmalar neticesinde önerilen SAA tabanlı çift diyotlu modelin fotovoltaik hücrenin I-V ve güç-gerilim (P-V) karakteristik eğrilerini daha yüksek doğrulukla kestirdiği anlaşılmıştır. Elde edilen model ile gerçek güneş hücresine gerek duymadan farklı platformlarda operasyon öncesi test, benzetim ve optimizasyon çalışmaları gerçekleştirilebilir.

Anahtar Kelimeler: Parametre tayini, sürüngen arama algoritması, fotovoltaik hücre, iki diyotlu model, optimizasyon

ABSTRACT

Photovoltaic (PV) cell modelling and identification of model parameters by current-voltage (I-V) characteristic curves hold an important place for the effectiveness of PV systems. In this work, for effectively modelling of the solar cell and identifying the parameters in its two-diode equivalent circuit model precisely, reptile search algorithm (RSA) was used and proposed. Introduced in 2022, the RSA has been seen to produce satisfactory solutions to different optimization problems. The numerical results are obtained using an experimental dataset belonging to the R.T.C. France silicon solar cell. According to the comparisons with different algorithms, it is revealed that RSA-based double-diode model could predict the I-V and P-V characteristic curves of the PV cell with higher precise. Using the obtained model, testing, simulation and optimization can be carried out in different platforms before operation without the requirement of a real solar cell.

Keywords: Parameter identification, reptile search algorithm, photovoltaic cell, two-diode model, optimization

1. GİRİŞ

Sürdürülebilir bir çevre oluşturma için küresel ısınmanın azaltılması bugünlerde üzerinde durulması gereken önemli konuların başında gelmektedir. Fosil yakıt kullanımının azaltılması ya da tamamen ortadan kaldırılması ve böylelikle yenilebilir enerji kaynaklarına dönüşüm küresel ısınmanın üstesinden gelmede kilit faktörlerdendir [1]. Yenilebilir enerji güneş, rüzgâr, gelgit, biyokütle, dalga ve jeotermal enerjilerden oluşur. Bunlar arasında fotovoltaik güneş

enerjisi en temiz, bol miktarda bulunan ve uygulama için düşük çalışma/bakım maliyetlerine sahip olanıdır. Bununla birlikte fotovoltaik güneş enerji sisteminin verimi ortam sıcaklığı ve güneş ışığı (radyasyon) gibi çevresel faktörlere bağlıdır. Sistemde verim artışının sağlanması için güneş hücre/panellerinin doğru şekilde modellenmesi gerekir. Zira herhangi bir sistemin çıkışı etkili şekilde modellenmesine yakından bağlıdır. Bu itibarla güneş hücre/panellerinin modellenmesi araştırmacılar ve endüstriyel uzmanlardan tarafından yüksek ilgi görmektedir. Güneş hücrelerin doğrusal olmayan karakteristiğinden dolayı modelleme süreci zorlu bir iştir.

Güneş hücresinin modellenmesinde temel olarak iki matematiksel model kullanılır. Bu modeller tek diyotlu model (SDM) ve çift diyotlu modeldir (DDM). Bu modeller devre yapılarına, kullanılan parametrelere ve uygulamaya göre oluşturulmuşlardır. Modeller içinde yapısal basitliği ve daha az sayıda parametre gereksiniminden dolayı SDM yaygın olarak kullanılan model olmuştur. Ancak rekombinasyon kayıpları SDM’de dikkate alınmadığı için bir dezavantaj olarak düşünülmüş ve bu dezavantajın ortadan kaldırılması için devre modeline bir diyot daha ilave edilerek DDM ortaya konmuştur [2].

Konuyla alakalı pek çok araştırmacı ve uygulayıcı farklı fotovoltaik hücrelerin/modüllerin modellenmesi için çeşitli metotlar önermişlerdir. Bunlar analitik, deterministik ve metasezgisel olmak üzere üç grupta toplanabilir. Analitik yöntemlerde fotovoltaik panellerin parametrelerinin belirlenmesi için bazı matematiksel analizler gerçekleştirilir. Hesaplama yükü hafif olup işlemler hızlı gerçekleşir. Fakat elde edilen çözümün doğruluğu ile güvenilirliği zayıftır. Deterministik yöntemler modellerin dış büyüklüğüne ya da türevlenebilirliğine bağlı olduğundan çözümlerin kalitesi yine düşüktür. Metasezgisel yöntemler ise analitik ve deterministik yöntemlerdeki sınırlamaların üstesinden gelmektedirler. Ayrıca bu sınıftaki algoritmalar fotovoltaik sistem tasarımında önemli rol oynayan çok hedefli fonksiyonlarla uyumlu şekilde çalışabilirler.

Kyocera KC120-1 fotovoltaik modülünün tek diyotlu modellemesindeki 5 parametrenin tahmini için geliştirilmiş elektromanyetizma benzeri algoritma [3], çift diyotlu modeldeki 7 parametrenin tahmini için hibrit mutasyona dayanan diferansiyel evrim algoritması [4] ve hem tek diyotlu hem de çift diyotlu modellemeleri için Lambert W fonksiyonu tabanlı deniz yırtıcıları algoritması [5] kullanılmıştır. Kyocera KC200GT, SM55 ve ST40 fotovoltaik modüllerinin tek diyotlu modellemeleri için şönt dirence dayalı basit bir iteratif metottan yararlanılmıştır [6]. Kyocera KC200GT fotovoltaik modülün tek diyotlu ve çift diyotlu modellemeleri için radyal hareket optimizasyonu uygulanmıştır [7]. Kyocera KC200GT, SQ80 ve ST40 fotovoltaik modüllerinin tek diyotlu modellemeleri için Gauss-Seidel iteratif metodu kullanılırken, çift diyotlu modellemeleri için analitik bir metottan yararlanılmıştır [8].

R.T.C. France marka silikon fotovoltaik hücresinin tek diyotlu modellemesi için ışığın kırılma prensibini içeren balina optimizasyon algoritması geliştirilmiştir [9]. R.T.C. France marka silikon fotovoltaik hücresinin tek diyotlu ve çift diyotlu modellemeleri için denge optimizasyon algoritması [10], geliştirilmiş karşıtlığa dayanan öğretilme-öğrenme tabanlı optimizasyon [11] ve modifiye edilmiş yapay arı koloni algoritması [12] tasarlanmıştır. R.T.C. France marka silikon fotovoltaik hücresinin tek diyotlu ve çift diyotlu modellemeleri ile Photowatt-PWP201 fotovoltaik modülünün tek diyotlu modellemesi için Laplacian Nelder-Mead küresel evrimi [13], geliştirilmiş guguk kuşu arama algoritması [14], performans yönlendirmeli JAYA algoritması [15], modifiye edilmiş Rao-1 optimizasyon algoritması [16], modifiye edilmiş öğretilme-öğrenme tabanlı optimizasyon [17] ve geliştirilmiş uyarlanabilir kelebek optimizasyon algoritması [18] önerilmiştir.

Literatürde kullanılan yaklaşımlar değerlendirildiğinde, analitik metotlar test koşulları altında elde edilen parametrelere bağımlı iken, deterministik metotlar başlangıç koşuluna duyarlılıklarından dolayı yerel optimumu aramada iyidirler. Diğer taraftan, metasezgisel yaklaşımlar analitik ve deterministik metotlara göre daha iyi sonuçlar vermektedir fakat çözüm

kalitesini etkileyen kendilerine özgü kontrol parametrelerine sahiptirler. Bu nedenlerden ötürü, fotovoltaiik hücre/modül parametrelerinin etkili şekilde çıkarımına halen ihtiyaç duyulmaktadır. Bu noktada 2022 yılında önerilen sürüngen arama algoritması (SAA) fotovoltaiik hücrenin etkili şekilde modellenmesi için potansiyel bir yaklaşımdır.

SAA bir habitatta yaşayan timsahların avlanmak için kullandıkları stratejileri bilgisayar ortamında taklit ederek optimizasyon problemlerin çözümü için geliştirilmiş sürü tabanlı bir algoritmadır [19]. Çalışmada literatürde yaygın olarak kullanılan R.T.C. France marka fotovoltaiik hücrenin çift diyotlu modelindeki bilinmeyen elektriksel parametre değerleri minimum RMSE değeri için SAA ile elde edilmiştir. Elde edilen parametre değerleri kullanılarak fotovoltaiik hücreye ait akım-gerilim (I-V) ve güç-gerilim (P-V) karakteristik eğrileri çizdirilmiştir. Elde edilen sonuçların doğruluğu ve güvenilirliği için deneysel verilerle karşılaştırmalar yapılmıştır. Benzer problem için SAA aynı zamanda aritmetik optimizasyon algoritması (AOA) ile de karşılaştırılmış ve sonuçlar analiz edilmiştir.

2. SÜRÜNGEN ARAMA ALGORİTMASI

Sürüngen arama algoritması (SAA) 2022 yılında ortaya atılmış nispeten yeni metasezgisel, popülasyon tabanlı bir algoritmadır [19]. Algoritmada sürüngen familyasından olan timsahların çevreleme/kuşatma mekanizmaları, avlanma taktikleri ile sosyal davranışları bilgisayar ortamında taklit edilerek problem çözülmeye çalışılmaktadır. Timsahların davranışları iki sınıfta inceleyebilir: (i) yiyeceği çevreleme/kuşatma (ii) yiyeceği avlama. İlk sınıf arama uzayının keşfini sağlarken ikinci sınıfta elde edilen çözümlerden yola çıkarak sömürü gerçekleştirilmektedir. Keşif ile sömürü karakteristik özellikleri arasındaki denge algoritmanın performansı açısından büyük rol oynar. Bu bakımdan keşif ya da sömürü yeteneğinin tek başına iyi olması elde edilen sonuçların kaliteli olması için yeterli değildir. SAA üç alt başlık altında incelenecektir.

2.1. Algoritmanın başlatılması

Diğer algoritmalarda olduğu için SAA optimizasyon işlemine belli sayıda aday çözümlerle başlar. Çözümler arama uzayında rastgele üretilir. Bunun için Eş. 1 kullanılır.

$$X = LB + rand \cdot (UB - LB) \quad (1)$$

Eş. 1'de X aday çözümlerden (timsahlar) oluşan popülasyonu, $rand$ $[0, 1]$ 'da üretilen bir rastsal sayıyı, LB ve UB sırasıyla problemin alt ve üst sınırlarını göstermektedir.

2.2. Kuşatma fazı (keşif)

Bu fazda algoritmaya keşif yeteneği kazandırılmaya çalışılır. Kuşatma davranışına göre timsahların kuşatma sırasında yüksek yürüyüş ve göbek yürüyüş olmak üzere iki tipik hareketleri bulunur. Her ikisi de arama uzayında geniş ölçekte arama yapmayı sağlarlar. Timsahların kuşatma davranışı Eş. 2'de verilen basit bir bağıntı ile modellenmiştir.

$$x_{i,j}(t+1) = \begin{cases} best_j(t) \cdot -\eta_{i,j}(t) \cdot \beta - R_{i,j}(t) \cdot rand, & t \leq T/4 \\ best_j(t) \cdot x_{r_1,j} \cdot ES(t) \cdot rand, & t > T/4 \text{ \& } t \leq T/2 \end{cases} \quad (2)$$

Eş. 2'de t iterasyon sayısını ve T maksimum iterasyon sayısını göstermektedir. $best_j(t)$ elde edilen en iyi çözümün j . pozisyonunu, $rand$ $[0, 1]$ 'da üretilen bir rastsal sayıyı, $\eta_{i,j}(t)$ kuşatma operatörünü, β keşif denetleyici hassas bir parametreyi, $R_{i,j}(t)$ iterasyon sayısına bağlı olarak çözüm uzayını daraltan değişkeni, r_1 bir tamsayıyı, $x_{r_1,j}$ rastgele seçilen r_1 . çözümü göstermektedir. Evrimsel algı ($ES(t)$) fonksiyonu iterasyon sayısına bağlı olarak -2 ile 2 arasında rastgele biçimde azalan sayı üretir. $\eta_{i,j}(t)$, $R_{i,j}(t)$ ve $ES(t)$ Eşitlikler 3-5 ile hesaplanırlar.

$$\eta_{i,j} = best_j(t) \cdot P_{i,j} \quad (3)$$

$$R_{i,j} = \frac{best_j(t) - x_{r_2,j}}{best_j(t) + \epsilon} \quad (4)$$

$$ES = 2 \cdot r_3 \cdot \left(1 - \frac{t}{T}\right) \quad (5)$$

Eş. 4'te ε epsilon değeridir. $P_{i,j}$ en iyi çözüm ile eldeki çözümün j . pozisyonları arasındaki yüzdelik farktır ve Eş. 6'da verilen bağıntı ile hesaplanır.

$$P_{i,j} = \alpha + \frac{x_{i,j} - \text{mean}(x_i)}{\text{best}_j(t) \cdot (UB_j - LB_j) + \varepsilon} \quad (6)$$

Eş. 7'de α keşfin hassasiyetini ayarlayan bir parametredir ve algoritmada 0.1 olarak ayarlanmıştır. $\text{mean}(x_i)$ ifadesi Eş. 7'de verilmiştir.

$$\text{mean}(x_i) = \sum_{j=1}^n x_{i,j} \quad (7)$$

2.3. Avlanma fazı (sömürü)

Bu fazda algoritmanın sömürücü davranışı (avlanma) ortaya konulmuştur. Bu davranışa göre timsahların avlanma sırasında sergilendikleri iki davranış bulunur. Bunlardan ilki avlanma koordinasyonuyken diğeri avlanma iş birliğidir. Her iki davranışla algoritmanın belli bir alanda yaptığı arama işleminin konsantrasyonunun (sömürü) artması amaçlanır. SAA'da bu fazla ilişki bağıntı Eş. 8'deki gibi verilmiştir.

$$x_{i,j}(t+1) = \begin{cases} \text{best}_j(t) \cdot P_{i,j}(t) \cdot \text{rand}, & t > T/2 \text{ \& } t \leq 3T/4 \\ \text{best}_j(t) - \eta_{i,j}(t) \cdot \varepsilon - R_{i,j}(t) \cdot \text{rand}, & t > 3T/4 \text{ \& } t \leq T \end{cases} \quad (8)$$

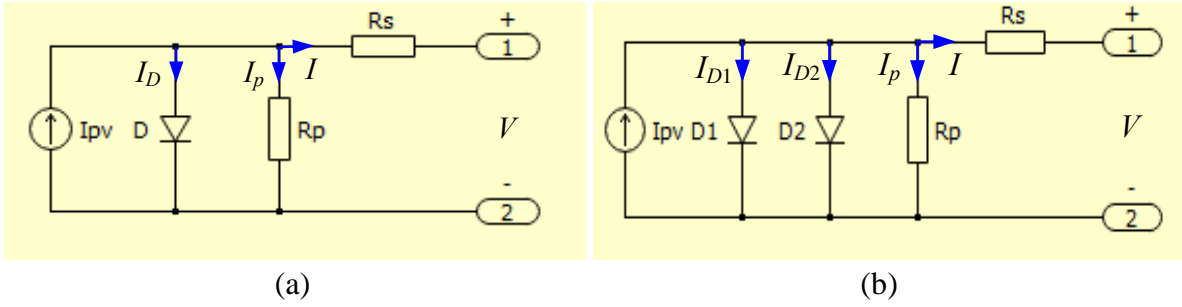

Eşitlikler 2 ve 8'den açıkça görünüyor ki toplam iterasyon sayısı iki eşit parçaya bölünmüştür. $t \leq T/2$ iken çözüm uzayının bilinmeyen, potansiyeli yüksek noktalarının keşfi için kuşatma fazı etkin iken $t > T/2$ iken ataktan hemen önce yiyeceğe olabildiğince yakın olabilmek için avlanma fazı çalışır. Bu durum aşağıdaki şekilde gösterilmiştir.

Şekil 1. Doğadaki timsahların hareketi (a) $t \leq T/2$ iken kuşatma (b) $t > T/2$ iken avlanma [19] no'lu kaynaktaki blok diyagram kullanılarak SAA, MATLAB/M-file ortamında kodlanmıştır ve optimizasyon çalışmaları gerçekleştirilmiştir.

3. FOTOVOLTAİK HÜCRENİN MATEMATİKSEL MODELİ

Fotovoltaik hücrenin en sık karşılaşılan elektriksel devre modelleri tek diyotlu model (SDM) ile çift diyotlu model (DDM)'dir. SDM ve DDM eşdeğer devreleri sırasıyla Şekil 2'de verilmiştir. Görüldüğü üzere eşdeğer devreler akım kaynağına bağlı paralel diyotlar ile dirençlerden meydana gelir. Ayrıca yük akımına bağlı olarak çıkış geriliminin değişimini sağlamak için fotovoltaik hücrenin çıkış terminallerine seri bir direnç konmuştur. Burada akım kaynağının akım şiddeti güneş ışığının miktarına ve sıcaklığa bağlıdır.

Şekil 2. Fotovoltaik hücrenin elektrik eşdeğer devre modelleri (a) SDM (b) DDM
DDM, SDM'e göre daha yüksek performans sağladığından bu çalışmada DDM tercih edilmiştir. Bu nedenle buradan sonraki kısımda DDM üzerine yoğunlaşılacaktır. Şekil 2(b)'deki DDM eşdeğer devresine kirşof kanununun uygulanmasıyla çıkış akımı I aşağıdaki şekilde tanımlanır.

$$I = I_{pv} - I_{D1} - I_{D2} - I_p \quad (9)$$

Eş. 4'de I_{pv} Amper (A) birimde foton akımı, I_D Amper (A) birimde diyot akımı ve I_p Amper (A) birimde paralel bağlı dirençten (R_p) akan akımdır. I_p Eş. 10'daki gibi ifade edilebilir.

$$I_p = \frac{V + IR_s}{R_p} \quad (10)$$

Burada V Volt (V) birimde fotovoltaik hücrenin çıkış gerilimini, R_s çıkış terminallerine bağlı seri direnci ve R_p diyot ya da akım kaynağına paralel bağlı direnci göstermektedir. Dirençler Ohm (Ω) birimindedir. Diyot akımları I_{D1} ile I_{D2} , Shockley bağıntısı kullanılarak Eşitlikler 11 ve 12'deki gibi çıkarılabilirler.

$$I_{D1} = I_{01} \left[\exp\left(\frac{V + IR_s}{n_1 V_t}\right) - 1 \right] \quad (11)$$

$$I_{D2} = I_{02} \left[\exp\left(\frac{V + IR_s}{n_2 V_t}\right) - 1 \right] \quad (12)$$

Eşitlikler 11 ve 12'de, n_1 ve n_2 diyotların idealite faktörleri, I_{01} ve I_{02} Amper (A) birimde ters doyum akımlarıdır. V_t Volt (V) birimde termal gerilim olup, aşağıdaki şekilde hesaplanır:

$$V_t = \frac{kT}{q} \quad (13)$$

Burada k Boltzmann sabiti (1.308649×10^{-23} Joule/Kelvin), q electron yükü ($1.602176634 \times 10^{-19}$ Coulomb) ve T Kelvin cinsinden ölçülen panel sıcaklığıdır. Eşitlikler 10, 11 ve 12, Eş. 9'da yerine konulursa, DDM'nin çıkış akımı I şu şekilde ifade edilir:

$$I = I_{pv} - I_{01} \left[\exp\left(\frac{V + IR_s}{n_1 V_t}\right) - 1 \right] - I_{02} \left[\exp\left(\frac{V + IR_s}{n_2 V_t}\right) - 1 \right] - \left(\frac{V + IR_s}{R_p}\right) \quad (14)$$

Eş. 14'den açıkça görülüyor ki DDM için yedi parametrenin bilinmesi gerekir. Bu model için bilinmeyenlerden oluşan vektörü δ Eş. 15'da verilmiştir.

$$\delta = [I_{pv}, I_{01}, I_{02}, n_1, n_2, R_s, R_p] \quad (15)$$

Çalışmada optimizasyon algoritmasında amaç fonksiyonunun doğru biçimde tanımlanması gerekmektedir. Çalışmanın amacı fotovoltaik hücrenin gerçek I-V karakteristik eğrisini tanımlanan DDM ile elde etmek olduğundan gerçek I-V verisi ile elde edilen I-V verisi arasındaki hata Eş. 16'da hesaplatılmıştır. Bu hata ölçütü hatanın karelerinin ortalamasının karekökü (RMSE) olarak tanımlanır.

$$RMSE = \sqrt{\frac{1}{N} \sum_{i=1}^N (I_i - \hat{I}_i)^2} \quad (16)$$

Eş. 11'de N deneysel olarak elde edilen (I_i, V_i) değerlerinin sayısıdır. I_i ve \hat{I}_i sırasıyla i . gerçek akım ve model kullanılarak hesaplanan akım değeridir. Çalışmada kullanılan deneysel veri seti 33°C ve 1000 W/m^2 radyasyon altında çalışan R.T.C. France marka silikon fotovoltaik hücrene aittir. Kullanılan veri setinde toplam 26 akım-gerilim verisi bulunmaktadır.

4. UYGULAMA SONUÇLARI

Önerilen yaklaşımın performansını test etmek için fotovoltaik hücrenin DDM için bilinmeyen parametre değerleri elde edilmiştir. SAA'da aday çözüm sayısı ile iterasyon sayısı 30 olarak ayarlanarak optimizasyon gerçekleştirilmiştir.

SAA kullanılarak gerçekleştirilen optimizasyon sürecine ait algoritma yakınsama grafiği Şekil 4'te verilmiştir. 1. iterasyon popülasyonun rastgele üretildiği başlangıç anıdır. Şekilden açıkça görüldüğü gibi en iyi RMSE değeri 0.01995'den 0.002761 değerine kadar düşmüştür.

Şekil 3. SAA yakınsama eğrisi

Optimizasyon sonunda elde edilen DDM parametre değerleri Tablo 1'de sunulmuştur. Bu tabloda aynı zamanda optimizasyon probleminin kısıtları olan parametre alt ve üst sınırları da gösterilmiştir. Elde edilen sonuçların etkinliğini göstermek amacıyla aritmetik optimizasyon algoritması (AOA) da probleme uygulanmış ve sonuçlar benzer şartlarda karşılaştırılmıştır. Tablo 1'deki RMSE değerleri incelendiğinde AOA en uygun 0.0039 değerini sunarken SAA ile bu değer **0.0028** olarak elde edilmiştir. Sonuç olarak bu problemde SAA performansının AOA'dan daha iyi olduğu anlaşılır.

Tablo 1. Parametre sınırları ve R.T.C. France marka fotovoltaik hücrenin DDM için bulunan en uygun parametre değerleri

Parametre	Sınırlar		Parametre değerleri	
	δ_{min}	δ_{max}	AOA	SAA
I_{pv} (A)	0	1	0.7585	0.7628
I_{01} (A)	1E-08	1E-05	4.9497E-08	1.7659E-07
I_{02} (A)	1E-08	1E-05	1.5555E-08	4.8147E-07
n_1	0	2	1.3123	1.4885
n_2	0	2	1.9907	1.6042
R_s (Ω)	0	5	0.0454	0.0348
R_p (Ω)	0	100	57.6578	53.1939
RMSE (Eş. 16)			0.0039	0.0028

Tablo 1'de SAA kullanılarak elde edilen parametreler ile fotovoltaik hücrenin DDM eşdeğer devresinden elde edilen I-V ve P-V karakteristik eğrileri Şekil 4'de verilmiştir. Deneysel olarak elde edilen gerçek I-V ve gerçek P-V karakteristik eğrileri de bu şekilde verilmiştir. Şekil 4'ten açıkça görülüyor ki SAA tabanlı DDM kullanılarak tahmin edilen değerlerle gerçek değerler arasındaki örtüşme iyi derecededir.

Şekil 4. Deneysel ve tahmin edilen I-V ve P-V karakteristik eğrileri

5. SONUÇLAR

Bu çalışmada, çift diyotlu fotovoltaik eşdeğer devresindeki bilinmeyen parametrelerin doğru şekilde tanımlanması için metasezgisel bir yaklaşım olan SAA'dan faydalanılmıştır. Fotovoltaik hücre modelinde elde edilen çıktılar değerlendirildiğinde; RMSE değeri 0.0028 seviyesine düşürülmüştür. Elde edilen sonuçlar aynı zamanda AOA ile elde edilen sonuçlarla karşılaştırılmış ve SAA'nın AOA'dan bu problem için daha etkin arama yeteneğine sahip olduğu anlaşılmıştır. Deneysel eğrilerle model tabanlı elde edilen akım ve güç eğrileri karşılaştırıldığında aradaki hatanın makul düzeyde olduğu görülmüştür. Sonuç olarak, SAA fotovoltaik hücrelerin gerçek akım-gerilim ve güç-gerilim karakteristik eğrilerinin elde edilmesinde belli bir potansiyele sahiptir.

ÖZET

Günümüzde teknolojinin gelişmesi ile otomatik duygu tanıma sistemleri de ortaya çıkmıştır. Otomatik duygu tanıma sistemlerinin yapısında insanların duygularını bilgisayar ortamında tanımlayabilen yöntemler kullanılmaktadır. Yapay zeka yöntemlerinin de gelişmesi ile ortaya birçok otomatik duygu tanıma sistemi çıkmıştır. Günümüzde otomatik duygu tanıma sistemleri, ses, görüntü, video, v.b. materyalleri kullanmaktadır. Bu girişlerden elde edilen özellikler tasarlanan yapay zeka tekniğinde çeşitli makine öğrenme yöntemleri kullanılarak değerlendirilerek, sonuçta doğru duygu tanıma işlemi gerçekleştirilmeye çalışılmaktadır. Bu çalışmada, yüz ifadelerinden duygu tanıma (FER) için derin öğrenme tabanlı bir yaklaşım değerlendirilmektedir. Burada çok sayıda yüz ifadelerinin yer aldığı FER2013 veri seti üzerinde geliştirilmiş bir VGG16 modeli kullanılarak duygu sınıflandırması yapılmıştır. FER2013 veri seti, 2013 yılında düzenlenen Kaggle yarışması kapsamında yayımlanmış ve yüz ifadelerinin otomatik tanınması için geniş çapta kabul görmüş bir veri setidir. Veri seti, toplamda 35.887 adet gri tonlamalı yüz görüntüsünden oluşmaktadır. Model mimarisine Batch Normalization katmanları eklenerek eğitim süreci hızlandırılmış ve modelin genelleme yeteneği artırılmıştır. Global Average Pooling ile hesaplama maliyeti azaltılırken, Dropout ile aşırı öğrenme engellenmiştir. Sonuç olarak, model FER2013 veri seti üzerinde % 87 test doğruluğu (accuracy), % 87 hatırlama (recall) ve % 85 F1 skoru elde etmiştir. Bu sonuçlar, değerlendirilen yaklaşımın yüz ifadelerinden duygu tanımda etkili olduğunu göstermektedir. Elde edilen bulguların, insan-bilgisayar etkileşimi, pazarlama ve güvenlik gibi alanlarda duygu tanıma sistemlerinin geliştirilmesine katkı sağlayacağı düşünülmektedir.

Anahtar Kelimeler: Duygu Tanıma, Yüz İfadeleri, Derin Öğrenme, VGG16, FER2013

ABSTRACT

Nowadays, with the development of technology, automatic emotion recognition systems have also emerged. In the structure of automatic emotion recognition systems, methods that can identify people's emotions in a computer environment are used. With the development of artificial intelligence methods, many automatic emotion recognition systems have emerged. Nowadays, automatic sensory recognition systems use materials such as sound, image, video, etc. The features obtained from these inputs are evaluated using various machine learning methods in the designed artificial intelligence technique, and as a result, accurate emotion recognition is attempted to be achieved. This study evaluates a deep learning-based approach for facial expression recognition (FER). Here, emotion classification is performed using a VGG16 model developed on the FER2013 dataset, which includes a large number of facial expressions. The FER2013 dataset is a widely accepted dataset for automatic recognition of facial expressions, published within the scope of the Kaggle competition held in 2013. The dataset consists of a total of 35,887 grayscale face images. Batch Normalization layers were added to the model architecture to accelerate the training process and improve the model's generalization ability. Global Average Pooling was used to reduce computational cost, while Dropout was employed to prevent overfitting. As a result, the model achieved 87 % test accuracy, 87 % recall, and 85 % F1 score on the FER2013 dataset. These results indicate that the evaluated approach is effective in recognizing emotions from facial expressions. We believe that our findings will contribute to the development of emotion recognition systems in various fields such as human-computer interaction, marketing, and security.

Keywords: Emotion Recognition, Facial Expressions, Deep Learning, VGG16, FER2013

1. GİRİŞ

İnsan yüzü, duygusal durumumuzun en açık ve evrensel göstergelerinden biridir. Yüz ifadelerimiz, sevinçten üzüntüye, öfkeden şaşkınlığa kadar geniş bir yelpazede duygusal deneyimlerimizi yansıtır. Bu ifadeler, sadece kişisel iletişimimizde değil, sosyal etkileşimlerimizin neredeyse her alanında önemli bir rol oynar. İnsanların birbirlerini anlamaları, empati kurmaları ve ilişkiler kurmaları için yüz ifadelerinin doğru bir şekilde yorumlanması büyük önem taşır.

Yüz ifadelerinin bu evrensel dili, günümüzde teknolojiyle birleşerek yeni uygulama alanları bulmaktadır. Özellikle insan-bilgisayar etkileşimi, pazarlama, eğitim ve güvenlik gibi alanlarda yüz ifadelerinin otomatik olarak tanınması ve analiz edilmesi büyük ilgi görmektedir. Bu sayede, kullanıcı deneyimleri kişiselleştirilebilir, müşteri memnuniyeti ölçülebilir, öğrenme süreçleri optimize edilebilir ve güvenlik sistemleri daha etkili hale getirilebilir.

Bu çalışmada, yüz ifadelerinden duygu tanımanın önemli bir uygulama alanı olan müşteri ve çalışan memnuniyeti analizi üzerine odaklanılmaktadır. Müşteri ve çalışanların yüz ifadelerini analiz ederek, onların duygusal durumlarını ve memnuniyet düzeylerini daha iyi anlamak ve buna göre hizmet kalitesini artırmak mümkündür. Bu amaçla, derin öğrenme tabanlı bir yaklaşım kullanarak yüz ifadelerinden duygu tanıma performansını değerlendirmekteyiz. FER2013 yüz ifadesi veri seti üzerinde eğittiğimiz gelişmiş bir VGG16 modeli ile duygu sınıflandırması gerçekleştirilerek, bu alanda etkili bir çözüm sunmayı hedeflemekteyiz.

2. ARAŞTIRMA VE BULGULAR

2.1.Yüz İfadesi Tanıma

Duygu tanıma, insan duygularını yüz ifadeleri, ses analizi, metin analizi ve fizyolojik sinyaller gibi çeşitli yöntemlerle tespit eden ve sınıflandıran önemli bir süreçtir. Pazarlama, sağlık, eğitim ve güvenlik gibi alanlarda yaygın olarak kullanılan bu teknoloji, müşteri memnuniyetini artırmaktan ruh sağlığı sorunlarını tespit etmeye kadar geniş bir yelpazede fayda sağlar. Duygu tanıma teknolojisi, insan duygularını daha iyi anlamamızı ve bu bilgiyi çeşitli amaçlarla kullanmamızı sağlayarak gelecekte daha da önemli bir rol oynayacaktır.

Şekil 1 Duygular

2.2. Derin Öğrenme

Derin öğrenme, yapay sinir ağlarının çok katmanlı yapılarını kullanarak karmaşık örüntüleri otomatik olarak öğrenme yeteneği sağlayan bir makine öğrenme alt dalıdır. Bu teknik, büyük veri kümelerinden yararlanarak görsel ve işitsel veriler gibi karmaşık veri türlerinde yüksek düzeyde performans sergileyebilir. Derin öğrenme, her katmanda girdi verisinin işlenmesiyle başlar, ardından katmanlar arası bağlantılar üzerindeki ağırlıkların iteratif olarak ayarlanmasıyla devam eder. Bu süreç, nesne tanıma, dil işleme, duygu tanıma gibi çeşitli yapay zeka görevlerinde etkili bir şekilde kullanılabilir. Derin öğrenme, insan beyninin çalışma şeklini taklit ederek bilgisayar sistemlerinin karmaşık problemleri ele almasına ve öğrenmesine imkan tanır.

2.3. Evrimsel Sinir Ağı

Evrimsel Sinir Ağları (Convolutional Neural Networks - CNN), görsel veri işleme için kullanılan derin öğrenme modelleridir. CNN'ler, görüntülerdeki örüntüleri tespit etmek ve tanımak için özelleştirilmiştir. Bu ağlar, görüntü işleme alanında yaygın olarak kullanılan ve birçok görsel görevde etkili sonuçlar veren özellik çıkarıcılar olarak da bilinirler [1].

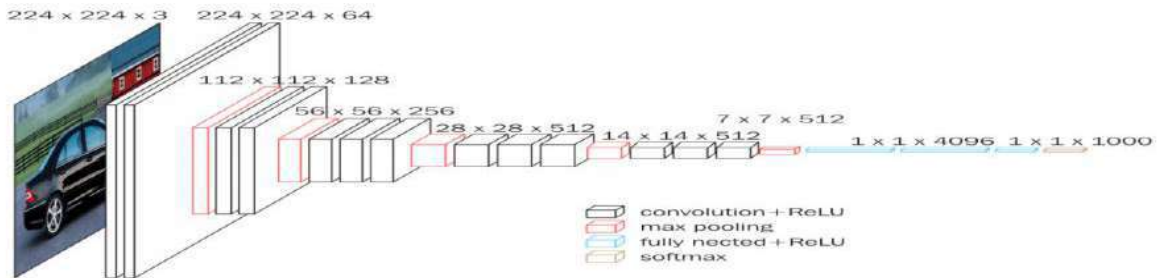

Şekil 2 CNN Mimari Örneği

CNN'lerin temel özelliği, veri içindeki yerel bağımlılıkları ve özelliklerin ölçek invariyanısını yakalamak için evrişim (convolution) ve havuzlama (pooling) katmanlarını kullanmalarıdır. Evrişim katmanları, görüntülerdeki özelliklerin (kenarlar, köşeler, desenler vb.) belirlenmesine yardımcı olmak için girdi görüntü üzerinde bir filtre uygular. Havuzlama katmanları ise, evrişim katmanlarının çıktılarını özetleyerek boyutunu azaltır ve özelliklerin yer değiştirmesi ve ölçek değişikliklerine karşı daha dirençli olmasını sağlar [2].

2.4. VGG16 (Visual Geometry Group)

VGG, bilgisayarlı görü ve görsel tanıma alanlarında sıkça kullanılan bir derin öğrenme modelidir. VGG'nin ana özelliği, modelin mimarisindeki derinlik ve basitlik kombinasyonudur. VGG, diğer birçok derin öğrenme modelinden farklı olarak, bir dizi ardışık katmandan oluşur. Her bir katman, evrişim, aktivasyon ve havuzlama katmanlarından oluşur ve ardışık olarak yer alır. Bu katmanların ardından tam bağlantılı katmanlar gelir [3-5].

Şekil 3 VGG16 Mimarisini

3. MATERYAL ve METOD

3.1. Veriseti

Bu çalışmada, yüz ifadelerini sınıflandırmak için FER2013 (Facial Expression Recognition 2013) veri seti kullanılmıştır. FER2013 veri seti, 2013 yılında düzenlenen Kaggle yarışması kapsamında yayımlanmış ve yüz ifadelerinin otomatik tanınması için geniş çapta kabul görmüş bir veri setidir. Veri seti, toplamda 35.887 adet gri tonlamalı yüz görüntüsünden oluşmaktadır. Her bir görüntü, 48x48 piksel boyutundadır ve aşağıdaki yedi yüz ifadesinden biriyle etiketlenmiştir:

Şekil 4 Duygular

Her bir görüntü, yüz ifadelerini tespit etmek ve sınıflandırmak için çeşitli derin öğrenme modellerini eğitmek amacıyla kullanılmıştır.

Veri setindeki görüntüler, çeşitli yaş gruplarından ve demografik özelliklerden gelen bireyleri içermekte olup, gerçek dünya koşullarını yansıtan çeşitli ışıklandırma ve poz varyasyonları içermektedir. Bu çeşitlilik, modellerin genelleme yeteneğini artırmak için önemlidir.

3.2. Model

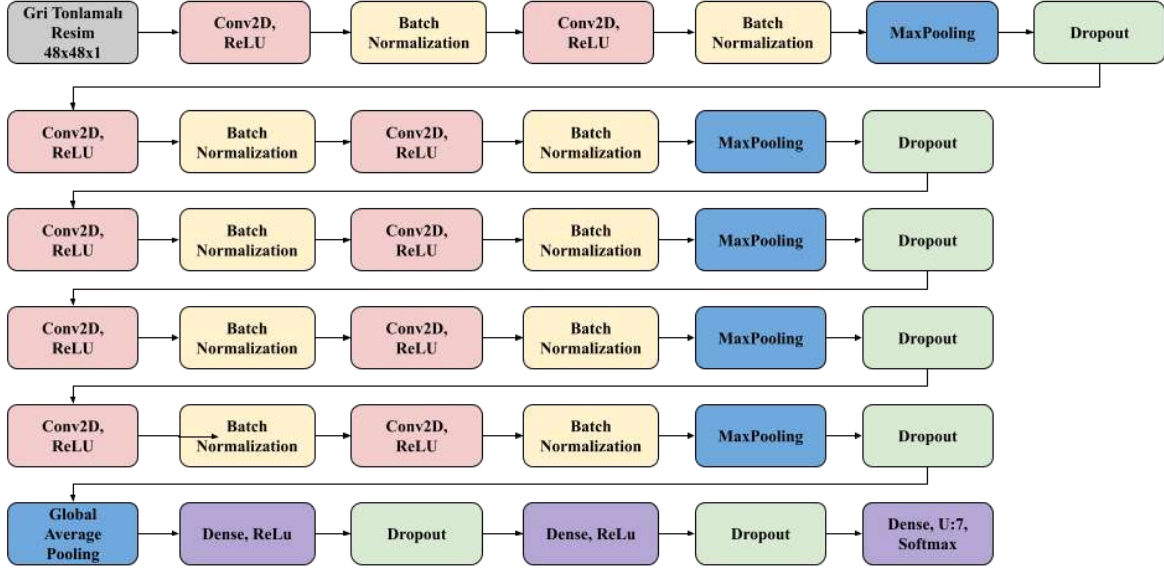

Bu çalışmada, FER2013 veri seti kullanılarak yüz ifadelerinin tanınması amacıyla değiştirilmiş bir VGG16 modeli geliştirilmiştir. VGG16, çok katmanlı yapısı ile derin özellikleri öğrenme yeteneğine sahip bir Convolutional Neural Network (CNN) modelidir. Orijinal VGG16 modeline bazı eklemeler ve değişiklikler yapılarak, modelin yüz ifadelerini daha iyi tanıyabilmesi sağlanmıştır.

Her blok, birkaç evrişim (Conv2D) katmanı ve bir MaxPooling2D katmanı içerir. Evrişim katmanları, görüntüdeki özellikleri çıkarırken, MaxPooling katmanları boyutu azaltır. ReLU aktivasyon fonksiyonları doğrusal olmayan ilişkileri öğrenmeyi sağlar. BatchNormalization, öğrenme sürecinde kararlılığı artırır ve Dropout katmanları aşırı öğrenmeyi önler.

GAP(Global Average Pooling) katmanı, her bir özelliğin ortalama değerini alarak çıktı boyutunu azaltır ve parametre sayısını düşürür. Bu katman, modelin daha az parametreyle daha etkili öğrenmesini sağlar.

512 nöronlu iki Dense katmanı ve 7 sınıflı bir softmax aktivasyonlu çıkış katmanı içerir. Bu katmanlar, öğrenilen özelliklere göre sınıflandırma yapar.

Bu model, görüntüdeki özellikleri katman katman öğrenerek, son katmanda yüz ifadesi sınıflandırması yapar. Özellikle GAP katmanı, özellik haritalarını özetleyerek modeli daha verimli hale getirir ve benzerlerine göre daha yüksek performans göstermesini sağlar.

Şekil 5 Model Mimarisi

3.3. Performans Değerlendirme Metrikleri

Modelimizin performansını değerlendirmek için üç temel metrik kullanılmıştır: doğruluk (accuracy), F1 skoru ve hatırlama (recall). Bu metrikler, modelin ne kadar iyi çalıştığını ve hangi alanlarda iyileştirmeler gerektiğini belirlemek için kritik öneme sahiptir.

Doğruluk (Accuracy)

Doğruluk, modelin doğru sınıflandırdığı örneklerin toplam örnek sayısına oranıdır. Yani, modelin doğru tahmin ettiği örneklerin yüzdesini ifade eder [6-10].

$$\text{Doğruluk} = \frac{TP+TN}{TP+FP+TN+FN}$$

Doğruluk, genel olarak modelin ne kadar iyi performans gösterdiğini belirlemek için kullanılır. Ancak, veri setindeki sınıfların dengesiz olduğu durumlarda tek başına yeterli bir performans ölçütü olmayabilir.

Hatırlama (Recall)

Hatırlama, modelin pozitif sınıfları ne kadar iyi yakaladığını gösterir. Yani, modelin doğru bir şekilde pozitif olarak sınıflandırdığı örneklerin, tüm gerçek pozitif örneklere oranıdır [6-10].

$$\text{Recall} = \frac{TP}{TP+FN}$$

Hatırlama, özellikle pozitif sınıfların yakalanmasının önemli olduğu durumlarda kritik bir metrik olarak öne çıkar.

Kesinlik (Precision):

Precision, doğru pozitif sonuçların (tahmin edilen pozitiflerin gerçek pozitiflerle oranı) ölçüsüdür. Duygusal ifade tanıma durumunda, precision, her bir duygusal ifade sınıfının doğru bir şekilde tahmin edilme oranını gösterir. Yüksek bir precision, modelin bir sınıfı doğru bir şekilde tahmin etme yeteneğini gösterir [6-10].

$$\text{Precision} = \frac{TP}{TP+FP}$$

F1 Skoru

F1 skoru, precision ve recall'un harmonik ortalamasıdır ve özellikle dengesiz sınıflar arasında performansı değerlendirirken kullanışlıdır. F1 skoru, modelin hem yanlış pozitifleri (false positives) hem de yanlış negatifleri (false negatives) dikkate alarak dengeli bir performans ölçümü sağlar [6-10].

$$\text{F1 Skoru} = 2 * \frac{\text{precision} * \text{recall}}{\text{precision} + \text{recall}}$$

4. SONUÇ ve KAYNAKÇA

Performans değerlendirme metrikleri, modelimizin duygu tanıma görevinde ne kadar başarılı olduğunu ortaya koymaktadır. Bu sonuçlar, modelin gerçek dünya uygulamalarında kullanılabilirliğini ve farklı duygu sınıflarını tanımadaki etkinliğini göstermektedir. Modelimizin performans metrikleri aşağıdaki gibidir:

Doğruluk (Accuracy): %87

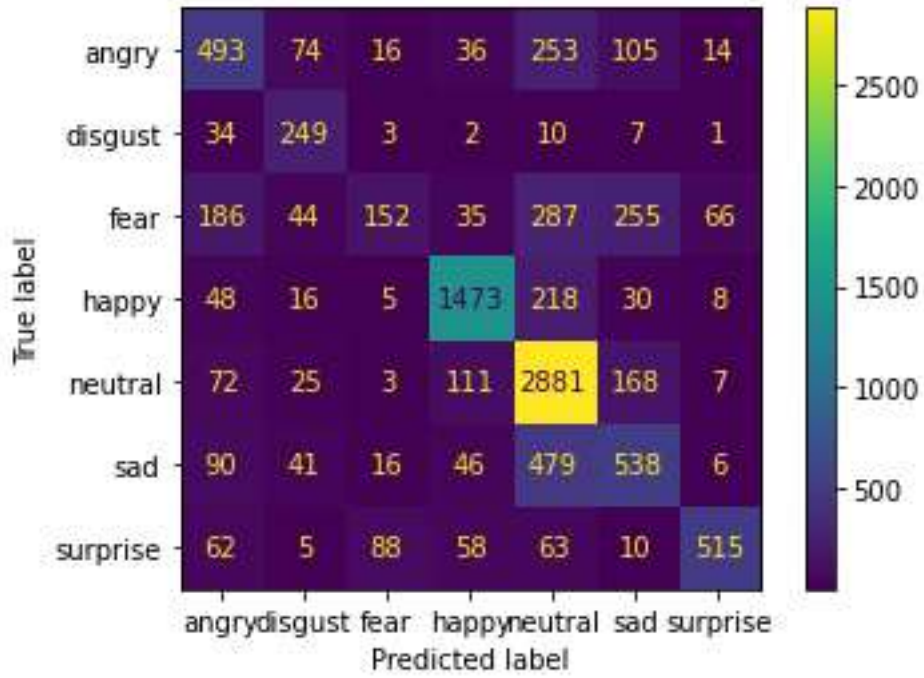

F1 Skoru: %85

Hatırlama (Recall): %87

Bu sonuçlar, modelin duygu tanıma sistemi için sağlam bir temel oluşturduğunu ve uygulamalarda kullanılabilirliğini göstermektedir. Modelin eğitim sürecinde elde edilen doğruluk ve kayıp grafikleri, modelin öğrenme kapasitesini ve genel performansını görselleştirmekte yardımcı olmuştur.

Şekil 6 Eğitim ve Doğrulama Grafikleri

Şekil 7 Karmaşıklık Matrisi

Karışıklık matrisi ve diğer metrikler, modelin hangi sınıflarda daha başarılı olduğunu ve hangi sınıflarda iyileştirmeler gerektiğini belirlememize yardımcı olmuştur. Sonuç olarak, modelimizin duygu tanıma görevinde etkili olduğu ve çeşitli metrikler kullanılarak başarıyla değerlendirildiği sonucuna varılmıştır.

**ITALIAN ADMINISTRATIVE MEASURES TARGETING NGO RESCUE VESSELS
IN THE CENTRAL MEDITERRANEAN SEA: IN VIOLATION OF UN AND EU
FACILITATION OF SMUGGLING AND TRAFFICKING NETWORKS**

Enkelejda Koka¹

¹Department of Public Law, University of Tirana, Tirana, Albania

Abstract

In accordance with the international legal framework on Search and Rescue (SAR), captains of vessels have the obligation to rescue any person at distress at sea. High numbers of irregular migrants are crossing the Central Mediterranean Sea via unseaworthy boats, thus falling within the ambit of the SAR Convention. To discourage the irregular migrant crossing, the Italian strategy is to prevent and thus stop captains of private vessels or SAR NGOs from responding to rescue calls at sea by imposing overly restrictive administrative measures if the rescue occurs without the prior authorization of the disembarking coastal state. This paper argues that Italy has adopted a new irregular migrant containment strategy in the form of disguised administrative acts to ensure SAR activity discouragement. These measures are undertaken under the Italian pretence of fulfilling their international objective to disengage smuggling and trafficking networks under the Palermo Protocols and the European Legal Framework on the facilitation of smuggling and trafficking networks. To date, there is no evidence linking irregular migration and SAR activities with Criminal networks. Offering an original contribution to literature, this paper analyses the Italian `administrative measures` in accordance with Law No. 15 of 24 February 2023 and Articles 1, 10 and 12 of the Italian Legislative Decree No. 286/1998 referred to as the `Italian Consolidated Text on Migration` arguing they are in effect disguised `criminalization measures` against captains of vessels responding to calls of irregular migrants in distress at sea. These measures are argued to violate the overall objective under the expressed intention of the UN Smuggling Protocol and the European Legal Framework on the facilitation of smuggling and trafficking networks exempting humanitarian actors from unreasonable administrative punishment.

Keywords: -1, arbitrary administrative measures, -2, irregular migrants, -3, rescue at sea, -4, SAR activity discouragement

NGO Rescue Discouragement at Central Mediterranean Sea

Since 2013, Italy has received an influx of over one million 'irregular migrant'¹ arrivals,² superseded with a death toll exceeding 28,000 people.³ These irregular migrant arrivals turned into a 'migrant crises' and political challenge for Italy and the European Union.⁴ In response to these influxes, Italy undertook a series of measures to prevent and reduce arrivals of irregular migrants to their external borders, such as strengthening their surveillance capacities and increased policing via interception operations at sea and land borders, referred to as 'externalization' measures of border control.⁵ To protect its external borders, Italy has undertaken a series of legislative and administrative measures linking irregular migration with issues on security and criminalization.⁶

To regulate the irregular migration issues from a criminal law management perspective, Italy adopted the Italian Consolidated Text on Migration⁷ in its attempt to fulfill its obligations under the Palermo Protocols within the national criminal code.⁸ Article 12(1) of the Consolidated Text

¹ IOM defines irregular migration as 'movement that takes place outside the regulatory norms of the sending, transit and receiving countries. However, there is no clear or universally accepted definition of irregular migration'. IOM, Key Migration Terms <<https://www.iom.int/key-migration-terms>> accessed 11 June 2024; In the Central Mediterranean Sea irregular migration is 'mixed'. It consists of people flows moving for different reasons but which share the same route. The 'boat people' share the same vessel and cross the sea without authorisation with the aim to reach EU territory. Thus, the term 'irregular migrant' includes asylum seekers, refugees, trafficked and smuggled persons, unaccompanied children, stateless persons, economic migrants and displaced persons; see Nathalie Bernardie-Tahir and Camille Schmoll, Islands and Undesirables: Introduction to the Special Issue on Irregular Migration in Southern European Islands (2014) JIRS 12(2), 87-102, 88-89.

⁷ Legislative Decree 25.7.1998, No. 286 on "Consolidated Act of Provisions concerning immigration and the condition of third country nationals.

⁸ UN. Convention against Transnational Organized Crime 2000, New York, 15 November 2000, UNTS 12, Volume 2225; UN General Assembly, Protocol against the Smuggling of Migrants by Land, Sea and Air, Supplementing the United Nations Convention against Transnational Organised Crime, United Nations,

on Migration defines smuggling as the ‘the promotion, management, organization, support, or conduct of the transportation of a third-country national in the territory of the State, of which the person is not a citizen nor a permanent resident, against the provisions of the Testo Unico’. In accordance with Italian legislation,⁹ any person can be accused for the crime¹⁰ of migrant smuggling if it is proved that there is an ‘illegal entry’¹¹ ‘within the territory’ and/or ‘cross-border smuggling’.¹² In its Article 12 (1) of the Italian Consolidated Text on Migration, Italian authorities impose punishment with ‘imprisonment from one to five years and with a 15,000 Euro fine for each person’ upon any person without distinguishing the underlying aim of the action, even in the case of a humanitarian actor saving lives at sea disobeying Italian law.¹³

To discourage the irregular migrant crossing and prevent massive arrivals of irregular migrants to European territory, this Italian strategy aimed to contain and stop SAR operations at sea in the name of deterrence to namely ‘punishing one to discourage others.’¹⁴ Those who had to be punished foremost were the NGO rescuing vessels, private shipping vessels and the irregular migrants fleeing upon unseaworthy boats from third countries. According to statistics produced by an inquiry made by the Italian Senate between 2017 and until June 2018, NGO vessels carried out roughly 40 % of all rescues at sea.¹⁵ During the first six months of 2017 (1 January-30 June), some 10 vessels deployed by NGOs rescued more than a third of the persons rescued at sea in this period (33,190 of the 82,187 persons).¹⁶

In terms of the Italian objectives, these measures seemed to produce successful results in discouraging irregular migrants from embarking upon the perilous journey via the Central Mediterranean Sea. From 119,369 sea arrivals in 2017, Italy saw a sharp decrease of numbers to 23,370 in 2018.¹⁷ These numbers further dropped to 11,471 in 2019.¹⁸ Although the number of irregular migrant arrivals dropped, the number of migrants dead and/or missing were alarmingly raised: in 2017 (119,369 arrivals) with 2,873 dead and missing; in 2018 (23,370 arrivals) with 1,311 dead and missing; in 2019 (11,471 arrivals) with 754 dead and missing; in 2020 (34,154 arrivals) with 955 dead and missing; in 2021 (67,477 arrivals) with 1,545 dead and missing; in 2022 (105,131 arrivals) with 1,453 dead and missing; and in 2023 (157,651 arrivals) with 1,908 dead and missing.¹⁹

¹⁹ *Ibid.*

Alarmed with the raising death toll at sea, NGOs such as *Médecins Sans Frontières/SOS Méditerranée*, *Sea-Eye*, *Proactiva Open Arms*, *Sea Watch* and many more, started to perform rescue activities to save lives at the Mediterranean Sea.²⁰ To deter these NGO vessels from responding to rescue calls, the former interior minister of Italy, *Matteo Salvini*, started in 2018 to target the rescued irregular migrants by considering them a ‘threat to national security’ and thereby declaring the Italian ports ‘closed’ to rescued migrants’ vessels.²¹ This was the start of the Italian containment strategy targeting not only the rescued irregular migrants but also the humanitarian actors assisting them to their rescue. The next phase of the Italian containment strategy consisted of criminalization and administrative measures against SAR NGOs in the form of seizure and confiscation of NGO boats, prosecutions for the facilitation of irregular migration and human smuggling, penalization for unauthorized entry to national ports, and imposition of administration fines.²² Those captains of vessels that refused to obey orders faced up to 50,000 euros of fine and in case of repeated offences the vessel’s seizure. The underlying aim of such drastic measures were to stop rescue operations conducted by NGOs or other vessels at international waters. This containment strategy developed under the so-called auspices of security and criminalisation priorities continued despite the Italian Senate report dismissing allegations that some NGOs were cooperating either directly or indirectly with smugglers in Libya.²³ Amongst other measures were the disengagement of EU coastal states in SAR operations through the suspension of Frontex Joint Maritime Operations *Themis* (launched in 2018 replacing Operation *Triton* initiated in 2014)²⁴ and the withdrawal of EUNAVFOR-MED operation ‘*Sophia*’ (launched in 2015).²⁵

However, despite the Italian government attempts to criminalise and punish NGO vessels from rescuing irregular migrant at sea, NGO humanitarian vessels and private shipping vessels continued in their efforts to rescue persons at distress at sea non-conditioned by their immigration status in accordance with their international obligations on rescue at sea and the protection of the fundamental ‘right to life’. As a result, since 2019 to 2024, Italy has seen an increase in the number of irregular migrant arrivals by sea, thereby hindering the Italian strategy of irregular migrant discouragement from departure on unseaworthy boats believing that no one would come to their rescue. Thus, in 2019, Italy received a number of 11,471 irregular migrants

²⁵ Anja Radjenovic, “Search and rescue in the Mediterranean”, EU Parliament Briefing PE 659.442 (January 2021).

by sea and the year 2020, saw a sharp increase of 34,154 number of irregular migrants by sea.²⁶ In 2021, the number continued to increase to 67,477.²⁷ The year 2022, registered 105,129 irregular migrants by sea and a further surge of 50% in irregular migrant numbers of 157,652 in 2023.²⁸ Whereas, up to June 23, 2024 the number of sea arrivals reached 24,825 and the number of dead and missing reached 805 as of 23 July 2024.²⁹

These changes to Italian legislation are argued to be incompatible with the legal framework adopted by the Palermo Protocols and the EU legal framework on the facilitation of smuggling and trafficking networks. The two legal elements that must be proved for the crime of migrant smuggling is the `illegal entry` and that `the smugglers gained financial or other material benefit.³⁰ Adding the legal element of a financial gain, the UN legislators` intention was to exclude from criminal liability humanitarian actors who save lives at sea in accordance with their obligations under international law.³¹ The same intention was preserved by the EU Refit Evaluation in 2017 in its assessment of the EU Facilitators Package.

Italian Administrative Measures Targeting NGO Rescue Vessels

As a counter response to the increased number of irregular migrant arrivals via sea, on 24 February 2023, Italy went on to adopt Law No. 15 of 24 February 2023 known as the Piantedosi`s Decree, which regulates the activities of private vessels transporting rescued migrants carrying out rescue missions and increased the administrative requirements of private vessels when entering or transiting through Italian territory.³² This new regulatory framework gives Italian authorities the power to restrict entry and transit to commercial or humanitarian NGO vessels in the Italian territorial sea unless the vessel proves: "1) The ship systematically carrying out search and rescue activities operates in accordance with authorisations issued by the competent authorities of the flag State and is in possession of the requirements of technical-nautical suitability for the safety of navigation; 2) Specific initiatives were promptly taken to inform the rescued persons of the possibility of requesting international protection, and the vessel personnel are required to collect relevant data to be made available to the authorities. Information must also be provided for the purpose of acquiring elements relating to the rescue operation carried out,³³ 3) Immediately after the event (the rescue) the vessel must request the

³³ Decree Law 1/2023, Art. 2bis (b).

assignment of a port of disembarkation, and must proceed to that port without delay,³⁴ 4) The methods of search and rescue at sea by the ship should not have contributed to creating dangerous situations on board or prevented the timely arrival at the port of disembarkation designated by the authorities.³⁵ In case of violation, the master of ship, owner and the shipowner of the ship shall be liable to administrative offences; incur penalties for payment of 10,000 – 50,000 euros;³⁶ administrative detention of the vessel for a period of two months; and the confiscation of the vessel in case of reiterated violations of the provisions with the same vessel.³⁷ It is argued here that the Italian Law No. 15 of 24 February 2023, underlying objective is to directly target NGO vessels that rescue irregular migrants at distress at sea leaving them only two options: 1) stop any future rescues or 2) continue rescue at sea but be overburdened with legal, criminal and administrative fines. The effects of Law No. 15 of 24 February 2023, have been to mark the year 2023 with the highest annual death toll on record with over 8,500 deaths.³⁸

NGO rescue vessels are required in accordance with Law No. 15 of 24 February 2023 to disembark the rescued individuals immediately to a port following rescue. It prevents them from responding to other boats in distress in the area. Any captain of a vessel that disobeys this rule faces a fine up to 10,000 euros, detention of vessel for at least 20 days and a period of 2 (two) months with the possibility of confiscation by Italian authorities in cases of reiterated violations of the provisions with the same vessel.³⁹ Since 2023, Italian authorities have detained 9 (nine) NGO rescue vessels on 16 occasions. The period of detention amounted to more than 300 days prevention from the vessels being active at sea and in the same time, preventing them from assisting people in distress which often has resulted in fatalities with loss of life.⁴⁰

The Italian government justifies the adoption of Law No. 15 of 24 February 2023, as part of a series of Italian government externalization measures of border control against migrant smuggling networks. This paper argues though that the Italian Law No. 15 of 24 February 2023 obliging NGO vessels not to respond to consequent distress calls for rescue in the area, is in effect a national legal administrative measure which obstructs assistance to people in distress at sea acting in violation of the international legal framework on search and rescue and international human rights law on the ‘right to life’ and ‘duty to rescue’.⁴¹ The international

legal framework on rescue at sea renders upon any master of a navigating vessel, be it a governmental or private fishing vessel⁴² a duty of assistance to persons in distress at sea without setting conditions as to their immigration status.⁴³ The international legal framework protection on the 'right to life', ranked as the most fundamental⁴⁴ right within the ECHR in which the Convention expressly provides that no derogation from it is permitted.⁴⁵

Administrative Conditions on 'Disembarkation' against the Spirit of international law

In January 2023, the *Geo Barents* vessel was instructed by Italian authorities to disembark the 61 rescued people to the port of *La Spezia*, a journey of about 1,200 km. During its journey for disembarkation to the port of *La Spezia*, *Geo Barents* received a report that another vessel was in distress nearby. On the way to responding to the second rescue, *Geo Barents* ran into a third vessel in distress. *Geo Barents* responded to all three rescue calls, gathering a total of 237 people on board. It took the vessel 4 days travel to disembark the rescued migrants to the port of *La Spezia*. On 1 February 2023, Italian authorities granted *Geo Barents* permission to leave port. On 13 February 2023, *Geo Barents* performed another rescue in international waters in which it was given permission to disembark the rescued in the port of Ancona, five days' journey away. On 24 February 2023, the Ancona Port Authority ordered a 20-day detention for *Geo Barents* under the justification that it did not share the Voyage Data Recorder. Commercial vessels are required to share their Voyage Data Recorder information only upon an investigation following a maritime accident.⁴⁶ *Geo Barents* was also fined by the Prefect of Ancona.

So far, the Italian administration has not provided any documentation to explain how their decisions for disembarkation are made contrary to Article 41 of the European Charter of Fundamental Rights of the European Union,⁴⁷ which requires administrations to provide reasons for their decisions and to allow access to administrative documentation. To date, the Italian legislative administrative measures have been imposed arbitrarily only to NGO SAR vessels, not to the Italian Coast Guard or merchant vessels doing rescues.⁴⁸ Any unreasonably prolonged to disembarkation has the effect of jeopardizing the health and well-being of extremely vulnerable individuals.⁴⁹ In addition, it contributes to discouragement of rescue by

NGO or private commercial vessel rescue efforts contrary to their international law obligations by imposing financial burden due to undue delay in disembarkation instructions.

It is argued in this paper that although Italy has the right to require commercial vessels that systematically carry out search and rescue activities, to do so in accordance with authorisations issued by the competent authorities of the flag State and to be in possession of the requirements of technical-nautical suitability for the safety of navigation, it must not use the provisions of this new law to arbitrarily increase inspections and the risk of new sanctions towards these commercial vessels under the disguised objective to discourage migrant rescue at sea. The limits of a State's power of inspection and control have already been clarified by the Court of Justice of the EU (CJEU).⁵⁰ The CJEU affirmed that Article 19 of Directive 2009/16 on 'State Port Control' gives states the power of inspection and control over ships to produce proof of certificates and requirements that are only required by and issued by the flag State. Moreover, state authorities may their power to inspect those ships under a flag State that are being systematically used for activities relating to the search for and rescue of persons in danger or distress at sea, only if they have been operated in a manner posing a danger to persons, property or the environment.

Nonetheless, the State shall not make the detention or the lifting of a detention measure subject to the condition that "those ships hold certificates appropriate to those activities and comply with all the corresponding requirements".⁵¹ Instead of detention measures, the court suggested that the State imposes "predetermined corrective measures relating g to safety, pollution prevention and on-board living and working conditions (...). Such corrective measures must, in addition, be suitable, necessary, and proportionate to that end. Furthermore, the adoption and implementation of those measures by the port State must be the result of sincere cooperation between that State and the flag State, having due regard to the respective powers of those two States".⁵² According to the interpretation granted by the CJEU, State authorities should not impose arbitrary administrative measures upon commercial vessels carrying out search and rescue activities by challenging their rescue duties on the basis of certifications which are those issued by the flag State.⁵³ Requesting commercial vessels provide details reconstruction of the rescue operation or ask for any information relevant to the rescue, imposes an excessive burden on SAR NGOs work without any legal justification.

Law No. 15 of 24 February 2023 further requires captains of vessels to disembark the rescued individuals according to their stipulations. According to this law, Italian authorities may oblige larger NGO vessels to disembark rescued people in the north of Italy which can be up to 1,600 km (up to 5 (five) days of navigation from the rescue area). Also depending on the SAR area, the vessel rescues the migrants, Italy coordinates the NGO vessel on whether to disembark them to Italian or Maltese territory. The SAR Convention makes the State responsible for the search and rescue region decision maker on the 'place of safety'.⁵⁴ Such coordination takes times and often results in leaving the NGO vessel together with the rescued migrants stranded at sea for days or weeks.

⁵⁴ Annex 5 to the amended SAR Convention, Chapter 3, paragraph 3.1.9 (MSC 78/26/Add.1, 3); SOLAS, Chapter V, Regulation 33.

In addition, the Italian government developed a new policy assigning disembarkation ports in central and northern Italy rather than the closer ports of Sicily. At the time, two NGO vessels were involved in the rescue of migrants in distress at sea: '*Geo Barents*' and the *Médecins Sans Frontières* (MSF) which had carried out two rescue operations in Libyan waters. The Italian authorities assigned to these vessels the ports of *Ancona* and *La Spezia* for disembarkation. These vessels argued that this new policy not only imposed significant travel costs on the rescue organizations but also meant less time and resources for rescue operations in the Mediterranean Sea. *Médecins Sans Frontières* raised a complaint before the *Lazio* Regional Administrative court in Italy. In June 2023, the administrative court upheld the government's distant port policy and rejected the complaint lodged by *Médecins Sans Frontières*.⁵⁵

The *Lazio* Regional Administrative Court re-iterated that it is "evident and undeniable" that it is up to the Interior Ministry to assign the port as "rescue operations which must be framed in the broader and more complex context of the migratory phenomenon by sea" which in addition to rescue also provides for reception, public order and the general management of the migration phenomenon.⁵⁶ The court was not convinced with the logic provided by the NGOs that the notion of 'safe port' would necessarily coincide with the one closest to the rescue zone. According to the court reasoning "there is a lack of a clear and internationally shared definition of 'safe port' inextricably linked to the concept of the nearest port".⁵⁷ The court accepted the reasoning of the government to assign the ports of disembarkation upon the application of the principle of "safe harbor", taking into account a series of factors: the "prompt definition of the operations preordained" to the assignment of the port to "ensure the short duration of rescue operations"; the size of the *Geo Barents*, a ship suitable "to safely face a longer journey"; the "failure of the NGO to report" "emergency situations on board"; and the impossibility for reception centres close to the rescue area to host migrants and the consequent need to place them in less congested areas.⁵⁸

It is argued in this paper that although a State has the discretion to adopt national administrative procedural rules to ascertain 'refugee status', they must do so in accordance with the spirit of international law rules. To determine the status of a refugee, the 1951 Convention recognizes the discretion of States to adopt national administrative procedural rules. The 1951 Convention has given the status of 'refugee' an *ipso jure status* (i.e. by the law itself).⁵⁹ This means that the Convention established the general definition of the term 'refugee' and it remains in the discretion of the State to adopt rules in order to ascertain (not to assign) such status. The adoption of administrative rules shall not act however as a means to erode well established international law rules through the implementation of national administrative rules on migration to affect process of providing access to or determining ones 'refugee status'.⁶⁰

Conclusion

To prevent captains of private vessels or SAR NGOs from conducting rescues at sea without prior authorization from the disembarkation state, Italy implemented a strategy aimed at discouraging such rescue efforts by targeting NGO vessel captains, using administrative procedures to criminalize SAR activities. On February 24, 2023, Italy amended Article 1 of Law Decree No. 130 from October 21, 2020, with Decree Law No. 1/2023 (converted into Law No. 15 on February 24, 2023, also known as the Piantedosi Decree), regulating the actions of private vessels carrying rescued migrants when entering or passing through Italian waters. Under Law No. 15 of February 24, 2023, NGO rescue vessels are required to immediately disembark rescued individuals at a designated port and are prohibited from assisting additional boats in distress in the area. Captains who violate this regulation may face fines of up to 10,000 euros, vessel detention for at least 20 days, and a two-month prohibition on operations, with the possibility of vessel confiscation by Italian authorities for repeated violations involving the same vessel.

This paper critically evaluated Italy's Law No. 15 of 24 February 2023 and its impact on search and rescue (SAR) operations in the Central Mediterranean Sea. The law imposes extensive administrative requirements on NGOs and commercial vessels, including long disembarkation routes and obligations on the commercial vessels to inform rescued individuals about international protection claims. It is argued that the Italian Law No. 15 of 24 February 2023 obliging NGO vessels not to respond to consequent distress calls for rescue in the area, is in effect a national legal administrative measure which obstructs assistance to people in distress at sea acting in violation of the international legal framework on search and rescue and international human rights law on the 'right to life' and 'duty to rescue'. In relation to the administrative measures adopted by the Italian legislature, it is argued that Italian authorities must adopt measures that are proportionate to the legitimate aim pursued. National administrative procedural rules must be adopted in accordance with the spirit of international law rules.

The paper advocates for the revision of Law No. 15 to support more effective SAR practices and align with international standards. It recommends allowing vessels to conduct multiple rescues without penalty, and calls for EU member states to collaboratively define a 'place of safety' to avoid unnecessary delays. Additionally, it urges Italy to amend its legislation on state port control to comply with CJEU jurisprudence on inspection and administrative measures. This analysis underscores the urgent need for Italy to reconcile national laws with international maritime, human rights, and refugee law to ensure the protection of life and the efficacy of SAR operations.

ÖZET

Güzel görünmek amacıyla insanoğlunun kendi ya da çoğunlukla elbiselerinin üzerinde kullandığı ve estetik kaygısıyla biçimlendirdiği objeler takı olarak tanımlanır. Takılar, giysi modasındaki eğilimler ve gereksinimlerle birlikte değişmiş, zaman zaman takılara değişik anlamlar da yüklenmiştir. Tunç Çağı ile birlikte madencilik başlaması sebebiyle metalden eser üretimi içerisinde takılar da önemli yer bulmuştur. Bunlar içerisinde iğneler en büyük grubu oluşturur. Gövdesinde delik olan ve "Toggle Pin" olarak tanımlanan iğne gruplarının yanı sıra delik içermeyen iğneler de önemli bir yer tutar. Başlarının şekillerine göre küre başlı, elips başlı, söbe başlı, kare başlı, piramit başlı, konik başlı, çift konik (baklava biçimli) başlı, mercimek başlı, tek rulo başlı ve çift rulo başlı olarak ayrılan bu iğneler içerisinde en büyük grup ise küre başlı iğnelerdir.

Bu çalışmada İç Batı Anadolu'daki küre başlı metal iğneler araştırılarak, bu eserlerin benzerleri tüm Anadolu ve Yakındoğu'da tanımlanmaya çalışılmıştır. İç Batı Anadolu'daki bu iğneler Demircihöyük, Küllüoba, Karataş-Semayük yerleşmelerinden bilinmektedir. Ayrıca söz konusu iğnelerin mezarlıklarda da çok bulunması sebebiyle, günlük hayatta elbiselerin tutturulması işlevinin yanı sıra kefen iğnesi olarak da kullanıldığını düşündürmektedir. İç Batı Anadolu'da küre başlı ve gövdesinde delik olmayan iğnelerin mezarlıklardan gelen örnekleri Sarıket, Harmanören ve Karataş Semayük'ün mezarlık alanlarından bilinmektedir.

Anahtar Kelimeler: Metal Eser, İğneler, İç Batı Anadolu, Arkeoloji

SPHERE HEAD NON-HOLE METAL NEEDLES (INLAND WESTERN ANATOLIA EXAMPLES)

ABSTRACT

Objects that humans use on themselves or mostly on their clothes in order to look beautiful and that they shape with aesthetic concerns are defined as jewelry. Jewelry has changed along with trends and needs in clothing fashion, and different meanings have been attributed to jewelry from time to time. Due to the beginning of mining with the Bronze Age, jewelry has also found an important place in the production of metal artifacts. Needles constitute the largest group among these. In addition to the needle groups with holes in their bodies and defined as "Toggle Pins", needles without holes also have an important place. These needles, which are divided into sphere-headed, ellipse-headed, dowel-headed, square-headed, pyramid-headed, conical-headed, double-conical (diamond-shaped)-headed, lentil-headed, single-rolled-headed and double-rolled-headed according to the shapes of their heads, have the largest group among them as sphere-headed needles.

In this study, sphere-headed metal needles in Inland Western Anatolia were investigated and similar artifacts were tried to be identified throughout Anatolia and the Near East. These needles in Inland Western Anatolia are known from the settlements of Demircihöyük, Küllüoba, Karataş-Semayük. In addition, since these needles are found abundantly in cemeteries, it is thought that they were used as shroud pins in addition to their function of fastening clothes in daily life. Examples of needles with sphere heads and no holes in their bodies from cemeteries in Inland Western Anatolia are known from the cemeteries of Sarıket, Harmanören and Karataş Semayük.

Key Words: Metal Artifact, Needles, Inland Western Anatolia, Archaeology

GİRİŞ

Güzel görünmek amacıyla insanoğlunun kendi ya da çoğunlukla elbiselerinin üzerinde kullandığı ve estetik kaygısıyla biçimlendirdiği objeler takı olarak tanımlanır. Takılar, giysi modasındaki eğilimler ve gereksinimlerle birlikte değişmiş, zaman zaman takılara değişik anlamlar da yüklenmiştir. Tunç Çağı ile birlikte madencilik başlaması sebebiyle metalden eser üretimi içerisinde takılar da önemli yer bulmuştur. Bunlar içerisinde iğneler en büyük grubu oluşturur. Başlarının şekillerine göre küre başlı, elips başlı, söbe başlı, kare başlı, piramit başlı, konik başlı, çift konik (baklava biçimli) başlı, mercimek başlı, tek rulo başlı ve çift rulo başlı olarak ayrılan bu iğneler içerisinde en büyük grup ise küre başlı iğnelerdir.

Bu çalışmada İç Batı Anadolu'daki küre başlı metal iğneler araştırılarak, bu eserlerin benzerleri tüm Anadolu ve Yakındoğu'da tanımlanmaya çalışılmıştır.

KÜRE BAŞLI İĞNELER

Başlı küre şeklinde ve gövdesi deliksiz süs iğneleri, İç Batı Anadolu'da İTÇ I döneminde Demircihöyük (Fidan 2005: Lev. 5: 12), İTÇ II döneminde Demircihöyük (Fidan 2005: Lev. 5: 13), Küllüoba (Fidan 2005: Lev. 15: 39) ve Karataş-Semayük (Fidan 2005: Lev. 61: 167) yerleşmeleri ile Sarıket (Fidan 2005: Lev. 82, Lev. 83: 226), Harmanören (Fidan 2005: Lev. 153: 468, 469) ve Karataş Semayük (Fidan 2005: Lev. 165: 504) mezarlıklarında ele geçirilmiştir.

Karataş-Semayük mezarlarında bulunan örneklerin hepsinin gövdesinde bezeme vardır. Bunun yanında Çavdarlı İTÇ II yerleşmesindeki buluntu (Fidan 2005: Lev. 24: 69) ile gövdesi bezemeli bir başka örnek de Bademağacı İTÇ molozu içerisinde (Fidan 2005: Lev. 51: 145) ele geçirilmiştir.

Küre başlı ve deliksiz süs iğnelerinin benzerlerini geniş bir coğrafya da görmek mümkündür. Ege dünyasında, Poliochni (Bernabo-Brea 1964), Thermi (Lamb 1936) ve Kiklatlar (Higgins 1961; Tsountas 1899) ile Batı Anadolu'da, Troya II ve Troya III tabakalarının İTÇ III'e tarihlenen evrelerinde (Blegen v.d. 1950; Blegen v.d. 1951; Schmidt 1902; Dörpfeld 1902), ayrıca Orta Anadolu'da Alishar İTÇ II döneminde (von der Osten 1937), Alacahöyük mezar H'de (Koşay 1951), Maşathöyük ve Oymağaç'ta görülen bu tip, M.Ö. 2. Bin'de Orta Anadolu'da çok yaygınlaşır (Bordaz 1978). Doğu Anadolu'da Norşuntepe'den (Hauptmann 1972) ve Güneydoğu Anadolu'da Gedikli-Karahöyük İTÇ III mezarlarından (Egeli 1989) varlığını bildiğimiz örneklerin yanında, Tilmen Höyük İTÇ (Egeli 1989), Tarsus İTÇ III (Goldman 1956) ile Suriye'deki Halawa İTÇ II mezarlığında (Orthmann 1981) ve Hama İTÇ III yerleşmesinde de (Fugmann 1958) bu tip süs iğneleri bulunmuştur. Bunların dışında Mezopotamya'da Tello İTÇ mezarlığı (Genouillac 1934) ile İran'da Susa İTÇ III mezarlığında (Mecquenem 1943) aynı tipteki süs iğneleri gün ışığına çıkarılmıştır.

Bu tip iğnelerin, bezemeli benzerleri, Troya'da IIC tabakasından (Blegen v.d. 1950), Maşathöyük'ten (Emre 1979), Güneydoğu Anadolu'da Hassek Höyük İTÇ II mezarlığından (Egeli 1989) ayrıca Suriye'den Biblos İTÇ (Dunand 1937) ve Amarna İTÇ III (Woolley 1914) yerleşmelerinden bilinir.

Tablo: İğnelerin tipolojisi

SONUÇ

Yakındoğu'da çok geniş bir alana yayılan Küre başlı ve gövdesinde delik olmayan metal iğneler, özellikle Tunç Çağı ile birlikte yaygın olarak görülür. İç batı anadolu'da da bu tür metal eserlerin çok sayıda olduğu anlaşılmaktadır. Mezarlardaki buluntular kefen iğnesi olarak yorumlanırken, yerleşmelerde bulunan iğnelerin giysilerde kullanıldığı düşünülmektedir.

Katkı Belirtme: Bu çalışma, yazarın İstanbul Üniversitesi Sosyal Bilimler Enstitüsünde tamamladığı yüksek lisans tezinden üretilmiştir.

TUNÇ ÇAĞI'NDA KIKLAD MİMARİSİ: KASTRİ VE PALAMARI YERLEŞMELERİ

Erkan FİDAN

Bilecik Seyh Edebali University, Faculty of Humanities and Social Sciences, Bilecik

ORCID: 0000-0002-6777-927X

ÖZET

Bu çalışmada, Ege Denizi'nin güneyinde Kikladlar olarak adlandırılan takımadalar içerisinde yer alan ve en önemli İlk Tunç Çağı merkezlerinden, bölgenin anahtar yerleşmesi olan Kastri yerleşmesi ile Kikladlar'ın kuzeyindeki Skyros Adası'nda yer alan Palamari yerleşmesi incelenmiştir. Kastri yerleşmesi, 400 kilometrekarelik yüzölçümüyle Kiklad Adalar grubunun en büyük adası olan Naxos'un batısında yer almaktadır. Oldukça verimli topraklara sahip ada, diğer Kiklad Adaları'na göre de daha fazla yükseltiye sahiptir. Ege kronolojisinde Erken Kiklad IIB Dönemi olarak adlandırılan ve Kastri Evresi olarak da bilinen dönem, Batı Anadolu kronolojisinde Erken İTÇ III Dönemi'ne denk gelmektedir ve günümüzden yaklaşık 4200 yıl öncesine tarihlendirilmektedir.

Yerleşme genel hatları ile güçlü bir savunma sistemi ve bu sistemin içerisindeki düzensiz şekilde yerleştirilmiş evlerden oluşur. Hem yapılar hem de savunma duvarı harç kullanmadan ve sadece taştan inşa edilmiştir. Harç kullanılmamasının nedeni olarak kil ve su kaynaklarının azlığı gösterilmektedir.

Palamari yerleşmesi ise, Kikladlar'ın kuzeyindeki Skyros Adası'nda yer alır. Adada Ege kronolojisine göre İlk Neolitik Dönem'den itibaren yerleşilmiştir. Yerleşme, üzerinde at biçimli bastionların olduğu kuvvetli bir savunma sistemi ile oldukça korunaklı şekilde inşa edilmiştir. Yer yer bu anıtsal bastionlar 5.0 m'ye kadar korunmuştur. Ayrıca söz konusu bu surun dış kesiminde bir de hendek vardır.

Bu çalışma ile her iki yerleşmenin anıtsal mimarisi, Ege Dünyası ve Batı Anadolu ile karşılaştırılarak, söz konusu mimarinin özellikleri ayrıntılı bir şekilde yansıtılmaya çalışılmıştır.

Anahtar Kelimeler: Mimari, Ege Dünyası, Kiklatlar, Arkeoloji

CYCLADIC ARCHITECTURE IN THE BRONZE AGE: KASTRI AND PALAMARI SETTLEMENTS

ABSTRACT

In this study, the settlement of Kastri, one of the most important Early Bronze Age centers located in the archipelago called the Cyclades in the south of the Aegean Sea and the key settlement of the region, and the settlement of Palamari on Skyros Island in the north of the Cyclades were examined. The settlement of Kastri is located west of Naxos, the largest island of the Cyclades group with a surface area of 400 square kilometers. The island, which has very fertile soil, also has a higher elevation than the other Cyclades Islands. The period called the Early Cyclades IIB Period in Aegean chronology and also known as the Kastri Phase, corresponds to the Early EBA III Period in Western Anatolian chronology and is dated to approximately 4200 years ago.

The settlement consists of a strong defense system in general terms and houses arranged irregularly within this system. Both the structures and the defense wall were built without using mortar and only from stone. The reason for not using mortar is shown as the scarcity of clay and water resources. Palamari settlement is located on Skyros Island in the north of the Cyclades. The island has been settled since the Early Neolithic Period according to the Aegean chronology. The settlement was built in a very protected manner with a strong defense system with horse-shaped bastions. In some places, these monumental bastions have been preserved up to 5.0 m. In addition, there is a moat on the outer part of this wall.

In this study, the monumental architecture of both settlements was compared with the Aegean World and Western Anatolia, and the characteristics of the architecture in question were tried to be reflected in detail.

Key Words: Mimari, Cyclades, Eagean World, Archaeology

GİRİŞ

Kikladlar, Ege Denizi'nin güneyinde yer alan takımadalardır. Söz konusu bu takımadalar içerisinde yer alan Kastri yerleşmesi ile Kikladlar'ın kuzeyindeki Skyros Adası'nda yer alan Palamari yerleşmesi bölgenin önemli İlk Tunç Çağı merkezleri içerisinde yer almaktadır. Ege Dünyası mimarisine önemli katkılar yapan bu iki yerleşme özellikle anıtsal özellikleri ile dikkat çeker.

KASTRI

Kastri yerleşmesi, 400 kilometrekarelik yüzölçümüyle Kiklad Adalar grubunun en büyük adası olan Naxos'un batısında yer almaktadır. Oldukça verimli topraklara sahip ada, diğer Kiklad Adaları'na göre de daha fazla yükseltiye sahiptir. Ege kronolojisinde Erken Kiklad IIB Dönemi olarak adlandırılan ve Kastri Evresi olarak da bilinen dönem, Batı Anadolu kronolojisinde Erken İTÇ III Dönemi'ne denk gelmektedir.

Erken İTÇ III Dönemi (EK IIB - Kastri Evresi):

Yerleşme genel hatları ile güçlü bir savunma sistemi ve bu sistemin içerisindeki düzensiz şekilde yerleştirilmiş evlerden oluşur (Çiz. 1). Hem yapılar hem de savunma duvarı harç kullanmadan ve sadece taştan inşa edilmiştir. Harç kullanılmamasının nedeni olarak kil ve su kaynaklarının azlığı gösterilmektedir (Doumas 1972; Caskey 1964).

Anadolu kronolojisine göre Erken İTÇ III Dönemi'ne tarihlenen yerleşme doğal bir tepenin kuzey kısmına inşa edilmiştir; dolayısıyla doğal olarak oldukça korunaklı bir konuma sahiptir. Savunma sistemi bastionlu sur ile daha da güçlendirilmiştir. Söz konusu bu surun yaklaşık 70.0 m uzunluğundaki bir kısmı açığa çıkarılmıştır. Ortalama 1.50 m kalınlığında olan bu sur, yer yer 1.30 m'ye kadar korunmuştur. Sur üzerinde 6 tane yarım daire şeklinde bastion ele geçirilmiştir (Çiz. 1). Yerleşmeye de bu bastionların üzerindeki ya da aralarındaki açıklıklardan girilmektedir (Doumas 1972; Bossert 1967).

Çizim 1: Kastro yerleşmesi genel yerleşim planı (Bossert 1967, Plan 2).

Güçlü savunma sisteminin dış kısmında ikinci bir savunma duvarı bulunmaktadır. Kazının ilk hafiri Tsountas, bu ikinci duvarların daha alçak olduğunu söyleyerek, bunların duvarın düşmanların yerleşmeye girişlerini daha da zorlaştırmak amacıyla inşa edildiğini belirtir (Tsountas 1899). Dış duvarın, direkt olarak kapıların dışarıdan görülmesini engellemek ve yaklaşan düşmanı dar bir alana sıkıştırmak için inşa edilmiş olduğu düşünülebilir.

Yerleşmenin yüksek kısımları erozyona uğradığı için oldukça tahrip olmuştur. Yapılar ise daha az eğimli yamaç üzerine inşa edilmiştir. Bazıları sura bitişik olarak, düzensiz bir şekilde inşa edilen evler, genellikle dar sokaklar tarafından birbirinden ayrılmaktadır. Bunlar tek veya daha fazla odadan oluşmaktadır. Bazı evlerin kendi bağımsız duvarları olmasına rağmen, çoğunlukla ortak duvarlar söz konusudur. Yerleşme Erken İTÇ III Dönemi sonunda bir yangın sonucu yıkılmış ve terk edilmiştir.

PALAMARI

Palamari yerleşmesi, Kikladlar'ın kuzeyindeki Skyros Adası'nda yer alır. Adada Ege kronolojisine göre İlk Neolitik Dönem'den itibaren yerleşilmiştir. Burada ilk araştırmalar D. Theochares tarafından gerçekleştirilmiştir. 80'li yıllarda yeni yüzey araştırmaları (Parlama 1984) sayesinde tekrar ziyaret edilen yerleşme, daha sonra L. Parlama tarafından kazılmıştır (Parlama 1984). Yerleşim, alçak bir burundur; burnun en yüksek noktası, deniz yüzeyinden sadece 19 m yüksekliktedir. Burun, Skyros'un kuzeydoğu kıyısındaki tek körfezin kuzey kısmını oluşturur. Körfezin tam ortasında denize dökülen Limna Deresi, merkezi Olympus dağ kütesinden doğar ve adanın en zengin ovası olan, doğu sınırı Palamari sahiline kadar ulaşan Trachy'den geçer. Söz konusu bu burun üzerindeki düzlükte yaklaşık 10 hektarlık bir alan üzerine kurulmuş olan yerleşmede, Anadolu kronolojisine göre İTÇ I, İTÇ II ve Erken İTÇ III Dönemleri temsil edilmektedir (Ege kronolojisinde EK I, EK IIA, EK IIB Kastro Evresi). Ancak İTÇ I ve İTÇ II Dönemleri'nin mimari kalıntıları yetersizdir. Buna karşılık, Ege kronolojisine

göre Kastri-Lefkandi I Evresi'ne (Batı Anadolu kronolojisinde İTÇ III ortaları) ait önemli mimari kalıntılar yerleşmenin III. Kat'ında ortaya çıkarılmıştır.

Erken İTÇ III Dönemi (Geç EH II/ Kastri – Lefkandi I Evresi): Yerleşme, üzerinde at biçimli bastionların olduğu kuvvetli bir savunma sistemi ile oldukça korunaklı şekilde inşa edilmiştir (Parlama 2003). Yer yer bu anıtsal bastionlar 5.0 m'ye kadar korunmuştur. Ayrıca söz konusu bu surun dış kesiminde bir de hendek vardır.

Sur sisteminin anlaşılması için yapılan kazı çalışmalarının dışında, yerleşim içindeki kazılar ise A ve B olmak üzere iki ayrı alanda gerçekleştirilmiştir. A Alanı yerleşmenin merkezinde, B Alanı ise yerleşmenin kuzey kenarındadır. A Alanı'nda geniş ve dar bir yol boyunca evler yer almaktadır. Taş temelli bu evler megaron formuna yakındır. B Alanı'nda ise iki odası olan uzun evler vardır (**Çiz. 2**). Taş temelli bu yapıların tabanları da sık sık taş döşemelidir. Yapılar arasında dar yollar yer almaktadır. Bu sebeple burada Thermi yerleşmesinde olduğu gibi adacıkların olduğu bir yerleşim sisteminden söz edilebileceği belirtilmiştir (Alram-Stern 2004).

Çizim 2: Palamari B Alanı'nın genel yerleşim planı içindeki konumu (Theochari ve Parlama 1997, Çiz. 1 ve Theochari v.d. 1993, Çiz. 2'den düzenlenmiştir).

SONUÇ

Kiklad adalarında yer alan Palamari ve Kastri yerleşmeleri İlk Tunç Çağı'nın sonunda anıtsal mimari özellikleri ile ön plana çıkar. Aslında bu durum İç Batı Anadolu'dan farklı olarak hem batı Anadolu sahil kesimi hem de Ege Dünyası yerleşmelerinde alışık olduğumuz bir durumdur. Mimaride taş kullanarak özellikle de savunma mimarisinde anıtsallaşma bölge için tipik bir mimari özellik olarak karşımıza çıkmaktadır.

Katkı Belirtme: Bu çalışma, yazarın İstanbul Üniversitesi Sosyal Bilimler Enstitüsünde tamamladığı doktora tezinden üretilmiştir.

ÖZET

Küreselleşmeyle beraber dünyada hızlı bir şekilde artan uluslararası göç hareketliliğinin temel öznesini oluşturan göçmenlerin, çalışmak amacıyla gittikleri ülkelerdeki elde ettikleri kazançlarını ana vatanlarındaki hane halkına havale etmeleri işçi dövizleri olarak tanımlanmaktadır. Son dönemlerde giderek artan işçi dövizleri ulaştığı seviye ile zamanla aile ekonomisinin de önüne geçerek alıcı ülkelerin ekonomik büyüme performansına da önemli katkı sağlayacak boyutlara ulaşmıştır. İşçi dövizlerinin havale edilen ülkede, harcanabilir geliri artıracığı, eğitim, sağlık koşullarını iyileştireceği, hayat standartlarını yükselteceği, makroekonomik anlamda herhangi bir ekonomik yükümlülük altına sokmamasından dolayı ülkelerin ekonomilerine olumlu etkiler katacağı, cari açığı dengeleme yoluyla bu açıkları gidereceği yönünde önemli bir çözüm yöntemi olmasına kadar pek çok avantaj sunmaktadır. Bu çalışmada, gelişmekte olan ülke sınıfında kabul edilen beş büyük ekonomiden oluşan BRICS ülkeleri için işçi dövizlerinin ekonomik büyümeyi ne yönde etkilediğini araştırmaktadır. 2000-2022 dönemine ait yıllık veriler kullanılarak panel veri analizi yapılmıştır. Analiz sonuçlarına göre işçi dövizleri ekonomik büyümeyi olumsuz etkilemektedir.

Anahtar Kelimeler: İşçi dövizleri; Ekonomik büyüme; BRICS ülkeleri.

ABSTRACT

With globalization, the main subject of the rapidly increasing international migration movement in the world, migrants who transfer their earnings from the countries they go to work to the households in their homeland are defined as remittances. In recent years, the increasing remittances have reached a level that will overtake the family economy and contribute significantly to the economic growth performance of the recipient countries. Workers' remittances offer many advantages in the country they are sent to, such as increasing disposable income, improving education and health conditions, raising living standards, contributing positively to the economies of nations as they do not impose any economic obligations in the macroeconomic sense, and being a vital solution method to eliminate these deficits by balancing the current account deficit.

This study investigates how remittances affect economic growth for the BRICS countries, which consist of five major economies accepted in the developing country class. Panel data analysis was conducted using annual data from 2000-2022. The results show that remittances negatively affect economic growth.

Keywords: Remittances; Economic growth; BRICS countries.

1. GİRİŞ

Günümüzde dünya genelinde nüfusun artmasıyla beraber küresel düzeye ulaşan insan hareketliliği uluslararası göç olarak bilinmektedir. Göçün temel faktörünü ise göçmenler oluşturmaktadır. Çalışmak amacıyla yurtdışına gittikleri ülkede bir yıldan daha fazla süreyle kalan işçiler göçmen pozisyonundan ayrı olarak yerleşik sıfatı taşımaktadırlar. Göçmenlerin göç ettikleri ülkelerde elde ettikleri kazançları, ikamet ettikleri ülkedeki ailelerine göndermeleri işçi dövizleri olarak tanımlanmaktadır. Yerleşik olarak benimsenen işçilerin havale ettikleri dövizler, cari özel transferler olup cari işlemler bilançosunda aktifler kısmına kayıt edilir.

Az gelişmiş ülkelerdeki insanlar daha iyi iş imkânına sahip olmak ve daha yüksek gelir elde etmek, hayat standartlarını yükseltmek ve yoksullukla mücadele edebilmek amacıyla gelişmiş ülkelere göç etmekte ve bu da uluslararası göç dinamiklerinin ortaya konulması açısından büyük önem taşımaktadır. Göç eden işçilerin gelişmiş ülkelerde sağladıkları ve ailelerine gönderdikleri döviz gelirleri, başta gelişmekte olan ekonomiler için büyük bir sermaye kaynağı yaratmaktadır.

Son dönemlerde artan uluslararası işçi akışı ile kaynak ülkelere gönderilen dövizler de kayda değer bir boyuta ulaşmıştır. İşçi döviz miktarının giderek artması döviz darlığı yaşayan birçok ekonominin, dış yardımlar ve doğrudan yabancı yatırımlarla beraber döviz rezervlerine önemli katkı sağlamaktadır. Havalelerin, dış yardımlar ve sermaye akımlarının devletleri siyasal veya ekonomik sorumluluklar altında bırakmaması ya da ileri dönemlerde geri ödemek üzere bir dış borç olmama niteliği önemini daha da artırmaktadır. İşçilerin döviz sonucunda gerçekleşen havaleleri, diğer sermaye kaynaklarından ayıran en önemli fark, ekonomik ve finansal şoklara karşı dayanıklı olması ve küresel kriz dönemlerinde dahi istikrarlı duruşunu sürdürmesidir. Ekonomik gelişmelere karşı fazla oynaklık (volatilité) göstermeyen göçmen transferleri, bazı ülkelerde doğrudan yabancı yatırımlar ve resmi kalkınma yardımlarını dahi aşarak hacmini ciddi oranda arttırmıştır. Daha dirençli olmalarından dolayı göçmen dövizlerini etkileyen faktörler veya göçmen dövizlerinin makroekonomik değişkenler üzerindeki etkileri son zamanlardaki araştırma konularının ilgi odağı haline gelmiştir.

İşçi dövizleri makroekonomik değişkenleri olumlu ya da olumsuz bir şekilde etkileyebilmektedir. Özellikle gelişmekte olan ülkeler açısından önemli bir döviz kaynağı sağlayan işçi transferlerinin ekonomik büyümeyi ne yönde etkilediğine dair bir fikir birliği yoktur. Dolayısıyla işçi dövizleri büyümeyi doğrudan veya dolaylı kanallarla etkileyebilmektedir. Göçmenler, hem göç alan ülkeler üzerinde hem de göç veren ülkeler üzerinde önemli izler bırakmaktadır. İşçi dövizlerinin rolü, yüksek düzeyde havale alan kaynak ülkelerdeki hane halkının geçimine yardımcı olacağı gibi makro anlamda da ülke ekonomilerinin gelişmelerine çeşitli faydalar sağlamaktadır.

Yurt dışına çalışmak amacıyla göç eden işçiler, ana vatanlarındaki ailelerine maddi açıdan destek olabilmek için karşılıksız döviz göndermektedirler. Transfer edilen bu dövizler, hane halkının gelir düzeyinin artmasına ve dolayısıyla geçim masraflarının karşılanması noktasında aile ekonomisine önemli faydalar sağlamaktadır. Harcanabilir geliri yükselen ailelerin tüketim harcamaları da artacağından çarpan mekanizması yoluyla toplam talep artacak ve ulusal ekonomik büyümeyi olumlu yönde etkileyecektir. Öte yandan gönderilerin belli bir payı tasarruf edilerek yatırıma dönüştürülmekte ve girişimciler için önemli bir fon desteği sunmaktadır. Aynı zamanda işçi dövizleri, özellikle kırsal alanda yaşayan kesimin sağlık hizmetlerinden daha iyi yararlanmasına, daha iyi eğitim almasına katkı sağlamakta ve böylelikle beşeri sermaye stokunun artmasına yardımcı olabilmektedir. Geliri doğrudan artan ailelerle beraber ülkelerdeki yoksulluğun azalması da beklenen bir durumdur. Böylelikle yaşam şartlarının iyileşmesine, refahın yükselmesine, gelirdeki eşitsizliğin azalmasına ve ekonomik büyümenin de pozitif yönde etkilenmesine kadar pek çok kazanım sağlamaktadır.

Göçün mali karşılığı olan işçi dövizleri, göçmenlerin kendi ülkelerinin gelişmesine sağladığı en önemli kaynak olabilmektedir. Aile bireyleriyle beraber yurt dışına gitmenin masrafını karşılayamayan işçiler, ailelerini ana vatanlarında bırakarak daha çok gelişmiş ülkelere gitmek zorunda kalmaktadırlar. Bu durumda haberleşme ve ulaşım maliyetlerinin azalması işçi dövizlerini artıran bir sebeptir. Çünkü göçmenler, aile ve akrabalarıyla ne kadar iletişim halinde olabilirlerse hane halkından o kadar haberdar olabilecekler ve elde ettikleri kazançlarla kendi ülkelerindeki yakınlarına o kadar fazla fon desteği sağlamak isteyeceklerdir. Daha çok alturistik nedenlerle yapılan işçi döviz transferleri, başta gelişmekte olan ekonomileri yakından ilgilendirmektedir. Bunun nedeni dünya genelinde ekonomik düzensizliği ve politik istikrarsızlığı sürekli yaşayan ülkelerin daha çok gelişmekte olan ekonomilerde yaşanmasından dolayıdır. Döviz akışı sonucu gerçekleşen gelirler sayesinde istikrarsızlık yaşayan ülkeler döviz kaynaklarını artırmaya başlayarak yeniden istikrar kazanmaktadırlar. Bunun yanı sıra işçi gelir akışının devam etmesi kaynak ülkeye bir tür sigorta sağlayarak uluslararası çaptaki finans piyasalarından daha düşük faizle borç almaya destek sunmaktadır. Ayrıca uluslararası kredi derecelendirme kuruluşları ülkelerin kredi notunu raporlarken, ülkeye gelen göçmen dövizlerini de hesaba katmaktadır. Dolayısıyla göçmen dövizlerinin miktarı arttıkça ülkelerin kredi notu da artacaktır. Kredi notundaki toparlanma ülkelerin fiziki ve beşeri sermaye stokunu artıracak ve böylelikle ülke ekonomisinin büyüme performansına olumlu yönde etki edecektir. Giderek hane halkı geçiminin önüne geçerek ülkelerin ekonomik performansını da artıracak büyüklüğe ulaşan işçi dövizleri hatta bazı ülkelerin GSYH 'sının üçte birini oluşturmaktadır. İşçi dövizlerinin bir başka olumlu yönü de gelişmekte olan ülkelerin kronik ödemeler dengesine çare olacak etkisidir. Bu havaleleri alan alıcı ülkelerde cari denge açıklarını dengeleme yoluyla yardımcı olmaktadır.

Bu çalışmanın amacı, gelişmekte olan ülke sınıfında kabul edilen ve beş büyük ekonomiden oluşan BRICS ülkeleri için uluslararası göçle birlikte miktarı hızla artan işçi dövizlerinin ekonomik büyüme üzerindeki etkisi incelenmektedir. İşçi dövizleri, ekonomik büyüme ve cari açık arasındaki ilişkiyi bir bütün olarak BRICS ülkeleri üzerine analiz eden çalışma sayısı neredeyse yoktur. Giriş bölümünün ardından ikinci bölümde işçi dövizlerinin dünya genelindeki payı incelenmiş olup, üçüncü bölümde konuyla ilgili literatür araştırılması yapılmıştır. Dördüncü bölümde BRICS ekonomileri için işçi dövizleri cari açık ve ekonomik büyüme arasındaki ilişkinin tahmin edildiği model, veri seti ve analiz sonuçları yer alırken son bölümde ise sonuç ve politika önermesi ile çalışma tamamlanmıştır.

2. İŞÇİ DÖVİZLERİNİN DÜNYA GENELİNDEKİ PAYI

Genel olarak bakıldığında işçi dövizleri, gelişmiş ülkelere az gelişmiş ve gelişmekte olan ülkelere doğru aktarılmaktadır (Al- Mukit vd., 2013: 55). Bundan dolayı göçmen havaleleri, düşük ve orta gelirli ülkeler için önemli bir dış finansman kaynağıdır. 2023 yılında düşük ve orta gelirli ülkelere yapılan transferler resmi olarak 656 milyar dolara ulaşmıştır (KNOMAD, 2024).

İşçi dövizleri diğer sermaye kaynakları ile kıyaslandığında ise daha istikrarlı bir döviz kaynağıdır. Şekil 1'de 2000-2025 dönemlerine ait en çok paya sermaye akımlarının gelişimi verilmiştir.

Şekil 1: İşçi Dövizlerinin Diğer Kaynak Akışlarıyla Karşılaştırılması

Kaynak: World Bank staff estimates; World Development Indicators.

Diğer sermaye akışlarına göre düzenli bir artış eğilimi gösteren havale akışları, özellikle 2000 yılından sonra daha da artmaya devam etmiştir. Yalnızca 2009, 2016 ve 2020 dönemlerinde önceki yıla göre çok küçük bir miktar düşüş (diğer sermaye akışlarında olduğu üzere) sergilemiştir. Bu azalışların harici, işçi havaleleri istikrarlı ve kararlı yapısını sürdürmeye devam etmiştir. Genel olarak bakıldığında, doğrudan yabancı sermaye yatırımları, diğer sermaye çeşitlerine göre en fazla payı kapsamakta iken düşük ve orta gelir grubunda yer alan ülkeler için işçi dövizleri, doğrudan yabancı sermaye yatırımlarından sonra en büyük ikinci döviz kaynağı konumundadır. 2008 krizinden sonra doğrudan yabancı sermaye yatırımları (FDI) inişli çıkışlı bir hareketlilik göstermiş ve 2012 yılından itibaren belirgin bir şekilde azalma eğilimine girmiştir. 2021 yılı itibarıyla işçi dövizleri doğrudan yabancı yatırımların da üzerine çıkmıştır. Dolayısıyla işçi dövizleri ile doğrudan yabancı sermaye yatırımları arasındaki makasın önümüzdeki yıllarda daha açılması beklenmektedir. Gelişmekte olan ülkelere yapılan işçi döviz havalelerinin hacmine bakıldığında ise söz konusu transferlerin resmi kalkınma yardımlarından (ODA) yaklaşık üç kat daha fazla olduğu görülmektedir. Gelecek dönemlere bakıldığında göçmen transferlerinin 2024'te yüzde 2,3 artarak 671 dolara, 2025 yılında ise yüzde 2,8 artarak 690 milyar dolara ulaşması beklenmektedir (KNOMAD, 2024).

Tablo 1'de Dünya Bankası sınıflamasına göre, 2017 yılında dünya genelinde 641 milyar dolar işçi gönderisi var iken, bu rakam 2023 yılında 857 milyar dolara ulaşmıştır. Dünya çapındaki bu transferlerin 2024 yılında 883 milyar dolara ulaşması beklenmektedir. Fon transferlerinin 2023 yılındaki 857 milyar dolarının yaklaşık 656 milyar doları düşük ve orta gelirli ülkelere yöneldiği görülmektedir (KNOMAD, 2024). Bu rakamlar bankacılık ve finansal kuruluşlar gibi resmi kanallardan gerçekleşen havale miktarlarını göstermektedir. Göçmenlerin kendisi ya da kendisi haricinde yakınlarına bu gelirleri iletebileceği gayri resmi kanallarda bulunmaktadır. Dolayısıyla resmi olmayan kanallardan gönderilen transferlerin takip edilememesinden dolayı gerçek tutarı yansıtmamakta ve gayri resmi yollardan gelen işçi dövizleri de dâhil edildiğinde gerçekleşen havale miktarı çok daha fazladır (Biçen, 2017: 241).

Tablo 1: İşçi Dövizlerinin Bölgelere Göre Seyri (2017- 2025, Milyar \$)

Bölge Grubu	2017	2018	2019	2020	2021	2022	2023e	2024f	2025f
Düşük ve Orta Gelirli Ülkeler	475	522	548	542	601	651	656	671	690
Doğu Asya ve Pasifik (Çin hariç)	129 (65)	137 (70)	143 (75)	132 (72)	128 (75)	132 (81)	134 (85)	136 (88)	137 (90)
Avrupa ve Orta Asya	52	59	62	58	67	79	71	69	72
Latin Amerika ve Karayipler	81	89	96	104	131	144	155	160	162
Orta Doğu ve Kuzey Afrika	54	55	57	59	67	65	55	58	61
Güney Asya	117	132	140	147	157	176	186	193	201
Sahra-altı Afrika	42	49	50	43	51	55	54	55	56
Dünya	641	696	728	717	794	843	857	883	913

Kaynak: World Bank staff estimates; World Development Indicators.

Tablo 1’de Doğu Asya ve Pasifik bölgesine yapılan göçmen havaleleri 2023’te yüzde 1,8 artarak 134 milyar dolara yükselmiştir. Çin hariç Doğu Asya’ya yapılan havaleler yüzde 4,8 artarak 85 milyar dolara yükselmiş ve 2024 yılında da bu bölgeye yapılan transferin 3,2 oranında artması beklenmektedir. Avrupa ve Orta Asya’da 2022 yılında yüzde 18’lik önemli bir artışın ardından göçmen havaleleri 2023 yılında yüzde 10 düşerek 71 milyar dolara gerilemiştir. Bu azalışın nedeni olarak, Ukrayna ve Rusya’da devam eden savaş neticesinde gönderilen havalelerin beklenen döviz akışından daha az olmasıdır. Latin Amerika ve Karayipler’de göçmen havalesi miktarı 2023 yılında 155 milyar dolar olarak gerçekleşmiştir. Orta Doğu ve Kuzey Afrika’ya yapılan göçmen havaleleri 2023 yılında yüzde 15 azalarak 55 milyar dolara gerilemiştir. Bu bölgeye gönderilen havale miktarındaki bu keskin düşüşün başlıca nedeni ise, transferlerin gayri resmi kanallardan yapılmasıdır. Ancak, dövizlerin 2024 yılında 4,3’lük bir oranda toparlanması beklenmektedir. Güney Asya’ya yapılan göçmen havalesi 2022 yılında yüzde 12’lik bir artış oranının ardından 2023 yılında yüzde 5,2 daha artarak 186 milyar dolar olarak gerçekleşmiştir. Bu havalelerin 2024 yılında ise yüzde 4,2 oranında daha artması beklenmektedir. Sahra altı Afrika’da ise havaleler 2023 yılında yüzde 0,3 gibi çok küçük bir oranda azalmayla 54 milyar dolar olarak gerçekleşmiş ve 2024 yılında yüzde 1,5 oranında artması öngörülmektedir. Göçmen havaleleri, 2023 yılında düşük ve orta gelirli ülkeler için doğrudan yabancı yatırımları ve resmi kalkınma yardımlarını geride bırakmıştır. Ayrıca 2023 yılında döviz akışlarındaki yavaşlama 2021-2022 yıllarındaki COVID-19 pandemisi sonrası yüzde 8,3 oranındaki artışla beraber trendlerin normalleşmesini göstermektedir (KNOMAD, 2024).

Şekil 2: Dünya’da En Fazla İşçi Döviz Alan 10 Ülke (2023, Milyar \$)

Kaynak: World Bank staff estimates; World Development Indicators.

Şekil 2’de 2023 yılında resmi olarak en çok havale alan 10 ülkeye ait veriler sunulmaktadır. Bu verilere göre, 2023 yılında en fazla işçi döviz elde eden ülke 120 milyar dolar ile Hindistan’dır. Aynı dönemde Hindistan’ı 66 milyar dolar ile Meksika, 50 milyar dolar ile Çin, 39 milyar dolar ile Filipinler ve bunu 27 milyar dolar ile Pakistan takip etmektedir (KNOMAD, 2024).

3. LİTERATÜR TARAMASI

Son yıllarda yapılan iktisadi araştırmalarda işçi dövizleri çok sayıda çalışmaya konu edilmiştir. Yapılan literatür çalışmaları incelendiğinde, işçi dövizleri ile ekonomik büyüme arasındaki etkileri inceleyen çalışmalar olduğu gibi işçi dövizlerini güdüleyen farklı faktörlerin de dahil edildiği araştırmalarda mevcuttur. Çalışmanın bu bölümünde konu ile ilgili yapılan literatür taraması sonucuna yer verilmiştir.

Karagöz (2009) incelemiş olduğu çalışmasında, Türkiye ekonomisi için 1970-2005 dönemi arasındaki yıllık verileri kullanarak zaman serisi analizi yardımıyla göçmen havaleleri ile ekonomik büyüme arasında bir ilişki olup olmadığını araştırmıştır. Çalışmanın ampirik bulgularına göre Karagöz, Türkiye’de göçmen dövizlerinin büyümeyi olumsuz bir şekilde etkilediği sonucuna ulaşmıştır.

Azam ve Khan (2011) işçi dövizlerinin Azerbaycan ve Ermenistan ekonomilerinin ekonomik büyümesi üzerindeki etkilerinin araştırmışlardır. 1995- 2010 dönemi yıllık veriler ışığında yapmış oldukları çalışmalarının ampirik bulgularına göre, işçi dövizlerinin büyüme üzerinde önemli bir etkisi olduğu sonucuna ulaşmışlardır. Ayrıca, her iki ülkenin politika yapıcılarının işçi dövizleri teşviki için uygun politikalar oluşturulması gerektiğini ifade etmişlerdir.

Jayaraman ve Choong (2012) incelemiş oldukları çalışmalarında, en fazla göçmen havallesi alan ülkelerden biri olan Hindistan ekonomisi için 1970-2009 dönemi yıllık verilerini kullanarak incelemiş oldukları araştırmalarında genişletilmiş Solow modelini benimsemişlerdir. Göçmen havaleleri ve büyüme arasındaki ilişkiyi sorguladıkları araştırmanın bulgularına göre, göçmen havalelerinin ekonomik büyüme üzerinde artırıcı bir etkisi olduğu sonucuna ulaşmışlardır.

Ayrıca, bu bulgular ışığında, göçmen havalelerinin finansal sektörün gelişimi üzerinde de olumlu ve anlamlı bir etki bıraktığı sonucuna ulaşmışlardır.

Jawaid ve Raza (2012) araştırmalarında, Çin ve Kore'yi ele alarak 1980- 2009 dönemine ait yıllık zaman serisi verilerini kullanarak Johansen & Juselius eş bütünleşme analizi çerçevesinde işçi dövizleri ve ekonomik büyüme arasındaki ilişkiyi gözlemlemişlerdir. Yapmış oldukları analizin ampirik bulgularına göre, işçi dövizleri ile ekonomik büyüme arasında uzun vadede Kore'de anlamlı ve pozitif yönlü bir ilişki olduğunu Çin'de ise, anlamlı ancak negatif yönlü bir ilişki olduğunu gözlemlemişlerdir. Hata düzeltme modeli sonucunda ise, kısa vadede Kore'de işçi dövizleri ekonomik büyümeyi anlamlı etkilerken, Çin'de anlamsız etkilediği sonucuna ulaşmışlardır. Ayrıca, hem Kore hem de Çin'de işçi dövizlerinden ekonomik büyümeye doğru tek yönlü bir nedensellik ilişkisi bulmuşlardır.

Shafgat vd. (2014) çalışmalarında, işçi dövizlerinin Pakistan'ın ekonomik büyümesi üzerindeki etkisini araştırmışlardır. 1991-2010 arasındaki yıllık zaman serisi verilerini kullanarak çoklu regresyon analizi yapmışlardır. İncelemiş oldukları araştırmanın ampirik bulgularına göre, Pakistan'ın ekonomik büyümesinde işçi dövizlerinin önemli ve anlamlı bir katkı sunduğu sonucuna ulaşmışlardır. Ayrıca, işçi dövizleri aracılığıyla kısa ve uzun vadeli yatırımların yapılması ve göçmenlerin ülkelerine resmi olmayan yollarla göndermiş oldukları kaynak akışı maliyetinin düşürülmesi ve çeşitli teşviklerin uygulaması, Pakistan'da ekonomik büyümeyi sürdürmesine ve geliştirmesine yardımcı olabileceğini ileri sürmüşlerdir.

Tolcha ve Rao (2016) işçi dövizleri ile ekonomik büyüme arasındaki etkiyi inceledikleri çalışmalarında, 1981-2012 dönemi arasındaki yıllık veriler yardımıyla Etiyopya ekonomisi için analiz yapmışlardır. Yapmış oldukları analizlerinin ampirik bulgularına göre, işçi dövizleri, kısa vadede büyümeyi pozitif etkilerken, uzun vadede ise büyümeyi negatif etkilediği sonucuna ulaşmışlardır. Bunun yanı sıra, işçi dövizleri ile ilgili iyimser ve kötümser olmak üzere iki farklı görüşün hâkim olduğunu belirtmişlerdir. İyimserlere göre, işçi dövizlerinin alıcı ülkelerde yoksulluğu azaltarak ekonomik büyümeyi ettiğini savunmuşlardır. Kötümserlere göre ise, işçi dövizlerinin ekonomik büyümeyi teşvik etmediğini aksine, havale alan ülkelerde dışa bağımlılığı artırdığını ifade etmişlerdir.

Kumar vd. (2017) araştırmalarında, göçmen havaleleri ile ekonomik büyüme arasındaki ilişkiyi tespit edebilmek için, Kırgızistan ve Makedonya ekonomilerinde 1990-2015 dönemi yıllık verileri kullanarak araştırmışlardır. Sonuç olarak, göçmen havalelerinin uzun vadede büyüme üzerinde pozitif etkileri olduğu sonucuna ulaşmışlardır. Ayrıca, finansal gelişmenin etkisi ise negatif olup sadece Kırgızistan için anlamlı, Makedonya için anlamsız bulunmuştur.

Meyer ve Shera (2017) çalışmalarında, işçi dövizleri ile ekonomik büyüme arasında anlamlı bir ilişki olup olmadığını amaçlamışlardır. 1999- 2013 dönemi yıllık verilerini kullanarak, en fazla göçmen gönderisi alan 6 ülkeyi (Arnavutluk, Bulgaristan, Makedonya, Moldova, Romanya ve Bosna Hersek) analizlerine dâhil ederek panel veri yöntemini kullanmışlardır. İncelemiş oldukları araştırmanın bulgularına göre, işçi dövizlerinin ekonomik büyümeyi anlamlı ve pozitif yönde etkilediği sonucuna ulaşmışlardır.

Ofeh ve Muandzevara (2017) çalışmalarında, işçi dövizlerinin Kamerun'un ekonomik büyümesi üzerindeki etkisini araştırmışlardır. 1980- 2013 arasındaki yıllık verileri zaman serisi analizi yapmışlardır. Çoklu regresyonun en küçük kareler yöntemiyle test edilen çalışmalarının ışığında, işçi dövizlerinin büyümeyi pozitif etkilediği ancak bu etkinin küçük bir düzeyde gerçekleştiği sonucuna ulaşmışlardır. Ayrıca, büyümeyi etkileyen diğer makroekonomik değişkenleri de modele dâhil etmişlerdir. Buna göre, tüketim harcamaları, kamu harcamaları ve ihracat büyümeyi olumlu, yatırım harcamaları büyümeyi olumlu ancak anlamsız yönde etkilerken ithalatın ise büyümeyi olumsuz etkilediğini gözlemlemişlerdir.

Adjei vd. (2020) çalışmalarında, işçi dövizleri ile ekonomik büyüme arasındaki ilişkiyi 7 Batı Avrupa (Burkina- Faso, Gana, Gine, Gine- Bissau, Mali, Nijerya ve Togo) ülkeleri için 2003-2018 dönemine ait dinamik panel veri analizini kullanarak test etmişlerdir. Yapmış oldukları araştırmanın bulgularına göre, Batı Afrika'daki işçi dövizlerinin büyüme üzerinde olumlu ve anlamlı bir etki yarattığı sonucuna ulaşmışlardır.

Sutradhar (2020) çalışmasında, gelişmekte olan 4 Güney Asya (Bangladeş, Hindistan, Pakistan ve Sri Lanka) ekonomisine ait işçi dövizlerinin ekonomik büyüme üzerindeki etkisini incelemiştir. 1977- 2016 dönemine ait yıllık panel verileri kullanılarak yapılan ampirik regresyon analizi sonucuna göre, Bangladeş, Pakistan ve Sri Lanka'da havale gelirleri ile büyüme arasında negatif bir ilişki olduğu sonucuna ulaşılrken, Hindistan'da ise havale gelirlerinin büyümeyi olumlu yönde etkilediği tespit edilmiştir.

Uddin vd. (2020) çalışmalarında, seçilen 5 Güney Asya ekonomileri için işçi dövizlerinin ekonomik büyümeyi ne yönde etkilediğini araştırmışlardır. 1975-2017 arası yıllık verileri kullanılarak panel veri analizi yapmışlardır. Çalışmalarının sonucunda, işçi dövizlerinin Güney Asya bölgesinde ekonomik büyümeyi önemli ölçüde ve olumlu yönde etkilemektedir. Bir başka ifadeyle, işçi dövizlerinden ekonomik büyümeye doğru tek yönlü bir nedensellik ilişkisi bulunmuştur. Ancak, ekonomik büyümeden işçi dövizlerine doğru herhangi bir nedensellik ilişkisi mevcut değildir.

Bajra (2021) araştırmasında, 2010- 2019 dönemi yıllık verilerini kullanarak 6 Batı Balkan ekonomisi için işçi dövizlerinin ekonomik büyüme ve gelir eşitsizliği üzerindeki etkisini incelemeyi amaçlamıştır. Panel veri analizi kullanılarak yapmış olduğu çalışmanın ampirik bulgularına göre, işçi döviz gelirleri büyümeyi hızlandırmada etkili bir faktördür. Ancak Bajra'ya göre, işçi dövizleri ekonomik büyümeyi doğrudan yabancı yatırım akışı gibi diğer finansman kaynakları kadar önemli ölçüde etkilememektedir. Bunun yanı sıra çalışma, işçi dövizlerinin eşitsizliği azaltmada olumlu bir etkiye sahip olduğunu göstermektedir. Dolayısıyla göçün yoksulluğu azaltıcı bir payı olduğu sonucuna ulaşmıştır.

Qutb (2021) çalışmasında, Mısır ekonomisi için 1980-2017 dönemine ait yıllık verileri kullanarak işçi dövizleri ile ekonomik büyüme arasındaki ilişkiyi sorgulamıştır. Zaman serisi analizi yardımıyla yapmış olduğu Johansen eş bütünleşme test sonucuna göre, işçi dövizlerinin ekonomik büyüme üzerinde uzun vadede olumsuz bir etki bıraktığı sonucuna ulaşmıştır. Qutb'a göre, Mısır'ın dünyada en fazla işçi döviz alan ekonomilerden biri olmasına rağmen literatürde beklenen sonuca ulaşamamıştır. Çünkü havalelerin büyük bir payı hane halkı tüketimine ayrılmaktadır. Bundan dolayı, Mısır hükümetinin ve politika yapıcıların göçmen havalelerini, ekonomiye yatırım amaçlı kullanımının teşvik edilmesi, havalelerle ilgili işlem maliyetini düşürmek ve döviz transferlerinde kullanılan teknolojinin geliştirilmesi, cazip kredi fırsatları sunması gibi uygun politikalar geliştirilmesi gerektiğini ifade etmiştir.

Saha (2021) çalışmasında, 1995- 2016 dönemi yıllık verileri yardımıyla zaman serisi analizi kapsamında Bangladeş'te işçi dövizlerinin ekonomik büyüme üzerindeki etkisini araştırmıştır. Johansen & Juselius testi kullanarak yapmış olduğu analiz sonucuna göre, uzun vadede işçi döviz gelirleri Bangladeş ekonomisinin büyümesini pozitif ve istatistiksel olarak anlamlı etkilemektedir.

Bucevska (2022) analizinde, 6 Güney Doğu Avrupa (Arnavutluk, Bosna Hersek, Hırvatistan, Karadağ, Kuzey Makedonya Cumhuriyeti, Sırbistan) ülkeleri için 2008q1- 2020q2 dönemine ait üç aylık dengeli panel veri setini kullanmıştır. Çalışma sonucuna göre, işçi dövizlerinin ekonomik büyüme üzerinde önemli bir pozitif etkiye sahip olduğunu tespit etmiştir. Ayrıca, doğrudan yabancı yatırımların büyümeyi negatif ve istatistiksel olarak anlamlı; brüt sermaye yatırımları ve ticari açıklık ise büyümeyi pozitif ve istatistiksel olarak anlamlı etkilemektedir.

Abdulai (2023) çalışmasında, Gana ekonomisi için 1990-2020 dönemine ait yıllık veriler yardımıyla işçi dövizlerini ekonomik büyüme üzerindeki etkisini incelemiştir. ARDL analiziyle yapılan çalışmanın ampirik bulgularına göre, ekonomik büyüme oranının işçi dövizlerinin yanı sıra doğrudan yabancı yatırımlar, enflasyon, işsizlik oranı, ticaret, nüfus artış hızı ve resmi kalkınma yardımlarıyla uzun vadeli bir ilişki içinde olduğunu tespit etmiştir.

Ibenyenwa vd. (2023) araştırmasında, işçi dövizleri ile Nijerya ekonomisinin gelişimi arasındaki ilişkiyi 2002- 2022 dönemine ait zaman serisi analizi kapsamında incelemiştir. Yapmış olduğu araştırmanın bulgusuna göre, işçi dövizlerinin Nijerya’da ekonomik kalkınma üzerinde önemli bir etkisi olmadığını tespit etmiştir. Granger nedensellik test sonucuna göre ise, döviz gelirlerinin İnsani Gelişme Endeksi üzerinde bir nedensellik ilişkisi bulunmadığı yönündedir.

Jaji ve Uthman (2023) çalışmalarında, 1981- 2021 dönemi için Nijerya’da işçi dövizlerinin finansal gelişme üzerindeki etkilerini ARDL analizi çerçevesinde incelemiştir. Finansal gelişimi, bankacılık sektörü gelişimi ve borsa gelişimi yoluyla ölçtükleri çalışmanın bulgularına göre, işçi dövizlerinin bankacılık sektörü gelişimi üzerinde anlamlı ve olumlu bir etkiye sahip olduğunu ancak borsa gelişimi üzerinde ise önemsiz bir etkisi olduğunu tespit etmişlerdir.

Mehmood vd. (2023) araştırmalarında, Pakistan için işçi dövizleri ile ekonomik büyüme arasındaki ilişkiyi tespit edebilmek amacıyla 1980- 2019 dönemine ait yıllık zaman serisi analizi çerçevesinde ARDL testi yapmışlardır. Araştırmalarının ampirik bulgularına göre, işçi dövizleri Pakistan ekonomisini anlamlı ve pozitif bir yönde etkilemektedir.

Rehman vd. (2023) işçi dövizleri, büyüme ve yoksulluk arasındaki ilişkiyi tespit edebilmek amacıyla Pakistan ekonomisi için 1981-2020 arasındaki yıllık verilerle ARDL analizi gerçekleştirmişlerdir. Yapmış oldukları çalışmanın ampirik bulgularına göre ise, Pakistan’da işçi dövizleri ekonomik büyümeyi önemli ölçüde pozitif etkileyerek yoksulluğun azaltılmasına katkı sağlamaktadır.

Rexhepi (2023) çalışmasında, Balkanlarda en çok döviz gönderilen ülkeler arasında yer alan Kosova ekonomisinin gelişiminde göçmen transferlerinin rolünü ve etkisini incelemiştir. Rexhepi’ye göre, güvenli bir finans kaynağı olan göçmen dövizleri, Kosova’nın ekonomik büyümesine büyük katkı sağlamaktadır. Bunun yanı sıra, alıcı ülkede hayat standartlarının yükseltilmesi, yoksulluğun azaltılması, eğitim seviyesinin artması, sağlık hizmetlerinin iyileştirilmesi gibi birçok faktörde göçmen döviz gelirlerinin önemli bir rol oynadığını savunmuştur.

Singh ve Pradhan (2023) çalışmalarında, göçmen transferlerinin Nepal ekonomisi üzerindeki etkisini 1990- 2021 dönemine ait yıllık veriler ışığında zaman serisi analizi kapsamında incelemiştir. ARDL sınır testi ile yapılan araştırmanın ampirik bulgularına göre, göçmen transferleri ile büyüme arasında uzun vadede olumlu bir ilişki olduğu sonucuna ulaşmışlardır.

Ali vd. (2024) çalışmalarında, işçi dövizlerinin Pakistan’ın ekonomik büyümesi üzerindeki etkilerini 1976- 2022 dönemine ait yıllık veriler yardımıyla zaman serisi analizi çerçevesinde ARDL testi ile değerlendirmişlerdir. Çalışmalarının ampirik sonucuna göre, işçi dövizleri özellikle yatırım aktarım kanalı yoluyla Pakistan’da büyümeyi olumlu ve anlamlı bir şekilde etkilemektedir. Ayrıca, işçi dövizlerinin olumsuz yönlerinden biri olan Hollanda Hastalığından Pakistan ekonomisinin etkilemediğini ifade etmişlerdir.

Amir ve Amir (2024) araştırmalarında, seçilen 42 Afrika ülkesi için göçmen havalelerinin ekonomik büyüme üzerindeki etkisini analiz etmişlerdir. Çalışmalarında 2001- 2020 dönemine ait yıllık panel verileri kullanmışlardır. Yapmış oldukları analiz bulgularına göre, göçmen havalelerinin Afrika ülkelerinde büyümeyi pozitif ve önemli bir ölçüde etkilediği sonucuna ulaşmışlardır.

Barkat vd. (2024) arařtırmalarında, sürdürülebilir kalkınma hedeflerinde göçmen dövizlerinin rolünü sorgulamışlardır. Bu doğrultuda 2000- 2022 dönemi yıllık panel verileri ile gelişmekte olan 109 ülkeyi incelemişlerdir. GMM yöntemiyle yapmış oldukları çalışmanın sonucuna göre, dövizlerin sürdürülebilir kalkınma hedefleri gelişiminde olumlu bir etkisi olduğunu ortaya koymuşlardır.

Dahal vd. (2024) arařtırmalarında, 8 SAARC üye ülkelerinde işçi dövizleri ve ekonomik büyümenin enflasyon oranı üzerindeki etkisini incelemişlerdir. 272 veri ögesinden oluşan çalışmanın ampirik bulgularına göre, işçi dövizlerindeki artış uzun vadede enflasyonu artırmaktadır. Ayrıca büyüme oranındaki artışın ise enflasyonu tetiklemesine neden olduğunu ifade etmişlerdir.

Dutta ve Saikia (2024) analizlerinde, göçmen havalesi alan 17 Asya ülkesi için bir panel kullanarak, havalelerin büyüme üzerindeki etkisini test etmişlerdir. 1993- 2017 dönemi için yapılan eş bütünleşme testi sonucunda, değişkenler arasında uzun vadeli bir ilişki olduğunu ve havalelerin seçilen ülkelerde ekonomik büyümeyi artırdığını gözlemlemişlerdir.

Habib (2024) arařtırmasında, göçmen dövizleri ve ekonomik büyüme arasındaki ilişkiyi 12 Orta Doğu ve Kuzey Afrika (MENA) ülkesi için 2002- 2020 dönemine ait panel veri analizi çerçevesinde GMM yöntemiyle analiz etmiştir. Yapmış olduğu çalışmanın sonucuna göre, göçmen dövizlerinin büyüme üzerinde negatif ve anlamlı bir etkiye sahip olduğunu tespit etmiştir.

Ojeyinka ve Ibukun (2024) analizlerinde, Asya, Afrika ve Latin Amerika'da seçilmiş ülkelerde göçmen havaleleri ile yoksulluk arasındaki ilişkiyi tespit etmeye çalışmışlardır. 1990- 2021 dönemi yıllık verileri ile yapmış oldukları çalışma sonucunda, havalelerin seçilen ekonomilerde yoksulluğu azaltıcı bir etkisi olduğu yönündedir.

Yukarıdaki literatür incelemesinden de anlaşıldığı üzere, değişkenler arasındaki ilişkiyi tek ülke üzerinden inceleyen arařtırmalar mevcut olduğu gibi birçok ülkeyi ele alarak inceleyen arařtırmalarda mevcuttur. İşçi dövizlerinin büyüme üzerindeki etkisinin yönünü sorgulamak için yapılan çalışmalar karışık sonuçlar vermektedir. İşçi dövizlerinin ekonomik büyümeyi pozitif yönde etkilediğini savunan çalışmaların yanı sıra negatif yönde etkilediğini savunan çalışma sayısı da oldukça fazladır.

4. EKONOMETRİK MODEL VE VERİ SETİ

Panel veri yöntemi, ülkeler, hane halkı ve firmalar gibi unsurlardan oluşan yatay kesit gözlemlerinin, zaman boyutu ile de tanımlanması olarak da bilinmektedir (Baltagi, 2001: 1).

Panel veri analizi son dönemlerde sıklıkla kullanılan bir yöntem haline gelmiştir. Bunun nedeni panel veri seti, zaman boyutunun yanı sıra yatay kesit boyutunu olmak üzere iki tane boyutu dikkate almaktadır. Başka bir ifadeyle panel veri yönteminde, N tane birim ve her bir birime karşılık gelen T tane gözlem mevcuttur (Hsiao, 2003: 7).

Bu çalışmada kullanılan veriler, BRICS (Brezilya, Rusya, Hindistan, Çin ve Güney Afrika) ülkelerinin 2000-2022 dönemine ait gözlemlerinden meydana gelmekte olup Dünya Bankasının "World Development Indicator" (WDI) veri tabanından elde edilmiştir. Modelde kullanılan değişkenlerin tanımları Tablo 2'de aşağıdaki şekilde ifade edilmektedir:

Tablo 2: Çalışmada Kullanılan Değişkenler ve Tanımları

Değişkenler	Tanımları	Kaynaklar
<i>lngrowth</i>	Ekonomik büyüme	Dünya Bankası (WDI)
<i>lnremit</i>	İşçi dövizleri	
<i>ca</i>	Cari açık	

Analizde kullanılan model aşağıdaki şekildedir:

$$lngrowth_{it} = \beta_0 + \beta_1 lnremit_{it} + \beta_2 ca_{it} + \varepsilon_{it} \quad (1)$$

BRICS ülkeleri için kurulan modelde ekonomik büyüme bağımlı değişken; göçmen havaleleri ve cari işlemler açığı ise açıklayıcı değişkenler olarak analize dâhil edilmiştir.

İşçi dövizleri genellikle gelişmekte olan ülkeleri ilgilendiren bir konudur. Bunun nedeni, geçmişten bugüne ekonomik dalgalanmaları en fazla yaşayan ekonomiler olmasından dolayıdır. konjonktürel daralmayı yaşama potansiyelinin yüksek olması gelişmekte olan ülkelerin ekonomik büyümelerini olumsuz etkilemekle beraber özellikle dışa bağımlı olan ülkelerde de cari açığın artmasına sebep olmaktadır. Bu anlamda işçi döviz gelirlerinin ülke ekonomilerinin performansına olumlu etki edebileceği gibi cari açığın dengelenmesine de katkıda bulunmaktadır. Bundan dolayı analizde ekonomik büyüme (*lngrowth*), işçi dövizleri (*lnremit*) serileri logaritmik formda ifade edilmiştir. Cari açık (*ca*) değişkeni ise analizin daha iyi bir sonuç vermesi açısından oransal olarak gösterilmiştir.

4.1. Yatay Kesit Analizi

Panel veri analizinde yatay kesit bağımlılığı analizini incelemek için kullanılan testler Pesaran (2004) CD_{LM} testi, Breusch- Pagan (1980) CD_{LM1} testi ve Pesaran (2004) CD_{LM2} testleridir. CD_{LM1} ve CD_{LM2} testleri $T > N$ olduğunda, CD_{LM} testinde ise $N > T$ olduğunda yatay kesit bağımlılığını tespit eden tahminicilerdir (Çınar, 2010: 594). Çalışmada 23 dönem (T) ve 5 BRICS ülkesi (N) açıklanan şartların doğruluğunu sağlamıştır. Araştırmada yer alan birim kök testinin hipotezi aşağıdaki şekildedir:

H_0 : yatay kesit bağımlılığı yoktur.

Yatay kesit bağımlılığı analiz sonuçları Tablo 3'te gösterilmektedir.

Tablo 3: Yatay Kesit Analizi¹

Test	İstatistik	Olasılık değeri
LM	117,6	0,0000
LM adj*	60,85	0,0000
LM CD*	16,77	0,0000

Tablo 3'te düzeyde test edilen boş hipotezi istatistiki ve anlamlı olarak reddedip panel veri setinde yatay kesit bağımlılığı olduğu sonucuna ulaşılmıştır. Bu sonuçtan hareketle, modelde yer alan ülkelere birinde meydana gelen bir değişim diğer ülkeleri de etkilemektedir. Panel veri yönteminde birim kök analizinden önce incelenmesi gereken başka bir analiz ise homojenlik analizidir. Panel veriyi oluşturan yatay kesit katsayılarının homojen mi yoksa heterojen mi olduğunu tespit edebilmek amacıyla Tablo 4'te homojenlik analizi yapılmıştır.

¹ Yatay kesit bağımlılığı testleri, Stata programı kullanılarak test edilmiştir.

Tablo 4: Homojenlik Analizi

adj.	Delta	Olasılık değeri
	2,542	0,011
	2,797	0,005

Modelde yer alan ülkelerin eğim katsayılarının aynı olduğu durumda homojenlik söz konusu iken; bu katsayılar söz konusu ülkeler için farklı ise heterojenlik söz konusudur.

Analizde yer alan homojenlik testinin hipotezi aşağıdaki şekildedir:

H_0 : Homojen

Tablo 4’te panel veri setinde değişkenlerin boş hipotezi reddedip heterojen olduğu sonucuna varılmıştır. Çalışmada öncelikle birim kök testi yapabilmek için incelenmesi gereken bir başka araştırma ise değişkenlerin düzey değer grafiklerinin incelenmesidir.

Şekil 3: Düzey Değer Grafikleri

Şekil 3’ te BRICS ülkeleri için serilerin düzey değer grafikleri incelendiğinde, ekonomik büyüme olan bağımlı değişkenin ve göçmen havaleleri ile cari açık olan bağımsız değişkenlerinin grafiği sıfır noktasından değil daha yüksek değerlerden başlamakta (intercept) ve belirgin bir trendin bulunduğu görülmektedir.

4.2. İkinci Nesil Birim Kök Testi

Birim kök sınaması için panel verileri kullanıldığında yatay kesit bağımlılığı analizi yapılmalıdır. Panel veri setinde yatay kesit bağımlılığı reddedilirse birinci nesil birim kök testleri kullanılabilir. Eğer panel verileri yatay kesit bağımlılığı içeriyorsa ikinci nesil birim kök testlerinin kullanmak daha güçlü ve sağlam bulgulara ulaşılmasına imkân tanır (Çınar, 2010: 594).

Çalışmada, etkili bir sonuca ulaşabilmek adına yatay kesit bağımlılığını dikkate alan ikinci nesil birim kök testi yapılmıştır. Yatay kesit bağımlılığı ve heterojenliğin olduğu durum göz

önüne alınarak ikinci nesil birim kök testlerinden Pesaran (2007) CIPS testi yapılmıştır. Çalışmada yer alan ikincil nesil birim kök analizinde Pesaran (2007) CIPS testinin hipotezi aşağıdaki şekildedir:

H_0 : Birim kök vardır.

Tablo 5: Pesaran (2007) CIPS Testi

Düzye				Birinci Farklar			
Değişkenler	CIPS t-istatistik değeri	Olasılık değeri	% 5	Değişkenler	CIPS t-istatistik değeri	Olasılık değeri	% 5
<i>lngrowth</i>	-3,19	<0,01	-2,88	<i>lngrowth</i>	-	-	-
<i>lnremit</i>	-1,10	>=0,10	-2,88	<i>dlnremit</i>	-2,62	<0,01	-1,72
<i>ca</i>	-3,21	<0,01	-2,88	<i>ca</i>	-	-	-

Tablo 5'te de görüldüğü gibi ekonomik büyüme ve cari değişkenlerinin seviyelerine uygulanan ve ekonometrik analizde kullanılan birim kök test sonuçlarında t istatistikleri ve olasılık değeri sonuçları düzeyde durağan [I(0)] olduğunu göstermektedir. Göçmen havalalarının ise t istatistik ve olasılık değeri sonucu serinin düzeyde [I(0)] durağan olmadığını göstermektedir. Serinin birim kök içerdiği görülmektedir. Bu nedenle söz konusu serinin birinci farkı araştırılmış ve göçmen havalalarına birince farkında bakıldığında, elde edilen bulguda serinin birinci farkında durağan [I(1)] olduğu görülmüştür.

Bağımlı değişken olan ekonomik büyüme [I(0)] durağan olduğu için bağımsız değişkenlerden göçmen havalaları [I(1)] çıkmasına rağmen kısa dönemli bir analize gidilmesi gerekmektedir. Bundan dolayı göçmen havalalarının birinci farkı alınıp durağan hale getirilerek analize devam edilmiştir.

4.3. F- Breusch Pagan ve Hausman Testi

Serilerin durağan olduğu sonucuna varıldıktan sonra panel veri analizinde tahmin yöntemleri uygulanmıştır. Panel veri analizinde sabit etkiler modeli, rassal etkiler modeli ve havuzlanmış etkiler modeli ile tahmin edilmektedir. Söz konusu testlere ait hipotezler Tablo 6'da verilmiştir.

Tablo 6: Hipotezler

	Hipotezler
F testi	H_0 : Havuzlanmış etkiler H_1 : Sabit etkiler
Breusch- Pagan testi	H_0 : Havuzlanmış etkiler H_1 :Rassal etkiler
Hausman testi	H_0 : Rassal etkiler H_1 : Sabit etkiler

Tablo 7'de uygun panel veri modeline karar veren F testi, Breusch - Pagan testi ve Hausman testi sonuçlarına yer verilmiştir.

Tablo 7: F, B-P ve Hausman Test Sonucu

	F Testi	BP Testi	Hausman Testi
Olasılık değeri	0,000	0,000	0,667

Tablo 7'de F testi sonucunda sıfır hipotezini reddedip sabit etkili olduğunu göstermektedir. Breusch Pagan testinde ise, sıfır hipotezi reddedilip rassal etkili olduğu sonucuna ulaşılmıştır. Bu durumda hangi modelin seçilip seçilmeyeceğine karar verebilmek için Hausman testi yapılmıştır. Tahmin sonucunda boş hipotez reddedilemez ve rassal etkiler sonucuna ulaşılır. Bu durumda analizin devamında rassal etkiler modeli dikkate alınacaktır. Kurulan modelin

herhangi bir ekonometrik sorunu içermemesi gerekmektedir. Bunu test edebilmek için sırasıyla değişen varyans ve otokorelasyon testleri analiz edilecektir.

4.4. Değişen Varyans Testi

Modelin hata terimi varyansı, açıklayıcı değişkenlerdeki farklılıklardan etkilenmeyi sabit kalmaktadır. Hata terimine ait örneklemin sabit olmaması durumunda değişen varyans ortaya çıkmaktadır (Albayrak, 113: 2008). Değişen varyans probleminin sınaması için Levene-Brown- Forsythe (1974) testi uygulanmıştır. Değişen varyans testi için hipotez şu şekildedir:

H_0 : Değişen varyans yoktur.

Hipotezin reddedilmesi değişen varyans sorunu olduğunu gösterirken; reddedilememesi ise değişen varyans sorunu olmadığını ifade etmektedir.

Tablo 8: Leven- Brown- Forsythe Testi

W0 = 17,603	Pr > F = 0,000
W50 = 11,850	
W10 = 16,205	

Tablo 8'deki boş hipotez reddedilip kurulan modelde değişen varyans sorunu ile karşılaşmıştır.

4.5. Otokorelasyon Testi

Regresyonun ana varsayımlarından birisi de birbirini izleyen hata terimleri arasında bir ilişki olmamasıdır. Eğer ki hata terimleri arasında bir bağ var ise bu durum oto-korelasyonun varlığına işaret etmektedir (Yavuz, 2009: 126). Modelde oto-korelasyon sorunu olup olmadığı tespit edebilmek amacıyla Wooldridge testi tercih edilmiştir. Oto-korelasyon testi için hipotez şu şekildedir:

H_0 : Otokorelasyon yoktur.

Wooldridge (2002)'nin, panel veri analizlerinde oto-korelasyonun varlığını sorgulamak niyetiyle ortaya koyduğu testin boş hipotezi "birinci dereceden oto-korelasyon yoktur" şeklinde ifade edilmektedir.

Wooldridge testi olasılık değerinin 0,05'ten küçük (olasılık değeri > F = 0,00) olmasından dolayı boş hipotez reddedilmiş ve modelin oto-korelasyon sorunu içerdiği bulgusuna ulaşılmıştır.

Modele uygulanan analizler sonucunda rassal etkiler modeli tahmininin geçerli olacağı bulgusuna ulaşılmıştır. Ancak uygulanan ekonometrik problemlerin sınıdığı testler sonucunda modelde değişen varyans ve oto-korelasyon sorununun varlığı söz konusudur. Bundan dolayı, daha istikrarlı- sağlam (robust) bir sonuca erişebilmek ve söz konusu sorunları ortadan kaldırmak amacıyla Driscoll- Kraay (1998) tahmincisinden yararlanılmıştır. Wooldridge tahmincisinde, hata terimleri birimler içerisinde korelasyon mevcut iken; birimler arasında korelasyon yoktur (Alpay, 2013: 24).

Tablo 9: Driscoll- Kraay Tahmincisi

<i>lngrowth</i>	Katsayı	Driscoll- Kraay std. hata	t- istatistik	p> t
<i>dlnremit</i>	-0,371	0,191	-1,94	0,065
<i>ca</i>	-0,048	0,007	-6,48	0,000
sabit	8,552	1,133	7,54	0,000

Tablo 9'da yer alan Driscoll - Kraay tahmincisi sonucuna göre, göçmen transferleri modelde %10 anlamlılık düzeyinde istatistiksel olarak anlamlı bulunmuştur. Göçmen transferlerindeki

%1'lik artış ekonomik büyümeyi % 0,371 azaltmaktadır. Cari açık modelde istatistiksel olarak %5 anlamlılık düzeyinde anlamlı bulunmuştur. Cari açıktaki bir birimlik artış ekonomik büyümeyi % 0,048 azaltmaktadır.

Tablo 10: Rassal Etkili Model Sonucu

<i>lngrowth</i>	Katsayı	Standart hata	z	p> t
<i>dlnremit</i>	-0,371	0,106	-3,50	0,000
<i>ca</i>	-0,048	0,010	-4,65	0,000
sabit	8,552	0,451	18,96	0,000

$$lngrowth_{it} = 8,552 - 0,371dlnremit_{it} - 0,048_{it} + \varepsilon_{it}$$

Tablo 10'daki rassal etkiler modeli sonucuna göre ise, göçmen transferleri modelde %5 anlamlılık düzeyinde istatistiksel olarak anlamlı bulunmuştur. Göçmen transferlerindeki %1'lik artış ekonomik büyümeyi % 0,371 azaltmaktadır. Cari açık modelde istatistiksel olarak %5 anlamlılık düzeyinde anlamlı bulunmuştur. Cari açıktaki bir birimlik artış ekonomik büyümeyi % 0,048 azaltmaktadır.

5. SONUÇ VE POLİTİKA ÖNERMESİ

İşçi dövizleri, göçmenlerin gittikleri ülkede kazanmış oldukları gelirleri alıcı ülkelerdeki ailelerine ve yakınlarına havale ettikleri para olarak tanımlanmaktadır. Daha çok gelişmiş ülkelerde döviz geliri sağlayan işçiler, ana vatanlarındaki hane halkı geçimine katkı sağlamak arzusuyla göç etmektedirler. Dövizin geldiği alıcı ülkede bireylerin harcanabilir gelirleri artmaktadır. Az gelişmiş ve gelişmekte olan ülkelerdeki kişiler sağlık olanaklarından daha iyi yararlanarak, daha iyi bir eğitim almakta ve böylece ülkedeki beşeri sermayenin yükselmektedir. İşçi dövizlerinin hacminin artması yoksullukla mücadele ederek, gelirdeki eşitsizliği de azaltmaktadır. Bunun yanı sıra, tasarruf yapma yoluyla yatırımların artmasında büyük önem taşıyan işçi dövizleri ülkenin ekonomik büyüme performansına da önemli ve olumlu katkılar sağlamaktadır. Doğrudan yabancı yatırımlar gibi diğer sermaye kaynaklarına daha istikrarlı bir gelir kaynağı olan işçi dövizlerinin dünya genelindeki payı da her geçen gün artmaktadır. 2017 yılında 641 milyar dolar olan işçi dövizleri, 2023 yılında 857 milyar dolara ulaşmış ve bu transferlerin yaklaşık 656 milyar doları düşük ve orta gelirli ülkelere yönelmektedir. Dolayısıyla işçi dövizleri, gelişmekte olan ülkeler için önemli bir sermaye kaynağıdır.

Bu çalışmada, gelişmekte olan ülke sınıfında kabul edilen beş büyük ekonomiden oluşan BRICS ülkeleri ele alınarak 2000- 2022 dönemine ait yıllık veriler ışığında analiz yapılmıştır. Oluşturulan modelde işçi dövizleri, cari açık ve ekonomik büyüme arasındaki ilişki panel veri analizi yöntemiyle tahmin edilmiştir. Çalışmada elde edilen sonuca göre, işçi dövizlerindeki artış ekonomik büyümeyi olumsuz yönde ancak istatistiksel olarak anlamlı etkilemektedir. Modele dâhil edilen cari açığın artması ise büyümeyi negatif yönde ve istatistiksel olarak anlamlı etkilemektedir.

İşçi dövizlerinin ekonomileri olumlu yönde etkilediği düşünülürse, bu transferleri ülkelere çekmek için ciddi politikalar ve teşvikler uygulanması gerekmektedir. Bu konuda hükümetler ve ilgili politika yapımcılar havalelerden alınan işlem maliyetini düşürmek, transfer esnasında kullanılan teknolojinin iyileştirilmesi, uygun kredi imkânları tanınması gibi göç yanlısı politikalar oluşturmalı, ülkelere söz konusu dövizleri çekmek için işçi dövizini artırıcı çalışmalar üzerine yoğunlaşmalıdırlar.

AİLƏDƏ MƏNƏVİ-PSIXOLOJİ MÜHİTİN TƏŞKİLİ

Dos.Əsmət İdris qızı İsmayılxanova
ADPU-nun “Ümumi pedaqogika” kafedrası
<https://orcid.org/0000-0002-1151-4440>

Xülasə. Müəllif yazmış olduğu məqalədə qeyd edir ki, indiki cəmiyyətin mənəviyyatı ailənin varlığından asılıdır. Ona görə də deyilir ki, hər bir ailə cəmiyyətin özəyidir. Dövlət uğurlu nığahın olmasında, ailənin möhkəmliyində, uşaqların düzgün tərbiyə olunmasında maraqlıdır. Bu səbəbdən dövlət ailələrə qayğı və dəstək göstərir.

Müəllifin fikrincə ailədə düzgün mənəvi-psixoloji mühit yaradılsa burada tərbiyə alan hər bir övlad istər ictimai yerlərdə, istər əmək kollektivlərində, istərsə də məktəblərdə özlərini nümunəvi aparar və ailəsinin şərəfinə xələl gətirməz. Əks halda ailə gözdən düşər və heç bir yerdə o ailəyə hörmət edilməz.

Ailədə müsbət mənəvi-psixoloji mühitin olması üçün ailə üzvləri arasında psixoloji cəhətdən bir-birinə uyuşması mütləqdir. İlk növbədə ailənin qurulduğu gündən qadınla kişinin psixoloji cəhətdən bir-birinə uyuşması lazımdır, ona görə ki, hər iki gənc də müxtəlif ailələrdə, müxtəlif psixoloji iqlimdə böyüyüb tərbiyə almış və indi bir ailədə birləşmişlər.

Açar sözlər: mənəvi-psixoloji mühit, mənəviyyat, hörmət, məhəbbət, qarşılıqlı anlaşma, tələbkarlıq, əxlaqi keyfiyyətlər, xoşbəxtlik

ОРГАНИЗАЦИЯ ДУХОВНО-ПСИХОЛОГИЧЕСКОЙ СРЕДЫ В СЕМЬЕ

Аннотация:

Автор отмечает, что морально-духовное состояние современного общества зависит от семьи и её ценностей. Отсюда и устоявшееся мнение, что каждая семья является ячейкой общества. Государство заинтересовано в удачном браке, прочности семьи и правильном воспитании детей. Поэтому государство заботится о семьях и их поддерживает.

По мнению автора, ребёнок, воспитанный в правильной духовно-психологической среде, будет примерно вести себя в общественных местах, в трудовых коллективах, в школах и не нанесёт вреда чести своей семье. В противном случае семья будет дискредитирована и потеряет всеобщее уважение.

Чтобы обеспечить положительную духовно-психологическую обстановку в семье, необходимо, чтобы члены семьи были психологически совместимы друг с другом. Прежде всего, со дня основания семьи между мужчиной и женщиной в семье должно быть психологическое согласие, поскольку они выросли и воспитывались в разных семьях, в разном психологическом климате, и только теперь объединились, создав семью.

Ключевые слова: духовно-психологическая среда, духовность, уважение, любовь, взаимопонимание, требовательность, нравственные качества, счастье.

ORGANISATION OF THE SPIRITUAL-PSYCHOLOGICAL ENVIRONMENT IN THE FAMILY

Abstract: The author states that the moral and spiritual state of modern society depends on the family and its values. Hence the widespread opinion that each family is a cell of society. The state is interested in a successful marriage, the strength of the family and the proper education of children. That is why the state cares for and supports families.

According to the author, a child brought up in the right spiritual and psychological environment will behave in public places, at work, in schools adequately and will not damage the honour and reputation of his family. Otherwise, the family will be discredited and lose the popular respect.

In order to ensure a positive spiritual and psychological environment in the family, it is necessary that the members of the family are psychologically compatible with each other. First of all, the man and the woman in the family should be psychologically compatible from the day the family is founded, because they grew up and were raised in different families, in different psychological environments, and only now they are united under a new family.

Key words: spiritual-psychological environment, spirituality, respect, love, mutual understanding, demanding, moral qualities, happiness.

İndiki cəmiyyətin mənəviyyatı ailənin varlığından asılıdır. Ona görə də deyilir ki, hər bir ailə cəmiyyətin özəyidir. Dövlət uğurlu nıgahın olmasında, ailənin möhkəmliyində, uşaqların düzgün tərbiyə olunmasında maraqlıdır. Bu səbəbdən dövlət ailələrə qayğı və dəstək göstərir. Hər bir ailə başa düşməlidir ki, düzgün tərbiyə almış bu günün gəncləri sabahın qurucuları olaraq dövlətdə məsul vəzifələrə sahib olacaqlar. Mənəviyyatı sağlam olan gənclər düzgün qərarlar vermək iqtidarındadırlar. Odur ki, deyə bilərik ki, cəmiyyətin də, dövlətin də qüdrətli olması ailədən, ailənin möhkəmliyindən və ailədə düzgün təşkil olunmuş mənəvi-psixoloji mühitdən birbaşa asılıdır.

Möhkəm ailə necə olmalıdır? Birgə nıgahda olan qadınla kişinin qarşılıqlı sevgisi, bir-birini başa düşməsi, sevincini, kədərini birlikdə bölüşmək, biri-birinin sağlamlığının qayğısına qalmaq, uşaqların düzgün tərbiyə olunmasında əlbir olmaq möhkəm ailə deməkdir.

Ailənin hər iki üzvü kişi və qadın uşaqların düzgün tərbiyəsində eyni dərəcədə məsuliyyət daşıyırlar. Böyük ingilis şairi C.Bayron deyirdi ki, qadınla kişinin arasında saf, təmiz məhəbbət olmazsa o ailədə xoşbəxtlik olmaz. Sevgi ailənin təməl daşdır.

Ulu babalarımız da ailəni böyük qiymətləndirmiş və həm kişinin, həm də qadının özünəməxsus vəzifələri olduğunu söyləmişlər. Bir atalar sözündə deyilir: "Ailəni dişi quş qurar". Qadının ailədəki rolunu qiymətləndirən atalarımız qeyd edirlər ki, ananın gücü ilə yuva nə yıxılır, nə dağılır.

Ailə daxilində nə ərlə arvadın, nə də övladların arasında "sənin", "mənim" ifadəsi olmamalıdır. Ailə içərisində nə varsa "bizim" olmalıdır. Nümunəvi ailədə əsas prinsiplər bunlardır: bir-birinə olan qarşılıqlı məhəbbət, sevgi, qarşılıqlı hörmət, ailənin mənəvi borcu, ata-ananın övladlarına olan qayğısı, sevgisi, ailədə dünyaya göz açan uşaqların düzgün tərbiyəsi.

Böyük rus pedaqoqu A.S.Makarenko demişdir: "Kim dünyaya övlad gətirib onu tərbiyə etməyəcəksə, cəmiyyəti əvvəlcədən bu cinayətdən xəbərdar etsin". Azərbaycan

Respublikasında əksər ailələrin qurulması həqiqi məhəbbətə, sevgiyə söykənir. Ata-ana arasındakı qarşılıqlı səmimiyyət, hörmət bir həyat məktəbi olmalıdır ki, övladları onlardan nümunə götürsünlər. Bu da bir həqiqətdir ki, ailə gənclərin bir-birinə olan sevgisi əsasında qurulur. Ancaq onu da etiraf etmək lazımdır ki, xoşbəxt olmaq üçün tək sevgi, məhəbbət kifayət

deyil. Ailənin xoşbəxtliyi üçün maddiyyat da mütləqdir. Bəzən maddiyyat üzərində qurulan ailələr sevgi üzərində qurulan ailələrdən daha uzun ömürlü olur. Ailədə mövcud olan maddi sıxıntılar, xasiyyətlərində olan fərqlilik, mənafe uyğunsuzluğu, hövsələsizlik, digər qüvvələrin ailəyə müdaxiləsi ər-arvad arasında olan sevgini soyuda bilir. Bəzən möhkəm təməl üzərində qurulmayan ailələr yox olub gedir ki, sonunda zərər çəkən övladlar olur.

Odur ki, ailə quran hər iki cütlük qurduqları ailənin məsuliyyətini dərk etməlidir. Çünki ailə borcu ailənin mənəvi sərvəti hesab edilir. Ailənin əsas borcu dünyaya gətirdikləri övladlarını Vətənin mənafeyini öz mənafeələrindən uca tutan, gələcəyə nikbin nəzərlərlə baxan, hərtərəfli inkişaf etmiş nümunəvi övlad tərbiyə etməkdir.

Övladların borcu isə valideynlərinin onlara olan sevgisini qiymətləndirmək, yaxşı oxumaq, nümunəvi davranış mədəniyyətinə, müsbət əxlaqi keyfiyyətlərə malik olmaq, məncub olduğu ailənin, nəslin şərəfini qorumaq və ailəsinə həm maddi, həm mənəvi dəstək olmaqdan ibarətdir. Ailədə ata və ana həmişə çətinliklərə hazır olmalı, birlikdə çətinliklərin öhdəsindən gəlməlidirlər. Ailənin digər üzvlərinin də bir-birinə inamı olmalıdır. Bir-birinə inam şərin, böhtanın qarşısını alır, ailənin sarsılmasına imkan yaratmır. Ailə içərisində ər-arvad borcu ilə ailə borcunu müqayisə etsək ailə borcunun daha geniş anlayış olduğunu görürük. Onu qeyd edək ki, ailə borcu həm ata-analıq, həm nənə-babalıq, həm də nəvəlik borcu ilə sıx əlaqədədir. Odur ki, ailənin hər bir fərdi öz üzərinə düşən borcun məsuliyyətini dərk etməli və dəyərləndirməyi bacarmalıdır.

Qurulan hər bir ailənin təməlini möhkəmləndirən vacib məsələlər vardır ki, bunlara aşağıdakıları göstərmək olar:

- ailə üzvlərinin bir-birinə olan səmimi münasibəti;
- hər hansı bir işi görmək istədikdə kişi ilə qadının bir-biri ilə əvvəlcədən məsləhətləşməsi
- ailənin digər fərdlərinin, məsələn, nənə-babanın, övladlarının fikirlərini dinləmək və bu fikirləri anlayışla qarşılamaq və.s.

Həzrəti Məhəmmədin mübarək kəlamlarında deyilir ki, ailədə oğlanla qıza fərq qoyulmamalı, onlara qarşı ədalətli olmalı, birini digərindən üstün tutmamalı. Əks halda övladlar arasında fərq qoyularsa onlar arasında qısqançlıq baş qaldıra bilər.

Ailədə düzgün mənəvi-psixoloji mühit yaradılsa burada tərbiyə alan hər bir övlad istər ictimai yerlərdə, istər əmək kollektivlərində, istərsə də məktəblərdə özlərini nümunəvi aparar və ailəsinin şərəfinə xələl gətirməz. Əks halda ailə gözdən düşər və heç bir yerdə o ailəyə hörmət edilməz.

Odur ki, ailədə müsbət mənəvi-psixoloji mühiti düzgün təşkil etmək və ya onun üçün əlverişli şərait yaratmaq ailənin bütün fərdlərindən bilavasitə asılıdır. Ona görə ki, hər bir insanın mənəvi, psixoloji dinclik tapdığı, özünü tamamilə arxayın hiss etdiyi məkan onun öz ailəsi, öz evi, öz isti ocağıdır. “Ailə”, ”Ev” sinonim sözlər olmaqla eyni məkanı işarət edir. Yəni “ailəmiz” dedikdə evimizi, “evimiz” dedikdə isə ailəmizi başa düşürük.

Bildiyimiz kimi dünyada tərkibinə, həyat tərzinə, maddi imkanlarına, maraq dairəsinə görə əsaslanaraq ailələr müxtəlif tiplərə bölünür. Ancaq ailənin öz içərisində də ailənin hər bir fərdi maraq dairəsinə, zövqünə, dünyəvi təsəvvürlərinə, gözəllik haqqında fikirlərinə görə də bir-birindən əsaslı şəkildə fərqlənir.

Ailədə müsbət mənəvi-psixoloji mühitin olması üçün ailə üzvləri arasında psixoloji cəhətdən bir-birinə uyuşması mütləqdir. İlk növbədə ailənin qurulduğu gündən qadınla kişinin psixoloji cəhətdən bir-birinə uyuşması lazımdır, ona görə ki, hər iki gənc də müxtəlif ailələrdə, müxtəlif psixoloji iqlimdə böyüyüb tərbiyə almış və indi bir ailədə birləşmişlər. Müxtəlif ailədə fərqli tərbiyə alan, müxtəlif qayğı ilə əhatə olunan gənclərə müxtəlif pedaqoji-psixoloji təsirlər də müxtəlif olmuşdur. Məsələn, cütlüklərdən biri valideynləri tərəfindən qayğı ilə əhatə olunmuş, maddi sıxıntı çəkməmiş, istənilən tələbi anında yerinə yetirilmiş, heç zaman ev işləri ilə məşğul olmamışdır. Digəri isə hələ kiçik yaşlarından ev işlərinə kömək etmiş, maddi sıxıntılarla böyümüş, bəzən günahlı, bəzən də günahsız yerə fiziki şiddətə məruz qalmışdır.

Bəzi avtaritar ailələrdə “ailənin rəisi mənəm, mən nə desəm o da olmalıdır” ifadəsi ailənin psixoloji mühitinə zərbə vurur. Belə halda ailədə mehribanlıq, səmimiyyət pozulur.

Bir çox tədqiqatçıların fikrincə yeni ailə quran cütlük ata evində qazandığı müsbət təcrübəni öz ailəsində tətbiq etməli, müsbət ailə tablosu formalaşdırmalı və övladlarını da eyni qayda ilə tərbiyə etməlidir. Çünki yeni qurulan ailənin memarı bir-birini sevərək evlənən gənclərdir. Hər bir ailənin mənəvi-psixoloji iqliminin özünəməxsus cəhətləri vardır. Bir-birinin ardınca dünyaya övlad gəlir, ailə genişlənir və yeni-yeni münasibətlər yaranır. Bu münasibətlərin düzgün tənzimlənməsi və idarə olunması ailədə psixoloji mühiti möhkəmləndirir.

Azərbaycanın tanınmış psixoloqu, professor Ə.Əlizadənin fikrincə ailədə müsbət mənəvi-psixoloji mühitin yaranması üçün ailənin bütün fərdlərinin birgə fəaliyyət göstərməsi lazımdır. Elə ona görə də ailənin mənəvi-psixoloji mühüm əhəmiyyət kəsb edir. O, qeyd edir ki, ailənin mənəvi-psixoloji iqlimi valideynləri vasitəsilə övladlarına keçir. Hətta övladların sağlam böyüməsi də mövcud iqlimdən asılıdır. Əgər ailədə qarşılıqlı münasibət düzgün formada təşkil olunarsa belə ailələr problemlərlə üzləşməz.

Nüklear ailələrdə ailədaxili problemlər çox az halda baş verir. Əsas problemlərə mürəkkəb ailələrdə daha çox özünü göstərir. Belə ki, belə ailələrdə ata-ana, baba-nənə, baldız, qayın birlikdə yaşayırlar və ailədə müsbət mənəvi-psixoloji mühitin tənzimlənməsi bir qədər çətin olur. Belə ki, qaynana-gəlin münasibətlərində narazılıq baş verəndə ailənin digər üzvləri işə qarışır və hər kəs özünü haqlı sayır, münasibətlər gərginləşir. Bəzən də gəlinlə baldız arasında olan mübahisələrdə qaynana qızını müdafiə edir ki, bu da müəyyən xoşagəlməz halların baş verməsinə səbəb olur. Bu söyləmələrdən məlum olur ki, ailənin uğurlu, uzunömürlü və sağlam olması üçün ailədə sağlam mənəvi-psixoloji mühitin qorunub saxlanması o ailədə yaşayan hər bir kəsdən asılıdır. Ailənin bütün fərdləri öz vəzifəsini düzgün yerinə yetirərsə, o ailədə heç bir problem baş verməz.

Özet:

Yürütülen projelerinin sayısı, büyüklüğü ve karmaşıklığı günden güne hızlı bir artış göstermektedir. Projelerin yeterli bütçe ile zamanında ve istenilen kalitede gerçekleştirilebilmesi için takibi ve belirli periyotlarla izlenmesi gerekmektedir. Bu nedenle proje başarısının ölçülmesi için çeşitli ölçüm kriterleri bulunmaktadır. Fakat bu metrikler proje başarısını ölçmek için her zaman yeterli olmayabilir. Günümüz koşullarında projelerin performansının gerçekçi bir şekilde ölçülmesi zorlaşmaktadır.

Projeler arasındaki çeşitlilikten dolayı aynı derecede, adil ve gerçekçi ölçümün belirlenmesine ihtiyaç duyulmaktadır. Bu çalışmada proje performansının ölçülmesinde kullanılabilecek kriterler belirlenmiştir. Bu kriterler örnek projelere uygulanmış ve sonuçları yorumlanmıştır. Geliştirilen proje performans değerlendirme yaklaşımı ile birçok projenin etkin bir şekilde ölçülebileceği hedeflenmektedir.

Anahtar Kelimeler: Proje Yönetimi, Proje Performansı, Proje Performans Endeksi, Performans Göstergeleri

MODELING FOR PROJECT PERFORMANCE MEASUREMENT

Abstract:

The number, size, and complexity of projects are rapidly increasing day by day. To ensure that projects are completed on time, within budget, and with the desired quality, they need to be tracked and monitored at regular intervals. Therefore, there are various measurement criteria for assessing project success. However, these metrics may not always be sufficient to gauge project success on a consistent scale. In today's conditions, it is becoming increasingly difficult to measure project performance in a realistic way.

Due to the diversity among projects, there is a need for a consistent, fair, and realistic measurement approach. This study identifies criteria that can be used to measure project performance. These criteria have been applied to example projects, and the results have been discussed.

The developed project performance evaluation approach aims to enable the effective measurement of multiple projects.

Key Word: Project Management, Project Performance, Project Performance Index, Project Indicators

1. Giriş

Projeyi bir çok kaynak farklı tanımlar. **Proje Nedir?** “Kendine özgü bir ürün veya hizmet yaratmak için girişilen geçici işler bütünü.” (PMI/PMBOk). Karmaşık, sıradan olmayan, bir kereye özgü, zaman, bütçe, kaynak, ve performans belirtilmeleri ile sınırlı, belirli müşteri ihtiyaçlarını karşılayacak çaba (Gray&Larson, 2003) olarak tanımlanmıştır. Proje kavramı, başlangıç ve bitiş noktası önceden belirlenmiş, benzersiz bir ürün geliştirmek için yürütülen geçici bir girişim olarak tanımlayabiliriz.

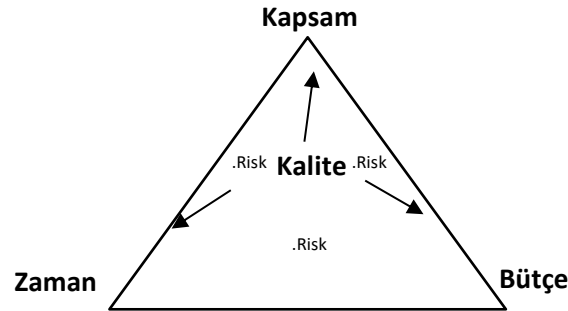

Proje yönetimi, projenin başlangıç, planlama, uygulama, kontrol ve kapanış süreçlerinin başarılı bir şekilde gerçekleşmesini sağlar. Bu temel süreçlerin yanı sıra, karmaşıklık, zorluk, belirsizlik, vb. farklı kavramlar da yer almaktadır. Proje karmaşıklığının yönetilebilir hale gelmesi için projeleri yönetirken karmaşıklık yaratacak her bir faktörün ve etkilerinin net olarak tanımlanması ve ölçülmesi gerekmektedir. Bütünsel açıdan bakıldığında, bu yaklaşım, ilk bakışta tespit edilemeyen faktörlerin de ortaya çıkarılmasını mümkün hale getirmektedir. Bu sebeple proje karmaşıklığının ölçülmesine yönelik oluşturulmuş çerçeveler ve bu çerçevelerde yer alan boyutlar, proje karmaşıklığının tanımlanması ve ölçülmesi için kritik öneme sahiptir. Projelerin başarı durumuna etki eden faktörlerin belirlenmesi ve performansının ölçülmesine yönelik birçok çalışma yapılmıştır. Projelerin performansları değerlendirilirken ilk dikkat edilmesi gereken husus projelerin mümkün olduğu kadar benzer türe sahip olmasıdır. Bunun için öncelikle projelerin sınıflandırılması gerekmektedir. Aynı zamanda proje karmaşıklığının giderilmesi ve ölçülebilir hale getirilmesi gerekmektedir.

Proje performansı değerlendirme kriterleri belirlenirken;

- Projenin genel hedeflerini net bir şekilde tanımlayın.
- Hedeflerin SMART kriterlerine (Özgül, Ölçülebilir, Ulaşılabilir, Gerçekçi, Zamanlı) uygun olmasına dikkat edin.
- Proje performans göstergelerinizi hesaplayın.

2. Performans Göstergelerinin Seçimi

Proje yönetiminde başarılı olmanın sırrı, Proje Yönetimi Üçgeni'nde saklıdır. Bu üçgen, projelerin planlanması, yönetilmesi ve başarıyla tamamlanması için kritik olan üç ana unsuru içerir; zaman, maliyet ve kapsam'dır. Bu unsurlar arasında denge kurmak gerekmektedir.

Şekil 1: Proje Yönetimi Üçgeni

Zaman; Projenin tamamlanması için geçen süredir. Maliyet; Proje tamamlanana kadar harcadığımız bedeldir. Kapsam; Projenin taahhüt edilen istekleridir. Bir proje yönetimi üçgenindeki üç kısıtlama zaman, maliyet ve kapsamdır. Kalite ve risk yönetimini de beraberinde getirir. Proje üçgeni, "demir üçgeni" ve daha az imtiyazlı olan "üçlü kısıtlamalar" olarak da bilinir. Ne olursa olsun, aynı şeyi ifade ediyor: Projenin bütçesini, zamanlamayı veya kapsamını, diğer iki parçadan en az birini etkilemeden değiştiremezsiniz.

Proje performans değerlendirme kriterleri olarak aşağıdaki performans göstergeler doğru sonucu elde etmemize yardımcı olacaktır.

- **Finansal Göstergeler:** Bütçe uyumu, hurda/stok/iade verileri,
- **Zaman Göstergeleri:** Proje süresi, teslimat performansı,
- **Kalite Göstergeleri:** Ürün kalitesi, müşteri memnuniyeti,
- **Kapsam Göstergeleri:** Proje kapsamının yerine getirilme oranı,
- **Risk Göstergeleri:** Risk etkenleri.

3. Performans Görterge Endeksi Hesaplama Yöntemi

Proje başarı ölçütünde herhangi bir projenin etkinliğini ve ilerlemesini değerlendirmek için net ve ölçülebilir göstergeler oluşturularak performansı izleyebilir, iyileştirme alanlarını belirleyebilirler. Bu kapsamlı kılavuzda, farklı proje türlerine ve sektörlere göre uyarlanabilecek çeşitli proje başarı ölçütü örnekleri yer almaktadır.

Projelerin performans gösterge çarpanı değerlendirilirken aşağıdaki noktalar gözönünde bulundurulmalıdır:

- Proje performans göstergelerini analiz etmek için sorular sorun.
- Analiz için hazırlanan sorularla kılavuz oluşturun.
- Performans göstergelerini düzenli olarak izleyin.
- Toplanan verileri analiz etmek için uygun istatistiksel ve analitik yöntemleri seçin.
- KPI'lar (Anahtar Performans Göstergeleri) ile performansı izleyin.

Hem nitel hem de nicel ölçümleri birleştirerek proje ve kritik başarı faktörleri hakkında kapsamlı bir anlayış kazanır ve hem somut sonuçları hem de insan faktörlerini etkili bir şekilde ele almalarını sağlar.

3.1. Proje Performans Endeksi (PPE) Formülü

Her projenin performans kriterleri farklı olabilir. Asıl amaç müşteri isterleri doğrultusunda doğru zaman ve belirlenen maliyette projenin sonlandırılmasıdır. Proje performans kriterleri genel başlıklar altında; kalite, bütçe, zaman, kapsam ve riskler olarak sınıflandırılabilir. Proje performans endeksi hesabı için verilen formülasyonda başarı çarpanlarının ortalaması proje özelinde belirlenerek ağırlıklandırma yapılır. Performans göstergeleri olarak belirlenen ana başlıklar ile oranlanarak, Proje Performans Endeksi hesaplanır.

Şekil 2’de Proje Performans Endeksi Formülü yer almaktadır.

$$PPE = \text{Ortalama}(\text{Başarı Çarpanı}(A1 + A2 + A3 + A4 + A5); \frac{\text{Performans Göstergeleri}(K + B + Z + İ + R)}{5})$$

Şekil 2: Proje Performans Endeksi Formülü

Tablo 1’de yer alan açıklamalar performans göstergelerinin detaylandırılarak, proje performansının hesaplanması için gerekli kriterleri içermektedir. Bu adımlar takip edilerek, proje performansını etkili bir şekilde ölçülebilir ve yönetilebilir. Modelleri proje özelliklerine göre özelleştirmek de önemlidir.

1.Proje Performans Göstergeleri
1.1. Kalite; Ürün veya hizmet kalitesini ölçer (0-100 arası bir ortalama değer). (K)
Müşteri Memnuniyeti
Uygunsuzlukların Kapatılma Oranı
Fonksiyonel Test Başarı Oranı
1.2. Bütçe; Projenin bütçe uyumunu veya maliyet tasarrufunu gösterir (0-100 arası bir ortalama değer). (B)
Proje Karlılığı
Hurdasızlık Oranı
Kayıpsızlık Oranı
1.3. Zaman; Projenin zamanında tamamlanmasını ölçer (0-100 arası bir ortalama değer) (Z)
Teslimat Performansı Oranı
İşçilik Hedef Oranı
Proje İlerleme Başarı Oranı
1.4. Kapsam; Projenin belirlenen kapsamı ne ölçüde yerine getirdiğini gösterir (0-100 arası bir ortalama değer). (İ)

Tasarım Tamamlanma Oranı
Test Başarı Oranı
1.5. Riskler; Proje risklerini ortaya koyar (0-100 arası bir ortalama değer). (R)
Risk Azaltma Oranı

Tablo 1: Proje Performansı Kriterleri

Belirlenen kriterlerin başarı katsayısı kılavuzu doğrultusunda başarı ağırlığı hesaplanır. Tabloda değerlendirme kriterleri doğrultusunda başarı ağırlıkları verilmiştir. Tablodaki veriler kullanılarak, bir projeye ait örnek hesaplama yapılmıştır.

Proje Yönetim Esasları	Değerlendirme Kriterleri	Başarı Ağırlığı (BA) Düşük: 1, Orta: 2 Yüksek:3	Cevap (C) Evet: 1, Hayır:0	Sembol	Başarı Çarpanı (BAxC)/Toplam Başarı Ağırlığı*
1.Kalite					
1.1	Giriş kalite faaliyetleri işletiliyor mu?	2	1	A1	15%
1.2	Proses kalite faaliyetleri işletiliyor.	2	1		
1.3	Final kalite faaliyetleri işletiliyor.	3	1		
1.4	Madde bulgusu kapatma oranı paylaşıyor mu?	2	1		
1.5	Kabulde fonksiyonel test var mı?	2	1		
2. Bütçe					
2.1	Proje karlılığı hedefi verildi mi?	3	1	A2	7%
2.2	Hurda/iade/fazla stok/kayıp bütçesi proje bütçesine oranı hedefi verildi mi?	2	0		
2.3	Tedarikçilerle anlaşılması için fiyat hedefi verildi mi?	2	1		
2.4	Plan/fiili uyum oranı hedefi var mı?	2	0		
3. Zaman					
3.1	Son teslim tarihi gerçekçidir.	1	1	A3	14%
3.2	Son teslim tarihi cezaya tabiidir.	3	1		
3.3	Proje planı, tüm paydaşların katılımı ile hazırlanmıştır.	2	1		
3.4	Müşterinin takvim esnekliği vardır.	2	0		
3.5	İşçilik süresi hedefi verildi mi?	2	1		
3.6	Gecikme oranı hedefi verildi mi?	3	0		
3.7	Proje ilerleme oranı paylaşıyor mu?	2	1		
4. Kapsam					
4.1	Projenin gerçekçi gereksinimi var mıdır?	2	1	A4	26%
4.2	Tasarım analizleri yapıldı mı?	1	1		
4.3	Tasarımın doğrulanması için, alt sistem testleri yapıldı mı?	2	1		
4.4	Tasarımın doğrulanması için, kalifikasyon test kapsamı var mıdır?	2	1		
4.5	Tasarımın doğrulanması için, GIET test kapsamı vardır mıdır?	2	1		

4.6	Malzeme ve kaynak planı doğru yapılmış mıdır?	3	1		
4.7	Seri üretim projesi midir?	1	1		
4.8	ELD kapsamı var mıdır?	1	1		
4.9	Altyüklenici yönetimi var mıdır?	1	1		
4.10	Araç müşteri sorumluluğunda mıdır?	1	1		
4.11	Tasarım müşteri ile ortak yürütülmekte midir?	2	0		
4.12	Müşterinin girdi sağladığı ürünler vardır mıdır? (birimler, üstyapı vs.)	2	1		
4.13	Yerlilik yükümlüğü var mıdır?	1	1		
5.Riskler					
5.1	Proje sponsoru var mıdır?	2	1	A5	22%
5.2	Proje iletişim risk planı var mıdır?	1	1		
5.3	Proje iletişim planı var mıdır?	1	1		
5.4	Proje paydaşlarının net belirlendiği organizasyon şeması var mıdır?	3	1		
5.5	Düzenli gözden geçirme toplantıları yapılmakta mıdır?	3	1		
5.6	Günlük/haftalık açık konu/eksik listeleri yayınlanmakta mıdır?	3	1		
5.7	Yazılı belgeler arşivlenmekte midir?	1	1		
5.8	ELD kapsamı parti kabullerini etkilemekte midir?	2	1		

Tablo 2: Başarı Katsayısı Kılavuzu

Tablo 2’de yer alan veriler doğrultusunda, formülizasyonda yer alan başarı çarpanları ve performans göstergeleri ise aşağıdaki gibidir.

K: %95

B: %75

Z: %80

İ: %75

R: %90

A1:%15

A2:%7

A3:%14

A4:%26

A5%22

Belirlenen başarı çarpanları ve performans kritikerleri ile formülün sonucu aşağıdaki gibidir.

$$PPE = \text{Ort}((\%15 + \%7 + \%14 + \%26 + \%22); (\%95 + \%75 + \%80 + \%75 + \%90)/5)$$

$$PPE = \text{Ort}(\%84);(\%83)$$

$$PPE = \%83,5$$

Bu durumda, proje performans endeksi 83,5 olacaktır. Bu değer, projenizin genel performansını yansıtır ve zaman içinde karşılaştırmalar yapmanıza yardımcı olur. Yürütülen projeleri göz önünde bulundurarak başarı oranını belirleyebilirsiniz. Bu sayede proje başarısı takip edilebilirliği herkes tarafından eşit şekilde ölçülebilir. Başarılı olan projeler ödüllendirilerek motivasyon artışı sağlanmış olacaktır. Beklenen başarının altında kalan projeler ise eksik kalan konuların tespitini daha kolay yapabileceklerdir.

4. Sonuç ve Değerlendirme

Projelerin performanslarının değerlendirmesinde birçok faktörü gözönünde bulundurmak gerekmektedir. Projelerdeki farklılık, müşteri isterlerindeki değişkenlikler ve projeler genel karmaşıklığı nedenlerden dolayı performans değerlendirmesinde farklı yaklaşımlar geliştirilmiştir. Bu çalışmada geliştirilen modele göre değerlendirilmede kullanılacak kriterler, göstergeler ve hesaplama yöntemleri geliştirilmiştir.

Geliştirilen modelin birçok projeye uygulanabilmesi için analiz sorularının projelere göre ortaklaştırılması ve performans KPI'larının takip edilebiliyor olması gerekmektedir. Geliştirilen bu modelin zayıf yanları ise başarı ağırlık puanlarının otomatik belirlenmemesidir. Bir sonraki çalışmalarda bu konu özelinde iyileştirmelerin yapılması gerekecektir.

Sonuç olarak geliştirilen bu model ile karmaşık projelerin proje başarısının ölçülebildiği ve projenin başarısının ödüllendirilmesi ile daha verimli yönetilebildiği görülmektedir.

ÖZET

Organik yem bitkileri yetiştiriciliğine başlarken, mevzuata uygun olarak yetki verilmiş kuruluşlar ile organik yem bitkileri yetiştiriciliği yapmak isteyen üreticiler arasında bir sözleşme yapılmalıdır. Yetiştiricilik süreci, yetkilendirilmiş kuruluşun kontrolü altında devam etmekte ve nihayetinde yetiştirilen ürünün sertifikalandırılması ile sonuçlanmaktadır. Tamamen kurallara uygun olarak yapılan bu yetiştiricilik son yıllarda ilgi çekmektedir. Organik yem bitkileri yetiştiriciliğinde toprak analizi, gübreleme, zararlı kontrolü, doğal yem bitkileri seçimi, rotasyon ve uygun ekim, sulama, hasat ve depolama gibi temel konular üzerinde durulmaktadır. Toprak analizi, bitkilerin besin ihtiyaçlarını belirlemek için önemlidir. Gübreleme organik kaynaklardan elde edilen materyallerle yapılır ve doğru miktarlarda uygulanmalıdır. Zararlı kontrolünde doğal yöntemler tercih edilmelidir. Doğal yem bitkileri seçimi, toprağa ve hayvan ihtiyaçlarına uygun olarak yapılmalıdır. Rotasyon ve uygun ekim toprak verimliliğini artırırken, sulama bitkilerin sağlıklı büyümesi için önemlidir. Hasat ve depolama süreçlerinde bitkinin türüne ve kalitesine göre dikkatli davranılmalıdır. Organik yem bitkileri yetiştiriciliğinde uyulması gereken bu temel prensipler, organik yem bitkileri yetiştiriciliğinde başarıyı artırmak için önemlidir.

Anahtar Kelimeler: Ekim, hasat, organik, sulama, yem bitkileri.

ABSTRACT

When starting organic forage crops cultivation, a contract should be made between the authorized organizations in accordance with the legislation and the producers who want to cultivate organic forage crops. The cultivation process continues under the control of the authorized organization and eventually results in the certification of the cultivated product. This cultivation, which is completely in accordance with the rules, has attracted attention in recent years. In organic forage crops cultivation, basic issues such as soil analysis, fertilization, pest control, natural feed crop selection, rotation and appropriate planting, irrigation, harvesting and storage are emphasized. Soil analysis is important for determining the nutritional needs of plants. Fertilization is done with materials obtained from organic sources and should be applied in the right amounts. Natural methods should be preferred in pest control. Natural forage crops selection should be made in accordance with the soil and animal needs. While rotation and appropriate planting increase soil fertility, irrigation is important for the healthy growth of plants. Care should be taken according to the type and quality of the plant during the harvest and storage processes. These basic principles to be followed in organic forage crops cultivation are important for increasing success in organic forage crops cultivation.

Keywords: Planting, harvesting, organic, irrigation, forage crops.

1. GİRİŞ

Organik yem bitkileri yetiştiriciliği, günümüz tarımında giderek daha fazla önem kazanan ve çevre dostu tarım uygulamalarının merkezinde yer alan bir alanı temsil ediyor. Geleneksel tarım yöntemlerinin çeşitli olumsuz etkileri, çiftçileri organik tarım tekniklerine yönlendirirken, organik yem bitkileri yetiştiriciliği de bu dönüşümün önemli bir parçası haline geldi. Organik tarım, doğal kaynakları koruma, toprak verimliliğini artırma ve kimyasal gübre ve pestisit kullanımını azaltma gibi hedeflerle öne çıkıyor. Bu amaçlar doğrultusunda, organik yem bitkileri yetiştiriciliği, sağlıklı ve dengeli bir hayvancılık için hayvanların beslenmesinde temel bir rol oynuyor. Geleneksel tarım uygulamalarının aksine, organik yem bitkileri yetiştiriciliği, sentetik kimyasalların kullanımını minimuma indirerek doğal kaynakların korunmasına katkıda bulunur. Ayrıca, organik yem bitkilerinin yetiştirilmesi, toprak sağlığını korur ve biyolojik çeşitliliği destekler.

Organik yem bitkileri yetiştiriciliği, organik tarım prensiplerine uygun olarak hayvanlar için doğal ve sağlıklı yemler üretmeyi amaçlayan bir uygulamadır. Organik yem bitkileri, hayvanların beslenmesinde kullanılan tahıllar, otlar, yem bitkileri ve yemlik bitkiler gibi bitkisel materyalleri kapsar. Organik yem bitkileri yetiştiriciliği, genellikle kimyasal gübreler, sentetik ilaçlar ve genetik modifikasyon gibi sentetik girdiler yerine doğal yöntemlerle yapılır (Celen ve Erdal, 2017). Organik yem bitkileri yetiştiriciliği için bazı temel adımlar uygulanır (Yolcu ve Tan, 2008; Açıkgöz vd., 2010; Kodaş ve Er, 2012). Bunlar;

Toprak analizi: İyi bir organik yem bitkileri yetiştiriciliği için toprak analizi yapmak önemlidir. Toprağımızın pH seviyesini, besin içeriğini ve organik madde miktarını değerlendirerek toprağı düzgün bir şekilde düzenlenir.

Gübreleme: Organik yem bitkileri yetiştiriciliğinde doğal gübreler kullanılmalıdır. Hayvan gübresi, kompost, yeşil gübreler gibi organik gübreler toprağı doğal besin maddeleri sağlar.

Zararlı kontrolü: Organik tarım yöntemleri, zararlıların kontrolünü sentetik ilaçlar yerine doğal yöntemlerle yapmayı amaçlar. Zararlılarla mücadelede entegre zararlı yönetimi, doğal düşmanlar, bitki çeşitliliği ve biyolojik mücadele gibi yöntemlere başvurulur.

Doğal yem bitkileri seçimi: Organik yem bitkileri yetiştiriciliğinde, hayvanların beslenmesine uygun doğal yem bitkileri seçilmelidir. Bu, arpa, yulaf, mısır, fiğ, yonca, üçgül, korunga gibi bitkileri içerir.

Rotasyon ve uygun ekim: Bitki hastalıklarının ve zararlıların kontrol altına alınması için uygun bitki rotasyonu yapılmalıdır. Ayrıca, uygun ekim zamanı ve ekim derinliği gibi faktörlere dikkat edilmelidir.

Sulama: Bitkilerin ihtiyaç duyduğu suyu sağlamak için uygun sulama yöntemleri kullanılmalıdır. Damlama sulama veya yağmurlama gibi suyu verimli bir şekilde kullanmanız önemlidir.

Hasat ve depolama: Bitkiler olgunlaştığında doğru zamanda hasat edilmelidir. Hasat sonrası bitkilerin doğru şekilde kurutulması ve depolanması gerekmektedir.

Organik yem bitkileri yetiştiriciliği, sağlıklı hayvanlar için doğal ve dengeli bir beslenme sağlamaya yardımcı olurken, aynı zamanda toprağı ve çevreyi koruyarak sürdürülebilir bir tarım yöntemi olarak da öne çıkmaktadır (Demiryürek, 2011). Organik süt, et ve yumurta üretiminde önemlidir ve organik tarımın genel olarak sürdürülebilir bir tarım yöntemi olduğu kabul edilir.

2. Toprak Analizi

Organik yem bitkileri yetiştiriciliğinde toprak analizi, toprağın besin durumunu değerlendirmek ve bitkilerin ihtiyaç duyduğu besin maddelerini belirlemek için önemli bir adımdır. Toprak analizi, doğru gübreleme programlarının oluşturulmasına yardımcı olur ve verimli bir üretim sağlamak için

önemli bilgiler sağlar (Yolcu ve Tan, 2008). Organik yem bitkileri yetiştiriciliğinde, toprak analizi genellikle her 2-3 yılda bir yapılmalıdır. Toprak analizi, bir laboratuvarda yapılabilir. Toprak örnekleri, farklı derinliklerden alınmalı ve örnekler karıştırılmalıdır. Toprak analizi genellikle şu faktörleri içerir:

2.1. Toprak pH'sının ölçülmesi: Toprak pH değeri, toprak asitliği veya alkalınlığı hakkında bilgi verir. Bitkilerin büyüme için en uygun pH aralığını belirlemek ve gerektiğinde pH'ı ayarlamak önemlidir.

2.2. Temel besin maddelerinin ölçülmesi: Toprakta bulunan ana besin elementleri olan azot (N), fosfor (P) ve potasyum (K) miktarı analiz edilir. Bu besin elementlerinin seviyeleri, bitkilerin büyümesi ve gelişmesi için önemlidir. Diğer besin elementleride, özellikle kalsiyum (Ca), magnezyum (Mg) ve kükürt (S) gibi eser elementler, analiz edilir.

2.3. Organik madde içeriğinin belirlenmesi: Organik madde, toprağın su tutma kapasitesini artırır, besinleri depolar ve toprak yapısını iyileştirir. Topraktaki organik madde seviyeleri, toprağın verimliliği ve sağlığı açısından önemlidir.

2.4. Toprak tekstürünün belirlenmesi: Toprağın kum, silt ve kil oranları analiz edilir. Bu, toprağın su tutma kapasitesi, drene edilebilirlik ve havalandırma yetenekleri hakkında bilgi verir.

Toprak analizleri, bir laboratuvar ortamında gerçekleştirilir ve genellikle toprak numuneleri alınarak yapılır. Analiz sonuçları, gübreleme programlarını ve toprak düzenlemelerini belirlemek için kullanılır. Organik yem bitkileri yetiştiriciliğinde düzenli toprak analizleri yapmak, toprak sağlığını korumak ve verimli bir üretim sağlamak için önemlidir.

3. Gübreleme

Organik yem bitkileri yetiştiriciliğinde gübreleme, bitkilerin besin ihtiyaçlarını karşılamak ve verimli bir şekilde büyümelerini desteklemek için önemli bir adımdır. Organik gübreler, doğal kaynaklardan elde edilen ve sentetik kimyasallar içermeyen materyallerdir (Yolcu ve Tan, 2008). Organik yem bitkileri yetiştiriciliğinde kullanılan gübreleme yöntemler;

3.1. Organik Kompost: Kompost, bitki atıkları, mutfak artıkları, çiftlik gübresi ve diğer organik malzemelerin ayrıştırılması ve olgunlaştırılmasıyla elde edilen bir gübredir. Kompost, toprağın organik madde içeriğini artırır, su tutma kapasitesini geliştirir ve toprak yapısını iyileştirir. Organik kompost, yem bitkilerinin yetiştirilmesinde toprağa karıştırılarak veya yüzeyine uygulanarak kullanılabilir.

3.2. Hayvan Gübresi: Hayvan gübresi, organik yem bitkileri yetiştiriciliğinde yaygın olarak kullanılan bir gübredir. İyi çürütülmüş hayvan gübresi, bitkiler için besin maddeleri sağlar ve toprağın verimliliğini artırır (Yolcu vd., 2010). Bununla birlikte, ham veya taze hayvan gübresi doğrudan bitkilere uygulanmamalıdır, çünkü yüksek oranda azot içerdiğinden bitkilere zarar verebilir. Hayvan gübresi, önceden çürütülerek veya kompostlanarak kullanılmalıdır.

3.3. Yeşil Gübreler: Yeşil gübreler, bitki yetiştirme dönemleri arasında toprağı beslemek ve iyileştirmek için ekilen bitkilerdir. Bunlar, azotu toprağa geri kazandırmak, toprağın erozyonunu önlemek ve yabancı otları baskılamak gibi faydalar sağlar. Bazı yaygın yeşil gübre bitkileri arasında bakla, yonca, fiğ, bezelye ve hardal yer alır (Çıtak vd., 2006; Dhima vd., 2009; Won vd., 2011).

3.4. Deniz Yosunu: Deniz yosunu, toprağa uygulandığında bitkilerin büyümesini destekleyen ve besin maddeleri sağlayan bir organik gübredir. Aynı zamanda toprak yapısını iyileştirir, mikrobiyal aktiviteyi artırır ve bitkilerin hastalıklara karşı direncini artırır (Engin vd., 2019).

Organik yem bitkileri yetiştiriciliğinde gübreleme yaparken, doğru miktarlarda ve doğru zamanda uygulama yapmak önemlidir. Bu nedenle, toprak analizine dayanarak bitkilerin besin ihtiyaçlarını belirlemek ve uygun organik gübreleri seçmek, başarılı bir organik yem bitkileri yetiştiriciliği için önemlidir. Ayrıca, aşırı gübreleme toksik bir toprak ortamına ve çevre kirliliğine neden olabileceğinden, gübreleme miktarlarına dikkat edilmelidir. Bununla birlikte, organik yem bitkileri yetiştiriciliği için, organik gübrelerin yanı sıra, doğal mineral kaynaklarından elde edilen minerallerin de kullanımı önerilmektedir. Bu mineraller, bitkilerin gelişmesi ve sağlıklı olması için gerekli olan

eser elementleri sađlar ve organik gbrelerle birlikte kullanıldığında verimliliđi artar (Gl vd., 2015; Akbay vd., 2023).

4. Zararlı Kontrol

Organik yem bitkileri yetiřtiriciliđinde zararlı kontrol, sentetik pestisitler yerine dođal ve organik yntemlerle yapılır (Ařçı ve Acar, 2019). Organik yem bitkileri yetiřtiriciliđinde zararlı kontrol iin kullanılan bazı yntemleri:

4.1 Biyolojik Mcadele: Biyolojik mcadele, dođal dřmanlar veya yararlı organizmaların zararlıları kontrol etmek iin kullanıldığđı bir yntemdir. rneđin, zararlı bceklere karřı avcı bceklerin veya parazitoidlerin kullanılması gibi. Bu Őekilde, zararlı poplasyonunu kontrol altına alarak kimyasal mdahaleye ihtiya duymadan zararlıları azaltabilirsiniz (Sirat, 2016).

4.2. Bitki eřitliliđi ve Ekosistem Desteđi: Farklı bitki trlerinin yetiřtirilmesi, zararlıların yayılmasını ve poplasyonlarını kontrol altına alabilir. Bitki eřitliliđi, zararlıları engelleyen veya etkilerini azaltan dođal bileřikler ve kokular salgılayabilir. Ayrıca, eřitli bitki trleri ekici habitatlar sađlayarak yararlı bceklerin ođalmasını teřvik eder (nal Ařçı vd, 2010; Acar vd, 2011).

4.3. Fiziksel Engeller ve Tuzaklar: Fiziksel engeller, zararlıların bitkilere ulařmasını engellemek iin kullanılabilir. rneđin, bcekleri uzak tutmak iin tuzaklar, engel bantları veya bariyerler kullanılabilir (Altun, 2022).

4.4. Organik Pestisitler: Organik tarımda kullanılmasına izin verilen bazı dođal pestisitler mevcuttur. Bunlar, bitkisel yađlar, sabunlar veya bitkisel bazlı ekstraktlar gibi maddeler olabilir. Organik pestisitler, zararlıları etkili bir Őekilde kontrol etmek iin kullanılabilirken evreye ve insan sađlıđına daha az zarar verir (ztemiz, 2008).

4.5. Kltrel Uygulamalar: Zararlıların yayılmasını ve poplasyonlarını azaltmak iin kltrel uygulamalar kullanılabilir. rneđin, bitki dřeme dzenini optimize etmek, bitki dnřmn uygulamak, hasat artıklarını temizlemek ve bitki sađlıđını iyileřtirmek iin dođru sulama ve besleme yntemlerini kullanmak (ztemiz, 2008).

Organik yem bitkileri yetiřtiriciliđinde zararlı kontrol, entegre zararlı ynetimi prensiplerine dayanır. Bu prensipler, dođal dřmanları destekleyen ve zararlıları engelleyen bir ekosistemin oluřturulmasını hedefler. Bu Őekilde, sađlıklı bitki bymesi ve verim elde ederken zararlıları minimum seviyede tutmak mmkndr.

5. Dođal Yem Bitkileri Seimi

Organik yem bitkileri yetiřtiriciliđinde, dođal yem bitkileri seimi, iftliđin iklimine, toprak zelliklerine ve yem bitkilerinin hayvanlar iin besin deđerlerine uygunluđuna gre yapılmalıdır. Ayrıca, dođal yem bitkileri seimi, toprađın verimliliđini artırmaya, evresel srdrlebilirliđi sađlamaya ve hayvanların sađlıđına fayda sađlamaya da yardımcı olur. Organik yem bitkileri yetiřtiriciliđinde kullanılabilecek bazı dođal yem bitkileri (Yolcu ve Tan, 2008):

5.1. Yonca: Yonca, organik yem bitkileri yetiřtiriciliđi iin yaygın olarak kullanılan bir bitkidir. Yonca, hayvanların protein ihtiyacını karřılamak iin zengin bir kaynak sađlar ve toprađı azotlu hale getirerek diđer bitkilerin yetiřmesine yardımcı olur.

5.2. Fiđ: Fiđ, organik yem bitkileri yetiřtiriciliđi iin iyi bir seenektir. Fiđ, azot bađlama kapasitesi yksek bir bitkidir ve yksek protein ieriđi ile hayvanların beslenmesine katkıda bulunur.

Darı: Darı, organik yem bitkileri yetiřtiriciliđi iin sıklıkla kullanılan bir tahıldır. Darı, kuraklık ve dřk verimli topraklar gibi zor kořullara dayanabilir ve hem yeřil hem de kuru ot olarak kullanılabilir.

5.3. Bakla: Bakla, organik tarımda yem bitkisi olarak tercih edilen bir diđer baklagildir. Yksek protein ieriđi vardır ve sığır, koyunlar ve keiler iin uygun bir yem kaynađıdır. Ayrıca toprađa azot sađlar ve bitki dnřmnde faydalıdır.

Mısır: Organik yem bitkileri arasında mısır, yüksek enerji içeriği ve besleyici değeri nedeniyle popüler bir seçenektir. Özellikle kanatlı hayvanlar ve domuzlar için tercih edilir. Organik mısır yetiştirirken, genetik olarak değiştirilmemiş ve organik sertifikalı tohumları kullanmak önemlidir.

5.4. Çim Otu: Doğal yem bitkileri arasında çim otu da önemli bir yer tutar. Özellikle otlayan hayvanlar için idealdir. Organik çim otu, çeşitli yabancı otları içermeyen ve doğal gübrelerle yetiştirilen çim alanlarından elde edilmelidir.

5.5. Soya Fasulyesi: Soya fasulyesi, organik yem bitkileri arasında yüksek protein içeriğiyle bilinir. Sığırlar, koyunlar ve keçiler için iyi bir yem kaynağıdır. Ancak organik soya fasulyesi yetiştirmek, genetik olarak değiştirilmemiş ve organik sertifikalı tohumlar gerektirir.

5.6. Kaba Yem: Kaba yem olarak kullanılacak doğal bitkiler arasında arpa, çavdar, yulaf, buğday, çayır otu, yabancı çiçekler ve yapraklı bitkiler yer alır. Bu bitkiler, hayvanların ihtiyaç duyduğu lif ve diğer besin maddelerini sağlar ve çiftliğin çevresel sürdürülebilirliğine katkıda bulunur.

5.7. Bezelye: Bezelye, protein, enerji ve mineraller bakımından zengin bir yem bitkisidir. Ayrıca, kuru dönemlerde yeşil yem kaynağı olarak kullanılabilir.

5.8. Yulaf: Yulaf, yüksek lif içeriği ile hayvanların sindirim sistemini destekleyen bir yem bitkisidir. Ayrıca, protein, enerji ve mineraller de içerir.

Organik yem bitkileri yetiştiriciliğinde, yukarıdaki bitkilerin yanı sıra, bölgenin iklim ve toprak koşullarına uygun başka bitkiler de kullanılabilir. Ayrıca, çiftlik sahipleri, yem bitkileri seçimi yaparken hayvanların ihtiyaçlarına ve sağlığına uygun seçenekleri tercih etmelidir.

6- Rotasyon ve Uygun Ekim

Organik yem bitkileri yetiştiriciliğinde rotasyon ve uygun ekim yöntemleri, toprak verimliliğini artırır, hastalık ve zararlıların kontrol altında tutulmasına yardımcı olur ve sürdürülebilir bir üretim sağlar (Erdal vd., 2019).

6.1. Bitki Rotasyonu: Bitki rotasyonu, aynı alanda farklı bitki türlerinin sırayla yetiştirilmesidir. Bu yöntem, hastalık ve zararlıların bir yıl boyunca tek bir bitki türünde birikmesini önler. Rotasyon, bitki türlerinin hastalıklara dayanıklılık yeteneklerine göre planlanmalıdır. Örneğin, yonca gibi azot fiksasyonu yapan bitkiler, azot sağladığı için diğer bitkilerin büyümesine yardımcı olur.

6.2. Yeşil Gübreleme: Yeşil gübre bitkileri, toprağın besin içeriğini artırmak, organik madde miktarını artırmak ve toprak yapısını iyileştirmek için yetiştirilen bitkilerdir (Akkeçeci ve Özkan, 2022). Bu bitkiler, genellikle hasat edilmeden önce toprağa döndürülerek veya çiftlik hayvanlarına yem olarak kullanılarak kullanılır. Yeşil gübre bitkileri arasında yonca, bakla, fiğ, hardal ve keçiyoynuzu bulunur.

6.3. Sırk Rotasyonu: Sırk rotasyonu, bitkilerin büyüme döneminde kullanılan destek yapıları (sırkalar) etrafında dönmesini içerir. Özellikle yüksek bitki türleri için kullanışlıdır. Bu yöntem, bitki yapısını düzenler, bitki hastalıklarının yayılmasını engeller ve bitkilerin daha iyi havalandırılmasını sağlar.

6.4. Doğru Ekim Mesafeleri: Organik yem bitkileri yetiştirirken, uygun ekim mesafelerini kullanmak önemlidir. Bitkilerin yeterli alanı ve hava sirkülasyonu olduğunda hastalıkların yayılma riski azalır. Ayrıca, bitkiler arasındaki mesafenin uygun olması, bitkilerin besin ve su kaynaklarını daha iyi kullanmasını sağlar.

6.5. Yabancı Ot Kontrolü: Organik yem bitkileri yetiştiriciliğinde yabancı ot kontrolü, bitkilerin büyümesini ve beslenmesini engelleyen yabancı otların kontrol altına alınmasını içerir. Yabancı otlar, bitkilerin besin ve su kaynaklarını tüketerek verim kaybına neden olur. Yabancı otların elle veya mekanik olarak çıkarılması, organik yabancı ot kontrolünün bir parçasıdır. Ayrıca, yabancı otlarla mücadele etmek için doğal ürünler de kullanılabilir. Örneğin, sirke, tuz ve sıcak su gibi doğal ürünler yabancı otları öldürmek için kullanılabilir.

6.6. Sulama Yöntemleri: Organik yem bitkileri yetiştiriciliğinde uygun sulama yöntemleri de önemlidir. Bitkilerin büyümesi için yeterli suya ihtiyacı vardır, ancak sulama aşırıya kaçarsa

bitkilerin büyümesini engelleyebilir. Damlama sulama, yağmurlama sulama veya basınçlı sulama gibi sulama yöntemleri, bitkilerin ihtiyaç duyduğu suyu verirken su tasarrufu yapmanıza yardımcı olabilir.

6.7. Toprak Düzeltme: Organik yem bitkileri yetiştirirken, toprağı düzeltmek ve iyileştirmek önemlidir. Toprak yapısını iyileştirmek için kompost, yeşil gübreleme, vermikompost, biochar ve diğer organik materyaller kullanılabilir. Toprak verimliliğini artırmanın yanı sıra, toprak düzeltme, hastalıkları önlemeye ve zararlıların yayılmasını engellemeye yardımcı olabilir.

Organik yem bitkileri yetiştiriciliğinde rotasyon, uygun ekim mesafeleri, doğru sulama yöntemleri, yabancı ot kontrolü ve toprak düzeltme gibi yöntemler, bitki verimliliğini artırmanıza ve sürdürülebilir bir üretim sağlamanıza yardımcı olur.

7- Sulama

Organik yem bitkileri yetiştiriciliğinde sulama, bitkilerin sağlıklı büyümesi için hayati önem taşır (Ünver, 2006). Ancak, doğru sulama yöntemi seçimi, sulama zamanlaması ve sulama miktarı önemlidir. Organik yem bitkileri için uygun sulama yöntemlerini belirlemede dikkate alınması gerekenler:

7.1. Toprak Tipi: Toprak tipi, uygun sulama yöntemi seçiminde önemli bir faktördür. Kumlu topraklar suyu hızlı bir şekilde emer ve kolayca drene ederken, killi topraklar suyu daha yavaş emer ve suya dayanıklıdır. Sulama yöntemi, toprak tipine göre belirlenmelidir.

7.2. İklim: İklim, sulama yöntemlerini belirlemede de önemlidir. Sıcak ve kuru iklimlerde bitkiler daha fazla suya ihtiyaç duyar ve sulama daha sık yapılmalıdır. Soğuk ve nemli iklimlerde ise, sulama miktarı ve sıklığı daha düşük olmalıdır.

7.3. Bitki Türü: Organik yem bitkileri, farklı su ihtiyaçlarına sahip olabilir. Bazı bitkiler daha az suya ihtiyaç duyarken, bazıları daha fazla suya ihtiyaç duyar. Sulama yöntemi, bitki türüne göre belirlenmelidir.

7.4. Toprak Nem İçeriği: Toprak nem içeriği, sulama zamanlaması için önemli bir faktördür. Toprak nemliyken sulama yapmak, bitkilerin çürümesine neden olabilir. Toprak kurduğunda sulama yapmak ise bitkilerin büyümesini engelleyebilir.

7.5. Sulama Yöntemi: Organik yem bitkileri için en yaygın sulama yöntemleri arasında damla sulama, yağmurlama sulama, basınçlı sulama ve sıra arası sulama bulunur. Hangi sulama yöntemi kullanılacağı, toprak tipine, bitki türüne ve iklim koşullarına göre belirlenmelidir.

Organik yem bitkileri yetiştiriciliğinde sulama, bitkilerin sağlıklı büyümesi için önemlidir. Sulama yöntemi, sulama zamanlaması ve sulama miktarı, toprak tipi, iklim ve bitki türü gibi faktörler göz önünde bulundurularak belirlenmelidir.

8- Hasat ve Depolama

Organik yem bitkileri yetiştiriciliğinde hasat ve depolama, bitkilerin kalitesini korumak ve besin değerini korumak için önemlidir (Sirat, 2016). Organik yem bitkilerinin hasat ve depolama sürecinde dikkat edilmesi gereken bazı faktörler (Sirat vd 2012; Sirat, 2016):

8.1 Hasat Zamanı: Organik yem bitkilerinin hasat zamanı, bitkinin türüne, olgunluğuna ve kullanım amaçlarına göre değişebilir. Hasat zamanı, bitkilerin en yüksek besin değerine sahip olduğu zamandır. Hasat zamanı, bitkinin yaşına, çiçeklenme ve meyve oluşumuna, renk ve aroma gibi faktörlere bağlıdır.

8.2. Hasat Yöntemi: Hasat yöntemi, bitkinin türüne ve kullanım amaçlarına göre belirlenmelidir. Bazı bitkiler, elle toplanırken, bazıları makinelerle hasat edilir. Hasat yöntemi, bitkinin kalitesini korumak için önemlidir.

8.3. Depolama Koşulları: Organik yem bitkilerinin depolanması, nem, sıcaklık ve ışık gibi faktörlere dikkat edilerek yapılmalıdır. Bitkilerin depolanacağı yer kuru, serin ve havalandırması iyi olmalıdır. Ayrıca, bitkilerin depolanması için kullanılan kaplar temiz ve hijyenik olmalıdır.

8.4. Depolama Süresi: Organik yem bitkilerinin depolama süresi, bitkinin türüne ve depolama koşullarına bağlıdır. Bazı bitkiler, uzun süre depolanabilirken, bazıları kısa süreli depolama için daha uygundur. Depolama süresi, bitkinin kalitesini korumak için önemlidir.

8.5. Hasat Sonrası İşleme: Organik yem bitkileri, hasat sonrası işleme tabi tutulabilir. Bazı bitkiler, kurutulurken, bazıları sıkılır veya doğranır. Hasat sonrası işleme yöntemi, bitkinin türüne ve kullanım amaçlarına göre belirlenmelidir.

Organik yem bitkilerinin hasat ve depolama sürecinde dikkat edilmesi gereken faktörler, bitkilerin kalitesini ve besin değerini korumak için önemlidir. Hasat zamanı, hasat yöntemi, depolama koşulları, depolama süresi ve hasat sonrası işleme yöntemi, bitkilerin kalitesini korumak için dikkate alınmalıdır.

SONUÇ

Organik yem bitkileri yetiştiriciliğinde, toprak analizi, gübreleme, zararlı kontrolü, doğal yem bitkileri seçimi, rotasyon ve uygun ekim, sulama, hasat ve depolama gibi temel prensiplere uyulması, sağlıklı ve verimli bir üretim için hayati öneme sahiptir. Bu prensipler, bitkilerin ihtiyaç duyduğu besin maddelerini belirlemekten, doğal kaynaklardan gübreleme yapmaya, zararlıları kontrol etmekten, uygun bitki seçimine ve hasat sürecine kadar çeşitli aşamalarda etkili bir şekilde uygulanmalıdır. Bu sayede organik yem bitkileri yetiştiriciliğinde sürdürülebilir bir başarı elde edilebilir.

SÜRDÜRÜLEBİLİR TARIM İÇİN SU AYAK İZİNİN ÖNEMİ THE IMPORTANCE OF WATER FOOTPRINT FOR SUSTAINABLE AGRICULTURE

Ezgi KURTULMUŞ

Dr. Öğretim Üyesi, Bursa Uludağ Üniversitesi Karacabey Meslek Yüksekokulu Organik Tarım Programı

ÖZET

Jeopolitik nedenlerle, su belirli ülkeler arasındaki bağlantılarda stratejik bir kaynak olarak kabul edilir. Dünyadaki tarımsal amaçlı su kullanımı, toplam sektörel su kullanımlarının yaklaşık %70'ini oluşturmaktadır. Sektörel su kullanım oranları, ülkelerin gelişmişlik düzeylerine göre değişiklik gösterir. Tatlı su bulunabilirliği dünya çapında endişe verici bir şekilde azalmakta ve tarım bu eğilimde hayati bir rol oynamaktadır. Artan nüfus, iklim değişikliği ve sınırlı su kaynakları, küresel ölçekte su kıtlığını şiddetlendirmektedir. Özellikle tarım sektörü, suyun en yoğun kullanıldığı alanlardan biri olarak bu durumdan olumsuz etkilenmektedir. Bu bağlamda, su ayak izi kavramı, tarımsal üretimin su kaynakları üzerindeki baskısını ölçmek ve sürdürülebilirlik hedeflerine ulaşmak için kritik bir araç haline gelmiştir. Su ayak izi, bir ürünün üretimi boyunca doğrudan ve dolaylı olarak tüketilen su miktarını ifade eder ve mavi (yeraltı ve yüzey suları), yeşil (yağmur suyu) ve gri (kirlilik nedeniyle arıtma gerektiren su) olmak üzere üç bileşenden oluşur. Türkiye gibi su kaynakları sınırlı olan ülkelerde, su ayak izini azaltmak için damla sulama sistemlerinin yaygınlaştırılması, su tasarruflu bitki çeşitlerinin tercih edilmesi ve su geri dönüşüm uygulamalarının desteklenmesi gibi stratejiler benimsenmelidir. Bu sayede hem su kaynakları korunacak hem de tarımsal üretimde verimlilik artırılacaktır. Tarımsal su ayak izinin değerlendirilmesi yalnızca yerel su kaynaklarının yönetimi ve korunmasında değil, aynı zamanda yerel su tüketimi ile küresel pazarlar arasındaki sinerjileri anlamamızda da bir temel oluşturmaktadır. Bu araştırma, tarımsal üretimde suyun etkin kullanımı için kritik bir gösterge olan su ayak izinin önemini vurgular. Özellikle basınçlı sulama sistemlerinin (damla ve yağmurlama sulama) yaygınlaştırılması, ürün seçimi ve ürün deseninin yerel iklim ve su kaynaklarıyla uyumlu hale getirilmesi gibi uygulamaların etkisi incelenmiştir. **Anahtar kelimeler:** Sürdürülebilir tarım, su ayak izi, iklim değişikliği.

ABSTRACT

For geopolitical reasons, water is considered a strategic resource in the connections between certain countries. Agricultural water use in the world accounts for approximately 70% of total sectoral water use. Sectoral water use rates vary according to the development levels of countries. Freshwater availability is decreasing alarmingly worldwide, and agriculture plays a vital role in this trend. Increasing population, climate change, and limited water resources are exacerbating water scarcity on a global scale. The agricultural sector, in particular, is negatively affected by this situation as one of the areas where water is used most intensively. In this context, the concept of water footprint has become a critical tool for measuring the pressure of agricultural production on water resources and achieving sustainability goals. The water footprint refers to the amount of water consumed directly and indirectly during the production of a product and consists of three components: blue (groundwater and surface water), green (rainwater), and gray (water that requires treatment due to pollution). In countries with limited water resources, such as Turkey, strategies such as expanding drip irrigation systems, preferring water-saving plant varieties, and supporting water recycling practices should be adopted to

reduce the water footprint. In this way, both water resources will be protected and efficiency in agricultural production will be increased. The assessment of agricultural water footprint is not only a basis for the management and protection of local water resources, but also for understanding the synergies between local water consumption and global markets. This research emphasizes the importance of water footprint, which is a critical indicator for the efficient use of water in agricultural production. In particular, the effects of practices such as the expansion of pressurized irrigation systems (drip and sprinkler irrigation), product selection and adaptation of crop pattern to local climate and water resources were examined.

Keywords: Sustainable agriculture, water footprint, climate change.

Giriş

Su, günümüzde sadece hayati bir kaynak olmakla kalmayıp, aynı zamanda uluslararası ilişkilerde de stratejik bir öneme sahiptir. Özellikle tarım, dünya genelindeki toplam su kullanımının yaklaşık %70'ini oluşturmaktadır. Ancak artan nüfus, iklim değişikliği ve sınırlı su kaynakları, küresel ölçekte su kıtlığını şiddetlendirmektedir. Bu durum, özellikle suyun en yoğun kullanıldığı sektör olan tarımı olumsuz etkilemektedir. Su ayak izi kavramı, bir ürünün üretimi boyunca kullanılan su miktarını ölçerek, tarımın su kaynakları üzerindeki baskısını ortaya koyar. Bu kavram, mavi (yeraltı ve yüzey suları), yeşil (yağmur suyu) ve gri (kirlilik nedeniyle arıtılması gereken su) olmak üzere üç bileşenden oluşur (Hoekstra ve Chapagain 2008).

Türkiye gibi su kaynakları sınırlı olan ülkelerde, su ayak izini azaltmak için damla sulama, su tasarruflu bitki çeşitleri ve su geri dönüşümü gibi yöntemler hayati önem taşımaktadır. Bu sayede hem su kaynakları korunacak hem de tarımsal verimlilik artacaktır. Su ayak izi değerlendirmesi, yalnızca yerel su yönetimi için değil, aynı zamanda küresel ticaretteki su ayak izinin anlaşılması için de önemli bir araçtır.

D'Ambrosio ve ark. (2018), tarımda su ayak izi (WF) analizini ve akarsu izleme faaliyetlerini kullanarak tarımsal sürdürülebilirliği değerlendirdi. Çalışma, İtalya'nın güneyindeki Celone Nehri havzasına odaklandı. 2010-2011 döneminde yapılan analizler, toplam su ayak izinin %30,3'ünün yeşil su, %0,5'inin mavi su ve %69,2'sinin gri sudan oluştuğunu gösterdi. Özellikle gri su (kirlilik yükünün seyreltilmesi için gerekli su) miktarının, azot kirliliği gibi faktörlerden etkilenerek yüksek belirsizlik içerdiği saptandı. Çalışma, yeşil su kullanımının sürdürülebilir olduğunu, ancak mavi suyun mevsime bağlı olarak değişen bir sürdürülebilirlik gösterdiğini ve gri su kullanımının nehir ekosistemleri üzerinde sürdürülemez bir kirlilik yükü oluşturduğunu ortaya koydu. Elde edilen sonuçlar, tarımsal faaliyetlerin planlanmasında ve havza yönetiminde kullanılabilir.

Novoa ve arkadaşları 2023 yılında yaptıkları bir çalışmada, Şili'nin orta ve güney bölgelerindeki dört tarımsal havzada (Cachapoal, Longaví, Ñuble ve Mulchén nehir havzaları) tarımsal su ayak izi (WF) ve sanal su akışlarını (VWF) kapsamlı bir şekilde incelemişlerdir. Çalışmada, 2017-2018 yılları arasında 21 temel tarım ürünü için yeşil (WFgreen), mavi (WFblue) ve gri (WFgray) su ayak izleri hesaplanmıştır. Ürün grupları arasında meyveler (üzüm, kiraz, elma gibi), baklagiller (fasulye, mercimek), tahıllar (buğday, mısır) ve sebzeler (domates, kabak) yer almıştır. Sonuçlara göre, yeşil su ayak izi (WFgreen), güney bölgelerde daha yüksek olurken (Ñuble ve Mulchén havzaları), mavi su ayak izi (WFblue) ve gri su ayak izi (WFgray) orta bölgedeki havzalarda (Cachapoal ve Longaví) yoğunlaşmıştır. Gri su, analiz edilen toplam su ayak izinin %40'ını oluşturmuş ve bu durum, gübre kullanımı ve azot kirliliği gibi tarımsal uygulamalardan kaynaklanmıştır. Aynı dönemde, sanal su akışlarının %44 oranında artarak 2018 yılında 460,619 Mm³'e ulaştığı belirlenmiştir. Araştırmada, ihracat odaklı tarımın özellikle kiraz, üzüm ve elma gibi ürünler için su kaynakları üzerindeki etkisi detaylandırılmıştır. Sanal su akışlarının en büyük ithalatçıları Asya, Avrupa ve Kuzey Amerika

olarak sıralanmıştır. Özellikle 2018 yılında Asya'ya yapılan ihracat, sanal su akışında %138'lik bir artışla öne çıkmıştır. Çalışma, Şili'deki tarımsal su kullanımının sürdürülebilirliği ile ilgili önemli bulgular sunarak, iklim değişikliği etkilerine ve artan su talebine karşı daha verimli su yönetimi politikalarının geliştirilmesi gerektiğini vurgulamıştır. Bölgesel analizler, tarım sektöründe yeşil suyun daha fazla kullanılması ve gri su kirliliğinin azaltılması gerektiğini göstermektedir.

Lahlou ve Al-Ansari 2024 yılında yaptıkları çalışmada, Katar'daki tarımsal su kullanımını optimize ederek su kaynaklarının sürdürülebilirliğini artırmayı hedeflemişlerdir. Çalışmada, beş yıllık bir süre boyunca su stresi (WS) ve karbon ayak izi (CF) analiz edilmiştir. Yeraltı suyu, deniz suyundan arıtılmış su ve arıtılmış atık su (TSE) kaynaklarını içeren su bütçesi, süt, yumurta, kırmızı et ve tavuk üretimi ile açık ve kapalı tarımı kapsayan tarımsal faaliyetlerde kullanılmıştır. Çalışma, üç farklı WS senaryosu incelemiştir: yeraltı suyu kullanımının tamamen yasaklandığı (WS=0%), güvenli global ortalama su stresi seviyesi altında bir limitin uygulandığı (WS=25%) ve karbon ayak izi ile su stresi arasında bir denge sağlayan (WS=Comb) senaryolar. Sonuçlar, WS=Comb senaryosunun yıllık ortalama %9.6'lık su stresi seviyesiyle en düşük karbon ayak izine sahip olduğunu ve karbon emisyonlarını baz senaryoya kıyasla %20 oranında azalttığını göstermiştir. Ayrıca, bu senaryoda tuzlu su salınımı %16 oranında düşerken gri su kirliliği de önemli ölçüde azalmıştır. Özellikle TSE'nin artan kullanımı, yeraltı suyu kullanımına kıyasla gri su ayak izini ve su kirliliğini azaltmada etkili olmuştur. Bu bulgular, su kıtlığı yaşayan Katar gibi ülkelerde sürdürülebilir su yönetimi için çoklu dönemli optimizasyon yaklaşımlarının önemini ortaya koymaktadır.

Bu araştırma, tarımsal üretimde suyun etkin kullanımı için kritik bir gösterge olan su ayak izinin önemini vurgular. Özellikle basınçlı sulama sistemlerinin (damla ve yağmurlama sulama) yaygınlaştırılması, ürün seçimi ve ürün deseninin yerel iklim ve su kaynaklarıyla uyumlu hale getirilmesi gibi uygulamaların etkisi incelenmiştir.

Sürdürülebilir Tarım

Sürekli olarak büyüyen bir dünya nüfusuna yiyecek ve diğer kaynakları sağlayabilen bir tarım, insan varlığı ve dolayısıyla herhangi bir insan faaliyeti için hayati öneme sahiptir. Ancak, tarımın insan ihtiyaçlarını şimdi ve gelecekte karşılama yeteneğini tehdit eden çok sayıda sorun vardır; bunlar arasında iklim değişikliği; yüksek oranda biyolojik çeşitlilik kaybı; toprak erozyonu, sıkışma, tuzlanma ve kirlilik yoluyla arazi bozulması; su kaynaklarının tükenmesi ve kirlenmesi; artan üretim maliyetleri; giderek azalan çiftlik sayısı ve bununla bağlantılı olarak yoksulluk ve kırsal nüfusun azalması (Thrupp 2000). Tarım yalnızca bu sorunlarla yüzleşmekle kalmaz, aynı zamanda son on yıllarda uygulandığı biçimiyle tüm bu sorunların başlıca nedenidir (Velten ve ark 2015).

Sürdürülebilir tarım, "uzun vadede şunları sağlayacak: (a) insanların gıda ve lif ihtiyaçlarını karşılamak; (b) çevre kalitesini artırmak; (c) yenilenemeyen kaynakları ve çiftlik içi kaynakları verimli bir şekilde kullanmak ve uygun doğal biyolojik döngüleri ve kontrolleri entegre etmek; (d) çiftlik operasyonlarının ekonomik sürdürülebilirliğini sürdürmek; ve (e) çiftçilerin ve toplumun bir bütün olarak yaşam kalitesini artırmak." ABD Çiftlik Yasası 1990.

MacRae ve arkadaşları 1989 yılında Sürdürülebilir Tarımı, "tüm kaynakları korumak, atıkları ve çevresel etkiyi en aza indirmek, sorunları önlemek ve tarımsal ekosistemin dayanıklılığını, kendi kendini düzenlemesini, evrimini ve herkesin beslenmesi ve tatmini için sürdürülebilir üretimi teşvik etmek amacıyla doğal süreçlerle çalışan yönetim prosedürlerini" içerir diye tanımlamışlardır.

Su Ayak İzi

WFA alanı dört temel düşünceye dayanmaktadır. Birincisi, tatlı suyun küresel bir kaynak olduğu fikridir (Hoekstra ve Chapagain 2011), çünkü bir yerdeki insanlar VWT aracılığıyla başka yerlerdeki tatlı su kaynaklarını dolaylı olarak kullanabilir ve kullanır (Allan 2001) ve çünkü yerel su tahsisleri ve sürdürülemez su tüketim kalıpları giderek sürdürülebilir su

kullanımı için teşviklerden yoksun küresel ekonomi tarafından yönlendirilmektedir (Hoekstra 2013). İkinci fikir, tatlı su yenileme oranlarının sınırlı olduğudur, bu nedenle tüketim, üretim ve ticaret kalıplarının gelişimini bu sınırlamalarla ilişkili olarak incelememiz gerekir. Daha geniş anlamda, ekonomilerin çevresel sürdürülebilirliğini analiz ederken, insan tüketiminin gezegensel sınırlarla ilişkili 'ayak izini' incelemek gerekir. WF konseptini oluştururken, Wackernagel ve Rees (1998) tarafından geliştirilen 'ekolojik ayak izinden' ilham aldım. Üçüncü fikir, doğal kaynak kullanımını ve tüketimin etkilerini anlamak için tedarik zincirleri ve ürün yaşam döngüleri açısından düşünmemiz gerektiğidir. Dördüncü fikir, tatlı su kullanımı ve kıtlığına yönelik kapsamlı bir yaklaşımda hem yeşil hem de mavi su tüketimini (Falkenmark 2000) ve su kirliliğini (Postel vd. 1996) dikkate almamız gerektiğidir. WFA alanı bu nedenle temelde disiplinler arası ve bütünlendiricidir ve hem 'çevre bilimleri' hem de 'su kaynakları' dergilerinde yayınlanan makaleler vardır. Geniş anlamda, WFA çevresel düşünceyi (ayak izi ve tedarik zinciri düşüncesi) su kaynakları topluluğuna ve su kaynakları düşüncesini (su tahsisi, su verimliliği, su kıtlığı) çevre bilimleri topluluğuna getirerek iki disiplinler arası topluluğu birbirine bağlar (Hoekstra 2017).

Türkiye'de üretimin su ayak izi yaklaşık 139,6 milyar m³/yıl'dır. Türkiye'de üretimden kaynaklanan su ayak izinin %64'ü yeşil su ayak izidir; mavi su ayak izi %19 ve gri su ayak izi %17'dir. Türkiye'de su kaynaklarının en büyük tüketicisi olan tarım sektörü, ülkemizin toplam su ayak izinin yaklaşık %89'unu oluşturmaktadır. Bunun yanında %7'sini evsel kullanım ve %4'ünü sanayi oluşturur. Tarımın su ayak izinin ise %92'si bitkisel üretimden, %8'i otlamadan kaynaklanır. Özellikle tahıllar, tarımsal su tüketiminin yaklaşık %38'ini oluşturarak en büyük paya sahiptir ve bunu %31 ile yem bitkileri izler. Endüstri meyveler %13, yağ bitkileri %5, sebzeler ve baklagiller %2'sini oluşturur (Şekil 1) (WWF-Türkiye, 2014).

Şekil 1. Su ayak izinin sektörlere göre dağılımı (WWF 2014)

Her ülkenin her tarım ürünü için su ayak izi farklıdır. Çizelge 1'de bazı tarım ürünlerinin su ayak izleri (ortalama dünya değerleri) görülmektedir.

Ürün çeşidi	Birim (kg)	Global ortalama su ayak izi (Litre)
Elma/Armut	1	700
Muz	1	860
Sığır eti	1	15500
Ekmek (buğdaydan)	1	1300
Lahana	1	200
Peynir	1	5000
Tavuk	1	3900
Çikolata	1	24000
Salatalık/Balkabağı	1	240
Hurma	1	3000
Yerfıstığı (kabuklu)	1	3100
Marul	1	130
Mısır	1	900
Mango	1	1600
Zeytin	1	4400
Portakal	1	460
Şeftali/Nektarin	1	1200
Domuz eti	1	4800
Patates	1	250
Pirinç	1	3400
Şeker (şeker kamışından)	1	1500
Domates	1	180

Çizelge1. Bazı ürünlerinin su ayak izleri (ortalama dünya değerleri) (Hoekstra 2008)

Tarımda Su Ayak İzini Azaltma Yolları

Tarımsal üretimde su ayak izinin azaltılması, tatlı su için artan rekabet göz önüne alındığında son derece önemlidir. Etkin sulama yöntemlerinin kullanılması, yağmur suyu hasadı, toprak yönetimi, bitki seçimi tarımda su ayak izini azaltma yollarından bazılarıdır. Yağmurlama sulama etkin sulama yöntemleri arasında yer alsa da su ayak izi en fazla olan yöntem olarak bulunmuştur. Bunu karık, damla ve yüzey altı damla sulama takip eder. Karık sulama, klasik

"sulama etkinliđi" ölçüsü karık için daha düşük olmasına rağmen, yağmurlama sulamaya kıyasla daha küçük bir tüketim su ayak izine sahiptir (Chukalla ve ark. 2015).

Malçlama, aksi takdirde buharlaşma yoluyla nemini kaybeden toprak yüzeyini örtme yöntemidir. Çeşitli çalışmalar, ürün üretiminde birim verim başına ET'yi azaltmak için malçlamanın önemini göstermektedir (Ogban ve ark, 2008; Zhao ve ark, 2003; Zhou ve ark, 2011; Mao ve ark, 2012; Jalota ve Prihar, 1998).

Chukalla ve arkadaşları 2015 yılında yaptıkları bir çalışmada sulama tekniđi, sulama stratejisi ve malçlama uygulaması gibi yönetim uygulamalarını deđiştirerek bir ürünün tarla düzeyinde su ayak izinin azalma potansiyelini araştırmışlardır. Sulama tekniđi ve stratejisi ile malçlama uygulamasının çeşitli kombinasyonlarının etkileri, malçlama olmadan karık ve tam sulama referansı ile karşılaştırılmıştır. Araştırmada, damla ve yeraltı damla sulamanın yüzey buharlaşmasını azaltarak toplam su ayak izini %8-10 oranında düşürdüđü, sentetik malç ile bu oranın %28'e kadar yükseldiđi bulmuşlardır. Tam sulamadan eksik sulamaya geçtiklerinde su tüketimini azalırken ürün verimindeki kayıpları minimum düzeyde tutarak su verimliliđini artırdığını tespit etmişlerdir. Sulama teknikleri arasında yeraltı damla sulamanın en düşük su tüketimine sahip olduđu, yağmurlama sulamanın ise en yüksek su tüketimine neden olduđu gösterilmiştir. Ayrıca, malçlama uygulamalarının toprak yüzeyindeki buharlaşmayı azaltarak önemli ölçüde su tasarrufu sağladığı belirtilmiştir. Bu çalışma, hem yeşil hem de mavi su kaynaklarının etkin yönetimiyle sürdürülebilir tarımsal üretimin mümkün olduđunu ortaya koymaktadır.

Huang ve arkadaşları (2015), Pekin gibi su kıtlığı çeken bölgelerde tarımsal su yönetimini optimize etmeye yönelik bir çalışma gerçekleştirmiştir. Çalışmada, buğday-mısır rotasyon sisteminde farklı sulama ve gübreleme stratejilerinin ürün verimi, su tüketimi ve su kirliliđi üzerindeki etkileri değerlendirilmiştir. ISO 14046 su ayak izi standardını kullanarak yapılan analizde, sulama suyu miktarının %33,3 azaltılmasının ürün veriminde kayda değer bir düşüğe yol açmadan su kıtlığı ayak izini %27,5, besin kirliliđi ayak izini ise %23,9 oranında azalttığı tespit edilmiştir. Ayrıca, azot uygulamasının %33,3 azaltılması, ürün veriminde anlamlı bir deđişiklik yaratmaksızın besin kirliliđi ayak izini %52,3 oranında azaltmıştır. Sonuçlar, tarımsal faaliyetlerde su ve gübre yönetiminin iyileştirilmesinin yalnızca su tüketimini deđil, aynı zamanda su ekosistem sağlığını korumada da etkili olduđunu göstermektedir. Bu bulgular, Pekin gibi su stresi yaşıyan bölgelerde sürdürülebilir tarım uygulamaları için hem politika geliştirme hem de pratik tarım yönetimi açısından önemli katkılar sunmaktadır.

Sonuç

Küresel ısınma ve artan nüfusla birlikte su kıtlığı sorunu daha da şiddetlenecektir. Bu nedenle, su ayak izi kavramı gelecekte daha da önemli hale gelecektir. Ülkeler, şirketler ve bireyler, su kaynaklarını daha etkin kullanmak ve sürdürülebilir bir gelecek için bu kavramı dikkate almak zorunda kalacaklardır.

Sonuç olarak, su ayak izi kavramı, su kaynaklarının sürdürülebilir kullanımı için kritik bir araçtır. Hem bireysel hem de toplumsal düzeyde atılacak adımlarla su ayak izini azaltmak mümkün ve gereklidir.

PİRİNÇ TARIMINDA DRENAJ DRAINAGE IN RICE FARMING

Ezgi KURTULMUŞ

Dr. Öğretim Üyesi, Bursa Uludağ Üniversitesi Karacabey Meslek Yüksekokulu Organik Tarım Programı

ÖZET

Pirinç Dünya’da ve Türkiye’de yetiştirilen milyarlarca insanın temel gıda maddesi olarak kullandığı en önemli stratejik tahıllardan biridir. Özellikle tropikal ve yarı tropikal bölgelerde yetiştirilen pirinç, suya doymuş toprak koşullarında yüksek adaptasyon kabiliyetiyle diğer tahıllardan ayrılmaktadır. Neredeyse tüm diğer önemli bitkilerden farklıdır, çünkü yerin üzerinde büyüyen kısımlardan kökleri havalandırmak için iyi gelişmiş bir iç iletim sistemine sahiptir; bu sistem, pirincin suya doymuş anaerobik koşullar altında iyi bir şekilde büyümesine olanak tanır. Fakat bu özelliğine karşın pirinç üretiminin sürdürülebilirliği için etkili su yönetimi önemli bir gerekliliktir ve bu bağlamda drenaj, pirinç tarımının temel unsurlarından biri olarak öne çıkar. Drenaj, pirinç tarlalarındaki aşırı suyu kontrol altında tutarak bitkilerin büyümesi için uygun koşullar sağlar. Özellikle suyun uzun süre tarlada birikmesi, kök çürümesi ve oksijen yetersizliği gibi sorunlara neden olabilir. Bu durum bitki gelişimini olumsuz etkilerken, tarımsal üretimi ciddi anlamda azaltabilir. Aynı zamanda, uygun drenaj sistemleri, topraktaki tuz birikimini önleyerek toprak verimliliğinin korunmasına yardımcı olur. Pirinç tarımında drenajın etkin bir şekilde yönetilmesi, hem ürün kalitesini artırmakta hem de çevresel riskleri minimize etmektedir. Bu çalışmada, pirinç tarımında drenaj uygulamalarının önemi genel hatlarıyla ele alınmaktadır. Yüze ve yüzeyaltı drenaj sistemlerinin farklı tarım ekolojilerinde nasıl kullanıldığı, su yönetimine sağladığı katkılar ve drenaj stratejilerinin tarımsal sürdürülebilirlikteki rolü tartışılmıştır. Drenajın yalnızca tarımsal üretim açısından değil, aynı zamanda çevresel etkiler açısından da kritik olduğu vurgulanmıştır.

Anahtar kelimeler: Pirinç tarımı, sulama, drenaj

ABSTRACT

Rice is one of the most important strategic grains grown in the world and in Turkey, and used as a staple food by billions of people. Rice, which is grown especially in tropical and semi-tropical regions, is distinguished from other grains by its high adaptability to waterlogged soil conditions. It differs from almost all other important plants because it has a well-developed internal conduction system to ventilate the roots from the parts growing above the ground; this system allows rice to grow well under waterlogged anaerobic conditions. However, despite this feature, effective water management is a critical requirement for the sustainability of rice production. In this context, drainage stands out as one of the basic elements of rice farming. Drainage provides suitable conditions for plant growth by keeping excess water in rice fields under control. In particular, long-term accumulation of water in the field can cause problems such as root rot and oxygen deficiency. This situation negatively affects plant development and can seriously reduce agricultural production. At the same time, appropriate drainage systems help preserve soil fertility by preventing salt accumulation in the soil. Effective management of drainage in rice farming both increases product quality and minimizes environmental risks.

This study examines the importance of drainage practices in rice farming in general terms. How surface and subsurface drainage systems are used in different agricultural ecologies, their

contributions to water management, and the role of drainage strategies in agricultural sustainability are discussed. It is emphasized that drainage is critical not only in terms of agricultural production but also in terms of environmental impacts.

Keywords: Rice farming, irrigation, drainage

Giriş

Pirinç, özellikle yarı tropikal ve tropikal bölgelerde temel besin kaynağı olarak tüketilen bir tahıldır. Diğer bitkilerden farklı olarak, sulak alanlarda yetişmeye uyum sağlamış özel bir yapıya sahiptir. Köklerinin havayı almasını sağlayan gelişmiş bir iç dokusu sayesinde, su altında kalabilecek durumlarda bile yaşamını sürdürebilir. Bu nedenle pirinç, su seviyesinin yüksek olduğu ovalar gibi alanlarda sıklıkla yetiştirilir. Yağışlı mevsimlerde doğal olarak suyla kaplanan bu ovalar, pirinç tarımı için ideal ortamları oluşturur. Ancak tüm ovalar pirinç yetiştirmeye uygun değildir. Daha yüksek veya daha alçak bölgelerde, suyun derinliğine ve toprağın özelliklerine göre farklı pirinç çeşitleri yetiştirilebilir. Örneğin, yüksek yerlerde yetişen pirinç çeşitleri veya suyun çok derin olduğu bölgelerde yetişen yüzen pirinç çeşitleri bulunmaktadır. Pirinç, köklerin havalanmasını yukarıda büyüyen kısımlardan sağlayan iyi gelişmiş bir iç iletim sistemi sayesinde, su altında büyümeye uyum sağlamış, önemli tarım ürünleri arasında benzersiz bir yere sahiptir. Bu özelliği, pirincin yarı tropik ve tropik bölgelerde verimli bir şekilde yetişmesini mümkün kılar. Su dolu pirinç tarlaları, sadece istenen suya doymuş büyüme koşullarını sağlamakla kalmaz, aynı zamanda yabancı ot kontrolüne de yardımcı olur. Modern pirinç tarımı için su derinliği genellikle 5–10 cm arasında tutulur; bu, hem üretkenlik hem de kaynak verimliliği açısından optimum seviyedir. Geleneksel pirinç yetiştiriciliği esas olarak durgun suya dayanırken, drenaj sistemlerindeki gelişmeler, daha çeşitli ekim sistemlerine olanak sağlamıştır. Örneğin, mol drenaj sistemleri, Güney Çin gibi bazı bölgelerde gelişmiş pirinç tarımında sınırlı bir ölçekte kullanılmaktadır. 0,4–0,5 m derinlik ve 3–5 m aralıklarla kurulan bu sistemler, genellikle bambu borularla desteklenir. Bu teknoloji, pirinç-buğday rotasyonlarına olanak tanıyarak ekim yoğunluğunu artırmış ve sürekli pirinç ekiminin getirdiği sınırlamaları azaltmıştır. Ayrıca, pirinç arazilerinin yaklaşık %20–25'i, genellikle hükümet destekli arazi toplulaştırma programları çerçevesinde uygulanan borulu drenaj sistemlerinden faydalanmaktadır (Vlotman ve ark., 2020).

Bu yenilikler, sadece su yönetimini iyileştirmekle kalmaz, aynı zamanda çeşitlendirilmiş ekim sistemleri ve daha yüksek arazi kullanım verimliliği sağlayarak sürdürülebilir tarımsal uygulamalara katkıda bulunur.

Jung ve arkadaşları (2010), eğimli alüvyal pirinç tarlalarında açık hendek, vinil bariyerli açık hendek, yüzey altı drenaj (kum ve çakıl ile doldurulmuş hendek içindeki borular) ve boru demeti (borular kullanılarak yapılan yüzey altı drenaj) dahil olmak üzere dört farklı drenaj sisteminin performansını değerlendirmişlerdir. Araştırma sonuçları, yüzey altı drenaj sisteminin 15 gün boyunca en yüksek deşarj oranına sahip olduğunu göstermiştir. Ayrıca, yüzey altı drenaj sistemlerinin ürün verimini ve toprakların ekonomik üretkenliğini artırabileceği ifade edilmiştir.

Shao ve arkadaşları (2014), pirinç tarımında kontrollü sulama ve drenaj (CID) yöntemlerinin büyüme, tane verimi ve su kullanımı üzerindeki etkilerini incelemek amacıyla bir çalışma gerçekleştirmiştir. Araştırma, geleneksel sürekli su altı sulama yöntemine kıyasla, CID'nin su tasarrufu ve verim üzerindeki potansiyel faydalarını değerlendirmek üzere Güney Çin'de özel olarak tasarlanmış deney tanklarında yapılmıştır. Çalışmada, pirincin dört farklı büyüme evresinde uygulanan CID'nin etkileri analiz edilmiş ve bu yöntemle drenaj hacimlerinin %13–28 oranında azaldığı, yağmur suyu kullanım verimliliğinin ise %2–3 oranında arttığı tespit edilmiştir. Ayrıca, özellikle "çiçeklenme öncesi aşama (CID-Stage II)" sırasında uygulanan kontrollü drenajın, tane verimini önemli ölçüde artırdığı ve su kullanım verimliliğinde iyileşme

sağladığı görülmüştür. Araştırmanın temel amacı, pirinç tarımında su tasarrufu sağlayarak sürdürülebilir üretimi destekleyecek yenilikçi sulama ve drenaj yöntemlerinin etkinliğini ortaya koymaktır.

Darzi-Naftchali ve arkadaşları (2013), Kuzey İran'daki zayıf drenajlı çeltik tarlalarında farklı yer altı drenaj sistemlerinin su dengesi ve su tablası üzerindeki etkilerini inceleyen bir pilot çalışma gerçekleştirmiştir. Araştırma, Mazandaran bölgesindeki 4,5 hektarlık bir alanda, pirinç ve kanola olmak üzere iki ardışık ekim sezonunda yürütülmüştür. Çalışmada üç geleneksel yer altı drenaj sistemi (0.9 m derinlik - 30 m aralık, 0.65 m derinlik - 30 m aralık, ve 0.65 m derinlik - 15 m aralık), bir iki seviyeli drenaj sistemi (15 m aralıklarla alternatif 0.65 m ve 0.9 m derinlik) ve yüzey drenaj sistemi (kontrol) karşılaştırılmıştır. Sonuçlar, yüzey drenajına kıyasla yer altı drenajının su tablasını daha etkili bir şekilde kontrol ettiğini ve su dengesini iyileştirdiğini göstermiştir. Özellikle, 0.65 m derinlikteki drenaj sistemlerinin fazla suyu daha hızlı uzaklaştırdığı ve kök bölgesi havalanmasını artırarak toprak verimliliğini desteklediği gözlemlenmiştir. Çalışmanın temel amacı, drenaj tasarımlarının zayıf drenajlı tarım alanlarında su yönetimi üzerindeki etkilerini değerlendirmek ve sürdürülebilir ekim için uygun stratejiler geliştirmektir.

Rahimi ve arkadaşları, 2024 yılında yaptıkları bir araştırmada, farklı drenaj sistemlerinin performansını incelemiş ve özellikle hendek tipi drenaj sisteminin, yüzey ve yüzey altı drenaj sistemlerine kıyasla daha etkili olduğunu tespit etmişlerdir. Çalışmada, hendek tipi drenaj sisteminin toprağın üst katmanındaki nem daha hızlı azaltarak, drenaj alanından uzakta bile daha iyi performans gösterdiği belirtilmiştir. Ancak, bu sistemlerin sert tabaka (hardpan) gibi düşük hidrolik iletkenliğe sahip katmanlardaki nem seviyesini azaltmada etkisinin sınırlı olduğu saptanmıştır. Ayrıca, hendek tipi drenajın su tablasını daha hızlı düşürdüğü ve yüzey drenajına göre daha geniş çatlak alanları oluşturduğu ifade edilmiştir. Araştırmanın sonuçları, drenaj sistemlerinin özellikle pirinç tarlalarında ikinci ürün ekimi için toprak nemini kontrol etmede önemli bir rol oynadığını ve ekonomik verimliliği artırabileceğini ortaya koymuştur.

Bu çalışmada, pirinç tarımında drenaj uygulamalarının önemi genel hatlarıyla ele alınmaktadır. Yüzey ve yüzeyaltı drenaj sistemlerinin farklı tarım ekolojilerinde nasıl kullanıldığı, su yönetimine sağladığı katkılar ve drenaj stratejilerinin tarımsal sürdürülebilirlikteki rolü tartışılmıştır. Drenajın yalnızca tarımsal üretim açısından değil, aynı zamanda çevresel etkiler açısından da kritik olduğu vurgulanmıştır.

Yüzey Drenajı

Gelişmekte olan ülkelerde pirinç üretimi genellikle küçük, düzensiz parçalara ayrılmış tarlalarda gerçekleştirilir (Şekil 1). Bu tarlalar, küçük seddelerle bölünerek küçük sulama havzaları oluşturulur. Sulama, daha yüksek seviyedeki kanallardan sağlanırken, drenaj ise daha alçak seviyedeki kanallara doğru gerçekleşir. Bu geleneksel tarım yöntemi, genellikle küçük çiftçi yapısı ve sınırlı sulama olanakları nedeniyle tercih edilir. Bu sistem, pirincin su ihtiyacını karşılamakla birlikte, toprak yapısının korunması ve suyun verimli kullanımı açısından da önemlidir. Ancak, aşırı sulama ve kimyasal gübre kullanımı gibi faktörler, çevre üzerinde olumsuz etkiler yaratabilir.

Şekil 1. Güneydoğu Asya'da ıslak pirinç tarımı için tipik ova alanı parsel planı (Vlotman ve ark., 2020).

Yüzeyaltı Drenajı

Çin, Japonya ve Kore'deki bazı gelişmiş pirinç yetiştirme alanlarında yüzeyaltı drenajı uygulanmaktadır, ancak küresel uygulaması hala çok sınırlıdır (dünya pirinç alanının < % 0,1'i). Pirincin kuru dip bitkileri ile dönüşümlü olarak yetiştirildiği Mısır'da, yüzeyaltı drenajına, arazileri kurutma eğiliminde olduğu için çiftçiler bile şiddetle direnmektedir. Aslında, çoğu pirinç çiftçisi, toprakta su birikintisi uygulayarak, toprak profilinde aşağı doğru akışı teşvik etmek yerine sınırlamayı amaçlar. Henüz, yüzeyaltı drenajı uygulaması, esas olarak yoğun, yüksek girdili mekanize pirinç tarımı yapılan alanlarla sınırlıdır. Bu koşullar altında, gelişmiş kök havalandırması, toksik maddelerin yıkanması ve mekanik işlemlere yönelik alanların erken kurutulması için toprak profilinde yeterli aşağı doğru akış sağlamak için yüzeyaltı drenajı gerekebilir. Pirinç tarlalarında yüzeyaltı drenajının sağlanması, geleneksel pirinç alanlarında sıklıkla arzu edilen ürün çeşitlendirmesini de kolaylaştırır (Ogino ve ark. 2007; Vlotman ve ark.,2000).

Japonya'da en yaygın olarak uygulanan yüzeyaltı drenaj teknolojisi borulu drenaj teknolojisidir. Ülkedeki çeltik arazisinin yaklaşık %20-25'i, neredeyse tamamı devlet tarafından sübvansede edilen arazi toplulaştırma ve ürün çeşitlendirme programları çerçevesinde kurulmuş olan borularla drene edilmiştir. Uygulanan teknoloji başlangıçta çoğunlukla Batı Avrupa ve Kuzey Amerika'nın geleneksel borulu drenajlı ülkelerinden uyarlanmıştır, ancak zamanla ulusal

standartlar geliştirilmiştir (Ogino ve Murashima, 1993; Vlotman ve ark., 2020). Tesis derinlikleri genellikle 50–70 cm ve aralıklar 7–15 m arasındadır. Borular plastikten yapılmıştır ve uygun şekilde uyarlanmış küçük trençerler tarafından tesis edilir. Zarf malzemesi olarak çakıl ve pirinç kabuğu da kullanılmaktadır. Çoğu sistem, lateral uzunlukları 70 ile 150 m arasında olan birleşik tipteyken, çıkış yerçekimi ile gerçekleşir.

Borulu sistemler genellikle kontrollü drenaj için çalışacak şekilde tasarlanmıştır. Lateral bağlantı kutularındaki ve/veya kolektör çıkış kutularındaki vanalar sayesinde drenaj akışı (boşaltım kutularından sisteme giren yüzey suyu) açılıp kapatılabilir. Tasarım boşaltımları genellikle 20-30 mm/gün mertebesindedir. Sistemler ayrıca arazilerin sezon ortası ve son kuruma için su katmanının kaldırılmasından sonra tarlaları kurutacak şekilde tasarlanmıştır. Sistemler ayrıca pirinç bitkisi ile dönüşümlü olarak yetiştirilen yüksek arazi ürünleri (fasulye, buğday) için düzenli sutablası kontrolü sağlar (Murashima ve Ogino 1992).

Ürün çeşitlendirme

Nemli tropik bölgelerde, özellikle Güneydoğu Asya'da, geleneksel pirinç yetiştiren birçok ülkede, ürün çeşitlendirme programları devam etmektedir. Bu programların genel amacı, daha kuru dipli/yüksek arazi bitkilerinin yetiştirilmesini teşvik etmek ve pirinç-pirinç rotasyonunu bir pirinç-yüksek arazi bitkisi rotasyonu ile değiştirmektir. Çeltik-yüksek arazi bitki rotasyonunda, kuru mevsimde yetiştirilen ikinci bitki için genellikle ek drenaj önlemleri gerekmemektedir. Bununla birlikte, yağışlı mevsimde yüksek arazi bitkileri yetiştirilmesi, hemen hemen her zaman daha iyi bir drenajı gerektirecektir.

Yağışlı mevsimde yüksek arazi bitkilerinin mevcut ekimi, çoğunlukla, nehir kıyısı arazileri ve sınırdaki teras arazileri gibi ovaların daha yüksekte bulunan, daha iyi drene olan kısımlarıyla sınırlıdır. Ovalardaki yüksek arazi bitkilerinin ıslak mevsim ekimi istisnai ve çoğunlukla ev bahçelerinde yükseltilmiş yastıklarda yetiştirilen yüksek-değerli bitkilerle sınırlıdır. Pirinç tarlalarında yağışlı mevsimde yüksek arazi bitkilerinin büyük ölçekli ekimi, kapsamlı drenaj önlemleri gerektirir. Hakim yüksek yağış koşulları altında, yüzeyaltı drenaj sistemleri genellikle kök bölgesinin yeterli havalandırma kontrolünü sağlayamamakta ve bu tür sistemlerin nemli tropikal ovalara kurulmasının teknik/ekonomik olarak uygun olmadığı yaygın olarak kabul edilmektedir (ILRI, 1987; Vlotman ve ark., 2020). Endonezyalı çiftçiler tarafından geliştirilen Sorjan bitki yetiştirme sistemi (Şekil 2), yani alternatif derin kanallar ve yükseltilmiş yastıklar tesis edilen ve hem taşkına hem de kuraklığa yatkın alanlarda uygulanabilir bir sistem daha uygun olacaktır. Bununla birlikte, bu sistemlerin inşası oldukça emek yoğunudur ve bu tür bitki yetiştirme sistemleri yalnızca küçük-ölçekli emek-yoğun çiftçiliğe uygundur. Bombeli yastık sistemleri, aynı zamanda yüksek arazi bitkileri (örneğin şeker kamışı için uygulanan) için de uygun olabilir, ancak ıslak pirinç için uygun değildir.

Şekil 2. Sorjan yastık sistemi (solda) ve sağda merkezde fidelerin olduğu geleneksel çeltik tarlaları (Vlotman ve ark., 2020)

Taşkın kontrolü

Nemli tropik ovaların çoğunda, arazi kullanımı, doğal hidrolojik rejimin hakim özelliklerine, özellikle arazinin beklenen yıllık taşkınlarına iyi bir şekilde uyarlanmıştır. Taşkın genellikle oldukça iyi tanımlanmış dönemlerle sınırlıdır ve belirli bir zaman aralığı boyunca yavaş yavaş gelişir; bu taşkın desenleri, bitki yetiştirme takvimlerinde dikkate alınır. Tam taşkın kontrolü genellikle teknik/ekonomik olarak mümkün değildir ve bir takım olumsuz etkileri olduğu için (doğal drenajın seddeler tarafından tıkanması, taşkın suyunun tutulması nedeniyle akiferlerin yetersiz beslenmesi, balık yumurtlama alanlarının kaybı) çoğu zaman istenmeyen bir durumdur. Tarımsal gelişmede önemli ilerleme sadece kısmi taşkın kontrolü ile mümkündür.

Kısmi taşkın kontrolü, düşük maliyetle ve yararlanıcıların tam katılımıyla küçük polderler inşa edilerek köy düzeyinde uygulanabilir. Bu polderler, sulama suyu için giriş tesisleri ve fazla yağmur suyu için çıkış tesisleri sağlanarak çok amaçlı su yönetim birimlerine dönüştürülebilir (NEDECO, 1991; Vlotman ve ark., 2020). Kısa süreli pirinç çeşitlerinin yetiştirilmesinde kaydedilen ilerlemeyle birlikte kısmi taşkın kontrolü, çiftçilerin yılda birden iki pirinç ürününe geçiş yapmalarını sağlar. Zamanla, bölgenin/ülkenin artan gelişimi ile, bu küçük polderler giderek daha yüksek ve daha güçlü çevreleyen seddelere sahip daha büyük arazi birimlerinde konsolide edilebilir, bu da erken taşkın korumasının daha iyi güvencesini sağlar ve çiftçileri girdi harcamalarının seviyesini yükseltmeye teşvik eder. Nihayetinde, gelecekteki bir tarihte, bu gelişmeler taşkına eğilimli alanların çoğunun tam olarak korunmasına yol açabilir.

Sonuç

Pirinç tarımında drenaj, yalnızca tarımsal üretimin verimliliğini artırmak için değil, aynı zamanda çevresel sürdürülebilirlik açısından da büyük bir öneme sahiptir. Çalışmada ele alındığı üzere, drenaj sistemleri, fazla suyun kontrollü bir şekilde uzaklaştırılmasını sağlayarak kök çürümesi, oksijen eksikliği ve toprak tuzluluğu gibi sorunların önüne geçmektedir. Bu sistemler, aynı zamanda toprak verimliliğini artırarak uzun vadede tarımsal üretimin devamlılığını sağlamaktadır. Yüzey ve yüzeyaltı drenaj sistemleri, farklı ekolojik koşullara uygun olarak tasarlandığında, yalnızca pirinç üretiminde değil, aynı zamanda alternatif ürün rotasyonlarının teşvik edilmesinde de etkin bir rol oynamaktadır.

Bilimsel araştırmalar, modern drenaj sistemlerinin su kullanım verimliliğini artırmada, çevresel etkileri azaltmada ve sürdürülebilir üretimi desteklemede önemli katkılar sağladığını göstermektedir. Özellikle kontrollü sulama ve drenaj yöntemleri, pirinç tarımında su tasarrufu sağlayarak, hem ürün kalitesini hem de üretim miktarını artırma potansiyeline sahiptir. Aynı zamanda, bu yöntemler su kaynaklarının daha etkin kullanılmasını sağlayarak, artan küresel su talebi karşısında tarım sektörünün üzerindeki baskıyı azaltmaktadır.

Pirinç tarımında drenaj tekniklerinin etkin bir şekilde uygulanması, gelecekteki tarımsal sürdürülebilirlik hedefleri açısından kritik öneme sahiptir. Bu teknikler, yalnızca ekonomik verimliliği artırmakla kalmamakta, aynı zamanda doğal kaynakların korunması, iklim değişikliğine uyum ve gıda güvenliğinin sağlanmasına da katkı sağlamaktadır. Dolayısıyla, drenaj sistemlerinin iyileştirilmesi, yerel ve küresel düzeyde su yönetim politikalarının önemli bir parçası olarak değerlendirilmelidir. Bu kapsamda, teknolojik yeniliklerin ve araştırma bulgularının tarım uygulamalarına adaptasyonu, pirinç tarımının çevresel etkilerle uyumlu bir şekilde geliştirilmesine olanak tanıyacaktır.

ÖZET

Sözlü kültürün önemli aktarıcılarında olan türküler, sadece zamanın akışına karşı koyarak yaşamaz. Aynı zamanda toplumların çağlar öncesine uzanan evrenini, doğayı ve yaşamı algılama biçimlerini de yansıtır. Bu anlamda türküler, köklü bir kültürel geçmişin izlerini günümüz dünyasına taşır ve geçmişten günümüze uzanan zengin kültürel bir mirasın izlerine sahiptir. Öte yandan insanoğlunun en temel duygularını, düşüncülerini, başından geçen olaylara nasıl tepki verdiğini anlatma ve anlama kısmında modern topluma önemli kaynaklar da sunmaktadır. Türküler, Türk halk müziği geleneğinin en temel unsurlarından biri olarak, hem sözleri hem de melodileriyle halkın yaşam deneyimlerinden, duygularından, inançlarından ve tarihsel olaylardan beslenen bir ifade biçimidir. Anonim bir yapıya sahip olmaları ve kuşaktan kuşağa sözlü aktarım yoluyla varlıklarını sürdürmeleri, onları halkın ortak hafızasının bir yansıması hâline getirir. Sözlerinde sade, içten ve samimi bir dil kullanılması, türkülerini halkın duygu ve düşüncelerinin doğal bir aynası yapar.

Türküler, hem edebî hem de müzikal açıdan incelemeye değer zengin birer formdur. Edebi olarak, türkülerdeki anlatım tarzı, semboller, mitler ve toplumsal mesajlar üzerinden derinlemesine çalışmalar yapılmaktadır. Ele alınan temalar ise aşk, özlem, doğa, kahramanlık, dini değerler, sosyal eşitsizlikler gibi geniş bir yelpazeyi kapsar. Müzikal açıdan bakıldığında, türküler melodik yapılar, makamlar, ritmik kalıplar ve bölgesel farklar bakımından büyük çeşitlilik göstermektedir. Karadeniz'in enerjik kemençeli horonlarından, Ege'nin ağır ve vakur zeybeklerine, Doğu Anadolu'nun derin duygularla yüklü uzun havalarına kadar her bölge kendine has türkü tarzları geliştirmiştir. Bu zenginlik, halk müziği içindeki kültürel çeşitliliği ve müzikal derinliği gözler önüne sermektedir.

Türküler, halkın hem duygusal hem de toplumsal kimliğinin en güçlü yansımalarından biridir. Köylerde, kasabalarda ve şehirlerde halkın gündelik yaşamı, toplumsal olaylar ve duygusal deneyimlerinin en saf ifadeleri türkülerin içinde hayat bulmaktadır. Osmanlı İmparatorluğu'nun son dönemlerinden Cumhuriyet'in ilk yıllarına kadar göç, savaş ve yoksulluk gibi tarihsel süreçler türkülerin sözlerinde derin izler bırakmıştır. Ayrıca, köylü isyanları, aşk destanları, evlilik gelenekleri ve kahramanlık hikâyeleri türkülerin işlediği başlıca temalar arasında yer alır. Türküler, aynı zamanda halkın kültürel belleğini koruyan bir araçtır. Pek çok türkü, toplumsal travmaları, kahramanlıkları ve aşk acılarını unutturmayarak bireysel ve kolektif hafızanın yaşatılmasını sağlar. Bu anlamda, türküler sadece bir müzik türü değil, aynı zamanda halkın kültürel mirasını nesiller boyu canlı tutan bir köprüdür. Müzikal ve edebî açıdan da türkülerin derin bir araştırma alanı sunduğu söylenebilir. Türküler, bir yandan toplumun duygusal ve sosyokültürel yapısını ortaya koyarken, öte yandan tarihsel süreçleri ve halkın iç dünyasını anlamada önemli bir kaynak sunar. Bu anlamda türkülerin; halk kültürü, tarih, müzikoloji ve edebiyat gibi çeşitli disiplinlerin kesişiminde yer alan zengin bir inceleme konusu olduğu görülmektedir.

Bu çalışmada, anlatı ve tören türkülerinin muhteva açısından tahlili yapılmıştır. Tahlili yapılan türküler, Bursa'nın Keles ilçesi Kıranışıklar köyünden derlenmiştir. Derlenen türkülerden; iki

anlatı türküsü, gelin alma sırasında söylenen iki türkü ve yine tören türkülerinden bir kına türküsü olmak üzere toplam beş türkü seçilmiştir. Çalışmada bu beş türkünün muhteva bakımından analizi ortaya konulmuştur.

Anahtar kelimeler: Türk halk türküleri, anlatı türküleri, tören türküleri, türkü.

ABSTRACT

Turkish folk songs, which are significant conveyors of oral culture, do not merely survive by resisting the passage of time. It also reflects the way societies perceive the universe stretching back to prehistoric eras, nature, and life. In this sense, folk songs carry the traces of a deep cultural heritage into the contemporary world. Therefore, folk songs possess a rich cultural heritage that extends from the past to the present day. On the other hand, they also provide significant resources to modern society in terms of describing and understanding the most fundamental emotions, thoughts, and reactions of human beings to events that occur to them. Folk songs, as one of the most fundamental elements of Turkish folk music tradition, represent an expressive form deeply rooted in the lived experiences, emotions, beliefs, and historical events of the people. Their anonymous nature and oral transmission across generations make them a reflection of the collective memory of society. The use of simple, sincere, and intimate language in their lyrics renders folk songs a natural mirror of the emotional and intellectual world of the people.

Folk songs are worthy of analysis both in terms of literature and music. From a literary perspective, in-depth studies are conducted on their narrative style, symbols, myths, and social messages. The themes explored in folk songs span a broad range, including love, longing, nature, heroism, religious values, and social inequalities.

Musically, folk songs exhibit significant diversity in terms of melodic structures, modes, rhythmic patterns, and regional variations. From the energetic fiddle-accompanied horons of the Black Sea region to the stately zeybeks of the Aegean, and the deeply emotional long airs of Eastern Anatolia, each region has developed its own distinctive style of folk songs. This diversity highlights the cultural richness and musical depth within Turkish folk music. Folk songs also serve as one of the most powerful reflections of the emotional and social identity of the people. In villages, towns, and cities, they embody the purest expressions of daily life, social events, and emotional states. From the late Ottoman period to the early years of the Republic, historical processes such as migration, war, and poverty left deep imprints on the lyrics of folk songs. Additionally, themes such as peasant uprisings, love epics, marriage traditions, and heroic tales are frequently addressed in folk songs.

Furthermore, folk songs function as a vehicle for preserving cultural memory. Many songs help sustain both individual and collective memory by preventing the forgetting of social traumas, acts of heroism, and love tragedies. In this sense, folk songs are not merely a genre of music but also a bridge that keeps the cultural heritage of the people alive across generations. Folk songs offer a rich field for research both musically and literarily. While they reveal the emotional and socio-cultural fabric of society, they also provide a significant source for understanding historical processes and the inner world of the people. In this respect, folk songs stand at the intersection of various disciplines such as folk culture, history, musicology, and literature, and present themselves as a valuable subject for in-depth analysis.

In this study, narrative and ritual folk songs have been analyzed in terms of content. The analyzed folk songs were collected from the village of Kıranışıklar in the Keles district of Bursa. Five folk songs have been selected from the collected ones, including two narrative songs, two songs sung during the bridal procession, and one henna song, which is also a ceremonial folk song. The analysis of these five folk songs in terms of content has been presented in the study.

Keywords: Turkish folk songs, narrative songs, ceremonial songs, folk songs.

GİRİŞ

Güncel Türkçe Sözlük'te türkü; “çoklukla dörder mısralı bentlerden oluşan, 11’li hece ölçüsüyle yazılan ve kendine özgü bir besteye okunan halk edebiyatı nazım birimi” olarak tanımlanmaktadır.¹ Dizdaroğlu, terim olarak ilk kez türkünün 15. yy. da Doğu Türkistan’da aruz ile yazılmış ve özel müzikle söylenmiş ürünler için kullanıldığını ifade etmiştir. Ayrıca Türk halk şiiri içinde en eski türlerden olduğunu belirtmektedir.² Yeni Tarama Sözlüğü’nde ise “türkü söylemek” ifadesi için; “türkü yakmak, türkü düzmek, bestelemek”, “türkü yırlatmak, türkü çağdırtmak” biçiminde dil kullanımları olduğu görülmektedir.³ Ignaz Kunos’a göre türkü, en çok sekizli, on birli ölçülerle söylenen saz şiiridir. Kunos’a göre çoğu türkü, anonim halk edebiyatında vardır. Türküler; aşk, doğa, güzellik, gençlik veya acıklı konuların işlenerek ağızdan ağıza şekil değişiklikleriyle dolaşarak meydana gelmiştir.⁴

Güzel ve Torun’a göre türkülerin ortaya çıkışında; ölüm, ayrılık, kıtlık, kahramanlık, sevgi, depresyon gibi etkileyici sebepler yer alır. Toplumun bu olaylara verdiği tepki, türkülerde yansımaktadır. Ayrıca, öteki halk şiiri türlerine kıyasla türkülerin sosyal yanı ağırlıklıdır.⁵ Ali Yakıcı’ya göre türkü, ortaya çıktığında ait olduğu edebiyat şubesi veya biçim türünden ziyade halka mal olarak anonimleşen; şölende, düğünde, toplantıda ve her türlü icra ortamında dillerden düşmeyen; duygu, düşünce, hayal ve birey ya da toplum olarak doğumdan ölüme kadar yaşanan, insan ve toplumda iz bırakan bütün olayları dile getiren; sevinçli ya da üzüntülü zamanlardaki coşku ve heyecanı yansıtan; kaynakları genellikle ozan, türkü yakıcı ve söyleyicisi olan; icra ortamı ve konusuna göre kendine özgü bir ezgiyle söylenen manzum ürünlerdir.⁶ Türkiye sahasında türkülerle dair önemli çalışmaları olan İlhan Başgöz, Türkü adlı eserinde yer verdiği “Halk Türküsü” ana başlığı altındaki “Gerçekle Hayali Birleştiren Şiir” alt başlıklı yazısı, halk türküsünün derinlemesine bir incelemesi olarak dikkat çekmektedir. Başgöz, yazısının başlangıcında Ahmet Hamdi Tanpınar ve Âşık Veysel’den alıntılar yaparak halk türkülerinin kültürel kimliğimizdeki önemine vurgu yapmaktadır. Başgöz, türkülerin yüzyıllar boyunca süregelen bir geleneğin parçası olarak, gerçek ile hayali birleştiren bir anlatım biçimi olarak tanımlar. Bu anlamda coğrafyaların, sosyal ilişkilerin ve kültürel bağların halk türkülerinde yer aldığını ifade eder. Örneğin; pınar başındaki âşıkların romantik bir etkileşiminin, gurbetin ve garipliğin, askerliğin barındırdığı hüznün ve cesaretin türküler aracılığıyla, dinleyicinin hayal gücünü harekete geçirdiğini belirtir. Başgöz’e göre dinleyici, türkülerini dinlerken kendisini var eden derin kültürel kökleri de keşfeder. Ona göre türküler, kültürel mirasımızı anlamak ve yaşatmak için değerli bir kaynak oluşturur.⁷

Türkünün temelinde özellikli bir durum veya olay yatar. Türkü; gerçek veya gerçek dışı bir olay veya gurbet, doğa ile yurt sevgisi, dini ve kahramanlık duyguları gibi durumlar sonucu doğar.⁸ Türküler içerik ve biçimsel özellikleri açısından oldukça zengindir.

Türkülerin sınıflandırmasına dair pek çok görüş mevcuttur. Pertev Naili Boratav, türkülerin söylendikleri yer ve konuları esas almıştır. Buna göre de şöyle sınıflandırmıştır:

- 1.Lirik türküler
- 2.Taşlama, yergi, güldürü türkülerini
- 3.Anlatı türkülerini
- 4.İş türkülerini

5.Tören türküleri

6.Oyun ve dans türküleri ⁹

Yardımcı'ya göre türküler, kesin bir şekilde kategorize edilemez. İnceleme kolaylığı açısından ise şöyle maddelendirilebilir:

1.Ezgilerine göre türküler

2.Konularına göre türküler

3.Yapılarına göre türküler¹⁰

Ali Yakıcı, türküleri vezin ve yapı bakımından incelemiştir. Vezinleri bakımından türküleri hece ve aruz vezinliler olmak üzere iki grupta toplamıştır. Yapıları bakımından da türküleri sekiz maddede sınıflandırmıştır. Ayrıca on sekiz alt başlıkta konularına göre türküleri şöyle ayırtmıştır:

1. Aşk/ Seveda Konulu Türküler

2. Gurbet/ Ayrılık/ Hasret Konulu Türküler

3. Beşik/ Bebek/ Çocuk Türküleri/ Ninniler

4. Ölüm Türküleri/ Ağıtlar

5. Tören Türküleri

5.1. *Düğün Türküleri*

5.1.1. *Kına Türküleri*

5.1.2. *Gelin Alma/ Karşılama/Kutlama Türküleri*

5.1.3. *Güvey Türküleri*

5.2. *Bayram Türküleri*

6. Asker/Askerlik Türküleri

7. Hapishane Türküleri

8. Olay Türküleri

8.1. *Tarihî Olayları Anlatan Türküler*

8.1.1. *Savaş Türküleri*

8.1.2. *Yiğitlik/Kahramanlık Türküleri*

8.1.3. *Eşkıya Türküleri*

8.2. *Sosyal Olayları Anlatan Türküler*

8.2.1. *Toplum ve Aile İçi Olayları Konu Alan Türküler*

8.2.2. *Göç Türküleri*

8.2.3. *Hastalık Türküleri*

9. Doğal Çevre ile İlgili Türküler

9.1. *Doğayı Konu Alan Türküler*

9.2. *Bitki ve Çiçekleri Konu Alan Türküler*

9.3. *Hayvanları Konu Alan Türküler*

10. Beslenme ve Yiyecekleri Konu Alan Türkü

11. İş ve Meslek Hayatıyla İlgili Türküler

12. Övgü Türküleri

13. Yergi/ Alay/ Eleştiri Türküleri

14. Şikâyet Türküleri

15. Eğitici /Öğretici Türküler

16. Arzu/İstek Türküleri

17. Dinî/Tasavvufi Nitelikli Türküler

18. Oyun Türküleri

18.1. *Çocuk Oyunlarındaki Türküler*

18.2. *Kadın Oyunlarındaki Türküler*

18.3. Erkek Oyunlarındaki Türküler”¹¹

Bu çalışmada Bursa Kıranışıklar Köyü’nden derlenen; işlevlerine göre sırasıyla iki anlatı türküsü, gelin alma sırasında söylenen iki türkü ve yine tören türkülerinden bir kına türküsü olmak üzere toplam beş türkü incelenmiştir. Bu türküler, *muhteva* açısından ele alınmıştır. İncelenen anlatı ve tören türkülerinin arka planlarının unutulmaması ve türün kayıt altına alınması da amaçlanmaktadır.

YÖNTEM

Çalışmada ele alınan anlatı türküleri, Şahizer Çoban isimli kaynak kişiden, tören türküleri ise törenler sırasında bakraç çalan kadınlardan ve gelin alma sırasında damada sağdıçlık eden Kıranışıklar köyü erkekleri ile Raif Kaya’dan derlenmiştir.¹²

Bu çalışmada, Kıranışıklar köyünden derlenen anlatı ve tören türküleri, içerik, tema ve motifler açısından detaylı bir analiz sürecine tabi tutulmuştur. Araştırma verileri, saha çalışmaları ve yerel halkla gerçekleştirilen kaynak kişi görüşmeleri yoluyla elde edilmiştir. Toplanan bu veriler, nitel analiz yöntemleri kullanılarak derinlemesine değerlendirilmiştir.

1. ANLATI TÜRKÜLERİNİN İÇERİK YÖNÜNDE İNCELENMESİ**1.1. ANLATI TÜRKÜLERİNDEN “BUĞIŞ ÖMER” TÜRKÜSÜNÜN İÇERİK YÖNÜNDE İNCELENMESİ**

Söyleyen: Şahizer Çoban

Derleyen ve yazıya aktaran: Ezgi Şahin Sevdî

Giriş Durumu: Bursa’nın Keles ilçesi Kıranışıklar köyü anlatı türkülerinden Buğış Ömer türküsü, *muhteva* açısından anlatı türküsüdür. Kaynak kişinin aktardığı ve bölgede bilinen adı “koyuk türküsü”dür. Toplumun ortak duygularından biri olarak açıklanabileceği üzere acıklı bir türküdür. Bu türkünün hikâyesi de mevcuttur. Türküde mekân olarak bahsedilen yer, Bursa’nın Keles ilçesinin Kıranışıklar köyüdür. Ölüm hikâyesi anlatılan Buğış” lakaplı Ömer, köyün delikanlılarından. Evlidir ve bir çocuğu vardır. Bölgede “Kara Pınar” olarak anılan yerde ağaç keserken vurulmuştur. Karısı, Buğış Ömer öldükten sonra bir başına çocuğuyla dul kalmıştır. Türküde gencin vurulma sebebi anlatılmamaktadır. Kaynak kişi, türkünün hikâyesinde ağaç kesme işleminden bahsetmiştir. Yörede geçim kaynakları arasında ormancılık vardır ve yaygındır.

1. Türküde, Buğış Ömer’i bulduklarında üzerine kırmızı peşkir örtmüşlerdir. Aslında kırmızı peşkir, kadınlara özgü bir eşyadır. Ancak Buğış Ömer’i ölü buldukları için o peşkiri örtmüşlerdir:

*“Buğış Ömer’i vurmuşlar. Geride karısı bir tane çocukla kalmış. Onun için de türkü yakmışlar. Buğış Ömer de onu vurup öldüren de bizim köydenmiş. Kara Mınar denen yerde ağaç keserken vurmuşlar. Üzerine de kırmızı kadın peşkirini örtmüşler. Bizim köyde Soğur Hüseyin diye bir adam vardı, işte o adam kendi kendine böyle türküler yakmış. Bir tanecik oğlu varmış Buğış Ömer’in. Kendisini, karısını, oğlunu katarak türkü yakmışlar.”*¹³

2. Türkünün ilk dörtlük kısmında Buğış Ömer’in kırmızı peşkir altında uyuduğu ifade edilmektedir. *Uyku* kavramının, Türk edebiyatı ve halk biliminde çeşitli kullanımları vardır. Dinî ve tasavvufî alanda da kullanılmıştır. Tasavvufa göre dünya hayatında yaratılan kişi, gaflet uykusundadır. Ebedî uyku ise ölümdür.¹⁴

Bıçkının altı guyu

(Anam) Guyudan aldım suyu

Al peşkirin altında

Uyu Buğış Ömer'im uyu

3. Dede Korkut kitabında geçen *Salur Kazan Tutsak Olup Oğlu Uruz'u Çıkardığı* başlıklı hikâyede, uyku şöyle aktarılır: “*Kazanı küçücük ölüm tuttu, uyudu. Meğer Hanım Oğuz beyleri yedi gün uyur idi. Onun için küçücük ölüm derlerdi.*” Burada Oğuzlar uykuyu “küçük ölüm” olarak anmaktadırlar.¹⁵ Yukarıdaki dörtlükte de benzer bir kullanımın mevcut olduğu söylenebilir.

4. Aşağıdaki dizeler, türkünün sürekli tekrarlanan nakarat bölümüdür. Şerif Hanım, derlenen bilgilere göre Buğış Ömer'in karısı, Seyit Ahmet ise babasının ölümünden sonra annesini hayata bağlaması beklenen oğludur:

Ağlasın Şerif Hanım ağlasın

Gönlünü Seyd¹⁶ Ahmet'im eylesin

5. Türkünün aşağıda verilen bölümünde, türküye konu olan ve vurularak öldürülen Buğış Ömer'i ailesi dönsün diye beklemektedir. Ancak Ömer gideli bir ay beş hafta olmuştur ve hâlâ dönmemiştir. Bekleyiş sürmektedir:

Bıçkının altı tahta

(Anam) Ömer gelecek bu hafta

Ömer gitti gelmedi

(Anam) Oldu bir ay beş hafta

6. Aşağıda verilen dörtlükte, Buğış Ömer'in vurulduğu yer tasvir edilmektedir. “Kara Pınar” adı verilen bölgede çam ağaçları mevcuttur. Zira türkünün anlatısında da kaynak kişi Buğış Ömer'in ağaç keserken vurulduğunu aktarmıştır. Hüsamettin ismi sadece bu dörtlükte zikredilir. Bu, Buğış Ömer'i öldüren kişinin adıdır. Bu kısımda, ölümün bir kıyım sonucu geldiği ve Buğış Ömer gibi masum bir kişinin ölümüne duyulan üzüntü aktarılmıştır:

Karamnarın¹⁷ çamları

(Anam) Sallanıyor dalları

Nasıl kıydın (be hey) Hüsamettin

Buğış Ömer gibi canlara

7. Türkünün aşağıda yer alan kısmında Buğış Ömer'in ve Şerif Hanım'ın fiziksel özelliklerinden ön plâna çıkanlar mübalağa yolu ile aktarılmıştır. Buğış Ömer'in kaşlarının güzelliğinin yörenin bağlı bulunduğu il olan Bursa'ya dek gittiği; aynı şekilde Şerif Hanım'ın saçlarının güzelliğinin de civar köylerden biri olan Beyce Köyü'ne dek ulaştığı anlatılmıştır:

Karamnarın başları

(Anam) sallanıyor saçları

Şu Bursa'ya ün olmuş (anam)

Buğış Ömer'in gaşları

Şu Beyce'ye ün olmuş (anam)

Şerifanım¹⁸'in saçları

8. Aşağıda ele alınan kısımda, ölümü ile kıyameti kopan, yani eceli gelen Buğış Ömer'in türkünün nakarat kısmında sık sık tekrarlanan Seyit Ahmet isimli küçük çocuğu olduğu anlatılmaktadır:

Karamnar başı selamet

Bir meşeye çıktım goptu giyamet

Bitane körpe oğlum var aman

¹⁵ Muharrem Ergin, Dede Korkut Kitabı 1-2, Ankara 2018, s.234.

¹⁶ Seyit

¹⁷ Kara minarın

¹⁸ Şerif Hanım

Onun adı Seyd Ahmet.

“Buğış Ömer” türküsünde ölen kişinin ardından duyulan acı aktarılmaktadır.

1.2. ANLATI TÜRKÜLERİNDEN “SADETTİN EFE” TÜRKÜSÜNÜN İÇERİK YÖNÜNDEN İNCELENMESİ

Söyleyen: Şahizer Çoban

Derleyen ve yazıya aktaran: Ezgi Şahin Sevdı

Sadettin Efe, Bursa Keles Kıranışıklar köyünde doğmuştur. Bu köyde bulunan Handırlar sülalesindedir. Lakabı, “Topal”dır. 1930 veya 1940’lı yıllarda öldürülmüştür. Millî Mücadele’de Yunanlara karşı mücadele etmiştir. Millî Müfreze içinde yer almıştır.¹⁹ Orhaneli Yunan kuvvetleri tarafından işgal edilene kadar Anadolu’nun Bursa ile bağlantısını sağlayan isimlerdendir.²⁰

Köyün kahramanı olarak bilinen Sadettin Efe’nin hakkında anlatılan pek çok efsane mevcuttur.²¹ Ayrıca köyde ve yörede *Sadettin Efe Türküsü* olarak bilinen meşhur bir türkü de mevcuttur. Köyün efesidir. Düşmana, Millî Mücadele zamanı geçit vermediği için Kıranışıklar köyüne baskın yapılamamıştır. Ancak Sadettin Efe pusuya düşürülüp öldürülmüştür. Türküde bu pusu anlatılmaktadır. Ayrıca toplumda karşılığı bulunan ve önemli bir figür olan Sadettin Efe’nin ölümünden duyulan acı Sadettin Efe’nin kendi ağzından aktarılmaktadır.

“Sadettin Efe köyümüzün efesiymiş. Onun korkusundan gâvur köyümüzü basamamış. Çok değerli adammış. Onu bir yerde ekmeklemişler. Tabii öyle adamın düşmanı olmaz mı? Olur. Otururken baltalayıp öldürmüşler. Sadettin Efe için yakılmış bu türkü.”²²

1. Türkü, Sadettin Efe’nin kendi kendine aldanıp tuzağa düşmesiyle başlar. Uçurumun başından uçup çukura düştüğü tasvir edilmiştir:

*Yar başından uçtum göçüğe düştüm
Kendin ayağımlan duzağa düştüm*

2. Türkünün aşağıdaki kısmında yer alan Koca Ayşa’ya haber verilmesi isteği, ölen Sadettin Efe’ye aittir. Dizeler onun dilinden söylenmektedir. Türküde geçen Koca Ayşa’nın ufak kuzuları, evlatlarıdır:

*Koca Ayşa’ya haber verin gelsin yanına
Kendi kuzularını alsın yanına
Ufak da kuzularını alsın yanına*

3. Aşağıdaki dizelerde, Sadettin Efe’nin ağzından, cenazesinin öküzleri ile doğduğu büyüdüğü memleketi bildiği toprağında gömülmek istediği aktarılmaktadır. Bu, bir çeşit vasiyet dizesidir:

*Öküzlerimi goşun götürün beni
Kendi toprağıma yatırın beni*

4. Türkünün aşağıda ele alınan kısmında, Sadettin Efe’nin başına aldığı darbe sonucu öldüğü anlatılmaktadır. Bu dizede, elinde ipekli mendil ile baltayı saklayan kişi Sadettin Efe’nin başına ağır bir darbe indirir ve onu öldürür. Bu kısım, ölüm anının tasviri gibidir:

*Ellerinde mendil ipekli mendil
Kaldırır da baltayı beynini erdir*

¹⁹ Ömer Faruk Dinçel, Yörük ve Türkmen Diyarı Bursa Dağ Yöresi; Orhaneli, Harmancık, Keles, Büyükorhan, 1.b., Dağ-Der Yayıncılık, Bursa, 2003.132-133.

²⁰ Saime Yüceer, Bursa’nın işgal ve Kurtuluş Süreci (8 Temmuz 1920- 11 Eylül 1922) , Uludağ Üniversitesi Yay., Bursa, 2001, s. 114.

²¹ Ezgi Şahin Sevdı,a.g.e., s.39.

²² Ezgi Şahin Sevdı,a.g.e.,s. 41.

5. Aşağıda Sadettin Efe'nin ölümünün ikişer kez aktarıldığı tekrarlı dizeler verilmiştir. Bu dizelerde, "Sümüklü" lakaplı birinin cinayeti işlediği anlatılmaktadır. Sadettin Efe öldürülmeden önce yemeğe davet edilmiş ve kendisine bir tuzak kurulmuştur. Bu davette Hüseyin Efendi, Sadettin Efe'ye teke kurban ederek yemek hazırlamıştır. Ardından Efe öldürülmüştür:

*Hüseyin Efendi kurban kesmiş tekeyi
Sümüklü urda baltalamış efeyi*

6. Türkünün aşağıda verilen bölümünde, Sadettin Efe'nin ölümünün oldukça acı verici ve dayanılmaz olduğu bu dizelerde ifade edilmektedir:

*Koca Osman'ın bahçasından analar
Nasıl dayansın bunu gören analar*

7. Aşağıdaki dizelerde Sadettin Efe'nin "Pullu'm" biçiminde andığı eşinin kendisi ölünce ne hâle geleceği konusunda duyduğu endişe anlatılmaktadır:

*Evimizin önünde asmanın tali
Ben ölürsem nec' olur Pullu'mun hâli*

8. Türkünün aşağıda yer alan dizelerinde, Sadettin Efe'nin tuzağa düşürülerek öldürüldüğü ve "çatık kaşlı" olarak tasvir ettiği eşi Pullu'nun yarsız; "sarı saçlı" olarak betimlediği Halime'sinin, yani kızının öksüz kaldığı anlatılmaktadır. Dizeler Sadettin Efe'nin ağzından aktarılır:

*Benim ambarıma saman koydular
Çatık da kaşlı Pullu'mu yarsız kodular
Sarı saçlı Halime'mi öğsüz kodular*

9. Aşağıdaki dizelerde, öldürülen Sadettin Efe'den geriye kalan eşyaları anlatılmaktadır. Efe'nin değirmeni ve tüfeği geride kalanlar arasındadır ve zaman içinde çalışmaz işlemez hâle gelmiştir:

*Değmenim dereye bağlandı kaldı
Tüfeğim duvarda yağlandı kaldı*

10. Türkünün aşağıda yer alan kısmında, Sadettin Efe heybesinin içindeki tasın ondan alınmasını ister. Yine ardında bıraktığı beş karısının da arkasından yas tutmasını istemektedir. Türkünün bu kısmı da Sadettin Efe'nin ağzından aktarılır. Bu dizeler, Efe'nin ölümünün ardından gelen bir vasiyet gibidir:

*Hala heybem içinde alıven tası
Beş garım var arkamdan itsinler yası*

2. TÖREN TÜRKÜLERİNİN İÇERİK AÇISINDAN İNCELENMESİ

2.1. "AK KOYUN MELER GELİR" ADLI KINA TÜRKÜSÜNÜN İÇERİK AÇISINDAN İNCELENMESİ

Söyleyen: Şahizer Çoban

Derleyen ve yazıya aktaran: Ezgi Şahin Sevdî

"Ak Koyun Meler Gelir" türküsü, Kıranışıklar köyünde kına gecelerinde, gelin adayına kına yakma işlemi sırasında söylenmektedir. Bu türkü, tören türküleri arasındadır. Kına gecelerinde eline kına yakılan gelin adayını ağlatmak amaçlanır. Bu türküde de diğer türkülerle ortak olarak ölümün getirdiği ayrılık acısı gibi olmasa da baba evinden ayrı kalınacağı için hissedilen acı ve

burukluk ön plandadır. Düğünden önce gelin adayının evinde veya gelin adayının ailesinin belirlediği bir yerde kına töreni gerçekleşir. Derleme alanında müzisyenin bulunmadığı kına törenlerinde kadınlar bakraç çalarak türkü söylerler. Kaşık oyunu oynarlar. Erkekler kına gecesinin eğlencesine katılmazlar. Derleme alanında “yenge” kavramı önemlidir. Kınayı da yengelerden biri geline yakar. Bununla birlikte düğünün çeşitli evrelerinde yengenin desteği mevcuttur. Geline kınayı yakan yenge, evli olmalıdır.

Kına yakma işlemi sırasında “Altın Tas İçinde Kınam Ezilir Annem”, “Yüksek Yüksek Tepelere Ev Kurmasınlar” gibi dokunaklı türküler söylenerek gelin ağlatılmaya çalışılır. Bu sırada gelinin çevresinde yakınları, annesi ve kayınvalidesi bulunur. Kalabalık, kına yakma işlemi sırasında gelinin etrafında toplanır. Gelinin yüzü kırmızı renkli “kına örtüsü” denen örtü ile örtülüdür. *Ak Koyun Meler Gelir* isimli türkünün tahlili aşağıda yapılmıştır.

1. Türkünün bu kısmında, evlenecek kızların yabanda yani ailesinden/baba ocağından uzakta olmaları anlatılmıştır. Kına türküsüne ismini veren “Ak koyun meler gelir.” cümlesi ilk dizede yer almaktadır. Türkünün bu dörtlüğünde gurbet teması mevcuttur:

Ak koyun meler gelir

(Ay anam)

Dağları deler gelir

Yabanklıkta kızların

(Ay anam)

Aklına neler gelir

2. Türkünün aşağıda geçen kısmında, anneye duyulan sevgi ve onsuz içine düşülen duygu durumu anlatılmaktadır. Burası, nakarat kısmıdır. Derlenen türkü sözlerinde son dörtlükten önce bir kez daha tekrarlanmaktadır:

Anam benim

Ay anam anam

Anam yokdur benim

3. Aşağıda yer alan bölümde, türküde gurbet duygusu vurgulanmaktadır. Anneye kavuşma isteği ön plandadır. Bu istek öylesine güçlüdür ki koç kurban edilmiştir:

Pıçak yoldum terledim

(Ay anam)

İndim atı eyerledim

Anan geliyor dediler

(Ay anam)

Goçu gurban eyledim

4. Türkünün aşağıda geçen kısmında, türküyü yakan kişinin yaşının kırka dayandığını ancak anneye duyulan hasret ve kavuşma isteğinin hâlâ devam ettiği anlatılmaktadır:

Merdivenim kırk ayak

(Ay anam)

Kırkına vurdum dayak

Anan geliyor dediler

(Ay anam)

Seyirttim yalın ayak

2.2. “DERELERİN ALTI TÜFEK YANGISI” ADLI TÖREN TÜRKÜSÜNÜN İÇERİK AÇISINDAN İNCELENMESİ

Söyleyen: Raif Kaya

Derleyen ve yazıya aktaran: Ezgi Şahin Sevdı

“*Derelerin Altı Tüfek Yangısı*” adlı türkü, içerik açısından aşağıda tahlil edilmiştir.

1. Türkünün aşağıda yer alan kısmında türküyü adını veren *derelerin altı tüfek yangısı* dizesi iki kez tekrar edilmiştir. Dörtlük, aynı zamanda güzelliğinden ümit kesilmeyen yâr ile yani sevgili ile tanışmak için dua niteliğindedir:

*Derelerin altı tüfek yangısı
Göster Allah'ım benim yârim hangısı
Benim yârim güzellerin kendisi*

2. Aşağıda geçen dizelerde, sevgiliye seslenme ve bir olma isteği mevcuttur. Ayrılık ve ayrılığa neden olanlar için de beddua edilmektedir:

*Güzelim kibarım yollarımız bir olsun
Seni de benden ayıranlar kör olsun*

3. Türkünün aşağıdaki kısmında, kızların damat adaylarında dengine düşemezlerse ağlayıp üzülecekleri aynı zamanda da avunacakları aktarılmıştır:

*Engin derelerin suyu çağlasın
Dengine düşmeyen kızlar ağlasın
Hem ağlasın hem gönlünü eylesin*

2.3. “ODALARDA İDARE” ADLI TÖREN TÜRKÜSÜNÜN İÇERİK AÇISINDAN İNCELENMESİ

Söyleyen: Engin Kaya

Derleyen ve yazıya aktaran: Ezgi Şahin Sevdî

“*Odalarda İdare*” türküsü Bursa Kıranışıklar köyünde düğün öncesinde köyün içinde yapılan gelin alma sırasında Raif Kaya ve Kıranışıklar köyü erkeklerinden derlenmiştir. Türküyü seslendirenler; düğüne katılan damat adayının arkadaşları, akrabaları ve düğüne davetli olan erkeklerdir. Damat adayı, gelin alma sırasında akraba, arkadaş ve davetlilerle kol kola girerek köyün içinde kız evine türkü söyleye söyleye bir düğün konvoyu içinde yürüyerek ulaşır. Bu türkü gelin alma sırasında tüm erkek davetlilerce söylenmektedir. Aşağıda *Odalarda İdare* türküsünün tahlili yapılmıştır.

1. Türkünün aşağıda yer alan dörtlüğünde gelin adayının hüznü konu edinmiştir. Muhtemel erken evlilik yaşı gereği kız ya da gelin kavramlarını anlayamayan gelin adayının yüreği yanmaktadır. Bu dörtlük, türküde nakarat özelliği taşımaktadır. Türkü, gelin alma sırasında söylenmektedir:

*Odalarda idare
Vallahi etmem müdale²³
Ne kız oldun ne gelin
Yüreğim ona yanar*

2. Aşağıdaki dörtlükte, ümitsizlik duygusu hâkimdir. Kız oğlana, oğlan da kıza kavuşamayacaktır. Kavuşma arzusu, ancak düşte olabilecek, hayali kurulabilecek bir durumdur. Bu kısım, nakarat niteliği taşımaktadır:

*Amma da yaptın ha ha ha
Düşme (de) gördün (ey) budala
Seni bana beni sana vermezler
Var git otur odana*

²³ müdahale

3. Türkünün aşağıdaki bölümünü, düğüne davet edilen ve gelin alma sırasında damat adayının yanında olan erkekler yüksek sesle söylemektedir. Toplanan kalabalığa gelin alma sırasında gözyaşı dökmemeleri için bir seslenme vardır. Gelin alınmış, oğlun eşi getirilmiştir. Bu dizeler, nakarat niteliği taşımaktadır:

Silin gözünüzün yaşını

İşte gettik oğlunuzun eşini

4. Aşağıda yer alan dörtlükte, oda duvarına yapılan kirecin kum katmadan tutmayacağı ve eksik olacağı anlatılmıştır. Bu durum, teşbih yoluyla sevgilisine hasret olan âşığın da sevdiğine sarılıp yatmadan sevda hâlimden çıkamayacağı, sevenin sevdiğine kavuşmadan hep eksik kalacağı şeklinde aktarılmıştır:

Odam kireç tutmuyor

Kumunu katmayınca

Sevda baştan gitmiyor

Sarılıp yatmayınca

BULGULAR

Derlenen türküler, ritüel ve anlatı unsurlarını bir araya getirerek yerel yaşamı ve sosyal ilişkileri gözler önüne seren değerli bilgiler sunmaktadır. İncelenen türkülerde doğa, aşk, kayıplar ve ortak acı, ayrılık gibi toplumsal değerler çeşitli temalarla belirgin bir şekilde ortaya çıkmaktadır. Ayrıca, bu eserlerde kullanılan dil ve üslup, köyün kültürel kimliğini net bir biçimde yansıtmaktadır.

SONUÇ

Türk kültür hayatında türkülerin çok önemli bir yeri vardır. Sözlü kültürün de önemli taşıyıcı unsurlarından olan türküler, Türk kültür yaşamına ve geleneklerine dair bilgiler edinmemizde kayda değer bir yere sahiptir. Bu müzikal miras, asırlardır Türk toplumunun duygularını, düşüncelerini ve tarihini yansıtan önemli bir mozağin parçalarıdır. Türküler, genellikle yöresel motiflerle işlenmiş, geçmişten günümüze aktarılan yaşanmışlıkları ve hikâyeleri sözlerinde, melodilerinde barındırır. Ancak türküler sadece melodiler ve sözlerden ibaret değildir; aynı zamanda bir kültürün derinliklerine, toplumların duygu dünyalarına ve yaşamlarının köklerine de ulaşır. Düğünlerden cenazelere, asker uğurlamalarından tarlada çalışmaya kadar her türlü toplumsal olayda türküler yer alır. Toplumun bir araya geldiği her ortamda, türkülerin ezgileriyle birlikte geçmişin izleri ve geleceğe dair umutlar dile getirilir. Bu nedenle, Türk kültüründe türküler sadece bir müzik türü değil, aynı zamanda bir kimlik ve geçmişle gelecek arasında köprü kuran önemli bir unsur olarak kabul edilmiştir.

Türk kültüründe anlatı, tören ve düğün türküleri, binlerce yıllık zengin bir geleneğin önemli bir parçasını oluşturur. Bu türküler, genellikle toplumun ortak yaşam deneyimlerini, duygularını ve değerlerini yansıtarak geçmişten günümüze taşınmıştır. Anlatı türküleri, genellikle kahramanlık, aşk, doğa ve toplumsal adalet gibi temaları işlerken, tören ve düğün türküleri ise yaşamın dönüm noktalarında, özellikle evlilik gibi önemli anlarda karşımıza çıkar. Bu türküler, genellikle coşkulu melodilerle birleşerek kutlamalara renk katar ve topluluğun bir araya gelmesini sağlar.

Gelin alma ve kına gecesi için yakılan türküler, Türk kültürünün önemli ve renkli geleneklerinden biridir. Gelin alma ritüeli, genellikle gelinin ailesinin evinden gelinlik giydirilerek damat evine getirilmesini, bu süreçte çeşitli geleneksel müzikler ve danslar eşliğinde gerçekleştirilen coşkulu bir törendir. Kına gecesi ise gelin adayının yakınları ve arkadaşlarıyla bir araya gelerek gelinin ellerine kına yakılmasıyla kutlanır. Bu özel gece, genellikle kırmızı tonlarında süslemelerle ve geleneksel müziklerle renklendirilir. Anlatı türküleri ise hem bu ritüellerin vazgeçilmez bir parçasıdır hem de hüznü, trajik olayların

aktarıcıdır. Geçmişten günümüze aktarılan hikâyeleri, duyguları, olayları içeren bu türküler, bu anlara özel bir anlam katar ve katılımcıları duygusal bir yolculuğa çıkarır.

Çalışmada ele alınan türkülerden iki anlatı türküsünün temelindeki duygu toplumda önemi olan kişilerin ölümünden duyulan acıdır. Toplumda ortak duygular bağlayıcıdır. Türkülerin de ölüm gibi vahim bir olay üzerine söylenmesi ayrılık ve acı duygularının ortaklığını ifade etme işlevine sahip olduğunun göstergesidir. Ayrıca tören türkülerinin de ortak duygusu ayrılığın getirdiği burukluktur. Gelin adayının aile evinden ayrılması yeterince hüznü bir durumdur. Yeni bir aileye kavuşacak gelin adayını, aile hasretini gitmeden çekmeye başlamıştır. Bu duygular toplumda geçiş dönemlerinden evlilik gerçekleşmeden önce ortak hissedilen duygulardandır. Tören türküleri de toplumun ortak duygusu olan ayrılık acısını, hasreti ortaya koymaktadır.

Her türkü, geçmişin mirasını gelecek nesillere aktarmanın yanında, Türk kültürünün derinliklerinde yatan duygu ve düşünceleri de yansıtarak toplumun ortak değerlerini, birliğini ve kimliğini güçlendirir. Bu müzikal miras, Türk kültürünün yaşayan bir parçası olarak sürekli olarak yeniden yorumlanır ve gelecek kuşaklara aktarılır.

Kıranışıklar köyüne ait türküler üzerine yapılan bu analiz, bölgenin kültürel yapısını anlamak açısından önemli bir kaynak teşkil etmektedir. Bu çalışma, halk biliminin ve yerel kültürlerin korunmasına yönelik farkındalığı artırmayı amaçlamaktadır. Nihayetinde, yerel türküler yalnızca sanatsal eserler değil, aynı zamanda toplumsal hafızanın önemli bileşenleridir.

**BİR TEŞRÎ KAYNAĞI OLARAK
EBÜ'L-HASAN EL-EŞ'ARÎ'YE GÖRE KUR'AN-I KERÎM
AS A SOURCE OF LEGISLATIVE
THE QUR'AN ACCORDING TO ABÛ AL-HASAN AL-ASH'ARÎ**

Doç. Dr. Faruk GÖRGÜLÜ
Düzce Üniversitesi İlahiyat Fakültesi

ÖZET

İslâm düşünce tarihinde Kur'an'ın anlaşılması ve yorumlanması, Müslüman âlimler arasında önemli tartışmalara konu olmuştur. Kur'an'ın teşri kaynağı olarak merkezi rolü, çeşitli ekoller tarafından farklı yaklaşımlarla ele alınmış, özellikle Kur'an'ın mahiyeti, akıl-vahiy ilişkisi vb. üzerine derin ayrıştırmalar yaşanmıştır. Bu tartışmaların odağında yer alan isimlerin başında hiç şüphesiz Ebü'l-Hasan el-Eş'arî gelmektedir. O, İslâm'ın erken dönemlerinden itibaren Müslümanların büyük çoğunluğunun benimsediği Ehl-i sünnet anlayışının şekillenmesinde ve sistematik bir çerçeve kazanmasında öncü bir rol oynamıştır.

Kur'an-ı Kerîm, Müslümanlar tarafından Allah'ın kelâmı olarak kabul edilen ve kutsallığında hiçbir şüphe bulunmayan bir kitaptır. Ehl-i sünnet âlimleri, Kur'an'ı Allah'ın ezeli ve kadîm kelâmı olarak nitelerken, Mû'tezile ekolü Kur'an'ın yaratılmış bir varlık olduğunu savunmuştur. Ancak her iki görüş de Kur'an-ı Kerîm'in Allah'ın kelâmı olduğu konusunda hemfikirdir. Bu nedenle İslâm üzerine araştırma yapan her düşünür, görüşlerini öncelikle Kur'an'a dayandırmayı amaçlamış ve bu süreçte kendi belirlediği yöntemler ve ilkeler çerçevesinde hareket etmiştir. Kur'an'ın Allah'ın kelâmı olarak kabul edilmesi, ilâhî iradenin bir tezahürü şeklinde vahiy yoluyla Hz. Peygamber'e indirilmesi ve onun aracılığıyla insanlığa aktarılması, vahiy, inzâl, kelâm ve ilâhî kelâmın mahiyeti gibi kavramlar etrafında farklı görüşlerin ve tartışmaların doğmasına zemin hazırlamıştır.

Müslüman âlimler, tarih boyunca vahiy olgusunu anlamaya ve yorumlamaya yönelik kapsamlı çalışmalar yapmış; ilâhî kelâmın mahiyetiyle ilgili meseleleri detaylı bir şekilde inceleme gereği duymuşlardır. Kırk yaşlarında Mû'tezile ekolünden ayrılarak kendi yöntemini geliştiren Eş'arî, Kur'an'ı ve onun bir teşrî kaynağı olarak işlevini kendine özgü bir bakış açısıyla ele almıştır. Eş'arî'ye göre Kur'an, Allah'ın ezeli ve yaratılmamış kelâmı olup, doğrudan doğruya O'nun iradesini yansıtan bir kaynaktır. Hüküm koyma yetkisi yalnızca yegâne hâkim olan Allah'a aittir ve bu hüküm kaynağı da O'nun ilâhî hitabı olan Kur'an'dır. Allah, Kur'an'ı göndererek insanlara doğruyu ve iyiyi göstermiş ve ona uyanların kurtuluşa ereceğini bildirmiştir. Bu bağlamda ona göre Kur'an'ın doğru bir şekilde anlaşılmasında ve bireysel ve toplumsal hayata dair hükümlerinin belirlenmesinde vahyin üstünlüğü esas alınmalı, akıl ise bu üstünlük ışığında değerlendirilmelidir.

İşte bu çalışmada, Eş'arî'nin Kur'an'a dair görüşleri ile bir teşrî kaynağı olarak onun Kur'an'a yaklaşımı ve akıl-nakil arasındaki dengeye dair ortaya koyduğu fikirleri incelenecektir. Bu bağlamda, onun düşünce dünyasında Kur'an'ın kaynak olarak taşıdığı önem ile bu fikirlerin İslâm düşüncesine olan etkileri ve yansımaları analiz edilecektir.

Anahtar Kelimeler: Kur'an-ı Kerîm, Eş'arî, Teşrî, Kaynak, Akıl, Nakil, Vahiy.

ABSTRACT

In the history of Islamic thought, the understanding and interpretation of the Qur'an has been the subject of significant debates among Muslim scholars. The central role of the Qur'an as a source of legislation has been handled with different approaches by various schools of thought, and deep divergences have been experienced, especially on the nature of the Qur'an, the relationship between reason and revelation, and so on. Abu al-Hasan al-Ash'ari is undoubtedly one of the names at the center of these debates. He played a pioneering role in shaping and systematizing the understanding of Ahl al-Sunnah, which has been adopted by the majority of Muslims since the early periods of Islam.

The Qur'an is a book accepted by Muslims as the word of Allah and there is no doubt about its sanctity. While Ahl al-Sunnah scholars characterized the Qur'an as the eternal and eternal word of Allah, the Mûtaẓilite school argued that the Qur'an was a created being. However, both views agree that the Qur'an is the word of God. For this reason, every thinker who has done research on Islam has aimed to base his views primarily on the Qur'an and has acted within the framework of the methods and principles he has determined in this process. The acceptance of the Qur'an as the word of God, its revelation to the Prophet as a manifestation of the divine will, and its transmission to humanity through him have paved the way for the emergence of different views and debates around concepts such as revelation, revelation, kalām, and the nature of divine kalām.

Throughout history, Muslim scholars have conducted extensive studies to understand and interpret the phenomenon of revelation and have felt the need to examine the issues related to the nature of divine kalām in detail. Al-Ash'arī, who broke away from the school of Mutazila at the age of forty and developed his own method, dealt with the Qur'ān and its function as a source of legislation from a unique perspective. According to al-Ash'arī, the Qur'ān is the eternal and uncreated word of God and is a source that directly reflects His will. The authority to rule belongs only to God, the sole judge, and the Qur'an, His divine address, is the source of this ruling. By sending the Qur'an, Allah has shown people the truth and the good and has declared that those who follow it will attain salvation. In this context, according to him, the supremacy of revelation should be taken as the basis for understanding the Qur'an correctly and determining its provisions for individual and social life, and reason should be evaluated in the light of this supremacy.

In this study, al-Ash'arī's views on the Qur'an, his approach to the Qur'an as a source of the Qur'ān and his ideas on the balance between reason and reason will be analyzed. In this context, the importance of the Qur'an as a source in his world of thought and the effects and reflections of these ideas on Islamic thought will be analyzed.

Keywords: Qur'an al-Kerīm, Ash'ari, legislative, Source, Reason, Religious Texts (al-Nakl), Revelation.

GİRİŞ

İslam düşünce tarihinde önemli bir yer tutan Ebü'l-Hasan el-Eş'arî (ö. 324/936), Ehl-i sünnet kelâmının temel taşlarını atan ve bu alandaki en etkili ekollerden birinin kurucusu olarak, hem hayatı hem eserleri hem de fikirleriyle sonraki yüzyıllarda pek çok düşünürün fikir dünyasını şekillendirmiştir. Eş'arî'nin geliştirdiği itikâdî ve kelâmî görüşler, kısa sürede geniş bir kabul görenek İslam dünyasında ortak bir inanç ve anlayışa dönüşmüştür. Eş'arî'nin mezhebinin İslâm coğrafyasındaki en saygın düşünce hareketlerinden biri hâline gelmesinde, savunduğu fikirlerin

tutarlılığı kadar bu fikirleri sistematik bir şekilde düzenlemesi ve etkili bir biçimde sunması da önemli bir rol oynamıştır (Görgülü, 2022: 3).

Eş'arî, kelâmî görüşlerini şekillendirirken temel dinî anlayış ve akidesini Ehl-i sünnet düşüncesinin merkezindeki muhafazakâr söylemden almış; ilâhî isim ve sıfatlar, halku'l-Kur'an, rü'yetullah, îmân, îmanda istisnâ, mürtekb-i kebîre, imâmet ve sem'ıyyât gibi birçok konuda ehl-i hadîsin fikirlerini benimseyerek, itikâdî sahada Mu'tezilî geçmişinin etkilerini tamamen ortadan kaldırmış ve kısa sürede sünnî bir kanaat önderi olarak tanınmıştır. Eş'arî, Mâverâünnehir'de Ebû Mansûr el-Mâtürîdî (ö. 333/944) ve Mısır'da Ebû Ca'fer et-Tahâvî (ö. 321/933) ile eşzamanlı olarak, Ehl-i sünnet'in imamı kabul edilen Ahmed b. Hanbel'in (ö. 241/855) naslara dayalı itikâdî esaslarını, Ebû Hanîfe (ö. 150/767) ve İbn Küllâb'ın (ö. 240/854 [?]) yöntemine benzer bir şekilde aklî ilkelerle teyit ederek uzlaştırma çabasıyla İslâm düşünce tarihinde yeni bir dönemin kapılarını aralamıştır (Mavil, 2012: 87). Bu bağlamda, kelâm sistemini Mu'tezile'ye yönelik eleştiriler üzerine kuran Eş'arî, bu süreçte kendisinden önceki muhalif kelimcilerin fikirlerinden önemli ölçüde yararlanmıştır.

Kur'an-ı Kerîm, İslam düşünce geleneğinde en temel teşrî kaynağı olarak kabul edilmiştir. Ebü'l-Hasan el-Eş'arî, eserlerinde Kur'an'ın hem bilgi kaynağı hem de dini hükümler açısından merkezi bir rol oynadığını vurgulamış ve bu alanda sistematik bir yaklaşım benimsemiştir. Ona göre Kur'an, Allah'ın kelâmı olması itibarıyla mutlak hakikatin ifadesidir ve insan bilgisinin en güvenilir kaynağıdır (Eş'arî, 1953: 16-23). Bu doğrultuda Eş'arî, Kur'an'ın hem itikâdî hem de amelî meselelerde temel referans olduğunu ifade etmiştir. O, *Makâlâtü'l-İslâmiyyîn* adlı eserinde kelâm ilmini "temel meseleler" (*celîlü'l-keîâm*) ve "ayrıntılı meseleler" veya "ince detaylar" (*dakîkü'l-keîâm*) olmak üzere iki ana başlıkta incelemiştir (Eş'arî, 1963: 301). Onun temel meseleler olarak nitelendirdiği konular, dinî düşüncenin özünü oluşturan îmân, tevhîd, sıfatlar, kader bağlamında insan fiilleri, Allah'ın şer ve kötülükleri yaratması, lütuf, ecel, rızık, hidâyet ve dalâlet, tevfiik ve hızlân gibi ulûhiyet ve sem'ıyyât ile ilgili meselelerden oluşmaktadır. Ona göre bu temel meselelerdeki hüküm kaynaklarını ise başta Kur'an ve sünnet olmak üzere, ehl-i hadîs, Ebû Hanîfe, ehl-i isbât (Hüseyin en-Neccâr, Dırâr b. Amr vb.) ve Küllâbiyye oluşturur (bk. Eş'arî, 1963: 199, 281-283).

Eş'arî'nin Kur'an'ı bir hüküm kaynağı olarak ele alışı, akıl-nakil ilişkisine dair geliştirdiği metodoloji ile doğrudan ilişkilidir. O, Mu'tezile'den ayrılışından sonra, Kur'an'ın mutlak otoritesini kabul eden ancak aklın, vahyi anlamadaki rolünü de reddetmeyen bir yaklaşım benimsemiştir. Bu süreçte düşünceleri ehl-i hadîs çerçevesinde şekillenirken, Kur'an'ı anlamada daha çok nakle dayalı bir yöntem geliştirmiş; ancak bu rivayet odaklı tutumu, aklî istidlali tamamen dışlamamıştır. Aksine, aklî vahyin derin anlamlarını keşfetmede önemli bir araç olarak görmüş ve hayatının sonraki dönemlerinde akıl ve nakil arasında daha dengeli bir yaklaşım ortaya koymuştur. Bu bağlamda Eş'arî, Kur'an metnine güçlü bir bağlılık gösterirken, aklî delillerin kullanımını da teşvik etmiş ve bu yöntem, sonraki Eş'arî âlimlerince benimsenerek geliştirilmiştir. Bu çalışmada, Eş'arî'nin Kur'an'ı bir teşrî kaynağı olarak ele alış biçimi; Kur'an anlayışı, halku'l-Kur'an konusundaki fikirleri ve akıl-nakil arasında kurduğu denge ekseninde ele alınarak bütüncül bir perspektifle değerlendirilecektir.

1. EŞ'ARÎ'NİN KUR'AN ANLAYIŞI

Ebü'l-Hasan el-Eş'arî, Kur'an'ın Allah'ın kelâmı olduğunu ve kelâm sıfatının O'nun zâtıyla kâim, ezeli bir nitelik taşıdığını ifade eder (Eş'arî, 1987, ss. 78-34). Allah'ın ezeli bir sıfat olan kelâm ile mütekellim olduğunu belirten Eş'arî, bu sıfatın ezeliğini ilim sıfatının ezeli oluşuyla kıyas eder. Ona göre, Allah'ın ilim sıfatı gibi kelâm sıfatı da O'nun ezeli varlığını ortaya koyan önemli bir unsurdur. Diğer sıfatlar gibi Allah Teâlâ'nın kelâm sıfatını reddetmek, O'nu kelâmın zıddı olan suskunluk veya konuşmamazlık gibi eksiklik ifade eden bir durumla nitelendirmeyi

gerektirir ki, bu durumun Allah'a nispet edilmesinin mümkün olamayacağını ve bunun Allah hakkında düşünülemeyeceğini söyler (Eş'arî, 1953: 17-18).

Öte yandan Eş'arî, kelâmullah konusunu Allah'ın hay (hayat sahibi) oluşu perspektifinden ele alır. Ona göre Allah'ın hay olduğu sabit olduğunda, işiten ve gören olduğu gibi konuşan olması da zorunludur. Aksi bir durumun imkânsız olduğunu belirten Eş'arî, Allah'ın konuşmamasının, bunun zıddı olan dilsizlik anlamına geleceğini, bunun ise Allah'ın zâtına yakışmayan bir eksiklik olduğunu ve Allah'ın bu tür noksanlıklardan münezzehe olduğunu vurgular (Eş'arî, 1963: 17-18, 94-96). Eş'arî'ye göre vahiy bağlamında kelâmullah, kelâm-ı lafzî ve kelâm-ı nefsî şeklinde bir ayrımı içermez. O, Allah kelâmının ses, harf veya harici araçlara bağlı bir yapı taşımadığını; bunun, Allah'ın manaları açıklayıp beyan ettiği ilahî bir söz olduğunu belirtir. Eş'arî, Kur'an'ın tedrici olarak nazil olmasının, onun insan idrakine açık bir kitap olduğunu gösterdiğini özellikle vurgular. Ona göre kelâmullah, aynı zamanda ezeli bir manayı da bünyesinde barındırır. Ancak Eş'arî, kelâmullah bağlamında kırâat ile makrû' ve tilavet ile metlûv arasında bir ayrım yapar. Bu nedenle okuma sırasında fonetik olarak ortaya çıkan kırâat ve tilavetin ezeli olduğunu iddia etmek mümkün değildir (Altundağ, 2000: 81).

Eş'arî, kelâmullah'ı bölünmez bir bütün olarak kabul etmiş; emir, nehiy, haber, istihbâr, va'd ve va'id gibi çoğul formlarını, yani kelâmullah'ın nesneleşmiş şekli olan Kur'an'ı (kelâm-ı lafzî) doğrudan kelâmullah'ın özü olarak görmemiştir. "... Allah'ın sözleri bitmez." (Lokmân, 31/27) ayeti de bu durumu destekler. Ayette geçen "kelimetullah" ifadesi; saygı, yüceltme ve tâzim anlamlarını içeren pek çok kelimenin yerini tutar. Çünkü Allah için iki kelâm, iki ilim veya iki kudretin varlığını söylemek mümkün değildir. Bu nedenle Allah, ezeli olarak emreden, yasaklayan ve haber veren bir zâttır (İbn Fûrek, 1987: 66, 327). Eş'arî'ye göre kırâatteki harfler ve sesler, yalnızca kelâmullah'ı temsil eden sembollerdir. Bu bağlamda, Cebrail'in Hz. Peygamber'in kalbine ilettiği şeylerin doğrudan kelâmullah değil, ona işaret eden ifadeler olduğunu ifade eder. Aynı şekilde Kur'an nüshalarından okunan veya yazılan şeylerin de kelâmullah olduğu söylenemez. Bu nedenle kelâmullah, mahiyeti itibarıyla Allah'ın zâtından ayrılarak başka bir yere geçmez. Ancak bu, kelâmullah'ın Allah'ın zâtına ait bir sıfat olduğunu gösterir (İbn Fûrek, 1987: 62-69).

Eş'arî, Allah'ın kelâm sıfatını, ilim sıfatı gibi ezeli ve O'nun zâtıyla kâim bir sıfat olarak değerlendirir. Bu yaklaşım, sıfatların Allah'ın zâtından ayrı mı yoksa zâtıyla kâim mi olduğu yönündeki klasik kelâm tartışmalarında Ehl-i Sünnet'in denge arayışını temsil eder. Ona göre, kelâm sıfatını reddetmek, Allah'ı eksiklik ifade eden bir durumla nitelendirmek anlamına gelir ki, bu durum Allah hakkında düşünülemez. Bu görüş, hem Mu'tezile'nin "Kur'an yaratılmıştır" şeklindeki tezine hem de kelâmullahı sadece lafzî boyutuyla değerlendiren aşırı literal yaklaşımlara karşı bir orta yol olarak değerlendirilebilir. Eş'arî, kelâmullah'ı Allah'ın zâtına ait ezeli bir sıfat olarak konumlandırırken, bunun dünyevi tezahürleri olan ses, harf ve yazıyı ayrı bir kategoride ele alır. Bu yaklaşım, ilâhî kelâmın aşkın boyutunu korurken, onun insani idrak açısından anlaşılabilir olmasını da mümkün kılar. Bu bağlamda, Eş'arî'nin kırâat (okuma) ve tilavet (okunan metin) ile makrû' (okunan kelâm) ve metlûv (okunan şey) arasında yaptığı ayrım, kelâmullah'ın lafzî unsurlarının ezeli olmadığını; ancak bu unsurların Allah'ın ezeli kelâmına işaret ettiğini ifade eder (İbn Fûrek, 1987: 60).

Eş'arî'nin, kelâmullah'ı kelâm-ı nefsî (Allah'ın zâtında mevcut olan kelâm) ve kelâm-ı lafzî (harf ve seslere dayalı ifade) şeklinde ayrı kategorilere ayırmaktan kaçınması, onun kelâmullah'ı bölünmez bir bütün olarak ele aldığını gösterir. Bu yaklaşım, kelâmullah'ın hem ezeli bir mana taşıdığı hem de insan idrakine uygun biçimde indirildiği fikrini barındırır. Aynı zamanda, vahyin mahiyetine ilişkin teorik bir zemin sunarak sonraki dönem kelâm tartışmalarına önemli katkılarda bulunur. Bu yönüyle Eş'arî'nin yaklaşımı, kelâmullah'ın hem metafizik hem de epistemolojik boyutlarını uyum içinde açıklamayı hedefler ve bu konuda büyük bir tutarlılık sergiler.

2. HALKU'L-KUR'ÂN MESELESİ

Halku'l-Kur'ân meselesi, bir dönem kelâm ve tefsir ilimlerinde yoğun biçimde tartışılan konuların başında gelir (Koçyiğit, 1984: 184,187). Eş'arî, yaşadığı dönemin önemli meselelerinden biri olan bu konuya kayıtsız kalmamış; Kur'an'ın mahlûk olmadığını hem ayet ve hadislerle hem de akli delillerle savunmaya çalışmıştır. Bu hususta karşı çıktığı grupların başında, bir dönem kendisinin de mensubu olduğu Mu'tezile ile Kur'an'ın mahlûk olduğunu ileri süren Cehmiye mezhebi gelmektedir.

Halku'l-Kur'ân meselesi, Allah'ın kelâm sıfatıyla bağlantılı olarak ele alınan bir tartışmadır. Mu'tezile'ye göre kelâm, Allah'ın zâtından ayrıdır. Zâtından ayrı olan hiçbir şeyin kadim olamayacağı prensibinden hareketle, kelâmın hâdis ve yaratılmış olduğunu savunmuşlardır. Buna karşılık, Ehl-i Sünnet âlimleri, Allah'ın ezeli bir kelâm sıfatına sahip olduğunu, bu sıfatın O'nun zâtıyla kaim olduğunu ve hiçbir şekilde O'ndan ayrılmayacağını ileri sürmüşlerdir. Kur'an, Allah'ın kelâmı olduğu için onun da ezeli olduğu kabul edilmiştir (Yavuz, 1997: 15/371-375).

Mu'tezile, Kur'an'ın mahlûk olduğunu savunurken bu iddialarını Kur'an'dan delillerle temellendirmeye çalışmış, Eş'arî ise aynı yöntemi izleyerek Kur'an'ın mahlûk olmadığını yine Kur'an ayetlerine dayanarak kanıtlamaya gayret etmiştir. Bununla birlikte, Eş'arî'nin bu meselede delil olarak sunduğu ayetlerin çoğu, bağlamlarından koparılarak ve asıl içeriklerinden bağımsız şekilde yorumlanmıştır. Halku'l-Kur'ân tartışmalarında, tarafların birbirlerini Allah'ın yüceliğine ve aşkınlığına zarar vermekle suçladıkları dikkat çekmektedir. Bu bağlamda, Eş'arî'nin "Kur'an mahlûk değildir" söylemi, kelâmullahı te'vilden koruma çabasının bir yansıması olarak değerlendirilebilir (Görgülü, 2023: 102).

Mu'tezile'nin Kur'an'ın mahlûk olduğu yönündeki ısrarı, bazı ayetleri te'vil ederek daha esnek bir yorum alanı oluşturma çabası olarak değerlendirilebilir. Eş'arî, Allah'ı tevhid ve tenzih amacıyla ayet, hadis ve kıyas gibi yöntemlere başvurarak Kur'an'ın yaratılmamış olduğunu savunurken, Mu'tezile aynı delilleri kullanarak karşıt bir görüşü benimsemiştir. Bununla birlikte, Mu'tezile'nin Allah'ın ezelde mütekellim olmadığını iddia ettiğini söylemek doğru değildir. Tevhid ilkesine dayanan Mu'tezile, Allah'ın bazı sıfatlarını zâtıyla bir kabul ederken, diğer sıfatların hâdis olduğunu ileri sürmüştür. Buna karşın, Eş'arî, Allah'a nispet edilen tüm sıfatların kadim olduğunu savunmayı temel bir prensip olarak benimsemiştir (Görgülü, 2023, s. 270).

Eş'arî'nin Kur'an'ın mahlûk olmadığını ispat sadedinde delil olarak sunduğu ayetlerden biri "Göğün ve yerin emri ile var olması da O'nun varlığının işaretlerindedir..." (Rûm, 30/22) ayetidir. Eş'arî'ye göre bu ayette geçen "Allah'ın emri" ifadesi, O'nun sözü ve kelâmı anlamına gelir. Yerin ve göğün varlık sahasına çıkması, Allah'ın onları var olmaları için kelâmıyla emir buyurmasıyla gerçekleşmiştir; dolayısıyla bu durum, Allah'ın kelâmının ezeli olduğunu işaret eder (Eş'arî, 1987: 72). Ona göre "De ki: Rabbimin kelimelerini yazmak için denizler mürekkep olsa, bir o kadarını da katsak, Rabbimin kelimeleri tükenmeden denizler tükenirdi." (Kehf, 18/109) ayeti de Kur'an'ın yaratılmamış olduğuna işaret eder. Eş'arî, bu ayeti yorumlarken şu görüşleri dile getirir: "Eğer denizler mürekkep olsaydı, onlar tükenir, kalemler kırılırdı; ancak Allah'ın ilmi tükenmediği gibi Rabbimin kelimeleri de tükenmezdi. Sözün tükenmesi, söyleyen için eksiklik ve sessizliğe yol açar. Böyle bir durumun Allah için düşünülemeyeceği açıktır. Bu nedenle O'nun ezeli olarak mütekellim olduğu sonucuna varılır. Allah'ın mütekellim olmaması durumunda, sessizlik ve eksiklik gibi sıfatlara sahip olması gerekirdi; oysa Allah bundan münezzehtir." (Eş'arî, 1987: 73). Bu açıklamalarıyla Eş'arî, Allah'ın kelâm sıfatının sonu veya sınırı olmadığını vurgulamaktadır. Ona göre eğer Allah'ın kelâmı yaratılmış olsaydı, sınırlı ve sonlu olması gerekirdi ki bu, Allah'ın yüceliğiyle bağdaşmaz.

Eş'arî'nin bu konudaki delillerinden biri de müşriklerin Kur'an hakkında sarf ettikleri “*Bu, yalnızca bir insan sözüdür*” (Müddessir, 74/25) ifadesidir. Ona göre, Kur'an'ın mahlûk olduğunu iddia eden bir kişi, aslında müşriklerin Kur'an'ı insan sözü sayan bu sözlerini onaylamış olur. Oysa bu iddia, Allah tarafından açıkça reddedilmiştir. Ayrıca, Allah'ın mahlûkatı yaratmadan önce konuşmayıp daha sonra konuştuğunu kabul etmek, varlıkların Allah'ın emri ve kelâmı olmaksızın meydana geldiğini söylemek anlamına gelir. Bu durumda, Allah'ın yaratılışa “Ol!” emrini vermediği sonucuna ulaşılır ki bu, Kur'an'ı inkâr etmek ve Müslümanların genel kabulünden sapmak anlamına gelir (Eş'arî, 1987: 75, 76).

Eş'arî'ye göre, bir şeyin mahlûk olması durumunda ya bir beden, ya bir şahıs, ya da bir şahsa ait bir sıfat olması gerekir. Ancak Kelâmullah'ın bir şahıs olması imkânsızdır; zira şahıs olsaydı, yemesi, içmesi veya evlenmesi gibi insanlara özgü durumlar söz konusu olurdu ki bu, Allah'ın kelâmı için düşünülemez. Kelâmullah'ın mahlûk olması, onun fânîlik ihtimalini gündeme getirir ve bu da Allah'ın kelâmının ezeli değil, sonlu olduğunu ima eder. Aynı şekilde, Allah kelâmının herhangi bir mahlûkta yaratılmış olması da mümkün değildir; çünkü Kelâmullah, bir şahsın sıfatı gibi düşünülemez. Eğer bir şahısta mahlûk olarak yaratılmış olsaydı, insan kelâmı gibi bir mef'ûl konumunda olurdu ve bu durumda Kelâmullah ile beşer sözü arasındaki farkı ayırt etmek güçleşirdi (Eş'arî, 1987: 73).

Eş'arî'ye göre, “*Bir şeye 'Ol' dediğimizde, o hemen oluverir*” (Nahl, 16/40) ayetinin zahirine bakıldığında, her şeyin “ol” emriyle meydana geldiği anlaşılır. Bu durumda, evrendeki her şeyin kelâmullahtan kaynaklandığı söylenir. Ancak böyle bir anlayış, kelâmullahı mahlûk olmaktan istisna eder. Allah'ın ilmi ezeli ve daimidir; bu nedenle, O'nun kelâmının da sonlu veya zevale uğrayan bir nitelikte olması düşünülemez. Aksi bir durum, kelâmın zıddı olan sükût ve arızî maksatların Allah'a izafe edilmesi anlamına gelir ki bu, ilim sıfatına tamamen aykırıdır. İlimin yanında cehalet, şüphe veya kusur bulunamayacağı gibi, Allah'ın kelâmında da eksiklik düşünülemez. Bu bağlamda, Cehmiyye'nin kelâma sükût ve arıza izafe ederek aşırıya kaçtığını ve hataya düştüğünü ifade eder (Eş'arî, 1987: 15, 16, 74).

Eş'arî, “*Rablerinden kendilerine gelen her yeni hatırlatmayı alaya alarak dinlerler*” (Zümer, 39/45) ayetindeki “zikir” kelimesinin, Kur'an anlamına gelmediğini belirtir. O, burada kastedilenin, Hz. Peygamber'in öğütleri ve tavsiyeleri olduğunu savunur. Buna karşılık, Mû'tezile ise bu ayetteki “zikir”den Kur'an'ı anlamış ve bununla, Kur'an'ın yaratılmış olduğu görüşünü ileri sürmüştür. Eş'arî, Kur'an'ın yaratılmadığını savunarak, ayetteki “zikir”in yalnızca Allah'ın mesajlarının ve öğütlerinin genel anlamını taşıdığını ifade eder (Eş'arî, 1987: 94).

Eş'arî, halku'l-Kur'ân meselesinde kendi görüşünü desteklemek için hadislerden aktardığı rivayetlerde, özellikle Kur'an'ın Allah'ın kelâmı olduğunu ve onun faziletini vurgulayan hadisleri kullanmıştır (Görgülü, 2023: 102) Kur'an'ın yaratılmadığını savunurken, ayet ve hadislerin yanı sıra akli-nazari deliller de sunarak bu görüşünü ispatlamaya çalışmıştır. Bu bağlamda, Allah'ın ezelden beri mütekellim olduğuna ve dolayısıyla kelâmullahın yaratılmadığına dair sunduğu akli delillerden biri şudur:

Eş'arî, kelâmın ya kadîm ya da hâdis olduğunu belirtir. Eğer kelâm hâdis (sonradan yaratılmış) ise, Allah onu ya kendi nefsinde ya da başkasında yaratmak zorunda kalır. Ancak, kelâmın Allah'ın zâtında yaratılması mümkün değildir, çünkü Allah'ın zâtı, hâdis olan şeylere mahal değildir. Ayrıca, kelâm bir sıfat olduğu için, kendisiyle kaim olamaz. Başkasında yaratılması da imkânsızdır, çünkü eğer kelâm başka bir varlıkta yaratılmış olsaydı, bu varlığa ve bu sığata bir isim verilmesi gerekirdi. Bu da kelâmın doğasına aykırıdır. Kelâm sıfatının en belirgin özelliği konuşmaktır. Eğer kelâm bir cismin üzerinde tecelli ederse, o zaman bu cismin konuşan (mütekellim) olması gerekir. Eğer kelâmın özelliği emir ise, bu cismin emir veren (âmir) olması, eğer nehiy yani yasaklama ise, bu cismin yasaklayan (nâhi) olması gerekirdi. Ancak

Allah'ın kelâmıyla başka birinin konuşması, O'nun emriyle başka birinin emir vermesi, ya da O'nun nehyi ile başkasının yasaklama yapması imkânsızdır. Bu sebeple, kelâm sıfatının başka bir varlıkta yaratılması ve onun mütekellim olması mümkün değildir. Dolayısıyla, kelâmın hâdis olmasına neden olan tüm gerekçeler geçersiz olduğundan, kelâmın kadim olduğu ve Allah'ın ezelden beri kelâmıyla mütekellim olduğu anlaşılır (Eş'arî, 1953: 22).

Eş'arî, kelâm sıfatının ezeliğini, ilim sıfatının ezeli oluşuna dayandırarak savunur. Ona göre, Allah'ın bu sıfatlarını ezeli kabul etmemek, Allah'ın ezelde bu sıfatların zıddı ile nitelenmesini gerektirir. Ancak Allah, ilim ve kelâm gibi sıfatların zıddıyla asla vasıflanamaz. Eğer kelâm sıfatının yaratılmış olduğunu kabul edersek, Allah'ın mütekellim olmadığı iddia edilmiş olur ki, bu da Allah'ın ilminin yaratılmış olduğunu ve dolayısıyla O'nun âlim olmadığını savunmakla eşdeğerdir ki bu da yanlıştır. Allah'ın ezeli âlim oluşunun aksine, O'nun ilminin ezeli olmadığı kabul edilirse, bir dönemde O'nun bilgisiz olduğu kabul edilmesi gerekir. Aynı şekilde, kelâm sıfatının ezeli olmadığı varsayılırsa, O'nun bir dönemde suskun olduğu düşünülmelidir. Ancak, bilgisizlik ve suskunluk Allah'ın sıfatlarının mükemmelliğine zıt olduğundan, O'nun ilim ve kelâm sıfatlarının zıddı ile vasıflanması imkânsızdır. Bu nedenle, tıpkı ilim sıfatının ezeli olması gerektiği gibi, kelâm sıfatının da ezeli olması gerekir. (Eş'arî, 1953: 17; 1987: 74).

Kur'an'ın mahlûk olduğunu gösteren açık bir nass bulunmamaktadır. Dolayısıyla Mû'tezile'nin delil olarak sunduğu naslardan, Kur'an'ın yaratılmış olduğu sonucuna varılamaz. Aynı şekilde, Eş'arî'nin nassa dayalı delillerinin de Kur'an'ın yaratılmamış olduğuna dair kesin bir kanıt sunduğu söylenemez. Çünkü bu ve benzeri nasların, farklı anlayışların desteklenmesi amacıyla öne sürüldüğü görülür (Güneş, 2003: 582).

Sonuç olarak, Eş'arî ve Kur'an'ın yaratılmadığını savunan diğer Ehl-i sünnet âlimlerinin, Kur'an'ın mahlûk olduğu görüşünü savunanlarla genellikle aynı delilleri kullandıkları gözlemlenir (Görgülü, 2023:106). Bu durum, Eş'arî'nin, Kur'an'ın yaratılmış olduğunu savunan akılcılarla, Kur'an'ın ezeli olduğunu savunan nakilci görüşleri bir noktada uzlaştırma çabası olarak anlaşılabilir. Ayrıca, Eş'arî'nin öğrencilerinin, kelâm-ı nefsî ile kelâm-ı lafzîyi daha belirgin bir şekilde birleştirme yönünde hareket etmeleri, bu kadim soruna bir çözüm bulma çabasının bir parçasıdır (Cedan, 1997: 39).

Görüldüğü gibi Eş'arî, Kur'an'ın yaratılmamış olduğu düşüncesini, Allah'ın kelâm sıfatını ilim sıfatıyla ilişkilendirerek hem naklî hem de aklî delillerle temellendirmiştir. Ona göre, kelâm sıfatının yaratılmış olduğunu kabul etmek, Allah'ın bir dönem bu sıfattan yoksun olduğunu ima eder ki bu, Allah'ın kemal sıfatlarıyla bağdaşmaz. Aynı akıl yürütme, ilim sıfatı için de geçerlidir. Halku'l-Kur'ân meselesinde Eş'arî ve muhaliflerinin ileri sürdüğü nasların, meseleyi kesin bir sonuca ulaştırdığı söylenemez; çünkü aynı metinler, farklı kavramsal çerçevelerde farklı şekillerde yorumlanmıştır. Bu bağlamda, Eş'arî ve takipçilerinin kelâm-ı nefsî ve kelâm-ı lafzî ayrımını geliştirmeleri, bu tartışmayı anlamlandırma ve çözüme kavuşturma çabasının bir ürünü olarak değerlendirilebilir. (bk. Görgülü, 2023:106-108)

3. BİR TEŞRİ KAYNAĞI OLARAK KUR'AN

Müslümanlar için Kur'an'daki hükümlerle amel etmek farzdır ve bir konuda hüküm arandığında, o konuda açık bir hüküm bulunduğu sürece başka bir delile başvurmak doğru değildir. Çünkü İslam inancına göre Kur'an, Allah'ın kelâmıdır; engin hikmet sahibi, en yüce övgülere layık olan Allah tarafından indirilmiştir. Allah, Kur'an'ı insanları doğru yola ve hakikate yönlendirecek bir rehber olarak göndermiştir (Şaban, 1996: 62-63)

Eş'arî'ye göre hüküm koyma yetkisi yalnızca Allah'a aittir ve hüküm kaynağı da O'nun ilahi hitabı olan Kur'an'dır. O, bu görüşünü desteklemek için şu ayeti delil getirir: “*Çünkü o Kur'an, eşsiz bir kitaptır. Hiçbir yönden ona yanlış karışmaz. O, her işinde hikmet bulunan ve her türlü*

övgüye layık olanın katından indirilmiştir” (Fussilet, 41/42). Eş’arî, Allah’ın Kur’an ve Hz. Peygamber aracılığıyla şeriat, ahkâm, helal ve haramı öğrettiğini belirtir. Allah, Kur’an’la insanlara doğru yolu göstermiş ve ona uyanların kurtuluşunu müjdelemiştir. Eş’arî’ye göre Kur’an, önceki ve sonraki tüm bilgileri içinde toplamış ve farzları, dini hükümleri tamamlamıştır (Eş’arî, 1987: 35).

Eş’arî, her hadisenin hükmüne dair doğrudan bir nas bulunmadığını ifade eder. Ona göre, bir olayın hükmüne ulaşmak için dört temel kaynak vardır: Kitap, sünnet, icma ve kıyas. Kitap, muhkem ve müteşabih olmak üzere ikiye ayrılır. Eş’arî’ye göre, nas, ifadesinin (ibaresinin) zahiri anlamı üzerinden bir hükme delalet eder. Bu delalet, bazen tek bir anlamı ifade eder ve başka bir yoruma yer bırakmaz. Diğer zamanlarda ise farklı anlamlar mümkün olsa da, en güçlü delalet edilen anlam tercih edilir. Bu durumda, diğer ihtimallere göre en açık olan anlam seçilir (İbn Fûrek, 1987: 19, 23, 190-192).

Eş’arî, Kur’an’daki ifadelerin, lafzın zahiri anlamının dışında başka anlamlara hasredilmesi durumunda bunun ancak sağlam bir delille mümkün olduğunu belirtir. (Eş’arî, 1987: 112; 1953a: 35). Ona göre, lafızlardaki emir biçimleri, emredilen şeyin zorunlu olduğu anlamına gelmez. Aynı şekilde, bir yasak da kendiliğinden harama işaret etmez. Emredilen bir fiilin zorunlu olup olmadığı, bu fiile dair belirli bir delille anlaşılabilir. Emir, hem ortaya konmadan önce hem de ortaya konduğu anda, emredilen şeyle ilgili bir bağ kurar (İbn Fûrek, 1987: 197).

Eş’arî Kur’an’dan sonra ikinci önemli hüküm kaynağının Hz. Peygamber’in sünneti olduğunu söyler. Çünkü Allah, Kur’an’da Hz. Peygamber’in sünnetine uymamızı teşvik ederek şöyle bulunmuştur: “Peygamber size neyi verirse onu alın, sizi neden menederse ondan da uzak durun...” (Haşr, 59/7). “... Dolayısıyla Peygamber’in emrine aykırı hareket edenler, başlarına bir felaketin gelmesinden veya can yakıcı bir azabın isabet etmesinden sakınsınlar.” (Nûr 24/63). “O kendi arzusuna göre konuşmaz, söyledikleri kendisine vahyolunan bir vahiyden ibarettir.” (Necm, 53/3-4). O “Anlaşamadığınız şeyin hükmünü Allah’a bırakın...” (Şûrâ 42/10) ayetini “Allah’ın kitabına ve Peygamber’in sünnetine başvurun” şeklinde yorumlayarak sünneti bu ayetin hükmünün içinde yer aldığını belirtir. Ayrıca, “Allah’a ve Resulü’ne itaat edin” ifadesiyle, Allah’ın hem kendisine hem de Resulü’ne itaat edilmesini emrettiğini ifade eder. Dolayısıyla Allah Teâlâ, Kitaba uymayı emrettiği gibi, Peygamber’in sünnetine sarılmayı da öğütlemiştir. Eş’arî, sünnete karşı çıkanları ve ona uymayanları sert bir biçimde eleştirir, bu kişilerin doğru yoldan sapmış olduklarını söyler (Eş’arî, 1987: 36).

Eş’arî, Hz. Peygamber’in fiillerinin bağlayıcılık açısından farklılık gösterdiğini ifade eder. Ona göre, Peygamber’in bir fiili gerçekleştirmiş olması, her durumda ona uymayı zorunlu kılmaz, çünkü bazı fiiller sadece ona özgü olabilir. Ayrıca, Hz. Peygamber’in bir şeyi terk etmesi de aynı şekilde değerlendirilir; çünkü bir şeyin terk edilmesi, genellikle onun zıddını yapmak anlamına gelir. Eş’arî’ye göre, Hz. Peygamber’e atfedilen sünnet, farklı hükümlere sahiptir ve bunlar yasak/haram, vücûb, mendup ve ibâha gibi kategorilere ayrılır. Bu bağlamda, emredilen şeyler "onun sünneti" olarak kabul edilir (İbn Furek, 1987: 24, 192, 193).

Görüldüğü gibi Eş’arî’nin düşünce sisteminde, hüküm koyma yetkisi mutlak surette Allah’a ait olup, dinî hükümlerin anlaşılması ve uygulanmasında Kur’an’ın birincil kaynaktır. Sünneti Kur’an’dan sonra ikinci kaynak olarak konumlandıran Eş’arî, Hz. Peygamber’in fiillerinin bağlayıcılığını farklı kategorilerde ele alır ve dört temel kaynak (Kur’an, Sünnet, icmâ, kıyas) üzerine inşa ettiği metodolojisiyle hem geleneksel değerleri muhafaza eden hem de yeni durumlara uyum sağlayan bir sistem geliştirmiştir.

4. AKIL-NAKİL İLİŞKİSİ

Eş’arî’nin düşüncesinin gelişiminde, hayatındaki farklı dönemlerin önemli bir rolü vardır. Bu nedenle, onun akıl ve nakil ilişkisine dair görüşlerini iki aşamada incelemek uygun olacaktır.

İlk aşama, Mû'tezile'den ayrıldıktan sonra yazdığı *el-İbâne* adlı eseriyle başlayan dönemi, ikinci aşama ise kelâmı savunma amacıyla kaleme aldığı *İstihsân* ve *el-Lüma*'yı yazdığı evreyi kapsar. Eş'arî, hayatının büyük bir bölümünde Mû'tezile'nin ilkelerini savunmuş, ancak zamanla bu mezhepten ayrılarak yeni bir ekolün ortaya çıkmasına öncülük etmiştir. Eş'arî, dönüşümünün ilk günlerinde içinde bulunduğu toplumun siyasi ve sosyal olaylarının etkisiyle geçmişteki Mû'tezile etkilerinden sıyrılmak istemiş ve Hanbeli ekolüne yakın bir söylem geliştirmiştir (Görgülü, 2015: 148, 149). O, bu dönemde kaleme aldığı *el-İbâne* adlı eserinin girişinde, yöntem olarak Kur'an, sünnet, sahabe, tabiin ve hadis imamlarının rivayetlerine dayandığını belirterek, Ahmed b. Hanbel'e olan bağlılığını ve onun görüşlerini benimsediğini ifade etmiştir. Ayrıca, akli te'vil yöntemini benimseyen Mû'tezile'yi, hak yoldan sapmak ve ehl-i hadis çizgisinden ayrılmakla suçlamıştır (Eş'arî, 1987: 42, 43).

Eş'arî, *el-İbâne* eserinde ağırlıklı olarak ehl-i hadîs perspektifini benimsemiş ve akli çözüm önerileriyle itikadi meseleleri ele alan kelâmcılara sert eleştirilerde bulunmuştur. Bu başlangıçtaki tutumu, akıl ve nakil arasındaki dengenin zamanla nakil lehine kaymasına neden olmuştur. Eş'arî, itikâdî temel ilkeleri belirlerken büyük ölçüde Ahmed b. Hanbel'in görüşlerinden etkilenmiş, ancak aynı zamanda nakli akılla destekleyen bazı görüşlere de yer vermiştir. Bu dönemde, İbn Küllâb, Muhâsibî ve Kalânîsî gibi kelâmcıların fikirlerini benimseyerek bir yol izlemiş, aynı zamanda kendi özgün kelâm sistemini oluşturmaya başlamıştır (Görgülü, 2015: 150). Bu nedenle, Eş'arî'nin *İbâne*'li döneminde itikâdî meseleleri açıklarken sadece nasslara dayandığını ve akli göz ardı ettiğini ileri sürmek ya da itikadi konuların izahında aklın kullanımını yasakladığını söylemek yanıltıcı olur. O, ehl-i hadîs düşüncesini benimsediği ilk döneminde, çok fazla te'vil yoluna gitmemiş ve müteşâbih âyetlerin yorumlanmasını doğru bulmamıştır. Ayrıca, Mû'tezile ve Cehmiyye'nin tamamen akli te'vil yöntemine dayanan yorumlarını da hatalı bularak şiddetle eleştirmiş, hatta halku'l-Kur'an meselesindeki görüşleri nedeniyle bu grupları tekfirle itham etmiştir (Eş'arî, 1987: 86).

İrfan Abdülhamid gibi konuyla ilgili araştırmalar yapan bazı bilim insanları, dönemin şartlarının Eş'arî üzerinde önemli bir etkisi olduğunu ifade etmektedir. Bu bağlamda, Eş'arî'nin başlangıçta, İslâm düşüncesinde merkezi bir yer edinmek ve güven kazanmak amacıyla ıslahçı bir yaklaşım benimsemiş olduğunu, ardından kendisine gerekli itimat sağlandıktan sonra çalışmalarının ikinci aşamasına geçtiğini belirtirler. Abdülhamid'e göre, Eş'arî bu aşamada dinî inançlarla ilgili akli delillerin dinle ne kadar uyumlu olduğunu tespit etmeye yönelik bir değerlendirme yapmıştır (Abdülhamid, 1981: 149).

Eş'arî, Mû'tezile'den ayrıldığı ilk dönemde üzerinde belirgin olan Hanbelî etkisinin azalmasının ardından *Risâle fî İstihsâni'l-Havz fî 'İlmi'l-Kelâm* adlı eserini yazmıştır. Bu eseriyle Eş'arî, akıl ve nassın hükümlerini birleştirmeyi hedeflemiş ve dönemin aşırı uçları arasında bir denge kurmaya çalışmıştır (Eş'arî, 1953b: 88-95) Bu bağlamda, söz konusu eserinde Eş'arî, akıl ve naklin birlikte kullanılmasının gerekliliğini özellikle vurgulamıştır.

Eş'arî, Hz. Peygamber'den sonra ortaya çıkan ve doğrudan nasla belirlenmemiş birçok meseleyi, hem sahâbenin hem de sonraki Müslümanların tartıştığını ifade eder. Bu tür meselelerde, nas bulunmamasına rağmen, Müslümanlar Kur'an ve Sünnet'teki benzer hükümlere kıyas yaparak içtihatla çözüm aramışlardır. Eş'arî, bu yaklaşımıyla, her sorunun çözümü için doğrudan bir nassın bulunmasının mümkün olmadığını ve bu nedenle akli çabalarla yapılan kıyas ve içtihadın gerekliliğini vurgular. Eş'arî'ye göre dinî sorunların çözümü vahiyle belirlenen dinî ilkelere dayanmalıdır. Akli meselelerin hükmü ise kendi alanına bırakılmalıdır. Ona göre akli konular nakli konularla, nakli konular da akli konularla karıştırılmamalıdır (Eş'arî, 1953b: 95).

Eş'arî, *İstihsân* adlı risâlesinde, nazar ve istidlâle karşı çıkanları eleştirir ve onlara mantıklı cevaplar sunar. Ayrıca, akli incelemenin geçerliliğini savunurken muhataplarını dengeli bir

yaklaşım benimsemeye davet eder. O, kelâmî konuların hem Kur'anî hem de nebevî temellere dayandığını vurgular ve Allah'ın varlığı, birliği, âlemin yaratılışı, öldükten sonra dirilme gibi meseleleri, hem âyetlerle hem de akli istidlâllerle ispatlamaya çalışır. Kur'an'daki âyetlerin insanları akli düşünmeye teşvik ettiğini belirten Eş'arî, bu bağlamda “*Eğer yerde ve gökte Allah'tan başka tanrılar olsaydı, yer ve göğün dengesi bozulurdu...*” (En'âm, 21/22) ayetini örnek olarak sunar. Eş'arî'ye göre bu ayet, Allah'ın birliğini ve ortağının olmadığını açıkça ifade eder. Bu görüşlerden hareketle, Eş'arî'nin aklın kullanımına karşı olmadığı, aksine imanın aklen anlaşılmasının zorunlu olduğunu savunduğu söylenebilir (Eş'arî, 1953a: s. 82).

Eş'arî, hayatının sonlarına doğru yazdığı ve önemli eserlerinden biri olarak kabul edilen *el-Lüma*'da, itikadi meseleleri *el-İbâne*'de kullandığı üslup ve yöntemden farklı bir şekilde ele alır. *İstihşân*'da olduğu gibi bu eserde de akla büyük önem verir, konuları açıklarken akli deliller sunar ve nazari düşünceyi ön planda tutar. O bu eserinde Ahmed b. Hanbelî'nin metodunu izlemez ve onun adını zikretmez. Meseleleri farklı bir yaklaşımla ele alır ve inceler. Aynı zamanda nazar ve istidlâli reddeden, bu yöntemi bidat olarak gören Hanbelî anlayışını da eleştirir; isim vermeden bu görüşlere karşı göndermelerde bulunur (Eş'arî, 1953a: 6-9, 38-42).

Eş'arî, *el-Lüma* adlı eserinin başlarında, Allah'ın varlığını ve birliğini akli delillerle ispatlamaya çalışır. Allah'ı her türlü cismanilikten ve yaratılmış varlıklara benzemekten arındırır. Eserinde zaman zaman karşılaştırmalar yaparak meseleleri akli bir zemine oturtmaya gayret eder. Eş'arî'ye göre Allah'ın varlığını kavrayabilmek için insanın hangi maddelerden yaratıldığını ve bir damla sudan nasıl mükemmel bir varlık haline geldiğini düşünmesi yeterlidir. İnsan, bu oluşum sürecini kendi bilgi ve iradesiyle gerçekleştiremediği için, Allah'ın varlığını akıl yoluyla ispatlamaya çalışır. Bu durumda, insanı yaratan, yaşatan ve ölümüne hükmeden bir irade ve kudret sahibi bir varlık olmalıdır; o da Allah'tır (Eş'arî, 1953a: 6-10). Eş'arî'ye göre, akıl tek başına Allah'ın hükmünü anlamaya yeterli değildir ve bu nedenle vahye ihtiyaç duyar. Akıl yalnızca bir araçtır ve vahiy olmadan dinin hükümlerini belirleyemez. Akıl, gayb âlemi ve sem'î konularda yanlılabılır ve bu tür meseleleri doğru bir şekilde kavrayamayabilir. Bu yüzden Peygamber'in bildirdiği vahye muhtaçtır. Vahiy, akli doğru yolda yönlendirir ve akıl da vahiy doğrular ve kabul eder. Eş'arî akli, naklin belirlediği hükümleri kabul eden ve onaylayan bir kaynak olarak görür ve nakil karşısında akla ikincil bir rol verir (Görgülü, 2015: 151).

Netice olarak Eş'arî'nin İslâm düşüncesindeki önemi, Mü'tezile'nin akılcı yaklaşımını terk edip, Kur'an'ın zâhirî anlamlarını öne çıkaran ehl-i hadîs anlayışını benimsemesi ve bu görüşün akli temellerini atmasıyla ortaya çıkar. Eş'arî'nin düşünsel dönüşümü, yeni bir yorum yöntemi geliştirmektense, önceki hadis taraftarlarının inançlarını akılcı bir şekilde temellendirip kanıtlama çabasına dayanır (Görgülü, 2015: 155). Özetle, Eş'arî'nin akıl ve nakil konusunda orta bir yol izlediği söylenebilir. O, ne Mü'tezile gibi sadece akılcı bir yaklaşımı benimsemiş, ne de dinî meselelerde sadece nakli kabul edip akli reddeden yaklaşımlara yönelmiştir. Ancak bazı araştırmacılar onun görüşlerini zaman zaman akıldan, bazen de nakilden sapma olarak değerlendirmiş ve bu durum eleştirilmiştir.

SONUÇ

Ebü'l-Hasan el-Eş'arî'nin Kur'an anlayışı ve ona teşrî kaynağı olarak yaklaşımı, İslam düşünce tarihinde önemli bir dönüm noktasını temsil etmektedir. Eş'arî, Mü'tezile ekolünden ayrılarak, Kur'an'ın Allah'ın ezeli ve yaratılmamış kelâmı olduğunu savunmuş ve bu bakış açısıyla İslam'ın teolojik çerçevesinde önemli bir yer edinmiştir. Onun Kur'an'a yaklaşımı, vahiy ve akıl arasındaki dengeyi vurgulamış, vahyin üstünlüğünü kabul ederken akli da belirli bir sınırdan, vahye tabi bir araç olarak görmüştür. Bu yaklaşım, Ehl-i sünnet inanç sisteminin temel taşlarını şekillendirerek, Kur'an'ın teşri kaynağı olarak işlevini ve toplumsal hayattaki rolünü daha net bir şekilde ortaya koymuştur. Eş'arî'nin geliştirdiği bu yöntem, hem Mü'tezile'nin aşırı akılcı yorumlarına hem de katı literalist yaklaşımlara karşı dengeli bir alternatif sunmuştur. Onun

Kur'an'ı Allah'ın ezeli kelâmı olarak konumlandırması ve bunu sistematik bir teolojik çerçeveye oturtması, sonraki dönem İslam düşüncesini derinden etkilemiştir.

Eş'arî'nin halku'l-Kur'ân meselesindeki tutumu, onun düşünce sisteminin önemli bir boyutunu oluşturur. Kur'an'ın yaratılmamış olduğu görüşünü hem naklî hem de aklî delillerle temellendirmesi, onun metodolojisinin karakteristik bir örneğidir. Bu yaklaşım, kelâm-ı nefsi ve kelâm-ı lafzî ayrımının gelişmesine zemin hazırlamış ve İslam düşüncesinde önemli tartışmalara yol açan bu meselenin daha sistematik bir çerçevede ele alınmasını sağlamıştır.

Teşrî kaynağı olarak Kur'an'a yaklaşımında Eş'arî, vahyin mutlak otoritesini vurgularken, aklın rolünü de tamamen reddetmemiştir. Kur'an'ı birincil kaynak olarak konumlandırmış, ancak onun anlaşılması ve yorumlanmasında aklın işlevini de kabul etmiştir. Eş'arî'nin düşünce sistemindeki en dikkat çekici yönlerinden biri, akıl-nakil ilişkisine dair geliştirdiği dengeli yaklaşımdır. Hayatının ilk dönemlerinde bu dengenin farklı yönlere kaydığı görülse de, sonraki süreçte akıl ve nakil arasında kurmaya çalıştığı uyum, İslam düşüncesinde kalıcı bir etki bırakmıştır. Sonuç olarak, Eş'arî'nin Kur'an'a yaklaşımı ve onu bir teşrî kaynağı olarak ele alış biçimi, İslam düşüncesinde orta yolu temsil eden, aşırılıklardan uzak, tutarlı ve sistematik bir metodoloji sunmaktadır.

RADIOFREQUENCY ABLATION (RFA) TREATMENT IS AN EFFECTIVE METHOD FOR VENOUS STASIS ULCERS

Fatih ADA

Assoc. Prof. Dr., Sivas Cumhuriyet University, Faculty of Medicine, Department of Cardiovascular Surgery

ABSTRACT

Venous Stasis Ulcers (VSUs) are wounds that develop as a result of chronic venous insufficiency (CVI), typically affecting the lower extremities. These ulcers are characterized by prolonged healing times and a tendency to recur. The pathophysiology of VSUs involves venous hypertension and venous reflux, leading to impaired tissue oxygenation and microcirculatory dysfunction. Traditional management strategies for venous diseases include compression therapy, topical wound care, and surgical interventions. In recent years, Radiofrequency Ablation (RFA) has emerged as an effective treatment option for venous insufficiency. The primary contributing factor to the development of venous stasis ulcers is the elevated venous pressure and consequent venous reflux. RFA is a minimally invasive technique designed to eliminate venous reflux by applying controlled radiofrequency energy to the vessel walls, thereby occluding the veins. This procedure helps normalize venous pressure, which, in turn, accelerates the healing of venous ulcers. RFA is an endovenous procedure in which radiofrequency energy is delivered via a radial guide catheter to heat the inner walls of the vein. This process results in endothelial damage and subsequent closure of the vein, restoring proper blood flow. The veins most commonly treated with RFA include the great saphenous vein, which, when occluded, resolves venous reflux. Several clinical studies have demonstrated that RFA not only improves venous disease but also significantly accelerates the healing of venous stasis ulcers. The effectiveness of RFA in treating venous stasis ulcers has been consistently supported by research, with studies showing that the closure of venous reflux leads to higher ulcer healing rates. In various studies, patients treated with RFA experienced faster ulcer healing and a lower recurrence rate. Moreover, significant improvements in patients' quality of life have been reported post-treatment. After RFA, when combined with compression therapy, reductions in leg edema and pain were observed, and the overall healing process was expedited. One of the major advantages of RFA is its minimally invasive nature, with a shorter hospitalization period. Recovery time is typically brief, allowing patients to resume normal activities within a few days following the procedure. However, the success of RFA is dependent on accurate vein targeting during the procedure, effective use of the device, and the patient's overall health condition. Additionally, RFA is most effective for veins with an appropriate diameter and is primarily targeted at larger venous structures, meaning that it may not be suitable for all patients. Radiofrequency Ablation (RFA) stands out as an effective method for treating venous stasis ulcers. By optimizing the treatment of venous insufficiency, RFA lowers venous pressure and accelerates ulcer healing. With its minimally invasive nature, short recovery times, and high efficacy, RFA offers a robust alternative to traditional treatment methods. The growing scientific support for RFA suggests that its role in the treatment of venous stasis ulcers will continue to expand, with future research expected to further clarify its long-term outcomes and effectiveness across diverse patient populations. In this study, we compiled data from 7 patients diagnosed with venous stasis who underwent RFA treatment between July 2023 and November 2024. During this period, a total of 76 patients received RFA treatment, 7 (9.2%) of whom had venous stasis ulcers. At the one-month follow-up after treatment, none of the patients had residual venous stasis ulcers, and no recurrences were observed during this time.

Keywords: chronic venous insufficiency, venous reflux, varicose veins, venous stasis ulcer, wound, radiofrequency ablation therapy

Introduction

Chronic venous insufficiency (CVI) is a condition that arises due to the inability of venous vessels to perform their normal functions. Venous insufficiency leads to blood pooling in the lower extremities and impaired circulation, which over time results in various symptoms and complications. This

condition is particularly associated with leg swelling, pain, varicose veins, and skin changes. In more advanced stages, it can progress to venous ulcers (stasis ulcers), which, if left untreated, may lead to serious health complications (1). Stasis ulcers typically occur in the lower parts of the legs, in areas where venous circulation is compromised. These ulcers cause permanent lesions on the skin, significantly diminishing the quality of life of affected individuals. The primary cause of CVI is the dysfunction of venous valves, which fail to prevent the backward flow of blood, leading to venous pooling. Consequently, venous hypertension develops, adversely affecting tissue perfusion and creating a predisposition to stasis ulcer formation (2). The treatment of chronic venous insufficiency and stasis ulcers varies based on the stage of the disease, the severity of symptoms, and the size of the ulcer. Early diagnosis and intervention are crucial for preventing complications and improving patients' quality of life. Treatment options include compression therapy, wound care techniques, surgical interventions, and pharmacological therapies (3). This study focuses on the outcomes of radiofrequency ablation (RFA) treatment for stasis ulcers associated with chronic venous insufficiency.

Method

Our study is a retrospective analysis of 76 patients who underwent radiofrequency ablation (RFA) surgery for chronic venous insufficiency between July 2023 and November 2024. The gender distribution of patients who developed stasis ulcers was similar. None of the patients experienced revascularization or recurrence. Almost all of the patients also underwent simultaneous phlebectomy. The group without ulcers was numerically larger and mostly consisted of patients with C3 CEAP stage disease. The majority of patients in the non-ulcer group were women. In both groups, nearly all patients were operated under spinal anesthesia. The demographic data, operative details, and follow-up data of the patients are summarized in Table 1.

Table 1: Demographic data of patients and information about the operation

	Nonulcerative Chronic Venous Insufficiency (n=69)	Ulcerative Chronic Venous Insufficiency (n=7)
Age (mean, years)	48,6 (\pm 12,8)	42,4 (\pm 14,6)
Sex		
Male (n, %)	20 (28.9%)	4 (57.1%)
Female (n, %)	49 (71.1%)	3 (42.9%)
Tobacco use (n, %)	26	3
CEAP sınıflama		
C2 (n, %)	10 (14.4%)	0
C3 (n, %)	52 (75.3%)	0
C4 (n, %)	5 (7.2%)	0
C5 (n, %)	2 (2.9%)	0
C6 (n, %)	0	7 (100%)
Anesthesia		
General (n, %)	5 (7.2%)	0
Spinal (n, %)	64 (92.8%)	7 (100%)
Concomitant phlebectomy (n, %)	66 (95.6%)	5 (71.4%)
Recanalization/recurrence (n, %)	2 (2.8%)	0

Discussion

Stasis ulcers related to varicose veins are among the most common complications of chronic venous insufficiency (CVI) and, if left untreated, can significantly reduce patients' quality of life. Stasis ulcers typically occur in the lower extremities as a result of venous hypertension, leading to persistent inflammation, damage, and permanent ulcers on the skin (4). This section aims to evaluate current treatment strategies for stasis ulcers related to varicose veins, addressing medical treatment, compression therapy, surgical approaches, and their efficacy. Medical treatment is an essential initial step in the management of stasis ulcers. This treatment typically involves the use of topical antibiotics and wound-healing agents. Topical treatment helps reduce the risk of infection and supports wound healing. Additionally, systemic treatments aimed at managing venous insufficiency may also be used. Flavonoid-based medications can enhance venous tone, improving blood flow, which may accelerate ulcer healing (5). However, medical treatment alone is often insufficient, as it does not directly target the effects of venous hypertension. Compression therapy is the first-line treatment for stasis ulcers associated with varicose veins. Compression stockings promote venous return, support vessel walls, and reduce the effects of venous hypertension. Studies have shown that compression therapy accelerates the healing process of stasis ulcers and reduces recurrence rates (6). However, compression therapy can be challenging for some patients due to the need for compliance. The effectiveness of compression therapy increases with proper use of the stockings and regular monitoring of the patients' skin condition. Surgical treatment options come into play in more advanced stages of stasis ulcer management. Open varicose vein surgery involves the surgical removal of varicose veins and the mechanical correction of venous insufficiency. Open surgery is generally preferred in cases of large varicose veins and when other treatment methods have proven inadequate (7). However, open surgical intervention may be more challenging due to the risk of complications and the patient's recovery time. Radiofrequency ablation (RFA) has gained popularity in recent years as a minimally invasive method for varicose vein treatment. RFA uses heat energy to destroy enlarged veins, redirecting blood to healthier vessels. This treatment is characterized by low complication rates and rapid recovery times (8). In our study, we demonstrated that RFA is an effective method at all stages of varicose veins and can be safely used in patients with stasis ulcers. Other surgical options include laser therapy and sclerotherapy. Laser therapy destroys varicose veins with laser beams, while sclerotherapy involves the injection of sclerosing agents into the veins to cause them to close. These methods are minimally invasive and are often preferred for aesthetic concerns and small veins (9). However, these techniques also have limitations and may not be suitable for every patient. In conclusion, multiple treatment options are available for stasis ulcers related to varicose veins. Medical treatment, compression therapy, and surgical methods can be used in combination, depending on the patient's condition and response to treatment. Each treatment method has its advantages and limitations, so the treatment plan should be personalized to meet the specific needs of the patient.

Conclusion

Radiofrequency ablation (RFA) is an effective treatment method for both chronic venous insufficiency (CVI) and stasis ulcers secondary to CVI. Factors such as short hospital stays, minimal invasiveness, early return to normal life, absence of scarring after surgery, and relatively low complication risk make RFA treatment a more favorable option. In patients with stasis ulcers, RFA can be safely and comfortably applied as long as the diameter of the saphenous vein permits. RFA treatment should be considered as a primary option even in patients who have developed stasis ulcers, provided they are suitable candidates.

ÖZET

Kökünü, Yahudi inancındaki vadedilmiş topraklar hayaline dayanan ve 1799 yılında, Fransız General Napolyon Bonaparte'nin, Osmanlı yönetimindeki Filistin'de bir Yahudi devleti kurulması fikrini ortaya atmasıyla başlayan ve son olarak 1948 yılında, işgal edilen Filistin topraklarında bir İsrail devletinin kurulmasıyla had safhaya ulaşan Filistin-İsrail olayları; tam 76 yıldır katliam ve direniş ekseninde artarak devam etmektedir. Bu süreçte, özellikle 7 Ekim 2023 tarihinde başlayan Aksa Tufanı ile birlikte; Filistin topraklarında on binlerce insan katledilmiş, ülkenin her tarafı yıkılıp tarumar edilmiş ve buna eş olarak da bu bir yıl içerisinde, Filistin sağlık hizmetleri, neredeyse tamamen yok olma durumuna getirilmiştir.

Bireyin ve toplumun; fiziksel, ruhsal ve sosyal yönden tam bir iyilik haline ulaşabilmesi için sunulan koruyucu, tedavi edici, rehabilite edici ve sağlığın geliştirilmesine yönelik hizmetlerin tamamına sağlık hizmetleri adı verilmektedir. İnsan hayatının temel ihtiyaçlarından olan beslenme ve güvenlik ihtiyaçları gibi, sağlık hizmetleri de bir toplum için olmazsa olmaz ihtiyaçlar listesindedir. Özellikle teşhis, tetkik ve tedavinin gerçekleştirildiği tedavi edici sağlık hizmetlerinin varlığı; bir savaş esnasında, yoğun bombardıman altında yaralanan insanların tedavi süreçleri açısından son derece önemlidir ve böyle bir savaş durumunda, içerisindeki hasta ve yararlılarla birlikte sağlık tesislerinin vurulması, savaş ve insanlık suçu olarak nitelendirilmektedir.

Bu çalışmanın amacı; 7 Ekim 2023 tarihinden itibaren Filistin-İsrail arasında başlayan Aksa Tufanı savaşı öncesi ve sonrasında Filistin sağlık hizmetlerinin durumunu ortaya koymak ve bu bağlamda değerlendirmelerde bulunmaktır. Çalışmada, konuyla ilgili literatür taraması gerçekleştirilmiştir. Sonuç olarak; son bir yılda, Filistin'in yalnızca Batı Şeria bölgesinde doğrudan sağlık hizmetlerine yönelik 286 hava saldırısı gerçekleştirilmiştir. Yine Gazze'deki 36 hastaneden yalnızca 17 tanesi kısmen hizmet sunumuna devam etmektedir. Bu bağlamda, İsrail saldırılarının ve soykırımın sonlanması ve Filistin sağlık hizmetlerinin yeniden yapılandırılması konusunda, Birleşmiş Milletler, İslam Ülkeleri ve Dünya Sağlık Örgütü'nün vakit kaybetmeden girişimlerde bulunması gerektiğini ifade etmek mümkündür.

Anahtar Kelimeler: Filistin, Aksa Tufanı, Sağlık Hizmetleri

ABSTRACT

The Palestine-Israel conflict, rooted in the Jewish belief in the dream of the Promised Land, began in 1799 when French General Napoleon Bonaparte suggested the establishment of a Jewish state in Palestine under Ottoman rule. This idea culminated in 1948 with the establishment of the state of Israel in occupied Palestinian territories, bringing tensions to their peak. For the past 76 years, these events have escalated along a trajectory of massacres and resistance. In this process, especially with the onset of the "Al-Aqsa Flood" on October 7, 2023, tens of thousands of people have been killed in Palestine, the country has been devastated, and over the past year, Palestinian healthcare services have been nearly obliterated.

Healthcare services encompass all protective, therapeutic, rehabilitative, and health-promoting services offered to enable individuals and societies to achieve complete physical, mental, and social well-being. Just as essential as basic human needs like nutrition and security, healthcare services are indispensable for a society. In particular, the presence of therapeutic healthcare services, where diagnosis, examination, and treatment are carried out, is vital during war, especially for treating individuals injured under intense bombardment. In such a war scenario, targeting healthcare facilities with patients and injured people inside is classified as a war crime and a crime against humanity.

The purpose of this study is to assess the state of Palestinian healthcare services before and after the "Al-Aqsa Flood" war that began between Palestine and Israel on October 7, 2023. A literature review on the topic was conducted in this study. As a result, in the past year alone, 286 airstrikes have been directed at healthcare facilities in the West Bank region of Palestine. Furthermore, only 17 of the 36 hospitals in Gaza continue to provide partial services. In this context, it is essential to emphasize that the United Nations, Islamic countries, and the World Health Organization should urgently take action to end Israeli attacks and genocide and to rebuild Palestinian healthcare services.

Keywords: Palestine, Al-Aqsa Flood, Healthcare Services

GİRİŞ

İsim kökeni ve tarihi Asur kralı III. Addizari'nin MÖ 800 yıllarında hükümdarlığı zamanlarına dayanan Filistin, günümüzde 29°-33° Kuzey enlemleri, 35°-39° Doğu boylamları arasında yer alan ve 6020 km²'den oluşan bir ülkedir (Barbakh, 2023; Joshua, 2018). Araştırmacıların ortak noktası Filistin topraklarına gelip yerleşen ve burada bir medeniyet kuran ilk kavmin Araplar olduğudur. Roma döneminde Filistin adı tüm Kutsal Topraklar için kullanılmış ve Roma imparatoru Hadrian döneminden itibaren resmi hüviyet kazanmıştır (Joshua, 2018).

Aynı zamanda eski çağlarda Suriye'nin bir parçası olan Filistin; Afrika, Asya ve Avrupa'dan oluşan üç kıtanın birleşim bölgesidir. Akdeniz'in güneydoğusunda yer alır. Kuzeyi Lübnan, doğusu Ürdün, güneyi Kızıldeniz, güneybatısı Mısır ve kuzeydoğusu Suriye ile çevrilidir. Başkenti Kudüs olan Filistin, Batı Şeria (5655 km²) ve Gazze Şeridi (365 km²) olmak üzere iki bölgeye ayrılmaktadır (Ahmad, 2021). Batı Şeria kendi içerisinde on bir ilden oluşmaktadır. Gazze şeridi ise; Sina çölü kenarında, Akdeniz'in doğu ucunda beş ilden oluşan kıyı bölgesidir (Dudeen, 2008; Anonymous, 2015). 7 Ekim 2023 tarihinden itibaren bu iki bölgede de soykırım yaşanmaktadır ve bu soykırım sonucunda da hayatın her alanında olduğu gibi sağlık alanında da çok ağır durumlara maruz kalınmıştır.

Hatta bu süreçteki saldırılar öyle bir duruma gelmiştir ki, Gazze bölgesinde bulunan 36 hastaneden 19 tanesi tamamen kullanılamaz hale gelmiştir. Geriye kalan hastaneler de tam olarak hizmet verebilecek durumda olmamalarına rağmen kapasitelerinin çok üzerinde bir performans sağlayarak hala hizmet vermeye çabalamaktadır. Tüm bu yaşananları daha net anlayabilmek için ana soruna bakılması gerekmektedir.

Filistin sorununun tarihçesine bakıldığında, konunun sadece Filistin ile İsrail arasında geçen bir çekişme ve çatışma süreci olmadığı görülmektedir. Uluslararası aktörlerin doğrudan ve dolaylı olarak müdahale ettiği ve yönlendirdiği Filistin meselesi, belki de çözüm bulmak adına hakkaniyetli bir kararın yeteceği noktadan, bugün sürekli savaş ve akan kanın tartışıldığı bir noktaya gelmiştir (Şenocak, 2016). Siyonist hareketin en temel hedefi; Filistin’i kolonileştiren bir Yahudi devletine dönüştürmek ve bunun için de her türlü maddi, ekonomik, siyasi, demografik ve toplumsal güç araçlarını kullanmaktır (Ahmad, 2021). Tüm bu belirtilen amaçların ışığında Filistin’in asıl seçilme sebebinin coğrafi konumu olduğunu belirtmek mümkündür.

FİLİSTİN MESELESİNİN TEMELİ

Ortadoğu’nun en hassas bölgelerinden biri olarak tanınan Filistin, dünya uygarlığının önemli bölgelerinden birisidir. Filistin, kıtalar ve uygarlıklar arası bir geçit özelliğine sahip olduğu için, tarih boyunca bölgede egemenlik kurmak isteyen devletler arasında bir çekişme ve çatışma alanı haline gelmiştir. 19. yüzyıldan itibaren bölgede yaşanan önemli değişimler Filistin’in kaderini olumsuz etkilemiştir (Ahmad, 2021).

19. yüzyılın sonunda Avusturyalı Yahudi gazeteci Theodor Herzl tarafından dünya çapında kurulan Dünya Siyonist Teşkilatı’nın ortaya çıkması ile beraber, dünya çapında Yahudilerin kendi aralarındaki sosyal, kültürel, dini ve milli değerler gibi ulusal açılımları birleştirerek ve Yahudi halkı arasında “tarihi yurtlarına dönüş” adıyla yayılan inanışla harekete geçerek Filistin topraklarına kademeli olarak başlayan Yahudi göçü bu soykırımında bir başlangıç noktası olarak ele alınabilir (Karaman, 2009).

Siyonistlerin amaçlarına yönelik dünya kamuoyunda destek ararken kullandıkları “halkı olmayan toprağı, toprağı olmayan bir ulusa verin” sloganı hem siyonistlerin hem de dünya kamuoyunun Filistin topraklarını nasıl ve ne şekilde gördüklerini gözler önüne sermektedir (Kaya, 2010). Tüm bu manipülasyonlara rağmen; genel olarak 31 Mayıs 2010 tarihinde gerçekleşen Mavi Marmara saldırısından sonra İsrail’in zalim, Filistin’in ise mazlum taraf olduğu büyük ölçüde görülmüştür.

İsrail devletinin kuruluşunu İsrail tarafı bir devrim ve zafer olarak nitelendirirken, Filistin tarafı “Nakba” yani bir felaket olarak nitelendirmiştir (Özkoç, 2009). İsrail’in resmen 14 Mayıs 1948 tarihinde kurulması bir devletin ilanı gibi görünse de aslında bir bakıma savaş ilanı anlamı da taşımaktadır (Şenocak, 2016). Nitekim Filistinlilerin El-Nakba (felaket günü) olarak tanımladıkları bu tarihten itibaren Filistin’de; kan, göz yaşı, sürgün, göç ve diğer insani dramlar maalesef hiç eksik olmamıştır (Ahmad, 2021).

Filistinliler, siyonist işgale karşı çeşitli zamanlarda irili ufaklı ayaklanma hareketlerinde bulundularsa da İsrail’e karşı ilk toplu ayaklanma, 8 Aralık 1987’de patlak veren ve kelime anlamı ayaklanma, başkaldırı olan İntifada hareketidir (Kaya, 2010). 1987 ile 1993 yılları arasında birinci intifada, 2000 ile 2005 yılları arasında ise ikinci intifada süreci yaşanmıştır. 1987 ile 1993 yılları arasında süren ve parça parça Filistin topraklarının her yerine yayılan

Birinci İntifada süreç içerisinde yaklaşık 1500 Filistinli hayatını kaybetmiştir. Ardından 2000 yılında başlayıp 5 yıl süren İkinci İntifada sürecinde 5200 Filistinli hayatını kaybetmiştir. Aynı zamanda Filistinliler tarafında gerçekleştirilen eylemlerde ise 1100 kişi hayatını kaybetmiştir (Yaşar vd., 2010). İkinci İntifada zamanında büyük ölçüde Filistin sorununun artık müzakere süreci ile çözülmesinin mümkün olmayacağı anlaşılmıştır (Şenocak, 2016). Aynı zamanda bu süreçte kendisini ispat etmek ve yalnız kaldığı savaşta ayakta kalabilmek adına Filistin'in atmış olduğu ilk adım FKÖ (Filistin Kurtuluş Örgütü)'nün Filistin Ulusal Konseyi toplantısında, 15 Kasım 1988 tarihinde Filistin devletinin kurulduğunu ilan etmesidir (Şenocak, 2016). Tabi tüm bu yaşanan süreçlere rağmen Filistin'de bulunan savaş ortamı devam etmiştir. İşte bu yüzden de bakılacak her kriterde savaş ortamı göz önüne alınmalıdır.

AKSA TUFANI

Aksa Tufanı, Filistin direnişinin Gazze Şeridi'nde 7 Ekim 2023 Cumartesi günü sabahı, İsrail'e karşı başlattığı; kara, deniz ve hava saldırısı ile direnişin Gazze Şeridi'ndeki çeşitli yerleşim yerlerine sızmasını içeren bir operasyondur. Operasyon, İslami Direniş Hareketi'nin (Hamas) askeri kanadı İzzeddin el-Kassam Tugayları genelkurmay başkanı Muhammed ed-Deif tarafından açıklanmış ve İsrail'e son on yılda yapılan en büyük özgürlük direnişi olarak nitelendirilmiştir (Al Jazeera, 2023).

Aksa Tufanı Operasyonu 7 Ekim'de İsrail askeri mevzilerini hedef almış ve askerlerini esir alarak İsrail hapisanelerinde tutulan binlerce Filistinlinin esir takası anlaşması yoluyla serbest bırakılması için İsraili yetkililere baskı yapmayı amaç edinmiştir. Bu nedenle operasyon, İsrail ordusunun Gazze Tümeni'ni ve Gazze çevresindeki İsrail yerleşimlerinin yakınında konuşlanmış İsrail askeri tesislerini yok etmeyi hedef edinmiştir (Independent, 2024).

Her ne kadar İsraili sivillerin öldürüldüğü algısı yaratılmaya çalışılsa da; Kassam savaşçılarının operasyonun daha en başında verilen emir, savaş esnasında İslami kurallara ve uluslararası savaş hukukuna bağlı kalmalarıydı. Bu kurallar arasında sivillerin, kadınların, çocukların ve yaşlıların öldürülmemesi; sivillere ait mülklere zarar verilmemesi ve sadece askerler ve silahlı kişilerle savaşmaya odaklanılması yer alıyor (Platform, 2024). Bu noktada İsraili sivillerden bahsederken, zorunlu askerliğin 18 yaşın üzerindeki (erkekler 32 ay, kadınlar da 24 ay askerlik hizmeti yapar) tüm İsraililer için geçerli olduğu ve herkesin silah taşıyıp kullanabilme özgürlüğü olduğu bilinmelidir. Bu, İsrail'in "silahlı halk" güvenlik teorisine dayanmaktadır ve İsrail varlığını "ülkesi olan bir orduya" dönüştürmüştür (Independent, 2024).

Tüm bunların yanı sıra 7 Ekim'deki Aksa Tufanı Operasyonu, İsrail'in Filistin halkına ve davasına yönelik tüm planlarına karşı koymak için gerekli bir adım ve normal bir yanıttır. Bu, İsrail işgalinden kurtulma, Filistinlilerin haklarını geri alma ve dünyadaki tüm halkların yaptığı gibi kurtuluş ve bağımsızlık yolunda savunma amaçlı bir eylemdir (Independent, 2024).

SAVAŞ ORTAMLARINDA SAĞLIK

Savaşlar, yalnızca insanların ölümüne ve katliamlara yol açan bir eylem değildir. Savaşlar, iki düşman cepheye yer alan asker-sivil fark etmeksizin tüm insanların yaşamlarında geri dönülemez travmalar yaratmakta, derin yaralar açmaktadır (Oseili, 2016). Savaş her ne kadar ardında bıraktığı ölümlerle anlatılmış olsa bile, unutulmaması gereken başka bir şey de; en az öldürdüğü insanlar kadar, arkasında fizyolojik ve psikolojik rahatsızlıklarla uğraşması gereken insanlar bırakmış olmasıdır (Brzezinski, 2005). Ölüm, yaralanma ve sakatlıklar bireyleri, yakın

çevrelerini ve giderek bütün toplumu derinden sarsan sonuçlara yol açmaktadır. Savaşlar sırasında ortaya çıkmaya başlayan travmalar, sağlık kuruluşları tarafından savaştan sonra tedavi edilmesini gerektiren sağlık sorunlarıdır. Aylar yıllar süren tıbbi bakım, ruhsal ve toplumsal rehabilitasyon gereksinimi, yoğun çaba ve kaynak aktarımı gerektirmektedir (Snoubar ve Karataş, 2015). Savaşların yarattığı bu travmalar ve travmalara maruz kalan insanlar tedavi edilmedikleri takdirde; nüksedecek olan bu travmalar, insanların hayatlarını en olumsuz şekilde etkileyip ve onları sağlıksız bireyler haline getirir (Erol ve Öner, 1999). Tüm bunların yanı sıra devamlı olarak bulunması gereken koruyucu sağlık hizmetlerini kontrol edebilmek ve idame ettirebilmek güç olabilmektedir.

Savaş ve çatışma koşullarından dolayı özellikle kadın ve çocuklara sağlık hizmetlerinin sağlanması oldukça zordur. Doğum kontrol ve takip gibi temel sağlık hizmetlerinin bulunmaması kürtaj, düşük doğum ağırlığı, çocuğunu emzirmek için süt üretme kabiliyeti kaybı, hastalıkların yayılması ve ölü sayılarının artmasına neden olabilmektedir (Gasseer vd., 2004). Bu yaşanan durumlar ise Sağlık Bakanlığı için hem maddi ve manevi zorluğa hem de sağlık sisteminde büyük aksamalara neden olmaktadır. Dünya'nın herhangi bir yerinde olan ve kısa süren savaş zamanlarında bile bu durum böyle iken yaklaşık olarak 76 yıldır devam etmekte olan Filistin-İsrail savaşı boyutunda yaşanabilecek olaylar daha vahim durumdadır.

FİLİSTİN'DE SAĞLIK

Yaşanan ortamları düşünerek diyebiliriz ki; Filistin'de yaşayan insanların sağlıklı olmasını ve toplum olarak gelişmesini olumsuz etkileyen temel neden güvenlik eksikliği sorunudur. Kontrol noktaları, yol bariyerleri, ayırma duvarı, İsrail'in Filistin yerleşim ve yerleşimcilerine artan baskısı, bombalama, silah sesleri, hapis, işkence, aşağılama ve kişilerin serbest dolaşımına kısıtlama gibi Filistinlilere karşı İsrail baskıcı uygulamaları Filistin'de herkesin özellikle de sağlığını ve güvenliğini tehdit eden, kronik sıkıntı hissi yaratan ve gelecek için umut kaybetmeye neden olan unsurlardır (Batniji vd., 2009). Filistin'in, 30 km veya daha yakın bir hastaneye gitmek için işgalci kontrol noktalarında yaşamlarını yitiren vatandaşları bulunmaktadır (Menawi, 2015).

İsrail'in Filistin'e karşı uluslararası kanunlara göre yasaklanmış her türlü silahı kullanmasından dolayı binlerce kişi ölmüş ve sakat kalmıştır (Snoubar ve Karataş, 2015). İsrail'in işgalci güçlerinin 1987'de Filistinlilere karşı kullandığı savaş politikaları arasında "kemik kırma politikası" yer almıştır. Bu politika çerçevesinde Filistin İstatistik Merkezi organına göre 1987-1997 yılları içinde elde edilen verilere göre yaklaşık 2525 kişi kalıcı engelli bir biçimde hayatlarına devam etmektedir (PCHR, 2007). Ayrıca PRCS (2009) verilerine göre sadece 2000-2008 yılları arasında işgal ile ilgili çatışmalar ve gösteriler nedeniyle 4502 kişi öldürülüp, 31531 kişi yaralanmıştır. Bunların yanı sıra insanlar böyle yaşanan durumlar dışında da hasta olabilmektedir.

Dünya çapında, yetişkinlerin toplam hastalık yükünün yaklaşık üçte ikisinin gençlikte karşılaşılan koşullar ya da davranışlarıyla ilişkili olduğu düşünülmektedir (Youth, 2016). Filistin'de yaşanan savaş süreçleri düşünüldüğünde yaşayan insanların sağlıklı yaşam koşulları ile karşılaştıkları söylenemez. Bu sebeple de Filistin'de sağlık konusunda DSÖ'nün sağlık tanımına uyan, yüksek bir oran beklenemez. Zaten Filistin'de gün geçtikçe tüm yaşlarda ve her iki cinsiyette de kronik hastalıkların oranları artmaktadır (Husseini, 2009).

FİLİSTİN SAĞLIK SİSTEMLERİ

Filistin Merkezi İstatistik Bürosu'na göre (2023) sağlık hizmetlerinin sağlanmasını denetlemekten sorumlu dört kurum vardır. Bunlar:

1. Sağlık Bakanlığı (Devlet sektörü)
2. Mültecilere Yardım ve Bayındırlık Ajansı (UNRWA (Askeri tıp merkezleri))
3. Sivil Toplum Kuruluşları (STK)
4. Özel Sektör

Bu kadar hizmet sağlayıcısı olmasına rağmen en ağır yükü Sağlık Bakanlığı taşımaktadır. Ayrıca Sağlık hizmetleri ülkemizdeki gibi birinci basamak, ikinci basamak ve üçüncü basamak olarak ayrılmaktadır. Sağlık hizmeti basamaklarına baktığımızda birinci basamak sağlık hizmetleri; Askeri Tıp Merkezlerine ek olarak, yukarıda bahsedilen hizmet sağlayıcıları tarafından verilmektedir (Filistin Sağlık Bölge Merkezi, 2019a).

Aksa Tufanı Süreci Öncesi:

Birinci basamak sağlık hizmetlerinin 2021'de 765 adet merkezi bulunmaktadır. Bunların %64'ü Filistin Sağlık Bakanlığı'na, %25'i sivil toplum kuruluşlarına, %9'u UNRWA'ya ve %2'si askeri hizmetlere bağlı olarak çalışmaktadır (OCHA, 2024a). Filistin'de ihtiyaç duyulan en önemli sağlık hizmetlerinden biri acil sağlık hizmetleridir. Bunun nedeni; devamlı olan savaş ortamı, çoğu Filistinlinin yoksulluk içinde yaşaması, düzenli sağlık hizmetlerine sınırlı erişimin bulunması sebebiyle yalnızca gerçekten ihtiyaç duyduklarında bakım almaları olduğu söylenebilmektedir (PCRF, 2024). İkinci basamak sağlık hizmetleri ise ağırlıklı olarak Sağlık Bakanlığı tarafından sunulduğu söylenebilmektedir. Tüm bunlara rağmen yine de Batı Şeria ve Gazze'de Filistin Topluluğu'nun ve devletin, sağlığın sosyal belirleyicileri üzerinde çok az denetimi bulunduğu görülmektedir (Menawi, 2015).

Sağlık Bakanlığı hastaneleri; genel cerrahi hizmetleri ve alt uzmanlık alanları, iç hastalıkları, pediatri, psikiyatri ve diğer uzmanlıklar dâhil olmak üzere hemen hemen bütün uzmanlıklarda; ayrıca poliklinikler, acil servisler ve hemodiyaliz birimleri aracılığıyla hastalara hizmet vermektedir (Filistin Sağlık Bölge Merkezi, 2019b). Ayrıca Filistin'de hizmet veren sivil toplum kuruluşlarına Türkiye'den Türk İş Birliği ve Koordinasyon Ajansı Başkanlığı'nı (TİKA) örnek gösterebilir. TİKA program koordinasyon ofisi Filistin'de 2 Mayıs 2005 tarihinde açılmıştır. TİKA tarafından sağlık, teknik yardım, kültürel mirasın korunması alanları ve su temini, okul inşası, eğitim bursu sağlanması başta olmak üzere Filistin'de birçok proje yürütülmektedir. Bu projelerden bazıları ise, Türkiye-Filistin Gazze Dostluk Hastanesi ve Tubas Türk Hastanesi projeleridir (T.C. Dış İşleri Bakanlığı, 2011).

Aksa Tufanı Süreci:

Günümüzde halen yaşanmakta olan saldırılar sonucunda Filistin Merkezi İstatistik Bürosu'na göre (2023), Gazze Şeridi'nde gerekli sağlık hizmetlerinden mahrum kalan yaklaşık;

- 350.000 kronik artrit hastası
- 71.000 şeker hastası
- 225.000 yüksek tansiyon hastası
- 45.000 kanser, böbrek hastalıkları ve diğer hastalıkların yanı sıra kalp ve damar hastalıklarına sahip hastalar mevcuttur.

Bu hastalıklara sahip ve tıbbi tahliye talebinde bulunan kritik hastaların %39'unun (15.600'den 6.075'i) talebi onaylandı; bunların arasında 26 Ağustos itibarıyla yurtdışına tıbbi tahliye edilenlerin %33'ü (15.600'den 5.138'i) yer alıyor. 16 Ekim itibarıyla, 14.000 hastanın Gazze Şeridi dışında tıbbi tahliyeye ihtiyaç duyduğu tahmin edilmektedir. Ayrıca 7 Mayıs'ta Refah Sınır Kapısı'nın kapatılmasından bu yana, altı kez 229 hasta ve 316 refakatçi istisnai olarak tahliye edilmiştir (OCHA, 2024b).

Aksa Tufanı Süreci Sonrası:

Savaş durumlarında insanlar için güvenli yerlerden birisi de sağlık kurumlarıdır. Buna rağmen İsrail durmadan buralara da içerisinde masumlar varken saldırmaya devam etmektedir. Bu saldırılar sonucunda yaşanan tahribata baktığımızda ise, Gazze Şeridi'nde saldırılardan önce bulunan (OCHA, 2024c);

- 36 hastaneden 19 tanesi tamamen hizmet dışı olup, 17 hastane ise kısmen faaliyette bulunmaktadır.
- Birinci basamak sağlık hizmeti veren merkezlerin %36'sı (132'den 47'si) kısmen işlevseldir.
- UNRWA'ya ait sağlık merkezlerinin %22'si (27'den 6'sı) faaliyettedir.
- 5'i tam, 6'sı kısmen olmak üzere 11 sahra hastanesi faaliyettedir.

Ayrıca Gazze'deki hastanelerin yatak kapasitesi 7 Ekim'den önce 3 bin 500 yataktan 1400 yatağa düşmüştür. Bu sayılar bize aslında yıkımın boyutunu bir nebze göstermektedir (Bezmiâlem Vakıf Üniversitesi, 2024). Batı Şeria'da ise sağlık hizmetlerine yönelik 286 saldırı gerçekleştirildi. Saldırlardan geriye kalan hastaneler kapasitelerinin %359'uyla çalışmaktadır. Son verilere göre ise 7 Ekim 2023 tarihinden 30 Kasım 2024 tarihine kadar; 111392 kişi yaralanmış, 45179 kişi de şehit olmuştur (Filistin merkezi istatistik bürosu, 2024).

FİLİSTİN'DE BULUNAN BAZI HASTANELER

BEYT HANUN ŞEHİTLERİ HASTANESİ: Beyt Hanun şehrinde bulunan tek sağlık merkezidir. Uluslararası bir yardım kuruluşuna bağlıdır ve çok sayıda özel kliniği bulunmaktadır (Beyt Hanun Şehitler Hastanesi, 2024).

AL-AHLİ ARAB HASTANESİ: Hastane 1982'de Gazze Şeridi'nde İngiltere kilisesi, Kilise Misyon Topluluğu tarafından kurulmuştur (Al-Ahli Arab hastanesi, 2024).

ŞEHİT KEMAL ADVAN DEVLET HASTANESİ: Gazze Şeridi'nde Beyt Lahiya'da bulunuyor. Gazze Şeridi'nin en büyük hastanelerinden olan devlet genel hastanesidir (Barbakh, 2023).

TÜRKİYE-FİLİSTİN GAZZE DOSTLUK HASTANESİ: Kanser hastalarının tedavi gördüğü tek hastanedir. Gazze Şeridi'nde yer alır (Barbakh, 2023).

EL-ŞİFA TIP HASTANESİ: Gazze Şeridi'ndeki merkez hastanesi ve en büyük devlet tıp kompleksidir. İçerisinde üç ihtisas hastanesini barındırır. Cerrahi hastanesi, Dahiliye hastanesi ve Kadın Hastalıkları ve Doğum hastanesi (Barbakh, 2023).

AL-NAJAH ÜNİVERSİTESİ HASTANESİ: Donanımlı bir yoğun bakım ünitesi, acil servis ünitesi, diyaliz ünitesi, radyoloji bölümü ve bir BT ünitesini içermektedir. Hastane Batı Şeria'nın Nablus kentinde bulunmaktadır. Hastane, kâr amacı gütmeyen bir tıbbi kuruluş olup

Filistin'deki tek eğitim hastanesidir. 120 yataklı bir hastanedir (Al Najah Üniversitesi Hastanesi, 2024).

SAĞLIK GÖSTERGELERİ

Nüfus Oranları (2023) (Filistin Sağlık Bakanlığı, 2024a):

	Batı Şeria	Gazze Şeridi	Filistin (Toplam)
0-14 yaş arası	35.2	40.4	37.3
15-29 yaş arası	28.1	27.8	28.0
60 yaş ve üzeri	6.3	4.8	5.7

Bu tabloya bakarak 2023 yılında, Filistin'de çok genç bir nüfus var diyebilmekteyiz. Bir nüfus piramidi düşünelim, bu verileri piramide yerleştirdiğimizde 0-14 yaş aralığının bulunduğu katın oldukça geniş yere sahip olduğunu görürüz. Şimdiki zaman ve koşulları düşündüğümüzde ise bu nüfus oranlarının değişimleri konusunda net bir yorumlama yapamamaktayız. Fakat bu durumda fikir yürütebilmemiz de zor olmasa gerek.

Hastane Sayısı (2022) (Filistin Sağlık Yıllığı, 2019-2020a):

BÖLGE	SAYI
Batı Şeria	57
Gazze Şeridi	36
Filistin (Toplam)	93

Çalışmayı yaparken en son elde ettiğimiz veriler ile konuşacak olursak, her ne kadar görünürde kısmen de olsa 11 hastane çalışıyor durumda görünse bile, aslında o hastanelerin de işlevlerini kaybetmiş olduğunu söyleyebiliriz. Yani yukarıdaki veriler yakın tarihli olsalar dahi aslında şu anki durumda vahameti anlayabilmemiz için yeterli.

Doktor ve Hemşire Sayıları (2021) (Filistin Sağlık Yıllığı, 2019-2020b):

Meslek	Sayı
Doktor	14.054
Hemşire	22.478

2021 yılında sayılar böyle olmasına rağmen, şu anki Soykırım sonucunda bu sayıların tükenmekte olduğunu söyleyebiliriz. Lakin durumdan ötürü günümüzde tam olarak yaşayan doktor ve hemşire sayılarına net olarak ulaşamamaktayız. Çünkü her saat, hatta her dakika bombardıman altındalar.

10.000 Kişiye Düşen Yatak Sayısı, Doktor, Hemşire ve Ebe Sayıları (Filistin Sağlık Bölge Merkezi, 2019c; Filistin Merkez İstatistik Bürosu, 2022):

Meslekler	Oranlar
Yatak Sayısı (2022)	1.3
Doktor (2022)	2.8
Hemşire (2018)	8.1
Ebe (2018)	0.9

Bu oranlarda şu anki duruma bakılarak büyük oranlarda değişim olduğu yorumunu yapabiliriz. Lakin bu değişimi görebilmemiz için yapılacak güncellenin, şu süreçte herhangi bir sayım yapılamayacağı için mümkün olmadığını görmekteyiz.

Doğurganlık Oranları (Filistin Sağlık Yıllığı, 2019-2020c):

1000 Kişide	Batı Şeria	Gazze Şeridi	Filistin (Ortalama)
15-19 yaş	39	48	43
20-24 yaş	198	207	202
25-29 yaş	221	227	224
30-34 yaş	170	145	159
35-39 yaş	109	113	111
40-44 yaş	24	36	28
45-49 yaş	1	4	2
Oranlar (15-49 yaş)	3.8	3.9	3.8

Doğum oranlarına baktığımızda genel olarak yaşayan insanların doğum yaşlarında çok acele etmediklerini görmekteyiz. Doğurganlık sürecinin en çok yaşandığı yaş aralığının 25-29 yaş arasında olduğunu görmekteyiz. Tüm bunların haricinde de Filistin halkının yıllardır bir zulüm içinde yaşamasına rağmen, varlıklarını devam ettirmekten de vazgeçemediklerini görmekteyiz.

Doğumdan Sonra Hastanede Kalış Süresi (Filistin Sağlık Yıllığı, 2019-2020d):

	Sağlık Kuruluşunda Kalma Süresi					Son 2 yıldaki canlı doğum yapan kadın sayısı
	6 saatten az	6-11 saat arası	12-23 saat arası	1-2 gün	3 gün veya daha fazlası	
Filistin (Toplam)	22.9	16.1	5.0	42.9	12.6	1437
Batı Şeria	6.3	13.1	6.5	57.1	16.7	1430
Gazze Şeridi	46.6	20.5	2.8	22.8	6.9	1007

Hastanede kalma sürelerine bakarak ve bölgedeki yaşam koşullarını düşünerek, insanların Gazze Şeridi'nde hastaneleri güvenli bölge olarak gördükleri ve en azından toparlanabilecekleri sürelerde hastanelerde kalmak istediklerini söyleyebiliriz. Şu anki durumu göz önüne alırsak, bu oranlarda düşüş olabileceğini düşünebiliriz. Çünkü maalesef İsrail hastaneleri vurmaktan da vazgeçmiyor ve insanlar artık hastanelerde de güvende olduklarını düşünmüyorlar.

Mortalite Oranları (Filistin Sağlık Bölge Merkezi, 2019d; Filistin Sağlık Yıllığı, 2019-2020e):

2019-2020 yılları	Batı Şeria	Gazze Şeridi	Filistin (Toplam)
Yenidoğan Ölüm Oranı	9.8	8.8	9.4
Bebek Ölüm Oranı	11.7	12.7	12.1
Çocuk Ölüm Oranı	3.0	1.0	2.2

Bu oranlar bulunabilmiş en yeri veriler olmasına rağmen, son yaşananlar sonrası muhtemeldir ki ölüm oranları özellikle çocuklarda %90 gibi yüksek oranları bulmuştur. Hala her saniye bu sayıların arttığının da hepimiz farkındayız.

1000 kişiye düşen	Batı Şeria	Gazze Şeridi	Filistin (Toplam)
Ölüm Oranı	2.8	2.3	2.6

2018 yılında gerçekleşen ölümlerin sayısı 12.098 olup bu ölümlerin 7.148'i (%59,08) Batı Şeria'da, 4.950'si (%40,92) Gazze Şeridi'nde kaydedilmiştir. Bu veriler ışığında şu anda bu oranların %90-100 oranları arasında bulunduğunu söyleyebiliriz.

Diğer Değerler (Filistin Sağlık Bakanlığı, 2024b):

2023 yılı değerleri	Batı Şeria	Gazze Şeridi	Filistin (Ortalama)
1000 kişiye düşen yatak sayısı			1.3
Kaba doğum oranı	26.6	32.0	28.8
Kaba ölüm oranı	3.9	3.4	3.7

2023 yılında saldırılar öncesindeki yatak oranları bile bu derece düşükken, şu an birçok hastanenin işlevini kaybettiğini de düşünerek 1 hastaya 1 yatak dahi düşmediğini söylememiz mümkündür. Kaba doğum oranının 1000 kişiye düşen canlı doğum oranı olduğunu göz önüne alarak; şu anda ise cansız ölümlerden daha az canlı ölüm olduğu için, bu oranın oldukça düştüğü kanısına varabiliriz. Kaba ölüm hızı ise 2023 yılında bu oranlarda olmasına rağmen bu oranın şu an oldukça yükselmiş olduğunu söyleyebiliriz.

Ölüm Nedenleri (2018) (Filistin Sağlık Bölge Merkezi, 2019e):

SEBEPLER	ORANLAR
Kardiyovasküler hastalıklar	%31.5
Kanser	%15.4
Felç	%13.0
Perinatal ölüm	%9.5
Diyabet	%7.5

2018 yılında gerçekleşen ölümlerin sebepleri bu şekilde sıralanmasına rağmen; şu anda bu sebeplere çok büyük orana sahip olan “SOYKIRIM” veya “KATLİAM” seçeneklerini de eklemeliyiz.

SONUÇ VE ÖNERİLER

Bu çalışmamız; tarihte defalarca kez direniş gösterecekleri dahi sesleri duyulmayan ancak 7 Ekim 2023 tarihinde başlamış olan Aksa Tufanı ile inkâr edilemeyecek bir boyuta gelen Filistin halkının yaşadığı soykırımın öncesinde, sonrasında ve genel olarak bu süreçte sağlık alanında yaşanan tüm durumları gözler önüne sermiş bulunmaktadır. Aynı zamanda bu soykırımın sonucunda yeni oluşan durum içinde ulaşılabilen sağlık verileri analiz edilmiştir. Sonuç olarak ise; bu yaşananlar sonucunda yapılabileceği düşünülen öneriler listelenmiştir.

Öncelikle Filistin hakkında incelemeler yaparken yıkık altyapı ve hizmeti olmayan, devamlı tehlike altında olan sağlık ve sosyal sistemler göz önünde bulundurulmalıdır. Çünkü Filistin derken aslında; besin maddesi olmayan, ilaç ve çocuk maması yokluğu çeken, evde, işte, okullarda ve ibadet yerlerinde bile can güvenliği bulunmayan, yakın ve uzak yerler arasında ulaşım zorluğu yaşayan, işsizlik oranı artan, yaralıları, genç ölümleri, engellileri, dulları ve

yetimleri çok sayıda olan bir ülkeden bahsedilmektedir (Menawi, 2015).

İsrail'in Gazze Şeridi ablukası, uzun vadeli ekonomik ve politik nedenleri itibariyle vahşice ve acımasızca bulunmaktadır. Çünkü bu ablukanın asıl amacı; ülkedeki bölünmeyi bitirmekten daha çok Filistin halkının siyasal, ekonomik, kültürel ve sosyal yapısını tamamen bozmaktır. Ayrıca Filistin halkının zihninde yer etmiş olan düşmanla mücadele ve ona karşı kararlı bir duruş sergilemek gibi önceliklerini; fakirlik, sıkıntı ve mahrumiyet gibi etmenlerle yok etmek, halkı umutsuzluk ve hüsrana sürüklemektir (Sourani, 2018). Yani aslında mesele; işgal edilmiş Filistin topraklarında yaşayan Filistin halkı için sürekli ve ağır bir insani kriz içerisinde yaşam savaşı anlamına gelmektedir (Mengüaslan, 2024).

7 Ekim 2023'te Hamas güçlerinin yardımıyla Filistin halkı yıllardır devam etmekte olan katliama Aksa Tufanı ile direniş gösterdiler. Aynı zamanda bu direniş Hamas güçlerinin, güç kapasitesini göstermesinin yanında, İsrail devletinin başta "demir kubbe" adıyla bilinen hava savunma sistemindeki yetersizliği ve İsrail güvenlik kapasitesinin zafiyetini de ortaya koymuştur (Mucuk vd, 2023). İsrail için oluşan olumsuz duruma rağmen AB komisyonu 9 Ekim'de Gazze'ye yönelik kalkınma yardımlarını durdurma kararı alarak, İsrail'in orantısız güç politikalarını meşrulaştıran bir tutum sergilemiştir (Bloomberg HT, 2023). Burada aslında İsrail'in bir devlet olarak yalnız hareket etmeyip, tek başlarına mücadele etmeye çalışan Filistin ve Hamas'ın karşısına AB gibi çok da görünür olmayan bir ordu ile beraber çıkıp tüm dünyanın önünde katliamlarına devam ettikleri görülmektedir.

Bunun yanında aynı süreçlerde Birleşmiş Milletler Genel Sekreteri Antonio Guterres'in Gazze'yi bir çocuk mezarlığına benzeterek İsrail hükümetine yaptığı eleştiri, olaylara yönelik küresel ölçekteki tepkiyi ortaya koymaktadır (Birleşmiş Milletler Türkiye, 2023). Dünya geneli oluşan tüm tepkilere rağmen İsrail hala saldırılarına devam etmekte ve her gün şiddetini daha da arttırmaktadır. Tüm dünya Filistin'de yaşanan bu soykırıma bu denli karşı çıkarken, biz maalesef ki Türkiye Devleti olarak konuşmak dışında elle tutulur bir şey yapamamaktayız. Çünkü her ne kadar Filistin'in yanındayız desek de devlet olarak hala İsrail ile ticareti devam ettirmekte ve bunu da inkâr etmekteyiz. Hatta bu ticaret öyle bir boyutta ki, soykırımın devam etmesi için gereken silahların ham maddelerini, askerlerin hayatta kalması ve daha çok zulüm yapılabilmesi için gereken yiyecek malzemelerini, vs. ihraç eder durumdayız.

Sonuç olarak tüm bu yaşananların ve yaşanabileceği öngörülen olayların gerçekleşmemesi için çalışılması gerekmektedir. Aksi takdirde; daha çok insan ölecek, engelli halde yoluna devam edecek, hala işletilmeye çalışılan sağlık sistemi tamamen işlevsiz hale gelecek veya dezavantajlı dediğimiz gruplar daha fazla sıkıntı yaşayacaklardır. Bizlerin, ülkece 6 Şubat 2023'teki gibi yıkıcı depremler yaşayan insanlar olarak Filistinli insanlarla bir nebze de olsa empati yapabildiğimiz düşünülmektedir. Bu empati özellikle toparlanma sürecinde en çok ihtiyaç duyulan duygu olacaktır. Çünkü dünya gündemi saniyeler içinde değişebilmektedir. İşte bu nedenden, **ÖNCELİKLE BU SOYKIRIMIN ACİLEN SONLANDIRILMASI GEREKMEKTE VE BUNUN İÇİN İSRAİL'E YÖNELİK ULUSLARARASI YAPTIRIMLARIN GEREKLİ OLDUĞU DÜŞÜNÜLMEKTEDİR.**

SOYKIRIMIN SONA ERMESİYLE BİRLİKTE, ULUSLARARASI CAMİANIN DESTEK VE GAYRETİYLE; FİLİSTİN SAĞLIK SİSTEMİNİN YENİDEN YAPILANDIRILMASI, BÜYÜK ÖNEM ARZ ETMEKTEDİR.

Tarihçesine baktığımızda Filistin'in yüzyıllardır aynı bölgede yaşamasına rağmen İsrail'in çoğu sahte olan belgeleri öne sürerek hak iddia etmesi ve bunu da zalimce yapması nedeniyle bölgedeki topraklar asıl sahiplerine -yani Filistinlilere- teslim edilmesi gerekmektedir. Ayrıca

Filistin’de yıllardır yaşanmakta olan bu katliamlar -yani İsrail’in yapmakta olduğu soykırım- herhangi bir din sorunu veya millet sorunu değil, bir “İNSANLIK SUÇU”dur. Öncelikle bu durum kabullenilmeli ve harekete geçilmelidir. Bu nedenle de Filistin’de tüm bu süreçleri yaşayıp hala hayatta kalmış olan her birey için; fiziksel ve psikolojik olarak iyileştirme sağlanmasına yönelik her türlü uygulama planlanmalıdır. Özellikle hastalığı kritik durumda olan insanların, yaşlıların, çocukların ve hamile kadınların bir an evvel koşulsuz bir biçimde tedavi görebilmeleri için Filistin’den tahliye edilmesi gerekmektedir.

Ayrıca Filistin’de yaşayan insanların da en temel ve doğal hakkı olan yaşam haklarını elde edebilmeleri için, çocuk felci aşısı için bir günlük durdurulabilen soykırımın kalıcı olarak durdurulması gerekmektedir. Soykırımın sona erdirilmesinin ardından ise, güvenli bir yaşam alanı oluşturulması ve tekrardan ayağa kaldırılması gereken sağlık sistemi için Dünya Sağlık Örgütü’nün devreye girmesi gerekmektedir.

Bunların dışında hukuki olarak ise; İsrail işgalini Filistin halkına yaşattığı acılardan dolayı yasal olarak sorumlu tutulması, hastanelere ve sağlık sistemine karşı işlemiş olduğu suçlardan dolayı tüm dünya kamuoyunda suçlanması, yaptırım uygulanması gerekmektedir. Bireysel boyutta ise; Özellikle Aksa Tufanı ile başlayan süreçte yapılmaya özen gösterilen boykotun devam ettirilmesi gerekmektedir. Çünkü bu süreç içinde sadece boykotun bile ne kadar işe yaradığı görülmüştür.

ÖZET

Günümüzde meme kanseri hastalarında Tamamlayıcı ve Alternatif Terapi (TAT) kullanımına ilginin giderek yaygınlaşma nedenleri arasında; meme kanserinin sık görülmesi, düşük sağ kalım oranı, tıbbi tedavinin getirdiği pek çok yan etki ve kadınların sağlık arama davranışlarının fazla olması yer almaktadır. TAT kullanım oranları ülkeden ülkeye değişiklik göstermekle birlikte, genel olarak meme kanseri tanısından sonra artmaktadır. Meme kanseri hastaları TAT yöntemlerini (bitkisel, psikolojik, fiziksel, vb.); semptomları, metastazı ve hastalığın tekrar etmesini önlemek, immun sistemi güçlendirmek, kanseri tedavi etmek, yaşam kalitesini yükseltmek, duygusal iyilik halini sağlamak, tedavinin yan etkileriyle mücadele etmek, içinde bulunulan durumu stabilize etmek ve medikal tedaviyi verimli hale getirmek için kullanmaktadır. Sıklıkla hastanın aile üyeleri ve yakınları tarafından önerilen alternatif ve tamamlayıcı terapilere hastalar, mevcut hastalığın getirmiş olduğu çaresizlik nedeniyle çok fazla araştırma yapmadan başvurmaktadır. Bu durum bize hem hastaların hem de sağlık profesyonellerinin tamamlayıcı ve alternatif terapiler ile ilaçların yararları, tehlikeleri hakkında güvenilir, kanıta dayalı bilimsel bilgilere erişmeleri gerektiğinin önemini göstermektedir. Bu nedenle meme kanseri tanılı kadınların tedavi için başvurdukları tamamlayıcı ve alternatif terapiler hakkında sağlık profesyonelleri ayrıntılı bilgiye sahip olmalı ve hasta ile karşılıklı iletişim kurarak rehberlik etmelidir. Meme kanseri tanılı kadınların tedavi için başvurdukları alternatif ve tamamlayıcı terapilere yönelik güncel literatür doğrultusunda hazırlanan bu çalışmanın, sağlık çalışanlarına yön gösterici olabileceği ve literatüre katkı sağlayacağı düşünülmektedir.

Anahtar kelimeler: Meme kanseri, Sağlık profesyonelleri, Tamamlayıcı ve alternatif terapiler

ABSTRACT

The reasons for the increasing interest in the use of complementary and alternative therapy (CAT) in breast cancer patients include; the high prevalence of breast cancer, low survival rate, many side effects of medical treatment and women's high health-seeking behavior. Although CAT use rates vary from country to country, they generally increase after breast cancer diagnosis. Breast cancer patients use CAT methods (herbal, psychological, physical, etc.); to prevent symptoms, metastasis and recurrence of the disease, strengthen the immune system, treat cancer, improve quality of life, provide emotional well-being, combat the side effects of treatment, stabilize the current situation and make medical treatment efficient. Patients often resort to alternative and complementary therapies recommended by family members and relatives of the patient without doing much research due to the helplessness brought by the

current disease. This situation shows us the importance of both patients and health professionals to access reliable, evidence-based scientific information about the benefits and dangers of complementary and alternative therapies and drugs. Therefore, health professionals should have detailed information about the complementary and alternative therapies that women diagnosed with breast cancer use for treatment and should guide the patient through mutual communication. It is thought that this study, prepared in line with the current literature on alternative and complementary therapies used by women diagnosed with breast cancer for treatment, will guide healthcare professionals and contribute to the literature.

Keywords: Breast cancer, Health professionals, Complementary and alternative therapies

GİRİŞ

Meme kanseri ciddi fiziksel ve duygusal yüke, kronik ağrı ve bozulmuş yaşam kalitesine neden olan bir hastalıktır (Link ve ark., 2013; Link ve ark., 2013; Cramer ve ark., 2017; Hwang ve ark., 2015). WHO, 185 ülkenin 157'sinde kadınlarda en sık görülen kanser türünün meme kanseri olduğunu ve meme kanserinin dünya genelinde 670 bin kişinin ölümüne neden olduğunu açıklamıştır (WHO, 2024).

Kanser tedavisi hastaları fizyolojik, psikolojik ve sosyal yönden etkileyen uzun ve zor bir süreçtir (Şen, 2022). Meme kanseri tedavisinde temel olarak cerrahi tedavi, kemoterapi, radyoterapi, hormon tedavi ve hedefe yönelik tedavi/akıllı ilaç tedavileri bazen tek bazen kombine olarak kullanılmaktadır. (Yavuz ve ark., 2007; Kurt ve ark., 2013; Baykara 2016; Şen, 2022; Pekmezci ve ark., 2022; Yaraşır ve Bulut, 2024; Yusefi ve ark., 2024). Kanser tedavisinde dünyada ve ülkemizde modern tedavi yöntemleri kullanılmasına rağmen, tedavi sürecinde bazı hastalar destekleyici bakım olarak ve tedavilerin yan etkilerini yönetmek için Tamamlayıcı ve Alternatif Terapi (TAT) yöntemlerine başvurmaktadır (Greenlee ve ark., 2017; Eren ve ark., 2019; Sarvay ve Sarvay, 2019). Meme kanserli hastaların genellikle TAT kullanım nedenleri arasında; uzun süreli tedaviler, kemoterapiye bağlı yan etkiler ile mücadele etmek, kanseri yenmek, immün sistemi güçlendirmek, fiziksel ve manevi rahatlık sağlamak, tekrar kanser oluşumunu önlemek ve şifa bulacağı umudunu korumak gibi çeşitli faktörler yer almaktadır (Boon ve ark., 2007; Link ve ark., 2013; Düzen ve Korkmaz, 2015; Hwang ve ark., 2015; Greenlee ve ark., 2017; Cramer ve ark., 2017; Peksoy ve ark., 2018; Sakin, 2024). Yapılan çalışmalarda meme kanserinde en az bir TAT kullanım oranı %16,5 ile %85,7 arasında değişmektedir (Boon ve ark., 2007; Kurt ve ark., 2013; Demirsoy, 2016; Çınar ve ark., 2019; Yeşil ve ark., 2024).

Hastalar, çok fazla araştırma yapmadan TAT'a aile üyeleri veya yakın çevrelerinin tavsiyesi ile mevcut hastalığın getirmiş olduğu çaresizlik nedeniyle başvurmaktadır. TAT kullanan birçok kadın, bu yöntemleri kullandığını sağlık ekibi ile paylaşmamaktadır. Düzen ve Korkmaz'ın (2015) çalışmasında TAT yöntemine hastaların kendi bilgilerine dayanarak başvurmadıkları ve kullandıkları yöntemi doktor ve hemşireleriyle paylaşmadıkları belirtilmiştir. Bu nedenle kanser hastaları ile çalışan sağlık profesyonelleri TAT kullanımını ayrıntılı sorgulamalı, bu konuda rehberlik yapabilecek bilgiye sahip olmalıdır (Peksoy ve ark., 2018; Sakin, 2024). Bu doğrultuda meme kanseri tanı kadınların tedavi için başvurdukları alternatif ve tamamlayıcı terapilere yönelik güncel literatür doğrultusunda hazırlanan bu çalışmanın, sağlık çalışanlarına yön gösterici olabileceği ve literatüre katkı sağlayacağı düşünülmektedir.

MEME KANSERİNDE KULLANILAN ALTERNATİF VE TAMAMLAYICI TERAPİLER

Alternatif ve tamamlayıcı terapiler, meme kanseri olan kadınlar tarafından sıklıkla kullanılmaktadır (Boon ve ark., 2007; Horneber ve ark., 2012). Tamamlayıcı terapi, bireylerin sağlığını kazanmak için modern tıbbın paralelinde tıbbi tedavilere destek olmak amacıyla uygulanan yöntemlerin tümüne verilen isimdir (Peksoy ve ark., 2018; Görücü, 2018; Sarvay ve

Sarvay, 2019). Alternatif terapi ise modern tıbbın yerine kullanılan ve etkisi bilimsel olarak kanıtlanmamış yöntemleri içermektedir (Kurt ve ark., 2013; Düzen ve Korkmaz, 2015; Görücü, 2018; Peksoy ve ark., 2018; Sarvay ve Sarvay, 2019; WHO, 2019). Yapılan çalışmalar, kanser teşhisi almış bireylerin %14,8 ile %73,1 oranları arasında alternatif ve tamamlayıcı terapilere başvurduğuna dikkat çekmektedir (Molassiotis ve ark., 2005; Horneber ve ark., 2012). Alternatif ve tamamlayıcı terapi uygulamaları psikolojik ve fiziksel yaklaşımlar (zihin ve beden uygulamaları) ile beslenme (doğal ürünler) olarak iki ana başlıkta gruplandırılmış olup bu iki gruba uymayanlar ise diğer tamamlayıcı sağlık yaklaşımları olarak gruplandırılmıştır (Satija ve Bhatnagar, 2017; Peksoy ve ark., 2018; Eren ve ark., 2019; Talhaoğlu, 2021; NCCIH, 2021). Alternatif ve tamamlayıcı terapi uygulamaları;

1. Beslenme yaklaşımları (ginseng, kantaron otu, zencefil, üzüm çekirdeği gibi bitkisel ürünler, vitamin ve mineraller, probiyotik gibi diyet takviyeleri)
2. Psikolojik ve fiziksel yaklaşımlar (solunum egzersizleri, meditasyon, yoga, akupunktur, hipnoz, müzik terapisi),
3. Diğer tamamlayıcı sağlık yaklaşımları (geleneksel çin tıbbı, ayurveda, homeopati)

olarak üç ana başlıkta toplanabilmektedir (Peksoy ve ark., 2018; Eren ve ark., 2019; Talhaoğlu, 2021; NCCIH, 2021).

BESLENME YAKLAŞIMLARI

Fitoterapi, geleneksel bitkisel tıbbi ürünler ve bitki kaynaklı ilaçların kullanımıyla yapılan bir tedavi yöntemidir (Falzon ve Balabanova, 2017; Yaraşır ve Bulut, 2024). Kanser hastalarına yönelik TAT'lar arasında bitkisel preparatlar veya fitoterapi en yaygın ve en eski kullanılan tedavi grubudur (Ma ve ark., 2011; Lopes ve ark., 2017). Ulusal Tamamlayıcı ve İntegratif Sağlık Merkezi (NCCIH) beslenme yaklaşımlarında, bitkiler (ginseng, kantaron otu, zencefil, üzüm çekirdeği vb.) vitaminler, mineraller ve probiyotikler gibi çeşitli ürünlerin yer aldığına vurgu yapmaktadır (NCCIH, 2021).

Ülkeden ülkeye değişmekle birlikte fitoterapötik ürünlerin ilaç olarak ruhsatlandırılması veya geleneksel bir tıp biçimi olarak görülmesi söz konusudur (Lopes ve ark., 2017). Çoğu zaman, hastalar tarafından bitkisel ürünler anti-mutasyon, anti oksidan ve antitümör etkisi olduğu düşünülerek kendi kendine doktor tavsiyesi olmadan kullanılmaktadır (Lopes ve ark., 2017; NCCIH, 2021). Yapılan çalışmalarda TAT kullanım oranları %48,7 ile %97,4 ve bitkisel yöntemleri kullanım oranları %34,8 ile %98,4 arasında değişim göstermektedir (Yavuz ve ark., 2007; Ma ve ark., 2011; Link ve ark., 2013; Kurt ve ark., 2013; Huebner ve ark., 2014; Demirsoy, 2016; Drozdoff ve ark., 2018; Sarvay ve ark., 2019; Yücel, 2021). Çalışmalar, meme kanseri tanılı hastaların beslenmeye yönelik yöntemler içerisinde en çok yeşilçay (Demirsoy, 2016; Yu ve ark., 2019), ekinezya, bitkisel çaylar (Ma ve ark., 2011; Sarvay ve ark., 2019), ginko bilobayı (Ma ve ark., 2011), ökse otu (Drozdoff ve ark., 2018), ıhlamur, kuşburnu çayı (Şen, 2022), ısırgan otu (Yavuz ve ark., 2007; Kurt ve ark., 2013), vitamin (Link ve ark., 2013; Şen, 2022), selenyum (Huebner ve ark., 2014), astragalus (Geven Otu) ve isveç şurubu (Yücel, 2021), yoğurt, kırmızı et, sebzeler (Şen, 2022), süt-süt ürünleri (Yücel, 2021) ve yağdan fakir diyeti (Demirsoy, 2016) tercih ettiklerine dikkat çekmektedir.

PSİKOLOJİK VE FİZİKSEL YAKLAŞIMLAR

Zihin-beden terapileri, zihnin beden semptomlarını ve işlevlerini iyileştirme kapasitesini artırmak için zihin, beyin ve davranışla bedensel etkileşimlere odaklanmaktadır (Hassed, 2013; Deng ve Cassileth, 2015; Satija ve Bhatnagar, 2017). Hem konsantrasyona dayalı hem de harekete dayalı terapiler (Satija ve Bhatnagar, 2017), akupunktur, masaj terapisi, meditasyon, gevşeme teknikleri, spinal manipülasyon, yoga, dans veya sanat terapileri, tai chi ve gi gong gibi uygulamaları içermektedir (Peksoy ve ark., 2018; NCCIH, 2021).

-Meditasyon- farkındalık temelli stres azaltma

Meditasyon, zihinde dolaşan düşüncelerin farkındalığını artıran (Kwekkeboom, 2010; Satija ve Bhatnagar, 2017) ve zihnin tek bir hedefe (nesneye, fikre ya da etkinliğe) istenildiği kadar uzun süre odaklanmasını sağlayan kültürel kökleri geleneksel doğu sistemlerine yerleşmiş zihinsel bir egzersizdir (Kwekkeboom, 2010; Satija ve Bhatnagar, 2017; Şengül, 2023). Farkındalık temelli stres azaltma (FTSA), genellikle onkoloji ortamında araştırılan bir meditasyon tekniğidir (Kwekkeboom, 2010; Satija ve Bhatnagar, 2017). Kişinin yalnızca şu ana dikkat etmesini ve bir sonraki anda ortaya çıkan yeni durumlara karşı yargısız olmasını sağlayan "Şimdiki An Farkındalığı" ilkesine dayanmaktadır (Satija ve Bhatnagar, 2017). Meditasyon, dikkatin solunum almaya, görselleştirmelere, mantralara veya uygulayıcının kendi düşüncelerine odaklanmasını ortak kılan bir dizi teknik ve prosedürü kapmaktadır. Bu odaklanmış dikkat, kaygıyı azaltan ve bazı meditasyon tekniklerinde, uygulayıcının bilincin genişlemesiyle birlikte uzay, zaman ve beden hissini kaybettiği "meditatif duruma" ulaşmayı kolaylaştıran bir sessizlik ve rahatlama durumuna yol açmaktadır. Meditasyon, hastalığın semptomları ile başa çıkmaları ve bunlar üzerinde kişisel kontrol sağlamaları için bilgi ve beceriler sağlamayı, zihnin nasıl odaklanacağını öğrenerek duyguları ve bedensel işlevleri kontrol etmenin mümkün olduğu ilkesinden yararlanmayı amaçlamaktadır (Castellar ve ark., 2014). Voiss ve arkadaşlarının (2020) yaptıkları çalışmada meme kanseri tanısı konulan kadınların %25,2'si zihin-beden yöntemini (spiritüel meditasyon, yoga, farkındalık meditasyonu) kullanmıştır.

Meditasyon tekniklerinin farklı amaçları olup uygulayıcıları farklı şekilde etkileyebilmektedir. Bazı teknikler rahatlama ve kaygıyı azaltmayı hedeflerken, bazıları öz-bilgiyi artırmaktadır (Castellar ve ark., 2014). Yapılan çalışmalarda; meditasyonun kanser hastalarında kemoterapi kaynaklı mide bulantısı, kusmayı, ruh sağlığını ve yaşam kalitesini iyileştirdiği, ağrıyı, immüno depresyonu, yorgunluk ve uyku bozukluklarını azalttığı, kişilerarası ilişkileri iyileştirerek ve maneviyatı güçlendirerek fayda sağladığına vurgu yapılmaktadır (Kwekkeboom, 2010; Kim ve ark., 2013; Castellar ve ark., 2014; Satija ve Bhatnagar, 2017).

-Yoga

Yoga, uygulayıcının kendini gerçekleştirme ve aydınlanmasına başka bir deyişle bütün ile birliğe ulaşmasına olanak tanıyan güç ve esneklik geliştiren ve rahatlama teşvik eden fiziksel duruşlar ve kontrollü solunum olarak iki ana yönden oluşan bir doktrindir (Bower ve ark., 2012; Castellar ve ark., 2014; O'Neill ve ark., 2016). Meditatif bir uygulama olan yoga, fiziksel duruşlar, solunum alma uygulamaları, meditasyon ve ayrıca iç çatışmaları azaltmak için duygusal kültürelmeye yardımcı olan ahlaki ilkeleri içermektedir (Bower ve ark., 2012; Castellar ve ark., 2014).

Yoganın, sağlığı ve refahı iyileştirmek için uygulandığı, sağlığın birden fazla boyutunu (fiziksel, zihinsel, duygusal ve ruhsal) etkilediği, ruh hali ve bilişte iyileşmeleri destekleyen çeşitli beyin yapılarındaki aktiviteyi değiştirdiği gösterilmiştir (O'Neill ve ark., 2016; Selvan ve ark., 2022). Yoga uygulaması, her ikisi de stres hormonları olan kortizol ve katekolaminlerin salınımının azalmasına nedenleri olabilecek Hipotalamus-hipofiz-adrenal eksenini ve Sempatik Sinir Sistemi'ni düzenleyip stresin azalmasına ve gevşemeye yol açmaktadır (Selvan ve ark., 2022; Padmavathi ve ark., 2023). Meme kanseri tanısı konan hastalar ile yapılan çalışmalarda yoga uygulamasının; yaşam kalitesi (Chandwani ve ark., 2010; Yağlı, 2012; Chandwani ve ark., 2014; O'Neill ve ark., 2016; Cramer ve ark., 2017; Yi ve ark., 2021; Selvan ve ark., 2022), fonksiyonel kapasiteyi artırma, yorgunluk (Chandwani ve ark., 2010; Yağlı, 2012; Cramer ve ark., 2017; Yi ve ark., 2021), mide bulantısı/kusma, uyku kalitesi, anksiyete, depresyon, stres (Chandwani ve ark., 2010; Bower ve ark., 2012; Cramer ve ark., 2017; Yi ve ark., 2021; Selvan ve ark., 2022), yara iyileşmesi semptomları (Selvan ve ark., 2022) ve ruhsal iyilik halinde (Cramer ve ark., 2012; Castellar ve ark., 2014) önemli faydasının olduğu belirtilmiştir.

-Progresif gevşeme egzersizi (PGE)

Progresif Gevşeme Egzersizi (PGE) çeşitli kas gruplarının gönüllü, sürekli, sistematik esnetilmesini, gevşetilmesini içermekte ve bireyin dikkatini iskelet kaslarına çekmektedir (Zhou ve ark., 2015; Charalambous ve ark., 2016; Parás-Bravo ve ark., 2017; Metin ve ark., 2019). Progresif gevşemede hastaların eğitim ile kademeli olarak, belirli ardışık kas gruplarının istemli, düzenli ve birbirini izleyen bir şekilde gerilme ve gevşemesine odaklanılmakta ve bazı semptomlar kontrol altına alınmaya çalışılmaktadır (Ovayolu ve Ovayolu, 2013; Özdelikara ve Arslan, 2017; Greenlee ve ark., 2017; Talhaoğlu, 2021). Gevşeme egzersizleri tek başına kullanılabilir gibi, diğer bilişsel davranışsal tekniklerle birlikte genellikle solunum alma ve imgeleme egzersizleriyle birleştirilerek bireysel veya grup olarak yapılabilir (Ovayolu ve Ovayolu, 2013; Greenlee ve ark., 2017; Talhaoğlu, 2021).

PGE'deki temel amaç zihin sakinliği ile kasların gevşemesi ve bu yolla sempatik sinir sistemi aktivitesinin azaltılması ve vücut gerginliğinin ve anksiyetenin azaltılmasıdır (Kurt, 2023). Meme kanserli hastalarla yapılan çalışmalar PGE'nin anksiyete, stresi azaltmada (Song ve ark., 2013; Yılmaz ve ark., 2015; Pelekasis ve ark., 2017), bulantı, kusma, ağrı, yorgunluk şiddetini hafifletmede (Metin ve ark., 2019) ve yaşam kalitesini iyileştirmede (Demiralp ve ark., 2010) etkili olduğunu ortaya koymaktadır (Zhou ve ark., 2015; Charalambous ve ark., 2016; Parás-Bravo ve ark., 2017; Metin ve ark., 2019).

-Masaj terapisi

Masaj terapisi, belirli kasları ve diğer bağ dokularını eşit bir tempoda ve çeşitli basınç seviyelerinde okşayarak, yoğurarak, sürtünme uygulayarak ve gererek vücudun yumuşak dokularını manipüle etme yöntemi olarak tanımlanmaktadır (Lee ve ark., 2011; Greenlee ve ark., 2017). Kanserli hastalarda gevşemeyi teşvik etmek, kas sertliğini, ağrıyı gidermek ve kas-iskelet sistemi şikayetlerini gidermek için kullanılan masaj, yan etkisi olmayan, ucuz ve kullanımı kolay bir yöntemdir (Lee ve ark., 2011; Greenlee ve ark., 2017; Bahçeli ve ark., 2022). Kanserli hastalara uygulanan çeşitli masaj biçimlerini (İsveç, Shiatsu ve derin doku masajı, vb.) açık yaralar, morluklar, cilt bozulması, damardaki kan pıhtısı, tümör bölgesi, tıbbi bir cihazın yakınındaki alanlar (örneğin drenaj) veya radyasyon tedavisinden sonra hassas cilt dahil olmak üzere vücudun belirli hassas bölgelerine yapmamaya dikkat etmelidir. Ayrıca, birden fazla kemik metastazı olan belirli hastalar derin masaj sırasında kırık riski altında olabilmektedirler (Greenlee ve ark., 2017). Yapılan bir çalışmada TAT yöntemi olarak en çok masajın (n=40) ve dua etmenin (n=38) tercih edildiği saptanmıştır (Yeşil ve ark., 2024). Çalışmalar, meme kanseri olan kadınlarda masajın yorgunluk düzeyine (Bahçeli ve ark., 2022), hücre aktivitesi, sistolik kan basıncı ve kalp hızı üzerinde olumlu etkisi olduğunu belirtmektedir (Billhult ve ark., 2009)

-Refleksoloji

Refleksoloji, vücutta belirli organ ve bölgelerin küçük bir aynası olarak kabul edilen, tüm salgı bezleri, organlar ve vücut bölümleri ile ilişkili olan kulaklar, eller ve ayaklardaki refleks noktalarına, masajla basınç uygulayarak gerçekleştirilen holistik, tamamlayıcı, iyileştirici özel bir tedavi ve enerji dengeleme sistemidir (Özdelikara, 2013; Korkan ve Uyar, 2014; Metin, 2015; Erkek ve Pasinlioğlu, 2017). Refleksolojinin arkasındaki teori, başparmak, parmak ve el tekniklerini kullanarak uyarılan kulak, ayaklar, yüz ve ellerdeki belirli bölgelerin, çok sayıda sağlık sorununa yardımcı olacak belirli bezlere, organlara ve vücudun diğer bölgelerine karşılık geldiğidir (Greenlee ve ark., 2017). Refleksoloji ile vücudun uyarılan refleks noktaları beyinde uyarılara neden olup alanda gevşeme ve iyileşme sağlanmaktadır (Korkan ve Uyar, 2014; Metin, 2015; Greenlee ve ark., 2017).

Onkolojide, refleksoloji genellikle gevşemeyi teşvik etmek, semptomları ve ilaçlara bağlı yan etkileri hafifleterek yaşam kalitesini arttırmak, fiziksel ve psikolojik destek sağlamak amacıyla için kullanılmaktadır (Kurt ve ark., 2013; Greenlee ve ark., 2017). Meme kanseri tanılı hastalar ile yapılan çalışmalarda refleksoloji uygulamasının yorgunluk şiddetinde (Özdelikara ve Tan,

2017; Tarrasch ve ark., 2018; Nourmohammadi ve ark., 2019), günlük yaşam aktivitelerinin etkilenme düzeyinde (Özdelikara ve Tan, 2017; Tarrasch ve ark., 2018), uyku kalitesi, ağrı (Tarrasch ve ark., 2018) ve dispnenin şiddetinde olumlu bir etkiye sahip olduğu belirtilmiştir (Wyatt ve ark., 2012).

-Taichi

Eski bir içsel Çin dövüş sanatı olan Taichi, yavaş hareketi kontrollü solunum alma ve farkındalıklı meditasyonla birleştiren, zihin-beden, ağırlık taşıyan bir egzersiz müdahalesidir (Liu ve ark., 2018; Guo ve ark., 2020; Liu ve ark., 2020). Taichi, vücudu, zihni güçlendirmek, rahatlatmak için derin, düzenli solunum alma ve imgeleme ile koordineli yavaş, kasıtlı hareketler ve meditatif tekniklerle işbirliği yapmaktadır (Liu ve ark., 2018; Guo ve ark., 2020). Çalışmalar, meme kanseri tanılı kadınlarda Taichi kullanımının yorgunluk semptomlarını önemli ölçüde hafiflettiğini, yaşam kalitesini iyileştirdiğini göstermektedir (Pan ve ark., 2015; Liu ve ark., 2020).

-Akupunktur

Akupunktur, fiziksel, duygusal ve ruhsal durumlar arasında uyumlu bir denge sağlamak için vücut meridyenleri boyunca uzanan akupunktur noktalarına ince iğnelerin batırılması ve manipülasyonu ile uyarılarak enerji akışlarını etkileme tekniğidir (Kumar ve ark., 2017; Kaya, Dişli ve Rathfisch, 2018; Maged ve ark., 2019; Lin, Kotha ve Chen, 2022). Akupunktur noktalarının tetiklenmesi kan akışını teşvik eder ve iç organların işlevini düzenler (Rong ve ark., 2011; Chien ve ark., 2013). Akupunkturda, çalışan yaşam enerjisi yolları, meridyenler olarak adlandırılmakta, her bir meridyen bir iç ve bir dış yolu içermekte olup uygulama, bu meridyenler hizasında deriye ve deri altındaki kas dokusuna yapılır; uygulama sırasındaki her türlü uyarandan deri ve deri altı kas dokusu etkilenir (Arslan ve Özdemir, 2015).

Akupunktur, kemoterapi ve radyoterapinin neden olduğu semptomların birçoğunun yönetiminde etkin olan bir TAT yöntemi olarak hem hastalığın hem de tedavilerin yol açtığı sorunların kontrolünde kullanılmaktadır (Chon ve Lee, 2013; Ovayolu ve Ovayolu, 2013; Chien ve ark., 2013; Arslan ve Özdemir, 2015; Özdelikara ve Arslan, 2017). Çalışmalar, meme kanseri hastalarında akupunkturun kemotarepiyle ilişkili bulantı ve kusmayı önlediğini (Chien ve ark., 2013; Li ve ark., 2020), kronik kas-iskelet ağrı şiddetini azalttığını, fiziksel ve ruhsal sağlığı iyileştirdiğini ortaya koymaktadır (Chien ve ark., 2013; Bao ve ark., 2023).

-Hipnoz

Hipnoz, kişinin farkındalığı korunarak iç deneyimlerine yöneldiği ve çevresel uyaranları algılama azaldığı zaman dikkatin ve odaklanmanın arttığı bilinç durumudur (Dumanlı ve ark., 2015; Semerci ve Sarı, 2023; Derin, 2024). Hipnozun trans benzeri hali, hastanın farkındalığının artmasını, odaklanmasını ve telkinlere açık olmasını sağlamaktadır. (Dumanlı ve ark., 2015; Derin, 2024). Hipnoz, yaşanan duygusal sıkıntıları veya hoş olmayan fiziksel belirtileri ve davranışları değiştirmeye yardımcı olmak için zihnini ve düşüncelerini nasıl kullanacağını öğrenmeyi kapsayan farklı bir bilinç durumu içermektedir (Brown ve Fromm, 2015; Alan ve Güzel, 2018; Semerci ve Sarı, 2023). Hipnoterapi, özel olarak eğitilmiş bir hipnoterapist tarafından uygulanabileceği gibi kişi hipnoterapist tarafından öğretildiğinde kendi kendine de uygulayabilmektedir (Derin, 2024).

Hipnoterapi, terapi ve meditatif çalışmalarda ağrı kontrolü, işlem öncesi hazırlık vb. amaçlar için kullanılmaktadır (Turan ve ark., 2010; Başer ve Taşçı, 2015; Cramer ve ark., 2015). Yapılan çalışmalar meme kanseri tanılı kadınlarda hipnozun, uyku bozuklukları ve duygusal işlev bozukluklarını azaltmada (Elyasi ve ark., 2021), mastektomi sonrası ağrının azaltılmasında (Moreno Hernández ve ark., 2022), yaşam kalitesinin artırılmasında (Moreno Hernández ve ark., 2022; Padoli ve ark., 2024), ağrı ve sıkıntı üzerinde olumlu etkilerinin olduğunu göstermektedir (Cramer ve ark., 2015).

-Müzik terapi

Müzik terapisi, insan davranışlarında değişiklik yaratan, emosyonel durumu etkileyen, ağrıyı ve anksiyeteyi azaltan, iletişimi kolaylaştıran, manevi iyileşmede etkin bir role sahip bir yöntemdir (Chlan, 2009; Uyar ve Korhan, 2011; Sezer ve ark., 2015; Zhou ve ark., 2015; Lafçı, 2018). Müzikle tedavi 'bir kişi veya grubun fiziksel, duygusal, sosyal ve kognitif ihtiyaçlarını karşılamak üzere gereksindiği iletişim, ilişki, öğrenme, ifade, mobilizasyon, organizasyon ve diğer ilgili terapötik öğeleri geliştirmek ve artırmak için müziğin ve/veya müzikal elemanların (ses, ritm, melodi ve harmoni) eğitilmiş bir müzik terapisti tarafından tasarlanarak kullanılması' olarak da tanımlanabilir (Birkan, 2014). Terapi, uygulanması kolay, kullanılması pahalı olmayan, yan etkisi bulunmayan, fiziksel, psikolojik, sosyal, duygusal ve ruhsal iyileşmede aktif rol oynayan güvenli ve doğal bir girişimdir (Uyar ve Korhan, 2011; Karadağ ve ark., 2019; Yücel, 2021).

Çeşitli hastalıkların tedavisi için kullanılan müzik terapi, ritim, ton yoluyla hastanın dikkatini dağıtma, uyarıcı konsantrasyonunu azaltma yoluyla kaygı, depresyon ve ağrı hissini düşürebilmektedir (Taghinejad ve Delpisheh, 2010; Sarıkaya ve Oğuz, 2016; Xu ve ark., 2024). Müzik terapisi kalp atış hızını, kan basıncını, solunum hızını ve kortizol seviyelerini etkileyebilmektedir (Taghinejad ve Delpisheh, 2010; Xu ve ark., 2024). Çalışmalar, meme kanseri hastalarında müzik terapisinin hastanede kalış süresini kısalttığına (Zhou ve ark., 2015), uykusuzluk ve iştah kaybında iyileşmelere (Bozcuk ve ark., 2006), yorgun hissetme algısında düzelmeye (Lesiuk (2015), ağrı yoğunluğunu azalttığına (Li ve ark., 2011; Deng ve ark., 2022), anksiyete ve depresyonu iyileştirdiğine dikkat çekmektedir (Romito ve ark., 2013; Zhou ve ark., 2015; Karadağ ve ark., 2019; Lima ve ark., 2020; Deng ve ark., 2022; Xu ve ark., 2024).

-Sanat Terapisi

Sanat terapisi, psikolojik sıkıntıyı ve zor duyguları ifade etme zorluklarına, zorlu kanser tanısıyla ilgili düşüncelere ve tedavi durumuna odaklanan bir duygusal destek biçimidir (Kievisiene ve ark., 2020). Sanat terapisi, terapötik sürecin bir parçası olarak imgeler, renkler ve şekiller kullanılarak yaratıcı süreci ve psikoterapiyi birleştirerek kendini keşfetmeyi ve anlamayı kolaylaştırır (Jalambadani ve Borji, 2019). Çalışmalar, meme kanseri olan kadınlarda sanat terapisinin depresyon ve somatik semptomları azaltmada (Czamanski-Cohen ve ark., 2019), kaygı düzeyini düşürmede (Kievisiene ve ark., 2020), yaşam kalitesini iyileştirmede (Svensk ve ark., 2009; Jalambadani ve Borji, 2019) etkili olduğunu ortaya koymaktadır.

DİĞER TAMAMLAYICI SAĞLIK YAKLAŞIMLARI

Geleneksel Çin Tıbbı (GÇT) binlerce yıldır uygulanmakta olup günümüzde kanser için alternatif bir tedavi olarak yaygın olarak kabul görmektedir (Wang ve ark., 2018; Xiang ve ark., 2019). Ayurveda, homeopati, naturopati gibi geleneksel Çin uygulamaları diğer tamamlayıcı sağlık yaklaşımları olarak gruplandırılmaktadır (NCCIH, 2021).

-Ayurveda

Ayurveda, "yaşam bilimi" anlamına gelmekte olup gereksiz acıyı önlemek, uzun ve sağlıklı bir yaşam sürmek felsefesi ile Hindistan'da ortaya çıkan yaklaşımlardan birisidir (Parasuraman ve ark., 2014). Ayurveda zihin, beden ve ruh dahil olmak üzere yaşamın tüm alanlarında uyum ve denge getirmeye odaklanmaktadır (Parasuraman ve ark., 2014; Ceyhan ve Yiğit, 2016; Talhaoğlu, 2021). Ayurveda yaklaşımında, hastalığın belirtileri çıktığında tedavi etmek yerine hastalığın ortaya çıkışını durdurmak veya hastalıkları iyileştirmek yerine sağlıklı yaşama geçmek felsefesi benimsenmiştir (Ceyhan ve Yiğit, 2016; Görücü, 2018). Ayurveda, dengeyi yeniden sağlayarak hastalığın temel nedenini ortadan kaldırmak için diyet, otlar, baharatlar, mineraller, egzersiz, meditasyon, yoga, zihinsel hijyen, sesler, kokular ve mekano-prosedürler gibi doğal araçların kullanımını içermekte, aynı zamanda dengesizliğin tekrarlanmasını önlemek için sağlıklı bir yaşam tarzı yaratmaktadır (Parasuraman ve ark., 2014; Talhaoğlu, 2021). Dash ve arkadaşlarının (2021) yaptıkları çalışmada, meme kanseri tanılı kadınlarda

ayurveda yaklaşımı tümör baskılayıcı ve kemoterapi ajanlarının zararlarını azaltıcı özelliği ile dikkat çekmektedir.

-Homeopati

Homeopati, vücuttaki bazı bozuklukları gidermek için yüksek oranda seyreltilmiş bitkisel, hayvansal veya mineral içeriklerden elde edilen ürünlerin kullanımını içeren tamamlayıcı ve alternatif tıp yöntemidir (Kohli ve Kohli, 2014). Homeopati, “benzeri benzer ile tedavi etme” esasına dayanmaktadır (Ünlü ve ark., 2017; Görücü, 2018; Talhaoğlu, 2021). Bu ilkeye göre, birçok kez seyreltilmiş maddeler, sağlıklı insanlarda kullanıldığında ortaya çıkacak semptomlar hastaları da tedavi etmek için kullanılmaktadır (Kohli ve Kohli, 2014; Ünlü ve ark., 2017). Belirli bir hastalık için tedavi bulmaktan ziyade vücudun büyük uyumsuzluğunu tedavi etme felsefesiyle karakterize olan bu yaklaşım kanseri tedavi etmek için uygulanan en yaygın tamamlayıcı ve alternatif tıp prosedürlerinden biri haline gelmiştir (Ünlü ve ark., 2017; Yücel, 2021).Yapılan bazı çalışmalarda meme kanseri hastalarında homeopati kullanımının yaşam kalitesini iyileştirdiğine (Mediona ve ark., 2023) ve yorgunluk üzerinde olumlu etkisi olduğuna vurgu yapılmaktadır (Lapidari ve ark., 2021).

-Naturopati

Naturopati, vücudun kendini iyileştirme konusunda doğuştan gelen kapasitesine inanan geleneksel birincil bakım tıbbının belirgin bir türüdür (Flemin ve Gutknecht, 2010; Nair ve Nanda; 2014). Naturopati, hastayı tedavi etmek için doğal maddeler kullanan ve hastanın zihinsel, duygusal ve fiziksel durumlarının kalıcı bir etki için tedavi edilmesi gerektiğini kabul eden bir sistemdir. (Fleming ve Gutknecht, 2010). Naturopatik tıbbın temeli, doğanın iyileştirici gücünün vitalistik felsefesidir. Naturopati, hastalıkların toprak, su, güneş ışığı ve mesaj gibi çevrede bulunan doğal kaynaklarla iyileştirilmesinde ısrar etmektedir (Kohli ve Kohli, 2014).

TAMAMLAYICI VE ALTERNATİF TERAPİLERDE SAĞLIK PROFESYONELLERİ

Son yıllarda küresel anlamda toplumda geleneksel ve tamamlayıcı tedavilerin kullanımı artma eğilimi göstermektedir (Mollahaliloğlu ve ark., 2015). Hizmet amacı birey, aile ve toplumun sağlık gereksinimlerini karşılamak olan sağlık profesyonellerinin tamamlayıcı terapilerde rol alması bir zorunluluk haline gelmiştir (Turan ve ark., 2010). Sağlık profesyonelleri bireylere Geleneksel ve Tamamlayıcı Tıp Uygulamaları'nın (GETAT) güvenli ve etkili kullanımı hakkında danışmanlık ve uygulama yapmak için önemli bir konumdadır. GETAT, bireylerin sağlık hizmeti tavsiyesi alması için güvenilir bir kaynak olarak kritik öneme sahiptir (Mollahaliloğlu ve ark., 2015). Bu doğrultuda sağlık profesyonellerinin tamamlayıcı terapilerin kullanımına ilişkin uygulamalarını geliştirmeleri, etkin stratejiler belirlemeleri ve sağlıklı/hasta bireyleri tamamlayıcı terapileri etkin ve doğru şekilde kullanmaları konusunda yönlendirmeleri beklenmektedir (Turan ve ark., 2010). Sağlık bakımı vermede kilit nokta olan ebe ve hemşirelerin TAT yöntemlerini, kullanım amaçlarını, etkilerini, şekillerini bilmesi ve değerlendirmesi oldukça önemlidir (Mollahaliloğlu ve ark., 2015; Demirsoy, 2016; Aktaş, 2017; Yücel, 2021). Demirsoy'un çalışmasında (2016) bireyler TAT yöntemlerine ilişkin bilgi ve tavsiyeleri en çok aile bireylerinden edindiklerini, TAT yöntemleri ile ilgili yeterli bilgiye ulaşamama gibi sorunlar yaşadıklarını ve çoğunluğun TAT yöntemini sağlık personeli ile paylaşmadıkları belirtilmiştir. Çınar ve arkadaşları (2019) meme kanserli hastaların tamamlayıcı sağlık yaklaşımları kullanım durumları ve ilişkili faktörleri araştırdıkları çalışmada, hastalar uygulamaları aile ve akrabaların tavsiyesi, medyanın etkisi nedeniyle kullandığını, uzak organ tutulumu ve hastalık süresi daha uzun olan hastaların tamamlayıcı sağlık yaklaşımları uygulamalarını daha çok kullandıkları ifade edilmiştir.

Sonuç

Meme kanserinin sık görülmesi ve mortaliteye neden olmasından kaynaklı meme kanseri tanısından sonra TAT kullanım oranları artış eğilimi göstermektedir. Meme kanseri tanılı hastalar çok fazla araştırma yapmadan aile üyeleri ve yakınları tarafından önerilen çok çeşitli

TAT yöntemlerini hastalığa çare olur umuduyla kullanmaktadır. Meme kanseri tanılı kadınların tedavi için sıklıkla başvurdukları tamamlayıcı ve alternatif terapiler hakkında sağlık profesyonelleri hastaları ve aileleri bilgilendirmeli, danışmanlık yaparak rehberlik etmelidir.

ÖZET

Bizans imparatoriçeleri Türk devletlerinde olduğu gibi herhangi bir siyasi sebebe dayanılarak seçilmiyordu. Bir kadının imparatoriçe olabilmesi için bazen güzellik bile yeterli olabiliyordu. İmparatoriçe, imparatorluk meşruiyetinin aktarımcısı olması dolayısıyla devlet içerisinde ayrıcalıklı bir konuma sahipti. Çünkü imparatorun ölümü sonrasında imparatoriçe ya tahtın varisi ya da varis olarak düşündüğü kişi ile evlenerek devletin devamlılığını sağlıyordu. Bu hanedan kadınlarından bir tanesi de İmparatoriçe Theodora'dır. Fakir bir ailenin çocuğu olarak dünyaya gelen Theodora'nın babası ayı bakıcısı, annesi ise sirkte pandomim sanatçısı olarak görev yapmaktadır. Theodora da biraz büyüdükten sonra annesi ile aynı mesleği yapmaya başlayacaktır. İmparator Justinianus ile tanışmaya kadar, Theodora'nın hayatının çok da iyi olduğunu söylememiz mümkün değil. Ancak kader Theodora'nın yüzüne Antakya'da tanıştığı Makedonia isimli bir kızla tanışması ile gülecektir. Makedonia, görünüşte dansözdür. Ancak onun asıl görevi rejim aleyhtarları hakkında Justinianos'a bilgi toplamaktır. Makedonia'nın arabuluculuk yapması ile Theodora ve Justinianos evleneceklerdir. Bundan sonraki süreçte Theodora, Justinianus'un aldığı her kararda etkili olacak olan bir isim haline gelecektir. Hatta Justinianus'a karşı Nika İsyanı başladığında, ülkeyi bu isyandan kurtaran dahi Theodora olacaktır. Theodora 547 senesinde hayatını kaybedecektir. İmparator Justinianus ise onun ölümünden sonra bir daha evlenmeyecektir. Bu çalışmada Bizans İmparatoriçesi Theodora ve onun Bizans siyasetindeki yeri hakkında bilgi verilecektir.

Anahtar Kelimeler: İmparatoriçe, Bizans Devleti, Justinianus, Theodora.

POLITICAL ROLES OF BYZANTINE DYNASTY WOMEN: THE CASE OF EMPRESS THEODORA

ABSTRACT

Byzantine empresses were not chosen based on any political reason, as in the Turkish states. Sometimes, beauty was enough for a woman to become empress. The empress had a privileged position within the state because she was the transmitter of imperial legitimacy. Because after the death of the emperor, the empress would ensure the continuity of the state by marrying either the heir to the throne or the person she thought would be the heir. One of the women of this dynasty was Empress Theodora. Born into a poor family, Theodora's father was a bear keeper and her mother was a mime artist in the circus. Theodora would also start the same profession as her mother after she grew up a little. It is not possible to say that

Theodora's life was very good until she met Emperor Justinian. However, fate would smile upon Theodora when she met a girl named Makedonia, whom she met in Antioch. Makedonia was apparently a belly dancer. However, her real duty was to gather information for Justinian about those who were against the regime. With Macedonia's mediation, Theodora and Justinian will marry. In the following period, Theodora will become a name that will be effective in every decision Justinian makes. In fact, when the Nika Revolt against Justinian begins, Theodora will be the one who saves the country from this rebellion. Theodora will die in 547. Emperor Justinian will not marry again after her death. This study will provide information about the Byzantine Empress Theodora and her place in Byzantine politics.

Key Words: Empress, Byzantine Empire, Justinian, Theodora.

GİRİŞ

Fakir bir ailenin çocuğu olarak dünyaya gelen Theora'nın ailesi 501 tarihinde Girit'ten Konstantinopolis'e göç etmiştir. Yeşiller¹ tarafından ayı bakıcısı olarak istihdam edilen Theora'nın babası, Konstantinopolis'e geldikten yaklaşık iki sene sonra 503 tarihinde hayatını kaybetmiştir. Babasının ölümünden sonra ailenin geçimini annesi sağlamıştır. Theodora'nın annesi, sirkte pandomim sanatçılığı yapmaktadır. İlerleyen süreçte de önce Theodora'nın ablası Comito, on altı yaşına geldiğinde de Theodora aynı yerde çalışmaya başlamıştır.²

Babasının ölümünden sonra evlenen annesinin yeni eşi Mavilere yakındır. Bundan dolayı da Theodora ve ailesi de Maviler tarafına geçmişlerdir. Theodora, o esnada birlikte olduğu erkeklerden birinden hamile kalmış ve bu evlilik dışı ilişkiden bir de kız çocuğu dünyaya gelmiştir.³

Kaynakların ifadesine göre, ince ruhlu ve zeki bir kadın olan Theodora aynı zamanda cüretkâr ve girişimciydi. Herkesin hürmet ve takdirini, işveleri ve tebessümleri ile kazanırdı. Tiyatroda oldukça yetenekliydi. Ancak Theodora fazilete ve ahlaki değerlere çok da ehemmiyet vermeyen birisiydi. Bütün Bizans'ta aşıkları vardı. Hatta bu halleri o kadar ileri derecedeydi ki Theodora, sokaktan geçtiği zaman namuslu insanlar, her zaman uzaktan gitmeyi tercih

¹ Yeşiller, daha çok halkın alt ve fakir sınıflarını temsil eden ve aynı zamanda da Monofizit Ortodoks mezhebine bağlı kişilerden meydana gelmektedir. Georg Ostrogosky, *Bizans Devleti Tarihi*, Çev. Fikret Işıltan, Arkeoloji ve Sanat Yayınları, Ankara 2011, s.70

² Ostrogosky, s.70. "Ravona'da, Sen Vital Kilisesi'nin duvarlarını süsleyen mozaikler içinde zarif ve cazip bir kadın siması bakışları üzerinde toplar. Bu sima hipodrom sahnelerinden Bizans tahtına yükselen, işvesi ve cazibesi ile gönülleri büyüleyen Teodora'nın simasıdır. Teodora miladın altıncı yüzyılında tiyatro sahnelerinde arz-ı endam eylediği zaman velveleli bir şöhret kazanmıştı. Suriye'nin mavi seması altında yetişen bu cazip çiçek, Bizans sahnelerinde bütün hayran bakışları üzerinde topluyordu. Teodora'nın babası, tiyatroların birinde ayı bakıcısı idi. Annesi iffet ve namusa laubali, tiyatro kulislerinde hayat süren bir kadındı. Teodora, işte bu ailenin evliliğinden dünyaya gelmişti. Teodora, hâkimiyeti altına alacağı halkı önce cazibesi ile büyülemişti. Babası Akaçyus, annesini üç kızı ile kimsesiz ve mahrum bir halde bırakmış, kadıncağız evlatları ile beraber geçimini sağlamak için başka biriyle münasebette bulunmaya başlamıştı. Fakat bu adama da kocasının memuriyetini temin etmek gerektiği için, Teodora'nın annesi üç kızını çiçekler ile süsleyerek sah neye çıkarmış, Maviler'le Yeşiller grubundan Maviler'in teveccühünü kazanarak amacına ulaşmayı başarmıştı. Teodora o zamanlar Yeşil ler'in gösterdikleri kayıtsızlığı ömrü boyunca unutmamış, bu suretle hipodrom kulislerinde hayat sürmeye başlamıştı." Ahmet Refik, *Bizans ve Osmanlı Saraylarında İhtiraslı Kadınlar*, Haz. Nükhet Erkoç, Karakutu Yayınları, İstanbul 2009, s.25-27.

³ Maviler, devletin elitlerinden oluşan ve Diofizit Ortodoks inancına sahip olan kişilerden meydana gelmektedir. Ostrogosky, s.70, Ahmet Refik, *Bizans İmparatoriçeleri*, Çev. Muammer Yılmaz, Arkeoloji ve Sanat Yayınları, İstanbul, 2012, s.23.

ederlerdi. O dönemde henüz yirmili yaşlarda bulunan Theodora'ya sokakta rastlamak dahi adeta bir uğursuzluk kaynağı addediliyordu.⁴

Theodora, birgün aniden ortadan kaybolmuştur. Bu kayboluşun sebebi Theodora'nın aşıklarından biri olan Hecebolus'tur. Aslen Suriyeli olan Hecebolus, bir Bizans memurudur. Bu zat bir müddet sonra Afrika'ya tayin olmuştur. Theodora da aşkının peşinden Afrika'ya gitmiştir. Ancak Theodora'nın bu aşkı çok uzun soluklu olmayacaktır. Hecebolus, aralarının bozulmasından dolayı Theodora'yı kovalayacaktır.⁵

Theodora, bu ayrılıktan sonra Antalya'ya gidecektir. Ve burada hayatını değiştirecek olan Makedonia isimli bir dansözle tanışacaktır. Makedonia, Maviler tarafından istihdam edilen bir dansözdür. Ancak bu sadece bir görünüşten ibarettir. Onun asıl görevi İmparator Justinianus'a rejim aleyhtarları hakkında bilgi toplamaktır. Makedonia, Theodora ve Justinianus arasında da arabuluculuk rolü oynayacak ve bunun neticesinde de Justinianus, Theodora'ya aşık olacaktır.⁶

Bir süre sonra Theodora ile evlenmek isteyen Justinianus'un önünde bu konuda iki önemli engel bulunmaktadır: bunlardan bir tanesi İmparatoriçe Eufamia'dır. Diğeri ise yürürlükteki kanunlardır. Çünkü yürürlükteki kanunlara göre, konsül vesenatörlerin aktrisler ile evlenmeleri yasaktı. Justinianus, İmparatoriçe Eufamia'ya duymuş olduğu saygıdan dolayı o hayatını kaybedinceye kadar bu evliliği gerçekleştiremeyecektir. Eufamia, 524 tarihinde ani bir kalp krizi neticesinde hayatını kaybedecektir. Onun ölümünün hemen arkasından Justinianus'un, Theodora ile evlenmesi için gerekli yasal düzenlemeler de yapılacaktır. Ve bundan sonra da Justinianus ile Theodora, Ayasofya'da yapılan görkemli bir düğün ile hayatlarını birleştireceklerdir.⁷

NİKA İSYANI VE THEODORA

Theodora, Justinianus ile evlendikten sonra devletin kaderini dahi tayin edebilecek kadar güçlü bir konuma erişmiştir. Nika İsyanı bunun en önemli örneklerinden birisidir. 10 Ocak 532 tarihinde Konstantin Valisi hem yeşillerden hem de mavilerden şiddet olaylarına karışan yedi kişiyi önce tevkif ettirmiş sonra da onları astırmıştır. Ancak idam sırasında biri mavilerden diğeri de yeşillerden olmak üzere iki kişi kaçmayı başarmıştır. Bu olaylardan üç gün sonra hipodromda yarışlar başlamıştır. Bu yarışlar esnasında Maviler ve Yeşiller İmparator'dan bu iki kişinin bağışlanmasını isteyeceklerdir ancak İmparator bunu kabul etmeyecektir. Bunun üzerine Maviler ve Yeşiller birleşerek, "Nika, Nika" diye, bağırmağa başlayacaklardır. İmparator, hipodromu terk edecek ancak olaylar kısa sürede hipodrom dışına taşacaktır. Önce hapis hanedeki mahkûmlar, isyancılar tarafından serbest bırakılacak sonra da valilik konağı, Ayasofya, Aya İrine Zeuxippos ve Mese üzerindeki birçok bina ile Sampson Hastanesi de dahil olmak üzere birçok yeri yakacaklardır.⁸

⁸ Dikici, s.136. Giles Morgan, *Yeni Roma Ya da Konstantin Şehri Bizans'ın Kısa Tarihi*, Kalkedon Yayınları, İstanbul 2010, s.51.

Ertesi gün isyancılar yeniden hipodromda toplanarak, Kapodokyalı İonnes, Tribonian ve şehrin valisinin görevden alınmasını isteyeceklerdir. Olayların daha fazla büyümesinin önüne geçmek için onların bu istekleri kabul edilir. Ama isyancılar bununla da yetinmezler, bu defa da Justinianus'un yeğeni olan Hypatius'u bulurlar ve onu tahta çıkartmaya çalışırlar.⁹

Bu durum karşısında ne yapacağını bilemeyen İmparator Justinianus, müşavirleri ile yaptığı müzakereler sonrasında kaçmaya karar vermiştir. Bu toplantı esnasında Theodora da bulunmaktadır. O zamana kadar sükûnetini bozmayan Theodora, Justinianus'un çaresizliğini görünce ayağa kalkmış ve İmparatora şu sözleri söylemiştir: *“Kaçmaktan başka bir kurtuluş çaresi kalmamış bile olsa, be yine kaçmayacağım. Başında saltanat tacı taşıyanlar, o taç ile beraber ölmelidirler. Halk beni İmparatoriçe diye selamladıktan sonra yaşamamak benim için evladır Sezar! Sen kaçmak istiyorsan işte meydan! Paran var, gemiler hazır. Fakat ben sebat edeceğim. Benim için İmparatoriçelik elbisesi, en güzel bir kefedir.”* demiştir.¹⁰

Bunun üzerine kaçma fikrinden vazgeçilir. Asiler, ertesi gün Krala yeni şartlarını bildirmek için hipodroma gelirler. Ve Belaserius hipodroma, mavilerin oturduğu batı kapısından Mundus ve adamları ise Ölü Kapısı diye bilinen kapıdan girerler. Mavi-Yeşil, kadın-erkek ayrımı yapılmadan orada bulunan herkes kılıçtan geçirilir. Hypatius da yakalanır. Aslında Justinianus, onu affetmek niyetindedir ancak Theodora bu duruma müdahale eder. Ve Justinianus'a: *“Bu adam, beyaz saçına bakmadan, halk tarafından kendisine sunulan tacı kabul etmiştir. Yarın potansiyel bir ayaklanma için yeni adaydır. Affedilmesi mümkün değildir. Bunun için asılması lazım.”* der. Justinianus da onu haklı bulur ve Hypatius, idam edilir.¹¹

KADIN HAKLARI VE THEODORA

Justinianus döneminin en önemli eseri Codex Justinianus'tur. Bu eserin hazırlanması görevini Tribonianos başkanlığındaki bir heyet yürütmüştür. Bu hukuk kitabı, Justinianus'dan önce yapılan yasaları da içerir. Bu anlamda oldukça nitelikli bir eserdir.¹²

Justinianus'un hazırlattığı bu geniş kapsamlı eser, üniversitelerde de kaynak olarak kullanılabilir bir eserdir. Hazırlanan bu eser, iki kitap halindedir. Ve bu eser, Institutes adını alır. Bu hukuk kitabında 555 senesine kadar da yeni düzenlemeler yapılmıştır.¹³

Theodora'nın, Bizans siyasetindeki yerini anlayabilmemiz için bu codex'e bakmamız yeterlidir. Nitekim Theodora, hazırlanan bu kanun kitabına kadın hakları ile alakalı bazı kanun maddeleri ekletmek istemiş, ancak codex'i hazırlayan görevliler buna karşı çıkmışlardır. Ancak Theodora, bu konuda diretince, kadın haklarıyla alakalı o dönem için oldukça marjinal sayılabilecek bazı maddeler bu codex'e dahil edilmiştir.¹⁴

¹³ Yıldırım, s.32.

¹⁴ Karadeniz Çelebican, *Roma Hukuku*, Turhan Yayınları, Ankara 2000, 45, Dikici, s.135.

Codexe dahil edilen bu maddeler arasında kadınların tek başlarına ticaret yapabilmeleri, boşanmış bir kadının da çocuk sahibi olabileceği, kadınların tek başlarına mal-mülk sahibi olabilmeleri ve aile hukukunda ölüm cezasının olamayacağı bulunmaktadır.¹⁵

Theodora, Suriye keşişlerine karşı her zaman büyük bir sevgi ve saygı beslemiştir. Bu keşişleri her zaman sarayına davet ve kabul ederek, onların duasını almıştır. Theodora, Hristiyan bir hükümette dini meselelerin ne kadar önemli olduğunu, bu meselelere kayıtsız kalmaktan ne tür neticelerin doğacağını bilirdi. Anadolu, Suriye ve Mısır'ın verimli toprakları imparatorluğun en önemli yerleriydi. Dini ihtilaflar dolayısıyla bu yerlerin elden çıkması, Bizans için büyük bir kayıp olacaktı. Bu sebeple Theodora, dinî ihtilaflara karşı kendi eğilimlerine mani olur, imparatoru da böyle davranması konusunda yönlendirirdi. Justinianus, kalben dine bağlı olduğu için dini meselelere karıştırdı. Theodora ise dinî münazaraların geçici ve değişken fırtınalarına ehemmiyet vermeyerek, meselenin daima esasını dikkate alırdı. Bu sebeple Rafizileri himaye etmiş, Papa'ya karşı durmuş, kararsız ve perişan haldeki kocasını bildiği yola sürükleyerek, dini kavgalara bütün mevcudiyeti ile atılmıştır.¹⁶

Theodora, devlet ricalinin de kendisine bağlı olmasını isterdi. Bunun için de her türlü hileyi kullanmaktan çekinmezdi. Örneğin General Belisarius'u kontrolüne almak için onun eşi Antoni'yi kullanıyordu. Bizans İmparatorluğu'nun en parlak dönemi olan Justinianus dönemi, en iyi komutanlarından Belisarius hem Avrupa'ya hem de Afrika'ya yaptığı seferler ile Bizans hakimiyetini en geniş sınırlarına ulaştırmak için yola çıkmıştı. Ancak Theodora, Belisarius'u bu seferden geri çağırarak, Konstantinopolis'e dönmesini sağlamıştır. Theodora'nın buradaki amacı Belisarius'un merkezden çok uzak bölgelerde hakimiyet kurarak, gücünü çok artıracaklarını ve Bizans'a karşı isyan edebileceğini düşünmüştü.¹⁷

İmparatoriçe Theodora, 547 senesinde hastalanır ve 548 tarihinde de hayatını kaybeder. Justinianus, onun ölümünden sonra bir daha evlenmeyecek ve kendisi ölünceye kadar da her zaman onu yasını tutacaktır.¹⁸

SONUÇ

Bizans Devleti'nde imparatoriçeler ayrıcalıklı bir konuma sahipti. Onlar, imparator ile evlendikleri andan itibaren imparatorluk meşruyetinin resmi aktarımcıları olarak görülüyorlardı. Onlar kendilerine ait görevliler ile tören ve ayinlerde yer alıyorlardı. Aynı zamanda şöenlerde de yöneticileri ile birlikte bir masaları vardı. İmparator hayatını kaybettiğinde, imparatoriçe tahtın varislerini seçme ya da onunla evlenme hakkına sahipti. Aslında Bizans Devleti'nde babadan oğla geçen bir veraset sistemi yoktu. Ancak yine de saltanattaki aileler arasında bir bağın olmasına dikkat ediliyordu. İşte bu bağı sağlayan kişi de Bizans İmparatoriçeleri idi. Bu şekilde devletin devamlılığı da sağlanmış oluyordu.

Theodora da bu Bizans İmparatoriçelerinden birisidir. Theodora, Bizans tarihinde o kadar önemli bir yere sahiptir ki onun güçlü kişiliği aynı zamanda Bizans Devleti'nin de kaderini tayin etmiştir. Nitekim Bizans tarihinde meşhur Nika isyanı onun sayesinde bastırılmıştır. Theodora'nın Bizans tarihindeki tek etkinliği bununla da sınırlı değildir. O aynı zamanda kültürel ve sosyal hayat üzerinde de oldukça etkili bir isimdir. Yürülmeye sokmaya çalıştığı kadın haklarına dair reformlar, Ortaçağ Avrupası'nın kadına bakış açısını göz önüne

¹⁵ Dikici, s.85-86.

¹⁶ Refik, *Bizans ve Osmanlı Saraylarında İhtirash Kadınlar*, s.35.

¹⁷ Dikici, s.143.

¹⁸ Umar, s.35.

aldığımızda oldukça cesurca bir adımdır. Kadınlara verilen bu haklarla hem Bizans kadınlarının herhangi bir haksızlığa maruz kalmalarının önüne geçilmiş hem de onların da erkekler gibi ticari hayatta özgürce yer almalarının önü açılmıştır. Theodora, VI. yüzyılda Bizans Devleti'nin kaderini belirleyen en önemli isimdir.

ENDÜSTRİ MİRASI YAPILARININ KORUMA AMACIYLA YENİDEN İŞLEVLENDİRİLMESİ; SİLO ÖRNEKLERİ KAPSAMINDA DEĞERLENDİRMESİ
ADAPTIVE REUSE OF INDUSTRIAL HERITAGE BUILDINGS FOR CONSERVATION: A CASE STUDY OF SILOS

Fatma KILIÇ URFALI

Doktora Öğrencisi, Erciyes Üniversitesi Mimarlık Fakültesi, Mimarlık Anabilim Dalı

Ayşegül AKŞEHİRLİOĞLU

Dr. Öğretim Üyesi, Erciyes Üniversitesi, Mimarlık Fakültesi, Mimarlık Anabilim Dalı

ÖZET

Mimarlık kavramının, tarihe tanıklık eden ve farklı kültürlerin etkisiyle ortaya çıkan çeşitli dönem yapıları ile kültürlerin yaşantılarını yansıttığı düşünüldüğünde koruma olgusunun önemi ortaya çıkmaktadır. Bu bağlamda tarihte önemli kırılma noktalarından birini temsil eden endüstri mirası yapıları değerlendirildiğinde, sanayi devriminin etkisiyle birlikte diğer tüm alanlarda olduğu gibi mimari anlamda da büyük değişimlerin yaşandığı görülmektedir. Kentsel yaşam biçiminde ve algısındaki değişim, dönüşümler; yeni teknolojik, bilimsel keşifler; sosyo-kültürel, sosyo-ekonomik yapının değişimi ve sanayileşme süreci gibi etkenler kent merkezlerinde büyük ölçekli endüstri mirası yapılarının oluşumunu beraberinde getirmiştir. Yaşam biçiminin yeniden yorumlandığı ve başkalaştığı süreçte endüstri mirası yapıları da nitelikleri gereği büyük bir çeşitlilikte kurgulanmış ve inşa edilmiştir. Bu çalışma kapsamında, endüstri mirası yapıların geniş çeşitlilik yelpazesinde ve kent hafızasında önemli yer kaplayan, depo-ambar (gıda, tohum, yem, maden, kimyasal madde) vb. işlevleriyle tasarlanmış siloların dönem yapısı olarak önemi ve korunması araştırılmıştır. Siloların, yapıldıkları zamanın kullanım amaçlarını yitirmeleri sebebiyle âtil kalması ve zamanla yok olma tehlikesi ile karşı karşıya gelmeleri bu yapıların yeniden işlevlendirilerek korunması ve kente kazandırılması gerekliliğini açıkça ortaya koymaktadır. Çalışmanın amacı, Türkiye ve Dünyanın çeşitli bölgelerinden seçilen, farklı deneyimler sunan niteliklerle işlevlendirilen örnekler aracılığıyla, silo yapılarının dönüştürülerek kent hafızasına katkı sağlama potansiyelinin değerlendirilmesi ve bunun yanı sıra tüketim-dönüşüm farkındalığının oluşturulmasına ve artırılmasına dikkat çekmektir. Siloların yeniden işlevlendirilerek korunmasını ve kent yaşamına etkisini odağa alan bu çalışmada, aynı zamanda Endüstri Mirası yapılarının koruma süreci ile ilgili olarak oluşturulan uluslararası kuruluşlar, yasalar ve yönetmeliklere dair bir perspektif sunulması da hedeflenmiştir.

Anahtar Kelimeler: Endüstri Mirası Yapılar, Tarihi Koruma, Yeniden İşlevlendirme, Mimari Sürdürülebilirlik.

ABSTRACT

When considering the concept of architecture as a reflection of various cultural influences through buildings that testify to history, the significance of conservation becomes apparent. In this context, examining industrial heritage buildings, which represent a critical turning point in history, reveals significant changes in architectural practices by the Industrial Revolution. Factors such as changes in urban lifestyles and perceptions, transformations due to new technological and scientific discoveries, modification in socio-cultural and socio-economic structures, and the process of industrialization have led to the emergence of large-scale industrial heritage buildings in city centers. During this process, where lifestyles are reinterpreted and transformed, industrial heritage structures have been designed and constructed

with great diversity due to their unique characteristics. This study focuses on the importance and preservation of silos—structures designed for various functions, including storage for food, seeds, feed, minerals, and chemicals—within the extensive spectrum of industrial heritage. These silos, having lost their original utility, face the risk of obsolescence and potential demolition, underscoring the necessity for their refunctionalization and reintegration into the urban context. The aim of this study is to evaluate the potential contribution of silo structures to urban memory through selected examples from various regions in Turkey and the world, which offer different experiences and functionalities. Moreover, this research aims to foster awareness regarding consumption and transformation processes. Focusing on the refunctionalization and preservation of silos and their impact on urban life, the study also aims to provide a perspective on international organizations, laws, and regulations related to the preservation process of industrial heritage buildings.

Key Words: Industrial Heritage Buildings, Historical Conservation, Adaptive Reuse, Architectural Sustainability.

GİRİŞ: AMAÇ VE KAPSAM

Sanayi Devrimi, 19. yüzyılda meydana gelen ve mimarlık tarihini derinden etkileyerek yeniden şekillendiren köklü bir dönüşüm sürecidir. Bu dönemde, mimari üslup anlayışında, malzeme bilimindeki ilerlemelerde ve kentleşme ile sanayileşme dinamiklerinde yaşanan değişimlerle birlikte, "koruma" kavramı da önem kazanmaya başlamıştır. Modern mimarlık yaklaşımlarının sadeleşmeyi ve basit geometrik formlara dayalı yapılaşmayı ön plana çıkarması, farklı dönemlere ait mimari üslupları, anıtları ve sit alanlarını koruma gerekliliğini daha belirgin hale getirmiştir. Bu bağlamda, modern mimarlık mirasının korunması sürecinde, endüstri mirası yapılarının dönüştürülerek işlevsel hale getirilmesi ve yeniden topluma kazandırılması büyük bir önem taşımaktadır.

Sanayileşmenin mimari yapılara yansımaları niteliği taşıyan endüstri mirası yapıları yapıldıkları dönemin somut örnekleri olarak varlıklarını sürdürmektedir (Konak, N. 2024). Endüstri mirası yapıları, kentsel dokuda geniş alanlara yayılan ve tarihsel sürece tanıklık eden, sanayileşme ile kültür aktarımını simgeleyen önemli yapılar olarak, kent belleğinin oluşumunda kritik bir rol oynamaktadır. Bu nedenle, bu yapıları korumak ve yeniden işlevlendirerek topluma kazandırmak hem tarihi mirası yaşatmak hem de kentsel kimliği güçlendirmek açısından büyük bir öneme sahiptir. Yeniden işlevlendirme kavramı, âtıl durumda olan ve farklı ihtiyaçlar için kullanılabilme potansiyeline sahip yapılar için mevcudiyeti devam ettirme çözümlerindedir (Öztürk, S.S., & Koramaz, E.K., 2020). Bu yaklaşım, binanın fiziksel yapısına ve özgün özelliklerine uygun bir şekilde, işlevsel dönüşümü ifade etmektedir (Günce, K. & Mısırlısoy, D., 2014). Tarihi yapılar yeni işlevlerle değerlendirilirken, hem özgün özelliklerinin ve niteliklerinin korunması hem de gerçekleştirilen değişikliklerin ekonomik katkı sağlaması, mekânın tanıtımına katkıda bulunması ve sürdürülebilirliğinin sağlanması hedeflenmektedir (Lecic, N., & Vasilevska, L., 2018). Bu bağlamda, yeniden işlevlendirme uygulaması yapısal anlamda koruma sağlamakla birlikte aslında sürdürülebilirlik bağlamında kültürel devamlılık sağlanmaktadır.

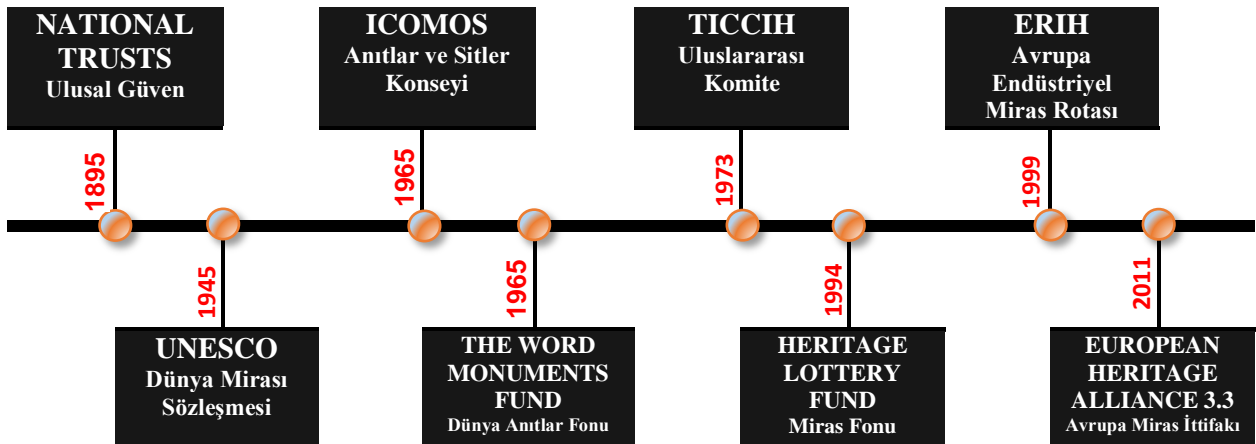

Koruma ve yeniden kullanım konusunda uluslararası düzeyde oluşturulmuş birçok tüzük ve standart bulunmaktadır. Venedik Tüzüğü, anıtların korunmasının, yapının özgün planı ve bezemelerini değiştirmemek kaydıyla işlevsel dönüşümle kolaylaştırılabileceğini belirtmektedir (Venedik Tüzüğü, 1964). Granada Sözleşmesi, anıtsal yapıların korunmasında modern yaşam ihtiyaçlarının göz önünde bulundurulmasını ve değişimlerin ekonomik, sosyal ve kültürel ihtiyaçlara uygun yapılmasını vurgulamaktadır (Granada, 1985). Burra Tüzüğü, koruma sürecinin yapının kültürel önemini koruyacak şekilde bir dizi yöntemle yapılması gerektiğini ifade etmektedir (Burra Tüzüğü, 2013). Nara Özgünlük Belgesi ise, anıtın

özgünlüğünün tasarım, malzeme, kullanım ve diğer kültürel boyutlarıyla tanımlanması gerektiğini belirterek, özgün özelliklerin korunmasının önemini vurgulamaktadır. Uluslararası rehberler, yeniden işlev verme sürecinde özgün yapıya saygılı ve geri alınabilir değişikliklerin ön planda tutulması gerektiğini önermektedir (Nara Özgünlük Belgesi, 1994). Dolayısıyla koruma ilkeleri doğrultusunda hareket edilerek yıpranması ya da yok olması söz konusu olan bir eserin yeniden kullanılabilirlik doğrultusunda değerlendirilmesi ve çağdaş yaşama kazandırılması önemli bir yaklaşım olarak karşımıza çıkmaktadır.

Uygulama sürecinde koruma ilkelerinin esas alınması; yapının özgünlüğünü, bütünlüğünü bozacak müdahalelerin yapılmaması, uygulanacak müdahalelerin anlaşılabilirliğinin, geri alınabilir niteliklerde olmasının sağlanması gibi parametreler açısından önem arz etmektedir. Bu sayede, tarihi nitelikteki yapı ya da yapı gruplarının özgün özelliklerini kaybetmemesi sağlanabilmektedir. Bu araştırmada, Endüstri yapılarının korunması ve yapılan çalışmalar üzerine yapılan literatür taramasının yanı sıra, Türkiye ve dünyadan seçilen örnekler üzerinden analitik bir metodolojiyle değerlendirme yapılmıştır. 1930-1970 yılları arasındaki endüstri mirası yapıları, özellikle silo yapıları üzerinden incelenerek, bu yapıların teknik özellikleri, mevcut durumları, konumları ve yenilenen işlevlerinin kente sağladığı katkılar gibi kriterler doğrultusunda yeniden kullanımları analiz edilmiştir.

ENDÜSTRİ MİRASINI KORUMA UYGULAMALARINDA YASAL-YÖNETSEL ÇERÇEVELER

Koruma eylemi; uluslararası belirli standartlar doğrultusunda ve farklı disiplinler kapsamında uzman kişilerce belirlenen yöntemlerle sürdürülmesi gerekli olan, son derece önemli bir eylemdir (Balcı, Kuban, Çiftçi, 2022). Toplumların sahip olduğu kültürel mirasların koruma olgusu kapsamında ele alınması dönemsel anlayışlar sonucu çeşitlilik göstermiştir (Değirmenci, T., Köşklük Kaya, N., 2020). Bu bağlamda, uluslararası alanda geçmişten günümüze devam eden süreçte kültür mirasını koruma amacıyla kurulan çok çeşitli kuruluşlar, ağlar, çalışmalar ve standartlar söz konusudur (Şekil-1). Bunun yansısı; 20. yüzyılda artan koruma bilinciyle birlikte kültürel miras kavramı ve kültürel miras koruma yöntemleri üzerine çalışmaların yoğunlaştığı bilinmektedir.

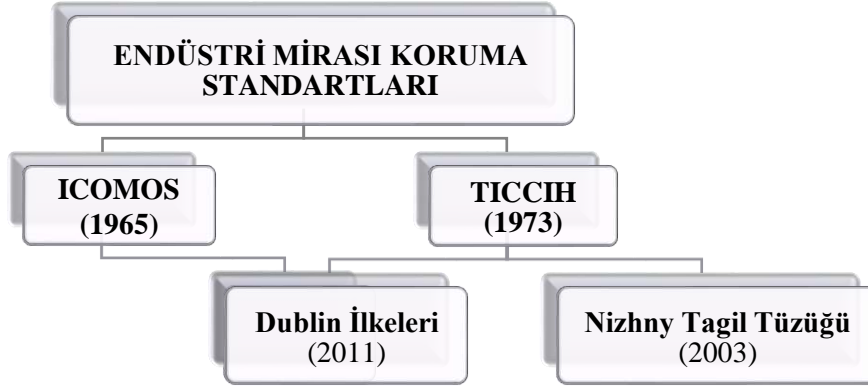

Şekil-1. Tarihi Süreçte Endüstri Mirasının Korunması Konusunda Etkili Olan Uluslararası Kuruluşlar ve Ağlar (URL 8)

Koruma olgusunun endüstri mirası yapılar kapsamında yasal yönetsel çerçevesi irdelendiğinde; 1970'lerden itibaren, özellikle Avrupa'da endüstriyel yapıları koruma amacıyla çeşitli kurumlar kurulduğu görülmektedir. Bu doğrultuda, TICCIH, DOCOMOMO ve ERIH gibi organizasyonlar oluşturulmuş ve bu organizasyonların aktif bir şekilde faaliyetlerini devam ettirdiği görülmektedir.

TICCIH (The International Committee for the Conservation of the Industrial Heritage), endüstri yapılarını koruma amacıyla kurulan ilk ve uluslararası alanda en önemli örgüt olup, 1970'li yıllara dayanan bir geçmişe sahiptir. Bu döneme kadar, endüstriyel mirasın korunması konusu akademik çevrelerde, konferanslarda ve bazı makalelerde tartışılmış olsa da, bu alanda kapsamlı bir örgütün kurulması ancak o yıllarda mümkün olabilmiştir (Gün, A., 2014). 2000 yılında, TICCIH ile ICOMOS arasında bir iş birliği anlaşması imzalanmıştır. Londra'da yapılan bu anlaşmada, öncelikle her iki örgütün kuruluş amaçları açıklanmış, ardından ortak hedefler ve benzerlikler vurgulanarak, her iki örgüt arasında fayda temelli bir iş birliği kurulmuştur (TICCIH 2000 Conference, 2000). DOCOMOMO (Documentation and Conservation of Buildings, Sites and Neighbourhoods of the Modern Movement), modern mimarlık ürünlerinin korunması, koruma teknolojileri tarihi ve eğitimine dair farkındalık yaratmayı ve modern mimarlık mirasına olan ilgiyi artırmayı amaçlayan bir organizasyondur. TICCIH gibi, ana odak noktası endüstri mirasını korumak olmasa da, DOCOMOMO' nun ilgilendiği dönemdeki yapılar arasında endüstriyel yapılar önemli bir yer tutmaktadır (URL 1).

“Endüstriyel Miras” konusunda, ilk uluslararası başvuru kaynağı olarak 2003 tarihli “Nizhny Tagil Tüzüğü” kabul edildiği bilinmektedir (Konak, N., 2024). ICOMOS (Dünya Anıtlar ve Sitler Konseyi) ve TICCIH (Endüstri Mirası Koruma Uluslararası Komitesi) ortak kararları doğrultusunda 2011 yılında kabul edilen Dublin İlkeleri de koruma çalışmalarını yönlendiren temel ilkeler olarak kabul edilir (Arabulan & Demirel, 2023). Genel anlamda endüstri mirası yapısı olarak kabul edilen kültür varlıklarının koruma kapsamında bakım-onarım, sağlama, yeniden işlevlendirme vb. işlem adımları için “Nizhny Tagil Tüzüğü” ve “Dublin İlkeleri” nin esas alınması durumu söz konusudur.

Şekil-2. Endüstri Mirasının Korunmasında Esas Alınan Standartlar

“Sanayi mirası, sanayi kültürünün tarihsel, teknolojik, sosyal, mimari veya bilimsel değere sahip kalıntılarından oluşur. Bu kalıntılar, şunları içerir: binalar ve makineler, atölyeler, imalathaneler ve fabrikalar, madenler ile işleme ve arıtma sahaları, ambarlar ve depolar, enerji üretilen, iletilen ve kullanılan yerler, ulaştırma ve tüm altyapısı, ayrıca sanayiyle ilgili barınma, ibadet etme veya öğretim gibi sosyal faaliyetler için kullanılan yerler” olarak ifade edilmiştir (Nizhny Tagil Charter, 2003). Bununla birlikte endüstri mirasının korunması süreci; endüstri mirasının tanımlanması, değerinin belirlenmesi, tanımlanıp kayıt altına alınması, yasal koruma protokollerinin uygulanması, bakım ve koruma uygulamalarının tamamlanması biçiminde özetlenebilir (Dublin İlkeleri, 2011). Bu bilgiler doğrultusunda, endüstri mirası yapıların koruma uygulamalarında yönlendirici standartların belirlenerek yol izlenmesi önemlidir (Tablo-1).

Tablo-1. Endüstri Mirası Koruma Standartları Kapsamında Oluşturulan Kuruluş ve Tüzükler

	ICOMOS International Council on Monuments and Sites (Dünya Anıtlar ve Sitler Konseyi)	TICCIH The International Committee for the Conservation of the Industrial Heritage (Endüstri Mirası Koruma Uluslararası Komitesi)	DUBLIN İLKELERİ
Kuruluş Tarihi	1965	1973	2011
Amaç	Tarihi anıtlar ve sitlerin korunması ile değerlendirilmesine yönelik uluslararası standartlar, ilkeler, teknikler geliştiren uluslararası bir organizasyondur.	Endüstri anıtları ve yapıtlarının korunması, insanlığın endüstri mirasının tarihi, bilimsel, eğitici değeri hakkında bilgilendirilmesi için yerel ve uluslararası düzeyde işbirlikleri sağlayan uluslararası topluluktur.	ICOMOS ve TICCIH ortak kararı ile endüstri mirasının belgelendirilmesi ve korunması adına imzalanan ilkelerdir.
Koruma kapsamı	19 yy. öncesi yapılar Geniş kapsamlı kültürel miras yapıları	19. yy sonrası yapılar Endüstri mirası yapılar	19. yy sonrası yapılar Endüstri mirası yapılar
Nitelik	Sivil Toplum Kuruluşu	Uluslararası Topluluk	Uluslararası Rehberlik Belgesi
Faaliyet alanı	ICOMOS, UNESCO'nun Dünya Mirası Sözleşmesi çerçevesinde danışmanlık yaparak, dünya genelindeki kültürel miras alanlarının korunmasına yönelik çalışmalar yürütmektedir.	ICOMOS' un endüstriyel miras konusunda uzman danışmanıdır ve Dünya Mirası Listesi için endüstriyel alanları değerlendirmektedir.	Endüstri Mirasının tanımlanması, kayıt altına alınması, koruma uygulamalarının belirlenmesini sağlamaktadır.
Üyeler	Mimarlık, arkeoloji, tarih ve diğer alanlarda uzmanlaşmış disiplinlerarası üyeler	Sanayi mirası alanında çalışan uzmanlar, akademisyenler ve koruma profesyonelleri	

ENDÜSTRİ MİRASININ KORUMA AMACIYLA YENİDEN İŞLEVLENDİRİLEREK KENTE KAZANDIRILMASI

Tarım toplumundan sanayileşme toplumuna geçişi ifade eden endüstri devriminin ardından yeni iş kollarının doğması ve iş gücüne bağımlı üretimin oluşması sebebiyle kırdan kente göçler başlamıştır. Göçler sonrası yaşanan sosyal değişimlerin ardından ortaya çıkan barınma ihtiyacı ve dolayısıyla konut birimlerinin yapılması, sanayi yapılarının oluşturulması, ulaşım ağlarının kurulması süreciyle “kentleşme” kavramı ortaya çıkmıştır (Aksoy, M. E., & Sönmez, Ö. 2021). Başlangıçta kalabalık olmayan ve sanayileşerek gelişen kentler sonraki dönemlerde yoğunlaşarak bilinen kent düzenine geçiş yaşamaya başlamıştır (Şekil-3).

Şekil-3. Londra Kent Merkezinin Endüstri Devrimi Etkisiyle Gelişim Süreci Örneği (Enlil, Z., 2011)

Süreçte artan nüfusun, kent merkezlerinde sayısal anlamda ve alan bakımından yoğunlaşmalara neden olması günümüz şehirleşmesinin zeminini hazırlayan unsurlar olarak ele alınabilir (Enlil, Z., 2011). Bu bağlamda, kentleşmenin yapı taşı oluşturulan parametreler (Şekil-4) değerlendirildiğinde; önceki dönemlere kıyasla toplumun sosyal ve ekonomik düzenindeki değişimler de anlaşılabilir.

Şekil-4. Endüstri Devrimi Etkisiyle Ortaya Çıkan veya Farklılaşan Parametreler (Enlil, Z., 2011).

Kentleşmenin önemli parçalarından birini oluşturan ve dönemin etkisiyle vücut bulan endüstri yapıları da, genellikle kent merkezlerinde veya su kıyılarında kurularak kentlerin gelişim süreçlerine katkıda bulunmuşlardır. Yapılar, sanayileşme gerçeği ile birlikte işlev öncelikli, estetik kaygının arka planda tutulduğu, makineleşme nedeniyle büyük hacimlere ihtiyaç duyulan tasarımlar biçiminde uygulanmıştır (Konak, N., 2024). Endüstri dönemi yapıları, zaman içinde teknolojik gelişmeler ve sanayi bölgelerinin dışında kalmaları gibi nedenlerle işlevlerini yitirmiş ve kullanılmaz hale gelmiştir. Ayrıca, yapıların düzenli bakımının yapılmaması, korunma önlemlerinin alınmaması, bu yapıların yok olma riskiyle karşı karşıya kalmasına yol açmaktadır. Korunması gereken yapıların mevcudiyetini sürdürebilmesi için toplumdaki soyutlanmayı, çevresiyle etkileşimi sağlayacak güncel işlevlerle değerlendirilmesi önemlidir (Arabacıoğlu ve Aydemir, 2007). Venedik Tüzüğü'nün 5. maddesinde "Anıtların korunması her zaman onları herhangi bir yararlı toplumsal amaç için kullanmakla kolaylaştırılabilir." ifadesiyle yer almaktadır (Venedik Tüzüğü). Bununla birlikte yeniden işlevlendirme eski binaların yıkımdan kurtarılması için bir araçtır (Ahunbay, 2017). Bu bağlamlarda, koruma sağlanması amacıyla, kullanılmayan yapıların mimari değerlerine uygun bütüncül bir yaklaşımla ele alınarak yeniden işlevlendirilmesindeki temel hedef, toplumsal kullanıma açık, kamu yararı sağlayan dönüşüm projelerinin parçası haline getirmektir (Konak, N., 2024 & Öztürk, S.S., Koramaz, E.K., 2020).

Endüstri mirası yapıları, inşa edildikleri dönemde kent merkezlerinde yer almakta olup, zamanla artan yapılaşma ile konumları daha da merkezleşmiştir. Günümüzde ise bu yapılar, genellikle yoğun nüfuslu ve dikkat çeken alanlarda bulunmaktadır. Ancak, terk edilip bakımsız bırakılmaları, bu yapıların zaman içinde yıpranmasına ve bozulmasına yol açmaktadır. Endüstri mirası yapılarının kentsel açıdan işlevsiz hale gelmesi, buldukları bölgelerin tehlikeli ve güvensiz alanlar haline gelme ya da değer kaybetme risklerini beraberinde getirmektedir. Bu yapılar, koruma disiplini çerçevesinde yeniden işlevlendirilerek kente kazandırıldığında, mevcut yapı stoğunun kullanımı ile kentsel alanın daha sürdürülebilir bir şekilde planlanmasına katkı sağlamakta, doğanın korunmasına destek olmakta ve çevresel açıdan betonlaşmanın önüne geçilmektedir. Ayrıca, mevcut yapıların yenilenmesi süreci, yıkım ve yeniden inşa

işlemlerine kıyasla önemli ölçüde iş gücü tasarrufu sağlamaktadır. Alternatif kullanım pratiği olarak dönüşüm sürecinin, geçmişle bağlantı kurma, "aidiyet duygusu" ve "yer duygusu" oluşturma gibi kültürel ve psikolojik faydaları göz önünde bulundurulmalıdır. Ayrıca, bu dönüşüm, yapının bulunduğu alanda aktif bir kullanıcı kitlesi oluşturmayı ve çevresel etkileşimi güçlendirerek, kentsel bütünlüğü sağlamak açısından da önemli bir rol oynamaktadır.

Koruma ilkeleri doğrultusunda yapılacak araştırmalar ve her yapının özgün durumuna uygun olarak geliştirilecek uygulamalar sayesinde, endüstri mirası yapıları yeniden işlevlendirilerek, ekonomik, sosyal, kültürel ve mimari açılardan sürdürülebilirlik sağlanabilir. Bu süreç, hem mevcut yapılarının değerini koruyarak kentsel dokuya entegre olmasını mümkün kılar hem de çevresel etkileri minimize ederek kaynakların verimli kullanımına katkıda bulunur. Ayrıca, yeniden kullanım uygulamaları, yerel topluluklar için sosyal fayda sağlayarak kültürel mirası yaşatmakla birlikte, yapının mimari özelliklerini de koruyarak modern yaşamın ihtiyaçlarına uyum sağlamasına olanak tanır (Uyumaz, F.E., Soyluk, A., 2023).

BELİRLENEN SİLO YAPILARININ YENİDEN İŞLEVLENDİRME KAPSAMINDA DEĞERLENDİRİLMESİ

Bu çalışma ile, endüstri mirası yapıları kapsamında Türkiye ve dünyadan seçilen işlevini yitirmiş silo örneklerinin yeniden işlevlendirilerek kente kazandırılması üzerine bir araştırma gerçekleştirilmiştir. Çalışmanın metodolojisi, endüstri mirası yapıları dikkate alarak 1930-1970 yılları arasındaki dönemde inşa edilmiş ve benzer kullanım amacına sahip dört farklı silo yapısına dayanmaktadır. Farklı büyüklüklerdeki siloların tekil veya grup halinde bir araya getirilmesiyle tasarlanan ve dünya genelinde çeşitli yerlerde örnekleri bulunan bu yapılar incelendiğinde, endüstri mirası silo yapıların; kent belleğinde iz bırakan, büyük hacimli kapalı alanlardan oluşan ve dönemin biçimsel özelliklerini, kullanım amacını yansıtan yapılar olarak ortak nitelikler taşıdığı söylenebilir. Ancak, silo yapıların yeni işlevlere uyarlanmasının ardından, kullanım amaçları, buldukları kent yerleşkelerindeki konumları, teknik hacim özellikleri ve yenilenme tarihleri gibi faktörler, her örneği farklılaştıran unsurlar olarak karşımıza çıkmaktadır (Tablo-2).

Çubuklu Siloları

İstanbul'un endüstri mirası yapılarından olan Çubuklu Silolar, Paşabahçe ile Kanlıca arasında yer almaktadır ve 19. yüzyıl sonlarında şehrin enerji ihtiyacını karşılamak amacıyla sanayi yapılarının şekillenmeye başlamasıyla yapılmıştır. 1941 yılından itibaren, petrol deposu olarak farklı kotlardaki teraslara yerleştirilen 17 adet silo, çeşitli boyutlarda inşa edilmiştir (URL 2). İstanbul'da akaryakıt deposu olarak inşa edilen ve zamanla işlevini yitirmesi sebebiyle kullanılmayan Çubuklu Siloları 2024 yılında yenilerek kent yaşamına kazandırılmıştır. Yaklaşık olarak 3m-15m aralığında farklı çaplarda kurgulanan ve konum itibarıyla kent sahilinde bulunan silolar günümüzde dijital sanatlar müzesi, doğa ve bilim müzesi, kütüphane, atölye, sahne, etkinlik alanı, restoran, kafe, çocuk ve sanat merkezi gibi çok amaçlı niteliklerle hizmet vermek üzere yeniden işlevlendirilmiştir (URL 3).

Silo 468

1960 yılında Finlandiya, Helsinki konumunda petrol deposu olarak inşa edilen yaklaşık olarak 35 m çap ve 15 m yüksekliğe sahip tek hacim biçimindeki silo işlevini yitirdikten sonra 2012 yılında yenilenmiştir. Yerleşim olarak kent sahilinde bulunan silo kentsel ışık enstalasyonu sağlamak amacıyla rüzgar kontrollü aydınlatma tesisi olarak işlevlendirilerek kullanıcıların deneyimine sunulmuştur. Kentin kullanılmayan lokasyonuna yeni bir imaj kazandırarak dönüşüm sağlayan ve ziyaretçilerine farklı deneyim sunan proje uygulaması yeniden işlevlendirilmenin kenti yaşatmak adına önemini ortaya koymaktadır (URL 4).

Neighborhood Ministries Silos

19 yy.' da depolama amacıyla inşa edilen ve Phoenix, Arizona, Amerika'da bulunan yeni kimlikli yapı aynı çaplarda 44 silonun birlikteliğinden oluşmaktadır. Kent merkezinin yoğunluklu kullanıldığı bir konumda yer alan silo yapısı eğitim kurumu yapısı olarak dönüştürülmüştür. Bununla birlikte okul sonrası işletme eğitimi, çok amaçlı kullanım, idari ofisler vb. niteliklerle kullanıma açılmıştır. Yaklaşık olarak 3,5m çap ve 8m yüksekliğe sahip siloların oluşturduğu kütlelerin dönüşümü ile kent yaşamına katkıda bulunulmuştur (URL 5).

Miancang Cotton Park

1970 yılında akaryakıt deposu olarak kullanılan dört adet silonun bir arada hizmet verdiği yapı grubu Changzhou, Çin' de bulunmaktadır. Bağımsız birimler biçimindeki siloların şeffaf tüplerle birbirine bağlanarak yeniden işlevlendirilmesinin ardından silo yapıları kentsel park; kültürel etkinlikler, yerel katılım ve toplantılar için çok yönlü bir merkez olarak yeniden kurgulanmıştır. Silo birimleri yaklaşık olarak 15m çap-19m yüksekliğe sahiptir. Kullanışsız durumdayken yenilerek kent kullanıcılarının hizmetine açılan ve topluluk alanına dönüştürülen silo yapıları ile endüstriyel miras değerlendirilmiştir (URL 6).

Tablo-2. Seçilen Silo Örneklerinin Benzerlik ve Farklılıkları

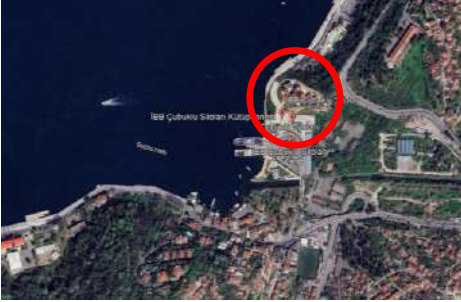

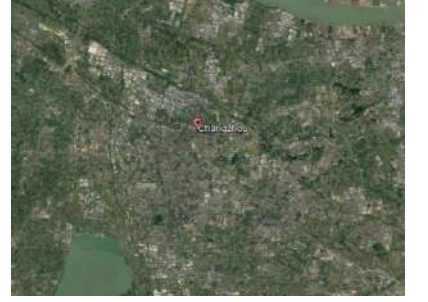

Benzerlikler	Farklılıklar
Depolama amacıyla (benzer işlevler) kurgulanmış olmaları	Yeniden İşlevlendirme Sonrası Kullanım Amaçları
Biçimsel Özellikler	Teknik Ölçüler
Kente Hizmet Eden Nitelik Kazanmaları	Dünyanın Farklı Noktalarında Bulunmaları
Yapıldıkları Dönem	Yenilendikleri Tarihler

İncelenen silo yapıları, dönüşüm sonrasında buldukları kentsel konumun kent kullanıcılarına hizmet vererek âtıl durumda kalmalarının önlenmiş olması sebebiyle araştırılmıştır (Tablo-3 ve 4). Farklı nitelikler kazandırılan endüstri mirası örnek silo yapılarının yeniden işlev ile korunmuş olması; mevcut kullanıcı kitlesine kullanım olanağı sunmakta ve doğa-çevre açısından fayda sağlamaktadır. Bu veriler ışığında, siloların yeniden işlevlendirilmesi sürecinin, kentsel düzeyde çevresel etkileşimi güçlendirdiği, sürdürülebilirlik ilkelerine katkı sağladığı ve tüketim farkındalığına yönelik bilinç oluşturulmasında önemli bir rol oynadığı anlaşılmaktadır. Yeniden işlevlendirilen bu endüstriyel yapılar, yalnızca fiziksel olarak kent dokusuna entegre olmakla kalmayıp, aynı zamanda çevre dostu uygulamaların teşvik edilmesine, kaynakların verimli kullanılmasına ve toplumda sürdürülebilir yaşam tarzlarının benimsenmesine zemin hazırlamaktadır. Ayrıca, bu süreç, kullanıcıların çevresel sorumluluk bilincini artırarak, modern kentsel yaşamın ihtiyaçları ile geçmişin endüstriyel mirasının uyumlu bir şekilde harmanlanmasını sağlamaktadır.

Tablo-3. Örnek Silo Yapılarına Ait Bilgiler

	Çubuklu Siloları (URL 3)	Silo 468 (URL 4 & URL 9)	Neighborhood Ministries Silos (URL 5)	Miancang Cotton Park (URL 6)
Yenileme Öncesi				
Yenileme Sonrası				
Yapım Tarihi	1930	1960	19.yy	1970

Kullanım Alanı	20.000 m ²	1.100 m ²	4.000 m ²	1.500 m ²

SONUÇ:

Endüstri mirası yapılar, sanayi devrimi ve sonrası dönemin teknolojik, kültürel ve sosyal izlerini taşıyan, korunarak yeniden işlevlendirilen önemli tarihi yapılar arasında yer almaktadır. Kullanım amacını yitiren ve belirli bir dönemin aynası niteliğindeki yapıların terk edilmesi, kaçınılmaz olarak bu yapıların zamanla yıpranmasına veya yok olmasına yol açmaktadır. Ayrıca, bu tür yapılar, buldukları kentsel alanlarda âtil durumda kalmaları nedeniyle, kullanılmayan ve bakımsız alanlar oluşturmakta, bu da kent bağlamında sosyo-kültürel açıdan riskli bölgelerin ortaya çıkmasına neden olmaktadır. Mimari açıdan her yapı, tasarımı ve işlevi doğrultusunda bulunduğu çevreye katacağı değerlerle varlığını sürdüren bir bileşen olup bu bağlamda, tarihi yapıların yeniden işlevlendirilmesi, sadece fiziksel yapılarının korunması anlamına gelmemekte; aynı zamanda bu yapılarla bağlantılı toplumsal hafızanın ve kültürel değerlerin de korunmasını sağlamaktadır. Bu süreç, kentin tarihî ve kültürel mirasının yaşatılması, unutulmaya yüz tutmuş alanların canlandırılması ve kent belleğinin sürekliliğinin sağlanması açısından büyük bir öneme sahiptir. Koruma, yeniden işlevlendirme ve sürdürülebilirlik ilkelerine dayalı olarak uygulanan müdahaleler, mevcut tarihi yapıların kente kazandırılmasının, sadece bir yapısal iyileştirme değil, aynı zamanda çevresel, kültürel ve ekonomik açıdan da katkı sağladığı bir süreci ifade etmektedir. Bu tür uygulamalar, tarihi yapıların korunmasının yanı sıra, doğanın korunmasına, kentsel değerlerin artırılmasına ve tarihi mirasın devamlılığının sağlanmasına yönelik önemli bir strateji sunmaktadır.

Silolar, endüstriyel üretimin simgelerinden biri niteliğinde, büyük hacimli depo yapıları olarak işlev görmüş ve zamanla endüstri mirası kapsamında kentsel hafızada önemli bir yer edinmiştir. Bu yapılar, inşa edildikleri dönemin teknolojik, ekonomik ve sosyal koşullarına uygun olarak tasarlanmış, kullanım amaçlarına hizmet eden, kapladıkları hacim ve taşıdıkları yapısal niteliklerle kentsel bellekle bütünleşerek endüstriyel mirasın önemli unsurlarından biri haline gelmiştir. Ancak günümüzde bu tür endüstriyel yapılar, çağdaş üretim teknikleri ve teknolojik gelişmelerle uyumsuz hale gelmeleri, buldukları kentsel konumların işlevsel değişimi ve eski iş kollarına olan ihtiyaçların azalması gibi nedenlerle, çoğunlukla işlevini yitirmiştir. Bu durum, yapıların zamanla terk edilmesine ve değerlerinin kaybolmasına yol açmıştır (Alagöz M. 2017 & Uyumaz, F.E., Soyuluk, A., 2023). Bu kapsamda siloların yeniden işlevlendirilerek kente ve kullanıcıya kazandırılması büyük önem taşımaktadır.

Çalışma kapsamında incelenen benzer amaçlarla ve farklı büyüklüklerle kurgulanan dört silo örneği de benzer nedenlerle farklı süreçlerde işlevini kaybetmiştir. Âtil durumda olan bu sanayi yapıları, kent kullanıcılarının günümüz ihtiyaçlarına uygun hale getirilmek amacıyla farklı niteliklerde yeniden değerlendirilmiş ve işlevsel olarak dönüştürülmüştür. Uygulanan dönüşüm stratejileri sayesinde, tarihi öneme sahip bu yapılar tahrip olmak veya yok olmak yerine, kültürel mirasın korunması sağlanmış, böylece hem yapının tarihsel ve kültürel değerleri yaşatılmış hem de çevresel sürdürülebilirlik sağlanmıştır. Bu dönüşüm süreci, yapıların özgün dokusuna ve estetik değerlerine zarar vermeden, yeniden işlevlendirilmesiyle, mevcut yapı stokunun korunmasına olanak tanımaktadır. Ayrıca, bu tür dönüşümler, yıkım ve yeniden inşa sürecinin getirdiği yüksek maliyetlerden tasarruf edilmesini sağlarken, aynı zamanda yapısal ve tarihsel bütünlüğün de korunmasına katkıda bulunmaktadır. Bu bağlamda, yeniden işlevlendirme yalnızca çevresel ve kültürel bir kazanım değil, aynı zamanda ekonomik açıdan da verimli bir yaklaşım olarak öne çıkmaktadır.

ÖZET

2024 yılında öğrencilerin çok yönlü gelişimini bütüncül ve etkili bir şekilde desteklemek amacıyla Türkiye Yüzyılı Maarif Modeli öğretim programları yayınlanmıştır. Öğretim programlarında alan becerileri, kavramsal beceriler, eğilimler ile sosyal-duygusal beceriler, değerler ve okuryazarlık bir bütün olarak ele alınmıştır. Fen bilimleri dersi öğretim programında gelişim alanları beceri ve değer odaklı fen öğretimi, bilim kültürü ile zenginleşen fen öğretimi, disiplinler arası ilişkiler ve sürdürülebilirliği temel alan fen öğretimi olarak belirtilmiştir. Fen öğretim programında 3. sınıftan 8. sınıfa kadar tüm kademelerde elektrik konusu yer almaktadır. Çalışmamızda her kademe için elektrik konusu üniteleri 2018 öğretim programıyla karşılaştırılmalı olarak incelenmiştir. 2024 programında 2018 programına göre yapılan değişimler içerik bağlamında ele alınmıştır. Elektrikli Araçlar ünitesi Yaşamımızı Kolaylaştıran Elektrik olarak, Basit Elektrik Devreleri ünitesi Enerji Dedektifleri, Elektrik Devre Elemanları ünitesi Yaşamımızdaki Elektrik, Elektrik İletimi ünitesi Elektrik İletimi ve Direnç, Elektrik Devreleri ünitesi Elektriklenme, Elektrik Yükleri ve Elektrik Enerjisi ünitesi Elektrik Yolculuğu olarak değiştirilmiştir. Bu ünitelerin içeriklerine bakıldığında yedinci kademede olan seri ve paralel bağlı devreler, elektrik enerjisi ile ısı, ışık ve hareket enerjileri arasındaki dönüşümler ve elektrik enerjisinin teknolojik uygulamaları konularının sekizinci kademeye alındığı görülmüştür. Sekizinci kademede yer alan elektrik yükleri ve elektriklenme çeşitleri konusu da yedinci kademeye alınmıştır. 2018 programında üçüncü ve sekizinci kademede yer alan elektrik enerjisinin bilinçli ve tasarruflu kullanılması konusu 2024 programında üçüncü ve dördüncü sınıfta yer almaktadır. 2018 programında sekizinci kademede yer alan güç santrallerinde elektrik enerjisinin nasıl üretildiğini ve bunların doğurabileceği zararlı veya yararlı durumlar konusunun 2024 programında kapsam dışına çıkarıldığı görülmektedir.

Anahtar Kelimeler: 2018 Fen Öğretim Programı, 2024 Fen Öğretim Programı, Türkiye Yüzyılı Maarif Modeli, Elektrik Üniteleri

ABSTRACT

In order to support the multifaceted development of students in a holistic and effective way in 2024, the Turkey Century Maarif Model Curriculum was published. Domain skills, conceptual skills, tendencies and social-emotional skills, values and literacy were addressed as a whole in the curriculum. The development areas in the science curriculum were identified as skill and value-based science education, science education enriched with science culture, interdisciplinary relations and science education based on sustainability. The subject of electricity is included in the science curriculum in all grades from 3 to 8. In our study, the electricity units for each grade were compared with the 2018 curriculum. The changes made in the 2024 curriculum compared to the 2018 curriculum were addressed in the context of content. The Electric Vehicles unit has become Electricity That Makes Our Lives Easier, the Simple Electric Circuits unit has become Energy Detectives, the Electrical Circuit Elements unit has been changed to Electricity in Our Lives, the Conduction of Electricity unit has been changed

to Conduction of Electricity and Resistance, the Electrical Circuits unit has been changed to Electrification, the Electrical Charges and Electrical Energy unit has been changed to Journey of Electricity. Looking at the contents of these units, we can see that the topics of series and parallel circuits, conversions between electrical energy and heat, light and motion energies, and technological applications of electrical energy, which are in the seventh level, have been moved to the eighth level. The topic of electric charges and types of electrification, which is in the eighth stage, has also been moved to the seventh stage. The topic of conscious and economical use of electrical energy, which is in the third and eighth stages in the 2018 programme, has been taken to the third and fourth stages in the 2024 programme. It can be seen that the topic of how electrical energy is produced in power plants and the harmful or beneficial situations that may arise from this, which is in the eighth stage in the 2018 programme, has been excluded from the scope in the 2024 programme.

Keywords: 2018 Science Curriculum, 2024 Science Curriculum, Maarif Model, Electricity Units

GİRİŞ

Millî Eğitim Bakanlığı (MEB) birkaç yıldır çeşitli kademelerde ve branşlarda görev yapan öğretmenler, öğretim elemanları ve bakanlık yetkileri ile yürütülen kapsamlı bir çalışma sonucunda 2024 yılında Türkiye Yüzyılı Maarif Modelini (TYMM) ortaya koymuştur. TYMM formal eğitimin tüm aşamalarının ele alındığı bir modeldir. Modelde öğretim programlarının geliştirilmesi, öğrenme ortamlarının tasarlanması, öğretim materyallerinin geliştirilmesi, ders kitaplarının ve yardımcı kaynakların hazırlanması, ölçme ve değerlendirme süreçlerinin yapılandırılması ve öğretmenlerin mesleki gelişim süreçlerinin destelenmesi yer almaktadır. Türkiye ne kadar öğrenci merkezli bir eğitim sistemi benimsemiş olsa da öğrencilerin bireysel ihtiyaçlarına ve yeteneklerine odaklanma konusunda yeterli olmadığı söylenebilir. TYMM bu eksikliği gidermek için her öğrencinin potansiyelini en üst düzeyde geliştirmeyi amaçlamaktadır (Akpınar ve Köksalan, 2024; Ülçay, 2024).

TYMM beceri temelli bir öğretim yaklaşımı ve kazanımların sadeleştirilmesi şeklinde tanımlanan yeniliklere odaklanmıştır. TYMM çerçevesinde daha önce hedef, hedef davranış ve kazanım olarak ifade edilen program çıktılarının “öğrenme çıktıları” şeklinde ifade edilmektedir. Kavramsal beceriler, sosyal-duygusal öğrenme becerileri, eğilimler ve alana özgü becerileri kapsayan bütüncül bir bakış açısı dikkat çekicidir. Diğer taraftan teknolojik ilerlemeler ve değişen dinamikler eğitim sistemlerinin yeniden tasarlanmasını gerektirmektedir. Bu bağlamda model çağın gereksinimlerini karşılamak için bilgiyle birlikte eleştirel düşünme, problem çözme ve iletişim gibi becerileri kazandırmayı hedeflemektedir. Modelde diğer bir önemli husus sürdürülebilirlik ve sürekli iyileştirmenin temel alınmasıdır. Hızla değişen Dünya eğitim sistemlerinin değişime ayak uydurmasını zorlaştırmaktadır. Bu zorluk geri bildirim alma, değerlendirme ve iyileştirme ile adaptasyon sağlayan esnek sistemlerle aşılabılır (Akpınar ve Köksalan, 2024; Karataş, 2024; Ülçay, 2024). Yeni modelin bu esnekliğe sahip olması ve eğitim sistemindeki yeniliklerin gelişime destek olması beklenmektedir.

Fen konuları yaşamla içi içedir ve teknolojik gelişmelerden en hızlı etkilenen alanlar arasında yer alır. Elektrik bu özellikleri taşıyan temel fen konularından biridir. Elektrik kavramları soyut, karmaşık ve anlaşılması zor olgulardır. Her yaştan öğrenci formal bir öğrenme deneyiminden önce günlük yaşamda "güç", "akış", "voltaj" gibi kelimelerle karşılaşır. Öğrenciler eğitim-öğretim ortamına girmeden önce bu kelimeler için kendilerine özgü anlamlar geliştirir. Bu anlamlar kelimelerin günlük kullanımlarından büyük ölçüde etkilenir. Hatta genellikle fizik kavramlarıyla çelişen bu anlamlar geleneksel öğretim yöntemleriyle çok az değişir. Fen eğitimi araştırmaları içerisinde elektrik çok çalışılan bir konudur (Ezberci vd., 2015; Gunstone vd., 2009; Raissouni vd., 2022). 2018 Fen Bilimleri Dersi Öğretim Programı (FBDÖP) ve 2024 FBDÖP incelendiğinde tüm kademelerde elektrik konusunun yer aldığı görülmektedir. Bu

araştırmanın amacı TYMM çerçevesinde hazırlanan 2024 FBDÖP elektrik konuları üzerinde bir önceki program olan 2018 FBDÖP'ye göre yapılan değişikliklerin tespit edilmesidir.

YÖNTEM

Bu çalışmada doküman analizi yöntemiyle 2018 FBDÖP ve 2024 FBDÖP içerisinde bulunan elektrik konusuna ilgili üniteler karşılaştırmalı olarak incelenmiştir. 3. sınıf ve 8. sınıf arasında her bir sınıf seviyesi için elektrik konusunun nasıl ele alındığı incelenmiştir. Yeni müfredatta yapılan değişimlerin neler olduğu tespit edilmiştir.

BULGULAR

Elektrik konusu 2018 yılı öğretim programında Elektrikli Araçlar ünitesiyle verilirken 2024 öğretim programında Yaşamımızı Kolaylaştıran Elektrik ünitesi olmuştur. Elektrikli Araçlar ünitesinin amacı öğrencilerin çevrelerindeki elektrikli araçları gözlemleyerek bu araçların kullanım amaçlarını ve kullandığı elektrik kaynaklarını ayırt etmeleri, araçları kullanırken nelere dikkat etmeleri gerektiğini bilmeleri, pilleri tanıma ve pil atıklarının çevreye olan olumsuz etkilerini fark etmeleri olarak belirtilmiştir. Yaşamımızı Kolaylaştıran Elektrik ünitesi amaçlarında ise araç gereçlerin elektrikli olduğuna ilişkin bilimsel çıkarım yapılması, elektrikli araç gereçlerin güvenli kullanımı ile ilgili eleştirel düşünülmesi ve elektriği tasarruflu kullanma yolları belirtilmiştir. Tablo 1'e bakıldığında 2018'e göre 2024 programında kazanım sayısının, ders saatinin ve dönem boyu toplam fen konuları içerisindeki yüzdesinin azaldığı görülmektedir.

Tablo. 1 3. Sınıf Elektrik Ünitelerinin Karşılaştırılması

		2018 FBDÖP			2024 FBDÖP			
		Kazanım Sayısı	Ders Saati	Yüzde %		Öğrenme Çıktıları Sayısı	Ders Saati	Yüzde %
3. Sınıf	Elektrikli Araçlar	4	22	20,4	Yaşamımızı Kolaylaştıran Elektrik	3	12	11

4. sınıfta 2018 FBDÖP Basit Elektrik Devreleri ünitesinin yerini 2024 FBDÖP'de Enerji Dedektifleri ünitesi almıştır. Basit Elektrik Devreleri ünitesinde öğrencilerin devre elemanlarını tanıyarak basit elektrik devresi oluşturmaları ve bu bilgiyi evlerdeki elektrik sistemleri ile ilişkilendirmeleri amaçlanmaktadır. Enerji Dedektifleri ünitesinin amacı basit bir elektrik devresi kurmaya ilişkin bilimsel sorgulama yapılması, eleştirel düşünme yoluyla elektrik üretiminde yenilenebilir ve yenilenemeyen enerji kaynaklarının kullanımına ilişkin değerlendirme yapılması şeklinde ifade edilmiştir. Tablo 2 2018'e göre 2024 programında kazanım sayısının azaldığını ancak ders saati ve dönem boyu toplam fen konuları içerisindeki yüzdesinin arttığını göstermektedir.

Tablo. 2 4. Sınıf Elektrik Ünitelerinin Karşılaştırılması

		2018 FBDÖP			2024 FBDÖP			
		Kazanım Sayısı	Ders Saati	Yüzde %		Öğrenme Çıktıları Sayısı	Ders Saati	Yüzde %
4. Sınıf	Basit Elektrik Devreleri	3	6	5,6	Enerji Dedektifleri	2	12	11

2018 FBDÖP Elektrik Devre Elemanları ünitesi 2024 yılında Yaşamımızdaki Elektrik olmuştur. Tablo 3'e göre kazanım sayısının, ders saatinin ve dönem boyu toplam fen konuları

içerisindeki yüzdesinin değişmediği anlaşılmaktadır. Her iki ünitenin amaçları benzer olarak farklı elektrik devrelerindeki pil ve lamba sayısını değiştirerek bu değişimin devre üzerindeki etkilerini keşfetmek, devre şeması çizmek ve devre şemalarının ortak bilimsel dil açısından önemini kavramak şeklinde ifade edilmiştir.

Tablo. 3 5. Sınıf Elektrik Ünitelerinin Karşılaştırılması

		2018 FBDÖP			2024 FBDÖP			
		Kazanım Sayısı	Ders Saati	Yüzde %		Öğrenme Çıktıları Sayısı	Ders Saati	Yüzde %
5. Sınıf	Elektrik Devre Elemanları	3	16	11,1	Yaşamımızdaki Elektrik	3	16	11

6. sınıfta Elektriğin İletimi ünitesi 2024 programında Elektriğin İletimi ve Direnç olarak değiştirilmiştir. Tablo 4'e bakıldığında 2018'e göre 2024 programında kazanım sayısının azaldığı ancak ders saati ve dönem boyu toplam fen konuları içerisindeki yüzdesinin arttığı görülmektedir. Elektriğin İletimi ünitesinin amacı öğrencilerin elektriksel direnci, bağlı olduğu faktörleri, elektrik enerjisinin iletiminin hangi maddelerle sağlanacağını, iletkenlerin özelliklerini, iletken ve yalıtkan maddelerin günlük yaşamda kullanımları konusunda bilgi ve beceri kazanmalarıdır. Elektriğin İletimi ve Direnç ünitesinin amacı ise maddelerin elektriği iletme durumlarını gösteren deneyler yapılarak günlük yaşamdaki maddeleri iletkenlik ve yalıtkanlık durumlarına göre sınıflandırılması, bir elektrik devresindeki ampulün parlaklığının bağlı olduğu değişkenlerin test edilmesi, ayarlanabilir direncin ampul parlaklığına etkisine yönelik çıkarım yapılması olarak belirtilmiştir.

Tablo. 4 6. Sınıf Elektrik Ünitelerinin Karşılaştırılması

		2018 FBDÖP			2024 FBDÖP			
		Kazanım Sayısı	Ders Saati	Yüzde %		Öğrenme Çıktıları Sayısı	Ders Saati	Yüzde %
6. Sınıf	Elektriğin İletimi	5	12	8,3	Elektriğin İletimi ve Direnç	3	18	13

Tablo 5'e bakıldığında 7. sınıfta Elektriklenme olarak değiştirilen Elektrik Devreleri ünitesi için programında kazanım sayısının azaldığı, ders saati ve dönem boyu toplam fen konuları içerisindeki yüzdesinin arttığı görülmektedir. Elektrik Devreleri ünitesinin amacı öğrencilerin; seri ve paralel bağlama çeşitlerini dikkate alarak devre çizmeleri ve kurmaları, devredeki lambanın parlaklığının değişebileceğini fark etmeleri, elektrik enerjisinin teknolojik uygulamaları dikkate alınarak ısı, ışık ve hareket enerjisine dönüşümü hakkında bilgi ve beceriler kazanmaları ve gelecekteki özgün aydınlatma sistemlerini tasarlamaları olarak ifade edilmiştir. Elektriklenme ünitesinin amaçları ise elektrik yükleri arasında itme ve çekme kuvvetlerinin olduğunun farkına vardırılması ve cisimlerin elektrik yüklerinin sınıflanması şeklinde belirtilmiştir.

Tablo. 5 7. Sınıf Elektrik Ünitelerinin Karşılaştırılması

		2018 FBDÖP			2024 FBDÖP			
		Kazanım Sayısı	Ders Saati	Yüzde %	Öğrenme Çıktıları Sayısı	Ders Saati	Yüzde %	
7. Sınıf	Elektrik Devreleri	6	8	5,6	Elektriklenme	3	12	8

8. sınıfta Elektrik Yükleri ve Elektrik Enerjisi ünitesi Elektriğin Yolculuğu olarak değiştirilmiştir. Elektrik Yükleri ve Elektrik Enerjisi ünitesinde öğrencilerin elektrik yüklerini tanımları, elektrik yükleri arasında itme ve çekme kuvvetleri olduğunun farkına varmaları, topraklama olayını kavramaları, elektroskopu gözlemlemeleri, elektrik enerjisinin ısı, ışık ve hareket enerjilerine, hareket enerjisinin de elektrik enerjisine dönüşebileceğini deneyerek gözlemlemeleri, güç santrallerinde elektrik enerjisinin nasıl üretildiğini ve bunların doğurabileceği zararlı veya yararlı durumları tahmin etmeleri, elektrik enerjisinin bilinçli ve tasarruflu kullanılmasına yönelik bilgi ve beceri kazanmaları amaçlanmaktadır. Elektriğin Yolculuğu ünitesinde ise seri ve paralel bağlama çeşitleri dikkate alınarak devre çizip kurdurulması ve buna bağlı olarak devredeki ampulün parlaklığının değişebileceğinin fark ettirilmesi, bir devre elemanının uçları arasındaki gerilim ile üzerinden geçen akımın ilişkilendirilmesi, özgün bir aydınlatma modelinin tasarlanması, elektrik enerjisinin ısı, ışık, ses ve hareket enerjilerine dönüşümü, elektrik enerjisi üretim santrallerinde elektrik enerjisinin nasıl üretildiği ve bunun doğurabileceği avantaj veya dezavantaj durumları ile elektrik enerjisinin bilinçli ve tasarruflu kullanılmasının önemini tartışılması amaçlanmaktadır. Tablo 6 kazanım sayısının azaldığını, ders saati ve dönem boyu toplam fen konuları içerisindeki yüzdesinin arttığını ancak değişimlerin küçük miktarlarda olduğunu göstermektedir.

Tablo. 6 8. Sınıf Elektrik Ünitelerinin Karşılaştırılması

		2018 FBDÖP			2024 FBDÖP			
		Kazanım Sayısı	Ders Saati	Yüzde %	Öğrenme Çıktıları Sayısı	Ders Saati	Yüzde %	
8. Sınıf	Elektrik Yükleri ve Elektrik Enerjisi	11	24	16,7	Elektriğin Yolculuğu	10	26	18

SONUÇ

5. sınıf hariç diğer tüm kademeler için 2024 FBDÖP elektrik konuları kazanım sayısının 2018 FBDÖP'e göre azaldığı tespit edilmiştir. 3. sınıflar için elektrikli araçların tanınması ve güvenli kullanımı konusunda kazanım sayısı ile birlikte ders saati ve toplam fen konuları içerisindeki yüzdesi de azalmıştır. Bununla birlikte elektriğin tasarruflu kullanımı eklenmiştir. 4. sınıfta basit elektrik devresi kurma konusuna yenilenebilir ve yenilenemeyen enerji kaynakları konusu eklenmiş bununla birlikte ders saatinin ve toplam fen konuları içerisindeki yüzdesinin arttığı tespit edilmiştir. 5. sınıflar için devre şeması çizmek, devre şemalarının ortak bilimsel dil açısından önemini kavramak, pil ve lamba sayısının elektrik devreleri üzerindeki etkileri konusu neredeyse hiçbir değişime uğramadan 2024 programında yerini almıştır. Her iki programda 6. sınıfta iletkenlik ve yalıtkanlık, elektriksel direnç, ampul parlaklığının bağlı olduğu değişkenler konuları elektrik ünitesinde yer almıştır. Bu konular için yapılan değişiklikte ders saati ve toplam fen konuları içerisindeki yüzdesinin arttığı tespit edilmiştir. 2018 programında seri ve paralel bağlama, devredeki ampulün parlaklığının değişimi, bir devre

elemanının uçları arasındaki gerilim ile üzerinden geçen akımın ilişkilendirilmesi konusu 2024'te 8. sınıf düzeyine alınmıştır. Buna karşılık 2018'de 8. sınıfta yer alan elektrik yükleri ve bu yükler arasındaki itme ve çekme kuvvetleri konusu 7. sınıfa alınmıştır. Bunlarla birlikte elektrik enerjisi ile ısı, ışık ve hareket enerjileri arasındaki dönüşümler konusu 8. sınıf elektrik ünitesinde kalmıştır. Her iki sınıf seviyesinde elektrik konularına ait ders saati ve toplam fen konuları içerisindeki yüzdesinin arttığı bu artışın 8. sınıfta az miktarda olduğu tespit edilmiştir. Karataş (2024) derslerin kapsamlarının hafifletildiğini, kazanım sayısının azaltılmasıyla birlikte içeriklerin, işlenen konu ve alan sayısının azaltıldığını belirtmektedir. Bu araştırmanın bulgularına dayalı olarak 2024 FBDÖP elektrik konuları için kazanım sayılarındaki azalmanın içerik azaltılması anlamına gelmediği söylenebilir. Bu programın uygulayıcısı olan öğretmenlerin bu konudaki görüşlerinin alınması faydalı sonuçlar ortaya çıkaracaktır. Diğer taraftan 2024 FBDÖP'ye daha önceki programlarda olmayan öğrenme çıktıları ve süreç bileşenleri, içerik çerçevesi, öğrenme kanıtları, öğrenme-öğretme yaşantıları ve farklılaştırma gibi bölümler eklenmiştir. Elektrik konularına ait içeriklerin bu bölümler bağlamında ayrıntılı olarak incelenmesi faydalı olacaktır.

ÖZET

İnternetin hızla gelişimi bireylerin sosyolojik, ekonomik, kültürel ve çeşitli alanlarda değişiklikler yaşamalarına sebep olmaktadır. Bireylerin yaşam tarzlarında oluşan değişimler tüketim alışkanlıklarının da değişmesini beraberinde getirmektedir. Tüketicilerin değişen istek ve ihtiyaçları karşısında işletme sahipleri de yeni stratejiler geliştirme yoluna gitmektedirler. Bunlardan biri online alışveriş uygulamalarıdır. Online alışveriş sahip olduğu özellikler bakımından hem işletmelere hem de müşterilere çeşitli avantajlar sağlamaktadır. Özellikle müşteri ile işletme arasındaki iletişimin daha kolay ve hızlı olması online alışverişini daha cazip hale getirmektedir. Müşteri şikayetleri de iletişim kanallarından biridir. Online alışveriş uygulamalarının yoğun bir şekilde kullanılması müşterilerin şikayetlerini dile getirebilecekleri platformların oluşmasında etkilidir. Bu çalışmada da online alışveriş uygulamalarına yönelik müşteri e-şikayetleri incelenmektedir. Çalışma nitel araştırma deseni ile oluşturulmuştur. Veriler online şikayet platformu olan şikayetvar.com sitesinden doküman incelemesi yapılarak elde edilmiştir. Online alışveriş uygulamalarının seçiminde de yine bu sitede en çok şikayet alan uygulamalar dikkate alınmıştır. Bu doğrultuda Trend Yol, Hepsi Burada, N11 ve Çiçek Sepeti uygulamalarına Ocak ayında yapılan 50'şer, toplamda 200 adet müşteri şikayeti incelenmiştir. Şikayetler çalışmanın verileridir ve verilerin analizinde içerik analizi yöntemi kullanılarak nitel analiz programı olan MAXQDA'dan faydalanılmıştır. Yapılan analizler ve incelemeler sonucunda dört adet ana tema ve 11 adet alt tema elde edilmiştir. Metinlerin ilgili temalara kodlanması sonucunda ana temalar bazında dört uygulamanın da en çok şikayet aldığı temanın müşteri hizmetleri/ canlı destek ile ilgili şikayetler olduğu görülmektedir.

Anahtar Kelimeler: Online alışveriş, E-şikayetler, Şikayetvar, Maxqda

ABSTRACT

Rapid development of the Internet causes individuals to experience changes in sociological, economic, cultural and various fields. Changes in individuals' lifestyles bring with it the change of their consumption habits. Business owners are also on the way to develop new strategies in the face of the changing demands and needs of consumers. One of them is online shopping applications. Online shopping offers various advantages to both businesses and customers in terms of their features. Especially the easier and faster communication between the customer and the business makes online shopping more attractive. Customer complaints are also one of the communication blood. Intensive use of online shopping applications is effective in creating platforms where customers can raise their complaints. In this study, customer e-complaints for online shopping applications are also examined. The study was

created with a qualitative research pattern. The data were obtained by conducting a document review from the online complaints platform, grievor.com. In the selection of online shopping applications, the most complaining practices on this site were taken into consideration. Accordingly, 50 , which was made in January to Trend Yol, Hepsi Burada, N11 and Çiçek Sepeti applications, 200 customer complaints were examined in total. Complaints are data of the study and MAXQDA, a qualitative analysis program, was used using the content analysis method in the analysis of the data. As a result of the analyzes and reviews, four main themes and 11 sub-themes were obtained. As a result of coding the texts to the relevant themes, it is seen that the theme that all four applications received the most complaints on the basis of the main themes is complaints about customer service/ live support.

Keywords: Online shopping, E-complaints, Complainant, Maxqda

GİRİŞ

İnsanlar daha önce kullanmadığı ürün veya hizmeti satın alacakları zaman diğer insanların tecrübelerinden yararlanarak karar vermektedirler. Bu süreç eski zamanlarda akrabaya, arkadaşına danışarak yapılırken; günümüzde teknolojik gelişmelere bağlı olarak internet aracılığıyla tanımadığı kişilerin de fikirlerine başvurarak yapılmaktadır (Zengin & Haliloğlu, 2020).

Müşteriler, online alışveriş sitelerinden almış oldukları ürün/hizmetin beklentilerini karşılayamaması üzerine şikayet davranışlarında bulunurlar. Online alışveriş sitelerinin artış göstermesi müşterilerin şikayetlerini dile getirebilecekleri platformların da artmasında etkilidir. Sitelere yönelik yapılan şikayetlerin işletmeler tarafından değerlendirilmesi ve çözümlenmesi müşteri memnuniyetini ve sadakatini beraberinde getirmektedir (Gökdeniz, Bozacı, & Karakaya, 2011).

Müşteri şikayetleri işletmeler tarafından olumsuz bir durum olarak değil; bir avantaj ve fırsat olarak görülmelidir. Şikayetler işletmelere eksik yönlerinin fark edilmesine ve işletmelerin kendilerini geliştirmelerine yardımcı olmaktadır. Şikayetlerin hızla değerlendirilerek çözümlenmesi sonucunda müşterilerin sadık müşteri olma ihtimali artmakta ve memnuniyetsizliklerini ağızdan ağza aktarmalarına engel olmaktadır (Zengin & Haliloğlu, 2020).

Nitel araştırma deseni ile oluşturulan bu çalışmada müşteri e-şikayetleri incelenmektedir. Çalışmanın amacı belirlenen online alışveriş sitelerine yönelik yapılan şikayetlerin çözümlenmesidir. Bu doğrultuda e-şikayet platformu olan şikayetvar.com sitesinde online alışveriş uygulamalarından en çok şikayet alan Trend Yol, Hepsi Burada, N11 ve Çiçek Sepeti uygulamalarına yönelik müşteri şikayetleri ele alınmıştır. Veri toplama aracı olarak doküman incelemesinden yararlanılmış ve uygulamaların ocak ayına ait şikayetleri arasından rastgele 50'şer şikayet elde edilerek toplamda 200 adet şikayet incelenmiştir. Verilerin analizinde içerik analizi yöntemi uygulanarak MAXQDA programından faydalanılmıştır. Yapılan analizler sonucunda dört tane ana tema ve 11 tane alt tema oluşturulmuştur. Temalar doğrultusunda metinlere yapılan kodlamalar sonucunda ise dört uygulamaya da en çok yapılan şikayetlerin ana tema bazında müşteri hizmetleri/ canlı destek olduğu görülmüştür.

1. DİJİTAL PAZARLAMA ve İLGİLİ KAVRAMLAR

1.1.Dijital Pazarlama

Dijital pazarlama, işletmelerin pazarlama faaliyetlerinde yoğun olarak dijital araçların kullanılmasını ifade etmektedir (Kaya, 2015). Benzer bir başka tanımda da tüketicilere ulaşmak ve ürün veya hizmetlerin pazarlanması için dijital araçların kullanılmasıdır. Buradaki amaç işletmelerin yeni veya var olan ürün veya hizmetlerinin çeşitli dijital medya araçları ile tanıtılmasıdır (Gedik, 2020). Daha geniş bir tanımla ele alındığında dijital pazarlama; işletmelerin gerçekleştirmiş olduğu faaliyetlerin reklam ve tanıtımını yaparken geleneksel medyadan farklı yöntemlerle internet, mobil ve benzeri diğer interaktif platformlar aracılığı

ile tüm pazarlama faaliyetlerini de destekleyecek nitelikte yapılan uygulamalar bütünüdür (Koçal Alan, Tümer Kabadayı, & Erişke, 2018).

Dijital pazarlamanın tanımı ve işlevi zamanla gelişerek sadece ürün ve hizmetlerin dijital kanallar aracılığı ile pazarlanması olmaktan çıkmıştır. İşletmelerin varlıklarını sürdürebilmeleri ve rekabet avantajı sağlayabilmeleri açılarından da önem kazanarak dijital kanallar aracılığı ile yeni müşteriler elde etmek, var olan müşterileri elde tutmak, müşteri tercihleri oluşturmak, müşterilerle iletişim kurarak satışları artırmak gibi kapsamlı bir hale dönüşmüştür (Kannan, 2017). Çoğu kişi tarafından dijital pazarlama ile internet pazarlaması aynı kavramlar olarak görülmekte ya da karıştırılmaktadır. Ancak bunlar birbirinden farklı kavramlardır. İnternet pazarlama çevrimiçi reklam ve pazarlama çabalarını içerirken dijital pazarlama daha kapsamlı ve etki alanı daha geniştir (Kotler, Kartajaya, & Setiawan, 2016).

Dijital pazarlama müşterilerle iletişim kurmak ve kurulan iletişimi sürdürmek gibi sahip olduğu çeşitli özellikleri ile işletmelere avantajlar sağlamaktadır. Geleneksel reklam kanalları ile müşterilere ulaşmak zordur. Ancak dijital medya kanallarında işletmeler hedef kitlelerini (yaş, cinsiyet, gelir durumu, eğitim durumu vb. demografik özelliklere göre) ve bunların ilgi alanlarını kolayca belirleyebilmektedir (Ismayılov, 2022). Doğru hedef kitleleri belirleme ve pazarı etkin bölümlenmeye imkan vermenin yanı sıra işletmelere kolay ve hızlı ölçümleme imkanı da sunmaktadır.

Dijital pazarlamanın avantajları olduğu kadar bazı önemli dezavantajları da söz konusudur. İlk olarak işletmeler açısından önemli bir konu olan telif haklarıdır. Dijital mecralar doğası gereği herkes tarafından görünür olma özelliğine sahiptir. Bu durum işletmelerin sunmuş olduğu kampanyaların, marka isimlerinin ve logolarının dahi rakipleri tarafından kopyalanmasına, taklit edilmesine, çalınmasına sebep olabilmektedir (Safko, 2010). Yine dijital pazarlamanın bir özelliği olan internet tabanlı olma da bazen dezavantaj olabilir. İnternette meydana gelen kopukluklar ve aksamalar gibi olumsuz durumlar müşteriye zaman kaybı yaratabilir ve bu da beraberinde memnuniyetsizliği getirebilir (Todor, 2016). İnternet tabanlı olmasından dolayı yaşanan bir diğer olumsuzluk ise dokunarak, görerek ve inceleyerek satın almak isteyen müşteri kitlesine hitap edilememesidir (Taken Smith, 2012). Son dezavantaj da müşterilerin yaşadığı güvenlik sorunlarıdır. Elektronik ortamda yapılan alışverişler, para transferleri müşteride kart bilgilerinin kopyalanması ve çalınması gibi korkulara sebep olmaktadır. Güvenin tam olarak sağlanmadığı mecralarda müşteriler alışveriş yapmaktan kaçınılmaktadırlar (Wind & Mahajan, 2002).

1.2. İnternet Pazarlaması

Tüketicilerin istek ve ihtiyaçlarını gözeterek pazarlama kavramı yıllar içerisinde yaşanan birtakım gelişmelere bağlı olarak değişmektedir. Global olarak gerçekleşen teknolojik gelişmeler de hem tüketicileri hem de işletmeleri değiştirmeye zorlamaktadır. Teknolojinin bireylerin hayatlarının her alanında yer alması sonucunda hedef kitlelerine ulaşmak isteyen işletmeler de bu teknolojik imkanlardan faydalanmaktadır. İnternet pazarlaması veya internet üzerinden pazarlama işletmelerin işlerini daha verimli ve hızlı yapmasına imkan veren teknolojik gelişmelerden biridir.

İnternetin iş hayatında temelden değişmelere yol açtığı internet pazarlaması en sade ifadeyle işletmelerin interneti pazarlama amaçlı kullanmaları olarak ifade edilmektedir (Kaya, 2015). Bu durum pazarlama bakış açısında da yeniliklere sebep olmaktadır. İşletmeler, ürün/hizmetlerini satabilmek için her şehre mağaza açmaktan kurtularak maliyet avantajı sağladığı ve tüketicilere anlık olarak ulaşılabilen internetten faydalanmaktadır (Aksoy, 2009). İnternet pazarlaması Ngai (2003) tarafından yapılan tanımda “Alıcı ve satıcıların amaçlarını tatmin edecek şekilde bilgi, fikir, ürün ve servis hizmetlerinin çevrimiçi aktiviteler sayesinde değiş tokuşuna imkan verecek tüketici bağlarının kurulması ve geliştirilmesi faaliyetleridir” olarak belirtilmektedir. Başka bir tanımda da “Hedef pazara yönelik olarak, pazarlama karması unsurları olan ürünün geliştirilmesi, fiyatlandırılması, tutundurulması ve

dağıtılmasına ilişkin stratejik sürecin internet ortamında gerçekleştirilmesidir” şeklinde ifade edilmektedir (Mucuk, 2004).

Ticaretin büyük ölçüde internette yapıyor olması nedeniyle işletmelerin sürdürülebilirliği de bu alanlardaki başarılarına bağlı olmaktadır. İnternetin sağlamış olduğu faydaları doğru şekilde kullanan işletmeler rekabet üstünlüğü de elde etmektedirler. İnternetin işletmelere; daha az maliyet, tüketicilere anlık olarak cevaplar verebilme, hızlı bir şekilde güncellenebilir olma, işletme stratejilerinin tüketicilerin istek ve ihtiyaçları doğrultusunda oluşturulması, denetlemenin mümkün ve ölçümün kolay olması, zaman tasarrufu, sipariş kolaylığı ve global erişim gibi sağladığı birçok fayda söz konusudur (Kırcova, 2008).

Teknolojinin işletmeleri ve özelde pazarlamayı da etkilemesi sonucunda geleneksel pazarlama anlayışı ile internet pazarlaması arasında bazı farklılıklar meydana gelmiştir. Geleneksel pazarlama anlayışında tek yönlü bir iletişim söz konusudur. İşletme kendisi hakkındaki bilgileri aracıya tek yönlü olarak iletmekte ve iletişim işletmeden aracıya, aracıdan da müşteriye doğru ilerlemektedir. Aracılar da ürünleri tüketicilere tek yönlü olarak iletmekte ve işletme ile tüketici arasında doğrudan iletişim kurulmadığı için tüketicilerin ürünler ile ilgili talepleri, şikayetleri vb. durumlar işletme tarafından bilinmemektedir. Bu da işletmeler için olumsuz ve istenmeyen bir durumdur (Çağlar & Kılıç, 2005).

1.3. Online Alışveriş

İnternet, insanlık tarihi için en önemli icatlardan biridir. İnternetin hızla gelişmesi, ilerlemesi ve herkes tarafından kullanılabilir hale gelmesi gerek ekonomik yapıda gerekse bireylerin yaşantılarında birtakım değişikliklere yol açmıştır. Bireyler yaşanan teknolojik gelişmeler ile internet üzerinden birbirleriyle iletişim kurabilme, ihtiyaç duyulan bilgilere ve bilgi kaynaklarına ulaşabilmekte ve ürün/hizmet satın alma gibi günlük faaliyetlerini kolayca gerçekleştirmektedirler.

İnternet, kullanım rahatlığı bakımından toplumun her kesimi, her yaş grubu ve neredeyse her sektör tarafından kullanılarak geniş çaplara yayılmaktadır. Bu yönüyle işletmelerin de dikkatini çekmektedir. İşletmelerin bu ilgisi dijital ortamların dünyanın en büyük dijital pazarlarına dönüşmesinde etkili olmuştur (Pilatin & Dilek, 2021).

Hayatlarına internetin girmesiyle birlikte bireylerin değişen davranışları aynı zamanda birer tüketici olmalarından kaynaklı olarak tüketici davranışlarına da yön vermiştir. Tüketicilerin işletmelerden beklentileri artmış, istek ve ihtiyaçları farklılaşmıştır. Bu durum işletmeleri hedef pazarlarında olan tüketici gruplarına cevap verebilmek için değişmeye ve gelişmeye doğru yönlendirmektedir (Altunışık, 2010). İşletmeler için en büyük değişim özellikle 90’lı yıllarda internet kullanımının yaygınlaşmasının bir sonucu olarak internet üzerinden gelir elde etmenin arayışlarıyla başlamıştır. Bu noktada online alışveriş kavramı hızlı bir ivmeyle hem tüketicilerin hem de işletmelerin hayatlarında var olmuştur. İnternetin yaygın kullanımı, teknolojik gelişmelerin ve ulaşımın hızlanması, daha hızlı ve daha az maliyetli olması online alışverişin hızla yayılmasının nedenleri arasındadır (Pilatin & Dilek, 2021). Online alışveriş tüketici ile işletme arasındaki mesafeleri ortadan kaldırarak iletişimi daha kolay bir hale getirmiştir (Lubis & Utara, 2018).

Tanım olarak ele alındığında online alışveriş en sade tanımla alıcı ile satıcı arasındaki alışverişin elektronik olarak yapılmasıdır. Dünya Ticaret Örgütü (2018) de pazarlama süreci içinde yer alan ürün/hizmetlerin üretimi, tanıtılması, satılması, tutundurulması ve dağıtılması fonksiyonlarının internet üzerinden yapılması olarak tanımlamaktadır. Elektronik ticaret olarak da adlandırılan online alışveriş alıcı ile satıcı arasında para, mal veya hizmet alışverişinin herhangi bir aşamasının internet kullanılarak gerçekleştirilmesidir.

Online alışveriş internet tabanlı olduğu için bazı özelliklere sahip olmaktadır. Bu özellikler hem tüketicilere hem de işletmelere kolaylıklar sağlamaktadır. Bu nedenle de çekici hale gelmekte ve kullanım oranını artırmaktadır. Online alışverişin hızla artması işletmelerin

pazarlama çabalarında değişiklikler yapmalarını zorunlu kılmış ve böylece geleneksel pazarlama önemini yitirmiştir (Algür & Cengiz, 2011).

Online alışveriş geleneksel pazarlamanın aksine müşteri ile işletme arasındaki zaman ve mekan kısıtlamasını ortadan kaldırmaktadır. Aynı zamanda daha fazla müşteriye daha kolay erişimi sağlamakta, müşteriye özel hizmet zenginliği ile müşteri deneyimi yaratarak memnuniyeti artırmakta, siparişlerin alınmasında ve teslim edilmesinde kolaylıklar sağlamaktadır.

İşletmeler online alışveriş sitelerinde ürün veya hizmetleri hakkında tüketicilere daha fazla bilgi vermekte ve daha geniş ürün yelpazesi sunmaktadırlar (Butler & Peppard, 1998). Tüketiciler de fiziksel mağazalara bağlı kalmamakta, alışveriş merkezi kalabalığından kurtulmaktadır. 7 gün 24 saat alışveriş yapabilme imkanı ile çeşitli ürün gruplarından işletmelerin uyguladığı satış tutundurma çabaları sayesinde daha az maliyetle yararlanmaktadırlar. Böylece maddi olarak tasarruf yapmakla birlikte zamandan da tasarruf kazanmaktadırlar.

Rekabet üstünlüğü elde ederek pazar paylarını korumak isteyen işletmeler pazarlama unsurları olan ürün, fiyat, tutundurma ve dağıtım faaliyetlerini müşterilerin özelliklerine göre geliştirmektedirler. Kapıda ödeme, kredi veya banka kartı gibi ödeme çeşitliliği, ürün çeşitliliği ve sunulan çeşitli kampanyalar tüketicilere cazip gelmekte ve online alışveriş hizmeti sunan işletmeleri tercih etmektedirler. Bu da işletmelere daha düşük maliyetlerle satış imkanı ve dolayısıyla kar sağlamaktadır (Armağan & Temel, 2018).

Tüketiciler online alışveriş sırasında daha fazla ürün/hizmete erişmekle birlikte markalar arasında karşılaştırma da yapmaktadırlar. Ayrıca marka tercihi sırasında ürünü denemiş olan diğer tüketicilerin olumlu veya olumsuz yorumlarına erişerek karar verme imkanı bulmaktadırlar. Ürünü daha önce kullanarak deneyim sahibi olan tüketicilerin ürünle ilgili yaptığı geri bildirimler işletmeler açısından da bir avantajdır. Nelerin geliştirilmesi, iyileştirilmesi vb. konularda işletmelere fikirler vermektedirler. Kolaylık ve hız arayan tüketiciler online alışverişin sunduğu avantajlar sayesinde yaptıkları alışverişlerden memnun olmaktadır (Butler & Peppard, 1998).

2. MÜŞTERİ ŞİKAYETLERİ ve E-ŞİKAYET KAVRAMI

2.1. Müşteri Şikayetleri

Pazarlama dünyası ortaya çıkışından itibaren günümüze kadar içinde bulunduğu şartlar nedeniyle çeşitli aşamalardan geçmiştir. Geline son nokta ise işletmeleri ve pazarlama anlayışının müşteri odaklı olmasıdır. Günümüzün modern işletmeleri artan rekabet ortamında rekabet üstünlüğü elde etmek ve pazar paylarını korumak için çabalamaktadırlar.

Rekabetin yoğun olduğu pazarlarda müşterilerin bilinç ve farkındalık düzeylerindeki gelişmeler işletmelerden beklentileri de artırmaktadır. Bu artışlara bilgi ve teknolojiye gelişmeler de eklenince müşteriler ürün/hizmetlerin hangi pazarlarda daha kaliteli veya daha ucuz ve hangi pazarın beklentilerini karşıladığı arayışlarındadırlar. Bu da işletmeleri müşteri beklentilerini karşılama odaklı yapmaktadır (Şahin & Şen, 2017). İşletmelerin varlık sebebi olarak müşterileri ve onların memnun edilmesi anlayışından hareketle modern pazarlama anlayışını benimseyen işletmeler mevcut/potansiyel müşterilerinin istek ve ihtiyaçlarını karşılayarak memnuniyeti artırmaktadır. Bunu karşılayamayan işletmeler ise ilk olarak memnuniyetsizlik ve beraberinde de müşteri şikayetleri ile karşılaşmaktadırlar.

Şikayet kavramı genel olarak bir olumsuzluğu ve memnuniyetsizliği ifade etmektedir. Yani müşterilerin satın aldıkları ürün ya da hizmetin beklentilerini karşılayamaması veya tüketim sonrasında meydana gelen beklenmeyen durumların karşılığıdır (Sujithamrak & Lam, 2005).

Müşteriler, satın aldıkları ürün/hizmete ilişkin duygu ve düşüncelerini diğer bireyler ile paylaşmaktadırlar. Duygu ve düşünceler pozitif veya negatif olmak üzere iki şekilde gerçekleşir. Pozitif durumlar işletmelere pazar payı ve gelir artışı gibi avantajlar sağlarken; negatif durumlar tam tersi yönde etki etmektedir. Ayrıca müşteriler negatif durumları pozitif

durumlara kıyasla iki kat daha fazla dile getirmektedirler (Goodman & Newman, 2003). Yapılan bir araştırmada da memnun olmayan müşterilerin durumu işletmeye bildirmek yerine arkadaşlarına, ailesine ve çevresine anlatmayı daha fazla tercih ettikleri görülmüştür (Phau & Sari, 2004).

Müşteri şikayetleri ürün/hizmet satın alımı sonrasında beklentinin gerçekleşmemesi durumunda ortaya çıkmakta ve müşterinin olumsuz geri bildirimini olarak tanımlanmaktadır. Şikayet davranışları ise iki şekilde gerçekleşmektedir; geri bildirimde bulunmak ya da bulunmamak. Bazen müşteriler geri bildirimlerde bulunmadan işletmeyi değiştirme yoluna gitmekte, bazen de şikayetleri farklı şekillerde (telefon, anket, yüz yüze vb.) ifade etmektedirler (Lovelock & Wirtz, 2001).

Satın alınan ürün/hizmetten beklentilerini alamayan müşteri ilk olarak memnuniyetsizliği dile getirip getirmeme konusunda karar vermektedir. Bu kararın ardından şikayet etmek isteyen müşterilerin bunu üç şekilde yaptıkları görülmüştür: Şikayetleri direkt olarak işletmeye bildirme, etrafındaki diğer insanlara anlatma, tüketici kuruluşları veya adli kuruluşlar gibi çeşitli kurum ve kuruluşlara bildirme (Barlow & Moller, 1998).

Müşterilerin geri bildirimleri olmadığı zaman işletmeler bir problemin varlığından haberdar olmazlar ve problemi ortadan kaldırmak için çabalamazlar. Ancak müşteri şikayetleri işletmeler tarafından istenmeyen bir durum olsa da doğru yönetildiğinde işletmelere çeşitli avantajlar sağlamaktadır. Şikayetler ürün/hizmet üretim ve sunumundaki hataların belirlenmesi, nelerin iyileştirilmesi ve geliştirilmesi gerektiği ve müşteri memnuniyeti sağlanması konularında işletmelere fırsatlar sunmaktadır (Bladgett, Wakefield, & Barnes, 1995). Yapılan araştırmalarda müşteri şikayetlerinin işletmelerin personellerinin performansını değerlendirmede, iş süreçlerinde aksayan yönlerinin farkına varılmasında ve olaylara müşterilerin gözünden bakarak sadakat duygusunun oluşmasında önemli rol oynadığı görülmektedir (Tosun & Söyük, 2019).

Geri bildirimlerde bulunmayan müşterilerin bunu zaman ve çabaya değer bulmadığı bilinmektedir. Diğer taraftan da şikayetlerin dikkate alınması hem müşterileri memnun ederek ileride de satın alımlarını devam ettirmeye hem de olumsuz söylemlerin önüne geçmeye yardımcı olmaktadır (Heung & Lam, 2003). Konu üzerinde yapılan araştırmalar da bunu destekler niteliktedir. Şikayetlerin işletmeler tarafından dikkate alınarak müşterilere beklentileri doğrultusunda cevap verilmesi memnuniyet düzeyini artırmakta, önemsendiği izlemine yaratarak sonraki satın alımlarda etkili olmaktadır (Singh & Widing, 1991).

2.2. E-Şikayet

Küreselleşme ve teknolojiye yaşanan gelişmeler dünyanın tüm toplumlarında inovasyon, rekabet gücü ve kalkınma gibi etkilerle hem kültürel hem de toplumsal hayatı dönüştürmüştür (Ertuğrul & Deniz, 2018). Dijitalleşme sürecine uyum sağlayan bireyler zamanının büyük bir kısmını çevrimiçi ortamlarda geçirirken; işletmeler de kendilerine sunulan fırsatları değerlendirme yoluna giderek müşteriler ile sağlıklı iletişim kurmak amacıyla kendilerini çevrimiçi ortamlara taşımaktadırlar. Bu da müşteriler ile mesafeleri ortadan kaldırarak onlara hızlı ve kolay bir iletişim sağlamaktadır. Müşteriler de diğer müşteriler ile iletişim kurmakta, ürün/hizmetle ilgili daha fazla bilgiye, deneyim sahibi olan müşterilerin olumlu/olumsuz yorumlarına ve de şikayetlere erişmektedir (Hızlı, 2019).

İnternet işletmelere yeni pazar fırsatları, yeni müşteriler sunarken; müşterilere de satın alınan ürün/hizmet ile ilgili duygu ve düşüncelerini paylaşabilecekleri çevrimiçi ortamlar sunmaktadır. Bunlardan biri de müşterilerin şikayetlerini dile getirebilecekleri e-şikayet siteleridir. Müşteriler şikayetlerini bu ortamlarda hızlı ve kolay bir şekilde paylaşmaktadırlar. İşletmeler de internet siteleri veya sosyal medya aracılığı ile şikayetlere çok kısa bir sürede geri dönüş yapabilmektedirler (Argan, 2014). Teknolojiye uyum sağlayabilen ve iyi bir şikayet yönetimi yapabilen işletmeler şikayetlere hızlı bir şekilde çözüm bularak hem problemi ortadan kaldırmakta hem de kötü söylemlerin önüne geçmektedir. Şikayetlerin hızlı

bir şekilde çözüme kavuşturulması müşteri memnuniyetini de beraberinde getirmektedir (Zengin & Haliloğlu, 2020).

İnternetin ve şikayetlerin sunmuş olduğu fırsatlar yalnızca bunlarla sınırlı değildir. İşletmeler hakkında duygu ve düşüncelerini ifade edebilecekleri platformların varlığı müşterilere yorum ve eleştiri yapabilme gücünü vermektedir. Bu da işletmeleri daha kaliteli ürün/hizmet sunma zorlamaktadır (Zengin & Haliloğlu, 2020).

3. ARAŞTIRMANIN METODOLOJİSİ

3.1. Araştırmanın Amacı, Kapsamı ve Sınırlılıkları

Araştırmanın amacı online alışveriş uygulamalarına yönelik müşteriler tarafından yapılan e-şikayetlerin incelenmesidir. Bu inceleme sonucunda araştırma kapsamına alınan online alışveriş uygulamalarına en çok hangi şikayetlerin yapıldığı ortaya konulmaktadır. Bu bağlamda araştırma kapsamına alınan online alışveriş uygulamaları Trendyol, Hepsi Burada, Çiçek Sepeti ve N11'dir. Müşteri şikayetleri ise e-şikayet platformlarından biri olan "şikayetvar" sitesinden elde edilmiştir. Online uygulamaların seçiminde de bu siteden faydalanılmıştır. Seçimde dikkat edilen husus ise en çok şikayet alan uygulamaların tercih edilmesidir. Şikayetler belirlenen uygulamaların her birinden Ocak ayına ait 50 tane rastgele seçilerek toplamda 200 adet şikayet analiz edilmek üzere elde edilmiştir. Araştırmada yalnızca şikayetvar sitesinin kullanılması ve şikayetlerin az olması araştırmanın kısıtlılığını oluşturmaktadır.

3.2. Araştırmanın Yöntemi

Araştırma yapısı ve tüm süreçleri ile nitel araştırma deseni ile oluşturulmuştur. Doğal araştırma, yorumlayıcı ve alan araştırması da olarak adlandırılan nitel araştırma "Araştırdığı konuya yorumlayıcı ve doğal olarak yaklaşan ve birden fazla metotta odaklanan araştırma" olarak tanımlanmıştır (Yıldırım & Şimşek, 2000; Denzin & Lincoln, 1998). Başka bir tanımda nitel araştırma "Gözlem, görüşme ve doküman analizi gibi nitel veri toplama tekniklerinin kullanıldığı, algıların ve olayların doğal ortamda gerçekçi ve bütüncül bir biçimde ortaya konmasına yönelik nitel bir sürecin izlendiği araştırma" olarak tanımlanmaktadır (Yıldırım & Şimşek, 2008, s. 39). Tanımda da belirtildiği gibi nitel araştırmalarda, bir problemi çözmek amacıyla gözlem, görüşme ve doküman analizi gibi nitel veri toplama yöntemlerini kullanılmaktadır.

Verilerin toplanmasında nitel veri toplama yöntemlerinden biri olan doküman inceleme tekniğinden yararlanılmıştır. Doküman incelemesi; tüm görsel, işitsel ve yazılı materyalleri kapsamaktadır (Gürbüz & Şahin, 2018). Başka bir ifade ile "hedeflenen olgu ve olaylar hakkında bilgi içeren yazılı materyallerin analizini kapsamaktadır" (Yıldırım & Şimşek, 2008). Doküman analizi ilgili konu hakkında anlam çıkarmak ve konuya ilişkin bir anlayış geliştirmek amacıyla verilerin incelenmesini ve yorumlanmasını gerektirmektedir (Corbin & Strauss, 2008). Araştırmada kullanılacak olan dokümanlara web sayfalarından, haber gruplarından, e-mail üzerinden ve blog gibi elektronik ortamlardan da ulaşılabilmektedir (Baş & Akturan, 2017).

Verileri analiz edebilmek amacıyla içerik analizi kullanılmıştır. Nitel araştırmalarda toplanan veriler genellikle betimsel analiz veya içerik analizi yöntemleri ile analiz edilmektedir. İçerik analizi "araştırmanın özüne ilişkin kalıpları, temaları, önyargıları ve anlamları belirlemek hedefiyle verilerin dikkatli, detaylı ve sistematik olarak incelenmesi ve yorumlanmasıdır" (Baltacı, 2019). Başka bir tanımda da içerik analizi; "Her türlü söylemlere uygulanan yöntemsel araç ve teknikler" olarak ifade edilmektedir (Bilgin, 2014). Araştırmada kullanılan verilerin analizinde nitel analiz programlarından biri olan MAXQDA programından faydalanılmıştır. Program, araştırmacılara verileri kodlamada ve verileri görselleştirmede önemli imkanlar sunmaktadır. İçerik analizinde elde edilen veriler dört aşamada analiz edilmektedir (Yıldırım & Şimşek, 2008). Bu aşamalar: Verilerin kodlanması, temaların bulunması, kodların ve temaların düzenlenmesi, bulguların tanımlanması ve yorumlanması.

İlk aşama olarak araştırma için elde edilen şikayet metinleri incelenerek her şikayet için kodlama yapılmış ve veriler kategorik hale getirilmiştir. Kodlama; veriler arasında bir sözcük, cümle, paragraf gibi anlamlar bularak araştırmacı tarafından isim verilmesi ve bir bütün olarak ifade edilmesidir. Kodlama elde edilen verileri bölümlere ayırma, inceleme, karşılaştırma yapma, kavramlaştırma ve ilişkilendirme süreçlerini içermektedir (Baltacı, 2019). İkinci aşama temaların bulunmasıdır ve bunların bulunması için önce kodlar bir araya getirilerek incelenmektedir (Çoşgun İlgar & İlgar, 2014). Temalar; ilk aşamada ortaya çıkan kodlardan hareketle verileri, genel düzeyde açıklayabilen ve kodları belirli kategoriler altında toplayan nitelikte oluşturulmalıdır. Araştırmada kategoriler oluşturma sürecinde şikayet konuları göz önünde bulundurularak kodlamalar yapılmıştır. Yapılan kodlamalar sonucunda ana tema ve alt temalar oluşturulmuştur. Temalar ve alt temalar oluşturulurken, Güven (2020) çalışmasından faydalanılmıştır. İncelemeler sonucunda toplamda dört ana tema ve 11 alt tema oluşturulmuştur.

4. BULGULAR

Bu bölümde MAXQDA programı aracılığı oluşturulan ana tema ve alt temalara, metinlere yapılan kodlamalara ve şikayetlere örnekler, online alışveriş uygulamalarına yapılan şikayetlerin dağılımlarına yer verilmektedir. İlk olarak elde edilen şikayetlerin okunması ve incelenmesi doğrultusunda ortaya çıkan ana tema ve alt temalara, online alışveriş uygulamalarının bu temalardaki dağılımına yer verilmektedir.

Tablo 4.1. Şikayetlerin Ana Tema ve Alt Temalara Göre Dağılımı

		Trend Yol	Çiçek Sepeti	Hepsi Burada	N11	Toplam
İade Süreci İle İlgili Şikayetler	İade Talebinin Reddedilmesi	6	3	5	6	68
	Ücret İadesinin Yapılmaması	22	10	10	6	
Teslimat Süreci İle İlgili Şikayetler	Zamanında Teslim Edilmeme	5	10	4	0	62
	Teslim Edilmeyen Ürün	10	19	7	7	
Ürün İle İlgili Şikayetler	Orijinal Olmayan Ürün	6	16	4	1	95
	Arızalı/Kırık Ürün	5	3	1	9	
	Eksik Ürün	8	1	15	4	
	Yanlış Ürün	6	1	10	5	
Müşteri Hizmetleri/ Canlı Servis İle İlgili Şikayetler	Sorunlara Çözüm Bulmama	23	24	18	13	110
	Müşteri Hizmetlerinin İlgisizliği	4	9	6	3	

	Müşteri Hizmetlerine Ulaşamama	0	4	3	3	
TOPLAM		95	100	83	57	335

Tablo 4.1’de dört online alışveriş sitesinden elde edilen toplamda 200 adet şikayetin ilgili şikayetlere göre dağılımı gösterilmektedir. MAXQDA programının sunmuş olduğu bir metne birden fazla kodlama yapabilme özelliği ile metinlere toplamda 335 adet kodlama yapılmıştır. En çok kodlama yapılan online alışveriş siteleri sırasıyla; Çiçek Sepeti, Trend Yol, Hepsi Burada ve N11’dir. Buradan hareketle oluşturulan ana tema ve alt temalara uygun olarak en çok şikayet alan online alışveriş uygulaması Çiçek Sepeti’dir.

Çiçek Sepeti uygulamasına yönelik en çok şikayet edilen alt temalar müşteri hizmetlerinin sorunlara çözüm bulamaması ile ilgilidir. Takibinde ise teslim edilmeyen ürün, orijinal olmayan ürün, zamanında teslim edilememe ve ücret iadelerinin yapılmaması, müşteri hizmetlerinin ilgisizliği, müşteri hizmetlerine ulaşamama, iade talebinin reddedilmesi ve arızalı/kırık ürün, eksik ve yanlış ürün alt temaları gelmektedir.

Trend Yol uygulamasına yönelik en çok şikayet edilen konular müşteri hizmetlerinin sorunlara çözüm bulamaması (23) ve ücret iadesinin yapılmaması (22) konularıdır. Trend Yol uygulamasında elde edilen şikayetler arasında alt kategorilerden biri olan müşteri hizmetlerine ulaşamama kategorisine ilişkin bir şikayet bulunamamıştır.

Hepsi Burada uygulamasında en çok şikayet edilen konu Çiçek Sepeti ve Trend Yol’da olduğu gibi müşteri hizmetlerinin müşterilerin sorunlarına çözüm bulamamasıdır. Takibinde ise eksik ürün gönderimi yer almaktadır.

Uygulamalar arasında temalarla ilgili olarak en az kodlamaya sahip olan uygulamanın toplamda 57 adet kodlama ile N11 olduğu görülmektedir (Bkn. Tablo 4.1.). En çok şikayet edilen konular ise sırasıyla; müşteri hizmetlerinin sorunlara çözüm bulamaması, ürünlerin arızalı/kırık olması, teslim edilmeyen ürün, iade talebinin reddedilmesi ve ücret iadesinin yapılmaması, yanlış ve eksik ürün gönderimi, müşteri hizmetlerine ulaşmama ve müşteri hizmetlerinin ilgisizliği, orijinal olmayan ürün. Elde edilen şikayetler arasında N11 uygulamasında alt kategorilerden biri olan zamanında teslim edilmeme kategorisine ait bir şikayet bulunamamıştır.

SONUÇ

Çalışma nitel araştırma deseni olarak oluşturulmuştur. Online alışveriş uygulamalarına yönelik müşteri şikayetlerinin tespit edilmesi amaçlanmıştır. İncelenecek olan uygulamalar şikayetlerin elde edildiği şikayetvar.com sitesinde en çok şikayet alan online alışveriş uygulamaları değerlendirilerek seçilmiştir. Bu doğrultuda Trend Yol, Hepsi Burada, N11 ve Çiçek Sepeti uygulamalarından ocak ayına ait rast gele 50’şer, toplamda 200 adet müşteri şikayeti veri olarak doküman incelemesi ile elde edilmiştir. Metinlerin analiz edilmesinde içerik analizi yönteminden ve nitel analiz programı olan MAXQDA’dan faydalanılmıştır. İçerik analizi, metinlerin çözümlenmesini, temaların oluşturulmasını ve kodlamaların yapılmasını gerektirmektedir. Bu doğrultuda 200 adet müşteri şikayeti tek tek okunarak konuyla ilgili 4 ana tema ve 11 alt tema oluşturulmuştur. Ardından her bir uygulamaya ait şikayetler ilgili temalarla kodlanmıştır. Bir metin birden fazla şikayet temasını içerebilmekte ve MAXQDA programı da bir metne birden fazla kodlama yapabilme imkanı vermektedir. Bu nedenle kodlanan metin sayısı toplamda 335 adettir.

Şikayetler ana temalar bazında incelendiğinde dört uygulamanın da en çok şikayet aldığı temanın müşteri hizmetleri/ canlı destek ile ilgili şikayetler olduğu görülmektedir. Takibinde ona yakın olarak ürün ile ilgili şikayetler ve ardından iade süreci ile ilgili şikayetler yer almaktadır. En az şikayetin görüldüğü ana tema ise teslimat süreci ile ilgilidir. Yapılan başka bir çalışmada da müşteri hizmetleri/ canlı destek ana teması en çok şikayet edilen ana tema olmuştur (Güven, 2020).

Online alışveriş uygulamalarının alt temalara göre dağılımları incelendiğinde dört uygulamanın da en çok şikayet aldığı konunun müşteri hizmetlerinin sorunlara çözüm bulamaması olduğu tespit edilmiştir. İkinci sıralara bakıldığında; Trend Yol uygulamasında ücret iadesinin yapılmaması, Çiçek Sepeti uygulamasında teslim edilmeyen ürün, Hepsi Burada uygulamasında eksik ürün ve N11 uygulamasında arızalı/kırık ürün yer almaktadır.

Sonuç olarak değerlendirildiğinde online alışveriş uygulamalarının müşterileri odağına alarak onları dinlemeleri, memnuniyetsizliklerini anlamaları ve bunlara çözümler getirecek farklı yöntemleri geliştirmeleri gerekmektedir. Müşteri şikayetleri istenmeyen olumsuz bir durum olarak değil; nelerin geliştirilmesi ve iyileştirilmesi gerektiği konusunda fikirler veren bir fırsat olarak görülmelidir.

Bu çalışmada dört online alışveriş uygulamasına yönelik müşteri şikayetleri incelenmiştir. Çalışmanın en önemli kısıtı her uygulamaya ait yalnızca 50 adet şikayetin incelenmesidir. Uygulama ve şikayet sayısı artırılarak daha geniş bir çalışmayla daha farklı sonuçlar elde edilebileceği düşünülmektedir.

ÖZET

Sağlık çalışanlarında ilaç kötüye kullanımı, hasta güvenliği, çalışan sağlığı ve sağlık sisteminin bütünlüğü üzerinde ciddi etkiler yaratabilecek karmaşık bir sorundur. Bu meslek grubu, yüksek stresli çalışma ortamı, uzun çalışma saatleri, duygusal yük, ilaçlara kolay erişim ve kültürel damgalama gibi risk faktörleriyle karşı karşıyadır. Araştırmalar, sağlık çalışanlarının %10-15'inin kariyerleri boyunca madde bağımlılığı riski taşıdığını ve ilaç kötüye kullanımı yaşadığını göstermektedir. Özellikle opioidler, benzodiazepinler ve uyarıcılar gibi bağımlılık yapıcı ilaçların yanlış kullanımının yaygın olduğu bu sorunda, sağlık çalışanlarının mesleklerine özgü stres, tükenmişlik ve ilaçlara kolay erişim gibi faktörler önemli bir rol oynamaktadır. Erişim kolaylığı ve damgalanma korkusu, bu sorunun gizlenmesine ve tedaviye yönelik adımların atılmasının ertelenmesine neden olmaktadır. İlaç kötüye kullanımı, hasta güvenliği risklerini artırabilir, profesyonel ilişkileri zedeleyebilir, bakım hatalarına yol açabilir ve hukuki etik ihlallere neden olabilir. İlaç kötüye kullanımı ile mücadele eden sağlık çalışanlarında ruh hali değişiklikleri, izolasyon, mesleki performans düşüşü ve ilaç hataları gibi belirtiler görülebilir. Hemşireler, bu bağlamda, ilaç kötüye kullanımının önlenmesi ve müdahale edilmesinde kritik bir rol üstlenmektedir. Hemşireler, kötüye kullanım belirtilerini erken fark ederek, bağımlılık gösteren sağlık çalışanlarını uygun tedavi merkezlerine yönlendirebilir ve hastaları ilaçları doğru kullanma konusunda bilgilendirebilir. Multidisipliner bir yaklaşım benimsenerek hazırlanacak tedavi programları, bağımlılığın tıbbi, psikolojik ve sosyal boyutlarını dikkate alarak ve sağlık çalışanlarının iyileşmesini, mesleğe yeniden kazandırılmasını sağlayabilir. Bu süreçte hemşirelerin rolü büyük olup, sağlık kurumlarının proaktif stratejiler geliştirmesi, toplum sağlığını korumak için kritik öneme sahiptir. Sonuç olarak, sağlık çalışanlarında ilaç kötüye kullanımı, hem bireysel hem de sistemik düzeyde güvenli ve kaliteli sağlık hizmetlerinin sunulabilmesi için ele alınması gereken önemli bir

sorundur. Bu kapsamda, hemşirelerin erken farkındalık oluşturması, meslektaşlarındaki değişimleri izleyerek bağımlılığı tespit etmeleri ve doğru tedavi merkezlerine yönlendirme yapmaları önemlidir.

Anahtar Kelimeler: İlaç Kötüye Kullanımı, Psikiyatri Hemşireliği, Hemşirelik Yaklaşımı

ABSTRACT

Substance misuse among healthcare professionals is a complex issue that can have serious consequences for patient safety, worker health, and the integrity of the healthcare system. This occupational group is exposed to risk factors such as high-stress work environments, long working hours, emotional burdens, easy access to medications, and cultural stigma. Research indicates that 10-15% of healthcare workers are at risk of substance dependence and have experienced prescription drug misuse during their careers. In particular, the misuse of addictive substances like opioids, benzodiazepines, and stimulants is prevalent, with stress, burnout, and easy access to medications playing significant roles in this issue. Easy access to these substances and the fear of stigma often lead to the concealment of the problem and the postponement of treatment. Medication misuse can increase patient safety risks, impair professional relationships, lead to care errors, and cause legal and ethical violations. Healthcare workers struggling with substance misuse may exhibit signs such as mood changes, isolation, decreased professional performance, and medication errors. Nurses play a critical role in the prevention and intervention of medication misuse. By recognizing early signs of misuse, nurses can refer healthcare professionals exhibiting signs of addiction to appropriate treatment centers and educate patients on the proper use of medications. A multidisciplinary approach to treatment programs, which addresses the medical, psychological, and social dimensions of addiction, can support the recovery and reintegration of healthcare workers. Nurses have a crucial role in this process, and the development of proactive strategies by healthcare institutions is essential to protect public health. Ultimately, addressing substance misuse among healthcare professionals is a key issue that must be tackled at both the individual and systemic levels to ensure the delivery of safe and high-quality healthcare services. In this context, it is vital for nurses to raise early awareness, monitor changes in colleagues, detect addiction, and guide them to the appropriate treatment centers.

Keywords: Substance misuse, Psychiatric Nursing, Nursing Approach

Giriş

Sağlık çalışanlarında ilaç kötüye kullanımı, mesleki zorluklar sebebiyle giderek artan bir sorun haline gelmiştir. Yüksek stres seviyeleri, yoğun çalışma saatleri ve ilaçlara kolay erişim imkanı bu sorunun yaygınlaşmasına neden olan başlıca faktörler arasında yer almaktadır (Baldisseri, 2007). Bu durum, sadece bireyin sağlığını değil, aynı zamanda sağlık hizmetinin kalitesini ve hasta güvenliğini de tehdit etmektedir. Hemşireler, sağlık ekibinin kritik bir üyesi olarak, bu sorunun fark edilmesi ve yönetilmesinde önemli roller üstlenmektedir (Monroe ve Kenaga, 2011; Trinkoff ve Storr, 1998).

İlaç Kötüye Kullanımının Tanımı ve Boyutu

İlaç kötüye kullanımı; ilaçların tıbbi gerekçelerle ve önerilen dozda kullanılmaması, yanlış amaçlarla tüketilmesi veya reçete dışı kullanımını ifade etmektedir. Sağlık çalışanları arasında ilaç kötüye kullanımı, iş ortamı sebebiyle diğer meslek gruplarına nazaran daha yaygındır. Yapılan araştırmalar, hemşirelerin %10-15'inin yaşamlarının bir döneminde ilaç kötüye kullanımı ile karşılaştığını göstermektedir (Trinkoff ve Storr, 1998). Ancak bu oranlar, vakaların büyük bir kısmının gizlenmesi nedeniyle gerçeği tam yansıtmayabilir. Sağlık çalışanlarında ilaç kötüye kullanımını artıran faktörler arasında iş stresi, tükenmişlik yaşama,

travmatik olaylara şahit olma ya da maruz kalma, kronik ağrı ve ruhsal sağlık sorunları, yüksek stres seviyeleri ve psikolojik baskılar altında çalışıyor olmak öne çıkmaktadır (Monroe ve Kenaga, 2011; Trinkoff ve Storr, 1998; Saruç, 2021; Yazıcı ve Şahin, 2023). Ayrıca, sağlık okuryazarlığı düzeyi de ilaç kötüye kullanımında etkili bir faktördür. Düşük sağlık okuryazarlığı, bireylerin ilaçları doğru kullanma becerilerini olumsuz yönde etkileyerek, yanlış kullanım veya gereksiz ilaç alımına yol açabilmektedir (Öztaş ve Korkmaz, 2019; Yılmaz ve Çolak, 2018). Sağlık çalışanlarının, ilaçların etkileri ve kullanımı hakkında yeterli bilgiye sahip olmaması, ilaç kötüye kullanımını daha da kötüleştirmektedir, sağlık çalışanlarının ilaç uyumu ile ilgili bilgi eksiklikleri, ilaçların karmaşık olması ve etkilerini bilmemeleri gibi durumlar, kötüye kullanıma neden olabilmektedir (Köseoğlu ve Enç, 2016). İlaç kötüye kullanımını etkileyen diğer bir faktör ise, sağlık çalışanlarının mesleki deneyim ve yaşlarıdır. Uzun yıllar sağlık sektöründe var olan çalışanların, stresle başa çıkma yöntemleri geliştirememesi halinde, ilaçlara yönelme eğilimleri artabileceği saptanmıştır (Sarı, 2017).

Etkileri ve Sonuçları

Sağlık çalışanlarında ilaç kötüye kullanımı, hem bireylerin hem de sağlık sisteminin genel sağlığı üzerinde ciddi olumsuz etkilere yol açmaktadır. İlaç kötüye kullanımı, sağlık çalışanlarının mesleki stres, tükenmişlik ve ruhsal sağlık sorunları gibi faktörlerle ilişkilidir. (Gökçe, 2022). Bu durum, sağlık çalışanlarının ruh sağlığını olumsuz etkileyerek, hem bireysel hem de toplumsal düzeyde sorunlara yol açmaktadır. İlaç kötüye kullanımının sonuçları arasında, sağlık çalışanlarının mesleki performansında düşüş, hasta güvenliğinde azalma ve sağlık hizmetlerinin kalitesinde bozulma yer almaktadır. Ayrıca, hatalı ilaç uygulamaları, karar verme yetisinde bozulma ve hasta güvenliğini tehdit etme gibi sonuçların meydana gelmesi mümkündür (Natan ve Beyil, 2009; Yel ve Türeyen, 2022). Bunun yanı sıra, sağlık çalışanlarının ilaç kötüye kullanımı, toplumda genel bir güvensizlik yaratabilir. Sağlık çalışanlarının kendi sağlıklarını riske atması, hastaların sağlık hizmetlerine olan güvenini sarsabilir (Tarhan ve ark., 2018).

Hemşirelerin Rolü ve Müdahale Yaklaşımları

Sağlık çalışanları arasında ilaç kötüye kullanımında hemşirelerin rolleri, yalnızca tedavi sürecine dahil olmak değil, aynı zamanda ilaç kötüye kullanımını önlemek, erken tanı koymak ve müdahalede bulunmaktır (Türk Hemşireler Derneği, 2023).

Hemşirelerin Rolü

1. Farkındalık Yaratma ve Eğitim

Hemşireler, eğitici rolleri kapsamında sağlık çalışanlarına yönelik eğitim programları düzenleyerek, bağımlılık ve ilaç kötüye kullanımı konusunda farkındalık kazandırmada önemli bir rol oynamaktadır. Bu eğitimler; sorunun nedenleri, belirtileri ve önlenmesi ile ilgili bilgiler sunmalı ve bağımlılıkla mücadele, hemşirelerin liderliğinde, sağlık personeline yönelik doğru bilgi aktarımı ile daha etkili hale getirilmelidir (Baldisseri, 2007; Özel ve ark., 2018).

2. Erken Tanı ve Gözlem

Hemşireler, iş arkadaşlarının ruhsal durum ve davranışlarındaki değişimleri gözlemleyerek ilaç kötüye kullanımını erken dönemde fark edebilirler. Bu, hem bireyin sağlığını koruma hem de kurumsal güvenliği sağlama açısından son derece önemlidir. İlaç kötüye kullanımının erken farkına varılmasıyla daha etkin tedavi ve destek stratejileri geliştirilmesini sağlanabilmektedir. Çalışanlarda, depresyon, aşırı yorgunluk, fiziksel değişiklikler, performans düşüşü gibi belirtiler gözlemlenebilir ve durum fark edildiğinde sorunun kişi mahremiyeti içinde ele alınması ve profesyonel yardım için yönlendirme yapılması gerekmektedir (Monroe ve Kenaga, 2011).

3. Müdahale ve Destek

Bu süreç, kişinin iyileşmesi için gereken psikolojik ve fiziksel desteği sağlar ve sağlık kurumlarının güvenliğini korur. Müdahale, genellikle çok disiplinli bir yaklaşım gerektirir (Natan ve Beyil, 2009). Hemşire, kişiye empati ve güven duygusu vererek, tedavi sürecine aktif katılımı sağlamalı ve bunu diğer sağlık personelleri (psikologlar, bağımlılık uzmanları ve diğer sağlık profesyonelleri) ile işbirliği içinde yapmalıdır. Sağlık çalışanlarının, stres yönetimi ve ruh sağlığına yönelik destek almaları da ilaç kötüye kullanımını önlemek için kritik öneme sahiptir (Karagöz, 2022).

Rehabilitasyon ve İşe Dönüş

Sağlık çalışanlarında ilaç kötüye kullanımı, ciddi bir sorun olup, bu durumun rehabilitasyonu ve işe dönüş süreci, hem bireylerin hem de sağlık sisteminin sürdürülebilirliği açısından büyük önem taşımaktadır. Rehabilitasyon süreci, sağlık çalışanlarının ilaç kötüye kullanımına yönelik yaşadıkları sorunları ele alarak, onların yeniden iş gücüne kazandırılmasını hedefler. Bu süreç, kişiye özel planlar gerektirir, çeşitli aşamalardan oluşur ve hem psikolojik hem de fiziksel destek içermektedir. Rehabilitasyon sürecinin ilk aşaması, sağlık çalışanının durumunun değerlendirilmesidir. Bu aşamada, bireyin ilaç kullanımı ile ilgili geçmişi, ruhsal durumu ve mesleki stres faktörleri göz önünde bulundurulur. (Baldisseri, 2007; Karagöz, 2022). Bu nedenle, stres yönetimi ve psikolojik destek programları, rehabilitasyon sürecinin önemli bir parçasını oluşturur. Psiko-eğitim programları, sağlık çalışanlarının stresle başa çıkma becerilerini geliştirmelerine yardımcı olabilir (Karagöz, 2022). Rehabilitasyon sürecinin bir diğer önemli bileşeni, bireyin sosyal destek ağının güçlendirilmesidir. Sağlık çalışanları, iş yerinde ve sosyal çevrelerinde destek bulduklarında, iyileşme süreçleri daha hızlı ve etkili olabilir. Bu bağlamda, hemşirelerin ve diğer sağlık çalışanlarının, birbirlerine destek olmaları teşvik edilmelidir (Köksal, 2023).

Rehabilitasyon sonrasında güvenli bir işe dönüş planı oluşturmak, kişinin yeniden topluma kazandırılmasını sağlar. Sürekli izleme ve destek mekanizmaları, iyileşme sürecini sürdürülebilir kılmak için kritik öneme sahiptir (Monroe ve Kenaga, 2011). Bu süreçte, sağlık çalışanlarının iş yerindeki rollerine yeniden entegre olmaları sağlanır. İşe dönüş sürecinde, bireylerin iş yüklerinin dikkatlice ayarlanması ve gerektiğinde esnek çalışma saatleri sunulması önemlidir. Ayrıca, sağlık çalışanlarının işe dönüşlerinde, iş yerinde psikolojik destek ve danışmanlık hizmetlerinin sağlanması, onların adaptasyon süreçlerini kolaylaştırabilir (Semerci, 2023).

Sonuç ve Öneriler

İlaç kötüye kullanımı, sağlık çalışanları arasında ciddi bir sorun olmaya devam etmektedir. Bu durumda rehabilitasyon ve işe dönüş süreci, çok yönlü bir yaklaşım gerektirmektedir. Hemşireler, bu sorunun önlenmesi ve yönetilmesinde merkezi bir rol oynamaktadır. Erken tanı, etkili müdahale ve empatik yaklaşımlarla bu sorunun etkileri azaltılabilir. Psikolojik destek, sosyal destek ağlarının güçlendirilmesi ve iş yerinde sağlıklı bir ortamın oluşturulması, bu sürecin başarıyla tamamlanmasında kritik öneme sahiptir. Sağlık kurumlarında düzenli eğitimler ve destek mekanizmaları sağlanmalı, rehabilitasyon süreçleri titizlikle yürütülmelidir. Multidisipliner bir yaklaşımla sorunun ele alınması, sağlık çalışanlarının iş gücüne güvenli bir şekilde dönmesini ve hasta güvenliğinin korunmasını sağlayacaktır.

ÖZET

Kafein, dünyada en çok tüketilen psikoaktif maddelerden biridir ve bağımlılık potansiyeline sahiptir. Kahve, çay, enerji içecekleri, çikolata ve bazı ilaçlar yoluyla alınan kafein, hem fiziksel hem de zihinsel uyarıcı etkileri nedeniyle sıklıkla tercih edilmektedir. Ancak, aşırı tüketimi zamanla bağımlılığa yol açarak bireylerin günlük yaşamını olumsuz etkileyebilir. Kafein bağımlılığı belirtileri arasında aşırı yorgunluk, baş ağrısı, konsantrasyon zorluğu, huzursuzluk ve anksiyete yer almaktadır. Yoksunluk semptomları genellikle kafein tüketiminin azalması veya kesilmesi durumunda ortaya çıkar. Yüksek dozda kafein alımı ise uyku bozuklukları, çarpıntı, mide rahatsızlıkları ve yüksek tansiyon gibi sağlık sorunlarına neden olabilir. Özellikle sağlık çalışanları gibi yoğun tempolu mesleklerde, uzun vadeli aşırı tüketim iş performansını ve genel sağlık durumunu olumsuz etkileyebilmektedir. Türkiye’de kafein tüketimi, kahve kültüründeki dönüşümle birlikte artış göstermiştir. Geleneksel Türk kahvesi popülerliğini korurken, filtre kahve ve espresso gibi türlerin tüketimi de hızla yaygınlaşmıştır. Araştırmalar, Türkiye nüfusunun yarısından fazlasının günlük kahve tükettiğini, %29’unun ise günde 3-4 fincan kahve içtiğini göstermektedir. Benzer şekilde, dünya genelindeki çalışmalar da sağlık çalışanlarının yüksek oranda kafein tükettiğine işaret etmektedir. Örneğin, Suudi Arabistan’da sağlık çalışanlarının %94,3’ünün kafein kullandığı, ABD’de ise hemşirelerin %88,1’inin günlük kahve tükettiği belirlenmiştir. Bu veriler, özellikle yoğun tempolu çalışan bireylerin yorgunlukla başa çıkmak için kafeine yöneldiğini göstermektedir. Kafein bağımlılığı ile mücadelede, tüketimi kademeli olarak azaltmak etkili bir yöntemdir. Sağlıklı bir uyku düzeni, düzenli egzersiz ve yeterli sıvı alımı gibi yaşam tarzı değişiklikleri, bağımlılığın önlenmesine yardımcı olabilir. Uzmanlar, sağlıklı yetişkinler için günlük kafein alımının 400 mg ile sınırlandırılmasını önermektedir. Ayrıca, eğitim programları ve farkındalık çalışmaları, bireylerin güvenli tüketim sınırlarını öğrenmelerini sağlayarak bağımlılığın önlenmesinde önemli bir rol oynamaktadır. Sonuç olarak, kafein bağımlılığı yaygın bir sorun olup bireylerin hem fiziksel hem de zihinsel sağlığını olumsuz etkileyebilir. Türkiye ve dünya genelinde artan

kahve tüketimi bu bağımlılığın yaygınlığını artırırken, doğru yönetim stratejileri ve farkındalık çalışmaları ile etkiler kontrol altına alınabilir. Sağlıklı tüketim alışkanlıklarının geliştirilmesi, bireysel ve toplumsal düzeyde daha iyi bir yaşam kalitesine katkı sağlayacaktır.

Anahtar Kelimeler: Kafein Bağımlılığı, Kafein Yoksunluğu, Bağımlılık

ABSTRACT

Caffeine is one of the most widely consumed psychoactive substances globally and possesses significant addictive potential. Commonly ingested through coffee, tea, energy drinks, chocolate, and certain medications, caffeine is frequently chosen for its physical and mental stimulant effects. However, excessive consumption can lead to addiction over time, negatively impacting individuals' daily lives. Symptoms of caffeine addiction include severe fatigue, headaches, difficulty concentrating, restlessness, and anxiety. Withdrawal symptoms typically manifest when caffeine intake is reduced or discontinued. High doses of caffeine may cause health issues such as sleep disturbances, heart palpitations, gastrointestinal discomfort, and hypertension. In professions with demanding workloads, such as healthcare, long-term overuse can impair job performance and overall health. In Turkey, caffeine consumption has increased in tandem with the evolution of coffee culture. While traditional Turkish coffee maintains its popularity, the consumption of filtered coffee and espresso is rapidly growing. Studies indicate that more than half of the Turkish population consumes coffee daily, with 29% drinking 3-4 cups per day. Similarly, global research highlights significant caffeine consumption among healthcare professionals. For instance, 94.3% of healthcare workers in Saudi Arabia and 88.1% of nurses in the United States consume caffeine daily. These findings suggest that individuals in high-stress professions often turn to caffeine to combat fatigue. Gradual reduction in consumption is an effective approach to addressing caffeine addiction. Lifestyle modifications such as maintaining a healthy sleep schedule, engaging in regular physical activity, and ensuring adequate hydration can aid in prevention. Experts recommend limiting daily caffeine intake to 400 mg for healthy adults. Educational programs and awareness campaigns play a critical role in helping individuals understand safe consumption levels, thereby preventing addiction. In conclusion, caffeine addiction is a widespread issue that can adversely affect both physical and mental health. Increasing coffee consumption in Turkey and worldwide contributes to the prevalence of this addiction. However, its impacts can be mitigated through effective management strategies and awareness efforts. Developing healthy consumption habits can significantly enhance quality of life at both individual and societal levels.

GİRİŞ

Kafein Bağımlılığı: Tanım ve Etkileri

Kafein Nedir?

Kafein, merkezi sinir sistemini uyarıcı etkisiyle bilinen doğal bir alkaloid maddedir. Kahve çekirdekleri, çay yaprakları, kakao tohumları gibi bitkilerde bulunur ve enerji içecekleri, gazlı içecekler ile bazı ilaçların içinde de yer alır. Kafein, uyanıklığı artırma, yorgunluğu azaltma gibi etkileri nedeniyle yaygın olarak tüketilir (Fredholm ve ark., 1999). Kafeinin etkileri olumlu ve olumsuz şeklinde ayrılabilir. Olumlu etkileri; Kafein, odaklanmayı ve zihinsel performansı kısa vadede artırabilir (Smith, 2002). Uzun süreli çalışma veya düşük enerji durumlarında enerji artışı sağlar (Nehlig, 2010). Orta düzeyde kafein tüketimi, ruh halini olumlu etkileyebilir. Kafeinin olumsuz etkileri aynı zamanda kafein bağımlılığının etkileri olarak karşımıza çıkmaktadır. Fiziksel etkilerde özellikle yüksek miktarda kafein tüketimi, kan basıncını artırarak hipertansiyona yol açabilir (Mesas ve ark., 2011). Ayrıca en bilinen özelliği olan uyku

açıcı etkisiyle kafein tüketimi uykuya dalmada güçlük ve uyku kalitesinde düşüşe neden olabilir (Drake ve ark., 2013). Gastrointestinal sistemde ise aşırı kafein tüketimi mide rahatsızlıklarına ve reflüye yol açabilir (Nehlig, 1999). Psikolojik etkilerde ise; kafein, kaygı bozukluklarını şiddetlendirebilir veya tetikleyebilir (Lara, 2010). Tolerans ve yoksunluk belirtileri, kafein tüketiminin artmasına yol açarak bağımlılığı derinleştirir. Ayrıca Kafein yoksunluğu sırasında sinirlilik ve depresyon benzeri durumlar görülebilir (Juliano ve Griffiths, 2004).

Kafein Bağımlılığı Nedir?

Dünya Sağlık Örgütü (WHO), kafein bağımlılığını, "Kafein Kullanım Bozukluğu" olarak tanımlamaktadır. Kafein Kullanım Bozukluğu, kişinin kafein kullanımını kontrol edememesi ve bu durumdan olumsuz etkilenmesi ile tanımlanabilmektedir (World Health Organization (WHO), 2019). DSM-5 ise Kafein Kullanım Bozukluğu tanısına yer vermemiş, bu tanıyı "Daha Fazla Çalışma Koşulları" kategorisine yerleştirmiştir (Amerikan Psikiyatri Birliği (APA), 2013)

Kafein Bağımlılığının Belirtileri

Kafein bağımlılığı da diğer bağımlılık türlerinde var olan belirtilerle karakterizedir. Bu belirtiler; Tolerans gelişimi, yani daha yüksek dozlarda kafein tüketmeden aynı etkiyi görememe (Juliano ve Griffiths, 2004). Kafein alımı azaldığında baş ağrısı, sinirlilik, yorgunluk ve konsantrasyon bozukluğu gibi yoksunluk belirtilerinin görülmesi (Juliano ve Griffiths, 2004). Kafein alımını sınırlamakta başarısız olma ve planlanandan daha çok tüketme ve olumsuz etkilerine rağmen kafein tüketimine devam etmektir.

Kafein Bağımlılığında Risk Faktörleri

Bunlar; Genetik Yatkınlık, (Cornelis ve ark., 2007). Yüksek Tüketim Alışkanlıkları: Günde 400 mg'ın üzerinde kafein tüketimi bağımlılık riskini artırabilmektedir (Health Canada, 2003). Psikolojik Bağımlılık: Kafeinin enerji artırıcı etkisi, bireylerin kendilerini ruhsal olarak ona bağımlı hissetmesine neden olabilir.

Kafein Bağımlılığına Dair Belirtiler ve Yoksunluk Semptomlarının Süresi ve Şiddetine bakıldığında ise; Yoksunluk belirtileri genellikle kafein alımının kesilmesinden 12-24 saat sonra ortaya çıkar .Belirtiler, kafein bırakıldıktan sonraki 1-2 gün içinde en şiddetli şeklini alır. Ancak kafein yoksunluğunun çoğu semptomunun 2-9 gün içinde azalarak kaybolması beklenir, ancak bazı bireylerde bu süre daha uzun sürebilir (Fredholm ve ark., 1999).

Kafein Bağımlılığında Yoksunluk Yönetimi ve Başa Çıkma Yöntemleri;

1. **Kademeli Azaltma:** Kafein tüketimini birden kesmek yerine, alımı kademeli olarak azaltarak yoksunluk belirtilerini hafifletmek (Özdemir, 2019).
2. **Alternatif İçecekler:** Bitki çayları ve kafeinsiz kahve gibi ürünlerle kafein alımını dengelemek (Gören ve Dağlıoğlu, 2019; Kaya ve Açar, 2021).
3. **Sağlıklı Yaşam Alışkanlıkları:** Düzenli uyku, dengeli beslenme ve fiziksel aktivite ile enerji seviyesini artırmak (Öcal ve ark., 2023).
4. **Hidrasyon:** Bol su içerek kafein yoksunluğuna bağlı baş ağrısını ve diğer belirtileri hafifletmek (Çavak, 2022).

Yüksek Dozda Kafein Alımının Sağlık Üzerindeki Olumsuz Etkileri

1. Kardiyovasküler Sisteme Etkileri

- **Kan Basıncında Artış:** Yüksek miktarda kafein alımı, geçici olarak kan basıncını artırabilir ve hipertansiyon riskini yükseltebilir (Mesas ve ark., 2011).
- **Çarpıntı:** Aşırı kafein tüketimi, kalp ritim bozukluklarına yol açarak çarpıntı hissi yaratabilir.
- **Kalp Krizi Riski:** Özellikle genetik yatkınlığı olan bireylerde, aşırı kafein alımı kalp krizi riskini artırabilir (Cornelis ve ark., 2007).

2. Sinir Sistemi Üzerindeki Etkiler

- **Anksiyete ve Gerginlik:** Kafein, merkezi sinir sistemini uyararak kaygı seviyelerini artırabilir ve huzursuzluğa neden olabilir (Lara, 2010).
- **Nöbet Riski:** Çok yüksek dozlarda kafein alımı, nöbet riskini artırabilir ve ölümcül olabilir (Nehlig, 1999).

3. Sindirim Sistemi Üzerindeki Etkiler

- **Reflü ve Mide Rahatsızlıkları:** Kafein, mide asidini artırarak gastroözofageal reflü hastalığını (GERD) şiddetlendirebilir.
- **Bağırsak Rahatsızlıkları:** Aşırı kafein alımı, bağırsak hareketlerini hızlandırarak ishal gibi sorunlara yol açabilir (Smith, 2002).

4. Uyku Üzerindeki Etkiler

- **Uyku Kalitesinde Azalma:** Kafein, melatonin salgılanmasını baskılayarak uykuya dalmayı zorlaştırabilir.
- **Uykusuzluk:** Gece geç saatlerde tüketilen yüksek doz kafein, kronik uykusuzluğa neden olabilir (Drake ve ark., 2013).

5. Kemik ve Kas Sistemi Üzerindeki Etkiler

- **Kalsiyum Emiliminin Azalması:** Yüksek kafein tüketimi, kemik sağlığı için önemli olan kalsiyumun emilimini olumsuz etkileyebilir ve osteoporoz riskini artırabilir (Massey ve Whiting, 1993).
- **Kas Titremesi:** Yüksek dozlarda kafein, kaslarda titreme ve istemsiz kasılmalara yol açabilir (Duncan ve Dixon, 202; Sands ve ark., 2015.).

6. Psikolojik ve Davranışsal Etkiler

- **Bağımlılık:** Aşırı kafein tüketimi, tolerans ve yoksunluk belirtileriyle kendini gösteren psikolojik bağımlılık yaratabilir (Juliano ve Griffiths, 2004).
- **Duygu Durumu Dalgalanmaları:** Aşırı tüketim, sinirlilik ve depresyon belirtilerini artırabilir (Kaya ve Açar, 2021).

Sağlıklı Kafein Tüketimi İçin Uzman Tavsiyeleri ve Güvenli Sınırlar

Kafein, ölçülü tüketildiğinde zihinsel uyanıklığı artırma ve fiziksel performansı destekleme gibi faydalı etkiler gösterebilir. Ancak aşırı tüketimi sağlık sorunlarına yol açabilir. Sağlıklı kafein tüketimi için belirlenen güvenli sınırların bilinmesi ve uzman önerilerine uyulması önemlidir.

Güvenli Tüketim Sınırları

- **Yetişkinler için:** Günlük kafein alımı 400 mg'ı (yaklaşık 4 fincan kahve) aşmamalıdır (EFSA, 2015; Sinar ve ark, 2019).
- **Hamileler için:** Hamile kadınlarda güvenli sınır 200 mg/gün olarak önerilmektedir. Aşırı kafein tüketimi, düşük yapma ve düşük doğum ağırlığı riskini artırabilir (WHO, 2021).
- **Gençler ve Çocuklar için:** 12-18 yaş arası gençlerde günlük kafein alımı vücut ağırlığı başına 2.5 mg ile sınırlandırılmalıdır. Küçük çocuklarda ise kafein tüketimi önerilmez (Nakilcioğlu Taş ve ark., 2019; Küçükkömürler ve Kurt, 2018).
- **Hassas Bireyler için:** Kalp rahatsızlığı veya anksiyete bozukluğu olan bireyler, kafein tüketimini daha da sınırlamalıdır (Gören ve Dağlıoğlu, 2019; Demir ve Görür, 2021).
- **Enerji İçecekleri:** Enerji içeceklerinde yüksek miktarda kafein bulunur. Özellikle gençler arasında yaygın olan bu ürünlerden mümkün olduğunca uzak durulmalıdır.
- **Kombinasyon Ürünleri:** Kafein ve şeker kombinasyonu içeren ürünler bağımlılık riskini artırabilir (Uğur, 2023; Molu ve Baş, 2019).

Kafein Bağımlılığına Yönelik Stratejiler ve Toplumsal Sağlık Üzerindeki Etkileri

Kafein, günlük hayatta sıkça tüketilen bir madde olarak hem faydalı hem de zararlı etkiler barındırır. Kafein bağımlılığı, modern yaşamın hızına ayak uydurma çabasında sıkça

karşılaşılan bir sorun haline gelmiştir. Ancak bireysel ve toplumsal düzeyde alınacak önlemlerle bu bağımlılık yönetilebilir ve önlenebilir.

1. Bireysel ve Toplumsal Düzeyde Stratejiler

a) Bilinçli Tüketim Alışkanlıklarının Geliştirilmesi

Bireylerin kafein tüketim alışkanlıklarını gözden geçirmeleri ve güvenli sınırlar içinde kalmaları, bağımlılık riskini önemli ölçüde azaltabilir. Bu bağlamda, etiket okuma alışkanlığı ve alternatif içecek tercihlerine yönelmek etkili bir başlangıçtır. Kafein içeren ürünlerin etiketlerini dikkatlice incelemek, bireylerin günlük alım miktarını kontrol etmelerine yardımcı olabilir (Aydın ve Eryılmaz, 2019). Ayrıca, bitki çayları veya kafeinsiz içecekler gibi alternatifler tercih edilerek kafein alımı azaltılabilir (Molu ve Baş, 2018).

b) Kademeli Azaltma ve Sağlıklı Yaşam Tarzı

Kafein tüketiminin kademeli olarak azaltılması, bağımlılık döngüsünü kırmada önemlidir. Bireyler, kafein alımını aniden kesmek yerine, yavaş yavaş azaltarak yoksulluk belirtilerini en aza indirebilirler (Helvacı ve Açıktur, 2018). Bununla birlikte, düzenli uyku, dengeli beslenme ve fiziksel aktivite gibi sağlıklı yaşam alışkanlıklarının benimsenmesi, enerji ihtiyacını doğal yollarla karşılamaya olanak tanır. Sağlıklı bir yaşam tarzı, bireylerin kafein bağımlılığını önlemelerine yardımcı olabilir (Muslu ve Kermen, 2020).

c) Eğitim ve Farkındalık Çalışmaları

Kafein bağımlılığıyla mücadelede toplumun bilinçlenmesi büyük bir rol oynar. Medya kampanyaları, okullarda verilen eğitimler ve dijital bilgilendirme platformları, bireylerin kafein tüketimine yönelik farkındalık kazanmalarına yardımcı olabilir. Örneğin, okullarda ve üniversitelerde düzenlenen seminerler, öğrencilerin kafein tüketim alışkanlıklarını sorgulamalarını ve bu konuda daha bilinçli kararlar almalarını teşvik edebilir (Köse ve ark., 2021).

2. Toplumsal Sağlık Üzerindeki Etkiler

a) Sağlık Risklerinin Azaltılması

Kafein bağımlılığına yönelik stratejiler, uyku bozuklukları, anksiyete ve kalp rahatsızlıkları gibi sağlık sorunlarının önlenmesine katkıda bulunabilir. Bu, genel toplum sağlığının iyileşmesini sağlar (Coşkun ve Kılıç, 2022).

b) İş Gücü Verimliliği ve Ekonomik Kazanımlar

Kafein bağımlılığının neden olduğu yorgunluk ve dikkat dağınıklığının azalması, iş gücü verimliliğini artırabilir. Ayrıca, bağımlılık tedavisi ve ilişkili sağlık sorunlarından kaynaklanan maliyetlerin azalması, toplumsal ekonomi üzerinde olumlu bir etki yaratabilir. Ayrıca, kafein bağımlılığına yönelik farkındalık kampanyaları, toplumda bu sorunun ciddiyetini vurgulayarak, bireylerin kafein tüketimlerini kontrol altında tutmalarına yardımcı olabilir. Kafein bağımlılığına yönelik stratejiler, bireylerin yaşam kalitesini artırabilir ve toplumsal sağlık üzerinde olumlu etkiler yaratabilir. Kafein tüketiminin kontrol altına alınması, bireylerin psikolojik ve fiziksel sağlıklarını korumalarına yardımcı olurken, aynı zamanda toplumsal sağlık sisteminin üzerindeki yükü de azaltabilir (Coşkun ve Kılıç, 2022).

c) Sağlıklı Alışkanlıkların Yaygınlaşması

Sağlıklı alışkanlıkların yaygınlaşması kafein bağımlılığına karşı toplumsal farkındalığın artması, bireylerin diğer sağlıklı yaşam alışkanlıklarını da benimsemelerini teşvik eder. Bu, daha güçlü ve dirençli bir toplum yapısına katkıda bulunur (Coşkun ve Kılıç, 2022).

SONUÇ

Kafein, dünya genelinde yaygın olarak tüketilen bir madde olmasına rağmen, aşırı tüketimi ciddi fiziksel ve psikolojik etkiler yaratabilir. Özellikle kafein yoksunluğu, bağımlılık döngüsü ve aşırı alıma bağlı sağlık sorunları bireysel işlevselliği ve toplumsal sağlığı olumsuz etkileyebilir. Bu nedenle, bireylerin günlük kafein tüketimlerini takip etmeleri, güvenli sınırları aşmamaları ve ani bırakma yerine kademeli azaltma stratejileri uygulamaları önemlidir. Ayrıca, kamuoyunu bilinçlendiren eğitim programları ve ürünlerin etiketlerinde kafein içeriği hakkında

net bilgi sağlanması, bağımlılığı önlemede etkili olacaktır. Sağlıklı yaşam tarzı alışkanlıklarını teşvik etmek, kafein tüketimine bağlı sorunları azaltmada önemli bir rol oynayacaktır.

MECHANISMS OF POST-WELD DISTORTION AND SHAPE CHANGES IN METAL STRUCTURES

Fikrican ÇİFTÇİ

Koluman Automotive Industry Inc. Military Projects Department,

ABSTRACT

Welding processes often result in post-weld distortions, including warping and dimensional changes, due to the thermal gradients introduced during the procedure. These distortions occur primarily because of the thermal expansion and contraction of the material, creating internal stresses that can lead to shape alterations. The mechanisms behind post-weld distortion can be categorized into factors like residual stresses, thermal gradients, and the cooling rate, which vary depending on the material properties, welding technique, and parameters. Residual stresses arise from uneven cooling, which causes some regions of the weld to contract more than others, leading to bending or twisting of the workpiece. The cooling rate influences the amount of distortion, with faster cooling rates generally leading to more significant changes in the material's shape. Different welding methods, such as TIG, MIG, and arc welding, also have unique effects on post-weld distortions, owing to variations in the heat input and cooling behavior. Moreover, the material's thermal conductivity and coefficient of expansion play significant roles in the extent of shape changes. These distortions are crucial in manufacturing, as they can affect the accuracy, performance, and longevity of the welded components. Therefore, understanding the mechanisms behind these distortions is essential for developing strategies to minimize them, such as optimizing welding parameters, preheating, or applying post-weld heat treatment. This paper reviews the primary causes of post-weld shape changes, the factors influencing them, and various mitigation techniques to ensure the dimensional integrity of welded components.

Keywords: Post-weld distortion, Residual stresses, Thermal gradients, Welding methods, Shape changes

INTRODUCTION

Welding is one of the most widely used methods for joining metal components in a variety of industries, including construction, automotive, aerospace, and manufacturing. Despite its significance, welding can introduce various post-weld challenges, with distortion and shape changes being among the most critical issues. Post-weld distortion occurs as a result of the uneven heating and cooling of the welded material, leading to changes in the shape and geometry of the welded structure. These distortions can affect the functionality, appearance, and dimensional accuracy of the finished product, necessitating a deeper understanding of the underlying mechanisms [1]. One of the primary causes of post-weld distortion is the thermal cycle associated with the welding process. As the material is heated during welding, it expands, and as it cools, it contracts. This non-uniform expansion and contraction across the welded area lead to stresses that result in warping, buckling, or misalignment of the welded components. The thermal gradients, particularly in thick-walled components, exacerbate these issues, as the outer layers cool faster than the inner sections, further contributing to distortion [2]. Moreover, residual stresses generated during the welding process can remain within the material after the weld cools, influencing the final shape of the structure and, in some cases, leading to cracking or reduced structural integrity [3]. Additionally, the material properties of the metal being welded, such as its thermal conductivity, coefficient of thermal expansion, and strength, significantly influence the extent of post-weld distortion. Metals with a higher coefficient of

thermal expansion are more prone to distortions due to the greater volume changes during heating and cooling. The rapid cooling rate in certain materials, like high-carbon steels, can also induce phase changes that lead to increased brittleness and additional distortion in the weld zone [4]. Understanding these material behaviors is crucial for addressing distortions, particularly in industries requiring high-precision components. Finally, geometric factors, including the joint design and welding sequence, also play an important role in the extent of post-weld distortion. Large or irregularly shaped structures may experience more pronounced distortions due to the unequal distribution of thermal energy, while the sequence in which welding is performed can affect how the heat is distributed, influencing the final shape of the structure. Optimizing these variables is essential for minimizing distortions and achieving the desired geometry [5]. In conclusion, post-weld distortion and shape changes are complex phenomena influenced by thermal effects, material properties, residual stresses, and geometric factors. Understanding the mechanisms behind these issues is critical for developing effective strategies to minimize their impact on welded metal structures. The next sections of this paper explore these mechanisms in greater detail, providing insights into how to mitigate these challenges in practical applications.

RESEARCH AND FINDINGS

Mechanisms of Post-Weld Distortion and Shape Changes

Post-weld distortion refers to the unintended changes in shape and dimensional inaccuracies that occur in welded structures after the welding process has been completed. These distortions arise due to the uneven heating and cooling experienced by the material during welding. When the material is heated in localized regions during welding, it expands, and as it cools, it contracts, often unevenly across the welded joint. This differential thermal expansion generates residual stresses within the material, which are a key contributor to post-weld shape changes. The residual stresses, combined with the constraints imposed by the welding fixture, lead to various forms of distortion, such as angular distortion, transverse shrinkage, and twisting of the welded parts [6]. One of the primary mechanisms driving distortion is the localized heating and cooling during the welding process. As the heat from the welding arc or other heat sources spreads across the metal, it causes the material in the heated area to expand. Upon cooling, the material contracts, but this contraction is hindered in constrained areas, resulting in uneven deformation of the workpiece. The rate of heating and cooling plays a crucial role in the severity of distortion, with faster cooling rates typically leading to more pronounced distortions due to higher thermal gradients and the resultant shrinkage [7]. The use of preheating or controlled cooling techniques can reduce thermal gradients and, thus, mitigate the extent of post-weld distortion. Material properties, including thermal expansion coefficients, yield strength, and stiffness, significantly influence the behavior of welded components in terms of distortion. For example, metals with higher thermal expansion coefficients are more prone to distortion as they experience greater dimensional changes with temperature fluctuations. Additionally, the yield strength of the material plays a key role in how the material deforms under the influence of residual stresses. In some cases, these stresses can exceed the material's yield strength, leading to permanent plastic deformation. Different welding techniques, such as TIG (Tungsten Inert Gas) or MIG (Metal Inert Gas) welding, influence the thermal cycles experienced by the material and, therefore, the resulting distortion [8]. The geometrical configuration of the welded structure also affects the degree of distortion. Thin-walled structures are particularly susceptible to distortion due to their lower thermal mass, which causes them to heat up and cool down more quickly compared to thicker components. The size and shape of the welded joint, as well as the location of welds relative to other structural features, can create uneven distributions of residual stresses, leading to further distortions. The complexity of the geometry increases the challenge of predicting and controlling distortion, particularly in large-scale or highly intricate structures like those found in the aerospace and automotive industries [9]. Furthermore, advances in

computational modeling and simulation have allowed engineers to predict post-weld distortions more accurately. Finite element analysis (FEA) is a widely used tool for simulating the thermal and mechanical behaviors during the welding process. This method helps in predicting the distribution of residual stresses and distortions across the welded component. By simulating various welding parameters, such as heat input, welding speed, and material properties, FEA enables the optimization of the welding process to minimize distortion. These predictive tools are crucial for the development of distortion-free welding procedures, especially in high-precision applications [10]. In summary, post-weld distortion is influenced by a combination of thermal, mechanical, and material factors, all of which interact to cause shape changes in welded metal structures. A thorough understanding of the mechanisms behind these distortions is essential for developing effective strategies to control and mitigate their impact. Through careful control of welding parameters, material selection, and advanced simulation techniques, it is possible to reduce distortion and achieve more accurate, high-quality welded components.

CONCLUSION

Post-weld distortion and shape changes remain a significant challenge in the fabrication of metal structures, with serious implications for the performance and reliability of welded components. The primary mechanism behind these distortions is the uneven thermal expansion and contraction that occurs during the welding process. Residual stresses induced by the differential heating and cooling of the material contribute to various forms of distortion, such as angular and transverse distortions. Understanding these underlying mechanisms is crucial for developing strategies to minimize distortions and maintain the desired geometry of welded components. Advances in welding techniques, such as controlled heat input and optimized cooling strategies, can help mitigate the extent of these distortions, but they require careful consideration of material properties and welding conditions [11]. The role of material properties, including thermal expansion, yield strength, and stiffness, has been shown to significantly influence the degree of distortion. Materials with higher thermal expansion coefficients are more susceptible to post-weld shape changes, as they experience larger dimensional changes during welding. The complexity of welded structures, particularly those with thin walls or intricate geometries, further complicates the prediction and control of distortion. To address these challenges, computational tools such as finite element analysis (FEA) have become invaluable in simulating the welding process and predicting the resulting distortions. By incorporating accurate material models and welding parameters, FEA allows engineers to design more effective distortion mitigation strategies and improve the quality of welded structures [12]. Moreover, recent research has focused on advanced welding techniques that aim to reduce the heat-affected zone and minimize thermal gradients, thus reducing the risk of distortion. Techniques such as laser welding and friction stir welding offer more controlled heat inputs, which can lead to reduced residual stresses and distortions. However, despite these advancements, post-weld distortion remains a prevalent issue, particularly in industries requiring high precision, such as aerospace and automotive manufacturing. Ongoing efforts to optimize welding parameters, including heat input, welding speed, and joint design, continue to play a crucial role in mitigating distortion in welded components [13]. In conclusion, while post-weld distortion is an inherent issue in many welding processes, a combination of advanced welding techniques, better material selection, and predictive computational methods can significantly reduce its impact. A thorough understanding of the mechanisms at play is essential for developing solutions that ensure the dimensional accuracy and structural integrity of welded components. Future advancements in welding technology and simulation tools hold great potential for further minimizing distortion and improving the overall quality of welded metal structures [14].

A REVIEW OF WELDING METHODS FOR CYLINDRICAL PIPES- TIG, MIG, AND LASER WELDING

Fikrican ÇİFTÇİ

Koluman Automotive Industry Inc. Military Projects Department,

ABSTRACT

Welding is a fundamental process in the production of cylindrical pipes used in various industrial sectors, including automotive, energy, and construction. Choosing the right welding method is essential for ensuring the structural integrity and performance of the pipes. This review article compares three commonly used welding methods—Tungsten Inert Gas (TIG) welding, Metal Inert Gas (MIG) welding, and Laser welding—focusing on their applicability to cylindrical pipes. TIG welding offers superior precision and high-quality welds, making it ideal for applications requiring minimal heat-affected zones (HAZ), although it is more time-consuming and labor-intensive. MIG welding, known for its speed and productivity, is frequently used in large-scale pipe welding projects, but may result in a larger HAZ and more spatter. Laser welding, an advanced technique, offers excellent precision, minimal distortion, and faster processing times, making it suitable for thin-walled pipes and applications that demand complex geometries. However, laser welding equipment is expensive, limiting its widespread use in certain industries. This paper compares the advantages, limitations, and selection criteria of these methods based on factors such as material types, application needs, cost, and weld quality. By examining the characteristics of each technique, this review aims to provide a comprehensive understanding of the optimal welding method for cylindrical pipe production, offering insights into their efficiency, cost-effectiveness, and suitability for various industrial applications.

Keywords: TIG welding, Residual stresses, Thermal gradients, Welding methods, Metal Inert Gas (MIG) welding

INTRODUCTION

Welding of cylindrical pipes is a fundamental process in various industries, including oil and gas, petrochemical, and power generation, where the integrity and strength of welded joints are critical. The welding process used for cylindrical pipes must ensure high-quality, reliable joints that can withstand the stresses and pressures encountered during operation. Among the most widely used welding techniques for cylindrical pipe fabrication are Tungsten Inert Gas (TIG) welding, Metal Inert Gas (MIG) welding, and Laser welding. Each of these methods has its distinct advantages and limitations, which make them suitable for different applications depending on the material, joint design, and operational requirements [1]. Tungsten Inert Gas (TIG) welding, also known as Gas Tungsten Arc Welding (GTAW), is widely recognized for its ability to produce high-quality, precise welds, particularly in critical applications where weld integrity is of utmost importance. TIG welding uses a non-consumable tungsten electrode to generate an arc, and a filler material is added manually or automatically. This process is known for its clean and strong welds with minimal spatter, which is crucial for industries that require high-strength joints with low defects. TIG welding is particularly suitable for welding thin-walled materials and stainless steels, as well as for pipe joints that demand high precision [2]. However, it requires a higher level of operator skill and is typically slower compared to other welding techniques. On the other hand, Metal Inert Gas (MIG) welding, or Gas Metal Arc Welding (GMAW), has become increasingly popular due to its higher speed and ease of automation. MIG welding uses a consumable wire electrode and an inert gas shield to protect

the weld from oxidation. Compared to TIG welding, MIG welding offers a higher deposition rate and is more suitable for thicker pipes and high-volume production environments. While MIG welding is known for its speed and ease of use, it can produce more spatter and requires post-weld cleaning, especially when welding materials like carbon steel. MIG welding is particularly effective in high-throughput applications and is widely used for welding thicker pipes and materials like mild steel, aluminum, and other non-ferrous metals [3]. Laser welding, a more recent development in welding technology, utilizes a high-powered laser beam to melt the material and create a weld. The focused laser beam allows for precise control of heat input, which results in minimal distortion and a narrow heat-affected zone. This technique is highly beneficial for welding thin-walled pipes or pipes with intricate geometries, where precision is paramount. Laser welding provides faster welding speeds and can be easily integrated into automated systems, making it a promising choice for industries that demand high productivity and high-quality welds. However, the high initial investment in laser welding equipment and the requirement for high-quality joints make it more suitable for specialized applications and high-value components [4]. Each welding method for cylindrical pipes—TIG, MIG, and laser welding—offers distinct advantages in terms of speed, precision, and material compatibility. Understanding the strengths and limitations of each technique is essential for selecting the appropriate method for specific applications, particularly when dealing with pipes that are subject to high stresses, temperature variations, and harsh operating environments. As the demand for higher-quality welds and greater efficiency continues to rise, ongoing advancements in welding technology aim to improve the performance and versatility of these welding methods, particularly in automated and robotic systems [5].

RESEARCH AND FINDINGS

Recent studies have explored the effectiveness and limitations of various welding methods for cylindrical pipes, particularly focusing on TIG, MIG, and laser welding techniques. One key finding is that TIG welding, while slower and more labor-intensive, offers superior control over weld quality, especially for thin-walled materials and critical applications where high precision is essential. Researchers have demonstrated that TIG welding provides excellent weld integrity with minimal defects, such as porosity or spatter, making it a preferred choice for industries requiring high-quality pipe joints, such as aerospace and petrochemical sectors. However, studies have also highlighted its lower productivity compared to other methods, particularly when high-speed welding is required in large-scale applications [6]. MIG welding, known for its high deposition rates and faster welding speeds, has been extensively studied for its application in welding thicker pipes and larger diameters. Research indicates that MIG welding is particularly advantageous in high-production environments due to its efficiency and ease of automation. While the process tends to produce more spatter compared to TIG welding, modern advancements in MIG welding technology, such as pulsed MIG and synergic control systems, have significantly improved the quality and consistency of the welds. Researchers have found that MIG welding is an ideal method for applications involving mild steel and other less critical materials, where speed and cost-effectiveness are more important than the absolute quality of the weld [7]. Laser welding, as a more recent advancement in welding technology, has shown considerable promise, especially in high-precision applications. Research on laser welding indicates that the technique is capable of producing narrow, deep penetration welds with minimal heat input, making it particularly suitable for welding thin-walled cylindrical pipes or pipes with complex geometries. Studies have also demonstrated that laser welding generates minimal distortion and a small heat-affected zone (HAZ), which is crucial for maintaining the integrity of the material properties, especially in heat-sensitive alloys. Furthermore, laser welding can be highly automated, making it an attractive option for industries that require high throughput and consistent quality, such as in the automotive and aerospace sectors. However, the high initial cost of laser welding equipment and its limitations in welding thick materials

have been noted as challenges for wider adoption [8]. Moreover, the combination of different welding methods has been explored in some studies as a way to optimize welding performance. For instance, hybrid welding techniques that combine laser and MIG welding have been proposed to leverage the strengths of both methods. Research findings have shown that hybrid welding can significantly improve welding speed and penetration depth while maintaining the quality of the weld. This approach has been particularly useful in industries where both high-speed and high-quality welds are required, such as in shipbuilding and pressure vessel manufacturing. The combination of laser's precision and MIG's deposition rate has allowed for more versatile welding solutions for cylindrical pipes [9]. In terms of material selection and joint design, recent research has found that the choice of welding method must be carefully tailored to the material being welded. For example, studies have shown that TIG welding is particularly effective for high-strength steels and stainless steels, while MIG welding excels in welding carbon steels. Laser welding, on the other hand, is more suitable for welding materials with low thermal conductivity, such as aluminum, where conventional welding methods may face challenges. Additionally, the joint design plays a crucial role in determining the suitability of each welding method. Research has highlighted that methods like TIG and laser welding are well-suited for butt joints and other configurations that require precise alignment, while MIG welding is often preferred for fillet welds and pipe-to-flange connections [10]. In conclusion, the findings from recent studies emphasize that the choice of welding method for cylindrical pipes—whether TIG, MIG, or laser welding—depends on a combination of factors, including material properties, joint design, production speed, and cost considerations. Each method has its strengths and limitations, and ongoing advancements in welding technology continue to refine these techniques for better efficiency, quality, and applicability in various industries.

CONCLUSION

In conclusion, the selection of a suitable welding method for cylindrical pipes is a critical decision that depends on various factors, including material type, joint configuration, production speed, and required weld quality. TIG welding is a preferred choice for applications demanding high precision and clean, high-quality welds, particularly for thin-walled pipes and materials like stainless steel and high-strength alloys. Despite its high quality, TIG welding tends to be slower and more labor-intensive compared to other methods, limiting its use in high-production environments where speed is essential [11]. MIG welding, on the other hand, offers a faster welding process with higher deposition rates, making it ideal for high-throughput applications and welding thicker pipes. Although it can result in more spatter and requires additional post-weld cleaning, recent advancements in MIG welding technology, such as pulsed MIG, have significantly enhanced its capability to produce quality welds at a faster pace. This makes MIG welding a popular choice in industries like construction, automotive, and manufacturing, where speed and efficiency are paramount [12]. However, its suitability for thinner materials or high-precision applications is limited compared to TIG welding. Laser welding has emerged as a promising technology, particularly for welding thin-walled cylindrical pipes and pipes with complex geometries. Its ability to create precise, narrow welds with minimal distortion and heat-affected zones makes it highly valuable in industries like aerospace, automotive, and electronics, where precision is crucial. While laser welding provides high-speed welding with minimal post-weld defects, its high initial equipment costs and limitations in welding thicker pipes are important factors to consider. Despite these challenges, ongoing technological advancements are expected to enhance its accessibility and versatility in the future [13]. Overall, each welding method—TIG, MIG, and laser welding—offers distinct advantages and drawbacks that must be carefully considered based on the specific requirements of the welding application. Combining methods, such as using hybrid laser-MIG welding, offers a potential solution to optimize both speed and quality. As welding technology continues to evolve, these methods will likely see further refinement, offering new opportunities for

improving weld quality, reducing costs, and increasing production efficiency. Future research should focus on developing more cost-effective solutions, particularly in terms of laser welding and hybrid techniques, to make these advanced technologies more widely accessible to industries that demand high-quality, reliable pipe joints [14].

ÖZET

Yapı Sağlığı İzleme (YSİ), mühendislik yapılarının güvenlik, dayanıklılık ve performansını sürekli olarak değerlendirmeyi amaçlayan, gelişmiş teknolojilerle desteklenen kapsamlı bir sistemdir. Bu sistem, yapıların mevcut durumunu sürekli izleyerek olası hasarları erken tespit etmeyi, bu sayede bakım ve onarım süreçlerinin bilimsel veriler ışığında planlanmasını mümkün kılmayı hedefler. Özellikle tarihi yapılarda, hassas ve etkili restorasyon süreçleri için YSİ sistemlerinin kullanımı, dünya genelinde olduğu gibi ülkemizde de giderek yaygınlaşan bir yaklaşım haline gelmiştir. Bu çalışmada, Erzurum İli Uzundere İlçesi'nde bulunan ve tarihi önemi haiz olan Öşki (Öşvank) Kilisesi üzerinde gerçekleştirilen YSİ çalışmaları ele alınmış, bu kapsamda restorasyona yönelik karar verme süreçleri detaylı bir şekilde incelenmiştir. Öşki Kilisesi'nin mevcut hasarlı durumu göz önünde bulundurularak, farklı YSİ cihazlarıyla gerçekleştirilen ölçümler ve bu ölçümlerden elde edilen veriler, restorasyon çalışmalarına yönelik çözüm önerilerinin geliştirilmesine ışık tutmuştur. YSİ kapsamında kullanılan sensörler ve izleme ekipmanları, yapıdaki çatlakların genişliği ve gelişimi, nem ve sıcaklık değişimleri ile titreşim analizleri gibi çeşitli verilerin toplanmasını sağlamıştır. Bu veriler, yapının dinamik özelliklerini (örneğin doğal frekans, mod şekilleri ve sönüm oranı) belirlemeye yardımcı olmuş, böylece restorasyon kararlarının daha sağlam bilimsel temellere dayandırılmasını mümkün kılmıştır. Özellikle çatlak ölçümleri, yapı içindeki stres dağılımını ve hasarın ilerleyişini anlamak açısından kritik bir rol oynamıştır. Nem ve sıcaklık değişimlerinin sürekli izlenmesi ise malzeme bozulmasının çevresel faktörlerle olan ilişkisini ortaya koymuştur.

Sonuç olarak, YSİ sistemleri, Öşki Kilisesi'nin mevcut durumunu detaylı bir şekilde analiz ederek restorasyona yönelik bilimsel çözüm önerileri geliştirilmesine katkıda bulunmuştur. Bu çalışma, YSİ'nin tarihi yapıların korunması ve restorasyonu üzerindeki kritik rolünü somut bir örnek üzerinden göstermektedir. YSİ uygulamaları, tarihi yapıların geleceğe güvenle taşınmasında önemli bir araç olarak öne çıkmakta, restorasyon süreçlerinin daha etkin ve doğru bir şekilde yönetilmesine olanak tanımaktadır.

Anahtar Kelimeler: Yapı Sağlığı İzleme, Karar Verme Mekanizması, Restorasyon, Güçlendirme, Erzurum Öşki Kilisesi

ABSTRACT

Structural Health Monitoring (SHM) is a comprehensive system supported by advanced technologies that aims to continuously assess the safety, durability, and performance of engineering structures. This system enables the early detection of potential damages by continuously monitoring the current state of structures, thereby facilitating maintenance and repair processes based on scientific data. Particularly in historical structures, the use of SHM systems has become an increasingly widespread approach both globally and in Türkiye, as it ensures precise and effective restoration processes. This study focuses on SHM activities carried out on the historically significant Oshki (Öşvank) Church, located in Uzundere District of Erzurum Province, and examines decision-making processes related to its restoration. Taking into account the current damaged condition of the church, measurements were conducted using various SHM devices, and the data obtained from these measurements were utilized to propose solutions for restoration efforts. Within the scope of SHM, sensors and monitoring equipment were employed to collect a wide range of data, including crack widths and propagation, humidity and temperature variations, as well as vibration analyses. These data facilitated the identification of the dynamic properties of the structure, such as natural frequencies, mode shapes, and damping ratios, thereby grounding restoration decisions on solid scientific foundations. In particular, crack measurements played a crucial role in understanding the stress distribution within the structure and the progression of damage. Continuous monitoring of humidity and temperature changes revealed the relationship between material degradation and environmental factors.

In conclusion, SHM systems contributed to the development of scientifically grounded restoration proposals by providing a detailed analysis of the current condition of the Oshki Church. This study highlights the critical role of SHM in preserving historical structures and exemplifies its contribution to restoration processes. SHM applications are emerging as essential tools for ensuring the safe transfer of historical structures to future generations, enabling more effective and accurate management of restoration processes.

1. INTRODUCTION

Historical buildings are invaluable cultural heritage that carry the cultural, architectural and artistic accumulation of civilizations from the past to the present. Each of them reflects the technology, lifestyle and aesthetic understanding of the period in which they were built, leaving indelible traces in the collective memory of humanity. These structures preserve the identity, memory and historical continuity of societies not only through their physical presence but also through the meanings and symbols they carry (Cakir et al. 2023). However, the effects of time, natural disasters, environmental conditions and human interventions can threaten these structures, causing them to deteriorate, become damaged and even disappear. The conservation and preservation of historic buildings is not only an aesthetic or cultural necessity, but also a matter of responsibility. It is of utmost importance that every intervention in this process is planned in a way that preserves the original identity and historical value of the building. At this point, structural health monitoring stands out as the basis for critical decisions to be taken in the restoration and retrofitting of historic buildings (Cakir, 2021).

Structural health monitoring (SHM) allows for a detailed understanding of the current condition of a building, assessing its carrying capacity and predicting future damage. Especially in historic buildings, such a scientific approach provides guidance in determining the necessity, location and methodology of interventions. The data obtained from the critical points of the building

increases the efficiency of the restoration process and prevents wrong or unnecessary interventions. Therefore, the application of SHM for the conservation and preservation of historic buildings for future generations not only identifies existing problems, but also makes it possible to develop appropriate, long-lasting and sustainable solutions to these problems. This highly sensitive process, supported by scientific methods and technological advances, is an important tool in carrying out the values of the past to the future.

SHM is one of the most critical steps where technology and science meet in the preservation of historic buildings. With the use of advanced technologies such as sensors, data acquisition systems and analysis software, the dynamic behavior of structures, material properties and damage over time can be monitored in detail. This method allows not only analyzing the current situation, but also predicting the risks to which the structure may be exposed in the future. In this way, restoration and strengthening works are planned and implemented on a scientific basis. SHM plays a critical role, especially in the aftermath of natural disasters or in identifying factors that threaten the life of the structure. For example, following catastrophic events such as earthquakes, the extent and severity of damage to the structural systems of historic buildings can be quickly and reliably determined by this method. This data not only shapes intervention decisions, but also monitors the suitability of restoration works for the structure.

Historic buildings stand out not only for their aesthetic value, but also as scientific and engineering laboratories. SHM processes shed light on future restoration projects with the information obtained on these structures. Thus, a pool of knowledge can be created for the conservation of similar buildings and solutions can be developed for common problems faced by historic buildings. In conclusion, SHM is not only an option but also a necessity for the conservation of historic buildings. This method not only provides an understanding of their current condition, but also allows them to be made more resilient against future threats, without harming their historical and architectural identity. The preservation of historic buildings is a shared responsibility for individuals, communities and institutions to preserve the heritage of the past and carry it into the future. SHM is an indispensable tool in fulfilling this responsibility, building a bridge to the future.

2. STRUCTURAL HEALTH MONITORING (SHM) IN RESTORATION STUDIES

SHM is a system used to monitor the safety and performance of buildings, bridges, dams, tunnels and similar engineering structures. In this process, factors such as damage, deformation, vibration, stress and temperature that may occur in the structure are measured and analysed continuously or at regular intervals through sensors and other monitoring devices placed on the structure. The aim is to evaluate the performance of the structure over time, detect damage early, and plan maintenance and repair works to extend the life of the structure (Koh et al. 1995). SHM is important to ensure the safety of critical structures, especially those facing earthquakes, overloads, material fatigue and other environmental impacts. While the system offers long-term monitoring for large structures, it minimizes the need for intervention by working integrated with damage detection systems (Wang et al. 1998). Sensor technology (accelerometers, strain gauges, fiber optic sensors, etc.), data analysis systems and software are the basic components of SHM (Kreber et al. 2012). SHM systems consist of sensors, data collection devices, and analytical methods that continuously or periodically monitor the condition of structures and assess potential risks or damage. By utilizing advanced sensors, diagnostic tools, and analytical models, these systems are commonly applied to large-scale structures such as bridges, dams, tall buildings, and historical structures, as well as those located in earthquake-prone regions. Specially, SHM transforms restoration and strengthening efforts into data-driven processes, ensuring precision and effectiveness. It offers insights into the hidden vulnerabilities and performance of structures, enabling proactive interventions that preserve their historical authenticity while enhancing their resilience against future challenges. Through continuous

monitoring and analysis, SHM ensures that interventions are both minimal and impactful, reducing the risk of unnecessary alterations while extending the life of these cultural heritages. The SHM process is structured into six main stages, each critical to ensuring the safe and efficient functionality of a structure. The flowchart for SHM processing in the restoration and strengthening studies is shown in Figure 1.

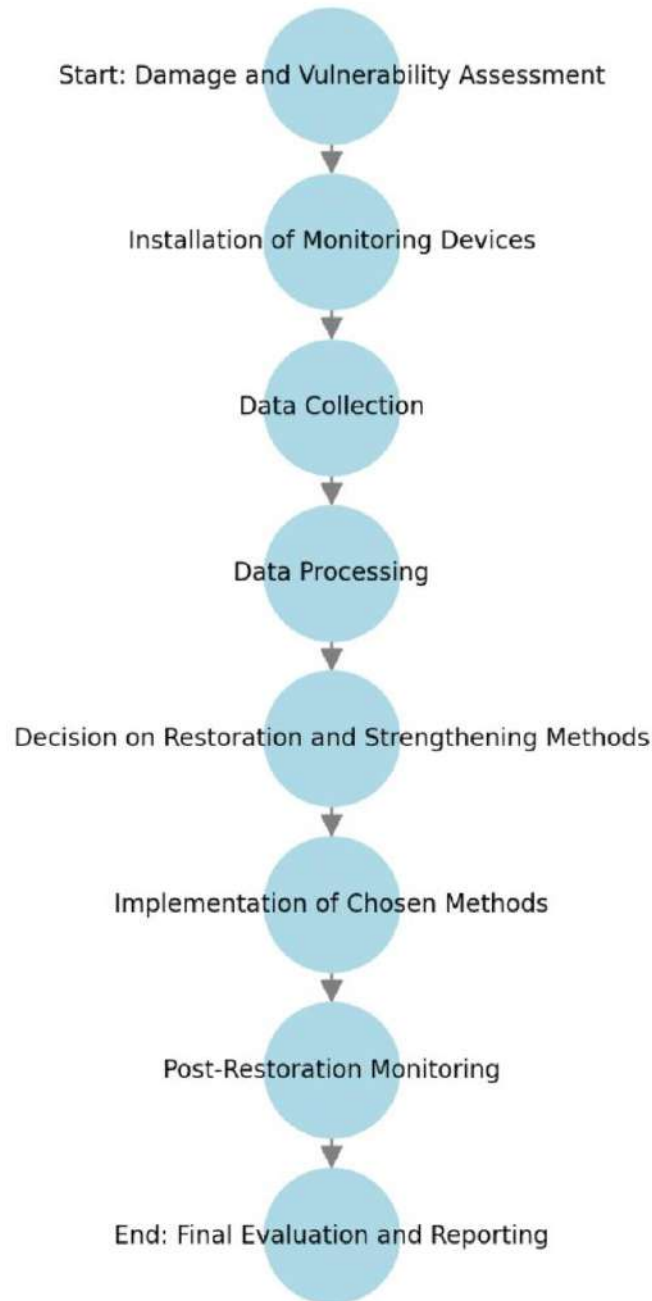

Figure 1. Flowchart for SHM processing in the restoration and strengthening studies

2.1. Damage Detection

- **Anomaly Detection:** At this initial stage, the current condition of the structure is compared with a predefined reference or "healthy" state. Data collected from sensors is analysed to identify unexpected deviations or anomalies. For example, sudden changes in vibration frequencies of a bridge could indicate potential issues. This step is vital for the early detection

of damage.

- **Damage Localization and Severity Assessment:** Once anomalies are identified, the precise location and severity of the damage are determined. Detailed sensor data analysis pinpoints the affected sections of the structure. This evaluation also helps ascertain whether the damage is superficial or deep, and whether immediate intervention is required. For instance, the location and extent of cracks in a building column can provide crucial insights into the overall stability of the structure.

2.2. Instrumentation and Data Collection

- **Sensors:** A variety of sensors measure different physical parameters of the structure. Accelerometers monitor vibrations, strain gauges measure stresses on materials, fiber-optic sensors provide high-precision temperature and strain readings, and Linear Variable Differential Transformers (LVDTs) are used for displacement and deformation measurements. These sensors are strategically installed at critical points to create a comprehensive and reliable dataset.

- **Data Recorders:** Sensor data is transferred to high-capacity and reliable data recording devices, ensuring accurate and uninterrupted data collection. Time-stamped recordings allow for tracking changes over time.

- **Remote Monitoring:** Cloud-based systems enable real-time monitoring and analysis of the collected data. Engineers and decision-makers can remotely track the structure's condition, such as monitoring water pressure sensors in a dam to identify potential risks.

2.3. Data Processing and Analysis

- **Preprocessing:** Raw data is cleaned to remove noise and filtered to prevent environmental factors from compromising data quality. Consistency and reliability are verified through validation processes, identifying and correcting issues such as sensor failures or communication interruptions.

- **Modelling and Simulation:** Structural behaviour is modelled using numerical analysis techniques like the Finite Element Method (FEM). Digital twin models replicate the real structure virtually, allowing simulations of various scenarios to predict the effects of loads or potential damage.

- **Feature Extraction:** Processed data is used to derive dynamic and static characteristics of the structure, such as natural frequencies, mode shapes, and damping ratios. These parameters reflect the structure's current state and performance, enabling the identification of changes and potential damage over time.

2.4. Decision-Making Mechanism

The decision-making phase is critical, as it consolidates all data and analysis results to make important determinations about the structure's safety and usage. Risk assessments are conducted, and restrictions or shutdowns may be imposed if necessary. Key considerations in this phase include:

- **Risk Assessment:**
 - ✓ **Natural Hazards:** Analysing the effects of earthquakes, wind loads, floods, and temperature changes on the structure.
 - ✓ **Human-Induced Hazards:** Evaluating damages caused by overloading, vibrations, explosions, or accidents.
 - ✓ **Time-Dependent Hazards:** Assessing material degradation, corrosion, or crack propagation over time.
- **Defining Critical Thresholds:**
 - ✓ **Dynamic Behavior Parameters:** Changes in natural frequency, damping ratio, and mode shapes help detect stiffness loss or damage localization.

- ✓ Load and Stress Limits: Exceeding design load capacities or stress thresholds indicate a breach in safety.
- Prognostic Analysis:
 - ✓ Predicting the long-term effects of existing damages on structural safety, performance, and lifespan.

2.5. Restoration and Strengthening Works

Based on the decisions made, restoration and strengthening works are planned and executed to address identified damages and weaknesses. Examples include:

- Material Replacement: Replacing damaged or deteriorated materials with new ones.
- Structural Reinforcements: Adding steel or carbon fiber reinforcements to improve the structure's strength.
- Repair Works: Filling cracks, removing corrosion, or other measures to extend the structure's lifespan.

2.6. Post-Intervention Monitoring and Follow-Up

After restoration and strengthening works, SHM systems continue to monitor the structure to assess the effectiveness of interventions and track its future performance. Continuous monitoring ensures:

- Intervention Effectiveness: Evaluating how well the repairs and reinforcements have improved the structure's behaviour.
- Early Warning Systems: Detecting potential new damage early.
- Maintenance Planning: Proactively scheduling future maintenance and repairs based on real-time data.

This six-step process highlights the comprehensive and systematic nature of SHM, emphasizing its growing importance in ensuring the safe and sustainable service of structures. Advances in sensor technology and data analysis methods are continually enhancing the effectiveness and reliability of SHM applications.

3. CASE STUDY: OSHKI CHURCH IN ERZURUM

3.1. History of Erzurum Oshki Church

Erzurum, a historic crossroads of cultures and civilizations, has long served as a social, cultural, and strategic centre. Over the centuries, it has preserved cultural traces left by each civilization that inhabited it. Due to its geographical location and geopolitical importance, Erzurum fell under the influence of several prominent empires, including the Assyrians, Sasanians, Persians, Arabs, Romans, and Byzantines, and has remained one of the most significant cities in the region throughout history. Erzurum holds a strategically significant position in terms of commerce, military, and economy, making it a site where people have settled and left numerous artifacts since the earliest historical periods. Among these invaluable structures is the Oshki Church in Erzurum (Figure 2). Located in the village of Camliyamac in the Uzundere district of Erzurum, the church is situated 50 km north of Erzurum's Tortum district and 13 km off the Erzurum-Artvin highway. The church, along with the accompanying library and refectory, constitutes the Oshki Monastery complex.

Figure 2. General View of Erzurum Oshki Church (January 13, 2016).

3.2. Observed Damages in the Structure of Erzurum Oshki Church

Due to environmental conditions, neglect, and abandonment, a variety of damages can be observed in the structure. The roof on the western facade has completely collapsed, leaving the structure exposed and unprotected. Cracks of varying sizes have developed in different areas, particularly on the upper sections of the walls and around the main dome. Notably, a significant crack runs along the height of the wall where the western and southern facades meet, especially on the western side. In its current state, this crack, resulting from the substantial separation between the western and southern walls, poses the greatest structural threat. This crack extends from the top of the wall down to the foundation. On-site measurements show that the crack width varies from 2 cm to 30 cm, indicating that the southern wall has detached from the western wall. Similar damage was observed in the southern section, resembling the issues found in the northern section. It was noted that certain vault sections, particularly those on the southern facade, which aid in load transfer, have collapsed, leading to issues in load transmission to the foundation.

Figure 3. Some Structural Damages of Erzurum Oshki Church

Figure 4. Damaged Dome and Apse Section on the Interior Facade of the Structure

3.3. Location of Equipment in the Structure of Erzurum Oski Church

The Erzurum Oski Church has been scheduled for examination as part of a restoration project conducted by the Ministry of Culture and Tourism, General Directorate of Cultural Heritage and Museums, and Erzurum Directorate of Surveying and Monuments, with the aim of preserving its structural integrity and historical value. To support this examination, a 12-month monitoring study has been proposed to understand the dynamic characteristics of the structure at the start of the restoration and to assess the progression of observed damages. To observe the current state of damage in the church's load-bearing system, crack gauges, two biaxial inclinometers, a thermometer for indoor temperature monitoring, a hygrometer for humidity measurement, and a triaxial accelerometer to monitor dynamic effects have been installed (Figure 5). The crack gauges were positioned inside the church to track the progression of cracks at various levels. The inclinometers and accelerometer were installed on the upper sections of the church walls, while the temperature sensor was placed in the pastophorion room.

Figure 5: Some devices of SHM Equipment

3.4. Evaluation of Data Obtained from SHM Systems

The sensors installed in the church by the supplier company for the monitoring system began transmitting data on July 9, 2018. The data is collected by an on-site data collection system and

temporarily stored on a computer located on-site. The data on the on-site computer is periodically transferred to a server at the supplier's central facility. The supplier company shares the collected data with us via the Dropbox service. Acceleration data is collected twice daily (at 08:00 and 20:00) for one-hour periods, while other data is gathered at 5-minute intervals and transmitted hourly via Dropbox. Additionally, if the values recorded by the accelerometers exceed $\pm 0.05g$, the data is collected separately at a 100Hz sampling rate and sent as an alarm signal.

The monitoring efforts that began on July 9, 2018, were reviewed by our Scientific Committee after one year, and it was determined that some cracks continued to develop. Based on this assessment, it was recommended extending the SHM to continue observing the progression of the crack activity. With the approval of the Erzurum Directorate of Surveying and Monuments, it was decided to extend the SHM for an additional four months. Monitoring concluded on October 15, 2019, once crack activity stabilized. The evaluation of the Device 1 and Device 11 for cracks is given in Figure 6 and the location of the device 1 and 11 is shown in Figure 7.

Figure 6. Evaluation of Crackmeters (Device 1 and Device 11)

Figure 7. Location of the Crackmeters (Device 1 and Device 11)

4. Conclusion

This study underscores the indispensable role of SHM in facilitating sustainable restoration processes, particularly for heritage sites where accuracy and preservation are paramount. The findings highlight that SHM systems are not only tools for damage detection but also key contributors to long-term maintenance and the safeguarding of cultural heritage. The implementation of SHM systems in the Oshki Church serves as an exemplary case, showcasing their potential to enhance restoration practices and ensure the safe transfer of historically significant structures to future generations.

The application of SHM systems in the church restoration project has demonstrated the critical importance of integrating advanced technologies in the preservation of historical structures. By continuously monitoring parameters such as crack propagation, environmental factors, and dynamic properties, SHM systems provided a robust scientific foundation for evaluating the church's current condition and proposing targeted restoration strategies. The collected data enabled an in-depth understanding of the structural behavior, environmental interactions, and progression of damage, ensuring that restoration decisions were both precise and effective.

Abstract

Nanoparticles (NPs) possess excellent physical and chemical properties by virtue of their small size. These properties have been successfully utilized in several technological and biomedical fields. Neem tree (*Azadirachta indica*) with its attendant secondary metabolites is considered in the present work. Neem bark is one the environmentally benign material whose extract can be used for the synthesis of nanoparticles. This study reports the biosynthesis of silver nanoparticles, AgNPs using aqueous extract of neem bark. The nanoparticles are characterized using UV-visible spectroscopy and Fourier transform infrared (FTIR) spectroscopy. The absorbance peak employed in the UV-visible spectrophotometric determination was in the range of 200 – 1000nm, depending upon the variation in the concentration of neem extract. FTIR outcomes indicate that the protein molecules in the neem bark extract played very active role in the reduction of silver ions to AgNPs as well as stabilizing the formed AgNPs. The results of the present study have confirmed the rapidity and cost effectiveness of green chemistry approach to biosynthesis of AgNPs at room temperature.

Keywords: Nanoparticles; Extract; Neem tree; UV-visible spectroscopy; Fourier transform Infrared (FTIR) spectroscopy

Introduction

Nanotechnology focuses mainly on the design, synthesis and manipulation of structure and size of the particles with dimensions smaller than 100nm (Savithramma, 2011). Currently, green chemistry is an emerging phenomenon for the synthesis of various chemical products, including nanoparticles, NPs, which greatly reduces the threat to the environment by eliminating the hazardous materials from the preparations methods that are toxic to human health. Therefore, green synthesis of metal nanoparticles provides a better platform for the synthesis of various nanomaterials, including silver nanoparticles (AgNPs) (Swamy and Prasad 2012). The use of plant extracts for the synthesis of nanoparticles is potentially advantageous, over microorganisms due to the ease of scaling up the biohazards and elaborate process of maintaining cell cultures (Bakar *et al.*, 2011; Annamalai *et al.*, 2012). In contrast to chemical and physical methods, biological methods have attracted significant attention for the synthesis of AgNPs, which are more economical and environmental friendly. In this regard, numerous studies have been reported for the synthesis of AgNPs using various biological materials such as bacteria (Saifuddin *et al.*, 2012), algae (Xie *et al.*, 2007), fungi (Verma *et al.*, 2010) and plants and so on (Gardea-Torresdey *et al.*, 2003, Shankar *et al.*, 2014). The present study aimed at the synthesis of silver nanoparticles, AgNPs using the neem bark and the characterization of the produced AgNPs.

Materials and Method

Sampling and sample preparation

The bark of neem tree was sampled from ten neem trees in the garden of science laboratory technology, SLT using stainless steel. The sampled neem bark were placed in sterilized polyethene bag and transported to the chemistry laboratory of the SLT complex, Hussaini Adamu Federal Polytechnic, Kazaure. The neem bark was identified by a botanist in the environmental biology unit of the SLT department. The samples were washed with deionized water and dried at 80°C in an electric oven (obtained from Friendemann Schmidt, Parkwood, Australia) to constant weight. The dried samples were cut into smaller pieces and then grinded into powder using pestle and mortar (purchased from Fluka Durban, South Africa). The grounded samples were sieved to obtain fine particles. This is stored in airtight desiccator (supplied by J. T. Baker, Phillipsburg, New Jersey, USA) awaiting extraction.

Fig 1: Neem bark Collected from Hussaini Adamu Federal Polytechnic Kazaure Campus

Preparation of the neem bark extract

About 10 g of the finely incised neem bark were weighed accurately using digital balance (bought from A & D Company Ltd. Tokyo, Japan) and transferred into 250 mL beakers containing 100 mL distilled water and boiled for about 20 min. The extracts were then filtered thrice through Whatman No. 1 filter paper to remove particulate matter and to get clear solutions which were then refrigerated (4°C) in 250 mL Erlenmeyer flasks (purchased from Buck Scientific, East Norwalk, U.S.A.) for further experiments. In each and every steps of the experiment, sterility conditions were maintained for the effectiveness and accuracy in results without contamination.

Silver nanoparticle (AgNPs) synthesis

Aqueous solution (1 mM) of silver nitrate (AgNO_3) was prepared in 250 mL Erlenmeyer flasks and bark extract was added for reduction of silver ions, Ag^+ ions. The composite mixture was then kept on turntable of the microwave oven for complete bio-reduction at a power of 300 W for 4 min discontinuously to prevent an increase of pressure. In the meantime, the colour change of the mixture from faint light to yellowish brown to reddish brown to colloidal brown was monitored periodically for maximum of 30 min. This was separately performed with each type of plant extract. The reactions were carried out in darkness (to avoid photo-activation of AgNO_3) at room temperature. Suitable controls were maintained all through the conduction of experiments. Complete reduction of Ag^+ ions was confirmed by the change in colour from colourless to colloidal brown. After irradiation, the dilute colloidal solution was cooled to room temperature and kept aside for 24 h for complete bio-reduction. Then, the colloidal mixture was sealed and stored properly for future use. The formation of AgNPs was furthermore confirmed by spectrophotometric analysis.

Results and Discussion

Analysis of silver nanoparticle by Uv- visible spectroscopy

The distinct colour change was observed after addition of aqueous neem bark extract to silver nitrate solution. The colour of the solution changed from colourless to colloidal brown as it can be seen in Fig 2.

Fig 3: FTIR Spectrum of Aqueous Extract of Neem bark

The results of the UV-visible spectrophotometric analysis were conducted at 24 hours incubation of the neem bark extract as unveiled in Table 1 – 5. The absorbance increases from wavelength 200nm to 400nm for each mixture then decreases from 600nm to 1000nm respectively across the mixtures except in sample S2 where increase at wavelength 800nm was recorded. Additionally, the absorbance of S1 at 800nm and 1000nm are equal. The optimization studies with respect to the quantity of the neem bark extract at a fixed quantity of silver nitrate solution may suggest that the absorbance at 400nm is required for the AgNPs synthesis.

The FTIR measurement was carried out to identify the possible bio-molecules responsible for the capping and stabilization of the synthesized AgNPs. The FTIR spectrum showed peaks at 3268 cm^{-1} and 1636 cm^{-1} (Figure 3). The two bands correspond to N-H bond of amines,

and C=C stretch of alkenes or C=O stretch of amides, respectively (Shankar *et al.*, 2014). This is an indication that protein molecules play a significant role in capping and stabilization of the AgNPs. Saxena *et al.* (2012) reported that proteins are involved in the stabilization and capping of nanoparticles by binding either through their free amine groups or cysteine residues.

Fig 4: FTIR Spectrum of AgNPs Synthesized from Aqueous Extract of Neem bark

Bioreduction of silver ions into silver nanoparticles, AgNPs after addition of aqueous neem bark extract was confirmed with change in colour. Initially, after addition of aqueous neem extract, the colour was colourless with the increase in incubation time the colour changed from colourless to colloidal brown and after 24 h incubation it was deep brown in colour. The brown colour was due to the excitation of the surface plasmon resonance (SPR), a very much characteristic property of silver nanoparticles (Freeman *et al.*, 2012). According to Freeman *et al.*, (2012), SPR band is dependent on the particle size and refractive index of the solution. From several literatures, it was reported that the SPR peak of silver nanoparticles is around 420 nm (Raju *et al.*, 2011) and in the present study it was centred at 410 nm.

Conclusion

The present work highlight one of the most simple and economical methods for the synthesis of silver nanoparticle from neem bark extract. Silver nanoparticles (AgNPs) were successfully obtained from bioreduction of silver nitrate solution using neem bark extract. AgNPs have been appropriately characterized using Uv- vis spectroscopy. FTIR analysis revealed the efficiency capping and stabilization properties of these AgNPs. However, plant uptake and utilization of AgNPs require more detailed research on many issues like uptake potential of various species, process of uptake and translocation and the activities of the AgNPs at the cellular and molecular levels. Though the green synthesis of silver nanoparticle is cost effective, environmentally friendly, yet large scale production is still at a very preliminary stage and the effective dose for its antimicrobial activity is yet to be decided.

ÖZET

Dalma erozyonla işleme yöntemi temassız olarak işleme yapabilen ve bu özelliğinden dolayı nikel ve kobalt bazlı süper alaşımlar başta olmak üzere titanyum bazlı alaşımları ve çelikleri işleyebilmektedir. Düşük işleme maliyeti, takım aşınmasının olmaması ve istenilen şekle yakın parçalar işleyebilmesinden dolayı kalıpcılık, havacılık, sağlık ve savunma sanayi gibi birçok önemli sanayi alanında kullanılmaktadır. AISI 1.2738 kalıp çeliği otomobil ve elektronik parçalarının kalıplarında sıklıkla kullanılmaktadır. Bu çeliğin işlenebilmesi için birçok farklı yöntem olmasına rağmen düşük yüzey pürüzlülüğü sağlamasından dolayı dalma erozyonla işleme yöntemi tercih edilen yöntemlerin başında gelmektedir. Dalma erozyonla işleme yönteminde işlemeye etki eden takım ilerleme hızı, voltaj, darbesiz ve darbeli geçen süre gibi birçok parametre vardır. Bu çalışma, AISI 1.2738 kalıp çeliğinin farklı voltaj (1 V, 2V ve 3 V), darbesiz geçen süre (10 µs, 20 µs ve 30 µs) ve takım ilerleme hızlarında (6 mm/s, 8 mm/s ve 10 mm/s) yüzey pürüzlülüğüne olan etkilerini incelemeyi amaçlamaktadır. Deney sonuçlarına göre tüm deney şartlarında en yüksek yüzey pürüzlülüğü 3 V değerinde elde edilmiştir. Ayrıca deney sonuçlarının genelinde artan voltaja bağlı olarak yüzey pürüzlülük değeri artmaktadır. Darbesiz geçen sürenin artması sonucunda yüzey pürüzlülük değeri artmaktadır. En düşük yüzey pürüzlülük değeri en düşük voltaj (1 V) ve en yüksek darbesiz geçen sürede (30 µs) elde edilmiştir.

Anahtar Kelimeler: Dalma Erozyon, Voltaj, Takım İlerleme Hızı, Darbesiz Geçen Süre

ABSTRACT

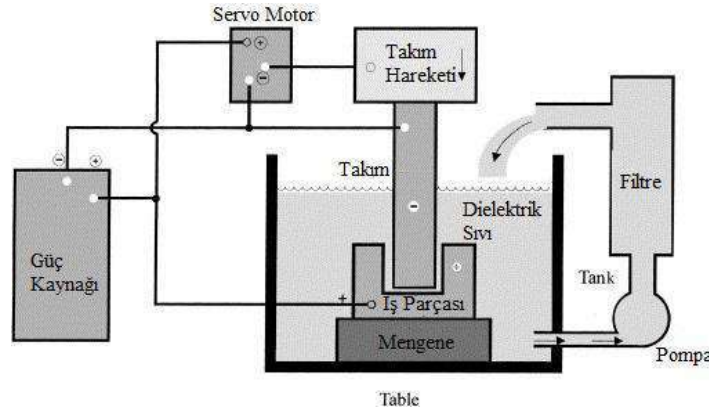

The electro erosion machining method can machine contactless and due to this feature, it can machine titanium-based alloys and steels, especially nickel and cobalt-based superalloys. This method is used in many significantly industrial areas such as mold making, aviation, health and defense industry due to its low machining cost, lack of tool wear and the ability to machining parts near to the desired shape. AISI 1.2738 mold steel is frequently used in molds of automobile and electronic parts. Although there are many different methods for machining this steel, electro

erosion machining is one of the most preferred methods due to its low surface roughness. There are many parameters such as cathode feed rate, voltage, time without impact and time with impact that affect the processing in the electro erosion machining method. This study aims to investigate the effects of different voltages (1 V, 2V and 3 V), pulse-off time (10 μ s, 20 μ s and 30 μ s) and cathode feed rates (6 mm/s, 8 mm/s and 10 mm/s) on the surface roughness of AISI 1.2738 mold steel. According to the experimental results, the highest surface roughness was obtained at 3 V in all experimental conditions. In addition, in the general experimental results, the surface roughness value increases depending on the increasing voltage. As the pulse-off time increases, the surface roughness value increases. The lowest surface roughness value was obtained at the lowest voltage (1 V) and the highest pulse-off time (30 μ s).

Keywords: Electro erosion, Voltage, cathode feed rate, pulse-off time

1. GİRİŞ

Tornalama, frezeleme ve delik delme gibi geleneksel talaşlı imalat proseslerinde malzemenin sertlik değerinin işleme performansı üzerinde önemli etkisi vardır. İş parçasının sertlik değeri ve kırılma oranı yüksek olduğunda takım aşınmasına, fener mili motorunun zorlanmasına ve dolayısıyla ek masrafa neden olmaktadır. Bu dezavantajlarından dolayı yüksek sertliğe sahip malzemelerin işlenmesinde elektrokimyasal işleme, aşındırıcı jet ile işleme ve dalma erozyon ile işleme (DEİ) gibi alışılmamış imalat yöntemleri kullanılmaktadır. DEİ yöntemi, karmaşık yüzeylere sahip parçaların boyutsal olarak istenilen tolerans aralığında üretilmesini sağlayan başarılı ve yaygın kabul gören geleneksel olmayan bir imalat yöntemidir. DEİ prosesi bu avantajlarının yanı sıra takım aşınması oluşturmaması, çapaklız işleme ve kalıntı gerilme olmamasından dolayı plastik kalıpcılık, sac metal kalıpcılık, dövme kalıpcılığı gibi geniş birçok endüstriyel alanda kullanılmaktadır. DEİ yönteminde elektrot olarak elektriksel iletkenliğe sahip tüm malzemeler kullanılabilir. Bakır, pirinç, alüminyum ve grafit sıklıkla elektrot olarak kullanılan malzemelerdir [1]

Şekil 1. DEİ yöntemi şematik gösterimi [2].

İş parçası ile elektrot arasında 0.01 ile 0.5 mm aralığında bir işleme boşluğu bulunması gerekmektedir. DEİ sırasında iş parçası ve elektrot arasında ufak kraterler oluşumu gözlenmektedir. Bu durumu engelleyebilmek için dielektrik sıvı kullanılmaktadır. Ayrıca, bu sıvı işlenmiş partikülleri iş parçasından ve elektrottan uzaklaştırmaya, iş parçasında korozyon oluşumunu engellemeye ve şerare açıklığının ortaya çıkması durumunda yanma ya da patlama olaylarının önüne geçilmesinde kullanılmaktadır. DEİ için malzeme sertliği ve kırılma oranı kritik bir öneme sahip değildir. Talaşlı imalat yöntemiyle işlemesi zor olan malzemeleri işlemede DEİ yöntemi büyük bir kolaylık sağlamaktadır. Bir diğer avantajı da ikincil bir bitirme

işlemine gerek kalmamasıdır. Bu avantajlarına rağmen DEİ yönteminin dezavantajlarından en önemlileri talaş kaldırma miktarının az olması ve iş parçasının iletken malzemeden olmasıdır.

Literatürde yapılan çalışmalara bakıldığında yüzey pürüzlülüğü konusunu inceleyen çalışmalar yapılmıştır. DEİ’de kullanılan parametrelerden özellikle boşalım akımı ve vuruş sürelerinin yüzey pürüzlülüğü üzerinde etkili oldukları ifade edilmiştir [3]. Chen ve diğerleri [4] değişik boşalım akımı, vuruş süresi ve vuruş ara süresi değerlerinde deneyler yaparak yüzey pürüzlülüğünün hesaplanabilmesi için empirik formül kullanılmasını önermişlerdir. Rizvi ve diğerleri [5] AISI 4340 çeliğinin bakır-tungsten elektrotla yapılan DEİ yöntemiyle işlenmesinde yüzey pürüzlülüğünü modellemişlerdir. İşleme parametreleri olarak akım, voltaj, ark süresi ve darbe boşluk oranının yüzey pürüzlülüğüne etkilerini ANOVA yöntemiyle analiz etmişlerdir. Analiz sonuçlarına göre, yüzey pürüzlülüğünü en çok etkileyen faktörün ark süresi olduğu, diğer parametrelerin ise daha az etkili olduğu belirlenmiştir. Yüzey kalitesini iyileştirmek için daha düşük bir ark süresi değeri önerilmiş ve optimum yüzey için düşük akım ve ark süresi, orta seviyede darbe boşluk oranı ile düşük voltaj değerlerinin ideal olduğu ifade edilmiştir. Nas ve Kara [6] çalışmalarında korozyona dayanıklı, sığ ve derin kriyojenik işlem uygulanmış Hastelloy C22 süper alaşımını DEİ ile işlemiş ve kriyojenik işleme tiplerinin DEİ performansı üzerinde etkisini incelemiştir. Performansı etkileyen parametreleri belirlemeye yönelik ANOVA sonuçlarına göre, boşalım akımı değeri R_a değerini 74.79% oranında etkilerken, malzeme işleme hızını 86.43% oranında etkileyen en etkili faktör olduğunu tespit etmiştir.

Literatürdeki araştırmalarda DEİ yöntemi hakkında yapılan çalışmaların genel olarak işlenmesi zor olan süper alaşımlar üzerine olduğu gözlemlenmiştir. Ancak birçok endüstride yaygın şekilde kullanılan çeliklerin başında kalıp çelikleri gelmektedir. Literatürde kalıp çeliklerinin DEİ yöntemiyle işlenmesi üzerine yapılan çalışma sayısı oldukça azdır. Bu çalışma AISI 1.2738 kalıp çeliğinin DEİ yöntemiyle işlenmesi sonrası oluşan yüzey pürüzlülük değerlerinin karşılaştırılmasını sunmaktadır. Ayrıca çalışmada farklı işleme parametrelerinin yüzey pürüzlülük değerleri üzerine etkisi incelenmiştir.

2. MATERYAL VE METOT

Bu çalışmada, DEİ yöntemiyle işlenen 40CrMnNiMo8-6-4 (AISI 1.2738) kalıp çeliği malzemesinin yüzey pürüzlülük değerleri incelenmiştir. Bu kalıp çeliğinin doğrusal genleşme katsayı $11.2 \times 10^{-6} m/mK$ ve ısı iletkenlik değeri $35 W/mK$ ’dir. Bu özelliklerinden dolayı malzeme plastiklerin enjeksiyon, ekstrüzyon, pres ve şişirme kalıplarında, kalıp çekirdeği, maça ve itici olarak kullanılmaktadır. Ayrıca, 30-35 HRC arasında ön sertleştirilmiş, parlatılabilirliği iyi olan ve çok iyi nitrürlenebilen kalıp çeliğidir. Deney malzemesinin kimyasal bileşimi **Error! Reference source not found.**’ de detaylandırılmıştır.

Tablo 1. AISI 1.2738 çeliğinin kimyasal bileşimi

Karbon (C)	Krom (Cr)	Molibden (Mo)	Mangan (Mn)	Nikel (Ni)
0.40 %	1.90 %	0.20 %	1.5 %	1.00 %

İş parçası boyutları ön çalışmalar neticesinde belirlenen şekilde $35 \times 35 \times 12 \text{ mm}^3$ olarak temin edilmiştir. İş parçalarının DEİ prosesinden önce frezeleme tezgahında silinip üzerindeki cüruf kaldırılmıştır. Bir sonraki adım olan gönyeleme işleminden sonra parçalar taşlama tezgahında taşlanmıştır. İş parçalarına ait işleme öncesi ve sonrası görüntüleri Şekil 2’de gösterilmektedir.

Şekil 2. İş parçalarına ait görünümler a) İşleme öncesi ve b) İşleme sonrası.

Deneylerde katot malzemesi olarak elektrik iletkenliği yüksek malzemelerden biri olan Cupromax bakır alaşımı kullanılmıştır. Malzeme krom ve zirkonyum ile alaşımlandırılmıştır. Katot malzemesinin kimyasal bileşimi Tablo 2’de detaylandırılmıştır.

Tablo 2. Katot malzemesinin kimyasal bileşimi.

Krom (Cr)	Zirkonyum (Zr)	Diğer (En fazla)	Bakır
0.5%-0.12%	0.03%-0.3%	0.2%	Denge

Katot parçasının ölçüleri 19.6 mm çap ve 50 mm yükseklik olarak belirlenmiştir. Katot malzemesi DEİ prosesinden önce CNC torna tezgahında tormalanmış ve istenilen ölçüye getirilmiştir. İşlem sonrası boyutsal doğruluk kumpas ile kontrol edilmiştir. Katot parçasına ait işleme öncesi ve sonrası görünümler Şekil 3a ve Şekil 3b’de sırasıyla gösterilmektedir.

Şekil 3. Katot malzemesinin görünümü a) İşleme öncesi ve b) İşleme sonrası.

Deneyler Ecwin MIC1270L marka dalma erozyon tezgâhı kullanılarak oda sıcaklığında gerçekleştirilmiştir. X, Y ve Z eksenlerinde 1200×700×500 mm³ hareket kabiliyeti olan bu tezgâhta Belone EDM marka modelli dielektrik sıvısı kullanılarak deneyler gerçekleştirilmiştir. Şekil 4’te kullanılan tezgah ve dielektrik sıvısına ait fotoğraflar gösterilmiştir.

3. BULGULAR ve DEĞERLENDİRME

Yapılan çalışmada 3 önemli değişken olan darbesiz geçen süre, takım ilerleme hızı ve voltaj değerleri değişken olarak belirlenmiştir. Bu değerlerin her biri 3 farklı seviyelerde incelenmiştir. Deneyler sonrası yüzey pürüzlülük değerleri ölçülmüştür. 10 μ s darbesiz geçen süre için sabit

tutularak 3 farklı hızda 3 farklı voltaj seviyesi için elde edilen pürüzlülük değerleri Şekil 5'te gösterilmektedir. Elde edilen sonuçlara göre 10 μ s darbesiz geçen sürede her takım ilerleme hızında en yüksek yüzey pürüzlülük değeri 3 V değerinde elde edilmiştir. Tosun ve diğerleri [7] yaptıkları çalışmada 10 mm kalınlığındaki SAE 4140 çeliğini işlemiş ve yüzey pürüzlülüğünü etkileyen parametreleri bulmak için ANOVA analizini uygulamıştır. Bu çalışmaya göre yüzey pürüzlülüğüne en yüksek etkiyi voltaj parametresi yapmaktadır. Bir başka çalışmada Singh ve diğerleri [8] voltajın artmasına bağlı olarak elektrokimyasal işleme ve DEİ yöntemlerinde yüzey pürüzlülüğünün arttığını bildirmiştir. Literatür incelendiğinde elde edilen sonucun literatürle uygun olduğu belirlenmiştir.

Şekil 5. 10 μ s darbesiz geçen sürede takım ilerleme hızının voltaja bağlı yüzey pürüzlülük grafiği.

20 μ s darbesiz geçen süre için farklı takım ilerleme hızlarının voltaja bağlı yüzey pürüzlülük değerlerinin grafiği Şekil 6'da gösterilmektedir. Şekil 5'te olduğu gibi en yüksek yüzey pürüzlülük değerleri en yüksek voltajda gerçekleşmiştir. Burada en düşük hız olan 6 mm/s takım ilerleme hızında voltajın artmasına bağlı olarak yüzey pürüzlülüğünün sürekli arttığı gözlemlenmiştir. Ayrıca diğer 2 takım ilerleme hızı için en düşük yüzey pürüzlülük değeri 2 V değerinde gerçekleşmiştir. Şekil 5 ve Şekil 6 karşılaştırıldığında en yüksek yüzey pürüzlülük değerinin 7.92 μ m ile 20 μ s bekleme süresinde gerçekleştiği ve en düşük yüzey pürüzlülük değerinin 5.83 μ m ile 10 μ s bekleme süresinde olduğu tespit edilmiştir.

Şekil 6. 20 µs darbesiz geçen sürede takım ilerleme hızı ile voltaj değerlerinin yüzey pürüzlülüğü üzerindeki etkisi.

En yüksek darbesiz geçen süre olan 30 µs için voltaj ve takım ilerleme hızı değerlerinin yüzey pürüzlülüğü değeri üzerindeki etkilerini incelemek için sonuçlara bağlı olarak çizilen grafik gösterilmektedir. 10 mm/s takım ilerleme hızında voltaj arttıkça yüzey pürüzlülüğünün arttığı gözlemlenmiştir. Bu durum beklenen ve voltaja bağlı olarak artan yüzey pürüzlülüğüne bağlanabilmektedir. Grafiğe göre en düşük yüzey pürüzlülüğü değerinin en yüksek takım ilerleme hızında ve en düşük voltajda 5.19 µm olarak elde edildiği gözlemlenmiştir. Aynı zamanda bu değer en yüksek darbesiz geçen sürede gerçekleşmiştir. Kıyak ve Çakır [9] yaptıkları çalışmada AISI P20 çeliğini farklı darbesiz geçen sürede işlemiş ve buna bağlı olarak darbesiz geçen süre arttıkça yüzey pürüzlülüğünün azaldığını belirlemiştir. Bir başka çalışmada Praveen ve diğerleri [10] Cu-Al-Mn alaşımın tel erozyonda işlenebilirliğini incelemek için birçok farklı parametre kullanmıştır. Bunun sonucunda yüzey pürüzlülüğü etkileyen parametrelerden biri olarak darbesiz geçen süreyi belirlemiş ve bu sürenin artmasıyla yüzey pürüzlülüğünün azaldığını raporlamıştır.

Şekil 7. 30 µs darbesiz geçen sürede voltaja bağlı değişken takım ilerleme hızlarında yüzey pürüzlülüğü değişiminin grafiği.

4. SONUÇLAR

Bu çalışma 3 farklı takım ilerleme hızları (6 mm/s, 8 mm/s ve 10 mm/s), farklı voltaj seviyelerinde (1 V, 2 V ve 3 V) ve 3 farklı darbesiz geçen sürelerde (10 μ s, 20 μ s ve 30 μ s) bağlı olarak DEİ prosesinde işlenen AISI 1.2738 kalıp çeliğinin yüzey pürüzlülük değerlerini karşılaştırmıştır. Bu karşılaştırma sonucunda birçok farklı sonuç elde edilmiştir. Bu sonuçlar aşağıdaki gibi listelenebilmektedir.

- Darbesiz geçen sürenin artışına bağlı olarak birçok deney şartında yüzey pürüzlülüğü azalma göstermiştir. Ayrıca en düşük yüzey pürüzlülük değeri olarak 5.19 μ m değeri 30 μ s darbesiz geçen sürede elde edilmiştir.
- Takım ilerleme hızlarında genel olarak bir bağlam bulunamasa da birçok deney şartı bir arada incelendiğinde takım ilerleme hızındaki artışın yüzey pürüzlülüğünü azalttığı sonucuna varılabilmektedir.
- Voltaj değerlerindeki artışın neredeyse her deney şartı için benzer sonuç verdiği gözlemlenmiştir. Voltaj değerlerindeki azalmanın işlemeye olumlu etki ettiği belirlenmiştir.
- 2 deney şartı hariç tüm deney parametrelerinde en yüksek yüzey pürüzlülük değerleri 3 V değerinde elde edilmiştir.

Teşekkürler

Bu çalışmayı deneylerin gerçekleştirilmesi, malzeme ve tezgâh kullanımı ile destekleyen POELSAN Plastik Sanayi ve Ticaret A.Ş. teşekkürlerimizi sunuyoruz

ÖZET

Micro:Bit kartları, programlama eğitiminde öğrencilerin temel kodlama becerilerini geliştirmelerine ve uygulamalı projeler yapmalarına olanak tanıyan etkili bir araçtır. Kullanıcı dostu yapısı ve blok tabanlı programlama dili desteği sayesinde, öğrenciler kodlama mantığını kolayca öğrenir ve Python gibi ileri seviye dillere geçiş yapabilirler. Üzerinde bulunan LED ekran, sensörler ve butonlar sayesinde öğrenciler, fiziksel dünya ile etkileşime giren projeler geliştirerek algoritmik düşünme, problem çözme ve yaratıcılık becerilerini pekiştirirler. Bu araştırma, Micro:Bit kartlarının programlama eğitimine entegrasyonunu, öğrencilere sağladığı faydaları ve öğrenme sürecine olan katkılarını incelemeyi amaçlamaktadır.

Anahtar Kelimeler: Micro:Bit Kartları, Algoritmik Düşünme, Programlama, Fiziksel Programlama

ABSTRACT

Micro:Bit cards are an effective tool that allows students to develop basic coding skills and do practical projects in programming education. Thanks to its user-friendly structure and block-based programming language support, students can easily learn coding logic and move on to advanced languages such as Python. With the LED screen, sensors and buttons on it, students develop projects that interact with the physical world, reinforcing their algorithmic thinking, problem solving, and creativity skills. This research aims to examine the integration of Micro:Bit cards into programming education, the benefits they provide to students and their contributions to the learning process.

Keywords: Micro:Bit Cards, Algorithmic Thinking, Programming, Physical Programming

GİRİŞ

Programlama eğitimi konusunda çalışmalar incelendiğinde öğrencilerin büyük bir kısmı programlamayı öğrenme konusunda sorunlar yaşamışlardır. Bu problemleri gidermek için öğrenme ortamlarında, oyun tabanlı, iş birlik içerisinde öğrenme ve proje tabanlı öğrenme gibi yöntemlerin kullanılması öneriliyor. (Beşer, 2013). Bu yöntemlere örnek olarak Alice, Kodu Game Lab, code.org ve Scratch gibi hem görsel tabanlı hem de blok tabanlı programlama platformları öğrencilerin karışık kodlama yapılarını öğrenmeden kendi programlarını oyun ve animasyonlarını gerçekleştirebilmelerini sağlayacaktır (Resnick ve diğerleri,2009). Avrupa ülkelerinde programlama eğitimlerinin erken yaşlarda verilmesine yönünde çalışmalar bulunmaktadır. Bu çalışmaların amacı öğrencilerin “mantıksal düşünme ve problem çözme“ becerilerini geliştirmektir. Robotik kodlama uygulamaları ise metin tabanlı olan programlama dillerinin somutlaştırarak

öğrencilerin doğrudan gözlemesini sağlamaktadır. Bu sebeple soyuttan somuta geçebilmek adına eğitimciler çeşitli donanım araçları “Arduino, Lego, micro:bit vb. “ kullanarak dersi desteklemektedirler.

Programlama eğitiminde teorik bilgilerin öneminin yanı sıra uygulamalara öğrencilerin ihtiyaç duyarak somut öğrenmelerini sağlayacak materyaller ile daha aktif olacaklarını Bayman ve Mayer (1983) öğrencilerin soyut kavramları anlamadıklarını ve oluşturdukları kod bloklarının sonuçlarını görmemeleri, öğrenci algısından olduğuna ulaşılmıştır. Bu sebeple motivasyonlarını ve öğrenmelerini yükseltecek görsel araçlar, materyaller kullanılmaları gerekmektedir (Derus & Ali, 2012; Milne & Rowe, 2002).

Proje Tabanlı Öğrenme (PTÖ) Nedir?

Proje tabanlı öğrenme, öğrencilerin belirli bir konu veya disiplin etrafında bir proje üzerinde çalışarak bilgi edinmelerini ve becerilerini geliştirmelerini amaçlayan bir öğretim yaklaşımıdır. Bu yöntem, öğrencilerin sadece teorik bilgi edinmekle kalmayıp, aynı zamanda bu bilgileri gerçek dünyadaki problemleri çözmek için kullanmalarına olanak tanır. Proje tabanlı öğrenme, öğrencilerin kritik düşünme, problem çözme, işbirliği yapma ve yaratıcı düşünme gibi becerilerinin gelişmesine yardımcı olur (Thomas, 2000; Bell, 2010).

Proje Tabanlı Öğrenmenin Temel Özellikleri

1. Gerçek Dünya Problemleri: PTÖ, öğrencilerin gerçek yaşamla bağlantılı problemleri çözmelerini sağlar. Bu tür bir yaklaşım, öğrencilerin öğrenme sürecini daha anlamlı ve bağlamsal hale getirir. Bu, öğrencilerin öğrendikleri bilgileri gerçek dünyada nasıl uygulayacaklarını daha iyi anlamalarına yardımcı olur (Anderson & Krathwohl, 2001).
2. Öğrenci Merkezli: PTÖ, öğrenme sürecinde öğrencilerin aktif rol aldığı, öğretmenin rehberlik ettiği bir yöntemdir. Öğrenciler, projeler üzerinde kendi hızlarında çalışarak, sorumluluk alır ve kendi öğrenme süreçlerinin kontrolünü elinde tutar (Hmelo-Silver, 2004).
3. İşbirliği ve Grup Çalışması: Proje tabanlı öğrenme genellikle takım çalışmasını gerektirir. Öğrenciler, gruplar halinde çalışarak, fikir alışverişinde bulunur ve birlikte çözüm önerileri geliştirir. Bu, sosyal ve iletişim becerilerinin gelişmesini sağlar (Johnson & Johnson, 1989).
4. Çok Disiplinli Öğrenme: Bir proje çoğunlukla birden fazla beceri setini içerir. Bu nedenle, PTÖ, öğrencilerin yalnızca bir disiplinde değil, çeşitli alanlarda bilgi edinmelerini ve bu bilgileri birleştirmelerini sağlar (Beers, 2011).
5. Ürün ve Sunum: Projelerin sonunda öğrenciler genellikle bir ürün üretir (örneğin, bir rapor, model veya video). Bu ürün, öğrencilerin öğrendikleri bilgilerin somut bir göstergesi olarak değerlendirilir ve genellikle bir sunumla paylaşılır (Blumenfeld et al., 1991).

YÖNTEM

Bu çalışma, elektronik devre kartlarının programlama eğitiminde kullanılabilirliğini incelemeyi, seçim sürecini ve araştırma sonucunda programlama eğitimine katkı sağlayabilecek kartların listelenmesini içermektedir. Araştırmada öncelikle çeşitli elektronik devre kartları analiz edilmiş ve programlama eğitimi açısından uygun olanlar belirlenmiştir. Bu süreçte, kartların eğitimdeki uygulama kolaylığı, öğrencilerin algoritmik düşünme ve problem çözme becerilerine katkıları değerlendirilmiştir.

Micro Kartlarının Belirlenmesi ve İncelenmesi

Bu araştırmada kullanılan eğitim aracının seçimi, araştırmacılar tarafından gerçekleştirilmiştir. Araştırmanın amacı doğrultusunda algoritma ve programlama eğitiminde kullanılabilirliği olan

araçlar arasından Micro kartları üzerinde durulmuştur. Araştırmacılar, öncelikle programlama eğitiminde yaygın olarak kullanılan çeşitli araç ve platformları inceleyerek bir liste hazırlamış, ardından algoritma ve programlama eğitimi konusunda uzman iki kişiye başvurarak bu araçların eğitimdeki etkisi hakkında fikir alışverişinde bulunmuşlardır. Micro kartlarının seçiminde kuramsal bir veri mevcut olmadığından araştırmacılar, kendi pedagojik ve eğitsel yaklaşımlarına göre karar vermiştir. Bu nedenle çalışmanın amacı doğrultusunda, öğrencilerin algoritmik düşünme ve problem çözme becerilerini geliştirmeye yönelik olarak Micro kartları tercih edilmiştir.

Tablo 1: Eğitimde kullanılan bazı temel elektronik bileşenler ve kartlar

Elektronik Bileşen/Kart	Açıklama	Kullanım Alanları
Arduino	Açık kaynak mikrodeneleyici kart	Robotik, otomasyon, temel elektronik
Micro	Eğitim amaçlı mikrodeneleyici kart	Programlama, fiziksel bilişim
Raspberry Pi	Küçük boyutlu bilgisayar kartı	Kodlama, ağ uygulamaları
Makey Makey	Nesneleri klavye veya fare olarak kullanma	Yaratıcı projeler

TARTIŞMA VE SONUÇ

Araştırma sonuçları, robotik kodlama etkinliklerinin öğrencilerin grup çalışması yapmasına olanak tanıyarak ilgilerini artırdığını ve takım çalışması becerilerini geliştirdiğini göstermektedir (Ersoy, Madran ve Gülbahar, 2011). Bu etkinliklerde öğrencilerin gruplar halinde çalışması, onların kodlamaya olan ilgilerini artırırken, eğlenceli bir öğrenme süreci yaşadıkları gözlemlenmiştir (Çankaya, Durak ve Yüncül, 2017). Ayrıca, öğrencilerin programlama sürecinde somut materyallerle çalışmaları ve etkin katılım sağlamaları motivasyonlarını yükseltmekte ve öğrenme süreçlerini hızlandırmaktadır. Programlama etkinliklerinde kullanılan görsel materyallerin de öğrencilerin öğrenme sürecini destekleyici bir rol oynadığı sonucuna ulaşılmıştır (Derus & Ali, 2012; Milne & Rowe, 2002). Bu bulgular, eğitimde robotik kodlama araçlarının kullanılmasının öğrencilere çok yönlü faydalar sağladığını ortaya koymaktadır.

ALGORİTMALARIN GÖLGESİNDE: PAZARLAMADA YAPAY ZEKÂ VE ETİK İKİLEMLER
IN THE SHADOW OF ALGORITHMS: ARTIFICIAL INTELLIGENCE AND ETHICAL DILEMMAS IN MARKETING

Gamze İLERİ

Arş. Gör., İstanbul Beykent Üniversitesi İktisadi ve İdari Bilimler Fakültesi İşletme (EN) Bölümü

ÖZET

Günümüzde yapay zekâ pazarlama stratejileri, iş modelleri, müşteri hizmetleri gibi birçok alanda değişikliğe yol açmakta ve pazarlama dünyasının manzarasını hızla değiştirmektedir. Pazarlamacıların amacı tüketicilerin ne istediğini anlamak ve buna doğrultuda kararlar vererek müşterilerin yaşam boyu değerini iyileştirmektir. Bu amaç doğrultusunda birçok işletme yapay zekâ araçlarını benimsemektedir. Yapay zekâ destekli araçlar, kişiselleştirilmiş deneyimler, hedefli reklamlar ve optimize edilmiş fiyatlandırma stratejileri sunmak için büyük miktarlarda tüketici verisi analiz edebilmektedir. Pazarlamada yapay zekâ kullanımının sağladığı bu kolaylıkların yanında bazı etik endişeler de bulunmaktadır. Bu endişelerden en ciddi olanı şüphesiz tüketicilerin verilerinin gizliliği ve güvenliğidir. Yapay zekâ araçları kişiselleştirilmiş deneyimler sunmak için büyük miktarda tüketici verisi toplamakta ve analiz etmektedir. Bu durum verilerin kötüye kullanım potansiyeli hakkında endişeler doğurmaktadır. Bir diğer endişe algoritmik önyargı ve ayrımcılıktır. Yapay zekâ algoritmaları toplumda var olan mevcut önyargıları sürdürme ve güçlendirme eğiliminde olabilir. Bu yaklaşım tüketicilere sunulan reklamlarda, fiyatlandırmada, ürün ve hizmetlerde ayrımcılığa yol açabilir. Manipülasyon ve aldatmaya dayalı etik endişe ise bir diğer ciddi konudur. Yapay zekâ araçları, tüketicileri kendi istekleri doğrultusunda etkilemek ve satın alma kararlarına yön vermek amacıyla dilediği sekmeye, ürüne ve hizmete yönlendirebilir. Son olarak yapay zekâ sistemlerindeki şeffaflık ve hesap verebilirliğin eksikliği önemli bir etik zorluktur. Tüketiciler genellikle yapay zekâ algoritmalarının kendi verilerini nasıl kaydettiğini ve nasıl karar aldığını anlamakta güçlük çekmektedir. Bu da yapay zekâ uygulamaları sayesinde aldıkları bir karara itiraz etmeyi zorlaştırmaktadır. Pazarlamada yapay zekâ kullanımından kaynaklı bu etik endişelerin ele alınması çok yönlü bir yaklaşım gerektirmektedir. Bu çalışmada amaçlanan bahsi geçen etik ikilemlerin derinlemesine incelenmesi ve anlaşılmasıdır. İncelenen literatür taraması bulgularına dayanarak yapay zekânın pazarlamada nasıl kullanıldığı, hangi etik sorunları beraberinde getirdiği ve bu sorunların neden önemli olduğundan derinlemesine bahsedilmiştir. Ayrıca etik sorunları azaltmak hatta ortadan kaldırmak amacıyla işletmelere stratejiler ve çözüm önerileri sunulmuştur.

Anahtar Kelimeler: Yapay Zeka, Pazarlamada Yapay Zeka Kullanımı, Etik Endişeler, Güven, Algoritmik Önyargı

ABSTRACT

Artificial intelligence (AI) is rapidly transforming the marketing landscape, impacting marketing strategies, business models, customer service, and consumer behavior. Marketers aim to understand consumer needs and make decisions that enhance customer lifetime value. To achieve this, many businesses are adopting AI tools. These tools can analyze vast amounts of consumer data to deliver personalized experiences, targeted advertising, and optimized pricing strategies. However, the use of AI in marketing also raises ethical concerns. One major concern is consumer data privacy and security. AI tools collect and analyze large amounts of consumer data to personalize experiences, raising concerns about the potential for data misuse.

Another concern is algorithmic bias and discrimination. AI algorithms may perpetuate and amplify existing societal biases, leading to discrimination in advertising, pricing, and product offerings. Manipulation and deception are also ethical concerns. AI tools can influence consumer behavior and purchasing decisions by directing them towards specific tabs, products, or services. Finally, the lack of transparency and accountability in AI systems is a significant ethical challenge. Consumers often struggle to understand how AI algorithms make decisions, making it difficult to challenge or contest outcomes. Addressing these ethical concerns requires a multi-faceted approach. This study aims to delve deeper into these ethical dilemmas and provide a comprehensive understanding of them. Based on a review of the relevant literature, this study examines how AI is used in marketing, the ethical issues it raises, and why these issues are important. Additionally, it offers strategies and solutions for businesses to mitigate or eliminate these ethical concerns.

Keywords: Artificial Intelligence, Use of AI in Marketing, Ethical Concerns, Trust, Algorithmic Bias

GİRİŞ

Günümüzün hızla dijitalleşen dünyasında, birçok alanda olduğu gibi pazarlama alanında da bazı değişiklikler yaşanmaktadır. Bunlardan şüphesiz ki en önemlisi devrim niteliğinde değişimlere yol açan dönüştürücü bir teknoloji olarak karşımıza çıkan yapay zekâdır. Yapay zekâ, insan zekâsını taklit eden ve karmaşık problemleri çözmeye, karar verme ve öğrenme yeteneğine sahip bilgisayar sistemlerini ifade etmektedir. Makine öğrenmesi, derin öğrenme ve doğal dil işleme gibi alt alanları içeren yapay zekâ, günümüzde büyük veri analizi, görüntü tanıma ve robotik gibi çeşitli uygulamalarda kullanılmaktadır. Sağladığı kolaylıklar nedeniyle yapay zekâ teknolojileri topluma daha fazla nüfuz etmekte ve çeşitli sektörlerde kullanımı yaygınlaşmaktadır.

Pazarlama stratejilerinden müşteri hizmetlerine, iş modellerinden tüketici davranışlarına kadar pek çok noktada etkisi bulunan yapay zekâ teknolojileri günümüzde pazarlama dünyasını da yeniden şekillendirmektedir. İşletmelerin rekabet sağlama noktasında en önem verdikleri nokta olan tüketici istek ve ihtiyaçlarını anlama ve karşılama konusu yapay zekâ teknolojileri sayesinde kolaylaşmaktadır. Yapay zekânın pazarlama alanındaki en önemli uygulamalarından biri yüzlerce tüketici verisini analiz ederek tüketicilere kişiselleştirilmiş deneyimler sunmasıdır (Bonneton vd., 2016). Hedefli reklamlar, optimize edilmiş fiyatlandırma stratejileri ve tüketiciye özel ürün önerileri yapay zekâ destekli araçlar sayesinde mümkün kılınmaktadır. Bu sayede işletmeler tüketicilerin istek ve ihtiyaçlarına daha etkili bir şekilde cevap verebilmekte ve dolayısıyla müşteri memnuniyetini artırabilmektedir. Tüketicilerin ürün ve hizmetlere erişiminin ve memnun kalmadıkları takdirde bu ürün ve hizmetlerden vazgeçmenin çok kolay olduğu günümüzde müşteri memnuniyeti sağlamak işletmeler için oldukça değerlidir. Bu noktada işletmeler yapay zekâ teknolojilerini hızla benimsemektedir.

Yapay zekâ işletmelere sağladığı faydaların yanı sıra bazı endişeleri de bünyesinde barındırmaktadır (Kirienko vd., 2021). Yapay zekâ teknolojilerinin pazarlama alanında kullanımını beraberinde bir dizi etik ikilemi getirmektedir. Verilerin gizliliği ve güvenliği, algoritmik önyargı ve ayrımcılık, manipülasyon ve aldatma ve son olarak şeffaflık ve hesap verilebilirlik gibi boyutlar yapay zeka uygulamalarının kullanımının etik boyutunun gündeme gelmesine ve sorgulanmasına neden olmaktadır. Yapay zekâ teknolojileri kullanımının yalnızca olumlu tarafına odaklanmak ve tüketici tarafını oldukça ilgilendiren etik boyutlarını ele almamak tüketici güvenini ve yapay zekâ teknolojisinin toplumsal kabulünü olumsuz etkileyebilir.

Bu çalışma pazarlamada yapay zekâ teknolojilerinin kullanımının etik boyutuna odaklanmaktadır. Çalışmanın amacı bu alanda ortaya çıkan etik ikilemleri derinlemesine incelemek ve anlaşılmasını sağlamaktır. Literatür taraması ve güncel örnekler ışığında yapay

zekânın pazarlama alanında nasıl kullanıldığı, beraberinde hangi etik sorunları getirdiği ve bu sorunların neden önem arz ettiği detaylı bir şekilde ele alınacaktır. Bunun yanı sıra işletmelere bu etik sorunları azaltmaları için belli stratejiler ve çözüm önerileri sunulacaktır.

YÖNTEM

Bu inceleme akademik kaynakları ve haber raporlarını kapsamaktadır. İlgili literatürün araştırılması iki aşamada gerçekleştirilmiştir. İlk aşamada yapay zeka etiği ile ilgili farklı terimleri yansıtan girdiler ya da anahtar kelimeler Google Scholar, Web of Science, IEEE Xplore ve Science Direct aracılığıyla taranmıştır. Kullanılan anahtar kelimeler yapay zekâ, yapay zekâda etik, etik, güvenilirlik, verilerin gizliliği, makine öğrenimi, şeffaflık, algoritmik önyargı ve ayrımcılıktır. İkinci aşamada ise ilk aşamada erişilen çalışmaların derinlemesine incelenmiş ve analiz edilmiştir.

YAPAY ZEKÂ VE ETİK

İnsan davranışlarını inceleyen, bu davranışlardaki doğru ile yanlış ayırt etmeye çalışan bir disiplin olan etik yapay zekâ devreye girdiğinde farklı bir tanımda kendini göstermektedir. Yapay zekâ etiği, insan zekâsını taklit eden ve genellikle insanların yapabildiğinden çok daha karmaşık görevleri yerine getirebilen sistemlerin tasarımı, gelişimi ve kullanımıyla ilgili kaygıları ve kritik noktaları ele alan bir disiplindir (Angwin vd., 2016). Günden güne gelişen yapay zekâ uygulamalarının giderek daha bağımsız hale gelmesi ile birlikte bu konudaki etik sorunlar da gündeme gelmektedir.

Yapay zekâ etiğinin amacı, topluma oldukça faydalı olan bu yapay zekâ uygulamalarının sorumlu ve etik değerlere uygun bir şekilde geliştirilmesini ve uygulanmasını sağlamaktır (Dilmaghani vd., 2019). Yapay zekâ kullanımında etik sorunları derinden incelemeye önce bu sorunların tespit edilmesi önem arz etmektedir. Yapay zekânın etik sorunu genellikle yapay zekâ ile ilgili ahlaki olarak kötü şeyleri veya sorun yaratabilecek sonuçları ifade etmektedir. Yapay zekâ teknolojilerinin pazarlama alanında kullanımının sonuçları da beraberinde bir dizi etik ikilemi getirmektedir. Verilerin gizliliği ve güvenliği, algoritmik önyargı ve ayrımcılık, manipülasyon ve aldatma ve son olarak şeffaflık ve hesap verilebilirlik gibi boyutlar yapay zekâ uygulamalarının kullanımının etik boyutunun gündeme gelmesine ve sorgulanmasına neden olmaktadır (Dignum vd., 2018).

Veri gizliliği ve güvenliği, yapay zekâ kullanımının etik boyutu açısından kritik bir noktada yer almaktadır. Genellikle kişisel ve hassas bilgileri kapsayan büyük miktarda veriyi toplamak, depolamak ve işlemek için yapay zekâ sistemlerine olan artan bağımlılık, bireysel gizliliğin korunmasına daha fazla odaklanılmasını gerektirmektedir. Bu konuda birincil endişelerden biri, yapay zekâ sistemleri tarafından yetkisiz erişim, veri ihlalleri veya kişisel bilgilerin kötüye kullanılması nedeniyle gizlilik ihlalleri olasılığıdır (Dilmaghani vd., 2019). Bu, belirli yapay zekâ algoritmalarının apaklığı nedeniyle daha da karmaşık hale gelmekte ve kişisel verilerin nasıl kullanıldığını ve korunduğunu anlamayı zorlaştırmaktadır. Dahası, hassas bilgilerin tehlikeye atılmasının kimlik hırsızlığı, mali kayıp ve itibar kaybı dâhil olmak üzere bireyler için ciddi sonuçları olabileceğinden, veri ihlalleri riski önemli bir tehdit oluşturmaktadır (Yang vd., 2019). Bu endişeleri gidermek için, veri gizliliği ve güvenliğine yönelik çok katmanlı bir yaklaşım esastır. Bu, yetkisiz erişimi ve veri ihlallerini önlemek için şifreleme ve erişim kontrolleri gibi sağlam güvenlik önlemlerinin uygulanmasını içerir. Ek olarak, veri anonimleştirme ve kimliksizleştirme teknikleri, tanımlayıcı bilgileri kaldırarak veya gizleyerek bireysel gizliliği korumaya yardımcı olabilir. Dahası, net veri yönetimi çerçeveleri oluşturmak ve verilerin toplanması, kullanımı ve depolanmasıyla ilgili şeffaflığı teşvik etmek, yapay zekâ sistemlerinde güven ve hesap verebilirliği teşvik etmede önemli adımlar olarak göze çarpmaktadır (Huang vd., 2023). Veri gizliliği ve güvenliği, yapay zekâ teknolojilerinin geliştirilmesi ve dağıtımında en önemli etik hususlardır. Sağlam güvenlik önlemleri,

kimliksizleştirme teknikleri ve şeffaf veri yönetimi çerçeveleri aracılığıyla veri korumasına öncelik verilerek, yapay zekâ sistemlerinin sorumlu ve etik bir şekilde kullanılması sağlanabilir. Algoritmik önyargı ve ayrımcılık, yapay zekâda bir diğer önemli etik kaygılardır. Bu etik kaygının temelinde yapay zekâ uygulamalarının ayrımcı sonuçlar üretmesi veya toplumda var olan kanıksanmış önyargıları sürdürmesi yatmaktadır. Ortaya çıkabilecek bu önyargı, yapay zekâ modellerini geliştirmek için kullanılan eğitim verilerinden, algoritmaların kendisinden ve hatta yapay zekâ modellerini geliştiricilerin önyargılarından kaynaklanabilmektedir. Yapay zekâ sisteminin önyargısının beklenmedik toplumsal önyargıyı ve ayrımcılığı teşvik etme ihtimali bulunmaktadır (Roselli vd., 2019). Algoritmik önyargının en temel sonuçların biri din, dil, cinsiyet, ırk ya da sosyoekonomik farklılıklara dayanarak belirli gruplara ya da kişilere ayrımcılık potansiyelidir. İşe alım sürecinde kullanılan bir yapay zekâ sisteminin iş yerinde var olan düzeni ve eşitsizlikleri sürdürerek belli bir grubu haksız yere kayırması bu etik endişe için örnek teşkil etmektedir. Ayrıca algoritmik önyargı, yapay zekâ kullanımı ile ulaşılan sonuçların çarpık olma ihtimaline dayanarak karar alma süreçlerinde adalet ve şeffaflığın eksikliğine yol açmaktadır. Yapay zekâ kullanımında etik ikilemler konusunda algoritmik önyargı ve ayrımcılığı ele almak çok yönlü bir yaklaşım gerektirmektedir. Bu yaklaşım yapay zekâ sistemlerinin gelişimi ve eğitiminde çeşitlilik ve kapsayıcılığın sağlanmasını gerektirmektedir. Ayrıca var olan önyargılardan sıyrılmış bir sistem oluşturulması hedeflenmelidir (Dastin 2018). Yapay zekâ uygulamalarında bir diğer etik sorun manipülasyon ve aldatmadır. Özellikle pazarlama ve reklamcılık alanlarında bireylerin zaafalarını ve önyargılarını istismar eden ve manipülatif sonuçlara yol açabilecek kişiselleştirilmiş ve hedefli mesajlar oluşturmak için kullanılan yapay zekâ sistemleri ciddi etik endişeleri doğurmaktadır (Lipton vd., 2017). Örneğin yapay zekâ destekli bir reklamcılık şirketi kullanıcı verilerini takip ve analiz ederek bireylerin tüketim tercihlerini ve davranışlarını tahmin edebilmektedir. Bu durumda pazarlama şirketlerinin de bireyleri belirli ürünlere veya hizmetlere yönlendiren ikna edici mesajlar oluşturarak tüketicinin önüne çıkarmasına olanak tanımaktadır. Günümüzde e-ticaret ve influencer pazarlamasının giderek yaygınlaşması da bu etik soruna zemin hazırlamaktadır. Yapay zekâ uygulamaları bireyleri yanıltabilen ve hatta manipüle edebilen sahte ürün incelemeleri gibi aldatıcı içerikler oluşturmak için kullanılabilir. Bu durum da bilgi kaynaklarına olan güveni zedelemekte ve bireylerin karşılaştıkları şeylerin gerçekliğini sorgulamalarına sebep olmaktadır (McDermid vd., 2021).

Şeffaflık ve hesap verilebilirlik özellikle pazarlama alanında yapay zekâ kullanımının ortaya çıkardığı etik endişelerin başında gelmektedir (Bird vd., 2020). Şeffaflık bir yapay zekâ sisteminin kararları nasıl aldığını anlatma ve açıklama beceresini ifade etmektedir. Hesap verilebilirlik ise bireylerin veya kuruluşların yapay zekâ uygulamalarının sonuçlarından sorumlu tutulabilmesini ifade etmektedir. Pazarlamada şeffaflık tüketicilerde güven oluşturma ve uzun dönemde tüketici sadakatini kazanma konusunda oldukça önemlidir. Yapay zekâ sistemleri tüketiciler için önerileri kişiselleştirmekte, reklamları hedeflemekte ve fiyat belirlemektedir. Tüm bu kararlar alınırken hangi verilerin kullanıldığı, algoritmaların nasıl tasarlandığı ve yapay zekâ çıktılarını tam olarak hangi faktörlerin etkilediğinin tüketicilere tüm şeffaflığıyla açıklanması gerekmektedir (Bird vd., 2020). Hesap verilebilirlik ise her türlü yapay zekâ uygulamasının sonucundan sorumlu olmak anlamına gelmesi sebebiyle ciddi bir etik endişe olarak görülmektedir (Dignum vd., 2018). Bir yapay zekâ sisteminin belirli bir gruba karşı ayrımcılık yaptığı ya da yanlış bilgi yaydığı takdirde bu etik ihlali durumun kimin sorumluluğunda olduğunun tespit edilmesi ve sorumluların hesap verilir tutulması oldukça önemlidir (Caplan vd., 2018).

Yapay zekâ algoritmalarının karmaşıklığı ve sınırları belli düzenleyicilerin olmaması sebebiyle yapay zekâda şeffaflık ve hesap verilebilirlik endişesini tamamen yok etmek zor görünmektedir. Bu zorluklardan yola çıkarak araştırmacılar ve yapay zekâ algoritma geliştiriciler yapay zekâ karar alma süreçlerini daha şeffaf ve anlaşılır hale getirmeyi amaçlayan yapay zekâ teknikleri

ve yöntemleri üzerine çalışmaları gerekmektedir. Buna ek olarak politika yapıcılar özellikle toplum için yüksek risk grubundan olan alanlarda kullanılan yapay zekâ sistemleri için hesap verilebilirliği artırıcı yollar araştırmalıdır. Pazarlamada yapay zekâ kullanımında ortaya çıkan etik endişelerden en ciddi ve üzerinde çalışılması gereken konu şeffaflık ve hesap verilebilirlik olarak görülmektedir.

SONUÇ

Pazarlamada yapay zekâ kullanımının etik boyutuna odaklanan bu çalışmada yapay zekâ kullanımını sırasında ortaya çıkan etik ikilemler ele alınmıştır. Literatür taraması ve güncel örnekler aracılığıyla yapay zekânın pazarlama alanında nasıl kullanıldığı, beraberinde hangi etik ikilemleri getirdiği ve bu ikilemlerin neden önem arz ettiği detaylı bir şekilde ele alınmıştır. Gün geçtikçe dijitalleşen dünyamızda hemen hemen her alanda yapay zekâ uygulamalarından faydalanılmaktadır. Özellikle pazarlama alanında hizmet veren işletmeler için tüketici memnuniyeti sağlamak ve tüketici ile ilişkisinde devamlılık sağlamak oldukça önemlidir. Bu noktada yapay zekâ uygulamaları işletmelerin elini oldukça kuvvetlendirmektedir. Ancak çalışmada bahsedildiği gibi yapay zekânın sağladığı faydaların yanı sıra bazı etik endişeleri de bulunmaktadır. Yapay zekâ destekli araçlar, tüketiciler için kişiselleştirilmiş deneyimler, hedefli reklamlar ve optimize edilmiş fiyatlandırma stratejileri sunmak adına çok büyük miktarda tüketici verisini analiz edebilmektedir. Yapay zekâyla ilgili etik ikilemler tam da bu noktada gündeme gelmektedir. Yapay zekânın büyük verileri analiz edebilme yeteneği aynı zamanda veri gizliliği ve güvenliği, algoritmik önyargı ve ayrımcılık, manipülasyon ve aldatma ve şeffaflık ve hesap verilebilirlik konusunda bir takım endişeleri barındırmaktadır. Ele alınan bu etik ikilemlerden şüphesiz ki en kritik olanı veri gizliliği ve güvenliğidir. Yapay zekânın ulaşabildiği herhangi bir alanda verisi bulunan tüketicinin bilgileri izinsiz bir şekilde toplanmakta ve analiz edilmektedir. Bu durum her ne kadar tüketici için faydalı olsa da verilerinin kötüye kullanılmayacağına garantisinin tüketiciye verilmesi gerekmektedir. Bir diğer önemli ikilem ise algoritmik önyargı ve ayrımcılık konusudur. Yapay zekâ algoritmalarının toplumda var olan önyargıları sürdürme ve güçlendirme eğiliminde olabileceği ve bunun tüketicilere sunulan reklamlarda, fiyatlandırmada, ürün ve hizmetlerde ayrımcılığa yol açabileceği belirtilmiştir. Tüketicileri memnun etmenin ve sadakatlerini kazanmanın giderek zorlaştığı günümüz koşullarında güven kavramını önemini korumaktadır. Yapay zekâ uygulamalarının pazarlamada kullanılması güven noktasında da etik bir ikilem meydana getirmektedir. Manipülasyon ve aldatma konusundaki etik ikilemde yapay zekâ araçlarının tüketicileri etkilemek ve satın alma kararlarına yön vermek amacıyla kullanılabilmesi ve bunun tüketicilerin güveninin zedeleme potansiyeli taşıdığı ifade edilmiştir. Tüketicilerin verilerini depolayan ve analiz eden yapay zekâ araçları tüketiciler hakkında tahmin edilemeyecek kadar bilgiye sahiptir. Bu durumda yapay zekâ araçlarının eline işletme adına tüketicilere karşı kuvvetlendirmektedir. Son olarak şeffaflık ve hesap verilebilirlik noktasında ise tüketicilerin kendi verilerinin nasıl kaydedildiği ve analiz edildiği hakkında detaylı bilgi sahibi olmamasından doğan bir endişe bulunmaktadır. Bu durum tüketici adına yapay zekâ uygulamaları tarafından alınan kararlara etkili bir biçimde itiraz etmeyi zorlaştırmaktadır.

Çalışmada pazarlamada yapay zekâ kullanımından kaynaklanan etik ikilemlerin ele alınmasının çok yönlü bir yaklaşım gerektirdiği vurgulanmıştır. Tüketici memnuniyeti ve sadakati sağlamak ve hatta yapay zekâ kullanımından en üst verimi almak için işletmelerin stratejik davranmaları gerekmektedir. Veri gizliliği ve güvenliği politikalarının geliştirilmesi oldukça önem arz etmektedir. İşletmeler bu konuda politika geliştirmeli ve tüketiciyle paylaşmalıdır. Bir başka stratejik önlem ise algoritmik önyargı ve ayrımcılığın önüne geçmek için çalışmaktır. İşletmeler tarafından algoritma önyargı ve ayrımcılığın tespiti ve azaltılması için çalışmalar yapılması, manipülasyon ve aldatma amaçlı yapay zekâ uygulamalarından kaçınılması, şeffaflık ve hesap verebilirliği artırıcı önlemler alınması gerekmektedir.

Özetle yapay zekâ teknolojilerinin pazarlama alanında kullanımı muazzam bir potansiyele sahiptir. Ancak beraberinde getirdiği etik boyutların da dikkate alınması büyük önem taşımaktadır. Yapay zekâ teknolojilerinden yararlanan işletmelerin tüketici güvenini korumak ve yapay zekâ teknolojilerinin toplumsal kabulünü sağlamak için bu noktaya dikkat etmeleri gerekmektedir. İşletmeler yapay zekâ uygulamalarını geliştirme sürecinde ve sonrasında uygulama aşamasında etik ilkelere bağlı kalmaları beklenmektedir. Bu çalışma pazarlamada yapay zekâ etiği konusunda farkındalığı arttırmayı ve işletmelere etik ikilemleri göz ardı etmemeleri konusunda rehberlik etmeyi amaçlamaktadır. Ancak yapay zekâ etiği çok geniş ve disiplinler arası bir araştırma alanıdır. Bu alandaki tüm olası konuları tek bir bildiri altında ele almak imkânsıza yakındır. Bu çalışmanın yapay zekâda etik konusuyla ilgilenen kişiler ve işletmeler için yeterli bir arka plan ve kuşbakışı bir bakış açısı edinmelerine yardımcı olacak bir başlangıç noktası olmasını ve böylece daha fazla araştırma yapılmasını umuyorum.

EXAMINATION OF PVT-BASED LOW TEMPERATURE RANKINE CYCLE USING SUPERCRITICAL WORKING FLUIDS FOR LNG COLD ENERGY RECOVERY

Gamze Soy Turk*, Onder Kizilkan

Department of Mechanical Engineering, Faculty of Technology, Isparta University of Applied Sciences, Turkey

ABSTRACT

This study investigates the performance of a Photovoltaic-Thermal (PVT) based Rankine cycle (RC) system integrated with Liquefied Natural Gas (LNG) regasification, focusing on the effects of different working fluids on energy and exergy efficiencies. A comprehensive analysis was conducted using various system parameters to evaluate thermal and power generation performance. The results demonstrate that CH₃F achieves the highest PVT power generation at 2.35 kW while maintaining a lower PVT cell temperature of 51.1°C, making it ideal for maximizing energy output. SF₆, despite having the highest exergy efficiency of 13.9%, leads to elevated PVT cell temperatures of 62.8°C, which could impact system durability. CO₂ and N₂O show balanced performance with moderate energy efficiencies of 10.7% and 11.2%, respectively. The RC net power analysis highlights that CH₃F delivers the highest power output at 7.35 kW, whereas SF₆ experiences the lowest exergy destruction at 59.6 kW. The study also reveals a decline in collector thermal efficiency with increasing solar radiation, underscoring the need for effective thermal management. The findings emphasize the importance of selecting appropriate working fluids and optimizing system parameters to achieve a balance between efficiency and power output. This research provides insights into enhancing PVT-based Rankine cycle systems, suggesting future exploration of advanced thermal management techniques and alternative working fluids for improved performance.

Keywords: PVT, Rankine cycle, LNG, Energy, Exergy.

INTRODUCTION

The integration of renewable energy systems with waste energy recovery processes has gained significant attention in recent years, driven by the dual challenges of energy demand and environmental sustainability. Among hybrid energy configurations, the combination of PVT systems with Rankine cycles, particularly in conjunction with LNG regasification cold energy, has shown substantial promise. This approach leverages the strengths of solar and thermal energy while capitalizing on the otherwise wasted cold energy from LNG regasification, leading to higher energy efficiency and reduced emissions. PVT systems, which simultaneously generate electrical and thermal energy from solar radiation, are more efficient than standalone photovoltaic systems (Kalogirou, 2001). Research has shown that integrating PVT systems with thermodynamic cycles such as the Rankine cycle can capture excess heat and improve energy output. Truchon et al. (2019) conducted an extensive analysis of working fluids in Rankine cycles specifically designed for LNG regasification. They developed a model to identify optimal fluids that maximize specific work output in the system. Their research concluded that ethylene was the best-performing fluid under various temperature and pressure conditions, making it a promising candidate for maximizing power generation efficiency from LNG regasification. This study provides a foundational understanding of the impact of fluid selection on the effectiveness of energy recovery from LNG processes. Rejeb et al. (2022) proposed an

innovative solar-powered PVT-based polygeneration system to produce hydrogen, oxygen, electricity, and heat simultaneously. By applying a multi-objective optimization framework, they balanced exergy efficiency and economic costs, achieving a system configuration with an optimal 16.24% exergy efficiency and a cost rate of 4.48 \$/hr. This study highlights the feasibility of multi-generation systems using renewable energy sources, emphasizing cost-effective and efficient hydrogen production.

Fioriti et al. (2021) developed a model for LNG regasification in port energy communities, integrating LNG with transcritical CO₂ and direct expansion cycles. Their study aimed to maximize electricity production and economic feasibility. By optimizing the size of gas turbines and regasification units, they found that the scale of components directly influences the system's economic viability, and an optimally sized system could lead to substantial returns on investment. This approach demonstrates the economic and energy potential of integrating LNG regasification with energy production in port facilities. Tourkov and Schaefer (2015) explored a PVT-ORC system configuration with a focus on optimizing working fluids and PV materials. They discovered that using an internal heat exchanger, along with alkanes as working fluids, notably increased the system's efficiency. This study illustrates how the combination of PVT and ORC systems can be optimized for enhanced solar and thermal energy generation, offering a practical approach to sustainable power production with increased operational efficiency. Bao et al. (2019) introduced a double-pressure condensation Rankine cycle coupled with a proton exchange membrane (PEM) electrolyzer for hydrogen production. Their research showed that higher seawater temperatures positively influenced power output and hydrogen production rates, suggesting that LNG cold energy could be effectively used to generate hydrogen. The double-pressure cycle helped manage temperature differentials more efficiently, enhancing both the thermodynamic and economic feasibility of hydrogen production systems integrated with LNG cold energy. Tjahjono et al. (2021) conducted a thermo-economic analysis of a hybrid system that combined CO₂ and Organic Rankine Cycles (ORC) for LNG-based power generation. This integrated system produced electricity, hydrogen, and potable water, achieving a payback period of 7.9 years. Their findings highlight that such multi-output systems can be economically viable and promote efficient energy use by leveraging LNG's inherent thermal properties for diverse energy applications. Mondejar et al. (2018) reviewed the use of ORC systems for waste heat recovery in maritime applications. They found that ORCs could lead to fuel savings of up to 15% and substantial emissions reductions when used onboard ships. However, the study also noted challenges related to integrating ORCs into maritime engines, particularly concerning space constraints and maintenance demands, underscoring the need for custom ORC designs for maritime use.

Soyturk and Kizilkan (2024) developed a multi-generation system combining Ocean Thermal Energy Conversion (OTEC) with a PVT-based ORC, using LNG cold energy recovery. Their design achieved high energy and exergy efficiencies, producing hydrogen and distilled water sustainably. This study demonstrates the potential of combining OTEC with LNG cold energy to develop multi-output systems capable of achieving significant renewable energy efficiencies and carbon reduction targets. Mosaffa et al. (2017) investigated the potential for enhanced efficiency in ORC-LNG systems through internal heat exchangers. Their study showed that using an internal heat exchanger in an ORC cycle improved heat transfer rates and energy efficiency significantly, proving the value of advanced heat exchanger designs in ORC-LNG integrations. Sarr and Mathieu-Potvin (2016) analyzed Rankine cycles cooled by refrigeration, examining combinations of working fluids and cooling fluids to identify efficient configurations. Their findings revealed substantial performance gains in Rankine cycles when optimized fluid pairs were used, which can serve as a basis for improving LNG-cooled Rankine

cycle systems. Lee and Han (2014) demonstrated that combining LNG with waste heat could double power generation when compared to conventional steam cycles. Their research emphasized the efficiency benefits of utilizing LNG cold energy in combination with other heat sources, showcasing the potential for LNG cold energy to boost output across various thermodynamic cycles. Peng et al. (2022) examined an advanced OTEC system using non-azeotropic fluid mixtures and found that regenerative cycles significantly improved energy conversion efficiency. This study points to the benefits of fluid selection and cycle configuration in maximizing the output of OTEC systems integrated with LNG. Calise et al. (2017) used TRNSYS to simulate a Concentrated Photovoltaic/Thermal (CPV/T) integrated with an ORC system, which achieved a 6% increase in electricity generation compared to a CPV system without ORC. This study provides insights into the advantages of combining CPV/T with ORC technology for increased energy generation from solar sources. Nafchi et al. (2018) explored high-temperature PEM electrolyzers integrated with Concentrated Solar Power (CSP) for hydrogen production, achieving an efficiency of 20.1%. Their work highlights the potential for using solar energy to enhance hydrogen production rates, demonstrating a feasible approach for integrating solar-driven electrolyzers with other renewable sources.

While considerable progress has been made in understanding the performance of these hybrid systems, there remains a need for a comprehensive analysis of PVT based Rankine cycle systems that utilize supercritical working fluids in combination with LNG cold energy recovery. Such an analysis would provide deeper insights into how different working fluids affect system performance, including energy and exergy efficiencies, power generation, and overall thermal management. Addressing these aspects is crucial for optimizing the design of hybrid energy systems and enabling more efficient and sustainable energy solutions.

This study aims to evaluate the performance of a PVT-based low-temperature Rankine cycle system integrated with LNG regasification. The research focuses on analyzing how various supercritical working fluids—such as CO_2 , CH_3F , SF_6 , N_2O , and C_2HF_5 —impact system efficiency, power generation, and thermal management under varying solar radiation conditions. By providing a detailed performance assessment, this research seeks to contribute to the development of optimized hybrid renewable energy systems, offering insights that could guide future advancements in sustainable energy production.

SYSTEM DESCRIPTION

Fig.1 shows the schematic diagram of the integrated system consisting of Photovoltaic-Thermal (PVT) panels, Rankine cycle, and Liquefied Natural Gas (LNG). The system presented in this study integrates a PVT array with a low-temperature Rankine Cycle for the efficient recovery of cold energy from LNG regasification. The primary objective of this hybrid system is to optimize energy efficiency by combining renewable energy from solar power with the utilization of cold energy produced during the LNG regasification process. The PVT array generates both electrical and thermal energy. The thermal energy is supplied to the working fluid in the Rankine cycle. The working fluid is first pressurized by a pump, after which it is heated by the thermal output of the PVT system. As the working fluid absorbs heat, it turns into vapor and flows to the turbine. The vapor expands through the turbine, generating mechanical work, which is converted into electricity. This phase captures solar energy and transforms it into useful electrical energy using the Rankine cycle. Once the working fluid exits the turbine, it enters the condenser, which cools and condenses it back into a liquid state. The cooling process in the condenser is assisted by the regasification of LNG. In this process, LNG is pumped from its storage by the LNG pump and then vaporized as it transitions from its

extremely cold liquid state to a gas. This cold energy, which is typically lost during LNG regasification, is harnessed to efficiently cool the working fluid in the condenser. After regasification, the LNG is directed into the city pipeline for distribution and use as natural gas. The recovered cold energy enhances the Rankine cycle's performance, making the system more energy-efficient. This system optimally integrates renewable solar energy with the waste cold energy from LNG, making it a highly efficient process for power generation and resource utilization. The use of the Rankine cycle in combination with LNG cold energy recovery provides a novel approach to both increasing renewable energy efficiency and improving LNG regasification operations, contributing to a more sustainable and efficient energy solution.

Fig.1. Integration of a PVT-Based Rankine Cycle System with LNG Regasification for Enhanced Energy Recovery

RESULTS

The purpose of this study is to evaluate the performance of a PVT-based Rankine cycle system by examining the effects of different working fluids on energy and exergy efficiencies. In this study, extensive simulations and analyses were conducted using EES software to determine how various parameters affect the system's efficiency and thermal performance. Parametric studies were also carried out to investigate the effects of solar radiation on the system performance.

Tablo 1. Design parameters for PVT Based Rankine Cycle System

Parameter	Value
Reference temperature	20°C
Reference pressure	101.325 kPa
Solar Irradiance	850 W/m ²
PVT	
Number of PVT collectors	20
Number of pipes	10
PVT length	1.649 m
PVT width per pipe	0.0992 m
Packing factor	0.9
PVT total surface area	1.649 m ²

PVT cell area	1.4841 m ²
External Pipe Diameter	0.008 m
Internal Pipe Diameter	0.006 m
Absorptivity	0.85
Transmissivity	0.9
Emissivity	0.88
Reference Efficiency	0.143
Temperature Coefficient	0.0045 1/K
Bond Thermal Conductivity	250 W/mK
Bond Thickness	0.05 m
Bond Width	0.01 m
Absorber Effective Thermal Conductivity	187.1 W/mK
Absorber Thickness	0.0065 m
Bond Conductance	5000 W/mK
Conductance per Unit Length	303.5 W/m ² K
Back Insulation Conductivity	0.04 W/mK
Back Insulation Thickness	0.03 m
Glass Cover Thickness	0.003 m
Solar Panel Thickness	300×10 ⁻⁶ m
Tedlar Thickness	0.0005 m
Insulation Thickness	0.05 m
Glass Conductivity	1 W/mK
Solar Panel Conductivity	0.036 W/mK
Tedlar Conductivity	0.033 W/mK
Insulation Conductivity	0.035 W/mK
Mass Flow Rate per PVT	0.007 kg/s
Pump Isentropic Efficiency	0.90
Turbine Isentropic Efficiency	0.88
LNG Pump Efficiency	0.9
LNG Turbine Power	3000 kW
House LNG Power	300 kW
Condenser temperature	-5.5 °C
Evaporator temperature	30 °C

The bar charts in Fig.2 show the net power generation and exergy destruction for different working fluids used in the RC cycle. CO₂ generates 5.69 kW of net power, which is a moderate level of power generation in comparison to other fluids. CO₂ also shows significant exergy destruction at 120 kW, indicating a high level of energy loss due to inefficiencies in the system. CH₃F exhibits the highest net power generation at 7.35 kW, which suggests it is the most effective working fluid for maximizing electricity production in this system. However, it also experiences the highest exergy destruction, at 159.5 kW, indicating that although it produces the most power, it has the most significant energy loss due to inefficiency. SF₆ produces only 2.38 kW of net power, making it the least effective fluid for power generation. SF₆ has the lowest exergy destruction, at 59.6 kW, indicating lower energy loss and higher overall efficiency, although it sacrifices power generation. N₂O generates 5.67 kW of net power, which is close to the output of CO₂. Exergy destruction is relatively high, at 120.2 kW, similar to CO₂, suggesting moderate inefficiencies in energy recovery. C₂HF₅ generates 3.47 kW of net power, lower than most fluids except SF₆. C₂HF₅ experiences 81.5 kW of exergy destruction, indicating a relatively efficient cycle compared to the others, with moderate energy loss. In summary, as can be seen from the graph, CH₃F produces the highest power output but comes with the highest

energy loss, making it suitable for systems where maximizing electrical output is a priority. In contrast, SF₆ has the lowest exergy destruction but produces very little power, making it more suitable for systems that focus on energy efficiency rather than output.

Fig.2. Comparison of RC Net Power Generation and Exergy Destruction for Different Working Fluids

Fig.3 presents the overall energy efficiency and overall exergy efficiency for different working fluids used in the system. SF₆ demonstrates the highest overall energy efficiency at 13.2%, indicating that this working fluid performs the best in terms of converting thermal energy into useful work. This suggests that SF₆ maximizes the system's ability to generate electricity from the combined thermal energy from the PVT array and the cold energy recovery from LNG. C₂HF₅ shows the second-highest energy efficiency at 11.9%, also performing well in terms of energy recovery, making it a strong candidate for energy optimization in the system. CO₂ and N₂O working fluids exhibit a moderate energy efficiency of 10.7%, which suggests they can perform reasonably well in the system but may not be as efficient as SF₆ or C₂HF₅. CH₃F, with the lowest energy efficiency of 9.8%, this fluid does not perform as effectively in converting thermal energy into work compared to other options, which may limit its effectiveness in this system configuration. SF₆ continues to lead in terms of overall exergy efficiency at 13.9%, which shows that it not only maximizes energy output but also minimizes the irreversibility (or exergy destruction) in the system. This confirms that SF₆ is the most efficient fluid in terms of both energy conversion and thermodynamic performance. Following closely behind, C₂HF₅ exhibits a high exergy efficiency of 12.5%, indicating that it performs well in maintaining the thermodynamic efficiency of the Rankine cycle. CO₂ and N₂O fluids show moderate exergy efficiencies of 11.3% and 11.2%, respectively, suggesting they have reasonable thermodynamic performance in the system but not as optimal as SF₆ or C₂HF₅. CH₃F, with the lowest exergy efficiency at 10.3%, CH₃F again shows lower performance, implying that there are higher thermodynamic losses when using this working fluid.

Fig.3. Comparison of Overall Energy Efficiency and Exergy Efficiency for Different Working Fluids

Fig.4 shows two important system parameters for different working agents: PVT power generation and PVT cell temperature for different working fluids. The left graph shows the electrical power output from the PVT array for different working fluids in the Rankine cycle. CH₃F generates the highest electrical power, at 2.35 kW. This suggests that CH₃F is the most effective working fluid in terms of facilitating better heat transfer from the PVT array to the Rankine cycle, enhancing electrical power generation. N₂O and C₂HF₅ have nearly identical power generation, around 2.29 kW and 2.27 kW, respectively. These fluids also perform well in terms of energy conversion, although slightly lower than CH₃F. CO₂ generates 2.28 kW, which is slightly lower than CH₃F but still competitive. SF₆ has the lowest PVT power generation, at 2.21 kW, indicating that it is the least effective in enhancing electrical power generation among the fluids considered. The right graph shows the operating temperature of the PVT cells for each working fluid. SF₆ has the highest PVT cell temperature, at 62.8°C. A higher PVT cell temperature can lead to reduced electrical efficiency due to overheating, which may explain the lower power output for SF₆ in the left graph. SF₆'s high temperature indicates that it absorbs less heat from the PVT array, leaving more heat in the PVT cells. CH₃F has the lowest PVT cell temperature, at 51.1°C, which corresponds to its highest power generation in the left graph. Lower cell temperature indicates more efficient heat extraction from the PVT array to drive the Rankine cycle, resulting in improved electrical output. CO₂, N₂O, and C₂HF₅ have similar PVT cell temperatures, ranging from 56.0°C to 57.7°C, which is moderate compared to the extremes shown by SF₆ and CH₃F. These fluids show balanced performance between electrical power generation and thermal management.

Fig.4. Comparison of PVT Power Generation and PVT Cell Temperature for Different Working Fluids

Fig.5 shows the relationship between solar radiation and RC power generation for different working fluids. According to the figure, CH₃F has the highest power generation across all levels of solar radiation. Starting from around 6 kW at 550 W/m², its power output increases steadily with solar radiation, reaching approximately 8 kW at 1000 W/m². This indicates that CH₃F is the most effective working fluid for maximizing power output in this configuration. N₂O and CO₂ follow similar trends, with moderate power generation. Both working fluids exhibit a linear increase in power output as solar radiation intensifies, with values starting near 4 kW at lower solar radiation levels and rising to about 5.5 kW at 1000 W/m². This suggests that both N₂O and CO₂ are relatively efficient and have similar performance characteristics within this range. C₂HF₅ generates slightly lower power compared to N₂O and CO₂, maintaining a steady increase as solar radiation increases. Its power generation starts around 3 kW at 550 W/m² and reaches just under 4 kW at the maximum solar radiation. This implies that while C₂HF₅ is less efficient than CH₃F, N₂O, and CO₂, it is still a viable option with stable performance. SF₆ consistently shows the lowest power generation among all working fluids, starting below 2 kW at 550 W/m² and reaching only around 2.5 kW at the maximum solar radiation. This suggests that SF₆ is the least effective working fluid in terms of power generation in this configuration.

Fig.5. Variation of RC power generation with solar radiation for different working fluids

Fig.6. illustrates the exergy destruction in the RC for different working fluids as a function of solar radiation. Exergy destruction represents the inefficiencies within the system, with higher values indicating greater energy losses. CH₃F exhibits the highest exergy destruction across all levels of solar radiation, starting around 140 kW at 550 W/m² and increasing to approximately 180 kW at 1000 W/m². This suggests that while CH₃F may have high power generation potential (as indicated in the previous graph), it also leads to the highest inefficiencies and energy losses within the system. N₂O and CO₂ show moderate exergy destruction. Both fluids follow a similar trend, starting near 110 kW at lower solar radiation levels and rising to about 140 kW as solar radiation reaches 1000 W/m². These fluids appear to have a balance between energy efficiency and exergy destruction, indicating moderate system inefficiencies. C₂HF₅ displays a lower level of exergy destruction compared to CH₃F, N₂O, and CO₂. Its exergy destruction starts around 70 kW at 550 W/m² and reaches just below 90 kW at 1000 W/m². This suggests that C₂HF₅ is relatively more efficient, with lower energy losses across the range of solar radiation. SF₆ consistently has the lowest exergy destruction among the working fluids, starting near 45 kW at the lowest solar radiation and increasing to around 60 kW at the highest solar radiation level. This indicates that SF₆ has the least amount of energy loss, making it the most efficient fluid in terms of minimizing exergy destruction, although it may not provide the highest power generation.

Fig.6. Variation of RC exergy destruction with solar radiation for different working fluids

Fig 7. shows how PVT power generation varies with solar radiation levels for different working fluids in the system depicted in Fig.1. As solar radiation increases, there is a consistent and linear rise in power generation across all working fluids, demonstrating the direct relationship between solar energy input and the system's electrical output. CH₃F stands out as the most effective working fluid, producing the highest power output at every solar radiation level. Starting at approximately 1.6 kW at 550 W/m², CH₃F reaches close to 2.6 kW at 1000 W/m², indicating its superior performance in energy conversion. CO₂, N₂O, and C₂HF₅ deliver very similar results, with power outputs slightly below that of CH₃F, generating around 2.5 kW at the highest solar radiation level. These fluids are efficient but not as optimal as CH₃F. On the other hand, SF₆ consistently yields the lowest power generation, starting from around 1.5 kW at 550 W/m² and reaching just under 2.2 kW at 1000 W/m². This indicates that SF₆ is the least efficient working fluid, likely due to its less effective heat transfer characteristics, which limit the system's overall performance.

Fig.7. Variation of PVT power generation with solar radiation for different working fluids

Fig.8. represents the overall energy efficiency of the system for different working fluids in relation to varying levels of solar radiation, ranging from 550 W/m² to 1000 W/m². The graph shows a general upward trend for all working fluids, indicating that energy efficiency improves as solar radiation increases. However, there are notable differences in performance among the working fluids. SF₆ consistently achieves the highest overall energy efficiency, starting at approximately 12% at 550 W/m² and rising to nearly 13.5% at 1000 W/m². This suggests that SF₆ is the most effective working fluid in converting solar energy into useful work, making it the most efficient option for the system. C₂HF₅ follows closely behind, starting at around 11% and reaching about 12.5% at the highest level of solar radiation. This fluid also demonstrates strong performance, maintaining a relatively high efficiency across the range of solar radiation levels. N₂O and CO₂ show moderate energy efficiency, with values starting just above 9% and increasing to around 11% as solar radiation increases. These fluids have similar efficiency curves, indicating that they perform well but are not as efficient as SF₆ or C₂HF₅. CH₃F exhibits the lowest overall energy efficiency, beginning at just under 9% and reaching slightly above 10% at the highest solar radiation level. This indicates that CH₃F is the least efficient working fluid for energy conversion in this system.

Fig.8. Variation of overall energy efficiency with solar radiation for different working fluids

Fig.9 represents the overall exergy efficiency of the system for various working fluids as a function of solar radiation, which ranges from 550 W/m² to 1000 W/m². The graph demonstrates a clear upward trend for all working fluids, indicating that exergy efficiency improves with increasing solar radiation. SF₆ shows the highest overall exergy efficiency, starting at approximately 13% at 550 W/m² and rising to nearly 14.5% at 1000 W/m². This suggests that SF₆ is the most effective fluid for minimizing energy losses and maximizing useful work output, making it the optimal choice for efficiency in this system. C₂HF₅ comes next, with an exergy efficiency starting at about 12% and reaching approximately 13% at the highest solar radiation level. This fluid also performs well, providing high exergy efficiency throughout the range of solar radiation values. N₂O and CO₂ exhibit moderate exergy efficiencies, beginning just below 10% and increasing to around 11% as solar radiation intensifies. These fluids demonstrate similar performance and offer a reasonable balance between efficiency and energy loss. CH₃F has the lowest overall exergy efficiency, starting slightly above 9% and climbing to just under 10% at 1000 W/m². This indicates that CH₃F is the least efficient working fluid for exergy recovery, with higher energy losses compared to the other fluids.

Fig.9. Variation of overall exergy efficiency with solar radiation for different working fluids

Fig.10 indicates the collector thermal efficiency of the system for different working fluids as a function of solar radiation, ranging from 550 W/m² to 1000 W/m². The general trend shows a decline in collector thermal efficiency as solar radiation increases for all working fluids, indicating that higher solar radiation levels reduce the efficiency of the thermal energy collection process. CH₃F exhibits the highest collector thermal efficiency across the range, starting at around 56% at 550 W/m² and gradually decreasing to approximately 54% at 1000 W/m². This indicates that CH₃F is the most effective working fluid in terms of thermal energy collection efficiency, even as solar radiation intensifies. N₂O and CO₂ show very similar performance, with collector thermal efficiency beginning at around 52% and dropping to approximately 50% as solar radiation increases. These fluids maintain relatively high thermal efficiency but are slightly less efficient than CH₃F. C₂HF₅ has a moderate collector thermal efficiency, starting at about 50% at 550 W/m² and decreasing to around 48% at 1000 W/m². This fluid provides a balance between thermal performance and energy losses, but it is not as efficient as CH₃F, N₂O, or CO₂. SF₆ demonstrates the lowest collector thermal efficiency, beginning at approximately 48% and declining to 44% as solar radiation increases. This indicates that SF₆ is the least effective working fluid for thermal energy collection, resulting in higher energy losses as solar radiation levels rise.

Fig.10. Variation of collector thermal efficiency with solar radiation for different working fluids

Fig.11 depicts the PVT cell temperature as a function of solar radiation for various working fluids, with solar radiation ranging from 550 W/m² to 1000 W/m². As solar radiation increases, the PVT cell temperature also rises for all working fluids, demonstrating a clear positive correlation between solar intensity and cell temperature. SF₆ consistently results in the highest PVT cell temperatures. Starting from approximately 45°C at 550 W/m², it increases to about 72°C at 1000 W/m². This indicates that SF₆ is less effective in transferring heat away from the PVT cells, causing a higher accumulation of thermal energy and, consequently, higher cell temperatures. C₂HF₅ and N₂O yield similar PVT cell temperatures, which are moderately high compared to the other working fluids. Their temperatures start around 40°C to 42°C at 550 W/m² and rise to about 65°C to 67°C at 1000 W/m², indicating they provide average heat transfer performance. CO₂ shows slightly lower PVT cell temperatures compared to C₂HF₅ and N₂O. The temperatures range from 40°C at the lowest solar radiation level and increase to around 65°C at the highest level, suggesting that CO₂ performs better in maintaining lower cell temperatures than SF₆ but not as efficiently as CH₃F. CH₃F results in the lowest PVT cell temperatures, starting around 38°C at 550 W/m² and increasing to about 60°C at 1000 W/m². This indicates that CH₃F is the most effective fluid for transferring heat away from the PVT cells, helping to maintain lower operating temperatures and potentially improving electrical efficiency.

Fig.11. Variation of PVT cell temperature with solar radiation for different working fluids

CONCLUSIONS

In this study, the performance of a PVT-based Rankine cycle system integrated with LNG regasification was analyzed by examining the impact of different working fluids and system parameters on overall energy and exergy efficiencies. The findings reveal that the choice of working fluid significantly influences system efficiency, thermal performance, and power generation capabilities.

The results indicate that CH₃F provides the highest PVT power generation, reaching 2.35 kW, while maintaining a relatively lower PVT cell temperature of 51.1°C. This makes CH₃F an effective option for maximizing energy output. In contrast, SF₆ exhibited the highest exergy efficiency of 13.9% but led to elevated PVT cell temperatures, peaking at 62.8°C, which could potentially affect system longevity and performance. CO₂ and N₂O demonstrated balanced performance, with energy efficiencies of 10.7% and 11.2% and exergy efficiencies of 11.3% and 11.2%, respectively, while maintaining moderate PVT cell temperatures of around 57.0°C and 56.0°C. C₂HF₅ provided consistent thermal stability with a PVT cell temperature of 57.7°C and a respectable exergy efficiency of 12.5%. The analysis of RC net power generation revealed that CH₃F achieved the highest power output of 7.35 kW, whereas SF₆ had the lowest power output of 2.38 kW. However, SF₆ had the least exergy destruction at 59.6 kW, compared to CH₃F, which experienced the highest exergy destruction at 159.5 kW. These results emphasize the trade-off between power generation and energy loss through exergy destruction. The thermal efficiency of the collector was observed to decrease with increasing solar radiation, highlighting the need for optimized thermal management strategies to enhance energy capture. Additionally, the analysis of PVT cell temperatures across different working fluids emphasizes the importance of effective heat transfer mechanisms to prevent overheating and maintain overall system efficiency.

Overall, the study underscores the critical role of selecting appropriate working fluids and optimizing system parameters to achieve a balance between energy efficiency, thermal performance, and power generation. Future work may explore the integration of advanced thermal management techniques and the use of alternative working fluids to further improve the performance of PVT-based Rankine cycle systems.

ABSTRACT

Nauclea latifolia is used in ethnomedicine for the treatment of typhoid fever and other infections. This study was aimed at investigating the anti-salmonella activity of the ethyl acetate leaf fraction of *N. latifolia* against clinical isolates of *Salmonella enterica* Typhi. Cold maceration method was used to obtain ethanol extract from 200 g of *N. latifolia* fine powdered leaf sample using 1000 mL sterile conical flask for 72 hours. Fractionation of the ethanolic crude extract (19.8g) of *N. latifolia* leaf was performed with ethyl acetate (1500ml) and n-hexane using a Soxhlet apparatus. Agar well diffusion method was used to determine the anti-salmonella activity of the fraction on the isolates with the following concentrations: 40 mg/ml, 80 mg/ml, 120 mg/ml, 160 mg/ml, and 200 mg/ml. The result of the qualitative phytochemical analysis showed that ethyl acetate fraction of *N. latifolia* leaf contains saponins, tannins, flavonoids, alkaloids, terpenoids, steroids, and phenols while glycosides were absent. The ethyl acetate leaf fraction of *N. latifolia* was active on *Salmonella enterica* Typhi in all the concentrations used. The diameter of the zones of inhibition ranged from 8.00 ± 0.67 mm to 11.00 ± 0.53 mm. The Minimum Inhibitory Concentration (MIC) of ethyl acetate fraction of *N. latifolia* against *Salmonella* Typhi was 6.25 ± 0.18 mg/ml while the Minimum Bactericidal Concentration (MBC) was 12.50 ± 0.11 mg/ml. It could be concluded that *N. latifolia* leaf has antibacterial activity on *Salmonella enterica* Typhi and may be used in the production of drugs against infections associated with the pathogen. Further tests should be carried out to determine the toxicological profile of the leaf.

Keywords: Typhoid fever, *Salmonella enterica* Typhi, *Nauclea latifolia*, Ethyl acetate fraction, Anti-salmonella.

INTRODUCTION

Typhoid fever is an infection that affects people of all ages. It is severe occasionally. It has an incidence rate of 12.5 million globally with children mostly affected. *Salmonella enterica* serovar Typhi, a gram-negative bacterium, is the causative agent and it spreads through faecal contamination of food and water supplies (Adeyi *et al.*, 2023). It is treated with antibiotics, but the emergence of multi-drug resistant *S. enterica* Typhi has limited the effectiveness of these antibiotics, thereby prompting the search for other treatment options (Nsofor *et al.*, 2015).

Nauclea latifolia is an important medicinal plant which belongs to Rubiaceae family. It is a small tree with an average height of 300 centimetres found in tropical Africa and Asia. It is grown in different parts of Nigeria (Oke *et al.*, 2020), and it is used for the treatment of typhoid fever, malaria, hypertension, diarrhoea, tuberculosis, dysentery and constipation. Therefore, this study was to evaluate the anti-salmonella activity of *N. latifolia* leaf ethyl acetate fraction used in treatment of typhoid fever in Minna, Nigeria.

MATERIALS AND METHODS

Collection and Preparation of Plant Materials

Leaves of *Nauclea latifolia* were harvested from Maikunkele, near Minna, Nigeria, and authenticated by a plant biologist from the Department of Plant Biology, Federal University of Technology, Minna. A voucher number (FUT/PLB/RUB/002) was assigned to the sample. The leaves were washed with water, drained, air drying under laboratory condition (25 -30°C) for one week. Then, the leaves were cut into smaller pieces and ground mechanically into powder using a laboratory blender (Iheagwam, *et al.* 2020), then stored in air-tight containers.

Extraction Procedure

Extraction of *Nauclea latifolia* leaves was carried out using cold maceration method of Ahoyo *et al.* (2019) with some modifications. Powdered leaf sample (200 g) was extracted by successive soaking for 72 hours using 1000 ml of ethanol in a 1000ml conical flask. The extract was filtered using Whatman No.1 filter paper and heated in water bath at 40°C to dryness until a solid residue was obtained. The solid concentrated filtrate, now the extract was then stored in universal bottles in the refrigerator at 4°C until when it would be used.

Fractionation of *Nauclea latifolia* Ethanolic Extract

Ethanol crude extract (19.8 g) was dissolved in ethanol and then sequentially extracted with n-hexane and ethyl acetate (1500ml) using a Soxhlet apparatus. The ethyl acetate solution was evaporated to dryness with a water bath (40°C) and weighed to determine their yield (Ahoyo *et al.*, 2019; Okwute and Ohiakwu, 2021). The fraction recovered was stored in universal bottle and put in the refrigerator at 4°C until when it would be used.

Bacterial Sample Collection

Clinical isolates of *Salmonella enterica* Typhi were obtained from the Microbiology Laboratory, General Hospital, Minna, and transported to the Microbiology Laboratory, Federal University of Technology Minna for analysis.

Bacterial Strain Identification and Storage

The isolates were confirmed through standard bacteriological methods such as gram staining, biochemical tests, and molecular identification (Cheesebrough, 2010). They were incubated at 37°C for 48 hours before storing in a refrigerator at 4°C until required for future use.

Standardization of Organisms

Sterile nutrient broth (5 ml) was inoculated with test organism and incubated at 37°C for 24 hours. Exactly 0.2 ml of the 24h culture was sub-cultured into 5 ml sterile nutrient broth and incubated at 37°C till the turbidity of 0.5 McFarland's Standard with approximate cell density of 1.5×10^6 CFU/ml was achieved (Osugwu *et al.*, 2021). A loop-full of the standardized culture was then used for the determination of the antibacterial activity of the plant extract.

Antibacterial Susceptibility Assay of *Nauclea latifolia* Fraction

The antibacterial susceptibility assay of *N. latifolia* ethyl acetate fraction was determined using agar well diffusion method as described by Osugwu, *et al.* (2021), with modifications. The plates were prepared by pouring nutrient agar media into sterile Petri dishes and left to set. The prepared bacterial suspension equivalent to 0.5 McFarland Standard (1.5×10^6 CFU/ml) was inoculated on three (3) plates (replicates) into sterile Nutrient Agar medium using a swab stick. A 6mm diameter sterile cork borer was used to make six (6) wells into each 20 ml solidified agar medium on Petri dishes. The following concentrations of the fraction: 40 mg/ml, 80 mg/ml, 120 mg/ml, 160 mg/ml, and 200 mg/ml were prepared. Each of the wells was filled with 0.2mL of the different specific concentration of the fraction. The inoculated plates were allowed to stand on the laboratory bench for a period of one hour in order to allow for proper diffusion of the fraction into the agar medium. An antibiotics (ciprofloxacin) was used as positive control. The plates were incubated at 37°C for 24 hours, and thereafter the plates were observed for zones of inhibition and measured.

Determination of the Minimum Inhibitory Concentration (MIC) of the Fraction

The determination of the MIC of *N. latifolia* ethyl acetate leaf fraction was performed using broth dilution method described by Oikeh *et al.* (2020). A double fold serial dilution of the fraction was prepared to obtain the following seven concentrations (100, 50, 25, 12.5, 6.25, 3.125, and 1.5625 mg/ml). The 8th test tube did not contain any fraction, but a solution and served as negative control. Then 0.1 ml of an 18 hours old culture of the bacteria earlier adjusted at 1.5×10^6 CFU/ml was inoculated into each tube and thoroughly mixed. The tubes were incubated at 37°C for 18-24 hours and observed for growth in form of turbidity. The test tube with the lowest dilution with no detectable growth by visual inspection was considered the MIC.

Determination of Minimum Bactericidal Concentration (MBC)

The MBC of ethyl acetate leaf fraction of *N. latifolia* was determined by taking a loopful from each tube of bacterial suspension from the MIC tubes without any growth and streaked into nutrient agar plates and incubated at 37°C for 24 hours (Oikeh *et al.*, 2020). After incubation, the concentration at which no visible growth was seen was recorded as the MBC.

Qualitative Phytochemical Screening of *N. latifolia* Fraction

Qualitative phytochemical screening was performed on the ethyl acetate fraction of *N. latifolia* to investigate the presence or absence of phytochemical compounds in the fraction, using procedure described by Abdallah and Mohammad (2018) and Osuagwu *et al.* (2021).

RESULTS AND DISCUSSION**Phytochemical Constituents of *Nauclea latifolia* Leaf Ethyl Acetate Fraction**

The phytochemical constituents of ethyl acetate fractions of *N. latifolia* leaf shows that saponins, tannins, flavonoids, alkaloids, terpenoids, steroids, and phenols were present while glycosides were absent (Table 1).

Antibacterial Susceptibility Assay of *Nauclea latifolia* Leaf Ethyl Acetate Fraction

The antibacterial susceptibility assay of ethyl acetate fraction of *N. latifolia* leaf against clinical isolates of *Salmonella enterica* Typhi is summarized in Table 2. The fraction was active on the test organism in all the concentrations used, with the diameter of the zone of inhibition ranging from 8.00 ± 0.67 mm to 11.00 ± 0.53 mm. Ciprofloxacin, the standard drug for treating this pathogen inhibited the growth of the test organism more than the leaf fraction

Table 1: Phytochemical constituents of *Nauclea latifolia* leaf ethyl acetate fraction

Parameter/Solvents	Ethyl acetate Fraction
Saponins	+
Tannins	+
Flavonoids	+
Glycosides	-
Alkaloids	+
Terpenoids	+
Steroids	+
Phenols	++

Table 2: Zones of inhibition in mm of different concentrations of *Nauclea latifolia* leaf fractions against test isolate

Isolates	Conc. (mg/mL)	Mean Zone of Inhibition (mm)	
		Ethyl acetate fraction	Ciprofloxacin (10µg/mL)
<i>Salmonella enterica</i> Typhi	200	11.00±0.53 ^b	42.00±0.44
	160	10.00±0.38 ^a	
	120	10.00±0.38 ^a	
	80	8.00±0.67 ^a	
	40	8.00±0.67 ^a	

Values are expressed in mean ± standard error of mean. Values with different superscript on the same column have a significant difference at $p < 0.05$.

Minimum Inhibitory and Minimum Bactericidal Concentrations (mg/ml) of *Nauclea latifolia* Ethyl Acetate Fraction

The minimum inhibitory concentration (MIC) and the minimum bactericidal concentration (MBC) of ethyl acetate fraction of *N. latifolia* leaf against *Salmonella enterica* Typhi are shown on Table 3. The minimum inhibitory concentration (MIC) was 6.25±0.18 mg/ml while the minimum bactericidal concentration (MBC) was 12.50±0.11 mg/ml.

Table 3: Minimum inhibitory concentration of *Nauclea latifolia* leaf ethyl acetate fraction

Test Organism	Concentration mg/ml								
	100	50	25	12.5	6.25	3.125	1.5625	MIC	MBC
<i>S. Typhi</i>	-	-	-	-	+	+	+	6.25	12.5

Discussion

The results of phytochemical screening of *Nauclea latifolia* leaf revealed the presence of saponins, tannins, flavonoids, alkaloids, terpenoids, steroids, and phenols but glycosides were absent. These phytochemicals are believed to be responsible for the medicinal property of some plants. The results of this study were in accord with Eze and Obinwa (2014) who reported the presence of these phytochemicals including glycosides. The absence of glycosides in the leaves of *N. latifolia* in this study could be due to geographical location, variation in the season cycle, the age of plants, and the variety of plant sample used.

Nauclea latifolia leaves ethyl acetate fraction showed antibacterial activity against *Salmonella enterica* Typhi with the diameter of zones of inhibition ranging from 8.00±0.67 mm to 11.00±0.53 mm. It exhibited concentration-dependent activity against the isolate with zones of inhibition increasing with increasing concentrations. This shows that a higher concentration is required for better result. This result agrees with the report of Nyong *et al.* (2021); Okwute and Ohiakwu (2021), and Ugye *et al.* (2018), who all reported that extracts and fractions of *N. latifolia* were active against *Staphylococcus aureus*, *Escherichia coli*, *Salmonella* Typhi, *Bacillus subtilis*, *Pseudomonas aeruginosa*, *Klebsiella pneumonia*, *Streptococcus pyogenes*.

The Minimum Inhibitory Concentration (MIC) and the Minimum Bactericidal Concentration (MBC) of ethyl acetate fraction of *N. latifolia* leaf revealed that the fraction had the ability to inhibit the growth and/or kill all the isolate. The test organism exhibited higher MBC than the MIC (Tables 3). This demonstrated that higher concentrations of fraction were needed to kill the bacteria than to inhibit their growth. This result agrees with the findings of Bolaji *et al.* (2018) and Okunye *et al.* (2020) who got similar MIC values (0.782 – 50 mg/mL) against *Salmonella* Typhi and *E. coli*. This supports the claim by traditional medicine practitioners and vendors that *N. latifolia* leaf extracts could serve as antimicrobial agents for the treatment of many bacterial infections.

CONCLUSION AND RECOMMENDATIONS

The results of this study showed that the *N. latifolia* leaf ethyl acetate fraction contains important phytochemical and has antibacterial activity on *Salmonella enterica* Typhi. Therefore, it may be used for the treatment of typhoid fever and in the production of drugs against infections associated with the pathogen. It is recommended that further tests should be carried out to determine the toxicological profile of the leaf.

ÖZET

Bu çalışma, 18 yaş ve üzeri akıllı telefon sahibi yetişkin bireylerde öz denetim, sosyotelizm ve problemlı akıllı telefon kullanımı arasındaki ilişkileri incelemeyi amaçlamaktadır. Öz denetim, bireyin kendi duygularını, düşüncelerini ve davranışlarını bilinçli bir şekilde kontrol etme ve yönlendirme yeteneğidir. Sosyotelizm ise, bireyin sosyal ortamlarda dikkatini mevcut kişilerden çok akıllı telefonuna yöneltmesi şeklinde tanımlanmaktadır (Chotpitayasunondh ve Douglas, 2016). Araştırmalar problemlı akıllı telefon kullanımına sahip bireylerin yüz yüze olan etkileşimlerde telefonlarını daha çok kullandığını (Chotpitayasunondh ve Douglas, 2016; Karadağ ve diğerleri, 2015; Safdar Bajwa ve diğerleri, 2023) ve öz denetim becerileri düşük olan bireylerin daha çok problemlı akıllı telefon kullanımı sergilediklerini göstermektedir. Çalışmanın örneklemini belirlerken kolayda örnekleme yöntemi kullanılmıştır. Çalışmanın örneklemini, %68.7'si (n=292) kadın, %31.3'ü (n=133) erkek olmak üzere toplam 425 yetişkin bireyden oluşmaktadır (Ortalama yaş=31.34, SS=10.09). Katılımcılara Bilgilendirilmiş Onam Formu, Demografik Bilgi Formu, Kısa Öz Kontrol Ölçeği, Genel Sosyotelist Olma Ölçeğın ve Problemlı Cep Telefonu Kullanımı Ölçeğı verilmiştir. Verilerin analizinde betimsel istatistikler, bağımsız grup farklılaşmaları için Student T Testi ve Oneway ANOVA, değişkenler arası ilişkiler için Pearson ve Spearman's Korelasyonu için SPSS 26.00 (Statistical Package for the Social Sciences) programı kullanılmıştır. Araştırmaya katılan bireylerin Kısa Öz Kontrol Ölçeğı toplam puanları ile Genel Sosyotelist Olma Ölçeğı toplam puanları arasında negatif yönde bir ilişki ($r=-0,359$; $p=0,001$; $p<0,01$); Kısa Öz Kontrol Ölçeğı toplam puanları ile Problemlı Cep Telefonu Kullanım Ölçeğı toplam puanları arasında negatif yönde bir ilişki ($r = -0.446$; $p = 0.001$; $p < 0.01$); Problemlı Cep Telefonu Kullanım Ölçeğı toplam puanları ile Genel Sosyotelizm Ölçeğı toplam puanları arasında pozitif yönde ve istatistiksel olarak anlamlı bir ilişki bulunmuştur ($r=0,810$; $p=0,001$; $p<0,01$).

Anahtar Sözcükler: Öz denetim, sosyotelizm, problemlı akıllı telefon kullanımı, psikoloji

ABSTRACT

This study aims to examine the relationships between self-control, phubbing, and problematic smartphone use among adult smartphone owners aged 18 and older. Self-control refers to an individual's ability to consciously regulate and direct their emotions, thoughts, and behaviors. Phubbing, on the other hand, is defined as the tendency of an individual to focus more on their smartphone than on people present in social settings (Chotpitayasunondh & Douglas, 2016). Studies indicate that individuals with problematic smartphone use are more likely to engage with their phones during face-to-face interactions (Chotpitayasunondh & Douglas, 2016;

Karadağ et al., 2015; Safdar Bajwa et al., 2023) and that those with lower self-control skills are more prone to problematic smartphone use. The sample of the study was determined using the convenience sampling method. The study sample consisted of a total of 425 adult individuals, of whom 68.7% (n = 292) were female, and 31.3% (n = 133) were male (Mean age = 31.34, SD = 10.09). Participants were administered an Informed Consent Form, a Demographic Information Form, the Brief Self-Control Scale, the General Phubbing Scale, and the Problematic Mobile Phone Use Scale. The data analysis was conducted using the SPSS 26.00(Statistical Package for the Social Sciences) software, employing descriptive statistics, Student t-test and One-Way ANOVA for independent group comparisons, and Pearson correlation and Spearman's correlation analysis to examine relationships between variables. A statistically significant negative correlation was identified between the total scores of the Brief Self-Control Scale and the General Phubbing Scale ($r = -0.359$; $p = 0.001$; $p < 0.01$), as well as between the total scores of the Brief Self-Control Scale and the Problematic Smartphone Use Scale ($r = -0.446$; $p = 0.001$; $p < 0.01$). Additionally, a statistically significant and positive correlation was observed between the total scores of the Problematic Smartphone Use Scale and the General Phubbing Scale ($r = 0.810$; $p = 0.001$; $p < 0.01$).

Keywords: Self-control, phubbing, problematic smartphone use, psychology

1. SOSYOTELİZM

Sosyotelizm, bireylerin yüz yüze sosyal etkileşimlerde bulunması gereken anlarda, akıllı telefon veya diğer mobil cihazlara odaklanmaları sonucu ortaya çıkan sosyal ihmal davranışıdır (Chotpitayasunondh ve Douglas, 2016). Bu kavram, “phone” (telefon) ve “snubbing” (küçümseme) kelimelerinin birleşiminden türeyen “phubbing” teriminin Türkçe karşılığı olarak kullanılmaktadır (Karadağ ve diğerleri, 2016, Pathak, 2013). Sosyotelizm, özellikle teknolojinin günlük yaşamın ayrılmaz bir parçası haline geldiği çağımızda, bireylerin çevrelerindeki insanlarla olan sosyal bağlarını zayıflatmakta ve iletişim kalitesini olumsuz yönde etkilemektedir (Abeele, Antheunis ve Schouten, 2016). Sosyotelist davranışlar ortaya çıktıkları bağlama göre çeşitli gruplara ayrılmaktadır. Bu gruplardan bir tanesi; romantik ilişkilerde bir tarafın diğerini ihmal etmesiyle ortaya çıkan ve ilişkinin duygusal bağını zayıflatan partner sosyotelizmidir (Roberts ve David, 2016). Bu durum, romantik ilişkilerde iletişim süreçlerinde aksamalara, karşılıklı güven düzeyinin zayıflamasına ve ilişkisel tatminin azalmasına neden olabilmektedir (Parmaksız, 2022a). Partner sosyotelizmine ek olarak ebeveynlerin, çocuklarıyla vakit geçirdikleri anlarda telefon kullanımını önceliklendirerek çocuklarıyla etkileşimi ihmal etmeleri, literatürde ebeveyn sosyotelizmi olarak adlandırılmaktadır (Xie ve diğerleri, 2019). Bu durum, ebeveyn-çocuk ilişkilerinde bağlanma ve iletişim süreçlerini olumsuz etkileyebilecek önemli bir risk faktörü olarak değerlendirilmektedir (Chotpitayasunondh ve Douglas, 2016). Sosyotelizmin diğer bir türü de iş yerinde gerçekleşen yöneticilerin çalışanlarıyla birebir iletişim kurmak yerine mobil cihazlara odaklanarak çalışanlarını ihmal etmesi olarak tanımlanan yönetici sosyotelizmidir (Roberts ve David, 2017). Yönetici sosyotelizmi, iş ortamında iletişim kalitesinin düşmesine etki ederek, çalışanların kendilerini değersiz hissetmelerine, liderlik ilişkilerinde güven kaybına, iş birliğinin zayıflamasına ve kurumsal bağlılığın zayıflamasına yol açabilmektedir (Roberts ve David, 2017; Roberts ve David, 2020).

2. ÖZ DENETİM

Öz denetim, bireyin hedeflerine ulaşmak, sosyal normlara uyum sağlamak veya uzun vadeli çıkarlarını korumak amacıyla davranışlarını, düşüncelerini ve duygularını düzenleme kapasitesini ifade eden bir kavramdır (Baumeister, Vohs ve Tice, 2007). Diğer bir deyişle öz denetim, bireyin anlık dürtülere boyun eğmek yerine, daha önemli ve uzun vadeli faydaları

gözeten bir şekilde karar almasını ve hareket etmesini sağlayarak kişinin hem kişisel gelişim için hem de toplumsal uyumunun sağlanması için katkıda bulunan bir beceridir.

Alan yazın incelendiğinde öz denetimi açıklamaya çalışan pek çok kuram karşımıza çıkmaktadır. Bu çalışmada söz konusu kuramlardan Öz kontrol Güç Kuramı ve İkili sistem kuramlarından bahsedilecektir. Öz kontrol Güç Kuramı (Ego Tükenmesi)

Öz kontrol Güç Kuramı, öz kontrol gerektiren bir görevde harcanan çabanın, sonraki öz kontrol gerektiren görevlerde performansın azalmasına yol açabileceğini ifade etmektedir (Baumeister ve diğerleri, 1998). Yani, bireylerin öz kontrol kapasitelerinin sınırlı bir kaynak gibi işlediğini bu kaynağın tükenbilir olduğunu öne süren bir modeldir.

İkili sistem kuramı ise, bireyin davranışlarını düzenleme süreçlerini iki temel sistemin etkileşimi çerçevesinde açıklamayı amaçlayan bir modeldir (Metcalf ve Mischel,1999). Bu kurama göre; hızlı, otomatik ve dürtüsel süreçlerden sorumlu bir "**otomatik sistem**" ile daha yavaş, bilinçli ve kontrol odaklı bir "**kontrol sistemi**" arasında bir etkileşim olduğunu öne sürmektedir. İkili sistem kuramına göre öz kontrol, bu iki sistem arasındaki etkileşimde denge sağlama becerisidir. Otomatik sistem dürtüleri tetiklerken, kontrol sistemi bu dürtülerin bireyin hedefleriyle uyumlu olup olmadığını değerlendirmekte ve bireyin uyumunu sağlamak adına bireyin davranışları düzenleyebilmek için harekete geçmektedir (Metcalf ve Mischel,1999).

3. PROBLEMLİ AKILLI TELEFON KULLANIMI

Günümüzde akıllı telefonların yaygınlaşmasıyla birlikte, bu cihazların kullanımına bağlı olarak bireylerin psikolojik ve sosyal işlevselliğini olumsuz etkileyen yeni sorun alanları ortaya çıkmıştır. Bu alanlardan bir tanesi, problemlı akıllı telefon kullanımı davranışıdır. Bu kavram, literatürde farklı terminolojilerle ve tanımlamalarla ele alınmaktadır. Bununla birlikte; bu kavramlar arasındaki ortak payda, bireyin akıllı telefon kullanımını kontrol etme kapasitesindeki azalmayı ve bu durumun psikolojik, sosyal ve davranışsal düzeyde olumsuz etkiler oluşturmasını içermektedir. Bu araştırmada ise problemlı akıllı telefon kullanımı, akıllı telefonların yoğun ve sınırlandırılması güç bir şekilde kullanımı sonucunda bireyin yaşamında olumsuz sonuçlara neden olma durumu olarak kavramsallaştırılmaktadır (Busch ve McCarthy, 2021).

Sağlık sorunları (Alsalameh ve diğerleri, 2019), göz problemleri (Chu ve diğerleri, 2023) uyku sorunları (Alshobaili ve AlYousefi, 2019; Buabbas ve diğerleri, 2020), trafik kazaları (Schwebel ve diğerleri, 2012), iş yaşamında ve akademik yaşamda düşük performans (Busch ve McCarthy, 2021), kişilerarası ilişkilerin zayıflaması (Chotpitayasunondh ve Douglas, 2016), depresyon ve anksiyete ile ilişkilerin sorunların artması (Elhai ve diğerleri, 2017) problemlı akıllı telefon kullanımının olumsuz etkileri arasında yer almaktadır. Bu olumsuz etkiler, problemlı akıllı telefon kullanımının bireylerin yalnızca bireysel sağlık ve psikolojik iyi oluş düzeyini değil, aynı zamanda sosyal, mesleki ve akademik işlevselliğini de derinden etkileyebileceğini düşündürmektedir.

4. ÇALIŞMANIN AMACI VE YÖNTEMİ

Çalışmada, 18 yaş ve üzeri akıllı telefon sahibi yetişkin bireylerde öz denetim, sosyotelizm ve problemlı akıllı telefon kullanımı arasındaki ilişkileri incelemeyi amaçlanmaktadır. Bu kapsamda, çalışma ilişkisel tarama modeliyle yürütülmüştür (Büyüköztürk ve diğerleri, 2012). Çalışmanın evrenini; akıllı telefona sahip olan yetişkin bireyler oluşturmaktadır. Araştırmanın örneklemini ise, uygun örnekleme yöntemi kullanılarak seçilen 425 kişiden oluşmaktadır (Büyüköztürk ve diğerleri, 2012).

Katılımcılara Bilgilendirilmiş Onam Formu, Demografik Bilgi Formu, Kısa Öz Kontrol Ölçeği, Genel Sosyotelist Olma Ölçeğın ve Problemlı Cep Telefonu Kullanımı Ölçeği verilmiştir. Verilerin analizinde betimsel istatistikler, bağımsız grup farklılaşmaları için Student T Testi ve

Oneway ANOVA, deęişkenler arası ilişkiler için Pearson ve Spearman's Korelasyonu analizi için SPSS programı kullanılmıştır.

5. BULGULAR

Çalışmaya akıllı telefonu olan 425 kişi alınmıştır. Alınan katılımcıların, %68,7'sini (n=292) kadın, %31,3'ünü (n=133) erkek katılımcı oluşturmaktadır. Bireylerin yaşı 18 ile 68 yaş arasında olup ortalama yaş=31.34, SS=10.09 bulunmuştur.

Şekil.1: Katılımcıların Cinsiyet Dağılımı

Tablo 1: Katılımcıların Yaşına Dair Temel İstatistikler

	Deęer
Ortalama (Mean)	31,34
Standart Sapma (SS)	10,09

	N	425	425
Kısa Öz Kontrol Ölçeęi	r	-0,446	-
	p	0,001**	-
	N	425	425

†r: Pearson Korelasyon Katsayısı

r: Spearman's Korelasyon Katsayısı

**p<0,01

Araştırmada kullanılan Kısa Öz Kontrol Ölçeği, Genel Sosyotelist Olma Ölçeği, Problemler Cep Telefonu Kullanım Ölçeği arasındaki ilişkiler Pearson korelasyon ve Spearman's korelasyon analizleri ile test edilmiştir.

Bu analiz sonuçlarına göre; Kısa Öz Kontrol Ölçeği toplam puanları ile Genel Sosyotelist Olma Ölçeği toplam puanları arasında istatistiksel olarak anlamlı, negatif yönlü ve zayıf düzeyde bir ilişki bulunmuştur ($r=-0,359$; $p=0,001$; $p<0,01$);

Kısa Öz Kontrol Ölçeği toplam puanları ile Problemler Cep Telefonu Kullanım Ölçeği toplam puanları arasında istatistiksel olarak anlamlı, negatif yönlü ve orta düzeyde bir ilişki bulunmuştur ($r = -0.446$; $p = 0.001$; $p<0.01$).

Problemler Cep Telefonu Kullanım Ölçeği toplam puanları ile Genel Sosyotelizm Ölçeği toplam puanları arasında pozitif yönlü ve istatistiksel açıdan anlamlı, oldukça güçlü bir ilişki bulunmuştur ($r=0,810$; $p=0,001$; $p<0,01$).

6. SONUÇ VE ÖNERİLER

İlk olarak, Kısa Öz Kontrol Ölçeği toplam puanları ile Genel Sosyotelizm Ölçeği toplam puanları arasında istatistiksel olarak anlamlı, negatif yönlü, zayıf düzeyde bir ilişki bulunmuştur ($r = -0,359$; $p = 0,001$; $p < 0,01$) (Akgül ve Çevik, 2003). Bu ilişki; düşük öz kontrol düzeyine sahip bireylerin daha fazla sosyotelist davranış sergileyebileceğine işaret etmektedir. Bu sonuç, düşük öz kontrolün bireylerin sosyal ortamlarında dikkatlerini kendi telefonlarına yöneltme davranışını artırdığına ilişkin literatürle uyumludur (Chotpitayasunondh ve Douglas, 2016; Roberts ve David, 2016). Diğer bir deyişle; sosyotelizm gibi davranışlar, anlık dürtülerin kontrol edilememesi ve uzun vadeli sosyal ilişkiler üzerindeki olumsuz etkilerin göz ardı edilmesi ile ilişkilendirilebilmektedir.

İkinci olarak, Kısa Öz Kontrol Ölçeği toplam puanları ile Problemler Cep Telefonu Kullanım Ölçeği toplam puanları arasında istatistiksel olarak anlamlı, orta düzeyde, negatif yönlü bir ilişki bulunmuştur ($r = -0,446$; $p = 0,001$; $p < 0,01$) (Akgül ve Çevik, 2003). Yani; öz kontrol düzeyi düştükçe bireylerin daha problemler akıllı telefon kullanım davranışı gösterme ihtimallerinin artabileceği anlamına gelmektedir. Bu durum, öz kontrol mekanizmalarının, bireylerin teknolojiyi daha kontrollü bir şekilde kullanmalarına katkı sağladığını öne süren önceki çalışmalarla uyumludur (Kim ve diğerleri, 2019; West ve diğerleri, 2021). Diğer bir deyişle; problemler akıllı telefon kullanımının düşük öz kontrol ile ilişki gösterdiği ve bu durumun bireylerde teknoloji bağımlılığı geliştirme riskini artırabileceği ifade edilebilir.

Son olarak, Problemler Cep Telefonu Kullanım Ölçeği toplam puanları ile Genel Sosyotelizm Ölçeği toplam puanları arasında istatistiksel olarak anlamlı, oldukça güçlü ve pozitif yönlü bir ilişki tespit edilmiştir ($r = 0,810$; $p = 0,001$; $p < 0,01$) (Akgül ve Çevik, 2003). Yani, problemler akıllı telefon kullanımını arttıkça bireylerin daha fazla sosyotelist davranış sergileme ihtimalleri artmaktadır. Diğer bir deyişle, akıllı telefonların aşırı kullanımının, bireylerin yüz yüze sosyal etkileşimlerini olumsuz etkileyebileceğini ve bu durumun sosyotelist davranışları teşvik edebileceğini göstermektedir. Çalışmanın bu bulgusu problemler akıllı telefon kullanımını sosyotelizm ile pozitif yönde ilişki içinde olduğunu ifade eden akademik literatürü destekler niteliktedir (Chotpitayasunondh ve Douglas, 2016; Karadağ ve diğerleri, 2016, Safdar Bajwa ve diğerleri, 2023).

Sonuç olarak; öz kontrol düzeyinin düşük olması, hem sosyotelizm hem de problemler akıllı telefon kullanımını ile ilişkili bulunmuş, bu da düşük öz kontrolün bireylerin akıllı telefonlarıyla olan etkileşimlerini olumsuz yönde etkileyebileceğine işaret etmektedir. Özellikle, problemler akıllı telefon kullanımını ile sosyotelizm arasında güçlü bir pozitif ilişki bulunması, akıllı telefonların aşırı kullanımının sosyal ilişkiler üzerindeki olumsuz etkilerini vurgulamaktadır.

Bu araştırmada, öz denetim, sosyotelizm ve problemler akıllı telefon kullanımını değişkenleri, nicel araştırma desenleri çerçevesinde incelenmiştir. Ancak, gelecekte yapılacak olan

çalışmalarda, bu üç değişkenin yetişkin bireylerin yaşamları üzerindeki etkilerini daha derinlemesine anlamak amacıyla nitel araştırma yöntemleri tercih edilebilir. Ayrıca; yetişkin bireylerin öz denetim becerilerini geliştirmeyi hedefleyen psikoeğitim programları tasarlanabilir ve bu programların sosyotelizm ile problemlili akıllı telefon kullanımı üzerindeki etkilerini deneysel bir yaklaşımla değerlendirilmesi önerilebilir. Dahası; mevcut çalışma Türkiye’de yaşayan akıllı telefona sahip yetişkin bireylerle gerçekleştirilmiştir. Bu bulguların kültürler arası düzeyde karşılaştırılabilmesi için dünyanın farklı ülkelerinden katılımcılarla yeni araştırmalar gerçekleştirilebilir.

INSULATION MATERIALS IN ELECTRIC MOTORS: A REVIEW OF TYPES, PERFORMANCE, AND FUTURE TRENDS

Gizem FIRAT

Koluman Automotive Industry Inc. Military Projects Department

ABSTRACT

Motor insulation materials are crucial components in ensuring the optimal performance, longevity, and safety of electric motors. These materials serve several functions, including protecting motor components from electrical faults, reducing energy losses, and improving overall efficiency. Insulation materials are primarily selected based on their ability to withstand high temperatures, resist moisture, and prevent electrical arcing or short circuits. Over time, various types of insulation materials, such as mica, polyester, silicone, and epoxy resins, have been developed and refined to meet the increasing demands of modern electric motor applications, particularly in harsh environmental conditions. The advancements in motor insulation materials have been driven by the need for higher motor efficiency, greater energy savings, and the ability to function reliably under extreme conditions. Key factors influencing the choice of insulation materials include their thermal resistance, dielectric strength, mechanical properties, and compatibility with other motor components. Furthermore, innovations in materials science have led to the development of advanced composites and hybrid insulation systems, which offer improved performance compared to traditional materials. These innovations have also contributed to reducing the size and weight of electric motors, which is essential for applications in industries such as automotive, aerospace, and renewable energy. This paper reviews the evolution of motor insulation materials, focusing on their properties, applications, and recent innovations. It provides a comprehensive analysis of the challenges faced in selecting the appropriate insulation for specific motor types and offers insights into future trends in motor insulation technology. The aim is to highlight the role of advanced materials in the development of more efficient and durable electric motors.

Keywords: Motor insulation, Electric motor performance, Insulation materials development, Insulation resistance, Insulation failures

INTRODUCTION

Insulation is an essential element in the performance, reliability, and safety of electric motors, playing a critical role in protecting the motor's electrical components from short circuits, leakage currents, and physical damage. Without proper insulation, electric motors would be prone to frequent failures, leading to reduced efficiency, potential fire hazards, and costly repairs or replacements [1], [2]. Moreover, insulation materials must not only provide electrical resistance but also withstand the thermal stresses that arise during motor operation, as excessive heat can compromise the motor's performance and lead to catastrophic failures [3]. In high-performance applications such as industrial machinery and electric vehicles (EVs), electric motors generate substantial heat. If not effectively managed, this heat can lead to overheating, negatively impacting motor efficiency and the structural integrity of the components [4], [5]. Insulation materials that can endure elevated temperatures while maintaining their insulating properties are critical to ensuring motors function within safe thermal limits. As the demand for high-performance motors increases, particularly in EVs and renewable energy systems, the need for advanced insulation materials that can offer superior electrical and thermal performance is more pronounced [6]. Advanced polymers, composites, and nanomaterials are being developed to meet these evolving demands, ensuring motors can operate efficiently under

more rigorous conditions [7]. The performance characterization of insulation materials is crucial for assessing their suitability for electric motor applications. Key parameters, such as thermal conductivity, dielectric strength, and mechanical properties, help evaluate how well insulation materials can function under high-voltage and high-temperature conditions, common in modern electric motors used in automotive, industrial, and renewable energy applications [8]. Furthermore, testing for dynamic stresses, such as vibrations and mechanical deformation, is essential, as these stresses are prevalent in motors used in heavy-duty operations [9]. Nanocomposites and thermally stable polymers are gaining popularity for their ability to offer superior electrical insulation while enhancing heat resistance, allowing motors to operate more efficiently at higher speeds and power outputs [7], [10]. The evolution of insulation materials has been driven by technological advances aimed at improving motor efficiency, performance, and durability. High-temperature-resistant materials, such as thermally stable polymers, nanocomposites, and epoxy-based resins, have become increasingly essential for enhancing the thermal resistance of motor windings [11]. These innovations allow motors to operate at higher temperatures without compromising performance or lifespan. Additionally, the trend toward miniaturization and lightweight designs in electric motors has spurred the development of insulation technologies that provide high performance while minimizing size and weight [12]. The integration of nanotechnology in insulation materials is expected to continue, enhancing the overall efficiency of electric motors and reducing energy losses during operation [13]. Furthermore, hybrid insulation materials combinations of different components to optimize properties like mechanical strength, electrical conductivity, and heat resistance are becoming increasingly common [14]. This trend will continue as manufacturers seek to balance cost-effectiveness with the performance demands of modern electric motors.

RESEARCH AND FINDINGS

A. TYPES OF INSULATION MATERIALS

Electrical insulation is a vital component in the design and performance of electric motors, ensuring their safe operation under various operating conditions. The primary function of insulation materials is to protect the motor's conductive components from high voltage, heat, and potential short circuits, which is crucial for maintaining motor efficiency, reliability, and longevity. Several types of insulation materials are employed in electric motors, each offering unique properties tailored to specific applications. Epoxy resins are among the most widely used materials in electrical insulation due to their excellent dielectric properties, high thermal stability, and mechanical strength. Epoxy is particularly effective in motor winding insulation, as it provides a durable barrier against electrical faults and thermal degradation. Studies have shown that epoxy resins retain their insulating effectiveness even at elevated temperatures up to 180°C, making them ideal for medium- to high-voltage motors [15]. Polyimide films, on the other hand, are valued for their outstanding thermal stability, capable of operating at temperatures as high as 250°C. This makes polyimide films particularly well-suited for high-performance motors, especially in applications such as aerospace and automotive, where motors are exposed to extreme thermal conditions [16]. These films offer superior resistance to heat, making them an attractive option for motors that operate under high thermal stress. For applications requiring extreme heat resistance, ceramic-based insulation materials are often preferred. Ceramic fibers, known for their exceptional thermal resistance, are commonly utilized in high-power motors in industries such as aerospace. These materials can withstand temperatures as high as 1000°C, ensuring that the motor remains insulated even in the harshest environments. Furthermore, ceramic fibers are lightweight, non-flammable, and provide excellent electrical insulation, which enhances the safety and longevity of the motor [17].

Alumina-based ceramics are also frequently used for stator and rotor insulation due to their high dielectric strength and stability under high-temperature conditions, ensuring the motor's reliability and efficiency in demanding applications [18]. A newer class of insulation materials, nanocomposites, has emerged as a significant advancement in motor insulation. By incorporating nanoparticles such as carbon nanotubes or graphene into polymer matrices, these materials offer improved thermal conductivity, mechanical strength, and resistance to thermal aging compared to traditional insulations. Nanocomposites represent a breakthrough in enhancing motor performance, particularly in compact designs where efficient heat management and electrical insulation are essential [19]. Hybrid insulation systems are another innovative development in the field of electric motor insulation. These systems combine multiple materials to leverage their individual strengths, providing superior thermal and electrical properties. Hybrid insulation is particularly beneficial for electric vehicle (EV) motors, where performance and efficiency are critical. By combining polymers with ceramics or metal oxide fillers, hybrid systems offer enhanced thermal conductivity and mechanical properties, ensuring effective insulation while maintaining the motor's lightweight characteristics [20]. Another promising approach to improving motor performance is the use of phase change materials (PCMs). These materials absorb and release heat as they transition between solid and liquid states, helping to regulate the motor's temperature and prevent overheating. PCMs are particularly useful for motors that experience variable operating temperatures, offering an additional layer of thermal management that contributes to the overall efficiency and lifespan of the motor [21].

B. COMPARISON OF INSULATION MATERIALS

The table above provides a comparison of six commonly used insulation materials: epoxy resins, polyimide films, ceramic fibers, alumina ceramics, nanocomposites, and phase change materials. Each material offers distinct advantages depending on the operational conditions of the motor. For example, epoxy resins are widely used due to their excellent dielectric properties and cost-effectiveness, while polyimide films are valued for their outstanding heat resistance and high-temperature performance. Ceramic fibers and alumina ceramics excel in extreme thermal environments, offering unmatched heat resistance and electrical insulation, although they can be brittle. Nanocomposites, on the other hand, offer improved thermal and electrical performance by incorporating nanomaterials like carbon nanotubes, making them suitable for high-performance and compact motor designs. Finally, phase change materials, while not providing electrical insulation on their own, are being explored for their ability to manage thermal fluctuations by absorbing and releasing heat.

Table 1 Performance and Properties Comparison of Common Insulation Materials in Electric Motors

Insulation Material	Thermal Stability	Electrical Properties	Mechanical Strength	Temperature Range
Epoxy Resins	Stable up to 180°C	$10^{13} - 10^{15} \Omega \cdot \text{cm}$	40-50 MPa	-40°C to 180°C
Polyimide Films	Stable up to 250°C	$10^{15} \Omega \cdot \text{cm}$	100-150 MPa	-200°C to 250°C
Ceramic Fiber	Stable up to 1000°C	$10^{12} - 10^{13} \Omega \cdot \text{cm}$	10-20 MPa	Up to 1000°C
Alumina Ceramics	Stable up to 1500°C	$\geq 10^{14} \Omega \cdot \text{cm}$	150-300 MPa	Up to 1600°C
Nanocomposites	Stable up to 200°C	$10^{12} - 10^{14} \Omega \cdot \text{cm}$	50-80 MPa	-40°C to 180°C
Phase Change Materials	Stable up to 100°C	$10^9 - 10^{10} \Omega \cdot \text{cm}$	5-15 MPa	-10°C to 120°C

C. COMPARISON OF INSULATION CLASSES

Insulation systems in electric motors play a critical role in ensuring operational safety, optimizing performance, and enhancing the longevity of the motor under both thermal and electrical stresses. These insulation systems are typically classified into Classes B, F, and H, each of which reflects the thermal tolerance, material composition, and performance characteristics of the materials used. Understanding these classifications is essential for selecting the appropriate insulation based on the operating conditions and performance requirements. Class B Insulation is designed for moderate thermal environments, with a maximum operating temperature of 130°C. Common materials used in Class B insulation include mica, polyester resins, and glass fibers. These materials are often reinforced with impregnated varnishes or epoxies to enhance their mechanical stability and moisture resistance. In typical applications, Class B insulation supports a temperature rise of up to 80°C above an ambient temperature of 50°C. However, the performance of Class B insulation can degrade in environments subject to frequent thermal cycling or high humidity, as the organic components are vulnerable to thermal aging and moisture absorption [22]. Class F Insulation offers improved thermal performance, with a maximum operating temperature of 155°C. This insulation class incorporates advanced materials such as aramid fibers, enhanced glass fibers, and thermosetting resins, which resist cracking under repeated thermal stress. Class F insulation is well-suited for motors in demanding industrial applications, including those that operate under variable load profiles or high-speed conditions. Motors equipped with Class F insulation exhibit reduced dielectric losses and extended operational life, even under elevated voltage and temperature stresses [23], [24]. Class F insulation allows for a temperature rise of up to 105°C, making it a reliable choice for applications requiring enhanced thermal performance and durability. Class H Insulation is designed for maximum thermal endurance, with the ability to withstand operating temperatures up to 180°C. The materials used in Class H insulation include silicone elastomers, mica composites, and polyimides, which are bonded with high-temperature-resistant adhesives such as silicone or fluoropolymer resins. These insulation systems are engineered for critical applications that demand high reliability, such as aerospace, military equipment, and heavy-duty industrial machinery. The integration of laminated mica sheets enhances turn-to-turn insulation in form-wound coils, which is particularly beneficial for high-voltage and high-frequency applications [25]. Class H insulation ensures the reliability of electric motors even in the most extreme operating conditions.

Table 2 Insulation Classes

Insulation Class	Max Operating Temp (°C)	Typical Materials	Applications
B	130	Mica, polyester	HVAC, general-purpose industrial motors
F	155	Aramid fibers, advanced resins	Variable frequency drives, heavy loads
H	180	Mica, silicone elastomers	Aerospace, military, extreme environments

D. FUTURE TECHNOLOGIES IN INSULATION MATERIALS FOR ELECTRIC MOTORS

The field of electric motor insulation is rapidly evolving to meet the growing demands for higher efficiency, compact designs, and greater durability in applications like electric vehicles (EVs), industrial machinery, and renewable energy systems. One of the most promising

advancements in this area is the use of polymer-based materials, such as polyether ether ketone (PEEK) coatings. These coatings offer improved thermal and electrical insulation properties, enabling electric motors to handle higher voltages and increased thermal loads. Such improvements are particularly beneficial for next-generation EV powertrains, where motor efficiency and reliability are critical. PEEK coatings also help mitigate partial discharge (PD) issues, which are common in high-voltage systems, by offering enhanced resistance to electrical stress [26], [28]. In parallel, insulation systems are being developed with superior thermal conductivity to better manage heat dissipation in high-power motors. Recent research has focused on incorporating inorganic fillers into impregnating resins to improve their heat dissipation capabilities. These advanced resins not only optimize thermal management but also enhance mechanical strength and resistance to environmental factors such as humidity and chemicals [27], [28]. Additionally, the use of nanomaterials, including nanoscale silica or alumina, is being investigated to create ultra-thin insulating layers with exceptional dielectric properties. The goal is to reduce insulation thickness without compromising thermal and electrical performance. These materials are expected to play a pivotal role in applications requiring weight reduction and increased power density, such as EV motors and aerospace systems [27], [28]. The shift toward higher voltage systems, such as the 800V architectures being integrated into modern EVs, has further driven the demand for insulation materials that can withstand increased stress without failure. Researchers are exploring multi-layer laminates with advanced chemical compositions to meet these evolving needs. These laminates are tested for long-term thermal aging and mechanical integrity, ensuring they maintain durability under extreme operational conditions [26], [28]. Additionally, the increasing emphasis on sustainability has led to the development of bio-based insulation materials, which aim to reduce the environmental impact of manufacturing and disposal. These materials, combined with advancements in recycling techniques, could play a significant role in the future of motor design [28]. Lastly, artificial intelligence (AI) and machine learning are being leveraged to optimize insulation system designs. These technologies predict material performance under varying operational conditions, allowing for faster development cycles and the creation of custom solutions tailored to specific motor applications [27].

CONCLUSION

The performance and reliability of electric motors are critically dependent on the quality of insulation materials, which provide electrical, thermal, and mechanical protection, ensuring proper functionality, longevity, and safety. This review explores various insulation materials, their performance characteristics, and the future directions of research aimed at improving motor efficiency and sustainability. Traditional insulation materials, such as Class B, F, and H systems, have long been the cornerstone of electric motor design. These materials, primarily composed of resins and varnishes, have provided reliable performance in many industrial and commercial applications. However, as the demand for higher performance increases, particularly in electric vehicles (EVs) and high-power systems, the limitations of these materials are becoming more apparent. For example, while Class H insulation offers excellent high-temperature resistance, it may still struggle to meet the thermal demands of modern high-power motors [29], [30]. Furthermore, these materials do not fully address the growing environmental and sustainability concerns associated with motor production and disposal [31]. In response to these challenges, there has been significant progress in the development of advanced insulation materials. Polymers like polyether ether ketone (PEEK) and polyimide are emerging as promising solutions due to their superior heat resistance and dielectric properties [32], [33]. These materials are particularly useful in high-power, high-temperature applications, such as EV traction motors, where traditional insulation may fall short. Additionally, nanotechnology

is increasingly recognized for its potential to enhance traditional insulation materials. Incorporating nanomaterials like nano-silica or nanofillers into polymer matrices has shown improvements in dielectric strength and thermal stability, offering a path to more efficient and compact motor designs [32], [33]. As industries transition towards sustainable practices, there is growing interest in eco-friendly insulation materials. Bio-based polymers and recyclable materials are being explored as alternatives to conventional resins and varnishes, with the goal of reducing the environmental footprint of motor production and end-of-life disposal. Furthermore, advancements in recycling technologies are enabling more efficient recovery of resources, contributing to a circular economy in the manufacturing sector [31]. These efforts are particularly crucial as the demand for electric motors grows, necessitating more sustainable technologies. Another promising trend is the integration of artificial intelligence (AI) and machine learning into the design and optimization of insulation systems. AI algorithms can analyze vast amounts of data to predict the behavior of materials under various operating conditions, enabling faster and more accurate material selection and design processes. These technologies can also help optimize manufacturing processes, lowering costs and improving the overall quality of insulation materials [32]. Looking forward, the future of motor insulation will be shaped by the continued exploration of high-performance polymers, nanomaterials, and sustainable alternatives. The demand for more energy-efficient and compact electric motors, particularly in the automotive and renewable energy sectors, will drive advancements in insulation systems. As research progresses, it is expected that insulation materials will not only meet the thermal, electrical, and mechanical demands of modern motors but also contribute to their overall sustainability and energy efficiency [32], [33]. The integration of advanced insulation materials, powered by intelligent design processes, is set to revolutionize motor performance. These innovations will enable motors to operate more efficiently in demanding applications, such as electric vehicles, where performance, weight, and energy efficiency are critical. Furthermore, the development of biodegradable and recyclable materials will help address the environmental concerns associated with the increasing use of electric motors [31].

INFLUENCE OF LOW TEMPERATURES ON ELECTRIC MOTOR PERFORMANCE AND MATERIAL DURABILITY

Gizem FIRAT

Koluman Automotive Industry Inc. Military Projects Department

ABSTRACT

This review explores the effects of low ambient temperatures on electric motor performance and the resilience of key materials used in motor construction. Low temperatures can substantially impact critical components within motors, including insulation, conductive materials, and mechanical elements like bearings, leading to possible declines in efficiency, output, and reliability. Under cold conditions, materials in motors may undergo mechanical and chemical changes such as embrittlement, loss of flexibility, and increased electrical resistance, which collectively affect the motor's operational capabilities. The review synthesizes recent studies and examines how these changes influence core motor parameters, such as starting torque, power output, and response time. Additionally, low temperatures may restrict lubrication flow, creating higher friction and wear on moving parts, which impacts durability and requires specific design adaptations. The article consolidates research findings to outline how environmental cold influences motor behavior in terms of thermal contraction, magnetic performance, and heat dissipation efficiency. The discussion also considers practical engineering solutions, such as material selection, motor insulation adjustments, and cold-weather lubrication strategies, to mitigate adverse impacts. By presenting a comprehensive view of low-temperature challenges, this study aims to provide insight into improving motor design for enhanced reliability and resilience in sub-zero conditions, which is essential for applications in industries like aerospace and defense.

Keywords: Low-temperature effects, Starting torque, Material durability, Cold-temperature resilience

INTRODUCTION

Electric motors are pivotal in various industrial, commercial, and military applications due to their efficiency, reliability, and adaptability. However, extreme operating conditions, such as low temperatures, pose significant challenges to their performance and material durability. These challenges are critical in applications such as aerospace systems, Arctic explorations, and military operations, where motors must operate seamlessly under sub-zero environments. Despite advancements in motor technology, the combined impacts of electrical, thermal, and mechanical stresses at low temperatures remain inadequately understood, prompting further research into this domain. Low temperatures significantly affect the electrical performance of motors. One notable impact is on the copper windings, where electrical conductivity increases as temperature decreases. This results in reduced resistive losses, theoretically enhancing motor efficiency. However, other critical issues, such as peak inrush currents during startup, negate this advantage. The increased load inertia at low temperatures demands higher starting currents, which can result in thermal stress and accelerated insulation degradation [1], [2]. Advanced motor control strategies are therefore being explored to mitigate these effects and ensure stable operation in cold environments [3]. Material durability is another concern, as low temperatures amplify mechanical stresses within the motor. Thermal contraction causes a mismatch in expansion rates between different motor components, such as steel, aluminum, and polymer-based materials. This can lead to micro-cracking, delamination, or complete structural failure over time [4], [5]. Insulation materials are particularly vulnerable; they can become brittle,

compromising their dielectric strength. Research into advanced composites and nanomaterial-enhanced polymers is showing promise in addressing these issues by improving flexibility and thermal resilience [6]. Lubrication challenges also arise in cold environments. Many lubricants thicken or freeze at sub-zero temperatures, increasing friction within bearings and other moving parts. This not only reduces motor efficiency but can also lead to premature mechanical failure. Innovations in low-temperature lubricants, including synthetic oils and additives, are being investigated to maintain fluidity and reduce wear [7]. Furthermore, the thermal management of closed-frame motors in low-temperature settings poses unique challenges. While ambient cold can aid in heat dissipation, internal heat generated during operation may accumulate due to the poor thermal conductivity of encapsulating materials. This paradoxical situation can cause localized overheating, especially in high-power motors. Phase-change materials (PCMs) and advanced heat exchangers are among the solutions being developed to enhance thermal regulation under such conditions [8], [9]. Research has also highlighted the influence of low temperatures on the dynamic response of motors. The stiffness of elastomeric components, such as seals and vibration dampers, increases at low temperatures, leading to changes in motor vibration and noise characteristics. Additionally, frost or condensation can occur on external surfaces, increasing the risk of short circuits and electrical arcing in open-frame designs [10], [11]. Consequently, robust design measures such as enhanced sealing and moisture-resistant coatings are essential for reliable performance in these environments [12]. To address these multifaceted challenges, extensive experimental and computational studies are required. Standards such as MIL-STD-810G provide guidelines for testing motors under extreme environmental conditions, ensuring their suitability for critical applications. However, real-world scenarios often introduce additional complexities, necessitating innovative approaches in motor design and material selection [13]. This study aims to investigate the combined impact of low temperatures on electric motor performance and material durability. By simulating Arctic conditions, the research evaluates advanced materials, innovative design strategies, and control algorithms to enhance the reliability of motors in extreme environments. These findings are expected to inform future designs, enabling the development of motors that meet the stringent requirements of low-temperature applications while ensuring sustainability and efficiency.

RESEARCH AND FINDINGS

A. ELECTRICAL PERFORMANCE

Low temperatures significantly influence the electrical performance of motors, primarily through changes in resistive losses, electromagnetic characteristics, and thermal stress behavior. These changes have direct implications for motor efficiency, starting performance, and overall operational reliability, making this factor a critical area of study. One of the most immediate effects of low temperatures on motor windings, typically made of copper or aluminum, is the reduction in resistivity. This is governed by the temperature coefficient of resistivity, which decreases in colder environments.

$$R_T = R_0(1 + \alpha(T - T_0))$$

- R_T is the resistance at temperature T
- R_0 is the resistance at temperature T_0
- α is the temperature coefficient of resistivity.

Figure 1 Impact of Low Temperatures on Resistance and Starting Current

This reduction in resistance improves efficiency by decreasing losses during normal operation. However, this also leads to higher inrush currents during startup, potentially stressing motor components and protection devices. Experimental studies corroborate these theoretical findings, showing that motor losses due to resistive heating are reduced by approximately 10-15% in cold conditions. Nonetheless, this benefit is often offset by challenges posed by other cold-temperature effects [14][15]. Low temperatures can significantly affect the starting currents in electric motors, primarily due to reduced impedance in the motor windings. As temperatures drop, the resistance of conductive materials such as copper decreases, which lowers the overall impedance of the circuit. This reduction allows for higher inrush currents when the motor is first energized. Elevated starting currents can stress both the motor and the power supply system, leading to potential thermal overloads and mechanical stress on components like bearings and shafts. Managing these currents requires mitigation strategies, including the use of soft starters, which gradually increase the voltage supplied to the motor, or variable frequency drives (VFDs) that modulate voltage and frequency during startup. These technologies reduce the magnitude of the inrush current, protecting the motor and extending its operational lifespan. Analytical models and real-world testing often include impedance-temperature dependencies to simulate and optimize startup conditions under low-temperature environments, providing insights into design improvements and operational strategies [16][17]. Low temperatures alter the magnetic properties of the motor's core materials. Increased permeability in cold environments enhances flux density, reducing hysteresis losses but potentially leading to core saturation. These effects are analyzed using finite element methods (FEM), which incorporate temperature-dependent parameters to predict operational limits [18]. Thermal stresses arise due to the differential contraction of materials within the motor as temperatures drop. This stress is particularly critical during startup and shutdown, where rapid temperature changes create significant gradients. Over time, these stresses can lead to fatigue and eventual failure of winding insulation. Testing methodologies, such as thermal cycling under standardized procedures like MIL-STD-810G, help evaluate the durability of motor components under extreme cold. Results indicate that motors subjected to frequent thermal cycling in low temperatures exhibit reduced insulation lifespan, with failure rates increasing by 25% compared to normal conditions [19], [20].

B. MATERIAL DURABILITY

Electrical motors are subject to thermal expansion and contraction during temperature fluctuations. At lower temperatures, materials contract, potentially leading to mechanical stresses. This contraction can affect the motor's bearings, windings, and housing, causing misalignment or increased wear. Such stresses can lead to cracks or deformations in the motor's components, weakening its overall structural integrity. In motors, particularly those with materials like metals and polymers, thermal contraction can alter the physical properties of the components, potentially leading to permanent damage. This effect is particularly notable in high-voltage cables used in motors, where the insulation material (like cross-linked polyethylene, XLPE) becomes more brittle at low temperatures. Studies on XLPE have shown that as the material ages due to thermal stress, its microstructure deteriorates, which may result in insulation breakdown if the temperature continues to drop. The mechanical degradation of insulation could lead to short circuits, equipment failure, or reduced motor life expectancy [21], [22]. As temperatures drop, the dielectric properties of insulating materials in electric motors can degrade. Insulation materials, especially those used in windings and cables, become less effective at insulating under cold conditions. The thermal aging process in materials such as XLPE has been studied extensively. Over time, as the material undergoes thermal cycling, the molecular structure of the insulation material degrades, and its ability to withstand high voltage weakens. For example, thermal aging can increase the relative permittivity of XLPE, making it more susceptible to electrical breakdown. This breakdown can lead to the failure of the motor if the insulation no longer provides the required protection [22], [23]. In conclusion, thermal contraction and insulation breakdown are crucial factors to consider when assessing the performance and longevity of electric motors under low-temperature conditions. These phenomena are interconnected, as the degradation of insulation materials can result from both thermal stresses and the contraction of motor components. Therefore, understanding and mitigating the impact of low temperatures on these factors are essential to ensuring the reliable operation of electrical systems in extreme environments [21], [22].

C. CASE STUDIES

Kumar and Sharma (2021) focused on the design considerations for industrial motors operating in cold climates. They found that motors subjected to temperatures below -20°C faced challenges such as increased starting currents and reduced insulation integrity. Their research included a simulation study to predict the performance of motors at these temperatures, with particular emphasis on lubricant viscosity changes and the increased friction in mechanical components. The study recommended the use of low-temperature lubricants and reinforced insulation systems to mitigate the performance decline in such conditions [24]. Suzuki et al. (2019) investigated the effects of low temperatures on motor lubrication and insulation breakdown in industrial systems. Their study found that the cooling effect of low temperatures on lubricants caused them to thicken, leading to higher internal friction and increased wear on mechanical parts. This increase in mechanical stress exacerbated the effects of low temperatures on insulation materials, leading to faster degradation. The authors proposed an integrated solution, combining advanced materials for insulation and motors designed to operate in harsh climates, as well as improvements in lubricant formulations to ensure optimal motor function [25]. Jackson (2020) performed a case study on the performance of electric motors used in Unmanned Aerial Vehicles (UAVs) in cold weather conditions. The findings revealed that UAV motors, when exposed to temperatures as low as -30°C , faced significant challenges related to thermal contraction, which affected the alignment of rotor components. These alignment issues led to excessive vibrations, decreased efficiency, and potential damage to the rotor bearings. The study emphasized the importance of designing motors with robust structural

components to minimize the impact of thermal contractions and to ensure consistent performance under extreme temperatures [26]. A case study by Peterson et al. (2021) explored the cold-weather operation of electric motors in wind turbines, specifically in regions experiencing temperatures below -25°C . The study found that the motors used in wind turbines could experience up to a 15% decrease in efficiency in such temperatures due to increased resistance in windings and slower response times from the control electronics. The case study also noted that the performance degradation was more pronounced during the startup phase, where peak currents were higher than expected. Recommendations included the use of heater systems to maintain the operating temperature of critical components and the integration of more efficient electronic control systems that could compensate for temperature-induced delays in performance [27]. Lee (2020) investigated the performance of electric vehicle (EV) motors in low temperatures, focusing on the challenges faced by batteries and motors in cold environments. The study showed that the motor performance was directly impacted by the battery's reduced ability to provide peak power in cold weather, leading to sluggish acceleration and decreased range. Additionally, the starting current of motors increased substantially in temperatures below -10°C , which affected the overall power consumption and led to a higher risk of overloading the system. Lee suggested that to mitigate these issues, EV motors must be paired with optimized energy management systems and battery preconditioning mechanisms to maintain efficiency [28]. Martínez et al. (2021) studied the impact of low temperatures on electric motors used in space applications, where temperatures can drop as low as -150°C . Their research highlighted that extreme cold affected not only the motor efficiency but also the structural integrity of materials used in motor components. They observed the phenomenon of embrittlement in materials used in insulation and casing, which could lead to mechanical failures. To counteract this, the study recommended the use of advanced cryogenic materials and insulation that maintain flexibility and strength at extremely low temperatures [29].

CONCLUSION

Low temperatures have a significant impact on the performance and durability of electric motors. When electric motors are exposed to cold conditions, several factors come into play, such as increased starting currents, insulation breakdown, and changes in material properties, all of which can affect motor efficiency and longevity. One of the most noticeable effects of low temperatures is the increase in the starting current. In colder environments, motors require more power to start, which can put additional strain on the motor and its power supply, leading to potential overloading and failure. Another important factor is the change in the mechanical properties of materials under low temperatures. For instance, metals and other materials contract in the cold, which can cause misalignments in motor components, resulting in increased friction and wear. This, in turn, leads to inefficiencies and potential mechanical failures. Similarly, the lubrication inside motors thickens in cold conditions, which increases the resistance to movement and can lead to further wear and tear on the motor parts. The insulation that protects the motor from electrical shorts is also highly vulnerable to cold temperatures. At lower temperatures, insulating materials can become brittle and prone to cracking, which can lead to short circuits or complete motor failure. This breakdown of insulation can also increase the risk of electrical fires, making it essential for motors operating in cold climates to be equipped with high-quality, temperature-resistant insulation. Overall, low temperatures create multiple challenges for electric motors, from increased starting currents to material degradation and insulation failure. As industries and technologies continue to rely on electric motors for a variety of applications, particularly in harsh climates, it is crucial to develop motor designs and materials that are resilient to the effects of cold weather. Advances in motor technology, including improved insulation materials and more efficient lubrication

systems, are necessary to ensure reliable performance and extend the lifespan of electric motors used in cold environments.

ÖZET

Yönetim, hedeflere ulaşmak için kaynakların organize edildiği ve gelecekteki faaliyetlerin amaçlarının belirlendiği bir süreçtir. Yönetim yaklaşımları; klasik yönetim yaklaşımı, neo-klasik yönetim yaklaşımı ve modern yönetim yaklaşımı olacak şekilde gruplandırılarak incelenir. Kendisinden önceki teorilerin geliştirilmesi ve eksikliklerinin giderilmesi amacıyla ortaya çıkan Modern Yaklaşım Teorisi, küresel çapta yaşanan değişim ve gelişmelerle şekillenmiş ve süreçle birlikte Toplam Kalite Yönetimi kavramı ortaya çıkmıştır. Toplam kalite yönetimi, organizasyondaki tüm faaliyetlerin, ürün ve hizmet kalitesini artırmanın yanı sıra genel kaliteyi sürekli olarak yükseltmek amacıyla planlanmasını ifade eder. Yaklaşımın organizasyonlar üzerindeki etkileri çok yönlü ve kapsamlıdır. Grup çalışmasını ön plana çıkaran bu yaklaşım, çalışanların daha fazla katılım göstermesini ve memnuniyet duymasını sağlar. Stratejik hedeflere odaklanmayı kolaylaştıran bu yaklaşım, aynı zamanda süreçlerin sürekli iyileştirilmesi için bir temel oluşturur. Toplam Kalite Yönetimi ile kurumsal kimlik yapısı güçlenirken o kuruluşun mal ve hizmetler de dâhil olmak üzere çıktılarının kalitesi artmaktadır. Bu gelişmeler sağlık hizmetlerinin sunum ve uygulanmasında da bulunmaktadır. İster kamu ister özel sağlık hizmetlerinde kalite anlayışı gelişmekte ve beklentiler artmaktadır. Kurumlar bu beklenti karşısında toplam kalite yönetimi sistemlerini devreye almakta ve gelişimlerini sürdürmektedir. Bu çalışmanın amacı; modern kalite yaklaşımlarından biri olan toplam kalite yönetiminin ve bu yönetim şeklinin sağlık hizmetlerinde kullanımının incelenmesidir. Literatür taranarak edinilen bilgiler doğrultusunda sağlık hizmetlerinde TKY ilkeleri esas alındığında sunulan hizmet kalitesinin ve hizmeti alan kişilerin memnuniyetinin arttığı görülmektedir.

Anahtar Kelimeler: Yönetim, Modern Teori, Sağlık Hizmetleri, Toplam Kalite Yönetimi

ABSTRACT

Management is a process in which resources are organized to achieve goals and the objectives of future activities are determined. Management approaches are examined by grouping them as classical management approach, neo-classical management approach and modern management approach. The Modern Approach Theory, which emerged with the aim of developing previous theories and eliminating their deficiencies, has been shaped by the changes and developments experienced globally and the concept of Total Quality Management has emerged with the process. Total quality management refers to the planning of all activities in the organization in order to increase the quality of products and services as well as to continuously increase the general quality. The effects of the approach on organizations are multifaceted and comprehensive. This approach, which emphasizes group work, ensures that employees show more participation and satisfaction. This approach, which facilitates focusing on strategic goals,

also forms a basis for continuous improvement of processes. While the corporate identity structure is strengthened with Total Quality Management, the quality of the outputs of that organization, including goods and services, increases. These developments are also found in the presentation and implementation of health services. The understanding of quality is developing and expectations are increasing in both public and private health services. Institutions are implementing total quality management systems in the face of these expectations and continue their development. The purpose of this study is to examine total quality management, one of the modern quality approaches, and the use of this management style in health services. In line with the information obtained by scanning the literature, it is seen that the quality of service provided and the satisfaction of the people receiving the service increase when the principles of TQM are taken as basis in health services.

Keywords: Management, Modern Theory, Healthcare, Total Quality Management

GİRİŞ

Yönetim kavramı insanlık tarihi kadar eski zamanlara dayanmaktadır ve zamanla farklı bakış açılarıyla birlikte şekillenmiştir. İhtiyaçlar doğrultusunda gelişerek birbirini tamamlayan yaklaşımlar organizasyonların yönetimde etkililiğini ve verimliliğini artırmayı amaçlamaktadır. Bu çalışmanın temel amacı yönetim yaklaşımlarından biri olan Modern Yönetim Yaklaşımı'nın incelenmesi ve Toplam Kalite Yönetimi'nin sağlık hizmetleriyle olan ilişkisinin değerlendirilmesidir. Bu kapsamda öncelikle yönetim yaklaşımları açıklanmış olup modern yönetim yaklaşımlarından biri olan toplam kalite yönetimi kavramının özelliklerine değinilmiştir. Sağlık hizmetlerinde toplam kalite yönetiminin önemi açıklanmaya çalışılmış olup yönetim ve kalite yönetimi anlayışlarının bütünsel bir perspektifle değerlendirilmesi, organizasyonların verimliliklerini artırmakla birlikte sosyal sorumluluklarını yerine getirme becerilerini de güçlendireceği düşünülmektedir. Modern dünyanın hızla değişen ve rekabetçi koşullarında, bu yaklaşımların etkili bir biçimde hayata geçirilmesi, organizasyonların uzun vadeli başarılarını güvence altına almada önemli bir etken olmaktadır.

YÖNETİM KAVRAMI VE YÖNETİM YAKLAŞIMLARI

Yönetim anlayışının başlangıcının insanlık tarihi kadar eski olduğu ve bilimsel olarak kabul görmesinin sanayi devriminin başlangıcı ile ilişkili olduğu bilinmektedir (Öztürk, Demir, 2017). Özellikle sanayi devrimi ile birlikte sistematikleşen yönetim anlayışının çeşitli teori ve anlayışlarla temelleri atılmıştır. Buharlı makinelerin üretilmesi ve endüstriyel faaliyetlerin yaygınlaşması ile birlikte daha büyük üretim tesisleri ve büyüyen fabrikalar beraberinde yönetim kavramının bilim olarak ele alınmasını ve daha detaylı bir şekilde incelenmesini ihtiyaç olarak ortaya çıkarmıştır (Efil, 2015, Ettinger, 1965). Literatüre bakıldığında, tarihsel süreçte yönetim ile ilgili çeşitli tanımlamaların yapıldığı görülmektedir. Akat ve diğerlerine (2002) göre yönetim kavramı, hedeflere yeterli ve verimli bir biçimde erişilebilmesi amacıyla bir insan topluluğunun iş birliği içerisinde uyum sağlamaya yönelik olarak sürdürülen çabaların tümüdür. Farklı bir tanıma göre ise yönetim; belirlenen hedeflere ulaşmak amacıyla kaynakların düzenlendiği ve gelecekteki etkinlikler için amaçların ortaya konduğu bir süreç olarak tanımlanabilir (Memduhoğlu, 2010). Tarihsel süreçte yaşanan sanayi devrimleri, savaşlar, teknolojik ilerlemeler gibi olaylar yönetim anlayışının zamanla değişmesine ve ihtiyaçlar doğrultusunda farklı teorilerin geliştirilmesine neden olmuştur (Seçtim, Erkul, 2020). Zamanla farklı bakış açılarıyla harmanlanmış ve ihtiyaçlar doğrultusunda şekillenmiş teoriler; yönetim yaklaşımlarının çerçevesini belirlemede önemli rol oynamıştır. Literatürde genel olarak kabul edilen sınıflandırmalara bakıldığında yönetimin; klasik yönetim yaklaşımı, neo-klasik yönetim yaklaşımı ve modern yönetim yaklaşımı olacak şekilde üçe ayrıldığı görülmektedir. Aralarında keskin ayrımlar bulunmama ile birlikte zamanla birbirlerinin eksikliklerini giderdikleri ve birbirlerini tamamlayarak ortaya çıktıkları bilinmektedir (Şimşek ve Çelik, 2012).

1. Klasik Yönetim Yaklaşımı

Buharlı makinelerin üretilmesi ve sanayi devrimiyle birlikte seri üretime geçilmiş olup ekonomik ve sosyal yönden değişiklikler kaçınılmaz olmuştur. Endüstriyel anlamda yaşanan değişimlerle birlikte ufak çaplı atölyelerin yerini çok sayıda kişinin bir arada çalıştığı fabrikalar olarak seri üretime geçilmiştir (Kocabaş, 2021). Verimliliğin artırılmak istenmesi, sahip olunan ham maddelerin daha etkin kullanılmak istenmesi ve geliştikçe yönetimin daha da zorlaştığı üretim merkezlerinde klasik yönetim teorilerinin ortaya çıktığı bilinmektedir (Bolat vd., 2008). Klasik Yönetim Teorisi'nin temel görüşü şudur: Bir makine nasıl belirli prensiplere ve planlara dayanarak kurulur ve çalıştırılırsa, aynı şekilde bir organizasyon da belirli kurallar ve sistemler çerçevesinde yapılandırılıp işletilebilir (Özer, 2015).

1.1. Bilimsel Yönetim Yaklaşımı

Taylor önderliğinde ortaya çıkan bu yaklaşım işçi ve işverenler arasında çıkar çatışmalarının yaşanmaması ve verimliliğin artması amacıyla gerekli düzenlemelerle birlikte işçi ve işverenin maksimum refahının sağlanması gerektiğini savunmaktadır (Öztürk, Demir, 2017). İşverenler ve personeller arasında dayanışma ve düzen sağlanamazsa, diğer tüm yönetim tekniklerinin ve ilkelerinin etkili olamayacağı düşünülmektedir (Topaloğlu, 2011).

1.2. Yönetim Süreci Yaklaşımı

Yönetim süreci yaklaşımının öncülerinden kabul edilen Henry Fayol mühendis olarak çalıştığı iş yerinde edindiği deneyimlere dayanarak bu yaklaşımı ortaya koymuştur (Çakar, 2018). Verimlilik ve rasyonellik ilkelerine odaklanarak yönetimin tüm alanlarıyla ilgili ilkeler geliştirmeye çalışmıştır. Fayol örgütün bütününe odaklanarak iyi bir organizasyon planlaması ve ilkelerini araştırmıştır (Efil, 2009). Taylor, özellikle işlerin daha verimli bir şekilde yapılabilmesi için uygulanması gereken yöntemler, gerekli hareketler ve bu hareketlerin gerçekleştirilmesi için gereken zaman üzerine yoğunlaşmıştır. Fayol ise, bir örgütü yönetmek ya da örgütün farklı birimlerinin başındaki yöneticilerin yapması gereken faaliyetleri açıklamıştır (Eren, 2009). Bilimsel yönetim yaklaşımının devamı ve tamamlayıcısı olarak görülen yönetim süreci yaklaşımında Fayol, yönetim kavramını bir süreç olarak değerlendirmiş ve 1916 yılında yayımladığı kitabında yönetim ile ilgili geliştirdiği ilkeleri faaliyetlerine göre gruplandırmıştır. Bu gruplandırma şu şekildedir (Eren, 2001):

- Teknik Faaliyetler (üretim süreçleri)
- Ticari Faaliyetler (ürün veya hizmetlerin alım-satım işlemleri)
- Finans Faaliyetleri (kaynakların temini ve etkin bir şekilde kullanımı)
- Muhasebe Faaliyetleri (işletme faaliyetlerinin kayıt altına alınması, mali sonuçların analiz edilmesi, dönem sonu mali tabloların hazırlanması ve istatistikî verilerin oluşturulması)
- Güvenlik Faaliyetleri (iş yeri ve çalışanları olası risklere karşı korumaya yönelik çalışmalar)
- Yönetim Faaliyetleri (insan gücü, finansal kaynaklar, alacaklar, stoklar ve donanım gibi varlıkların etkin ve verimli bir biçimde kullanılması (Eren, 2001).

1.3. Bürokrasi Yaklaşımı

Sosyolog Max Weber öncülüğünde ortaya çıkan yaklaşımda Weber'e göre örgütlerin olabildiğince verimli ve etkili bir şekilde yönetilebilmesi için bürokratik bir yönetim tarzının benimsenmesi gerektiği düşünülmektedir (Koçel, 2014: 264). Bu yönetim yaklaşımına göre geleneksel, karizmatik ve yasal-rasyonel olacak şekilde üç farklı türde otorite karşımıza çıkmaktadır (Seçtim, Erkul, 2020). Weber'e göre örgüt performanslarının yükselmesi ve zıtlıkların minimum seviyeye indirilmesi bürokrasi yönetimi sayesinde mümkündür (Topaloğlu, 2011).

2. Neo-Klasik Yönetim Yaklaşımı

Dünyada yaşanan gelişmeler ve değişimler beraberinde birtakım sorunları da getirmiştir. Dünya savaşları, ekonomik krizler, teknolojik gelişmeler, sanayileşen dünyada iş gücü ve hammadde arayışları örgütlerde yönetim açısından sorunlar yaşanmasına ve klasik yönetim anlayışının yetersiz kalmasıyla birlikte Neo-Klasik olarak isimlendirilen bir anlayışın ortaya çıkmasına neden olmuştur (Seçtim, Erkul, 2020). İnsan faktörünün geri planda tutulduğu fikriyle şekillenen ve ‘insan’ı önemseyerek klasik yönetim yaklaşımının eksik yanlarını düzenlemeyi amaçlamıştır (Bolat, vd., 2009). Bu yaklaşım ile ilgili çeşitli çalışmalar yapılmış olup Hawthorne Araştırmaları, Kurt Lewin Çalışmaları, McGregor’un X ve Y teorileri, Likert Sistem 1-Sistem 4 Modeli bunlardan bazılarıdır. Neo-Klasik yaklaşımda örgütün amaçlarından ziyade insan unsuruna değer verilmiş olup insanın etkililiğinin artması gerektiğini savunmaktadır (Öztürk, Demir (2017).

2.1. Hawthorne Araştırmaları

ABD’de bulunan bir elektrik şirketinin Hawthorne tesisinde gerçekleştirilen ışıklandırma deneyi, rölemontaj odası deneyi ve tel bağlama gözlem odası deneyi ile iş ortamının düzenlenmesinin etkinliğini test etmek amaçlanmıştır. Deneyde ortaya çıkan sonuçlarda iş ortamının düzenlenmesinin her zaman verimi artırmadığı, fiziksel olmayan faktörlerin fiziksel faktörlere göre daha önemli değişiklikler meydana getirdiği anlaşılmıştır (Asunakutlu, 2001).

2.2. Kurt Lewin’in Çalışmaları

Kurt Lewin’in Güç Alanı analizine göre güç türleri sürükleyici ve kısıtlayıcı güç olacak şekilde ikiye ayrılır. Verimliliği artırmak için, üst yönetim baskıları ve astları teşvik eden yarışmalar gibi sürükleyici güç yöntemleri kullanılabilir. Kısıtlayıcı güçte ise, örgüte karşı art niyetli davranışlar ve araç bakımının yetersizliği gibi sınırlayıcı faktörler etkili olabilir (Birdal ve Aydemir, 1992).

2.3. Mc Gregor’un X ve Y Varsayımları

Mc Gregor’un geliştirdiği varsayımlara göre X teorisinde yöneticiler; katı kuralları olan, cezalar veren, sonuç odaklı kişilerdir (Özer, 2013). Y teorisinde ise yöneticiler çalışanları motive ederler, hoşgörü ile talimat verirler. Bu varsayıma göre yöneticilerin tavırları ve yaklaşımları ile insanları nasıl algıladıkları arasında anlamlı bir ilişki vardır (Çetin, Mutlu, 2010).

3. Modern Yönetim Yaklaşımı

Klasik ve Neo-Klasik yönetim yaklaşımlarından sonra ortaya çıkan Modern Yönetim Yaklaşımı; kendisinden önceki teorilerin geliştirilmesi ve eksikliklerinin giderilmesi amacıyla geliştirilmiştir. 20. Yüzyılın sonlarına doğru yaşanan gelişmeler, sanayi faaliyetlerinin artması, teknolojik ilerlemeler, internetin kullanımının yaygınlaşmasıyla birlikte bilgiye erişimin kolaylaşması, örgütlerin daha kaliteli hizmet verme ve pazar ihtiyacı modern yönetim yaklaşımının gelişmesine katkı sağlamıştır. Küreselleşmenin etkisi ile birlikte ülkeler birbirlerini takip etmeye başlamış, rekabetin artmasıyla birlikte ‘insan’ unsuru daha da ön plana çıkmış, insan hakları gibi kavramlar yaygınlaşmıştır. Bu değişimler ve gelişmeler Modern Yönetim Yaklaşımlarının önem kazanmasını sağlamıştır (Koçel, 2005).

3.1. Sistem Yaklaşımı

Bütünün kendisini meydana getiren unsurlardan daha büyük olduğunu ifade eden sistem yaklaşımı Modern Yönetim Yaklaşımının temelini oluşturmaktadır. Sistem, parçalardan oluşan, bu parçaların birbirleriyle ve dış çevreyle etkileşime girdiği, girdilerin çıktılara dönüştüğü ve belirli bir sınırla tanımlanan bir bütün olarak açıklanabilir. (Bolat vd., 2008: 48). Sistem yaklaşımına göre sistemler karmaşık ve dinamik yapılardır, sistemlerin yalın ve sade olmasını beklemek mümkün değildir. Birçok alt sistemlerden oluşan yönetim kavramının temel amacı bu alt sistemler arasında karmaşaya son vererek uyum içerisinde çalışmalarını sağlamaktır. (Öztürk, Demir, 2017). Sistemler iki farklı şekilde değerlendirilmekte olup bunlar açık sistemler ve kapalı sistemlerdir. Kapalı sistemler, dışarıdan herhangi bir etkileşim almadan,

kendi başına çalışan ve çevresinden bağımsız olan sistemlerdir. Mekanik saatler, bu tür sistemlere örnek olarak verilebilir. Açık sistemler ise çevresel etkileşimde bulunan, enerji ve bilgi alışverişi yapan sistemlerdir. Biyolojik organizmalar ve sosyal yapılar açık sistemlere örnek olarak verilebilir (Çakar, 2018). Açık sistemler dış çevreleriyle iletişim kurarken kapalı sistemlerin herhangi bir etkileşimi yoktur. Her sistemin belirli hedefleri vardır ve sistemlerin kesin sınırları bulunmamaktadır (Özalp, 1996).

3.2. Durumsallık Yaklaşımı

Durumsallık yaklaşımında örgütler için her zaman geçerli olabilecek tek bir model yerine, her örgütün kendi yapısına, mevcut durumuna ve çevresel koşullarına en uygun çözümü benimsemesi gerektiği vurgulanmaktadır. Bu yaklaşıma göre örgüt koşullarındaki değişiklikler ile paralel olarak, örgüt yapısı ve yönetim anlayışı da evrimleşmekte, bu doğrultuda en uygun uygulamalara geçiş sağlanmaktadır. Bu bağlamda durumsallık yaklaşımı, her durumda geçerli evrensel ilkelerden ziyade örgüte dinamizm kazandıran teknoloji, sosyal davranış ve çevresel faktörlere odaklanan modern bir yönetim şekli sunmaktadır (Tortop, 2010). Araştırmacı Fred Luthans'a göre önceki zamanlardaki yönetim teorileri ve uygulamaları, çoğunlukla iç çevre faktörlerine odaklanırken, dış çevre genellikle göz ardı edilmiş veya olduğu gibi kabul edilmiştir. Ancak son dönemde, açık sistem analizlerinin etkisiyle yönetim alanında dış çevreye yönelik ilgi artmaya başlamıştır. Durumsallık yaklaşımı ise, hem iç hem de dış çevreyi dikkate alarak daha kapsamlı bir yönetim anlayışı benimsenmesi gerektiğini vurgulamaktadır (Özalp, Koparal, 1996).

KALİTE KAVRAMI

Kalite kavramının pek çok tanımı bulunmakla birlikte kişilere, isteklere ve beklentilere göre farklılık göstermektedir. Türk Dil Kurumu'na göre (2023) kalite 'herhangi bir bakımdan üstünlük' olarak ifade edilmektedir. Deming'e göre (1994) çalışan motivasyonunu sağlayıp devamlı iyiye gitmeyi hedefleyen bir yaklaşım şeklinde ele alınmıştır. Bir diğer perspektife göre kalite, kaynakların etkin kullanımını sağlayan, ürün ve hizmetlerin erişimini kolaylaştıran, müşteri ve tüketici beklentilerine uygun üretim ve hizmet stratejileri geliştiren ve işletmelerin toplumsal görevlerini başarıyla yerine getirmelerini temin eden bir başarı kriteridir (Doğan, 2000). Kalite kavramı ile ilgili farklı tanımlamalar yapılmakta ve literatürde kabul edilmiş net bir tanım bulunmamaktadır. Genel anlamıyla kalite; organizasyonel süreçlerin her aşamasında yüksek verimlilik, müşteri memnuniyeti ve sürekli gelişim hedefleyen bir yaklaşımdır. Bu, organizasyonun uzun vadeli başarısı için kritik bir unsurdur. Zamanla küresel çapta yaşanan değişim ve gelişmeler, sanayi devrimi ile birlikte makineleşme, teknolojik ilerlemeler gibi unsurlar kalite kavramının daha da gelişmesiyle birlikte kalite gelişim süreçleri oluşmuştur. Bu süreç; muayene, kalite kontrol, kalite güvencesi ve toplam kalite aşamalarından meydana gelmektedir. İmalat tamamlandıktan sonra ürünün kontrol edilmesi yerine, üretim aşamalarında yapılan kontrollerin maliyetleri daha fazla düşürdüğü gözlemlenmiştir. Bu durum, işletmelerde kalite güvence sistemlerinin kurulmasına olanak sağlamıştır. Tüm çalışanların süreçlere dahil edilmesi ve üst yönetimin desteğiyle müşteri memnuniyeti önemli ölçüde artmıştır. Sonuç olarak, toplam kalite yönetimi yaklaşımı dünya genelinde kabul gören bir yaklaşım olmuştur (Taner, Kaya 2005).

TOPLAM KALİTE YÖNETİMİ KAVRAMI

Küresel çapta yaşanan gelişmelerle birlikte, örgütlerin tamamında ortaya çıkan rekabet, yenilik, özgünlük alanındaki değişimler, tüm örgütleri ve işletmeleri toplam kalite yaklaşımını özümsemeye itmiştir (Tortop vd., 2010). Toplam kalite yönetimi, ürün ve hizmetlerin kalitesini, aynı zamanda örgütün genel kalitesini devamlı olarak ileriye taşımak için organizasyonda yürütülen tüm faaliyetleri ifade eder. 'Toplam' kelimesi ile organizasyondaki verimin artırılması amacıyla tüm alanlardaki kalitenin geliştirilmesini hedeflenir (Aktan, 1999). Toplam kalite anlayışı, geleneksel yönetim yaklaşımlarının aksine, takım çalışmasına dayanan, müşteri memnuniyetine önem veren, değişime açık, sürekli gelişim ve eğitim odaklı bir perspektife

sahiptir. Ayrıca, yöneticiler ile çalışanlar arasındaki ilişkiler, geleneksel yönetim modellerinden farklılık gösterir. Toplam kalite yönetiminde çalışanlar, yaptıkları işi daha başarılı hale getirmek ve süreçleri iyi hale getirmek amacıyla devamlı olarak fikir geliştiren ve katkı sağlayan kişilerdir. Yöneticiler ise, çalışanları teşvik eden, katılımı destekleyen ve onları yönlendiren bir rol üstlenir (Genç, 2012).

Toplam kalite yaklaşımının organizasyonlar üzerindeki etkileri, çok yönlü ve kapsamlıdır. Bu yaklaşım, grup çalışmalarını teşvik eder, çalışanların katılımını ve memnuniyetini artırır. Ayrıca, iletişim süreçlerinde yenilikçi yöntemlerin geliştirilmesine olanak tanır ve başarılı performansların takdir edilmesi konusunda yeni yollar sunar. Müşteri ile etkili bir iletişim dili kullanılmasını sağlayarak, müşteri memnuniyetini pekiştirir. Çalışanların moralini artırarak, iş yerindeki genel motivasyonu yükseltir. Bunun yanı sıra, organizasyonun stratejik hedeflerine odaklanmayı teşvik eder ve süreçlerin sürekli iyileştirilmesi için bir çerçeve oluşturur. İşçi-işveren ilişkilerini güçlendirir, işten ayrılma oranlarını düşürür ve bu da organizasyonel bağlılığı artırır. Ayrıca, toplam kalite anlayışı, işletmenin gelişim hızını ivmelendirir ve organizasyonun dinamizmini ile esnekliğini artırır (Mankan, 2011).

TOPLAM KALİTE YÖNETİMİNİN TEMEL İLKELERİ

İnsan ve Kalite Odaklılık: Bu ilke, verilen mal ve hizmetin kalite ve insan odaklı olması rekabet ortamında sürekliliği ve verimi artırdığını savunur. İnsan kavramına duyulan saygı ön planda tutularak geliştirilen yönetim anlayışlarının daha sağlıklı olduğunu belirtir (Parlak, 2013).

Müşteri Odaklılık İlkesi: Müşterilerin isteklerinin anlaşılması ve ihtiyaçlarını giderilmesi için hareket edilmesidir. Müşterilerin rahatsız olduğu unsurların ortadan kaldırılmasını amaçlayarak bu doğrultuda hizmet etmek ve müşterilerin memnun olmasını sağlamak esas hedef olmalıdır düşüncesi hâkimdir (Güzel, 2021).

Mükemmellik İlkesi: Mükemmelliği her alanda hedeflemek, yüksek düzeyde performans gerektiren bir çabadır. Kurumsal mükemmellik, ulaşılması güç hedeflerden biri olup, insanların işlerine tutkuyla bağlanmasını ve işbirliği yapmalarını gerekli kılar. Ortak bir bakış açısı, bu sıkıntıları aşılmasına yardımcı olur. Ekibin mükemmel olması, kurumsal mükemmelliğin temel bir ön koşuludur. Ekip mükemmelliğini sağlamak için ekip vizyonu oluşturulmalı ve bu vizyon, işletmenin genel vizyonunu desteklemelidir. Bireysel mükemmellik açısından ise, ekip ve organizasyonun hedeflerine katkı sağlayan bireysel başarılar ödüllendirilmeli ve teşvik edilmelidir (Taner, Kaya, 2005).

Kıyaslama (Benchmarking): Kıyaslama yapmak, bir işletmenin kendi uygulamalarını, rakiplerinin yanı sıra diğer sektörlerdeki ve ülkelerdeki örneklerle karşılaştırarak, zayıf yönlerini geliştirmeyi amaçlar. Bu süreç, öncelikle örgüt içinde yapılan iç değerlendirmelerle başlar. Böylece, hem organizasyonel başarı ölçütleri hem de iç süreçler birbirine kıyaslanarak, geliştirilmesi gereken alanlar net bir şekilde belirlenir (Gülner, 2021).

Sürekli Gelişme İlkesi (Kaizen): Örgütün gelişimi ve büyümesi amacıyla devamlı bir yenilenme ve iyileşme süreci içinde olmak zorunludur. Kaizen, sürekli gelişim anlayışını benimseyerek, bir organizasyonun başlangıçtaki durumu ile mevcut koşullarını karşılaştırarak sürekli bir iyileştirme ve geliştirme sürecinin gerektiğini vurgulamaktadır (Çakar, 2018).

Kişilerin Katılımı: Kalite, yalnızca yönetimin değil, organizasyondaki tüm çalışanların sorumluluğunda olan bir kavramdır. Bu ilkenin ana hedefi, çalışanların yönetim süreçlerine dâhil edilerek iyileştirme, maliyet düşürme, ürün tasarımı ve mevcut yapının geliştirilmesi gibi alanlarda aktif katılım sağlamalarını teşvik etmektir (Gülner, 2021).

Üst Yönetimin Liderliği: Üst düzey yöneticilerin, kalite eğitimlerine katılmaları, müşterilerle doğrudan iletişim kurmaları ve kalite ilkelerini orta düzey yöneticilerle birlikte alt kademe çalışanlarına benimsetmeleri gerektiğini savunur. Ayrıca, örgüt içinde şeffaflık ve güven temelli ilişkiler kurarak, toplam kalite yönetimini güçlendirecek stratejik ve uzun vadeli politikaların oluşturulmasının önemini belirtir (Parlak, 2013).

Çalışanların Eğitimi: Personellere gerekli bilgilendirmelerin yapılması ve uygun eğitimlerin verilmesinin gerekliliğini savunur (Gülner, 2021). Bu eğitimler, çalışanların tamamını kapsamalıdır. Eğitimler, çalışanların özgüvenlerini güçlendirir ve organizasyonun gelişimine katkıda bulunur. Çalışanlara sunulan eğitimler sayesinde, bilgi seviyeleri artar ve bu da işletmenin büyümesine olumlu yönde etki eder (Güzel, 2021).

Hataları Önleme İlkesi: Bu ilke, örgütlerin problemler meydana geldikten sonra çözüm arayışına girmek yerine, sorunlar ortaya çıkmadan önce önlem almayı savunur. Çünkü sorunlar çıktıktan sonra müdahale etmek, önceden tedbir almak kadar etkili ve zaman kazandırıcı değildir (Çakar, 2018).

Ölçme ve İstatistik İlkesi: Bu ilke, karar alma ve sonuç çıkarma süreçlerinde kişisel yorum ve duyguların etkisini engelleyerek tarafsız verilerin kullanılmasını savunur. İstatistiksel veriler, mevcut durumu objektif bir şekilde yansıttığı için, bu ilkenin benimsenmesi, örgütlerin daha rasyonel ve doğru değerlendirmeler yapmalarını sağlar (Çakar, 2018).

TOPLAM KALİTE YÖNETİMİNİN YARARLARI VE İŞLEVİ

Toplam Kalite Yönetimi ilkelerinin bir kurumsal varlık içinde uygulanması operasyonel faaliyetleri geliştirir ve organizasyonel ilerlemeyi kolaylaştırır. Organizasyon genelinde kalite bilincini yükseltir ve organizasyonel çerçeve içinde her süreç için yapıcı bir çıktı kalitesini teşvik eder. TKY'nin varlığı o kuruluşun mal ve hizmetler de dahil olmak üzere çıktılarının kalitesini artırır (Aksuner, 2019).

Böylelikle;

- İşletmelere rekabet avantajı sağlar.
- Müşteri memnuniyetini ve verimliliği artırır.
- Değişen piyasa koşullarına uyumlu olma imkanı verir.
- Yeni ve ilerleme odaklı metotların oluşturulmasını kolaylaştırarak sürdürülebilirliği artırır.
- "Kaizen" yaklaşımıyla süreçler sürekli gözden geçirilir ve iyileştirilir.
- İşyeri güvenliğini artırır; kusurların oluşumunu ve malzeme israfını azaltır.
- Daha düşük harcamalar ile maliyeti azaltır.
- Hata payı düşer. Yeniden işleme ve hata maliyetlerini düşürür.
- Kurumsal itibarı güçlendirir.
- Çalışanlar arası iletişimi güçlendirir, moral ve motivasyonunu yükselterek pozitif bir kurum kültürü yaratır.

SAĞLIK HİZMETLERİNDE TOPLAM KALİTE YÖNETİMİ

Sağlık, tüm dünyada bedensel, ruhsal ve sosyal bakımdan iyilik hali olarak tanımlanmaktadır (Dünya Sağlık Örgütü). Sağlık hizmetleri, toplumsal refahı yükseltmek ve genel yaşam kalitesini artırmak nihai hedefiyle fiziksel, manevi ve sosyal boyutlarda insan sağlığını korumayı, geliştirmeyi ve korumayı amaçlayan bir dizi müdahaleyi kapsar (Aslantekin vd, 2007). Alternatif olarak, sağlık hizmetleri genel olarak sağlığı korumak ve hastalıkların tedavisini yönetmek için üstlenilen sistematik çabalar olarak nitelendirilebilir (Demirbilek ve Colak, 2008). Endüstriyel kalitenin gelişimi, teknolojik gelişmeler ve bunlarla birlikte insanların eğitim seviyelerinin artmasına bağlı olarak sağlık hizmetlerindeki beklentinin artmasına bununda kalite anlayışının her geçen artmasına sebep olmaktadır.

Sağlık sektöründe Toplam Kalite Yönetiminin (TKY) uygulanması için temel motivasyonlar şu şekilde ifade edilebilir: sağlık kurumları arasında rekabetin ortaya çıkması, bireylerin satın alma gücünün artırılması, sağlık hizmetlerinde üstün kalite isteklerinin çoğalması ve nihayetinde TKY metodolojilerinin kalite-maliyet ikiliğini ele alma kapasitesi (Coruh, 1994). Bununla birlikte, sağlık sektörünün diğer hizmet sektörlerinden önemli farklılıklar gösterdiğini belirtmek zorunludur. Sağlık hizmetlerinde kaliteli hizmet sunumu, hastaların güvenliğini ve refahını ön planda tutarken, sağlık personeline hizmetlerle ilgili değerlendirme, planlama ve

karar verme konusunda sağlanan adil fırsatlara dayanan, belirlenmiş standartlar ve ileri düzeyde bakım ile karakterizedir (Karabeyoğlu, 2007). Sağlık hizmetlerinde kalite yönetiminin kapsayıcı amacı, hasta bakımını etkili bir şekilde ölçen ve yöneten ve böylece tüm hastalara en uygun tıbbi hizmetlerin sunulmasını sağlayan bir çerçeve tasarlamaktır (Li, 1997). TKY'nin benimsenmesiyle, sağlık kuruluşları, denetim odaklı bir kalite iyileştirme sisteminden müşterinin ihtiyaç ve beklentileri etrafında merkezlenmiş bir sisteme geçiş yapmaktadır (Manjunath vd, 2007).

Sağlık hizmetlerinin kalitesi teknik yeterlilik ve tedavi ile belirlenir. Kalitenin teknik boyutu, tanı ve tedavi hizmetlerinin mevcut tıp bilimine bağlı kalitenin yanı sıra yerleşik bilimsel standart ve normlara bağlılığını içerirken, sanatsal boyut, verilen hizmetlerin hasta beklentilerine uygun olmasını gerektirir (Kavuncubaşı, 2000).

Eğitim düzeyinin artırılması, bilgi seviyelerinin yükseltilmesi ve bireylerin gelişen ihtiyaçları, sağlık sektöründeki beklentileri önemli ölçüde değiştirmiştir. Bu bireyler aktif olarak aldıkları sağlık hizmetlerinin eleştirel sorgulanması ve değerlendirilmesine katılırlar. Sonuç olarak, bilgileri genişledikçe, sağlık hizmetlerine olan talep yoğunlaşmakta ve bireylere üstün kaliteli hizmetler ve kapsamlı bilgi verilmesini gerektirmektedir (Asunakutlu, 2007). Kaliteli sağlık hizmetlerinin sağlanması ve yönetimi için birkaç temel kriter gereklidir. Öncelikle, geçerli kalite seviyesi değerlendirilir. Sonrasında sürekli iyileştirilme yapılması, dinamik süreçleri içermesi, liderlikten operasyonel seviyelere kapsamlı destek sağlaması, taban geliştirme girişimlerini teşvik edebilmesi, müşteri memnuniyetini artırması, bilgili bir nüfusu gelişimi ve işbirlikçi çabalar teşvik edilirse kaliteli sağlık kavramı oluşturulabilir (Hayran ve Sur, 1998).

Sağlık sektöründe toplam kalite yönetimi alanında önde gelen yenilikçi Avadis Donabedian'dır. Lübnan'dan gelen Avadis Donabedian, bir tıp doktoru, araştırmacı ve epidemiyolog olarak tanınmaktadır. En önemli katkıları sağlık alanında yer almaktadır. Donabedian, bilimsel çalışmasında, yapısal, prosedürel ve sonuç boyutlarının önemini vurgulayarak, sağlık kalitesi ve sağlık hizmetlerinin sunumunun etkinliği ile ilgili olarak kalite ölçümünü incelemenin zorunlu olduğunu öne sürmektedir (Wikipedia, Avadis Donabedian 2024).

SAĞLIK HİZMETLERİNDE KALİTENİN ÖLÇÜLMESİ

Sağlık hizmetlerinde kalitenin ölçülmesi, sağlık hizmetlerinin etkin bir şekilde değerlendirilmesini ve iyileştirilmesini sağlamak için çeşitli model ve metodolojileri içeren çok yönlü bir süreçtir. Türkiye'de, sağlık kalitesini değerlendirmek için her biri kendine özgü odak ve metodolojiye sahip çeşitli modeller ve yaklaşımlar kullanılmaktadır. Bu modeller, hasta memnuniyeti ve süreç iyileştirmesine güçlü bir vurgu yapan hem gösterge tabanlı hem de vaka tabanlı yaklaşımları içermektedir. Aşağıdaki bölümler, Türkiye'de sağlık kalitesini ölçmek için kullanılan temel model ve yöntemlere genel bir bakış sunmaktadır.

1. Gösterge Tabanlı Modeller

- **Uluslararası Ortak Komisyon (JCI) ve Sağlık Kalite Standartları (HQS):** Bu modeller Türkiye'de yaygın olarak kullanılmaktadır ve belirli standartların ve süreçlerin varlığına odaklanmaktadır. Kavram, süreç ve standart mevcudiyet oranları açısından benzerler, bu da onları iyileştirme alanlarının belirlenmesinde ve uluslararası standartlara uygunluğun sağlanmasında etkili kılar (Cece, Köse, 2022).
- **Sağlık Bilgi ve Yönetim Sistemleri Topluluğu (HIMSS)- Elektronik Tıbbi Kayıt Benimsenme Modeli (EMRAM) :** Bu model özellikle eksiklikleri belirlemek ve sağlık süreçlerinde iyileştirmeler yapmak için kullanışlıdır. Modern sağlık hizmeti sunumu için çok önemli olan elektronik tıbbi kayıtların benimsenmesini ve kullanılmasını değerlendirmek için yapılandırılmış bir yaklaşım sağlar (Cece, Köse, 2022).

2. Hizmet Kalitesi Modelleri

- **SERVQUAL ve SERVPERF Modelleri:** Bu modeller sağlık hizmetleri ortamlarında hizmet kalitesini ölçmek için sıklıkla kullanılır. Somut özellikler, güvenilirlik, yanıt verme, güvence ve empati gibi hizmet kalitesinin çeşitli boyutlarına odaklanırlar. Türk hastaneleri bağlamında, bu modeller, kamu ve özel hastaneler arasındaki hizmet kalitesini karşılaştırmak için kullanılmış olup, özel hastanelerde daha yüksek hizmet kalitesine işaret eden bulgular kullanılmıştır (Yalçın, Uka, 2020).
- **Bulanık Mantık ve Bulanık AHP Metodolojileri:** Bu gelişmiş metodolojiler, birden fazla kriter ve bunların göreceli önemini göz önünde bulundurarak hizmet kalitesini değerlendirmek için kullanılır. Çalışma saatleri, ekipman kalitesi ve personel deneyimi gibi faktörler, Türk sağlık kurumlarında hizmet kalitesi için kritik önem taşımaktadır (Büyüközkan vd, 2011).

3. Süreç ve Sonuç Ölçüleri

- **Sağlık Süreci Kalite Ölçüm Modeli (HPQMM) :** Bu model, devlet hastanelerindeki sağlık süreçlerinin değerlendirilmesine odaklanmaktadır. Süreç kalitesini ölçmek için kapsamlı bir yaklaşım sunmayı ve hastanelerin güçlü ve zayıf yönlerini objektif olarak değerlendirmelerine olanak sağlamayı amaçlamaktadır (Aksoy, 2022).
- **Klinik Kalite Ölçüm ve Değerlendirme Sistemi:** 2012 yılında başlatılan bu sistem, süreç ve sonuç göstergelerini kullanarak sağlık vakalarını izler. Türkiye sağlık kurumlarında klinik kaliteyi iyileştirmeye yönelik devam eden çabaların bir parçasıdır (Aksoy, 2022).

4. Hasta Algısı ve Memnuniyeti

- **Hasta Algı Ölçekleri:** Hastaların hemşirelik bakımı ve ilgili hastane hizmetleri hakkındaki algılarını değerlendirmek için araçlar geliştirilmiştir. Bu ölçekler Türk bağlamına uyarlanmış ve güvenilirlik açısından doğrulanmıştır, hasta memnuniyeti ve iyileştirilmesi gereken alanlar hakkında değerli bilgiler sağlanmıştır (Ören ve ark. 2016).

Bu modeller ve metodolojiler Türkiye'de sağlık kalitesinin ölçülmesi için sağlam bir çerçeve sağlarken, her yaklaşımla ilgili zorlukları dikkate almak gerekir. Örneğin, JCI ve HQS gibi gösterge tabanlı modeller yapılandırılmış bir değerlendirme sunarken, hasta deneyimlerinin ve sonuçlarının nüansları tam olarak anlaşılabilir. Benzer şekilde, SERVQUAL gibi hizmet kalitesi modelleri hasta memnuniyeti hakkında değerli bilgiler sağlarken, sağlık hizmetlerinin sunumundaki kültürel ve bağlamsal farklılıkları ele almak için adaptasyon gerektirebilir. Bu nedenle, Türkiye'de sağlık kalitesinin etkin bir şekilde ölçülmesi ve iyileştirilmesi için birden fazla model ve metodolojiyi entegre eden kapsamlı bir yaklaşım şarttır.

SAĞLIK KURUMLARINDA KALİTE YÖNETİMİNİN ÖNEMİ

Sağlık kurumlarında kalite yönetimi, yüksek standartlı tıbbi hizmetlerin sunulmasını sağlamak, hasta memnuniyetini artırmak ve genel sağlık sonuçlarını iyileştirmek için çok önemlidir. Sağlık hizmetlerinde kalite yönetim sistemlerinin (KYS) uygulanması sadece yasal gereklilikleri karşılamakla ilgili değil, aynı zamanda sürekli iyileştirme ve hesap verebilirlik kültürünü teşvik etmekle de ilgilidir. Bu yaklaşım, tıbbi hataları en aza indirmek, kaynak kullanımını optimize etmek ve sağlık hizmetlerini hasta ihtiyaçları ve beklentileri ile uyumlu hale getirmek için gereklidir. Sağlık hizmetlerinde kalite yönetiminin önemi, daha iyi sağlık sonuçlarına ve hasta memnuniyetine katkıda bulunmayı, sağlık hizmetlerinin verimliliğini ve etkinliğini artırmayı hedeflemektedir. Kalite yönetim sistemleri, hasta güvenliği için kritik olan tıbbi hataların belirlenmesine ve en aza indirilmesine yardımcı olur. Sağlık kurumları ISO 9001 ve EN 15224 gibi standartları uygulayarak süreçlerinin hasta bakımı için en iyi uygulamalarla uyumlu olmasını sağlayabilir. Hasta memnuniyeti, etkili kalite yönetiminin doğrudan bir sonucudur. Sürekli kalite iyileştirmeye odaklanarak, sağlık hizmeti sağlayıcıları, sağlık kalitesinin çok önemli bir belirleyicisi olan hasta deneyimini geliştirebilir (Bris vd 2016).

Kalite yönetimi sayesinde; hasta güvenliği, klinik sonuçları daha iyi hale getirir. Kaynak verimliliğini artırır ve standardizasyonu sağlar. Maliyetleri azaltarak israfın önüne geçer. Hasta ihtiyaç ve beklentilerini anlamayı ve karşılamayı sağlayarak hasta memnuniyetini artırır. Sağlık kurumlarını hizmetlerini düzenli olarak değerlendirmeye ve geliştirmeye teşvik ederek sürekli iyileştirme kültürünü teşvik eder. Bu, iyileştirme alanlarını belirlemek ve yenilikçi çözümleri uygulamak için veriye dayalı yaklaşımların ve kıyaslama sistemlerinin kullanılmasını içerir ve sağlık hizmetlerinin genel kalitesini artırır (Yılmaz, 2021).

SONUÇ

Yönetim ve organizasyon anlayışları, tarihsel süreçte yaşanan değişim ve gelişmelerle birlikte evrilerek günümüze kadar gelmiştir. Sanayi devrimiyle birlikte bilimsel bir disiplin olarak ele alınmaya başlanan yönetim, klasik, neo-klasik ve modern yaklaşımlar aracılığıyla farklı bakış açılarıyla zenginleştirilmiş ve kapsamlı bir yapı meydana gelmiştir. Bu yaklaşımlar, organizasyonların verimliliğini artırmak, insan faktörünü ön plana çıkarmak ve çevresel koşullara uyum sağlamak amacıyla geliştirilmiştir. Özellikle modern yönetim yaklaşımları, sistemsel düşüncüyü ve durumsallık teorisini benimseyerek, organizasyonların dinamik yapısını destekleyen stratejiler sunmaktadır. Toplam Kalite Yönetimi (TKY), modern organizasyonların vazgeçilmez bir yönetim parçalarından biridir. İnsan ve müşteri odaklılığı, sürekli iyileştirme, ekip çalışması ve liderlik gibi ilkelerle TKY, organizasyonel performansı artırmak ve uzun vadeli başarıyı sağlamak için etkili bir araçtır. TKY'nin sağladığı rekabet avantajı, verimlilik artışı ve müşteri memnuniyeti hem özel sektörde hem de kamu kurumlarında bu yaklaşımın yaygınlaşmasına katkı sağlamaktadır. Sağlık sektörü gibi insan hayatını doğrudan etkileyen alanlarda TKY'nin uygulanması, hasta güvenliği ve memnuniyetinin artırılması açısından kritik öneme sahiptir. Uluslararası standartlar ve kalite değerlendirme modelleri, sağlık hizmetlerinin etkinliğini artırmak için yol gösterici olmaktadır. Kalite yönetiminin tüm sektörlerde olduğu gibi sağlık alanında da süreçlerin sürekli iyileştirilmesini teşvik ettiği ve organizasyonların daha sürdürülebilir bir yapıya kavuşmasını sağladığı görülmektedir.

Gelişen teknoloji ile hizmet sunucuları TKY uygulamaların geliştirerek sağlık alıcılarının beklentilerini karşılamaktadırlar. Yönetim ve kalite yönetimi yaklaşımlarının bütünsel bir şekilde ele alınması, organizasyonların hem verimliliğini hem de sosyal sorumluluklarını yerine getirme kapasitelerini artırmaktadır. Günümüzün hızlı değişen ve rekabetçi ortamında, bu yaklaşımların etkin bir şekilde uygulanması, organizasyonların sürdürülebilir başarı sağlamasında kritik bir rol oynamaktadır.

Organic Agriculture Pr., Tunceli, Turkey

ÖZET

Katı atıklarının artan üretimi, birçok toplumda önemli çevresel zorluklardan biri haline gelmiştir. Gelişmekte olan ülkelerde belediye katı atıklarının (MSW) önemli bir kısmını organik atıklar oluşturmaktadır. Kompostlama, bu organik kısmın yönetimi için etkili ve sürdürülebilir bir yöntem olarak yaygın şekilde kabul görmektedir. Organik atıkların kompostlama yoluyla geri dönüştürülmesi, gıda artıkları, bahçe budama atıkları ve tarımsal artıklar gibi organik maddeleri besin açısından zengin komposta dönüştüren sürdürülebilir bir atık yönetimi yöntemidir. Bu süreç, organik materyali oksijen varlığında parçalayan bakteri ve mantar gibi mikroorganizmalar tarafından yürütülür. Kompostlama, atıkların hacmini azaltarak çöplüklere gönderilen miktarı düşürmekte ve metan salınımını azaltırken, aynı zamanda toprak yapısını, nem tutma kapasitesini ve verimliliğini artıran değerli bir toprak düzenleyici oluşturmaktadır. Bu inceleme, kompostlama sürecinin toplama, ayrışma, olgunlaşma ve kullanım aşamalarını inceleyerek, çevresel faydalarını ve kompostlama çalışmalarını küresel ölçekte genişletmede karşılaşılan zorlukları vurgulamaktadır. Toplum katılımını, eğitimi ve yenilikçi kompostlama tekniklerini öne çıkaran bu makale, kompostlamayı atık azaltma ve sürdürülebilir tarım uygulamalarını teşvik etmek için kilit bir strateji olarak savunmaktadır.

Anahtar kelimeler: Kompostlama, organik atık, geri dönüşüm

ABSTRACT

The increasing production of solid waste has become one of the significant environmental challenges in many societies. Organic waste constitutes a significant portion of municipal solid waste (MSW) in developing countries. Composting is widely recognized as an effective and sustainable method for managing this organic fraction. Recycling organic waste through composting is a sustainable method of waste management that transforms organic matter such as food scraps, yard trimmings, and agricultural residues into nutrient-rich compost. This process is driven by microorganisms, including bacteria and fungi, that decompose the organic material in the presence of oxygen. Composting not only reduces the volume of waste sent to landfills, mitigating methane emissions, but also creates a valuable soil amendment that enhances soil structure, moisture retention, and fertility. This review explores the stages of composting collection, decomposition, curing, and use - highlighting its environmental benefits and the challenges faced in scaling composting efforts globally. Emphasizing community involvement, education, and innovative composting techniques, this paper advocates for composting as a key strategy for reducing waste and promoting sustainable agricultural practices.

Keywords: Composting, organic waste, recycling

INTRODUCTION

The growing generation of solid waste and inadequate sanitation management have become significant global environmental concerns (Medina-Mijangos and Seguí-Amórtegui, 2021). By 2050, the global production of municipal solid waste is projected to reach 3.88 billion megagrams (Mg) (Kaza et al., 2021). The improper management of this increasing waste volume is a major driver of environmental pollution and poses significant threats to human health (Vinti et al., 2023).

In developing economies, solid waste management systems are evolving, with local municipalities incorporating waste treatment strategies into their overall waste management practices (Iqbal et al., 2024). Composting has been extensively employed to recover nutrients from organic solid waste as the generation of municipal organic waste continues to rise (Zeng et al., 2023). Human excreta (HE), comprising feces and urine, contain 15–26% nitrogen (N), 5.5–8.5% phosphorus (P), 4–7% potassium (K), 51–72% carbon (C), and 8.5–10% calcium (Ca) (Rose et al., 2015). Additionally, John et al. (2006) estimated the nutrient contents of municipal organic waste (MOW) to include 1.1% nitrogen (N), 0.32% phosphorus (P), and 1.7% potassium (K). These nutrients in MOW and HE can be effectively recovered through composting (Oishi et al., 2023).

Composting is a biological process that decomposes complex compounds into simpler molecules through the activity of microorganisms (Aguilar-Paredes et al., 2023). This process occurs in four key phases: mesophilic I (25–40 °C), thermophilic (45–65 °C), mesophilic II, and maturation (Insam and de Bertoldi, 2007; FAO, 2015). By enhancing nutrient recycling, composting promotes sustainability and supports circular economy practices (Cao et al., 2023). Critical factors influencing the composting process include temperature, the carbon-to-nitrogen ratio (C), aeration, porosity, moisture content, and pH levels (Cao et al., 2023).

During aerobic composting, organic materials are broken down by specialized microbial communities, producing a stabilized end product. This compost serves as a valuable soil amendment, improving soil properties and boosting agricultural productivity. However, the management of leachate generated during the composting process remains a key challenge for composting facilities (Roy et al., 2018). Aerobic composting is a highly effective waste management technology that not only decomposes organic matter but also reduces antibiotic levels and the abundance of antibiotic resistance genes to a certain extent.

Nutrient recycling through composting enhances the availability of essential plant nutrients, helping farmers replenish soil organic matter and improve soil fertility. This process reduces dependence on synthetic fertilizers (Berendes et al., 2018) and mitigates environmental impacts associated with organic waste management practices (Li et al., 2023). Furthermore, applying compost can increase soil organic carbon (SOC) and soil nutrient levels while lowering greenhouse gas (GHG) emissions (Yokamo et al., 2023). Compost contains stable organic carbon, which supports soil carbon sequestration through direct transformation and by limiting carbon mineralization processes (Cao et al., 2023).

Many modern cities have undergone similar transformations, marked by a disconnect between nutrient recovery and agriculture due to urbanization and the adoption of water-based sanitation systems. However, future sanitation systems could reduce reliance on virgin water for flushing urban waste and instead promote circular resource flows, even in densely populated urban areas (Deng et al., 2023). Recycling water and nutrients can also help combat climate change by

cutting emissions associated with sewage treatment and synthetic fertilizer production (McKenna et al., 2022).

Organic fertilizers, which contain dissolved organic matter and minerals, are highly beneficial for plant development (Zhang et al., 2020). However, traditional methods of applying solid organic fertilizers often result in insufficient nutrient availability during later growth stages, posing challenges for integrated water and nutrient supply in soilless greenhouse vegetable production (Meghvansi & Varma, 2016).

Composting, by comparison, is a dynamic biodegradation process conducted under controlled, aerobic conditions. During this process, organic matter is transformed into safe, stabilized, humus-rich soil amendments and organic fertilizers (Zhang et al., 2021). As a result, composting is regarded as an effective, simple, and cost-efficient method for managing solid organic waste, maximizing nutrient recycling in the process.

In developed countries like Germany, the UK, and other parts of Europe, composting has become a widely utilized method for organic waste management (Cheng et al., 2017). However, in many developing countries, the techniques, infrastructure, and systems for composting and utilizing organic waste remain insufficient to meet growing demands.

Reduce, reuse and recycle urban water.

Reducing the volume of water entering cities decreases the amount of wastewater requiring treatment. Cost-effective measures to minimize wastewater generation in urban households, restaurants, and offices include metering and billing water usage based on consumption (OECD, 1999) and installing water-saving devices that do not demand changes in user behavior (Suzuki et al., 2010). For instance, low-flush toilets can cut flush water usage by 50–90%, while water-saving showerheads and taps can reduce water consumption by at least half without compromising comfort or functionality. Additionally, insulating hot water pipes saves on heating costs. Studies show that households equipped with such advanced installations may use as little as 20–40 liters per person per day (Drangert, 2021). Despite these benefits, such installations are rarely mandatory, and inefficient devices remain commercially available, even in cities where water is a scarce resource.

Reducing water flow in indoor and street sewers necessitates adequate pipe slope to prevent blockages, thereby minimizing the need for flushing. Consumers can further contribute by wiping fat, oil, and grease off dishes and disposing of the nutrient-rich paper in organic waste bins, instead of letting these substances enter the water system. Cleaner wastewater, containing fewer harmful substances, can then be reused for non-potable applications such as toilet flushing, industrial cooling, and irrigation. More heavily polluted wastewater, however, must undergo treatment before being recycled for use in industrial processes or agriculture (EC, 2012).

Reuse and recycle urban nutrients.

Food loss and waste from production to consumption is estimated to account for one-third of all food produced globally (Gustavsson et al., 2011). Implementing improvements in packaging, storage, and transportation, alongside increasing public awareness, could reduce these losses and waste by 50–75% (Springmann et al., 2018), potentially decreasing nutrient inflows to cities by 15–25%.

A key strategy for minimizing harmful substances in nutrient-rich wastewater flows is separating toilet water (blackwater) from greywater, as 85% of nutrients are concentrated in

blackwater (Jönsson et al., 2005). Additionally, avoiding the mixing of industrial and household wastewater is essential. This separation is economically viable in new housing developments, where conventional treatment to remove phosphorus (P) and nitrogen (N) is unnecessary for nutrient-poor greywater.

To facilitate this, double piping should be made mandatory in all new buildings to allow for the separation of blackwater and its connection to a dedicated sewer system when implemented. This forward-thinking approach parallels the EU's planned phase-out of petrol-fueled car sales by 2035, ensuring urban infrastructure is prepared for sustainable waste management.

Nutrients and organic matter recovered from blackwater are particularly easy to reuse or recycle due to blackwater's relatively uniform sludge composition and significantly better NPK ratio compared to the 2:1:0.1 found in mixed wastewater (van der Wiel et al., 2021). Fertilizers derived from sewage sludge can be enhanced with additional nitrogen (N), phosphorus (P), and potassium (K), enabling their sale as precision fertilizers. Additionally, separating food waste from other solid waste, such as medical residues and plastics, significantly improves its recycling potential.

Research indicates that nutrients recovered from organic waste and blackwater could replace approximately half of the phosphorus (P) fertilizers used in agriculture, alongside smaller fractions of potassium (K) and nitrogen (N) (Rose et al., 2015). Applying an extended waste hierarchy to phosphorus in Europe suggests that 44% of P could be saved in Step 1, directly substituting mined phosphorus. Steps 2 and 3 could save an additional 15–30%, depending on the efficiency of food production systems (Drangert, 2021). Notably, these estimates assume no change in dietary habits, implying that further savings might be achievable with dietary shifts.

Responses to global nutrient and water restrictions

The number of studies published on global resource limits and the emerging demands for sustainable food and product production has grown significantly over the past decade (WHO, 2016). Global data on resource availability and human impacts on the climate have become increasingly reliable, offering essential insights for city planners to anticipate future needs. However, two critical aspects have been overlooked in these reports: the impact of the growing use of chemicals in society, and the need for new planning strategies focused on nutrient recovery as the global population becomes more concentrated in urban areas.

CONCLUSIONS AND DISCUSSIONS

As the global population is projected to reach 11 billion by the end of this century, with around 8.5 billion people living in urban areas, cities will emerge as major centers of demand for virgin water and food, while simultaneously generating vast amounts of valuable waste. Recycling nutrient-rich liquid and solid waste from urban areas into fertilizers for agriculture will benefit both sectors. The analysis in this paper indicates that recycling has the potential to become the ultimate solution for organic waste and wastewater, while ensuring a steady supply of food and fertilizers, and mitigating both local and global environmental impacts. A combination of strategies can generate sufficient fertilizers to meet global food needs by 2100.

Current technical methods and systems are sufficiently advanced to enable the safe recycling of nutrient flows in urban areas, primarily for agricultural purposes. Rather than solely focusing on pressuring the chemical industry to adopt the substitution principle with easily degradable

substances, establishing a separate sewer for blackwater would provide a direct means of accessing nutrients, allowing them to be transformed into high-quality fertilizers.

Since the beginning of the new millennium, environmental challenges have shifted from local issues to global concerns, such as resource limitations and atmospheric pollution. For the first time in human history, societies are confronted with a combination of climate change, global resource constraints, and man-made pollution. On a global scale, sanitation solutions are likely to include measures such as collecting rainwater (e.g., sponge cities), recycling nutrients from treated blackwater sludge and other organic materials, and recycling or infiltrating greywater into the soil rather than discharging it into water systems.

These approaches require coordinated efforts from international organizations, multiple public sectors, businesses, and residents. Major changes and improvements in these systems may take 50–100 years to fully implement and will likely involve extended negotiations. Therefore, water and sanitation systems must become more flexible, allowing for source separation of wastewater and organic waste, and eliminating environmentally harmful waste disposal practices.

ÖZET

Ağır metaller ve organik kirleticilerden kaynaklanan toprak kirliliği, ekosistemlerde önemli çevresel sorunlar yaratmaktadır. Çevrenin kirlenmesi, gezegenin toprağını, suyunu ve havasını etkileyerek ekosistemler ve canlılar için büyük risk oluşturan ciddi bir sorundur. Bugüne kadar havalandırma lagünleri, filtrasyon, çökeltme, flokülasyon ve koagülasyon gibi çeşitli geleneksel arıtma yöntemleri kirliliğin giderilmesi için kullanılmıştır. Biyoremediasyon, fitoremediasyon ve mikoremediasyon gibi modern teknikler, çevre dostu özellikleri sayesinde daha yüksek verimlilik göstermiştir. Çeşitli arıtma yöntemleri arasında toprak biyoremediasyonunda kullanılan biyoakümülatör bitkilerin kullanımı, fitoremediasyon olarak bilinir ve sürdürülebilir, maliyet etkin ve çevre dostu çözümler sunar. Biyoakümülatör bitkiler veya hiperakümülatörler, yüksek düzeyde kirleticileri dokularında biriktirme, yoğunlaştırma ve depolama yeteneğine sahiptir ve bu süreçte toksik etkiler yaşamadan işlev görürler. Bu bitkiler, kurşun (Pb), kadmiyum (Cd), arsenik (As) ve diğer tehlikeli iyonlarla kirlenmiş toprakları etkili bir şekilde temizleyebilirler. Kadmiyum ve çinko için *Thlaspi caerulescens*, arsenik için *Pteris vittata* ve radyonüklidler için *Helianthus annuus* örnek olarak verilebilir. Fitoremediasyonun etkinliğini etkileyen faktörler arasında toprak koşulları, kirletici özellikleri ve bitki türü seçimi yer almaktadır. Biyoakümülatör bitkiler büyük bir potansiyele sahip olsa da, yavaş alım hızları, kirlenmiş biyokütlenin güvenli şekilde bertaraf edilmesi ve türlere özgü uygulamalara olan ihtiyaç gibi zorluklar, yaygın kullanımını sınırlamaktadır. Bununla birlikte, özellikle genetik mühendisliği alanında devam eden araştırmalar, alım kapasitesini artırmayı ve arıtma sürecini hızlandırmayı amaçlamaktadır. Biyoakümülatör bitkiler, kirlenmiş toprakları geri kazanmada ve karasal ekosistemleri iyileştirmede küresel çabalarda kritik bir araç olarak kabul edilmektedir.

Anahtar kelimeler: Toprak biyoremediasyonu, biyoakümülatör, bitkiler

ABSTRACT

Soil pollution caused by heavy metals and organic pollutants creates significant environmental issues in ecosystems. Environmental pollution is a serious problem that affects the planet's soil, water, and air, posing major risks to ecosystems and living organisms. To date, various traditional treatment methods such as aeration lagoons, filtration, sedimentation, flocculation, and coagulation have been used to address pollution. Modern techniques such as bioremediation, phytoremediation, and mycoremediation have shown higher efficiency due to their environmentally friendly properties. Among the various treatment methods, the use of bioaccumulator plants in soil bioremediation is known as phytoremediation, offering sustainable, cost-effective, and environmentally friendly solutions. Bioaccumulator plants or hyperaccumulators have the ability to accumulate, concentrate, and store high levels of

pollutants in their tissues while functioning without toxic effects. These plants can effectively clean soils contaminated with lead (Pb), cadmium (Cd), arsenic (As), and other hazardous ions. Examples include *Thlaspi caerulescens* for cadmium and zinc, *Pteris vittata* for arsenic, and *Helianthus annuus* for radionuclides. Factors influencing the effectiveness of phytoremediation include soil conditions, pollutant characteristics, and plant species selection. Although bioaccumulator plants have great potential, challenges such as slow uptake rates, safe disposal of contaminated biomass, and the need for species-specific applications limit their widespread use. However, ongoing research, particularly in the field of genetic engineering, aims to increase uptake capacity and accelerate the remediation process. Bioaccumulator plants are considered a critical tool in global efforts to reclaim polluted soils and improve terrestrial ecosystems.

Keywords: Soil bioremediation, bioaccumulation, plants

INTRODUCTION

Bioremediation, in contrast, utilizes the metabolic activities of organisms to diminish or neutralize harmful substances in contaminated environments. This approach can efficiently eliminate heavy metals and oil from polluted soils by exploiting the adsorption, redox, and degradation abilities of microorganisms, along with the absorption, uptake, and transformation capabilities of plants. Although phytoremediation processes are typically slower, they offer significant potential for restoring polluted soils. Despite the development of several chemical, physical, and biological methods, phytoremediation stands out as one of the safest, environmentally friendly techniques for addressing contaminated sites. Additionally, certain lower animals contribute to the degradation of specific pollutants.

Phytoremediation is the process of using plants and their associated microorganisms to reduce the build-up and harmful effects of pollutants in the environment (Kamath et al., 2004). It encompasses the metabolism, transformation, absorption, removal, and breakdown of various toxic substances, both organic and inorganic, present in the soil. This approach is considered environmentally friendly, cost-efficient, and socially acceptable for remediation (Kabra et al., 2012).

Oil spills and discharges that occur during the extraction, processing, and transport of crude oil and petroleum products are major contributors to soil contamination. These pollutants typically consist of a range of organic compounds, including alkanes, aromatic hydrocarbons, asphaltenes, and resins. Research has indicated that petroleum contamination in soil may also be linked to the presence of heavy metals, which can further contribute to complex pollution in ecosystems (Jørgensen et al., 2000).

Plants are closely linked to a diverse community of microorganisms that colonize their tissues, known collectively as the plant microbiota (Compant et al., 2019). The plant microbiome, which encompasses all microbial genomes, can expand the genomic and metabolic capabilities of the host plant. This interaction supports key processes such as nutrient acquisition, immune system modulation, and stress resistance (Fitzpatrick et al., 2020). The effects of the microbiome can even extend to influence plant interactions at multiple trophic levels (Pozo et al., 2020). Therefore, microbiome engineering is emerging as a sustainable approach to enhance plant productivity, offering a crucial platform for advancing the New Green Revolution (Lawson et al., 2019).

The plant microbiota consists of a wide variety of species that can be transmitted either horizontally from the environment or vertically through seeds (Trivedi et al., 2020). Research in recent years has focused extensively on the composition, dynamics, and functionality of bacterial components of the plant microbiota (reviewed in Fitzpatrick et al., 2020 and Cordovez et al., 2019).

Nevertheless, the significant role of specific fungi in plant fitness is well recognized. Some fungi can have detrimental effects, acting as important pathogens (Dean et al., 2012), while others are beneficial, supporting plant growth and health (Genre et al., 2020). Beneficial fungi can improve water and nutrient uptake, stimulate plant growth, suppress pathogens and pests through antibiosis, parasitism, or competition, enhance plant resistance to biotic and abiotic stresses, and contribute to bioremediation of polluted environments (Hyde et al., 2019).

Components of the plant mycobiota

The plant mycobiota refers to the diverse community of fungi that inhabit various plant tissues and their immediate environment, including the soil, roots, stems, leaves, and flowers. The components of the plant mycobiota can be classified into different functional groups based on their interactions with the plant. Overall, the plant mycobiota is a highly complex and dynamic community of fungi that plays crucial roles in plant health, growth, and environmental interactions. Understanding the full scope of these fungi and their functions is essential for advancing agricultural practices and biotechnological applications.

The plant mycobiota is primarily found in three major compartments: the rhizosphere, phyllosphere, and endosphere (Trivedi et al., 2020). Recent studies have also suggested the presence of fungal communities in the seed, pollen, and nectar microbiota (Klaps et al., 2020). These mycobiota assemblages are not randomly distributed but are influenced by various factors, including the plant's genotype, its biogeography, environmental conditions, nutrient availability, and interactions with other members of the plant microbiota (Coleman-Derr et al., 2016).

In recent decades, significant progress has been made in understanding the functional capabilities of selected members of the mycobiota, particularly those with high agronomic potential, such as mycorrhizal fungi and species from the *Trichoderma* and *Epichloë* genera. Among the most well-known plant–fungal interactions are mycorrhizas (Nash et al., 2017). These widespread symbiotic relationships have garnered particular attention due to their crucial roles in ecosystem functioning. In addition to their involvement in carbon cycling, mycorrhizal fungi are key drivers of both microbial and plant community dynamics (Ferlian et al., 2018).

Opportunities and challenges for the management of plant–fungal interactions

Enhancing Crop Productivity: Fungi such as mycorrhizal fungi and beneficial endophytes can enhance nutrient uptake, especially phosphorus and nitrogen, which are essential for plant growth. These fungi can also promote plant health by improving drought tolerance, disease resistance, and resistance to other abiotic stresses, leading to improved crop yields (Miyauchi et al., 2020).

Sustainable Agriculture: Fungal species, such as those in the *Trichoderma* genus, can act as biocontrol agents against plant pathogens. This reduces the need for chemical pesticides, offering a more eco-friendly and sustainable approach to pest and disease management (Ferlian et al., 2018).

Biofertilizers and Soil Health: Mycorrhizal fungi can be used as biofertilizers to improve soil fertility. They enhance soil structure, increase microbial diversity, and promote nutrient cycling. This leads to healthier soil ecosystems and supports sustainable farming practices (Miyauchi et al., 2020).

Challenges in Managing Plant–Fungal Interactions:

Complexity of Fungal Communities: The plant mycobiota is highly diverse and can include beneficial, neutral, or pathogenic fungi. Understanding the complex interactions within these communities is challenging, and identifying the specific fungi that are most beneficial for different plant species under varying environmental conditions requires extensive research (Redman et al., 2001).

Technical and Knowledge Gaps: Despite advances in sequencing technologies, much of the functional potential of fungi, particularly their roles in symbioses and their impact on plant health, remains poorly understood. The functional roles of many fungal taxa are still unknown, and technical barriers in fungal genomics, transformation, and genetic engineering limit our ability to fully exploit their potential (Naranjo-Ortiz and Gabaldon, 2020).

Scalability in Agricultural Systems: While beneficial fungi can be successfully used in controlled environments, scaling these applications to large agricultural fields or diverse ecosystems is a challenge. Factors such as soil composition, climate, and crop type can affect the success of fungal inoculants or biofertilizers in the field (Miyachi et al., 2020).

Environmental Variability: The effectiveness of fungal interactions can vary depending on environmental conditions. Factors such as soil pH, temperature, moisture, and nutrient availability can all influence fungal activity and plant response. Tailoring fungal applications to specific environmental conditions requires a nuanced understanding of local ecosystems and crop needs (Ferlian et al., 2018).

Field Studies and Long-Term Ecological Monitoring

Longitudinal Field Studies: To better understand plant–fungal dynamics in real-world environments, long-term field studies that monitor plant health, fungal diversity, and ecosystem functions are critical. These studies provide insights into how fungal communities change over time, how they respond to environmental stresses, and how their roles shift with changing agricultural practices or climate conditions.

Ecological Role of Fungi in Natural vs. Managed Systems: Understanding how fungi behave in both natural ecosystems (e.g., forests, grasslands) and managed agricultural systems (e.g., farms, monocultures) is important for assessing their ecological roles in different contexts. This knowledge can guide strategies for introducing or managing fungal species in agricultural settings.

Understanding the regulation of plant–fungal interactions

Understanding the regulation of plant–fungal interactions is crucial for optimizing the benefits of these symbioses in agriculture and ecosystem management. The interactions between plants and fungi are highly regulated by both the plant and the fungal partners through complex molecular signaling. These interactions can range from mutualistic relationships, where both partners benefit, to pathogenic ones, where the fungus may harm the plant.

Key factors in regulating these interactions include:

Molecular Signaling: Plants and fungi communicate through various signaling molecules. For example, in mycorrhizal symbiosis, plant roots release exudates like strigolactones and flavonoids that attract fungi, while fungi release myc factors that trigger plant responses. These signals govern the establishment and maintenance of the symbiotic relationship (Lanfranco et al., 2018).

Plant Immune Response: Plants have sophisticated immune systems that regulate fungal interactions. Some fungi may trigger plant immune responses, and the plant must decide whether to activate defense mechanisms or allow the fungus to establish a beneficial symbiosis. Understanding how plants modulate immune responses to distinguish between beneficial and harmful fungi is essential for optimizing fungal interactions (Marquez et al., 2017).

Environmental Influence: Environmental factors such as soil conditions, temperature, humidity, and nutrient availability also influence plant–fungal interactions. For instance, nutrient deficiencies (e.g., phosphate limitation) can promote the recruitment of mycorrhizal fungi, which help plants access nutrients from the soil. Environmental stresses can also affect the balance between beneficial and pathogenic fungi (Lemanceau et al., 2017).

Genetic Regulation: Both plant and fungal genomes play a role in determining the nature of the interaction. Plant genotypes can influence the structure of the plant microbiome, and specific genetic traits in plants can enhance or inhibit fungal colonization. Similarly, fungi possess specific genes that enable them to establish symbioses or become pathogens depending on the plant host and environmental conditions (Walters et al., 2018).

Co-evolutionary Dynamics: Over time, plants and fungi have co-evolved to form specialized interactions. Some plants and fungi have developed highly specific mutualistic relationships, where the plant provides the fungus with carbohydrates, and in return, the fungus provides the plant with essential nutrients. However, some fungi may switch to pathogenic behavior under certain conditions, leading to disease. The regulation of these shifts is still a subject of extensive research.

Plant and fungal manipulation and breeding for mycobiome engineering

Plant and fungal manipulation and breeding for mycobiome engineering hold significant potential for improving agricultural productivity, sustainability, and resilience. By optimizing plant–fungal interactions, it is possible to enhance plant health, increase nutrient uptake, and promote stress tolerance, while also improving the functionality of the soil microbiome. Mycobiome engineering involves both the direct manipulation of plant and fungal traits as well as the breeding of crops to better interact with beneficial fungi.

Key approaches in plant and fungal manipulation for mycobiome engineering include:

Selection for Symbiotic Traits: Plants can be bred to favor beneficial fungal interactions, particularly with mycorrhizal fungi. By selecting plant genotypes that are more compatible with specific fungal species (such as arbuscular mycorrhizal fungi), breeders can enhance plant nutrient acquisition, drought resistance, and disease resistance. For example, selecting plants that produce more exudates that attract beneficial fungi can help optimize symbiotic relationships (Miyauchi et al., 2020).

Improving Root Architecture: Traits related to root structure, such as root length, density, and branching patterns, can be selected for in breeding programs. These traits influence the extent of fungal colonization and the overall success of symbiosis, especially with mycorrhizal fungi and endophytes (Walters et al., 2018).

Genetic Resistance to Pathogens: Breeding plants for better resistance to fungal pathogens is another aspect of mycobiome engineering. Plants can be genetically modified or selected to possess traits that limit the colonization of harmful fungi while promoting beneficial symbiotic fungi (Redman et al., 2001).

RESULTS AND DISCUSSION

Our understanding of the importance of the plant microbiome has grown rapidly in recent years. However, most studies focus primarily on the bacteriota, rather than the entire microbial community. Despite compelling evidence of the critical role fungi play in the plant microbiome and significant advances in research and technology, the complexity of plant–mycobiome interactions remains far from fully understood. Descriptive studies and theoretical reviews have significantly raised awareness of the mycobiome's relevance, but there is a need for more experimental research focusing on functional aspects and field studies that examine the long-term effects of manipulating the mycobiome under changing environmental conditions. We require more manipulative, hypothesis-driven studies on the roles of individual mycobiota members within the broader context of the entire microbiome, incorporating the ecological insights gained in recent years. From a practical standpoint, appropriate regulation of bioinoculants (biostimulants and biopesticides) in agriculture is crucial. Our increasing understanding of the fundamental processes shaping mycobiota composition, its interactions with plants and other microbiome members, along with significant advances in genetic tools and formulations, promises an exciting future for mycobiome research and its applications.

CONCLUSIONS

Managing plant–fungal interactions presents exciting opportunities for improving crop productivity, promoting sustainable agriculture, and addressing environmental challenges like soil degradation and pollution. However, the complexity of fungal communities, the unpredictability of fungal behavior, and technical barriers to research and application remain significant challenges. Overcoming these challenges will require continued research, improved agricultural practices, and the development of better tools for fungal management and application in real-world farming systems.

Fostering ecological knowledge on plant–fungal interactions is crucial for advancing sustainable agriculture, improving plant health, and addressing environmental challenges. By encouraging interdisciplinary research, enhancing molecular and genomic tools, conducting field studies, and integrating mycology into agricultural practices, we can unlock the full potential of fungi in promoting ecosystem services and plant productivity. The integration of fungal biodiversity conservation and public engagement further supports this vision, helping to ensure a sustainable future for agriculture and the environment.

ÖZET

Bu çalışma, çocuk sporcuların psikolojik dayanıklılığını geliştirmede sporun etkisini değerlendirmek amacıyla gerçekleştirilmiştir. Araştırmada meta-analiz yöntemi kullanılmıştır. Meta-analiz, mevcut araştırma bulgularını sistematik bir şekilde bir araya getirerek, genel eğilimleri ve etkileri istatistiksel olarak değerlendirmeyi amaçlayan bir yöntemdir. Çalışmada elde edilen bulgular, sporun çocuk sporcuların psikolojik dayanıklılığını artırmada önemli bir rol oynadığını göstermektedir. Spor, çocukların stresle başa çıkma becerilerini, öz güvenlerini ve duygusal düzenleme kapasitelerini güçlendiren bir araç olarak öne çıkmaktadır. Analize dâhil edilen çalışmaların büyük bir kısmı, spor etkinliklerinin çocukların problem çözme, iş birliği yapma ve zorluklarla mücadele becerilerini geliştirdiğini ortaya koymaktadır. Ayrıca, takım sporlarının sosyal destek mekanizmalarını güçlendirdiği ve dayanıklılık üzerindeki etkisinin bireysel sporlara göre daha belirgin olduğu görülmektedir. Bununla birlikte, sporun psikolojik dayanıklılık üzerindeki etkisinin optimize edilebilmesi ve olumsuz sonuçların önüne geçilmesi için spor ortamlarında uygun pedagojik yaklaşımların benimsenmesi gerektiği vurgulanmaktadır. Çocukların dayanıklılık gelişimini desteklemek için spor programlarının yapılandırılmasında yaş grupları, bireysel ihtiyaçlar ve sosyal bağlar dikkate alınmalıdır. Bu alanda yapılan araştırmalar, sporun yalnızca bireysel faydalar değil, aynı zamanda toplumsal etkiler sunan bir araç olduğunu ortaya koymaktadır. Gelecekteki çalışmalar, spor programlarının, çocukların yaş grubu ve ihtiyaçlarına uygun şekilde tasarlanması önemlidir. Eğitim kurumları ve spor kulüpleri, çocuk sporcuların ihtiyaçlarına uygun, dayanıklılığı artırmaya yönelik yapılandırılmış programlar geliştirmelidir. Özellikle takım sporlarının dayanıklılığı artırmadaki etkisi göz önünde bulundurularak, bu tür etkinliklerin yaygınlaştırılması önerilmektedir. Ayrıca, spor programlarının sürdürülebilir ve uzun süreli olması, psikolojik dayanıklılığın kalıcı bir şekilde geliştirilmesine katkı sağlayacaktır. Ayrıca çocukların spor etkinliklerine aktif katılımı teşvik edilmelidir. Sporun çocuk gelişimindeki rolüne dair yapılan araştırmalar, bu etkinliklerin çocukların sadece fiziksel değil, aynı zamanda psikolojik sağlıklarını da desteklediğini güçlü bir şekilde ortaya koymaktadır.

Anahtar kelimeler: Çocuk Sporcular, Dayanıklılık Gelişimi, Psikolojik Dayanıklılık

ABSTRACT

This study was conducted to evaluate the impact of sports on developing psychological resilience in child athletes. A meta-analysis method was employed in this research. Meta-analysis is a statistical approach that systematically combines the findings of existing research to evaluate overall trends and effects. The findings of this study indicate that sports play a significant role in enhancing the psychological resilience of child athletes. Sports emerge as a tool that strengthens children's stress management skills, self-confidence, and emotional

regulation capacities. A majority of the included studies reveal that sports activities enhance children's problem-solving abilities, teamwork skills, and capacities to cope with challenges. Furthermore, it was observed that team sports are more effective in fostering resilience compared to individual sports due to their ability to strengthen social support mechanisms. However, it is emphasized that appropriate pedagogical approaches should be adopted in sports environments to optimize the impact of sports on psychological resilience and to prevent potential negative outcomes. When structuring sports programs to support children's resilience development, factors such as age groups, individual needs, and social contexts must be considered. Research in this field highlights that sports are not only a tool for individual benefits but also serve as a means of promoting societal well-being. Future studies should focus on designing sports programs tailored to the age groups and specific needs of children. Educational institutions and sports clubs are encouraged to develop structured programs aimed at enhancing resilience, aligned with the needs of child athletes. In particular, considering the effectiveness of team sports in fostering resilience, the promotion of such activities is recommended. Moreover, ensuring that sports programs are sustainable and long-term will contribute to the enduring development of psychological resilience. Additionally, children should be encouraged to actively participate in sports activities. Research on the role of sports in child development strongly demonstrates that these activities support not only children's physical health but also their psychological well-being.

Keywords: Child Athletes, Resilience Development, Psychological Resilience

GİRİŞ

Bu çalışmanın amacı, çocuk sporcuların psikolojik dayanıklılığını geliştirmede sporun etkisini meta-analiz yöntemiyle incelemektir. Bu araştırmanın önemi, çocuk sporcuların psikolojik dayanıklılığını geliştirmede sporun rolünü değerlendirerek, sporun çocuk sporcuların psikolojik dayanıklılığı süreçlerinde etkili bir yöntem olup olmadığını ortaya koymak ve alanyazına katkı sağlaması açısından çalışma önemlidir.

Psikolojik dayanıklılık, bireylerin stres, zorluklar, değişim ve baskı gibi yaşamın kaçınılmaz unsurlarına karşı etkin bir şekilde başa çıkabilme yeteneği olarak tanımlanmaktadır (Fletcher ve Sarkar, 2012). Özellikle çocuklar için psikolojik dayanıklılık, duygusal ve sosyal gelişimin bir parçası olarak kritik öneme sahiptir. Spor, bu dayanıklılığı geliştirmede güçlü bir araç olarak öne çıkmaktadır. Fiziksel aktivitelerin çocukların sadece fiziksel sağlığını değil, aynı zamanda zihinsel sağlıklarını, özgüvenlerini ve stresle başa çıkma becerilerini geliştirdiği bilimsel çalışmalarla ortaya konmuştur (Connaughton vd., 2008).

Spor, çocukların sosyal destek ağlarını genişletme, grup çalışması becerilerini geliştirme ve duygusal zorluklarla başa çıkma kapasitelerini artırma potansiyeline sahiptir. Takım sporlarında, çocuklar işbirliği yapmayı, sorun çözmeyi ve dayanışma içinde hareket etmeyi öğrenirken, bireysel sporlar özdisiplin, hedef belirleme ve bireysel çabayı ödüllendiren bir ortam sağlamaktadır. Bu bağlamda spor, çocuklara stresli durumlar karşısında daha dirençli olma ve zorlukları fırsata dönüştürme becerisi kazandırmaktadır (Ungar, 2008).

Bununla birlikte, çocuk sporcuların psikolojik dayanıklılığını geliştirmek için sporun tek başına yeterli olmayacağı ve bu sürecin etkili bir şekilde yönlendirilmesi gerektiği de unutulmamalıdır. Spor ortamında, uygun eğitim yöntemleri ve pedagojik yaklaşımlar kullanılmadığında, sporun olumsuz etkileri de ortaya çıkabilir. Bu nedenle, sporun çocukların psikolojik dayanıklılığı üzerindeki etkisini anlamak, bu etkiyi optimize etmek ve olası riskleri en aza indirmek için bilimsel temelli yaklaşımlara ihtiyaç vardır (Wagstaff vd., 2012).

Çalışmada, literatürdeki mevcut teorik ve ampirik bilgileri bir araya getirerek, sporun çocukların psikolojik dayanıklılığını nasıl etkilediğini daha kapsamlı bir şekilde ele almayı hedeflemektedir. Ayrıca, çocuk sporcuların dayanıklılığını geliştirmeye yönelik stratejiler ve

bu süreçte etkili olabilecek faktörler incelenmektedir. Bu kapsamda, sporun birey ve toplum düzeyinde çocuklara sağlayabileceği psikolojik faydalar detaylı bir şekilde tartışılacaktır. Sonuç olarak çalışma, çocukların psikolojik dayanıklılığını artırmayı hedefleyen eğitimciler, antrenörler ve politika yapıcılar için önemli bir rehber niteliğinde bilgiler sunması beklenmektedir. Ayrıca, sporun çocuk gelişimi üzerindeki etkilerine dair literatüre katkı sağlayarak, bu alandaki boşlukların giderilmesine yönelik yeni araştırma alanları sunması amaçlanmaktadır.

Psikolojik Dayanıklılık Kavramı

Psikolojik dayanıklılık, bireyin zorlu yaşam koşulları karşısında uyum sağlama ve bu koşullardan öğrenerek daha güçlü bir şekilde çıkabilme kapasitesini ifade etmektedir (Masten, 2001). Bu kavram, hem bireyin içsel motivasyonunu hem de çevresel kaynaklarla etkileşim yoluyla geliştirdiği becerileri içermektedir. Psikolojik dayanıklılık, stresli olaylar karşısında bireylerin sergilediği olumlu uyum yeteneğini ve bu süreçte gelişim gösterebilme potansiyelini temsil etmektedir (Luthar vd., 2000).

Literatürde, psikolojik dayanıklılığın doğuştan gelen bir özellikten ziyade öğrenilebilir ve geliştirilebilir bir süreç olduğu vurgulanmaktadır (Southwick vd., 2014). Bireylerin çocukluk döneminde aile desteği, güvenli bağlanma ilişkileri ve pozitif öğrenme deneyimleri ile bu özelliği geliştirebildikleri ifade edilmektedir (Rutter, 2006). Ayrıca, bireyin zihinsel esneklik, duygusal düzenleme ve problem çözme becerileri gibi psikolojik faktörlerinin de dayanıklılığı artırıcı bir etki yaptığı belirtilmiştir (Connor ve Davidson, 2003).

Psikolojik Dayanıklılığın Önemi

Psikolojik dayanıklılık, bireyin hem bireysel refahı hem de toplumsal uyum açısından önemli bir rol oynamaktadır. Yüksek psikolojik dayanıklılık seviyesine sahip bireyler, stresle başa çıkmada daha etkili stratejiler geliştirebilir, sağlıklı ilişkiler sürdürebilir ve yaşamın zorluklarına karşı daha güçlü bir tutum sergileyebilirler (Bonanno, 2004). Özellikle travmatik olaylar, doğal afetler veya ekonomik krizler gibi yoğun stres dönemlerinde, psikolojik dayanıklılığın bireylerin psikolojik sağlıklarını korumada temel bir araç olduğu gösterilmiştir (Masten ve Narayan, 2012).

Eğitim, iş yaşamı ve spor gibi farklı alanlarda psikolojik dayanıklılığın önemi giderek daha fazla ön plana çıkmaktadır. Özellikle spor bilimlerinde yapılan araştırmalar, sporcuların psikolojik dayanıklılık seviyelerinin performansları ve stres yönetimi kapasiteleri üzerinde belirleyici bir etkisi olduğunu ortaya koymaktadır (Fletcher ve Sarkar, 2012). Bu bağlamda, sporcuların yalnızca fiziksel değil, aynı zamanda psikolojik hazırlık süreçlerinde de dayanıklılığı artırmaya yönelik stratejilere ağırlık verilmesi önerilmektedir.

Spor ve Psikolojik Dayanıklılık

Sporun bireyler üzerindeki psikolojik etkileri uzun yıllardır araştırmaların odak noktası olmuştur. Bu araştırmalar, spor faaliyetlerinin bireylerin psikolojik dayanıklılığını artırmada önemli bir araç olduğunu ortaya koymaktadır (Fletcher ve Sarkar, 2012). Spor, bireylerin stresle başa çıkma becerilerini geliştirmelerine, duygusal düzenleme kapasitelerini artırmalarına ve zorluklarla mücadele yeteneklerini güçlendirmelerine yardımcı olmaktadır (Bennis ve Pachur, 2007).

Psikolojik dayanıklılık, spor ortamında, fiziksel ve zihinsel talepler karşısında sporunun tutarlılığını ve performansını sürdürebilmesi olarak da tanımlanabilir (Galli ve Vealey, 2008). Sporcuların antrenmanlarda, yarışmalarda ve zorlu şartlarda karşılaştıkları stresli durumlar, onları dayanıklılıklarını geliştirmeye zorlar. Örneğin, takım sporlarında ortak hedeflere ulaşma çabası, sporcuların sosyal destek mekanizmalarından faydalanmasını sağlamaktadır bu da psikolojik dayanıklılığı artırmaktadır (Morgan vd., 2015).

Sporun Psikolojik Dayanıklılığı Geliştirici Mekanizmaları

Sporun psikolojik dayanıklılığı artırıcı etkisi, genellikle aşağıdaki mekanizmalar aracılığıyla gerçekleşmektedir;

Zorluklarla Baş Etme Becerisi: Sporcuların karşılaştığı rekabet, başarısızlık ve yoğun fiziksel çaba gibi durumlar, problem çözme ve stres yönetimi becerilerini geliştirir (Fletcher ve Sarkar, 2012). Bu durum, bireylerin sadece spor alanında değil, aynı zamanda günlük yaşamlarında da psikolojik dayanıklılıklarını artırmalarını sağlamaktadır (Sarkar ve Fletcher, 2014).

Hedef Belirleme ve Motivasyon: Spor, bireylere belirli hedeflere ulaşmak için motivasyon sağlamaktadır. Bu süreçte bireylerin öz disiplin geliştirdiği ve zorlu hedeflere ulaşma konusunda esneklik kazandığı görülmektedir (Deci ve Ryan, 2000).

Sosyal Destek: Takım sporları veya bireysel sporlar aracılığıyla sağlanan sosyal destek, sporcuların duygusal düzenleme becerilerini güçlendirmektedir. Sosyal destek, sporcuların kriz durumlarında daha dirençli olmalarına olanak tanır (Bennis ve Pachur, 2007).

Bilinçli Farkındalık ve Kendini Düzenleme: Sporcuların antrenmanlar ve yarışmalar sırasında bilinçli farkındalık seviyelerini artırmaları ve stresli durumlarda kendilerini düzenleyebilmeleri, psikolojik dayanıklılığı desteklemektedir (Birrer vd., 2012).

Sporun Farklı Gruplar Üzerindeki Etkileri

Sporun psikolojik dayanıklılık üzerindeki etkisi sadece profesyonel sporcularla sınırlı değildir. Amatör sporcular, gençler ve hatta yaşlı bireyler üzerinde yapılan çalışmalar, düzenli spor faaliyetlerinin dayanıklılığı artırdığını göstermektedir. Örneğin, genç sporcular üzerinde yapılan bir araştırma, sporun özgüven ve dayanıklılık geliştirmede önemli bir rol oynadığını ortaya koymuştur (Neely ve Holt, 2014). Benzer şekilde, yaşlı bireylerde fiziksel aktivitenin yaşam kalitesini artırdığı ve psikolojik dayanıklılığı güçlendirdiği bulunmuştur (Windle vd., 2011).

Spor, bireylerin psikolojik dayanıklılığını artırmak için etkili bir araçtır. Spor yoluyla geliştirilen dayanıklılık becerileri, bireylerin zorlu yaşam koşullarına karşı daha dirençli olmalarını sağlamaktadır. Bu nedenle, spor faaliyetlerinin yaygınlaştırılması ve bireylerin yaşamlarına entegre edilmesi, toplumun genel psikolojik refahını artırmada önemli bir adım olacaktır.

Spor Branşlarının Psikolojik Dayanıklılık Üzerindeki Farklı Etkileri

Spor branşları, bireylerin fiziksel, duygusal ve zihinsel dayanıklılıklarını geliştirmede önemli bir araç olarak görülmektedir. Bununla birlikte, her spor branşı, bireylerin psikolojik dayanıklılığı üzerindeki etkiler açısından farklılık göstermektedir. Bu farklılıklar, sporun doğasından, bireysel veya takım dinamiklerinden, rekabet düzeyinden ve gerektirdiği zihinsel becerilerden kaynaklanmaktadır (Nicholls vd., 2010).

Bireysel Sporlar ve Psikolojik Dayanıklılık: Bireysel sporlar, sporcuların kendi performanslarını geliştirmeye odaklanmalarını gerektirir. Bu durum, sporcuların öz farkındalık, motivasyon ve stres yönetimi becerilerini geliştirmelerine yardımcı olur (Jones vd., 2002). Örneğin, bireysel dayanıklılık sporları (örneğin, maraton koşusu, triatlon) bireylerin uzun süreli fiziksel çaba gerektiren zorlu durumlara karşı psikolojik direnç geliştirmelerine olanak sağlamaktadır (Howells ve Fletcher, 2015).

Bireysel sporların bir diğer önemli etkisi, başarısızlık veya hataların doğrudan sporcunun bireysel performansına bağlanmasıdır. Bu, sporcuların öz eleştiri yapma ve hatalardan ders çıkarma becerilerini artırır, böylece dayanıklılıklarını güçlendirmektedir (Galli ve Vealey, 2008).

Takım Sporları ve Psikolojik Dayanıklılık: Takım sporları, sporcuların grup dinamikleri içinde çalışmasını gerektirir. Bu sporlar, bireylerin empati, iş birliği ve sosyal destek mekanizmalarını kullanmalarını sağlamaktadır. Takım sporlarının psikolojik dayanıklılık üzerindeki etkisi, sosyal bağlar ve destek sistemlerinin varlığı ile daha da güçlendirdiği gözlenmiştir (Morgan vd., 2013).

Takım sporlarında, zorluklarla mücadele ederken ekip üyelerinin birbirine güvenmesi ve destek sağlaması, bireysel dayanıklılığa katkıda bulunmaktadır. Örneğin, futbol, basketbol gibi sporlar, yoğun fiziksel ve psikolojik talepler içeren rekabet ortamlarında dayanıklılığı artırmaktadır. Bununla birlikte, takım başarısına olan bağlılık, bireylerin motivasyonlarını yüksek tutmalarına yardımcı olmaktadır (Bennis ve Pachur, 2006).

Güç ve Temas Sporlarının Psikolojik Etkileri: Güç sporları (örneğin, halter, güreş) ve temas sporları (örneğin, boks, rugby), sporcuların fiziksel dayanıklılıklarının yanı sıra zihinsel sertlik geliştirmelerini sağlar. Bu tür sporlar, rekabetin doğası gereği sporcuları yüksek stresli durumlarla başa çıkmaya zorlar. Temas sporları, sporcuların fiziksel ve duygusal dirençlerini artırarak ani stres durumlarına karşı hızlı tepki verebilme becerisini geliştirir (Mussel, 2010).

Zihinsel Odak Gerektiren Sporlar: Zihinsel dayanıklılık, genellikle sporcuların odaklanma ve strateji geliştirme becerilerinin ön planda olduğu sporlarla ilişkilendirilir. Örneğin, satranç ve okçuluk gibi sporlar, sporcuların dikkatlerini uzun süre sürdürebilmelerini ve stres altında soğukkanlılıkla karar alabilmelerini sağlamaktadır. Bu sporlar, bireylerin duygusal düzenleme ve zihinsel esneklik becerilerini geliştirmelerine yardımcı olmaktadır (Birrer vd., 2012).

Spor Branşları Arasındaki Farklılıkların Önemi: Her spor branşı, bireylerin psikolojik dayanıklılığını farklı mekanizmalarla desteklemektedir. Örneğin, dayanıklılık gerektiren sporlar, bireylerin fiziksel ve zihinsel sınırlarını test ederken, takım sporları sosyal dayanıklılığı ve iş birliğini güçlendirmektedir. Bu nedenle, bireylerin spor branşı seçiminde kişisel ihtiyaçları ve dayanıklılık geliştirme hedefleri dikkate alınmalıdır (Sarkar ve Fletcher, 2014).

Spor branşlarının bireylerin psikolojik dayanıklılığı üzerindeki etkileri, sporun yapısına ve bireyin sporla etkileşim biçimine göre değişkenlik göstermektedir. Spor branşlarının bu çeşitliliği, bireylerin farklı dayanıklılık alanlarında kendilerini geliştirmeleri için geniş bir fırsat yelpazesi sunmaktadır. Bu durum, sporun psikolojik sağlık üzerindeki etkilerini inceleyen araştırmalar için geniş bir perspektif sağlamaktadır.

Sporun Çocuklarda Stresle Başa Çıkma Becerilerine Katkısı

Çocukların stresle başa çıkma becerileri, erken yaşta kazanılan yaşam becerileri arasında önemli bir yere sahiptir. Stresle başa çıkma, bireylerin zorlu yaşam olayları veya günlük hayatta karşılaşılan stres faktörleriyle baş edebilme kapasitesini ifade etmektedir (Lazarus ve Folkman, 1984). Çocukluk döneminde bu becerilerin geliştirilmesinde spor faaliyetlerinin etkili olduğu, literatürde sıklıkla vurgulanmaktadır. Spor, çocukların fiziksel ve zihinsel sağlığını desteklemesinin yanı sıra, duygusal düzenleme ve problem çözme becerilerini geliştirmelerine de katkıda bulunmaktadır (Fraser-Thomas vd., 2005).

Fiziksel Aktivitenin Duygusal Düzenleme Üzerindeki Etkisi: Fiziksel aktiviteler, stres hormonlarının (örneğin, kortizol) seviyesini düşürerek çocukların stresle başa çıkmasına yardımcı olmaktadır (Penedo ve Dahn, 2005). Spor yapan çocuklarda, düzenli fiziksel aktivitenin endorfin hormonunu artırdığı ve bu durumun duygusal düzenleme süreçlerini desteklediği gösterilmiştir (Dishman vd., 2006). Bu durum, özellikle çocukların zorlu durumlarla karşılaştıklarında daha sakin ve dengeli bir şekilde tepki verebilmelerini sağlamaktadır.

Stresle Başa Çıkma Sosyal Destek: Takım sporları, çocukların sosyal bağlar kurmasını ve grup dinamiklerine uyum sağlamasını teşvik etmektedir. Spor yoluyla elde edilen sosyal destek, çocukların stresli durumlarda kendilerini yalnız hissetmemelerine yardımcı olur ve stresle başa çıkma becerilerini güçlendirir (Smith, 2003). Özellikle, antrenörlerin ve takım arkadaşlarının sağladığı duygusal destek, çocukların zorluklarla daha etkili bir şekilde baş etmelerine olanak tanımaktadır (Gould vd., 2007).

Sporun Çocukların Problem Çözme Becerilerine Etkisi

Rekabet ve Stres Yönetimi: Spor, çocuklara hem bireysel hem de takım düzeyinde hedeflere ulaşmak için strateji geliştirme ve problem çözme becerilerini kazandırmaktadır (Holt vd.,

2009). Spor müsabakaları sırasında yaşanan stresli anlar, çocukların problem çözme yeteneklerini uygulama ve geliştirme fırsatı sunmaktadır. Bu süreçte, çocuklar hem fiziksel hem de zihinsel esnekliklerini artırmaktadır.

Kriz Durumlarında Dayanıklılık: Spor faaliyetleri, çocukların başarısızlık veya hayal kırıklığı gibi duygularla başa çıkma becerilerini geliştirmesine yardımcı olmaktadır. Spor yoluyla öğrenilen bu beceriler, çocukların günlük yaşamlarında karşılaştıkları zorluklara karşı daha dayanıklı olmalarını sağlamaktadır (Hansen vd., 2003).

Sporun Uzun Vadeli Katkıları: Çocukluk döneminde kazanılan stresle başa çıkma becerileri, ergenlik ve yetişkinlik dönemlerinde de etkili olmaya devam etmektedir. Araştırmalar, çocuklukta spor yapan bireylerin daha iyi stres yönetimi becerilerine sahip olduğunu ve yaşam boyu daha yüksek bir duygusal dayanıklılık sergilediklerini göstermektedir (Eime et al., 2013). Bu nedenle, çocukların spor faaliyetlerine yönlendirilmesi, hem bireysel gelişimleri hem de toplum sağlığı açısından önemlidir. Çocukların spor etkinliklerine aktif katılımı teşvik edilmelidir. Sporun çocuk gelişimindeki rolüne dair yapılan araştırmalar, bu etkinliklerin çocukların sadece fiziksel değil, aynı zamanda psikolojik sağlıklarını da desteklediğini güçlü bir şekilde ortaya koymaktadır.

YÖNTEM

Bu çalışma, çocuk sporcuların psikolojik dayanıklılığını geliştirmede sporun rolünü anlamak amacıyla meta-analiz yöntemi kullanılarak gerçekleştirilmiştir. Meta-analiz, mevcut araştırma bulgularını sistematik bir şekilde bir araya getirerek, genel eğilimleri ve etkileri istatistiksel olarak değerlendirmeyi amaçlayan bir yöntemdir (Crits-Christoph, 1992).

Araştırma Modeli

Çalışma, çocuk sporcuların psikolojik dayanıklılığına ilişkin yapılan önceki çalışmaların sistematik bir şekilde incelenmesini ve bu çalışmaların bulgularının istatistiksel olarak birleştirilmesini hedefleyen meta-analitik bir araştırma modeli üzerine kurulmuştur. Bu kapsamda, 2010-2024 yılları arasında yayınlanmış çalışmalara odaklanılmıştır.

Veri Kaynakları ve Kapsam

Araştırmaya dâhil edilen çalışmaların seçimi için *PubMed*, *Web of Science*, *Scopus*, *Google Scholar*, veri tabanları taranmıştır. Taranan çalışmaların belirli kriterlere uygun olması sağlanmıştır. Dâhil edilen çalışmaların, *Çocuk sporcular üzerinde yapılmış olması*, *Psikolojik dayanıklılık veya benzer yapıların (örneğin, stresle başa çıkma, dirençlilik) spor yoluyla geliştirilmesini ele alması*, *DeneySEL, yarı-deneySEL veya nicel bir araştırma yöntemi kullanması*, İngilizce veya Türkçe yayınlanmış olması kriterlerine göre dâhil edilmiştir.

Çalışma Seçim Süreci

Çalışma seçim süreci, *PRISMA (Preferred Reporting Items for Systematic Reviews and Meta-Analyses)* kılavuzuna uygun olarak gerçekleştirilmiştir (Moher vd., 2009). İlk aşamada, anahtar kelimelerle yapılan taramalarda toplamda 200 makale belirlenmiştir. Çift kopyalar kaldırıldıktan sonra, çalışmanın başlıkları ve özetleri gözden geçirilmiş ve içerik açısından uygun olan 120 çalışma detaylı incelemeye alınmıştır. Nihayetinde, tüm kriterlere uygun olan 5 çalışma meta-analize dâhil edilmiştir.

Veri Toplama Süreci

Dâhil edilen çalışmalardan veriler, *Örneklem büyüklüğü*, *Katılımcıların yaş ve cinsiyet dağılımı*, *Kullanılan ölçüm araçları*, *Müdahale türü (sporun türü ve süresi)*, *Ana bulgular ve etkinlik büyüklükleri* bu kriterlere göre toplanmıştır.

Verilerin Analizi

Meta-analitik veri analizi, *Comprehensive Meta-Analysis (CMA)* yazılımı kullanılarak gerçekleştirilmiştir (Borenstein vd., 2021). Analiz sürecinde şu yöntemler izlenmiştir:

Etkili Büyüklüklerin Hesaplanması: Dâhil edilen çalışmalarda yer alan bağımsız değişkenlerin psikolojik dayanıklılık üzerindeki etkisi, Cohen'in *d* değerleri ile hesaplanmıştır (Cohen, 2013).

Heterojenlik Testleri: Çalışmalar arasındaki farklılıkları değerlendirmek için Q ve I² istatistikleri kullanılmıştır (Higgins ve Thompson, 2002).

Alt Grup Analizleri: Spor branşı, müdahale süresi ve yaş grubu gibi değişkenlere bağlı olarak etkilerin farklılık gösterip göstermediği incelenmiştir (Hedges ve Olkin, 2014).

Yayımlanma Yanlılığı Analizi: Funnel plot ve Egger's test kullanılarak, çalışmalardaki yayımlanma yanlılığı değerlendirilmiştir (Egger vd., 1997).

Etik İlkeler

Bu meta-analiz, daha önce yapılmış araştırmaların sonuçlarını analiz ettiğinden, herhangi bir bireysel katılımcı üzerinde doğrudan veri toplama yapılmamıştır. Bununla birlikte, analiz edilen çalışmaların etik kurallarına uygun olarak gerçekleştirilmiş olması kriteri olarak değerlendirilmiştir.

SONUÇ

Bu meta-analiz çalışması, çocuk sporcuların psikolojik dayanıklılığını geliştirmede sporun etkisini araştıran mevcut literatürden elde edilen bulguları bir araya getirmiş ve genel eğilimleri istatistiksel olarak değerlendirmiştir. Analiz sonuçları, sporun çocuk sporcuların psikolojik dayanıklılıklarını geliştirmede önemli bir araç olduğunu açıkça ortaya koymuştur. Özellikle spor etkinliklerinin stresle başa çıkma becerilerini, öz güveni ve sosyal uyumu güçlendirdiği görülmüştür. Çocuk sporcuların psikolojik dayanıklılığını geliştirmede sporun etkisini ele alan önceki araştırmaların bulgularını bir araya getirerek, sporun bireylerin stresle başa çıkma kapasitelerini ve dayanıklılık seviyelerini artırmada oynadığı rolü ortaya koymuştur. Çalışma, sporun yalnızca fiziksel bir aktivite olmadığını, aynı zamanda bireylerin psikolojik dirençlerini artıran bir araç olarak önemli bir işlev gördüğünü göstermektedir.

Analiz sonucunda,

Psikolojik Dayanıklılık Üzerindeki Etkiler: Fletcher ve Sarkar'ın (2012) çalışmasında, Olimpiyat sporcularının stresli durumlarla başa çıkma becerilerini geliştirmek için sporun sağladığı psikolojik dayanıklılığın önemli bir etken olduğu saptanmıştır. Bu dayanıklılık, bireylerin stres faktörlerini daha etkili bir şekilde yönetmelerine olanak tanımaktadır. Bu meta-analizde elde edilen genel etkili büyüklük (Cohen'in d) ise orta düzeyde pozitif bir etki göstermiştir (d=0.65, %95 CI [0.55-0.75]).

Takım ve Bireysel Sporların Rolü: Connaughton vd., (2008), takım sporlarının, sosyal destek mekanizmaları sayesinde bireysel sporlara kıyasla daha güçlü bir dayanıklılık etkisi yarattığını vurgulamaktadır. Bu analizde de takım sporlarına katılımın bireysel sporlara göre daha güçlü bir psikolojik dayanıklılık gelişimi sağladığı (d=0.71) gözlemlenmiştir.

Kültürel ve Sosyal Farklılıklar: Ungar (2008), dayanıklılık gelişiminde kültürel bağlamın önemini vurgulamış ve çocukların çevresel desteklerden faydalanarak dayanıklılıklarını artırabileceğini belirtmiştir. Bu bulgu, spor programlarının bireylerin sosyal çevresine ve kültürel bağlamına uygun şekilde tasarlanmasının kritik önem taşıdığını desteklemektedir.

Organizasyonel Destek ve Pozitif Psikoloji: Wagstaff vd., (2012), spor organizasyonlarının sağladığı psikolojik desteklerin bireylerin dayanıklılıklarını artırmada önemli bir rol oynadığını belirtmektedir. Özellikle çocuk sporcular için pozitif bir organizasyonel ortamın sağlanması, onların stresle başa çıkma becerilerini güçlendirebilir.

Sporun çocuk sporcuların psikolojik dayanıklılıklarını artırmada etkili bir araç olduğunu güçlü bir şekilde desteklemektedir. Spor etkinliklerinin, çocukların stresle başa çıkma becerilerini güçlendirerek yaşam kalitelerini artırabileceği ve onları daha dirençli bireyler haline getirebileceği sonucuna ulaşılmıştır. Özellikle takım sporlarının sosyal destek mekanizmalarını güçlendirdiği ve dayanıklılığı artırmada daha belirgin etkiler sağladığı ortaya konmuştur.

Pratik Uygulamalar için Öneriler: Spor programlarının, çocukların yaş grubu ve ihtiyaçlarına uygun şekilde tasarlanması önemlidir. Eğitim kurumları ve spor kulüpleri, çocuk sporcuların

ihtiyaçlarına uygun, dayanıklılığı artırmaya yönelik yapılandırılmış programlar geliştirmelidir. Özellikle takım sporlarının dayanıklılığı artırmadaki etkisi göz önünde bulundurularak, bu tür etkinliklerin yaygınlaştırılması önerilmektedir. Ayrıca, spor programlarının sürdürülebilir ve uzun süreli olması, psikolojik dayanıklılığın kalıcı bir şekilde geliştirilmesine katkı sağlayacaktır.

Politika Önerileri: Eğitim kurumları ve spor kulüpleri, çocuk sporcuların psikolojik dayanıklılıklarını artırmaya yönelik yapılandırılmış programlar oluşturmalıdır. Spor branşı çeşitliliğinin artırılması ve özellikle dezavantajlı grupların bu tür programlara erişiminin sağlanması, dayanıklılık gelişimine katkı sunabilir.

Gelecekteki Araştırmalar için Öneriler: Sporun psikolojik dayanıklılık üzerindeki etkilerini inceleyen çalışmaların, farklı sosyoekonomik bağlamlar ve kültürel gruplar üzerinde gerçekleştirilmesi önerilmektedir. Ayrıca, uzun dönemli müdahalelerin etkisini inceleyen boylamsal çalışmalar, spor programlarının kalıcı etkilerini daha iyi anlamamıza olanak sağlayacaktır. Sporun psikolojik dayanıklılık üzerindeki uzun vadeli etkilerini incelemek için boylamsal araştırmalara ihtiyaç vardır. Ayrıca, farklı sosyoekonomik ve kültürel bağlamlarda sporun etkilerini değerlendiren çalışmalar, bu alandaki bilgi birikimini genişletecektir.

Sonuç olarak, sporun çocukların psikolojik dayanıklılığını artırmada yalnızca bireysel bir araç olmadığı, aynı zamanda sosyal ve kültürel bağlamlarda dayanıklılığı güçlendiren bir mekanizma sunduğu anlaşılmaktadır. Spor, bireysel faydalarının yanı sıra toplumsal dönüşüm için de önemli bir araçtır. Sporun çocukların psikolojik dayanıklılığını artırmadaki rolü, aynı zamanda çocukların sosyal hayata entegrasyonunu ve yaşam kalitelerini artırmayı destekleyen önemli bir araç olarak karşımıza çıkmaktadır. Bu nedenle, sporun bireysel ve toplumsal faydaları bir bütün olarak değerlendirilmelidir.

Yönetimi Bölümü

ÖZET

Bu çalışma, örgütsel iletişimin çalışanların özgecilik davranışı üzerindeki etkisini incelemeyi amaçlamaktadır. Örgütsel iletişim, çalışanların iş yerinde tatmin düzeyini artırarak bireysel ve örgütsel fayda sağlayan davranışlar sergilemelerine olanak tanır. Bu bağlamda, özgecilik davranışı, çalışanların iş arkadaşlarına ve örgüte fayda sağlamak amacı ile gönüllü olarak yardım etmelerini ifade eder ve örgütsel vatandaşlık davranışlarının temel bir boyutudur. Araştırma, örgütsel iletişimin özgecilik üzerindeki etkisini ölçmek için tasarlanmıştır.

Araştırma örneklemini, 191 kamu ve özel sektör çalışanından oluşmaktadır. Katılımcıların örgütsel iletişim algıları ve özgecilik davranışlarını ölçmek için literatürde geçerliliği kanıtlanmış ölçekler kullanılmıştır. Elde edilen veriler doğrultusunda ilk olarak SPSS programı ile ölçeklerin doğrulayıcı faktör analizi (DFA) yapılabilmesi için elverişli olup olmadığına işaret eden KMO ve Barlett testleri gerçekleştirilmiştir. Uygun değerlerin elde edilmesi ile AMOS programı ile ölçeklere yönelik doğrulayıcı faktör analizleri gerçekleştirilmiştir. Bunun ardından hipotezleri test edebilmek adına korelasyon ve regresyon analizleri gerçekleştirilmiştir. Analizler örgütsel iletişimin, çalışanların özgecilik davranışları üzerinde anlamlı bir etkisi olduğunu göstermiştir. Buna göre örgütsel iletişim, çalışanların özgecilik davranışlarındaki varyansın %14'ünü açıklama gücüne sahip olduğu ortaya koymuştur. Bunun yanında, özellikle kurumsal bütünleşme ve kurumsal geribildirim, özgecilik ile en yüksek korelasyona sahip iletişim boyutları olarak öne çıkmıştır. Bu bulgular, iş yerinde etkili iletişimin özgecilik gibi olumlu davranışları teşvik edebileceğini göstermektedir. İletişim memnuniyetinin artırılması, örgütsel vatandaşlık davranışlarının güçlenmesine, iş tatmini ve verimlilik gibi unsurların gelişmesine katkıda bulunabilir. İşletmelerin, çalışanlar arası iletişim süreçlerini destekleyici stratejiler geliştirmesi, örgütsel hedeflere ulaşmada önemli bir avantaj sağlayabilir.

Anahtar Kelimeler: Örgütsel İletişim, Örgütsel Vatandaşlık Davranışı, Özgecilik

ABSTRACT

This study examines organizational communication's impact on employees' altruistic behavior. Effective organizational communication enables employees to demonstrate behaviors that benefit themselves and the organization by enhancing their job satisfaction. In this context, altruistic behavior refers to employees voluntarily helping their colleagues and the organization, and it is a key aspect of organizational citizenship behavior. The research is designed to assess how organizational communication affect altruistic behavior among employees.

The research sample consisted of 191 employees from both public and private sectors. Validated scales from existing literature were used to assess participants' perceptions of organizational communication and altruistic behaviors. First, KMO and Bartlett tests were conducted to determine whether the scales were appropriate for confirmatory factor analysis (CFA) using the SPSS program. Once suitable values were obtained, confirmatory factor analyses were performed on the scales using the AMOS program. Subsequently, correlation

and regression analyses were conducted to test the hypotheses. The results indicated that organizational communication significantly affects employees' altruistic behaviors. It was found that organizational communication can explain 14% of the variance in employees' altruistic behaviors. Additionally, organizational integration and organizational feedback emerged as the communication dimensions most strongly correlated with altruism.

The findings indicate that effective communication in the workplace can foster positive behaviors like altruism. Enhancing communication satisfaction may lead to improved organizational citizenship behaviors, job satisfaction, and productivity. Implementing strategies that improve communication processes among employees can offer a significant advantage in reaching organizational goals.

Keywords: Organizational Communication, Organizational Citizenship Behavior, Altruism

1. GİRİŞ

Günümüz iş dünyasında, çalışanların iş yerindeki tutum ve davranışları, örgütlerin başarısını etkileyen önemli faktörlerden biri haline gelmiştir. Özellikle çalışanların sergilediği örgütsel vatandaşlık davranışları, örgüt içi ilişkilerin güçlenmesine, iş tatmininin artmasına ve genel verimliliğin yükselmesine katkıda bulunmaktadır. Bu davranışlardan biri olan özgecilik, bireylerin kendi çıkarlarını geri planda tutarak başkalarına yardımcı olma eğilimidir. Özgecilik davranışı, örgütsel vatandaşlık kavramının temel bileşenlerinden biri olarak, çalışanların iş arkadaşlarına ve örgüte yönelik olumlu tutumlarının bir yansımasıdır.

Çalışanların örgüt içindeki bilgi alışverişi, geri bildirimler ve genel süreçlerde kullanılan tutum ve yaklaşıma yönelik değerlendirmeleri örgütsel iletişime yönelik memnuniyetini ifade eder. İletişimden duyulan memnuniyetin, çalışanların iş yerinde sergiledikleri çeşitli davranışlar üzerinde önemli etkileri olduğu düşünülmektedir. Örgütsel iletişim, çalışanların örgütün belirlenen amaçlarını gerçekleştirmek üzere eyleme geçmeleri sürecine dinamik bir yapı kazandırması bağlamında önemlidir (Demirel, Seçkin ve Özçınar (2011)). Nitelikli ve etkili iletişim, çalışanların kendilerini değerli ve işlerinin anlamlı olduğunu hissetmelerine, dolayısıyla örgüt içi özgecilik davranışlarını artırmalarına olanak tanır. Ancak, örgütsel iletişimin özgecilik davranışı üzerindeki etkisine ilişkin araştırmalar sınırlı sayıda olup, bu iki kavram arasındaki ilişkinin derinlemesine incelenmesine ihtiyaç duyulmaktadır. Bu bağlamda, bu araştırmanın amacı, örgütsel iletişimin çalışanların özgecilik davranışı üzerindeki etkisini incelemektir.

Örgütsel iletişime yönelik doyum, bir çalışanın iş yerindeki pozisyonuna bağlı olarak yöneticileri ve iş arkadaşlarıyla kurduğu iletişimden aldığı memnuniyeti ifade eder (Mount ve Back, 1999). Gray ve Laidlaw (2004) ise iletişim doyumunu, örgüt içindeki etkileşimlerin sonucu olarak ortaya çıkan sosyo-duygusal bir durum olarak tanımlarlar. Crino ve White (1981), iletişim doyumunu farklı ortamlardaki iletişim süreçlerinden elde edilen tatmin düzeyi olarak açıklamışlardır. Downs ve Hazen (1977) iletişim doyumunun karmaşık ve çok boyutlu bir yapıya sahip olduğunu belirtmiş, iş tatminiyle yakından ilişkili olduğunu öne sürmüşlerdir. Bu ilişkiyi incelemek için sekiz boyuttan oluşan bir iletişim doyumunu ölçeği geliştirmişlerdir. Bu boyutlar şu şekilde sıralanabilir:

- Örgütsel görünüm: Kurumun politikaları, hedefleri, finansal durumu ve örgütsel değişimler gibi geniş çaplı bilgileri kapsar.
- Kişisel geribildirim: Çalışanın performansının değerlendirilmesine dair bilgi içerir.
- Örgütsel bütünleşme: Çalışanların yakın çevreleri hakkında bilgi edinme derecesini ve bölüm planlamaları, iş gerekleri gibi konulardaki tatmin düzeyini ifade eder.
- Üstler ile iletişim: Üstlerin çalışanların fikirlerine açık olma, onları dinleme ve sorun çözmede rehberlik etme derecesidir.
- İletişim iklimi: Örgütsel ve kişisel düzeyde iletişimin sağlıklı olup olmadığını, çalışanların motive olup olmadığını belirler.

- Yatay iletişim: Çalışanlar arasındaki, sınırları esnek bir şekilde belirlenmiş, dedikoduyu da içerebilen informal iletişim düzeyidir.
- Medya kalitesi: Kurumsal iletişimin sağlamlığı, yazışmaların doğruluğu, anlaşılabilirliği ve zamanlaması ile ilgilidir.
- Astarlar ile iletişim: Yöneticilerin astları ile kurduğu dikey iletişimin sağlığına dair düşüncelerini kapsar.

Hargie ve arkadaşları (2002), zayıf bir örgütsel iletişimin örgütsel bağlılığı ve verimliliği düşürdüğünü, buna karşın devamsızlığı ve işten ayrılma oranlarını artırdığını öne sürmüşlerdir. Giri ve Pavan Kumar (2010) tarafından yapılan bir çalışmada ise, örgütsel iletişimin çalışanların performansını artırdığı sonucuna varılmıştır. Farahbod ve arkadaşları (2013) örgütsel iletişimin, iş tatmini ve örgütsel bağlılık üzerinde anlamlı bir etkisi olduğunu tespit etmiştir. Diğer araştırmalarla birlikte örgütsel iletişimin iletişimin; işle bütünleşme (Walden vd., 2017), örgütsel destek algısı (Neves ve Eisenberger, 2012), örgütsel vatandaşlık davranışı (Karyatun vd., 2022), örgütsel performans (Haroon ve Malik, 2018) gibi çeşitli değişkenlerle de pozitif yönde bir ilişkiye sahip olduğu ortaya konmuştur.

Araştırmanın bağımlı değişkeni olan özgecilik ise örgütsel vatandaşlık davranışı (ÖVD) çerçevesinde ele alınmaktadır. Örgütsel vatandaşlık davranışı, Organ (1988) tarafından “örgüt içinde herhangi bir biçimsel ödül sistemine bağlı olmayan, gönüllü ve işbirliğine dayalı çalışan davranışları” olarak tanımlanmıştır. Bu davranışların örgütün etkinliğine destek sağladığına, ancak yerine getirilmemesi durumunda herhangi bir yaptırım veya cezanın söz konusu olmadığına dikkat çekilmiştir. Podsakoff ve arkadaşları (2000), çalışanın meslektaşlarına yardım etmesi, ekstra mesai yapması, gönüllü olarak yüksek performans sergilemesi, örgüt içindeki sorunlarla başa çıkması ve problemlerin çözümünde aktif rol alması gibi davranışları, ÖVD'nin örnekleri arasında saymıştır.

Organ ve arkadaşları (2005), ÖVD'nin çalışanın yetenek, motivasyon ve fırsatları değerlendirme isteğiyle ilişkili olduğunu belirtmişlerdir. Yöneticilerin çalışanların motivasyonlarını, yeteneklerini ve örgüte katkı sağlayacak davranışlarını desteklemek için yapacakları müdahalelerin, bu tür davranışların ortaya çıkmasını etkileyebileceği ifade edilmiştir (Organ vd., 2005; Piccolo ve Colquitt, 2006). Organ (1988), literatürde en çok kabul gören ÖVD sınıflandırmasını beş boyutlu olarak sunmuştur: özgecilik (altruism), nezaket (courtesy), sportmenlik (sportsmanship), sivil erdem (civic virtue) ve vicdanlılık (conscientiousness). Kısaca tanımlamak gerekirse nezaket, çalışanın örgütsel süreçlerde herhangi bir problem ortaya çıkmadan önce önleyici davranışlar sergilemesi; sportmenlik, ideal olmayan şartlarda sorunların tolere edilebilmesi; sivil erdem, örgütün geleceğiyle ilgili sorunlara duyarlılık göstererek katılımcı bir tavır sergilenmesi; vicdanlılık ise görev tanımının dışında, örgüt yararına gönüllü davranışlarda bulunulmasını açıklamaktadır (Organ, 1988).

Özgecilik ise “çalışanın, bir zorunluluk olmadan ve gönüllü olarak çalışma arkadaşları, yöneticiler ve müşteriler gibi örgüt paydaşlarına, örgütsel etkinliğin artırılmasına katkı sağlayıcı yardımları” olarak ifade edilmektedir (Organ, 2014). Yeni katılan çalışanları örgüte alıştıırma çabaları, bir problem ile karşılaşan, iş yükü ağır olan veya işe gelemeyen arkadaşlarına yardımcı olma, bir makine veya ekipmanın kullanımını öğretme gibi davranışlar örgüt içinde özgeciliğe örnek olarak gösterilebilir (Podsakoff vd., 2000). Bu tür davranışların bireysel açıdan çalışanın işine son verilme ihtimalini azaltabileceği, daha yüksek kademelere yükselme kolaylığı sağlayabileceği, lider-üye etkileşimi için zemin hazırlayarak başarının yakalanabileceği belirtilmiştir (Organ vd., 2005). Fakat daha önce belirtildiği üzere, bu tür ödüllendirme olarak atfedilebilecek çıktılar çalışanın özgecilik davranışı sergilemesine sebep olarak gösterilemez. Eğer çalışanın amacı bu tür çıktılara ulaşabilmek ise; sergilediği davranışlar özgecilik olarak nitelendirilmez.

Örgüte yeni katılan çalışanları işe alıştıırma çabaları, sorun yaşayan, iş yükü fazla olan ya da işe gelemeyen arkadaşlarına destek olma, bir makine ya da ekipmanın nasıl kullanılacağını öğretme

gibi davranışlar, örgüt içindeki özgecilik örnekleri arasında yer alır (Podsakoff vd., 2000). Bu tür davranışların, birey açısından işten çıkarılma riskini azaltabileceği, terfi etmeyi kolaylaştırabileceği ve lider-üye etkileşimini güçlendirerek başarının önünü açabileceği belirtilmiştir (Organ vd., 2005). Ancak bu tür olumlu sonuçlar, çalışanın özgecilik davranışları sergilemesinin temel nedeni olarak kabul edilemez. Eğer çalışanın temel amacı bu tür sonuçlara ulaşmak ise, sergilediği davranışlar özgecilik olarak değerlendirilmez.

2. YÖNTEM

Bu çalışmanın amacı örgütsel iletişim ile özgecilik davranışı arasındaki ilişkileri ortaya koymaktır. Bu amaç doğrultusunda, ilgili literatüre dayanılarak genel tarama modellerinden biri olan ve iki ya da üzeri sayıdaki değişken arasında, değişim varlığı ve/veya derecesini belirlemede kullanılan aşağıdaki ilişkiyel tarama modeli oluşturulmuş ve araştırma hipotezleri geliştirilmiştir.

Şekil 1. Araştırma Modeli

Hipotezler:

H₁: Örgütsel İletişim ile özgecilik davranışı arasında pozitif yönlü anlamlı bir ilişki vardır.

H_{1a}: Kurumsal geribildirim ile özgecilik davranışı arasında pozitif yönlü anlamlı bir ilişki vardır.

H_{1b}: Kurumsal bütünleşme ile özgecilik davranışı arasında pozitif yönlü anlamlı bir ilişki vardır.

H_{1c}: Üstlerle iletişim ile özgecilik davranışı arasında pozitif yönlü anlamlı bir ilişki vardır.

H_{1d}: Yatay iletişim ile özgecilik davranışı arasında pozitif yönlü anlamlı bir ilişki vardır.

H_{1e}: İletişim iklimi ile özgecilik davranışı arasında pozitif yönlü anlamlı bir ilişki vardır.

H₂: Örgütsel iletişim, özgecilik davranışını anlamlı bir şekilde etkiler

2.1. Katılımcılara Ait Bilgiler

Çalışmanın amacı doğrultusunda, Gümüşhane Üniversitesi Lisansüstü Eğitim Enstitüsü, İnsan Kaynakları tezli yüksek lisans programında kayıtlı olan, kamu ve özel sektörlerde çalışan öğrencilere ve kartopu örnekleme yöntemi ile bu öğrencilerin çalışma arkadaşlarına ulaşılmaya çalışılmıştır. Böylece araştırmanın örnekleme 191 kamu/özel çalışanından oluşmuştur. Çalışmada yapılan tüm analizler ve elde edilen tüm bulgular bu örneklem kapsamındadır. Tablo 1'e göre "katılımcıların 85'i (% 42,9) erkek ve 113'ü (% 57,1) kadındır. Yaş kriteri göz önüne alındığında ise katılımcıların 84'ü (% 42,9) 30-39 yaş aralığında, 33'ü ise (% 16,7) 20-29 yaş aralığındadır. Katılımcıların % 75,3'ünün (149 kişi) evli olduğu, eğitim düzeylerine bakıldığında 103'ünün (%52) yüksek lisans mezunu olduğu ve sadece 23'ünün (% 11,6) lise mezunu olduğu dikkat çekmektedir. Son olarak çalışma süreleri dikkate alındığında ise katılımcıların 105'i (% 53) 2-10 yıl arası bir süredir kurumda çalışmaktayken sadece 10 kişi (% 5,1) kurumda yeni çalışmaya başlamıştır".

Tablo 1. Katılımcı Bilgileri

Cinsiyet	Kadın	114	59,7
	Erkek	77	40,3
Yaş	20-25	31	16,2
	26-30	73	38,2
	31-35	37	19,4
	36-40	29	15,2
	40 yaş üstü	18	9,4
	Medeni Durum	Bekâr	90
	Evli	101	52,9
Eğitim Durumu	İlköğretim	1	0,5
	Lise	7	3,7
	Önlisans	8	4,2
	Lisans	151	79,1
	Lisansüstü	24	12,5
Çalışma Süresi	0-2 yıl	65	34,1
	3-7 yıl	68	35,7
	8 yıl ve üzeri	58	30,2
	Toplam	191	% 100

2.2. Araştırmada Kullanılan Ölçekler

Katılımcılara yöneltilen anket formu iki kısımdan oluşmaktadır. Formun ilk kısmında katılımcıların; yaş, cinsiyet, medeni durum ve eğitim durumlarını tespit etmeye yönelik sorular bulunmaktayken, ikinci kısımda katılımcıların; işten ayrılma niyeti, örgütsel vatandaşlık davranışı ve iletişim iklimine yönelik tutumlarını tespit etmeye yönelik ifadeler bulunmaktadır. Ölçme araçları olarak örgütsel iletişim için Downs ve Hazen (1977) tarafından geliştirilen ve Bal (2013) tarafından Türkçe'ye uyarlanan ölçek kullanılmıştır. Ölçekte beş alt boyut (kurumsal geribildirim, örgütsel entegrasyon, üstlerle iletişim, yatay iletişim ve iletişim iklimi) ve her bir boyuta ait 5 soru bulunmaktadır. Özgecilik davranışı için ise Podsakoff P. ve diğerleri (2000) tarafından geliştirilen beş boyut, 24 maddeden oluşan ölçeğin, özgecilik boyutuna ait 5 maddesi kullanılmıştır. Anket formunun ikinci kısmında kullanılan tüm maddeler 5'li likert ölçek tipinde "1: kesinlikle katılmıyorum" dan ve "5: kesinlikle katılıyorum"a doğru artan şekilde hazırlanmıştır.

2.3. Bulgular

Elde edilen veriler doğrultusunda ilk olarak katılımcıların örgütsel iletişim algıları ve özgecilik davranışları üzerine değerlendirme yapabilmek için kullanılmış olan ölçeklere yönelik AMOS programı aracılığıyla doğrulayıcı faktör analizleri (DFA) gerçekleştirilmiştir. Bunun için öncelikle ölçeklerin DFA'ya uygunluğunun tespit edilebilmesi adına Kaiser Mayer Olkin (KMO) yeterli ölçümü ve Barlett küresellik testleri yapılmıştır. Yapılan testler sonucunda örgütsel iletişim ölçeği için ulaşılan KMO değeri 0,910; özgecilik davranışı için ise 0,825'dir. Barlett küresellik testi sonuçları da ölçeklere dair faktör analizi yapılmasının uygun olduğunu ortaya koymaktadır ($p = 0,000$). Böylece ölçeklere yönelik doğrulayıcı faktör analizlerine geçilmiştir.

2.3.1. Ölçeklere Ait Doğrulayıcı Faktör Analizleri

Örgütsel iletişim ölçeği için gerçekleştirilen ilk DFA sonucunda x8, x21 ve x24 kodlu maddelerin 0,30'un altında faktör yüküne sahip olduğu tespit edilmiş ve ölçekten çıkarılmıştır. Ardından model uyum önerileri dikkate alınarak gerçekleştirilen DFA sonucunda maddelerin 0,48 ile 0,87 arasında ve arzu edilen faktör yüklerine sahip olduğu gözlemlenmiştir. Ölçek yapısı uyum indeksleri ise Ki- Ki-Kare/Serbestlik Derecesi (χ^2/df)= 1,758; GFI= ,862; IFI= ,917; CFI= ,916; TLI= ,90; RMSEA= 0,063 olarak tespit edilmiştir. Böylece ölçek maddelerinin örgütsel iletişim ölçüm yapısı ile iyi uyuma sahip olduğu ve kullanılan ölçeğin değişkene yönelik değerlendirme yapabilmek adına uygun olduğu kanaatine varılmıştır.

Özgecilik davranışı ölçeği için model uyum önerileri dikkate alınarak gerçekleştirilen DFA sonucunda maddelerin 0,55 ile 0,77 arasında ve arzu edilen faktör yüklerine sahip olduğu gözlemlenmiştir. Ölçek yapısı uyum indeksleri ise Ki- Ki-Kare/Serbestlik Derecesi (χ^2/df)= 1,223; GFI= ,990; IFI= ,997; CFI= ,997; TLI= ,993 ve son olarak RMSEA= 0,034 olarak tespit edilmiştir. Böylece ölçek maddelerinin özgecilik davranışı ölçüm yapısı ile iyi uyuma sahip olduğu ve kullanılan ölçeğin değişkene yönelik değerlendirme yapabilmek adına uygun olduğu kanaatine varılmıştır.

Tablo 2. Ölçeklere Ait DFA Sonuçları

	Örgütsel İletişim Ölçeği	Özgecilik Ölçeği
KMO	,910	,825
Barlett	p<0,001	p<0,001
χ^2/df	1,758	1,223
GFI	,862	,990
IFI	,917	,997
CFI	,916	,997
TLI	,900	,993
RMSEA	,063	,034

2.3.2. Korelasyon Analizi

Araştırmanın bağımsız değişkeni olan örgütsel iletişim ve alt boyutları kurumsal geribildirim, kurumsal bütünleşme üstlerle iletişim yatay iletişim ve iletişim iklimi ile bağımlı değişken özgecilik arasındaki ilişkileri incelemek adına Pearson Korelasyon analizi gerçekleştirilmiştir. Değişkenler arasında “0,30 > r” ise zayıf, “0,30 ≤ r < 0,50” ise orta ve “0,50 ≤ r < 1” ise kuvvetli ilişkiler mevcuttur (Cohen, 2013). Buna göre genel örgütsel iletişim ile özgecilik arasında (r= 0,384; p<0.01) pozitif yönlü orta düzeyde anlamlı bir ilişki mevcuttur. Bununla birlikte özgecilik ile arasında en yüksek ilişki bulunan iletişim alt boyutunun (r= 0,418; p<0.01) kurumsal bütünleşme; en düşük ilişki olan alt boyutunun ise (r= 0,323; p<0.01) iletişim iklimi olduğu gözlemlenmiştir. Buna göre geliştirilen H₁ ve alt hipotezler kabul edilmiştir.

Tablo 3. Ölçek ortalamaları ve değişkenler arasındaki ilişkiler

Değişkenler	Ort.	1	2	3	4	5	6	7
1 Kurumsal Geribildirim	3,51	---						
2 Kurumsal Bütünleşme	3,59	,706	---					
3 Üstlerle İletişim	3,51	,523	,631	---				
4 Yatay İletişim	3,25	,644	,690	,717	---			
5 İletişim İklimi	3,36	,499	,599	,553	,680	---		
6 Örgütsel İletişim	3,45	,813	,854	,843	,903	,756	---	
7 Özgecilik	4,07	,380	,418	,288	,291	,232	,384	---

Not: *Korelasyon 0.01 düzeyinde anlamlı (iki yönlü).

2.3.3. Regresyon Analizi

Çalışanların örgütsel iletişim doyumlarının özgecilik davranışı üzerinde ne düzeyde etkiye sahip olduğunu belirlemek için gerçekleştirilen basit doğrusal regresyon analizi sonuçları Tablo 4’te sunulmuştur. Tabloda görüldüğü üzere çalışanların örgütsel süreçleri içerisinde deneyimlemiş oldukları iletişime dair memnuniyet düzeyleri onların özgecilik davranışları üzerinde istatistiksel olarak anlamlı bir etkiye sahiptir ($R^2= .148$, p<.001). Buna göre iletişim doyumunu, özgecilikte meydana gelen değişimin %14’ünü açıklama gücüne sahiptir ve böylece geliştirilmiş olan H₂ de kabul edilmiştir.

Tablo 4. Basit Doğrusal Regresyon Analizi

Örgütsel İletişim		Özgeçiliclik		
B	S.H.	t	p	R ²
,384	,070	5,722	,000	,148

Not: n= 191; B= Standardize edilmiş beta katsayısı; S.H.= Standart hata

SONUÇ

Bu çalışmada, iş yerinde örgütsel iletişime yönelik memnuniyetin, çalışanların özgeçiliclik davranışları üzerindeki etkisi incelenmiştir. Elde edilen bulgular iletişimin, çalışanların iş yerinde sergiledikleri özgeçiliclik davranışları üzerinde anlamlı bir etkisi olduğunu göstermektedir. Özellikle kurumsal bütünleşmenin, çalışanların özgeçiliclik davranışlarıyla en yüksek ilişkili alt iletişim boyutu olarak öne çıktığı görülmektedir. Bu durum, çalışanların örgütsel süreçler ve iş arkadaşlarıyla olan iletişimlerinde ne kadar bütünleşmiş hissederse, iş arkadaşlarına ve örgüte yönelik yardımlaşma davranışlarının o denli artabileceğini göstermektedir.

Çalışmanın sonucunda, çalışanların iş yerindeki iletişime yönelik memnuniyetin artırılmasının, örgütsel vatandaşlık davranışlarının bir boyutu olan özgeçilicliği teşvik edebileceği ve bu sayede örgüt içi ilişkilerin, iş tatmininin ve genel verimliliğin artabileceği söylenebilir. İşletmelerin, çalışanlar arası etkili iletişimi ve kurumsal entegrasyonu desteklemeye yönelik geliştirecekleri stratejiler, çalışanların işbirliği göstermeye gönüllü olmalarını ve yardımlaşma davranışlarının daha yoğun bir şekilde sergilenmesini teşvik edecektir.

ÖZET

Metro sistemleri kentsel ulaşımında kritik bir rol oynar. Ancak kapalı ortamları, yüksek yolcu yoğunluğu ve karmaşık altyapıları nedeniyle önemli yangın risklerine de eğilimlidirler. Bu çalışma, dünya çapında metro yangınlarını kapsamlı bir şekilde araştırıp, bunların mesleki sağlık üzerindeki etkilerine ve bu riskleri azaltmak için uygulanan güvenlik önlemlerine odaklanmayı amaçlamaktadır. Çalışma için 52 metro yangın vakası seçilmiştir. Bu vakaların seçiminde yangınların; dünya genelindeki homojen dağılımı, ölüm ve yaralanma sayılarındaki farklılıkları, yangınların çıkış nedenlerindeki çeşitlilikleri, meydana geldiği çevresel koşullar, kaza şiddeti gibi parametreler rol almıştır. Ele alınan 52 metro yangın vakasının Avrupa, Asya ve Kuzey Amerika'daki metro sistemlerindeki tarihsel ve coğrafi dağılımı analiz edilmiştir. Olayların istatistiksel oranlarını hesaplayarak; elektrik arızaları, insan hataları, yanıcı malzemeler ve eski altyapı gibi yangın çıkışına katkıda bulunan temel faktörleri belirlenmiştir. Elde edinilen bilgilerle kazalar; ölüm- yaralanma sayılarına göre sınıflandırılarak, yangından etkilenme oranlarını dikkate sunmuştur. Ayrıca Zehirli dumana, ısı stresine ve fiziksel yaralanmalara maruz kalma dahil olmak üzere işçiler üzerindeki mesleki sağlık etkileri analiz edilerek, gelişmiş koruyucu önlemlere olan ihtiyaç vurgulanmıştır.

Ek olarak, çalışma kapsamında yangına dayanıklı malzemeler, gelişmiş tespit sistemleri, acil durum müdahale prosedürleri ve personel eğitim programları gibi mevcut küresel güvenlik protokollerini incelenmiştir. Bulgular, yangın önleme ve acil durum müdahalesinde önemli ilerlemeler kaydedilmiş olsa da özellikle modern güvenlik altyapısından yoksun eski metro sistemlerinde işçi korumasında kritik boşluklar olduğunu göstermektedir. Bu araştırma, metro yangın güvenliğine dair küresel bir bakış açısı sunarak, yangın yönetimi stratejilerine mesleki sağlık hususlarını entegre etmenin önemini vurgulayarak mevcut literatüre katkıda bulunmaktadır. Çalışmanın özgünlüğü, güvenlik uygulamalarının bölge çapında analizinde ve metro çalışanlarının karşılaştığı mesleki sağlık risklerine odaklanmasında yatmaktadır ve kentsel ulaşım sistemlerinde yangın güvenliği standartlarını iyileştirmeyi amaçlayan politika yapıcılar ve güvenlik profesyonelleri için yeni iç görüler sunmaktadır.

Anahtar Kelimeler: Metro yangınları, iş sağlığı ve güvenliği, yangın güvenliği protokolleri, küresel güvenlik standartları, risk değerlendirmesi, kentsel ulaşım, acil müdahale.

ABSTRACT

Metro systems play a critical role in urban transportation. However, they are also prone to significant fire risks due to their closed environment, high passenger density and complex infrastructure. This study aims to comprehensively investigate metro fires worldwide, focusing on their impact on occupational health and the safety measures implemented to reduce these risks. 52 metro fire cases were selected for the study. The selection of these cases was based on

the homogeneous distribution of the fires around the world, the differences in the number of fatalities and injuries, the diversity in the causes of the fires, the environmental conditions in which they occurred, and the severity of the accident. The historical and geographical distribution of the 52 metro fire incidents in metro systems in Europe, Asia and North America was analyzed. By calculating the statistical proportions of incidents, the main factors contributing to fire outbreaks were identified, such as electrical faults, human error, flammable materials and old infrastructure. With the information obtained, the accidents were classified according to the number of deaths and injuries and the rates of exposure to fire were taken into account. It also analyzed occupational health impacts on workers, including exposure to toxic smoke, heat stress and physical injuries, highlighting the need for improved protective measures.

In addition, the study examined existing global safety protocols such as fire-resistant materials, advanced detection systems, emergency response procedures and personnel training programs. The findings show that while significant progress has been made in fire prevention and emergency response, there are critical gaps in worker protection, especially in older metro systems that lack modern safety infrastructure. This research contributes to the existing literature by providing a global perspective on metro fire safety, emphasizing the importance of integrating occupational health considerations into fire management strategies. The originality of the study lies in its region-wide analysis of safety practices and focus on occupational health risks faced by metro workers, offering new ideas for policy makers and safety professionals aiming to improve fire safety standards in urban transport systems.

Keywords: Metro fires, occupational health and safety, fire safety protocols, global safety standards, risk assessment, urban transportation, emergency response.

1. GİRİŞ:

Metro sistemleri, özellikle hızla büyüyen metropol alanlarında, karayolu trafiğine verimli, hızlı ve yüksek kapasiteli bir alternatif sunarak kentsel ulaşımın kritik bir bileşeni haline gelmiştir. Dünyanın en eski metro sistemi olan Londra Yeraltı Metroyu, 1863'te kurulduktan sonra, ikinci en eski metro ağı olan İstanbul'daki Beyoğlu Karaköy Tüneli ise 1875'te faaliyete geçmiştir. Bu tarihlerden itibaren metro ağları, büyük bir hızla gelişerek dünya genelinde önemli ölçüde büyümüştür (UITP, 2024). Bugün, yaklaşık 60 ülkede 200'den fazla şehirde 600'den fazla metro hattı faaliyet göstermektedir. Bu da modern kent yaşamındaki önemlerini vurgulamaktadır (Şahin ve Demirtaş, 2022). Bu erken sistemler, toplumların ekonomik, sosyal ve kültürel ilerlemesine katkıda bulunarak modern raylı ulaşımın zeminini hazırlamıştır (Kaya, 2021).

Metro sistemlerinin benimsenmesi, trafik sıkışıklığını azaltma, sürdürülebilir kentsel gelişimi destekleme ve çok sayıda yolcuyla uzun mesafelerde minimum sürede verimli bir şekilde taşıma kabiliyetleri tarafından yönlendirilir. Günlük 100.000 ila 10.000.000 yolcuyla hizmet veren metro sistemleri, daha düşük kaza oranları nedeniyle karayolu taşımacılığında daha güvenli olarak algılanır ve bu da halkın bu ulaşım biçimine güvenini ve bağımlılığını teşvik etmiştir. Bununla birlikte, metro ortamlarının karmaşıklığı, yüksek yolcu yoğunluğu ile birleştiğinde hem yolcuların hem de çalışanların güvenliğini sağlamak için benzersiz zorluklar ortaya koymaktadır (Yılmaz, 2023).

Metro sistemleri, özellikle hızla büyüyen metropol alanlarında, karayolu trafiğine verimli, hızlı ve yüksek kapasiteli bir alternatif sunarak kentsel ulaşımın kritik bir bileşeni haline gelmiştir. Metro istasyonlarında, her ne kadar yolcu güvenliği ön planda olsa da, sistemin işletme ve bakım aşamalarında çalışanların güvenliği de ihmal edilmemelidir. Ayrıca, metro sistemlerinde kullanılan enerji kaynakları ve ekipmanlar, yangın gibi acil durumlar için gerekli güvenlik önlemleriyle donatılmalıdır. (Küleççi ve Ramazan, 2023) Depolama alanları da önemli bir güvenlik konusu olup, bu alanlarda yangın riski minimize edilmelidir. Depolama alanlarının iyi bir şekilde organize edilmesi, yangın anında tehlike yaratacak unsurların kontrol altına

alınmasına yardımcı olacaktır. (Küleççi ve Uçak, 2023) Ayrıca, maden sektöründe olduğu gibi, metro sistemlerinde de özellikle havalandırma sistemlerine, yangın algılama ve söndürme teknolojilerine dikkat edilmesi, iş kazalarının ve yangınların önlenmesi açısından kritik öneme sahiptir. Bu unsurlar hem çalışanların hem de yolcuların güvenliğini sağlamak için sürekli olarak gözden geçirilmelidir. (Küleççi, 2023).

Metro sistemlerinde mesleki sağlık ve güvenlik (İSG), özellikle yangın güvenliği açısından acil bir endişe haline gelmiştir. Metro sistemleri, zamanla tehlikeli hale gelebilecek kapalı alanlar, yanıcı malzemeler ve elektrik sistemleri nedeniyle yangın olaylarına karşı savunmasızdır. Londra'daki King's Cross Yeraltı yangını (1987), Güney Kore'deki Daegu metro yangını (2003) ve Azerbaycan'daki Bakü Metro yangını (1995) gibi önemli olaylar, metro yangınlarının yıkıcı etkilerini göstererek önemli can kayıplarına ve kapsamlı hasara yol açmıştır (Jackson, 2019; Li vd., 2020). Bu olaylar, hem yolcuları hem de çalışanları duman soluma, toksik gaz maruziyeti ve ısı stresi gibi yangınlarla ilişkili sağlık risklerinden korumak için sağlam İSG önlemlerine olan ihtiyacı ortaya koymuştur.

Çeşitli ülkeler metrolarda oluşacak riskleri azaltmak için sıkı İSG (İş Sağlığı ve Güvenliği) protokolleri uygulamıştır. Örneğin, Japonya'nın metro sistemleri, işlevselliğini sağlamak için düzenli olarak denetlenen otomatik sprinkler ve duman tahliye sistemleri de dahil olmak üzere gelişmiş yangın algılama ve bastırma sistemleriyle donatılmıştır (Tanaka, 2021). Avrupa Birliği'nde, metro güvenlik düzenlemeleri kapsamlı risk değerlendirmeleri, acil tahliye tatbikatları ve yangına dayanıklı yapı malzemelerinin kullanımını zorunlu kılar (Avrupa Komisyonu, 2020). New York City Metrosu, çalışan eğitimine, yangın tehlikelerinin gerçek zamanlı izlenmesine ve hızlı müdahale için yerel itfaiye teşkilatlarıyla iş birliğine odaklanan sıkı İSG protokolleri benimsemiştir (Smith & Anderson, 2018).

Bu çabalara rağmen, dünya genelinde metro yangınlarının devamlılığı, güvenlik protokollerinde sürekli iyileştirmesi gerektiğini vurgulamaktadır. Bu çalışma, farklı ülkelerdeki metro yangını olaylarının kapsamlı bir araştırmasını yürütmeyi ve bunların mesleki sağlık ve güvenlik üzerindeki etkilerine odaklanmayı amaçlamaktadır. Bu yangınların nedenlerini, risklerini ve sonuçlarını analiz ederek, çalışma en iyi uygulamaları belirlemeyi ve etkili yangın önleme stratejileri önermeyi amaçlamaktadır. Bu çalışma, metro sistemlerindeki iş sağlığı ve güvenliği (İSG) önlemlerinin hem çalışanlar hem de yolcular için güvenlik standartlarının iyileştirilmesine yönelik değerli içgörüler sunarak literatüre önemli bir katkı sunmaktadır.

2. ARAŞTIRMA VE BULGULAR:

2.1. Metro Yangınlarına Genel Bakış

Metro yangınlarının tarihsel süreci, toplu taşıma sistemlerinin gelişimiyle birlikte güvenlik standartlarının evrimine ışık tutmaktadır. İlk olarak 1969 yılında Pekin metrosunda meydana gelen yangın, metro güvenliğine dair küresel farkındalığın başlangıç noktası olmuştur. Bu yangın, yoğun saatlerde gerçekleşmiş ve yangın söndürme ekipmanlarının eksikliğiyle birleşince büyük bir kriz yaratmıştır. Bu olay, Çin'de yeni gelişmekte olan metro sistemlerinde yangın güvenliğinin öncelikli bir sorun olarak ele alınması gerektiğini ortaya koymuştur. İlk kayıtlı bu olay, toplu taşıma araçlarının tasarımında ve acil durum yönetiminde yeni bir dönemin başlangıcını işaret etmiştir.

1973'te Paris Metro Yangını, tarihsel süreçte yangın güvenliği açısından başka bir dönüm noktası olmuştur. Gare de Lyon ve Bastille istasyonları arasında gerçekleşen bu yangın, elektrik arızasıyla başlamış ve trenlerde kullanılan plastik ile sentetik malzemelerin yüksek yanıcılığı nedeniyle hızla yayılmıştır. Bu olayın ardından, Fransız hükümeti ve Paris Toplu Taşıma İdaresi (RATP) geniş kapsamlı güvenlik standartları oluşturmuş; tren yapımında kullanılan malzemelerin yangına dayanıklı hale getirilmesi ve havalandırma sistemlerinin geliştirilmesi gibi önemli reformlar yapılmıştır. Paris'te yaşanan bu olay, yalnızca Fransa'da değil, dünya genelinde metro sistemlerinde yangın güvenliği konusunun önem kazanmasına yol açmıştır.

1987 yılında Londra'daki King's Cross St. Pancras İstasyonu'nda çıkan yangın, yer altı hava akımlarının etkisiyle küçük bir kıvılcımın nasıl büyük bir felakete dönüşebileceğini göstermiştir. Ahşap yürüyen merdivenlerin tutuşmasıyla başlayan yangın, müdahale gecikmesi nedeniyle 31 kişinin hayatını kaybetmesine neden olmuştur. Bu olaydan sonra, Londra metrosunda ahşap yürüyen merdivenlerin yerini metal merdivenler almış ve yangın algılama sistemlerinin iyileştirilmesi için büyük çaba sarf edilmiştir. King's Cross yangını, özellikle metro istasyonlarındaki mimari düzenlemelerin yangın güvenliğini nasıl etkileyebileceğini göstermesi bakımından kritik bir ders olmuştur.

Daha sonra 1995'te Bakü metrosunda meydana gelen yangın, toplu taşıma sistemlerinin güvenlik zafiyetlerini bir kez daha ortaya koymuştur. Havalandırma sistemlerinin eksikliği ve acil çıkışların yetersizliği, yangının büyümesine ve 289 kişinin hayatını kaybetmesine neden olmuştur. Bu olay, yalnızca Azerbaycan'da değil, birçok ülkede metro güvenliğinin yeniden ele alınmasını sağlamış ve özellikle acil durum tahliye sistemlerinin önemini vurgulamıştır.

2003 yılında Güney Kore'deki Daegu Metro Yangını ise yangın güvenliği standartlarının güncellenmesinde başka bir dönüm noktası olmuştur. Patlatılan bir torba sonucu başlayan yangın, 192 kişinin ölümüne ve 151 kişinin yaralanmasına neden olmuş, güvenlik standartlarının eksikliklerini dramatik bir şekilde gözler önüne sermiştir. Bu olay, yalnızca metro araçlarının değil, istasyonların da yangına karşı dayanıklı materyallerle donatılması gerektiğini ortaya koymuş ve dünya genelinde yangın güvenliği yaklaşımlarında bir paradigma değişikliğine yol açmıştır.

Tarih boyunca meydana gelen bu yangınlar, metro sistemlerindeki güvenlik eksikliklerinin aşılması için önemli dersler sunmuştur. Günümüzde yangın güvenliğini artırmak için yangına dayanıklı malzeme kullanımı, gelişmiş algılama ve söndürme sistemlerinin entegrasyonu, düzenli bakım çalışmaları ve acil durum protokollerinin etkin bir şekilde uygulanması gibi önlemler alınmaktadır. Ayrıca, toplu taşıma sistemlerinin artan karmaşıklığıyla birlikte yangın güvenliğinde yapay zeka ve sensör teknolojisi gibi yenilikçi çözümler devreye sokulmaktadır. Tüm bu süreçler, tarihsel metro yangınlarının toplu taşıma sistemlerinin daha güvenli hale gelmesine nasıl katkıda bulunduğunu ve gelecekteki felaketlerin önlenmesi için atılan adımların temelini oluşturduğunu göstermektedir.

Bu tarihsel olaylar, yalnızca geçmişteki sorunları ele almakla kalmayıp, aynı zamanda modern toplu taşıma güvenliği anlayışının şekillenmesinde kritik bir rol oynamıştır. Bugün ulaşılan güvenlik standartları, bu felaketlerden çıkarılan derslerin ve bu dersler doğrultusunda yapılan reformların bir ürünüdür.

2.2 Metro Yangınlarının Tarihsel Analizi

1863 yılından bu yana birçok önemli metro yangını meydana gelmiştir. Bu olayların bir kısmına ilişkin veriler günümüze ulaşmış, diğerleri ise tarih sayfalarında kaybolmuştur. Metro yangınlarına ilişkin bu tarihsel birikim, yangın güvenliği önlemlerinin geliştirilmesi ve mevcut risklerin anlaşılması açısından önemli bir kaynak teşkil etmektedir. Bu kapsamda, metro yangınlarının nedenlerini belirlemek ve daha güvenli çalışma alanları oluşturmak amacıyla, geçmişte meydana gelen vakalardan 52 tanesi seçilerek istatistiksel analizler gerçekleştirilmiştir. Bu analizler, yangınların kaynağı, etkileri ve önlenebilirlik düzeyleri gibi kritik verilerin ortaya konulmasında önemli bir rol oynamaktadır. Bu vakaların seçimi, yangınların dünya genelinde homojen bir şekilde dağılım göstermesi, ölüm ve yaralanma sayılarındaki farklılıklar, yangın çıkış nedenlerinin çeşitliliği, meydana geldiği çevresel koşullar ve kaza şiddeti gibi çeşitli parametrelere dayandırılmıştır. Bu kriterler, analizlerin daha kapsayıcı ve temsil edici olmasını sağlamak amacıyla belirlenmiştir.

52 metro yangını incelendiğinde, yangına neden olan faktörler dört ana başlık altında sınıflandırılmıştır. İlk olarak, elektrik altyapısındaki kısa devre, aşırı yüklenme ve yalıtım sorunları gibi teknik arızalar elektriksel arızalar başlığı altında ele alınmıştır. İkinci olarak, yolcuların veya personelin güvenlik prosedürlerine uymaması, ihmal veya hatalı

davranışlarından kaynaklanan durumlar insan kaynaklı hatalar olarak tanımlanmıştır. Üçüncü kategori olan teknik hatalar, metro sistemlerinin tasarımı, inşaatı ya da bakım süreçlerinde yapılan yapısal veya mekanik eksiklikleri içermektedir. Son olarak, doğal afetler, dış müdahaleler ve çevresel koşullardan kaynaklanan olaylar çevresel etkiler başlığı altında incelenmiştir. Bu sınıflandırma, metro yangınlarının nedenlerini sistematik bir şekilde analiz etmek için önemli bir çerçeve sunmaktadır.

52 çalışmanın nedensel dağılımına bakıldığında, 27'sinin elektriksel arızalardan, 10'unun insan hatalarından, 7'sinin çevresel etkilerden ve 8'inin teknik hatalardan kaynaklandığı belirlenmiştir. Bu bulgular, elektriksel arızaların metro yangınlarının en yaygın nedeni olduğunu ortaya koyarken, diğer faktörlerin de dikkate değer bir etkiye sahip olduğunu göstermektedir. (Şekil-1)

Şekil-1 Metro yangın kazalarının kök neden oranları

3. Metro Ağlarında Yangın Önleme ve Güvenlik Sistemleri

Metro ağlarında yangın önleme ve güvenlik sistemleri, İş Sağlığı ve Güvenliği (İSG) perspektifinden ele alındığında, yoğun yolcu kapasiteleri ve karmaşık altyapıları nedeniyle kapsamlı bir yaklaşımı gerektirir. Gelişmiş ülkelerde yapılan detaylı risk analizleri, kazaları önlemek ve yolcu güvenliğini artırmak için etkili önlemler geliştirilmesinde kritik bir rol oynamaktadır. Literatürdeki bulgular, metro yangın güvenliğini sağlamak için beş temel başlık altında incelenmiştir.

Mühendislik kontrolleri, yangına dayanıklı malzemelerin kullanımını esas alır. Seramik yalıtım, aerjel yalıtım ve şişen yangına dayanıklı kaplamalar gibi yenilikçi malzemelerin uygulanması, uluslararası standartlarla (örneğin, NFPA 130) uyumlu olarak güvenlik ve sürdürülebilirliği artırmaktadır (Liu, 2020). Havalandırma sistemleri, yangın sırasında duman

ve zehirli gazların tahliyesi için kritik öneme sahiptir. Jet fanlar, tavan egzoz sistemleri ve tabaka havalandırma teknolojileri, yangının yayılmasını önlerken yolcuların tahliyesini kolaylaştırır (Wong vd., 2019; Mao vd., 2022).

İdari kontroller, acil durum müdahale planlarının güncellenmesi, personel eğitimi ve yangın tatbikatlarının düzenlenmesi gibi süreçleri içerir. Simülasyon tabanlı çalışmalar, kaynakların etkin kullanımını ve müdahale sürelerinin minimize edilmesini sağlayarak, ekonomik kayıpların ve can kayıplarının azaltılmasına katkıda bulunmaktadır (Zhang vd., 2022). Yangın algılama ve söndürme sistemleri, sensörler ve otomasyon teknolojileriyle erken uyarı mekanizmaları sunarak yangınların hızlıca kontrol altına alınmasını sağlar. Yapay zeka tabanlı sistemler, gerçek zamanlı veri analiziyle riskleri öngörerek acil durum planlarını otomatik olarak devreye sokmaktadır (Yang vd., 2021).

Son olarak, yenilikçi eğitim teknikleri, simülasyon ve oyunlaştırma tabanlı yöntemlerle personel ve yolcuların yangın güvenliği eğitimlerini daha etkili hale getirmektedir. Sanal gerçeklik (VR) teknolojileri, yangın anındaki riskleri güvenli bir ortamda deneyimlemeyi sağlayarak karar alma reflekslerini geliştirmektedir (Kırtaş ve Altundağ, 2020; Uluç, 2022; Qui vd., 2020).

Elde edilen bulgular, metro ağlarında yangın riskini azaltmak için mühendislik ve idari yaklaşımların yanı sıra akıllı teknolojilerin entegrasyonunun önemini vurgulamaktadır. Bu önlemler hem yolcu güvenliğini artırmakta hem de toplu taşıma sistemlerinin sürdürülebilirliğini desteklemektedir.

4. Metro Yangınlarında Acil Durum Müdahalesi ve Yönetimi

Metro sistemlerinde yangın ve çevresel etkilerden kaynaklanan acil durumlara müdahale ve yönetim, yolcu güvenliği için kritik öneme sahiptir. İSG tarihi boyunca alınan birçok tahliye ve kaçış yöntemleri alınmıştır (Küleççi 2023). Yangın güvenliği protokollerinin etkin uygulanması, çevresel faktörler ve zehirli gazlar gibi etmenlerle başa çıkabilmek için acil müdahale planlarının geliştirilmesini zorunlu kılar (Küleççi ve Uçak, 2024). Kaçış yollarındaki karmaşıklığın önlenmesi ve öncelikli kişilere yönelik özel düzenlemeler, acil müdahale sürecini iyileştirir. Ayrıca, duman tahliye sistemleri ve yönlendirme işaretleri gibi güvenlik önlemleri, yolcuların güvenli tahliyesini sağlar. Yangın güvenliği planlarının düzenli olarak gözden geçirilmesi, acil durumlara etkin müdahale için önemlidir (Wang vd., 2018).

Metro sistemlerinde güvenliğin sağlanmasında tren operatörleri, bakım personeli ve güvenlik personelinin kritik sorumlulukları bulunmaktadır. Tren operatörleri, hız limitlerine uyum, yolcu güvenliği, anlık yol durumu izleme ve acil durumlarda doğru tepki verme gibi görevlerle yükümlüdür. Ayrıca, sinyal sistemleri ve otomatik kontrol cihazlarını kullanarak trenlerin güvenli hareketini sağlamak için düzenli izleme ve kontrol yapılmalıdır. (Yang vd., 2016) Tıpkı inşaatlarda olduğu gibi metro istasyonlarında sürekli risk analizleri yapılmalıdır. Tren operatörlerinin, metro sistemlerinin güvenli çalışmasını sağlamak için sinyalizasyon ve otomatik kontrol sistemlerinin kontrolü periyodik olarak yapılmalı, gerekli ilgi gösterilmelidir (Küleççi ve Meral, 2024). Bakım personeli, metro sisteminin altyapısının ve donanımının düzgün çalışmasını sağlamak amacıyla düzenli bakım, onarım ve yenileme işlemlerini gerçekleştirir. Bu süreçler, elektrikli bileşenlerin kontrol edilmesi ve yangın riskine neden olabilecek olası arızaların erken tespiti için kritik öneme sahiptir. (Tsukahara vd., 2011)

Metro sistemlerinde yangın güvenliği, sadece yangın algılama ve söndürme sistemlerine dayalı değildir. Etkili bir güvenlik yapısının oluşturulabilmesi için, bakım personelinin düzenli kontrolleri ve tren operatörlerinin hızlı reaksiyon kabiliyeti kritik rol oynar. Cheng ve Yang, 2012). Bu bağlamda personelinin, yangın risklerini en aza indirmek için düzenli bakımlarını yapmasının önemine dikkat çekilmektedir. Güvenlik personelinin yangın gibi acil durumlara hazırlıklı olması ve olaylara anında müdahale etmesi gerekir; bu, metro sistemlerinde güvenliğin sağlanmasında hayati bir faktördür (Kumar & Lee, 2020).

Metro istasyonlarının yangın acil durum kaçıışı, yalnızca güvenlik açısından değil, aynı zamanda istasyonun mimari tasarımının etkinliğiyle de doğrudan ilişkilidir. İyi bir mimari tasarım, yolcuların yangın anında hızlı ve güvenli bir şekilde tahliye olabilmesi için gerekli olan kaçış yollarının düzgün ve engellenmemiş olmasını sağlamalıdır (Kirkpatrick ve Riddell, 2011). Kaçış koridorlarının genişliği, yerleşim planı ve bağlantılı alanlar, yolcu trafiğini rahatlıkla yönlendirebilmelidir. Bunun yanı sıra, yangın güvenliği için tasarlanan havalandırma sistemleri, yalnızca fonksiyonel değil, estetik açıdan da istasyon tasarımına entegre edilmelidir (Chen vd., 2018). Yangın anında oluşan dumanın kontrolü için havalandırma sistemlerinin etkinliği, tasarımda önemli bir rol oynamaktadır; dumanın hızla dışarı atılması, yolcuların tahliyesini kolaylaştırırken, aynı zamanda yapının genel havasını da korur. Bu bağlamda, mimari tasarım ve yangın güvenliği unsurlarının entegrasyonu hem estetik hem de güvenlik açısından yüksek standartlarda olmalıdır (Wang vd., 2016). Bu tür entegre tasarımlar, metro istasyonlarında yangın güvenliğini artırırken, yolcuların güvenliğini ön planda tutar.

4. Sonuç

Bu çalışmada sunulan bulgular ışığında, metro sistemlerinde yangın güvenliğinin yalnızca teknik bir zorluk değil, aynı zamanda kritik bir iş sağlığı ve güvenliği (İSG) endişesi olduğu açıktır. 52 metro yangını olayının analizi, elektrik arızaları, insan hataları, eski altyapı ve çevresel faktörler tarafından yönlendirilen yangın risklerinin çok yönlü doğasını vurgular. Bu riskler, modern güvenlik protokollerinden yoksun eski metro sistemlerinde daha da kötüleşir. Çalışma, yangın tehlikelerini azaltmak için gelişmiş mühendislik çözümlerini, idari kontrolleri ve kapsamlı güvenlik sistemlerini entegre etmenin gerekliliğini vurgular.

Özet

Tarihi yapıların korunmasındaki temel amaç, gelecek nesillere güvenli bir şekilde aktarılmasını sağlarken orijinal formlarını korumaktır. Ancak bu yapılar, zamanlarının mimari teknikleri ve standartları kullanılarak inşa edildikleri için, genellikle çağdaş yangın güvenliği önlemleriyle uyumluluktan yoksundur ve bu da onları yangın risklerine karşı özellikle hassas hale getirir. Bu çalışma, kapsamlı bir literatür taraması yoluyla Türkiye genelindeki tarihi binalarda çıkan yangınların nedenlerini ve etkilerini araştırmaktadır. Bu yapılardaki yangın tehlikelerine katkıda bulunan temel risk faktörleri analiz edilmiş ve dört ana kategoriye ayrılmıştır: mimari özellikler, insan hataları, güncel olmayan altyapı ve dış faktörler. Yanıcı malzemeler ve güncel olmayan tasarım gibi mimari özellikler yangın duyarlılığını artırırken, insan faaliyetleri, yangın farkındalığının olmaması ve ihmalkarlık riskleri daha da kötüleştirir. Bu binalardaki eski elektrik ve yapısal sistemler, modern yükler altında arızalanabilecekleri için ek zorluklar sunar. Çevresel koşullar ve yakındaki kentsel faaliyetler gibi dış faktörler de yangın olaylarında rol oynar. Bu bulgulara yanıt olarak, bu çalışma tarihi binalardaki yangın risklerini azaltmak için üç öncelikli alanı vurgulamaktadır: çalışanlar için hedefli eğitim programları uygulamak, yangın güvenliği sistemlerini tarihi yapılarla uyumlu olacak şekilde yükseltmek ve modernize etmek ve miras koruma yetkilileriyle iş birliğini teşvik etmek. Bu önlemler, hem bu kültürel açıdan değerli alanların güvenliğini hem de bunların korunmasından sorumlu olanların sağlık ve güvenliğini artırmayı amaçlamaktadır.

Anahtar Kelimeler: Tarihi yapılar, yangın güvenliği, iş sağlığı ve güvenliği, risk değerlendirmesi, Türkiye, kültürel mirasın korunması, yangın önleme stratejileri.

Abstract

The primary objective in preserving historical structures is to maintain their original form while ensuring their safe transfer to future generations. However, since these buildings were constructed using the architectural techniques and standards of their time, they often lack compatibility with contemporary fire safety measures, leaving them particularly susceptible to fire risks. This study investigates the causes and impacts of fires in historical buildings across Turkey through a comprehensive literature review. Key risk factors contributing to fire hazards in these structures were analyzed and grouped into four main categories: architectural characteristics, human errors, outdated infrastructure, and external factors. Architectural features, such as flammable materials and outdated design, increase fire susceptibility, while human activities, lack of fire awareness, and negligence further exacerbate risks. Aging electrical and structural systems in these buildings present additional challenges, as they may malfunction under modern loads. External factors, including environmental conditions and nearby urban activity, also play a role in fire incidents. In response to these findings, this

study highlights three priority areas for reducing fire risks in historical buildings: implementing targeted training programs for employees, upgrading and modernizing fire safety systems to be compatible with historical structures, and fostering collaboration with heritage preservation authorities. These measures aim to enhance both the safety of these culturally valuable sites and the health and safety of those responsible for their protection.

Keywords: Historical structures, fire safety, occupational health and safety, risk assessment, Turkey, cultural heritage preservation, fire prevention strategies.

1.GİRİŞ

Dünya kültürel mirasının korunması konusunda, yangın güvenliği yönetiminin önemli bir rolü vardır. Çünkü yangın, tarihi yapıların kalıcı zarar görmesine ya da tamamen yok olmasına sebep olmaktadır. Geçmişten günümüze birçok tarihi eser, yangın sebebiyle büyük zarar görmüş ve telafisi olmayan kayıplar yaşamıştır. (Şimşek, 2020). Kültürel mirasın muhafaza edilmesi ve geleceğe aktarılması için çeşitli yasa ve yönetmelik ile düzen altına alınması, bu faaliyetlerin başarı elde etmesi şüphesiz önemlidir. Fakat bu faaliyetlerin halk ve kişi bakımından sadece yasalar ile koruma işleminin devam ettirilebilmesi olanaklı değildir.(ICOMOS Türkiye, 2013).Bilinç oluşturma ve farkındalık, tarihi yapıların korunmasında önemli rol oynamaktadır. Bu temelin oluşması halkın kültürel mirası idrak etmesi, korumanın önemini kavraması ve bu hususta eğitim görmesine dayalıdır. (Sürücü & Başar, 2016). Tarihi yapılar için yangın güvenliğinin oluşmasında kritik nokta, yapının kendine özgü dokusunu bozmadan veya en az hasar verecek biçimde koruma sağlamaktır. Bu sebeple alanında uzman bir danışman ile, gereksinimler saptanmalı ve hayata geçirilmelidir. (Özgünler, 2018).

Tarihi yapıların yangına karşı korunması, hem kültürel mirasın devamlılığı hem de toplumsal hafızanın sürdürülebilirliği açısından büyük bir öneme sahiptir. Bu yapıların korunmasında, modern yangın güvenlik sistemlerinin entegrasyonu ve düzenli bakım çalışmaları öncelikli adımlardır. Ancak, tarihi yapıların mimari özellikleri ve orijinal yapısını koruma zorunluluğu, yangın güvenlik önlemlerinin uygulanmasında çeşitli zorluklar yaratmaktadır. Örneğin, modern yangın söndürme sistemlerinin bu yapılara entegre edilmesi sırasında tarihi dokunun zarar görmemesi için özel yöntemler kullanılmalıdır. Bu doğrultuda, otomatik yangın algılama ve söndürme sistemlerinin hassas bir şekilde tasarlanması ve yerleştirilmesi kritik bir gerekliliktir (Çapan, 2019).

Tarihi binalarda yangın riski, yapısal özelliklerin eski olması, kullanılan yanıcı malzemeler ve çoğu zaman yetersiz yangın güvenlik önlemleri nedeniyle önemli bir tehlike oluşturmaktadır. Bu binaların korunması, kültürel mirasın gelecek nesillere aktarılması açısından kritik bir öneme sahiptir. Özellikle büyük binalardaki yangın söndürme sistemlerinin geçmişten günümüze gelişimi, yangınların etkisini azaltmada büyük bir rol oynamaktadır (Küleççi & Ramazan, 2023). Bununla birlikte, yangınların yalnızca yapısal zararlarla sınırlı kalmadığı; aynı zamanda işçi sağlığı ve iş güvenliği üzerinde de ciddi olumsuz etkiler yarattığı bilinmektedir. Örneğin, tütün mamulleri depolarında çıkan yangınların sonuçları incelendiğinde, yangının etkilerinin hem çalışanların güvenliği hem de iş süreçleri üzerinde yıkıcı olduğu görülmüştür (Küleççi & Uçak, 2023). Meyve suyu fabrikalarındaki iş akışlarının iş güvenliği açısından değerlendirilmesi gibi, tarihi binalarda da iş akışlarına uygun güvenlik önlemlerinin alınması büyük önem taşımaktadır (Küleççi & Meral, 2023). Yangın risklerinin tespiti ve önlemlerinin geliştirilmesinde, 3T gibi modern risk analiz yöntemlerinin kullanılması oldukça etkili olabilir (Küleççi & Meral, 2024). Aynı şekilde, madencilikte siyanür kullanımı gibi yüksek riskli süreçlerde yapılan analizler, risk yönetimi yaklaşımlarının tarihi binalardaki yangın risklerine uyarlanabilir olduğunu göstermektedir (Küleççi & Uçak, 2024). Dünya genelinde ve Türkiye'deki maden kazalarının incelenmesi, iş sağlığı ve güvenliği konusundaki tarihsel süreçlerin ve uygulamaların önemini ortaya

koyarken, bu yaklaşımlar yangın güvenliği politikalarının geliştirilmesinde de yol gösterici olabilir (Külekçi, 2023). Sonuç olarak, yangın güvenliği sadece bir yapı sorunu değil, aynı zamanda kapsamlı bir iş sağlığı ve güvenliği meselesidir. Bu nedenle, çalışanların eğitimi ve iş süreçlerinin iyileştirilmesi, tarihi binaların korunmasında önemli bir role sahiptir (Külekçi & Meral, 2024).

Sonuç olarak, bu çalışma, hem iş sağlığı ve güvenliği açısından farkındalık yaratmayı hem de tarihi yapı yangınlarına müdahale süreçlerinde sürdürülebilir bir güvenlik yönetimi modeli geliştirmeyi amaçlamaktadır. Böylelikle, kültürel mirasın korunmasında ve müdahale ekiplerinin güvenliğinin sağlanmasında daha etkin bir yaklaşım ortaya konulacaktır. Çalışma, yalnızca akademik literatüre değil, aynı zamanda uygulayıcılar ve politika yapıcılar için de rehber niteliğinde bir kaynak oluşturmayı hedeflemektedir.

2. TÜRKİYE'DEKİ TARİHİ BİNA YANGINLARI

2.1. Büyük Yangın Olayları

Geçmişten günümüze hem dünyada hem ülkemizde var olan birçok natürel, kültürel ve estetik değer, büyük yangınlar neticesinde yok olmuştur. Özellikle de tarihi yapılarda tehlike içeren yangın, kamusal alanda bulunan taşınmaz kültürel varlığımız olan mirasımızı tehdit etmektedir. Bu tip yapılar muhafaza edilmesi gereken değerlerdir. Türkiye tarihi yapılar yönünden benzersiz bir coğrafyada mevcuttur. Sayısız medeniyete ev sahipliği yapmış bu ülkenin sahip olduğu tarihi yapılarının korunması için çalışılmalıdır. (Alkış, 2013).

Ülkemizdeki bu kıymetli yapılarda kimi zaman yangın gibi facialar yaşanabiliyor. Bu felaketlerin konumları, sebepleri, boyutları farklılık gösterse de, kültürel mirasımızın zarara uğraması noktasında ortak bir paydada buluşmaktadırlar. Tarihte birçok tarihi yapı yangını bulunmaktadır. Cumhuriyet döneminde 1923 yılında Abraham Paşa Yalısı yangını, 1924'de Memduh Paşa Köşkünde yangın olmuştur. 21 Eylül 1941 yılında Haliç Fenerindeki yangın, Haliç Rum Patrikhanesinin müştemilatında çıkan yangın ile beraber büyük bir bölüme yayılarak 94ev, 1 mescit, 2 camiyi ve yazıhanesi olmak üzere toplam 98 tane bina yanmıştır.1954'de Kapalı Çarşı yangını ile, 744 dükkanın tamamı, 1.290 dükkanın bir kısmı, çarşının dışında kalan 30 dükkan yanmış ve yok olmuştur. Sigorta şirketleri hasar için 2.650.000\$ tazminat ödemesi yapmışlardır. 1958 yılında Bursa Çarşısı yangını ile birlikte yapı büyük hasara uğramış bir çok dükkan yanmıştır. Bu hasar için sigorta şirketleri 1.175.000\$ ödemişlerdir.(Kaya, 2018).2. Abdülhamid tarafından 1876 yılında inşa edilen Gazi Osman Paşa İlk Öğretim Okulunda, 31 Temmuz 2002'de elektrik kontağı sebebiyle yangın çıkmıştır. 28 Kasım 2010 yılında Ankara'da Haydarpaşa Gar binasında, 11 Şubat 2011 yılında Kılıç Ali Paşa Camisinde, 23 Aralık 2013'de Kapalıçarşı da, 24 Aralık 2012' de İl Milli Eğitim Müdürlüğü, 22 Ocak 2013 Galatasaray Üniversitesinde yangın olmuştur. (Atılğan, 2013).

Tablo 1. Türkiye'de Yaşanan Tarihi Yapı Yangınları

Tarih	Yapı	Yer	Sebebi	Hasar
28 Kasım 2010	Haydarpaşa Garı Yangını	İstanbul	Elektrik kontağı	Yapının 4. katı kullanılmaz hale geldi
11 Şubat 2011	Kılıç Ali Paşa Cami	İstanbul	Restorasyon çalışmalarında çatı yangını	Mimar Sinan'ın 1580'de inşa ettiği eseri kısmen zarar gördü

19 Şubat 2011	Beyazıt Camisi Hünkar Kasrı	İstanbul	Elektrik kontağı	Kasrın büyük bir bölümü hasar gördü
22 Aralık 2012	İl Milli Eğitim Müdürlüğü Yangını	İstanbul	Elektrik kontağı	147 yıllık tarihi olan yapı tamamen yandı
23 Aralık 2012	Kapalıçarşı Yangını	İstanbul	Elektrik kontağı	Kontrol altına alındı
22 Ocak 2013	Galatasaray Üniversitesi	İstanbul	Elektrik kontağı	Okul binası çatısı tamamen yandı, tarihi ana bina kullanılamaz durumda
10 Nisan 2013	Müşir Fuat Paşa Yalısı	İstanbul	Elektrik Panosu	Çatı tarafı yandı
28 Haziran 2014	Hüseyin Avni Paşa Köşkü	İstanbul	-	Kullanılamaz hale geldi
25 Kasım 2015	Alâaddin Cami	Konya	Restorasyon sırasında alev çıkması	Tavan kaplama ve kirişler yandı
30 Kasım 2015	Fahrünnisa Cami	Konya	Elektrik kontağı	Tamamen kullanılamaz hale geldi

Tablo 1'deki veriler, Türkiye'deki çeşitli yapıların yangın sebeplerini ve bu yangınların neden olduğu hasarları detaylandırmaktadır. Öne çıkan yangın nedenleri arasında elektrik kontağı en sık rastlanan problem olarak belirtilmiştir ve birçok yapıda ciddi hasarlara yol açmıştır. Örneğin, Haydarpaşa Garı yangınında yapının 4. katı kullanılamaz hale gelmiş, Galatasaray Üniversitesi'nin tarihi binası tamamen kullanılamaz duruma gelmiştir. Bunun dışında, restorasyon sırasında çıkan yangınlar da önemli bir risk oluşturmuş ve bu tür olaylar sırasında tarihi yapılar ciddi zarar görmüştür. Ayrıca kısa devre ve elektrik panosu arızaları gibi teknik sorunlar da çeşitli yangınlara neden olmuştur. Bu olaylar, özellikle tarihi ve kültürel mirasın korunması için altyapı ve elektrik güvenliği önlemlerinin ne kadar önemli olduğunu bir kez daha vurgulamaktadır.

2.2. Tarihi Yapılarda Yangınların Nedenleri

Tarihi yapılarda yangınların çıkış nedenleri, bu yapıların özgün mimari özellikleri, eski altyapıları ve modern koruma yöntemlerine uygun olmamaları nedeniyle oldukça çeşitlidir. Yüzyıllar boyunca inşa edilen bu yapılar, inşa edildikleri dönemin teknolojik ve mimari anlayışını yansıttığından, modern yangın güvenlik standartlarına entegre edilememekte ve dolayısıyla yangın risklerine karşı daha savunmasız hale gelmektedir. Elektrik tesisatlarının eskimesi, bu risklerin başında gelir. Tarihi binalarda kullanılan eski kablo ve yalıtım malzemeleri zamanla yıpranarak kısa devreler, aşırı yüklenmeler gibi sorunlarla yangın riskini artırmaktadır. Düzenli bakım yapılmadığında veya elektrik sistemleri modernize edilmediğinde bu riskler daha da büyümektedir. Ayrıca, eski altyapılar, güncel yangın algılama ve söndürme sistemlerine uyum sağlayamadığından müdahale sürecini zorlaştırmaktadır.

Tarihi yapıların inşasında kullanılan ahşap, duvar kaplamaları, dekoratif öğeler ve diğer yanıcı malzemeler yangınların hızlı bir şekilde yayılmasına neden olmaktadır. Bu tür malzemeler yalnızca yangın riskini artırmakla kalmaz, aynı zamanda yangına müdahaleyi de zorlaştırır. Özellikle ahşap yapılar, ufak bir kıvılcım ile büyük bir yangına dönüşebilirken, iç dekorasyonda kullanılan halılar, kumaş döşemeler ve duvar kağıtları da alevlerin yayılmasına zemin hazırlar. Bu tür durumlarda tarihi yapıların korunmasında hem önleyici tedbirlerin alınması hem de yangın anında hızlı müdahale sistemlerinin kurulması kritik önemdedir.

Yangın güvenliğinin bir diğer zayıf halkası, yangın algılama ve söndürme sistemlerinin eksikliğidir. Bu binaların tarihi dokusunu koruma kaygısıyla modern sistemlerin entegrasyonu çoğunlukla zor ya da maliyetli olmaktadır. Bunun sonucunda, yangın erken fark edilemez ve alevler hızla büyüyerek yapı üzerinde büyük yıkıma yol açabilir. Restorasyon sırasında yapılan hatalar da ciddi bir risk faktörüdür. Kaynak makineleri gibi fazla ısı açığa çıkaran ekipmanların dikkatsizce kullanılması, restorasyon sırasında sürtünme ve kıvılcım çıkması yangına yol açabilir. Ayrıca, tarihi yapıları ziyaret eden kişilerin ya da yapıda çalışanların dikkatsiz davranışları, özellikle sigara izmaritleri gibi küçük ancak tehlikeli unsurlar da yangına neden olabilir.

Doğal afetler ve çevresel etkenler de tarihi yapılarda yangın çıkmasına neden olabilmektedir. Özellikle yıldırım düşmesi, tarihi binalarda yangınlara sıklıkla sebebiyet vermekte ve bu yapılarda yeterli yıldırım koruma sistemlerinin bulunmaması tehlikeyi artırmaktadır. Ayrıca, sıcak ve kuru hava koşulları, özellikle yaz mevsiminde, bu yapılarda yangın olasılığını artıran önemli bir etkidir. Uzun süreli nem değişimleri ve sıcaklık dalgalanmaları, ahşap gibi malzemeleri yangına karşı daha hassas hale getirebilir.

Eski ısıtma sistemleri, tarihi yapıların yangına duyarlılığını artıran diğer bir etkidir. Bacalı sistemlerin veya şöminelerin uzun süreli bakım eksikliği, kurum ve is birikmesine, dolayısıyla tıkanmalara ve yangına yol açabilir. Ayrıca, bu sistemlerin oluşturduğu kıvılcımlar çevredeki yanıcı malzemelerle temas ettiğinde yangına dönüşebilir. Ekonomik ve kültürel faktörler de bu yapılar için önemli bir risk teşkil etmektedir. Tarihi yapıların korunması ve modernize edilmesi maliyetli bir süreçtir. Yetersiz bütçeler, bu yapılarda düzenli bakım ve modernizasyonun yapılmasını engelleyerek yangın riskini artırmaktadır. Ayrıca, toplumun bu yapılarla ilgili yeterli bilinç ve değer algısına sahip olmaması, yangına karşı alınan önlemleri zayıflatmaktadır.

Son olarak, kasıtlı eylemler, kundaklama ve çevresel vandalizm, tarihi yapıların güvenliğini tehdit eden önemli unsurlardandır. Yapının dış güvenliğinin sağlanamaması, çevredeki yangınların doğrudan etkisine maruz kalmasına neden olabilir. Tüm bu faktörler göz önüne alındığında, tarihi yapıların yangın risklerini azaltmak için kapsamlı koruma stratejilerinin geliştirilmesi ve uygulanması büyük bir gereklilik olarak ortaya çıkmaktadır. Hem teknik altyapının iyileştirilmesi hem de kültürel mirasın korunmasına yönelik farkındalık artırıcı programların hayata geçirilmesi, bu yapıların gelecek nesillere sağlıklı bir şekilde aktarılabilmesi için kritik öneme sahiptir.

3. ÇALIŞANLAR İÇİN MESLEKİ SAĞLIK RİSKLERİ

3.1.Duman Ve Zehirli Gaz Maruziyeti

Yangın sırasında gaz ve duman maruziyeti, çalışanların karşılaşabileceği en ciddi ve tehlikeli durumlar arasında yer alır. Yangın sırasında ortaya çıkan duman, içeriğinde karbon monoksit (CO), karbon dioksit (CO₂), hidrojen siyanür (HCN), azot oksitler (NO_x) ve kükürt dioksit (SO₂) gibi toksik gazlar barındırır. Ayrıca, duman partikülleri, yanma sürecinde açığa çıkan kimyasal maddelerle birleşerek havada asılı kalır ve solunum yoluyla çalışanların vücutlarına zarar verebilir. Özellikle karbon monoksit, kandaki oksijen taşınımını engelleyerek bilinç kaybına, kalp yetmezliğine ve ölümcül zehirlenmelere neden olabilir. Hidrojen siyanür ise plastik ve sentetik malzemelerin yanmasıyla ortaya çıkar ve hücresel seviyede oksijen kullanımını bloke ederek ani toksik etkilere yol açabilir. Bu durum, çalışanların kısa sürede hayati tehlike altına girmesine neden olur (Kök, 2020).

Dumanın içeriğindeki kimyasallar sadece akut etkiler değil, aynı zamanda uzun vadeli sağlık sorunlarına da yol açabilir. Yangın sırasında yüksek seviyede duman soluyan çalışanlar, kısa vadede boğulma hissi, solunum güçlüğü, öksürük, gözlerde yanma ve cilt tahrişi gibi belirtiler

yaşayabilir. Ancak asıl tehlike, bu kimyasallara uzun süreli maruziyetten kaynaklanır. Dumanın içeriğindeki toksik partiküller, akciğer dokusuna yerleşerek kronik bronşit, astım ve kronik obstrüktif akciğer hastalığı (KOAH) gibi hastalıkların gelişmesine neden olabilir. Ayrıca, bazı yanıcı malzemelerden açığa çıkan kanserojen maddeler, akciğer kanseri, mesotelyoma veya diğer kanser türlerinin riskini artırabilir. Özellikle asbest içerikli malzemeler yanarken açığa çıkan lifler, yıllar sonra ortaya çıkan ciddi sağlık sorunlarına neden olabilir. Formaldehit ve benzen gibi kimyasallar ise hem akut hem de kronik zehirlenmelere yol açabilir, bu da çalışanların genel sağlığını ciddi şekilde tehdit eder (Akçakale, 2018).

Yangınla mücadele eden çalışanların bu tehlikelere karşı korunması için uygun önlemler alınması hayati önem taşır. İlk olarak, çalışanların NIOSH veya EN standartlarına uygun solunum koruyucuları ve gaz maskeleri ile donatılması gereklidir. Bu maskeler, hem karbon monoksit ve hidrojen siyanür gibi gazların hem de partikül maddelerin solunum yollarına zarar vermesini önler. Bunun yanı sıra, yangın alanında çalışanların maruziyet süreleri sınırlandırılmalı ve sık sık temiz hava ortamına erişim sağlanmalıdır. Yangın sırasında etkili bir duman tahliye sistemi kurulması, çalışanların toksik maddelere maruziyetini azaltmada önemli bir rol oynar. Tarihi binalarda bu tür sistemlerin uygulanması zorluklar yaratabilir, ancak modern teknolojiler kullanılarak tahliye kanalları ve havalandırma ekipmanları binanın dokusuna zarar vermeden entegre edilebilir (Şimşek & Akıncıtürk, 2016).

Eğitim ve farkındalık çalışmaları da bu tehlikelerin önlenmesinde kritik bir rol oynar. Çalışanlara düzenli olarak yangın güvenliği eğitimi verilmesi, dumanın tehlikeleri hakkında bilgi sağlanması ve uygun ekipmanların kullanımı konusunda bilinç oluşturulması gereklidir. Ayrıca, yangın sonrasında çalışanların düzenli sağlık kontrollerinden geçirilmesi, maruziyetin uzun vadeli etkilerinin erken teşhis edilmesine olanak tanır. Çalışma ortamında kimyasal ölçümler ve gaz tespit cihazlarının kullanımı da anlık tehlikelerin tespit edilmesi açısından önemlidir. Son olarak, tarihi binalarda yangın riskini en aza indirmek için proaktif bir yaklaşım benimsenmeli, yanıcı malzemelerin depolanması ve kullanımı kontrol altına alınmalı, yangına dayanıklı malzemelerle restorasyon yapılmalıdır. Bu önlemler, hem çalışanların sağlığını koruyacak hem de tarihi yapının güvenliğini sağlayarak kültürel mirasın korunmasına katkıda bulunacaktır (Hakan & BİÇER & TAVACIOĞLU, 2022).

3.2. Yangınla İlgili Yaralanmalar Ve Ölümler

Tarihi binalarda yangınla mücadele eden çalışanların yaralanma ve ölüm riskleri, bu yapılarının özgün mimarisi, malzeme yapısı ve modern güvenlik sistemlerinden yoksun oluşu nedeniyle oldukça yüksektir. Tarihi binaların büyük bir kısmı ahşap, taş ve yanıcı malzemelerle inşa edildiğinden, yangınlar genellikle hızlı bir şekilde yayılır ve kontrol altına alınması zorlaşır. Bu durum, yangına müdahale eden itfaiyeciler ve restorasyon çalışanları için tehlikeli senaryolar yaratır. Örneğin, 2019'da Paris Notre Dame Katedrali'nde çıkan yangında, yoğun duman ve çatı çökmeleri nedeniyle yangına müdahale eden ekipler büyük risklerle karşı karşıya kalmıştır (KOCABAŞ vd., 2024). Bu gibi örnekler, tarihi binalarda yangınla mücadele ederken çalışanların karşılaştığı fiziksel tehlikelerin ne kadar ciddi olabileceğini göstermektedir.

Bu tür binalarda çalışanların karşı karşıya kaldığı yaralanma riskleri arasında duman zehirlenmesi, yanıklar, düşmeler ve enkaz altında kalma gibi durumlar öne çıkar. Tarihi binaların dar koridorları, karmaşık yapısı ve genellikle yetersiz tahliye yolları, yangın sırasında hem müdahaleyi hem de çalışanların tahliyesini zorlaştırır. Çatılar, tavanlar ve ahşap döşemeler yangın sırasında çökme riski taşıdığından, yangına müdahale eden ekiplerin bu bölgelerde çalışması son derece tehlikelidir. Ayrıca, tarihi binalarda genellikle elektrik tesisatları eski olduğundan, yangın sırasında elektrik çarpması da bir diğer önemli yaralanma

sebebi olabilir. Özellikle restorasyon veya bakım çalışmaları sırasında kullanılan yanıcı kimyasalların tutuşması, yangını daha tehlikeli hale getirebilir. Bu durum, çalışanların korunmasında uygun kişisel koruyucu donanımların önemini artırmaktadır, ancak bu tür ekipmanların kullanımı bazen hareket kabiliyetini kısıtlayarak çalışanların güvenliğini daha da karmaşık hale getirebilir.

Yangın sırasında ölüm riskleri ise genellikle yetersiz güvenlik önlemlerine, hızlı yayılma dinamiklerine ve yapısal çökmelere bağlı olarak artar. Tarihi yapılarda yangına müdahale eden çalışanların eğitim eksikliği, uygun ekipman eksikliği ve yangın planlarının yetersizliği gibi faktörler, bu trajik sonuçların başlıca nedenleri arasındadır. Bu tür olayların önüne geçebilmek için, tarihi binalarda yangın risk analizi yapılmalı, acil durum planları güncellenmeli ve çalışanların yangınla mücadele eğitimi düzenli olarak verilmelidir. Ayrıca, modern yangın güvenlik sistemlerinin tarihi dokuyu bozmadan entegre edilmesi, hem çalışanların hem de yapıların korunması açısından hayati bir öneme sahiptir (Uzer & Gülersoy, 2011).

3.3. Psikolojik Etki

Tarihi binalarda çalışanlar, görevlerinin hassasiyeti ve taşıdığı sorumluluklar nedeniyle ruhsal sağlık açısından ciddi zorluklarla karşılaşabilirler. Bu tür yapılarda gerçekleştirilen restorasyon, bakım veya koruma çalışmalarında tarihî ve kültürel mirası koruma sorumluluğu çalışanlar üzerinde yoğun bir baskı yaratır. Yaptıkları işin hem toplumsal hem de kültürel açıdan büyük bir öneme sahip olduğunu bilmek, hata yapma korkusunu artırabilir ve işlerine daha fazla odaklanmalarını gerektirebilir. Bu durum, çalışanların sürekli bir stres altında kalmasına ve işlerine olan motivasyonlarını zamanla yitirmelerine yol açabilir. Özellikle, proje sürelerinin uzun olması ve detaylara büyük bir özen gösterilmesi gereken işler, duygusal ve zihinsel yorgunluğu tetikleyebilir (Kavi&Karakale, 2018).

Fiziksel çalışma ortamının zorlukları da ruhsal sorunların ortaya çıkmasında önemli bir etkidir. Tarihi binalar genellikle modern çalışma koşullarına uygun değildir ve bu durum çalışanların iş yükünü artırabilir. Örneğin, yetersiz havalandırma, ergonomik olmayan alanlar ve güvenlik riskleri hem fiziksel hem de psikolojik stresi artırabilir. Ayrıca, bu ortamlarda karşılaşılan beklenmedik durumlar, örneğin yapısal tehlikeler veya tarihî eserlerin zarar görme riski, çalışanların kaygı düzeylerini yükseltebilir. Sürekli olarak dikkatli ve titiz bir şekilde çalışmayı gerektiren bu koşullar, çalışanların tükenmişlik sendromu, anksiyete ve depresyon gibi ruhsal sağlık sorunlarıyla karşılaşmasına neden olabilir (Keskin, 2024)..

Bu nedenle, tarihi binalarda çalışanların ruhsal sağlığını korumak için kapsamlı önlemler alınması gerekmektedir. İş yükünün adil bir şekilde dağıtılması ve proje takvimlerinin gerçekçi bir şekilde düzenlenmesi, çalışanların üzerindeki baskıyı hafifletebilir. Ayrıca, düzenli psikolojik destek hizmetleri, stres yönetimi eğitimleri ve ekip içi iletişimin güçlendirilmesi, bu tür sorunların önüne geçmede önemli bir rol oynar. Çalışma ortamlarının fiziksel koşullarının iyileştirilmesi, güvenliğin artırılması ve ergonomik düzenlemelerin yapılması da çalışanların hem fiziksel hem de ruhsal sağlıklarını olumlu yönde etkileyebilir. Bu tür destek mekanizmalarının oluşturulması, hem çalışanların verimliliğini artıracak hem de kültürel mirasın korunmasına yönelik çalışmaların daha sürdürülebilir bir şekilde yürütülmesini sağlayacaktır.

3.4.KKD Ve Güvenlik ekipmanları

Tarihi binalarda çalışanların kişisel koruyucu donanım (KKD) kullanımı, iş güvenliği açısından kritik öneme sahiptir ancak bu alanların özel koşulları nedeniyle ciddi zorluklar barındırır. Tarihi yapıların korunması ve restorasyonu sırasında çalışanlar genellikle toz, kimyasal maddeler, çökme riski, yetersiz aydınlatma ve düşme gibi tehlikelerle karşı karşıya kalır. Bu risklere karşı koruma sağlayan KKD'lerin, çalışanların güvenliğini sağlaması kadar,

tarihi dokuya zarar vermeyecek şekilde tasarlanmış olması da gereklidir. Örneğin, dar alanlarda veya kırılabilir yüzeylerde ağır iş botları ya da sert tabanlı ekipmanlar, yapıya zarar verebilir ve işin sürdürülebilirliğini riske atabilir. Aynı şekilde, eldiven gibi hassas malzemelerle çalışmayı zorlaştıran donanımlar, çalışanların bu ekipmanları kullanmamayı tercih etmesine neden olabilir. Bu durum, hem çalışanların güvenliğini hem de yapıların korunmasını tehlikeye sokar.

Tarihi binalarda KKD kullanımının bir diğer önemli zorluğu, bu binaların fiziksel özellikleri ve çevresel koşullarıdır. Genellikle modern yapılar için tasarlanmış olan standart KKD'ler, tarihi binaların dar koridorları, yüksek tavanları veya çökmeye müsait bölgelerinde işlevselliğini yitirebilir. Örneğin, dar ve sıkışık alanlarda hareket etmeyi zorlaştıran hacimli koruyucu ekipmanlar, çalışanların manevra kabiliyetini sınırlayarak iş kazası riskini artırabilir. Ayrıca, bu binalarda sıklıkla karşılaşılan kötü havalandırma, uzun süre maske veya solunum cihazı kullanmayı zorlaştırır ve çalışanların performansını olumsuz etkiler. Tarihi binaların dış çevresindeki koşullar da ek zorluklar yaratabilir; örneğin, yüksek yerlerde çalışanların düşmelere karşı güvenlik kemeri kullanması gereklidir, ancak bu kemerlerin tarihi yapılara sabitlenmesi sırasında yüzeye zarar verme riski vardır. Bu gibi durumlar, hem çalışanların güvenliği hem de yapının bütünlüğü açısından ciddi bir denge sorunu yaratır.

Bu zorlukların aşılması için, tarihi binalarda çalışanlara uygun, özel olarak tasarlanmış KKD'ler geliştirilmelidir. Hafif, esnek, ergonomik ve yapının dokusuna zarar vermeyen malzemelerden üretilmiş ekipmanlar, hem çalışanların konforunu artıracak hem de güvenli bir çalışma ortamı sağlayacaktır. Örneğin, toz ve kimyasal maddelere karşı özel olarak geliştirilen solunum maskeleri, uzun süreli kullanımlarda bile çalışanları rahatsız etmeden koruma sağlayabilir. Ayrıca, tarihi yapının özelliklerini göz önünde bulunduran, yapıya sabitlenmeden güvenlik sunan geçici bağlantı sistemleri gibi yenilikçi çözümler, düşme riskini en aza indirebilir. Bunun yanı sıra, çalışanların düzenli olarak eğitilmesi ve KKD'lerin doğru şekilde kullanımı konusunda bilgilendirilmesi, iş güvenliğini artırmanın yanı sıra tarihi mirasın korunmasını da destekleyecektir. Modern teknoloji ve mühendislik uygulamalarıyla desteklenen bu yaklaşımlar, tarihi yapıların korunmasını ve çalışanların sağlığını eş zamanlı olarak güvence altına alabilir.

4. İŞ SAĞLIĞI VE GÜVENLİĞİNİ İYİLEŞTİRMEYE YÖNELİK ÖNERİLER

Tarihi binalarda çalışan eğitimlerinin geliştirilmesi, kültürel mirasın korunmasında kritik bir adımdır. Özenle hazırlanmış eğitim programları, teknoloji ve simülasyonlarla desteklendiğinde yangın müdahalesinin daha etkili hale gelmesini sağlar. Ayrıca, sürekli eğitim ve farkındalık çalışmalarıyla toplumun bu konuda bilinçlendirilmesi, tarihi binaların daha iyi korunmasına olanak tanır. Böylece, geçmişin mirası olan bu yapıların gelecek nesillere aktarılması mümkün olur. Hem yangın riski hem de kültürel kayıplar azaltılırken, toplumun ortak bir değer etrafında birleşmesi sağlanır. Bu nedenle, tarihi binalarda yangın eğitimi, yalnızca bir güvenlik meselesi değil, aynı zamanda bir kültür ve miras koruma projesi olarak ele alınmalıdır.

Tarihi binalarda yangın güvenlik sistemlerinin etkinliği, yalnızca kurulumu değil, aynı zamanda düzenli bakımı ve kullanımına yönelik eğitimlerle de sağlanabilir. Güvenlik ekipmanlarının periyodik olarak kontrol edilmesi, olası arızaların önüne geçer ve sistemlerin her zaman çalışır durumda olmasını sağlar. Bunun yanı sıra, bina çalışanlarının ve yangın müdahale ekiplerinin sistemlerin işleyişi hakkında bilgi sahibi olması gerekir. Eğitimler, yangın anında sistemlerin nasıl kullanılacağını öğretmekle kalmaz, aynı zamanda yangın öncesi alınması gereken önlemleri de kapsar. Bu yaklaşımla, tarihi binalarda yangın güvenliği sürdürülebilir bir hale getirilebilir ve değerli kültürel miras daha etkili bir şekilde korunabilir.

Tarihi binalarda yangın güvenliğini sağlamak için koruma yetkilileri ile sürekli iletişim halinde olmak gereklidir. Binanın yapısında, kullanımında veya çevresel koşullarında meydana gelen değişiklikler, yangın güvenlik planlarının da güncellenmesini gerektirir. Koruma yetkilileriyle düzenli toplantılar yapmak, yeni risk faktörlerini belirlemeye ve önleyici tedbirler geliştirmeye olanak tanır. Ayrıca, uluslararası standartlar ve en iyi uygulamalar konusunda bilgi paylaşımı, tarihi binaların korunmasında daha yenilikçi ve etkili yaklaşımların benimsenmesine yardımcı olabilir. Bu sürekli işbirliği, yalnızca yangın riskini azaltmakla kalmaz, aynı zamanda kültürel mirasın korunması için sürdürülebilir bir strateji oluşturur.

5. SONUÇ

Tarihi binaların yangından korunması, yalnızca yerel veya ulusal bir mesele olarak görülmemelidir. Bu yapıların, dünya kültürel mirasının bir parçası olduğu gerçeği göz önünde bulundurularak, uluslararası standartlara uygun bir yaklaşım benimsenmelidir. Koruma yetkilileri, yerel yönetimler, yangın güvenliği uzmanları ve toplumun diğer paydaşlarının ortak çalışması, bu süreci daha etkin ve sürdürülebilir hale getirebilir. Bu işbirliği, sadece yangın riskini minimize etmekle kalmayıp, aynı zamanda bu yapıların estetik, tarihi ve manevi değerlerini gelecek nesillere aktarmanın da temelini oluşturur. Sonuç olarak, tarihi binaların yangına karşı korunması, teknik önlemlerle birlikte kültürel değerlerin sürdürülebilirliğini hedefleyen kapsamlı bir yaklaşım gerektirir. Bu hedefe ulaşmak, ortak bir sorumluluk ve kararlılık gerektirir; çünkü kültürel miras, geçmişin geleceğe bırakılmış en değerli hediyesidir.

WATER MANAGEMENT IN AGRICULTURE AND SOLUTIONS FOR DIMINISHING WATER RESOURCES

Research Assistant Dr. Gözde Hafize YILDIRIM

Recep Tayyip Erdoğan University, Faculty of Agriculture, Department of Field Crops,
Rize/Turkey
0000-0002-0557-6442

ABSTRACT

Water management in agriculture is crucial to ensure the efficient and sustainable use of water resources. Diminishing water resources, driven by factors such as climate change, population growth, and increasing agricultural water demand, exert significant pressure on agricultural production. An effective water management strategy aims to deliver water to plants in the correct amounts, at the right time, and with minimal loss. Modern irrigation methods like drip and sprinkler irrigation improve water-use efficiency and prevent wastage. Additionally, practices such as wastewater reuse, rainwater harvesting systems, and sustainable management of groundwater reserves contribute to the conservation of water resources in agriculture. Raising awareness among farmers about the value of water and promoting water-saving technologies are also essential. Water management in agriculture supports resource sustainability by maintaining productivity and expanding eco-friendly practices. This review aims to examine the importance of water management in agriculture and explore solutions for diminishing water resources, contributing to the efficient use of water resources.

Keywords: Drip Irrigation, Efficiency, Sustainability, Water Management, Conservation

INTRODUCTION

The rapidly growing global population, the effects of climate change, and limited natural resources have made the depletion of water resources one of the most critical issues facing the world. The sustainable management of water resources is of vital importance not only for agricultural production but also for maintaining ecosystem health, supporting economic development, and ensuring sustainable societal life. Drought, floods, and other extreme weather events caused by climate change are making water resources and water-dependent ecosystems increasingly fragile. Depleting water resources adversely affect not only agricultural production but also key aspects of life, such as biodiversity, food security, and energy production. Therefore, solutions such as rainwater harvesting, gray water recycling, modern irrigation techniques, and integrated water management play a crucial role in preserving and managing water resources. This review aims to address the causes of water resource depletion and explore effective solutions to tackle this problem.

MAIN CAUSES AND IMPACTS OF DEPLETING WATER RESOURCES

The rapidly growing global population, climate change, and limited natural resources have made water management a vital issue for agricultural production. The sustainable management of water resources is highly valuable for food security, ecosystem balance, and economic development. Biberoğlu et al. (2011) stated that climate change disrupts ecological balances by increasing the frequency of droughts, floods, and other extreme weather events, resulting in socioeconomic and political consequences.

This change increases the demand for water in agricultural production while causing water resources to become irregular and insufficient. Hekimoğlu and Altındağ (2008) noted that the increase in greenhouse gases accelerates global warming, leading to serious issues such as the depletion of water resources and the evaporation of freshwater. Turan (2018) emphasized the

difficulty in predicting the effects of drought and stated that human activities exacerbate the pressure on water resources.

The Integrated Water Management Approach aims to effectively manage water in various sectors such as agriculture, industry, drinking water supply, and environmental protection. The Rio Summit (1992) highlighted the importance of integrated resource management with natural systems and stated that countries should develop water management strategies to achieve sustainable development. This approach requires the use of scientific data in planning water resources and coordination among stakeholders.

Agricultural water management aims to increase agricultural productivity through the efficient and sustainable use of water. Methods such as rainwater harvesting and gray water reuse are becoming increasingly important, especially in regions experiencing water scarcity. According to the Union of Turkish Municipalities (2016), the recycling and treatment of water are indispensable for rational water management. Storing rainwater can save water and reduce the risk of flooding (6). Domestic gray water, which constitutes 50–80% of household water from laundry, showers, and taps, can be treated through a simple process and reused (Asan, 2013). These methods can reduce tap water consumption by up to 25% and provide a water source for agricultural irrigation (Aybuğa, 2018).

Climate change and the depletion of water resources not only negatively impact agricultural production but also disrupt ecosystem balance. The impacts on ecosystems include loss of biodiversity, risks to food security, and a reduction in agricultural crop diversity. Bayraç and Doğan (2016) noted that global warming, driven by energy production, land-use changes, and fossil fuel consumption, exerts significant pressure on water resources. Şanlı and Özekicioğlu (2007) stated that global warming leads to temperature increases, glacier melting, and evaporation of freshwater resources, causing irreversible damage to ecosystems. Tıraş (2012) emphasized that rapidly increasing human needs intensify the pressure on natural resources, leading to environmental degradation.

Solutions to agricultural water management challenges include integrated water management, the use of innovative technologies, and the widespread adoption of water-saving strategies. Additionally, recycling domestic water, promoting rainwater harvesting systems, and implementing sustainable irrigation techniques can provide effective solutions to water scarcity. (5) suggests that efficient water use and the prevention of losses are achievable through individual and societal awareness. In the future, agricultural water management will become even more critical with the growing population and changing climate conditions. The sustainable use of freshwater resources is vital for the continuity of agricultural production and the preservation of ecosystems.

EFFECTIVE SOLUTIONS FOR DEPLETING WATER RESOURCES IN AGRICULTURE

The depletion of water resources has become one of the most serious environmental and economic issues today due to the effects of global warming, drought, and human activities. The decline in water resources directly impacts agricultural production, ecosystem balance, and human life, leading to severe consequences.

Wilhite and Glantz (1985) categorized drought into three main types—meteorological, agricultural, and hydrological—and highlighted the different impacts of each. Meteorological drought refers to a lack of precipitation, agricultural drought to water deficiency in plants, and hydrological drought to the reduction of surface and groundwater resources. These categories underline the necessity of adopting different strategies for water management. Drought is often described as a "hidden disaster" that emerges slowly and becomes more apparent over time (Wilhite, 1993). Therefore, early detection of drought events and mitigation of their effects are critically important.

One of the most common methods used in drought analysis is the Standardized Precipitation Index (SPI), which effectively evaluates the frequency and severity of drought events using precipitation records (McKee et al., 1993). The SPI can be used to identify differences between meteorological, agricultural, and hydrological drought.

Das et al. (2020) conducted long-term drought analyses using the SPI in the Luni River Basin in Rajasthan, India, and found that severe drought conditions were concentrated in the region. These findings indicate that climate change may increase the frequency of drought events. Elkollaly et al. (2018) used the SPI to identify 1984 as the most severe drought year in the Eastern Nile Basin. These studies demonstrate the importance of the SPI in monitoring and managing drought trends in different regions.

The sustainable management of water resources requires the adoption of integrated water management approaches. These approaches can be implemented through a planning process prioritizing watershed management and stakeholder participation. Basin-based water management offers an effective strategy for preserving water quantity and quality.

- An effective solution to depleting water resources is the recovery of rainwater and gray water. Research shows that rainwater storage systems can reduce tap water consumption by up to 50%. Similarly, reusing domestic gray water plays a significant role in reducing demand for municipal water supplies.
- Monitoring drought events and planning strategic responses are also critical in water management. For example, studies in Morocco's Oum Er-Rbia Basin have identified drought trends, enabling strategic steps to manage water resources (Zhim et al., 2019).
- Modernizing irrigation techniques is essential for improving water efficiency in agricultural irrigation. Drip irrigation and precision farming techniques are effective methods for conserving water. Research indicates that modern irrigation practices contribute significantly to maintaining groundwater levels.
- The reuse of water through treatment technologies presents an important opportunity for conserving water resources. This method facilitates sustainable management by enabling water recycling.

The depletion of water resources poses a significant threat to agricultural production and ecosystem balance. Water recovery, modern irrigation techniques, and integrated water management approaches can contribute to addressing this issue.

CONCLUSION

The primary causes of water resource depletion include climate change, population growth, and inadequate water management, making it essential to adopt innovative methods to combat this problem. In the future, early warning systems for detecting drought events, policies promoting efficient water use, and public awareness campaigns will play a critical role in ensuring the sustainability of water resources. The effective management of water resources will not only help address current challenges but also serve as an indispensable step for ensuring the continuity of agricultural production and the preservation of ecosystem balance. Strategic actions taken in this direction will reduce the pressure on water resources, paving the way for a more sustainable environment.

IMPACT OF POTASSIUM FERTILIZERS ON PLANT RESILIENCE AND CROP QUALITY

Research Assistant Dr. Gözde Hafize YILDIRIM

Recep Tayyip Erdoğan University, Faculty of Agriculture, Department of Field Crops,
Rize/Turkey

0000-0002-0557-6442

ABSTRACT

Potassium fertilizers are essential nutrients that play a significant role in the growth and development processes of plants. Potassium regulates water balance in plants, enhances resistance to diseases, and positively contributes to crop quality. Vital functions in plants such as photosynthesis, protein synthesis, and carbohydrate transport are carried out more efficiently with the presence of potassium. Plants suffering from potassium deficiency may exhibit adverse effects such as leaf scorching, stunted growth, and reduced yield. These fertilizers strengthen plant cell walls, thereby increasing resilience to environmental stress conditions such as temperature fluctuations, drought, and diseases. Additionally, potassium improves water use efficiency, which provides critical support for plants growing under stress factors like drought. In this regard, potassium fertilizers are of great importance for agricultural sustainability and quality improvement. The regular and balanced use of potassium promotes the growth of high-quality and resilient plants, making agricultural production more sustainable. The purpose of this review is to provide information about potassium fertilizers and to examine their effects on plant resilience and crop quality, highlighting the advantages they offer.

Keywords: Fertilizer, Potassium, Resilience, Crop Quality, Yield

INTRODUCTION

Potassium (K), as a vital macronutrient for plants, plays a critical role in agricultural production. Potassium regulates the physiological processes of plants and enhances their resistance to stress conditions, offering a significant advantage, especially in coping with environmental challenges such as drought. By controlling stomatal movements to reduce water loss and playing an active role in photosynthesis, potassium improves water use efficiency and optimizes carbohydrate metabolism in plants.

In countries like Turkey, with vast agricultural lands and a high risk of drought, the efficient use of potassium fertilizers has become a strategic necessity for agricultural productivity and sustainability. In this context, potassium fertilizers are a vital tool for enhancing plants' resilience to environmental challenges and improving productivity. The regulatory role of potassium in plant metabolism, its contribution to crop quality, and its ability to enhance tolerance to water stress make potassium fertilizers indispensable for agricultural production. This review aims to address the importance of potassium fertilizers for plants, their effects on agricultural productivity, and their role in sustainable farming practices.

POTASSIUM FERTILIZERS

Potassium (K) is an essential macronutrient of vital importance for plants. Its deficiency can result in negative effects such as slow growth, low yields, and smaller seeds (Gupta et al., 2015). Çolpan et al. (2013) emphasized that potassium regulates the physiological processes of plants and contributes to their survival under stress conditions. Additionally, Woldmerian et al. (2018)

stated that potassium supports nutrient translocation and water uptake due to its role in photosynthesis. These characteristics demonstrate that potassium is a key component in strengthening plants' resistance mechanisms against drought stress.

Potassium plays a critical role in the opening and closing of stomata and in regulating the photosynthesis process (Shabala et al., 2002). Furthermore, it is known that potassium helps control stomatal movement, reducing water loss in plants, which provides a vital advantage under drought conditions.

One of the biggest challenges in the agricultural sector today is the negative impact of drought stress on plant productivity. As drought becomes more prevalent due to the effects of climate change, effective fertilization strategies have become increasingly critical to prevent yield losses and optimize plant growth. Potassium fertilizers stand out among macronutrients as playing a significant role in enabling plants to resist drought stress. Plants respond to drought stress initially by closing their stomata to reduce water loss (Xiong & Zhu, 2002). However, this adaptation also limits carbon dioxide (CO₂) uptake and nutrient absorption, negatively affecting plant growth. Drought is becoming more pronounced due to climate change and poses a threat to agricultural production (Backhaus et al., 2014). In Turkey, drought is particularly intense during summer in the Mediterranean and Southeastern Anatolia regions, affecting approximately 51 million hectares of arid and semi-arid land (Turan, 2018). In this context, potassium fertilizers have the potential to mitigate these adverse conditions by increasing plants' water use efficiency.

Potassium fertilizers support carbohydrate, fat, and protein synthesis in plant metabolism, enhancing both yield and quality (Çakmak, 2005). Potassium has been shown to have a significant impact on grain weight and crop yields in cereals (Brennan & Bolland, 2009; Kunzová & Hejman, 2010; Wani et al., 2014). In crops like tomatoes, which have high potassium requirements, the importance of these fertilizers is even more evident (Chapagain & Wiesman, 2004). The use of potassium fertilizers in tomato plants increases both yield and fruit quality. Prajapati and Modi (2012) stated that potassium improves crop quality and enhances the resistance of fruits to diseases. This is particularly important for commercial products that require a long shelf life. Lester (2005) highlighted potassium's multifaceted effects on taste, nutritional health, and plant development, emphasizing its indispensability for agricultural production.

Due to its vast agricultural lands located in arid and semi-arid climate regions, Turkey is a country where the effective use of potassium fertilizers is essential. To enhance drought resistance, the efficient application of potassium fertilizers can contribute to agricultural sustainability, particularly in regions with limited water resources.

THE CRITICAL IMPORTANCE OF POTASSIUM FERTILIZERS FOR PLANTS

Enhancing plant nutrition and productivity in agriculture is of great importance for both economic gains and sustainable food production. In this process, potassium fertilizers are among the essential elements that provide crucial effects on plant development and productivity.

Kanai et al. (2007) reported that potassium improves the size, color, quality, and shelf life of fruits, thereby enhancing the marketability of agricultural products. Boyer and Stout (1959) highlighted the significant role of potassium in nitrogen and carbohydrate metabolism and its effect on enzyme activation. Potassium deficiency disrupts these processes, severely reducing plant growth and yield. Hawkesford et al. (2012) emphasized potassium's regulatory role in cell expansion, turgor pressure, and stomatal opening and closing. These characteristics make potassium an indispensable element for enhancing plant resilience to water stress (Saxena,

1985). Specifically, potassium-deficient plants experience reduced water uptake, which negatively affects root growth and nutrient absorption.

Applications of potassium fertilizers play a critical role in increasing agricultural productivity. Evans et al. (1971) reported that fertilizer applications on potassium-deficient soils significantly increased yields. Potassium is effective in activating over 60 enzymes, making it essential for plant growth and development. Mengel and Kirkby (1997) stated that potassium significantly influences the synthesis and transport of photosynthesis products, fruit set, and quality. Srivastava (1985) emphasized that applying potassium with NPK fertilizers accelerates nodulation and vegetative growth in plants. Studies on crops such as sesame (Kumar et al., 2018), cotton (Akay, 2018), and pomegranate (Pathania et al., 2018) have demonstrated the effectiveness of potassium fertilizers in enhancing growth, yield, and quality. Moreover, Bar-Tal et al. (1991) reported that potassium increases plant tolerance to salinity stress but noted that excessive doses under high salinity conditions could lead to yield reductions.

Potassium deficiency can result in growth retardation, reduced photosynthesis capacity, and metabolic disorders in plants (Murumkar & Chavan, 1992; Zhao et al., 2001). This deficiency negatively affects carbohydrate metabolism in plants, leading to yield losses (Boyer & Stout, 1959). For example, potassium deficiency in cotton reduces the transport of saccharides from leaves to fruits, adversely affecting boll growth and fiber quality (Gulick et al., 1989; Oosterhuis et al., 1990). Zhao et al. (2001) reported that potassium deficiency in cotton plants causes starch accumulation in chloroplasts, resulting in stunted plant growth. Singh et al. (1994) stated that balanced application of potassium with nitrogen and phosphorus is effective in increasing chickpea grain yield.

Turkey's vast agricultural lands require the efficient use of potassium fertilizers. Eyüpoğlu (1999) noted that a significant portion of the soils in Southeastern Anatolia is deficient in potassium. Studies conducted in agricultural regions such as Adana and Çukurova have demonstrated that potassium applications significantly improve fiber quality and crop yield (Görmüş & Kanat, 1998; İnan, 1994). The conscious use of potassium fertilizers is an effective strategy for enhancing plant resilience to environmental stress factors such as drought and salinity. Future research on the proper and balanced applications of potassium will be crucial for sustainable agriculture and food security.

CONCLUSION

Potassium fertilizers hold a vital place in the sustainability of agricultural production as a fundamental element for plant growth, development, and resilience to environmental stresses. To ensure their effective application, it is essential to raise awareness among farmers, develop fertilization strategies based on regional soil analyses, and promote agricultural practices that enhance resilience to drought stress. Future research on the efficient use of potassium fertilizers will be critical for sustainable agriculture and food security. The multifaceted contributions of potassium to agricultural productivity and environmental resilience underscore the need to place the conscious use of these fertilizers at the center of agricultural policies.

SEAWEED-BASED FERTILIZERS: BIOLOGICAL CONTENT AND AGRICULTURAL ADVANTAGES

Research Assistant Dr. Gözde Hafize YILDIRIM

Recep Tayyip Erdoğan University, Faculty of Agriculture, Department of Field Crops,
Rize/Turkey
0000-0002-0557-6442

ABSTRACT

Seaweed-based fertilizers provide an eco-friendly and biologically rich fertilizer option for agricultural production. Seaweeds are rich in minerals, vitamins, amino acids, and natural growth regulators. Due to these properties, seaweed fertilizers promote plant growth, enhance stress resistance, and improve crop quality. They support microbial life by increasing soil biodiversity and help mitigate the adverse effects of chemical fertilizers. Additionally, these fertilizers improve the soil's water retention capacity, enabling plants to withstand stress conditions such as drought, which is particularly advantageous in regions with limited water availability. The natural nitrogen, phosphorus, and potassium content of seaweed fertilizers provides essential nutrients for plants, reducing dependency on chemical fertilizers. Widely preferred in organic farming practices, seaweed-based fertilizers support sustainable agriculture and maintain soil health. Their regular use improves crop yield and quality, making agricultural production processes more environmentally friendly. The biological composition and eco-friendly nature of seaweed contribute significantly to enhancing sustainability in agriculture. The purpose of this review is to examine the biological composition and agricultural advantages of seaweed-based fertilizers, highlighting their environmental benefits.

Keywords: Growth Regulator, Organic Farming, Seaweed, Sustainability

INTRODUCTION

Seaweed-based fertilizers stand out as an eco-friendly and effective alternative aligned with modern agriculture's sustainability goals. With a history of thousands of years in agriculture, seaweeds hold a significant place in both traditional methods and modern applications. In countries like China, Japan, and Korea, seaweeds have been used for nutritional and medicinal purposes, while in Europe, they have been utilized since the 12th century to enhance soil fertility in agricultural lands. These natural resources contain plant growth-promoting components such as macro- and microelements and growth regulators.

Today, seaweed-based fertilizers offer numerous benefits, including increased crop yield and quality and enhanced resistance to environmental stress conditions. These fertilizers, which are becoming increasingly important in agricultural production, have emerged as a crucial tool for sustainable agriculture. The purpose of this review is to explain the general characteristics of seaweed-based fertilizers and their agricultural applications based on scientific principles.

SEAWEED FERTILIZER

Seaweed-based fertilizers have emerged as a fertilization method that meets the needs of modern agriculture while drawing attention to their historical roots. With a history dating back to 2700 BCE, seaweeds were first widely used in agriculture in countries like China, Japan, and Korea after being valued as a source of food and medicine (Abetz, 1980). Today, the importance of seaweed-based fertilizers in agricultural production is growing, with their positive effects on crop yield, quality, and plant resilience being scientifically validated.

The use of seaweeds in agriculture has a long history. From the 12th century onward, seaweeds began to be used as fertilizer on agricultural lands in European countries such as France, Ireland, and England (Abetz, 1980). In these regions, seaweeds were utilized to improve the fertility of poor soils and were also used in industry for producing various derivative products (Blunden, 1992).

Seaweeds are biologically diverse and are classified into four main types: Rhodophyta (red algae), Phaeophyta (brown algae), Chlorophyta (green algae), and Cyanophyta (blue-green algae). The compositions of these types vary depending on their marine environments and include macroelements like nitrogen, calcium, and magnesium, as well as microelements such as iron, zinc, and copper (Güner & Aysel, 1996; Hong et al., 1995). Additionally, seaweeds contain growth regulators and betaines that enhance plant resilience under stress conditions.

In modern agriculture, seaweed-based fertilizers are commonly applied through foliar spraying, which is highly effective in improving crop yield and quality (Blunden, 1991). In France, brown seaweeds are particularly used for strawberry production, yielding positive results in greenhouse applications (Whapham et al., 1994). Similarly, large thallus algae are commonly used in the United States, while brown algae are widely employed in Europe for fertilization purposes.

Seaweed-based fertilizers play a crucial role in promoting plant growth. For instance, seaweed extracts support root development in plants, enhance resilience to environmental stresses, and improve crop quality (Blunden et al., 1992). Studies have also shown that seaweeds increase root growth in tomato plants, reduce root-knot nematode damage, and promote rooting under laboratory conditions (Finnie & Staden, 1985).

Seaweed-based fertilizers are known to enhance the nutrient content of crops. For example, the use of seaweed extract in lettuce has been shown to increase calcium, magnesium, and potassium levels while also boosting yield (Grouch et al., 1990). Moreover, seaweed sprays have been reported to prevent spoilage and extend the storage life of crops such as oranges, apples, and tomatoes (Blunden, 1991).

Seaweed-based fertilizers also improve plant resistance to pests and diseases. These fertilizers effectively reduce damage caused by plant nematodes (Grouch & Staden, 1993) and strengthen plant immunity against diseases (Whapham et al., 1994).

With their rich nutrient content and positive effects on plant growth, seaweed-based fertilizers have become an indispensable part of modern agriculture. Their ability to enhance resilience to environmental stresses, increase yield, and contribute to sustainable farming underscores their significance. Future research on the agricultural applications of seaweeds and the utilization of extracts from different species is expected to further unlock their potential.

ADVANTAGES OF SEAWEED-BASED FERTILIZERS IN AGRICULTURAL PRODUCTION

Seaweed-based fertilizers offer an eco-friendly and effective alternative to traditional fertilization methods in agricultural production. These fertilizers provide numerous benefits, including promoting plant growth, improving soil quality, enhancing resistance to stress conditions, and boosting crop quality. The use of seaweed-based fertilizers is becoming increasingly widespread in both organic and conventional farming, making them a sustainable method aligned with modern agriculture's goals.

Seaweed-based fertilizers significantly support plant growth and yield. Şimşek (1995) reported that seaweed extracts promote vegetative growth in Clementine mandarins. The biologically active compounds in seaweed extracts increase photosynthesis in plants, resulting in higher yield and quality (Ali et al., 2021). Additionally, seaweed extracts enhance seed germination and accelerate root development (Demirkaya, 2010).

The soil-enhancing effects of seaweed-based fertilizers are also noteworthy. These fertilizers enrich the organic matter content of the soil, increasing its water retention capacity (Dede et al.,

2011). In England, they are preferred as soil conditioners in arid and nutrient-poor soils (Güner & Aysel, 1996). Moreover, seaweed-based fertilizers used in organic farming have been shown to increase yield and quality in Granny Smith apple varieties (Yaman & Özkan, 2009).

Abiotic stress conditions such as salinity and drought pose significant challenges in agricultural production. Yıldırım and Güvenç (2005) reported that seaweed extracts improve germination rates in leeks under saline conditions. Fertilizers derived from *A. nodosum* and *E. maxima* have been found to enhance resilience to stress conditions and improve crop performance (Al-Ghamdi et al., 2018), offering notable advantages for farmers dealing with challenging environmental conditions.

Seaweed fertilizers have also been shown to positively affect the quality of fruits and vegetables. For example, fertilizers derived from seaweeds have improved yield and quality in crops such as tomatoes, strawberries, and carrots (Crouch et al., 1990; Kasım et al., 2015). Specifically, they have been reported to increase flowering rates and provide resistance against fungal diseases in tomato plants (Al-Ghamdi et al., 2018).

Seaweed fertilizers help address mineral deficiencies by enhancing nutrient uptake in plants. For example, *A. nodosum* has been reported to increase potassium uptake in cotton and support mineral balance in maize (Fei et al., 2017; Ertani et al., 2018). These features improve both growth and crop productivity.

Seaweeds offer both environmental and economic benefits. McHugh (2003) noted that approximately 7.5–8 million tons of seaweed are harvested annually worldwide, with a significant portion used as fertilizer. These fertilizers cause less environmental harm than chemical fertilizers and promote sustainable agricultural production (Layek et al., 2018).

Seaweed-based fertilizers hold a prominent place in agricultural production due to their contributions to plant growth, crop quality, soil fertility, and environmental sustainability. Future studies on the application of seaweed-based fertilizers across different agricultural sectors may expand their usage and demonstrate their broader potential.

CONCLUSION

Seaweed-based fertilizers play a vital role in the future of agriculture by increasing productivity while being environmentally friendly. In addition to supporting plant growth, these fertilizers improve soil structure, enhance resistance to stress conditions, and boost crop quality. They also contribute to the protection of plants by increasing their resistance to pests and diseases. The widespread adoption of seaweed-based fertilizers accelerates the transition to sustainable agriculture while helping reduce environmental impacts.

APPLICABILITY OF PRECISION IRRIGATION TECHNOLOGIES UNDER DROUGHT CONDITIONS

Research Assistant Dr. Gözde Hafize YILDIRIM

Recep Tayyip Erdoğan University, Faculty of Agriculture, Department of Field Crops,
Rize/Turkey
0000-0002-0557-6442

ABSTRACT

Efficient use of water resources under drought conditions is of great importance for the sustainability of agricultural production. Precision irrigation technologies ensure that water is applied only as needed and at the right time, offering significant advantages, particularly in regions with limited water resources. Precision irrigation techniques such as drip irrigation, sprinkler irrigation, and sensor-based irrigation systems accurately determine the water needs of plants and prevent water waste. Compared to traditional irrigation methods, these techniques can save up to 50% of water. During drought periods, the use of these technologies helps maintain agricultural productivity while supporting soil health. Precision irrigation also aids in controlling soil salinity levels and enhances water use efficiency. Sensor-based systems, in particular, continuously monitor soil moisture levels, optimizing water access for plants. This not only ensures the sustainable management of water resources but also contributes to preserving both the quality and quantity of crops. The purpose of this review is to examine the applicability of precision irrigation technologies under drought conditions and to emphasize their importance in achieving sustainable water management in agriculture.

Keywords: Drought, Drip Irrigation, Precision Irrigation, Water Management

INTRODUCTION

On a global scale, pressures on water resources have become increasingly complex and challenging to manage due to the impacts of population growth, industrialization, agricultural activities, and climate change. The rising demand for water has made the sustainable management of existing resources more crucial than ever. The preservation of water resources worldwide is a strategic necessity not only for maintaining environmental balance but also for ensuring sustainable economic development and food security. This situation becomes even more critical when considering that a significant portion of water is used in agricultural activities, highlighting the essential role of the agricultural sector in water management. Traditional irrigation methods lead to significant losses in agricultural water use and limit the efficient utilization of water resources. Additionally, the adverse effects of climate change on the water cycle, such as increased occurrences of droughts and floods, necessitate addressing water management through innovative and sustainable solutions. Precision irrigation technologies increase water efficiency by ensuring that water is applied only in the necessary amounts and at the right time, thereby minimizing environmental impacts and supporting agricultural productivity. This review aims to explore the importance of precision irrigation technologies in water management and their contributions to sustainable agricultural production.

PRECISION IRRIGATION TECHNOLOGIES

Pressures on global water resources are becoming an increasingly critical issue due to rapid population growth, industrialization, climate change, and agricultural activities. The sustainable use of water worldwide is vital not only for environmental balance but also for economic development and food security. Replacing traditional irrigation methods with more efficient

precision irrigation technologies has become an inevitable necessity for both preserving water resources and ensuring the sustainability of agricultural production.

Research by the IPCC (2023) indicates that groundwater depletion rates, particularly in agricultural areas, are accelerating, making it essential to reevaluate agricultural irrigation practices in terms of sustainability. Furthermore, climate change is causing radical alterations to the water cycle, increasing the frequency of extreme weather events such as floods and droughts (SKD Turkey and Ankara University Water Management Institute, 2023). Water scarcity stems not only from physical water shortages but also from social, economic, and institutional factors (Leroy, 2019).

Ungureanu et al. (2020) predict that by 2025, a large portion of the world's population will be affected by water scarcity. This highlights the urgent need for innovative technologies in agricultural water management. Precision irrigation technologies aim to increase water use efficiency by applying water only to the required areas and in the necessary quantities. Taylor and Zilberman (2017) emphasize the need to expand modern methods such as drip irrigation to ensure sustainability in agricultural production. These technologies can improve crop yields and enhance farmers' incomes, especially in regions with limited water resources (Liu et al., 2023).

In water-sensitive regions like the Küçük Menderes Basin, the use of precision irrigation technologies is critically important. Considering that water-intensive crops such as silage maize, tomatoes, and seedless grapes are irrigated using groundwater in the basin, the sustainability of current methods is a topic of debate (Ödemiş Municipality, 2022). In this basin, the adoption rates of drip irrigation are reported to be low. Pilevneli et al. (2023) highlight the importance of understanding farmers' perceptions of water scarcity and the barriers to adopting technology to shape water management policies according to local needs.

Drip irrigation, an innovative method that delivers water directly to plant roots, enhances water use efficiency and provides cost savings for farmers (SKD Turkey and Ankara University Water Management Institute, 2023). However, this technology remains limited in adoption in many regions; particularly in the Global South, economic and technical barriers hinder its widespread use (Garb & Friedlander, 2014).

Precision irrigation technologies not only ensure water conservation but also offer economic and social benefits. Hertel and Liu (2016) suggest that water-saving agricultural practices can help strike a balance between economic growth and environmental protection. In agriculturally intensive regions such as the Küçük Menderes Basin, this balance is critical for both environmental sustainability and the economic well-being of farmers.

Precision irrigation technologies are indispensable tools for the sustainability of agricultural production. Given the increasing water scarcity and the effects of climate change, expanding the use of modern irrigation methods such as drip irrigation is of great importance. However, increasing awareness among farmers, establishing economic support mechanisms, and developing strategies tailored to local conditions are necessary for adopting these technologies. In the future, the broader application of precision irrigation technologies could contribute to harmonizing water management with agricultural sustainability.

THE ROLE OF PRECISION IRRIGATION IN SUSTAINABLE WATER MANAGEMENT

Agricultural activities exert the greatest pressure on global water resources. Worldwide, 69% of water is used in agriculture, while in Turkey, this rate rises to 87% (FAO, 2017). Increasing water demand, limited resources, and climate change necessitate innovative approaches to ensure sustainable water management in agriculture. Precision irrigation technologies offer critical solutions in this regard, with the potential to save water and enhance agricultural productivity.

Turkey, characterized by low annual rainfall and declining per capita water availability, is facing increasing water stress. The Kibele Project (2021) reports that as of 2020, annual per capita water availability in Turkey had decreased to 1,640 m³, placing the country in the category of water-stressed nations. This has made water management particularly strategic for the agricultural sector.

Inefficient use of water resources in agricultural activities leads to both environmental and economic problems. WWAP (2015) notes that agriculture accounts for 70% of global freshwater withdrawals and emphasizes the need for water efficiency practices in intensive agricultural regions.

Precision irrigation, a modern method of applying water only to the required areas and in necessary quantities, supports farmers in increasing crop yields, improving profitability, and reducing environmental impacts (Pedersen & Lind, 2017). Methods such as drip irrigation and pressurized irrigation significantly contribute to water savings in agricultural water use.

FAO (2017) highlights the modernization of irrigation systems as an effective solution for improving agricultural water management. It has been reported that in the United States, efficiency improvements have been achieved with pressurized irrigation systems, while in Central Asia, modern agriculture has been promoted through crop diversification and water loss reduction applications (WWAP, 2015).

Precision irrigation technologies are key tools for achieving sustainable water management goals. The United Nations underscores the importance of sustainable management of water resources in Goal 6 of the 2030 Sustainable Development Agenda. Precision irrigation contributes to preserving water resources for future generations by reducing water consumption (Godfray et al., 2010).

FAO (2014) emphasizes the water-energy-food nexus (WEF), drawing attention to the importance of integrated natural resource management. In this context, precision irrigation applications offer integrated solutions by increasing water efficiency and optimizing resource use in energy and agricultural production.

Turkey has significant potential for the widespread adoption of precision irrigation technologies in agricultural water management. However, Bobat (2019) notes that Turkey's available water resources amount to only 112 billion m³, with a large portion allocated for agriculture. Precision irrigation applications can enhance the efficient use of existing resources and improve agricultural sustainability in water-stressed regions.

Topçu et al. (2019) highlight that per capita water availability in some Turkish basins has fallen below 1,000 m³, putting these regions under severe water stress. This underscores the necessity of implementing innovative technologies in water management. Sustainable water management is a strategic approach that ensures the preservation and efficient use of water resources. Precision irrigation technologies optimize water consumption in agricultural activities, contributing to both environmental and economic sustainability. In countries like Turkey, which face water stress, the widespread adoption of these technologies is critical for preserving existing water resources and ensuring the sustainability of agricultural production. Supporting precision irrigation systems in the future should become a fundamental component of water management policies at both local and national levels. These technologies not only enhance agricultural productivity but also contribute to creating a resilient agricultural system capable of addressing the global water crisis.

CONCLUSION

Precision irrigation technologies make efficient and controlled use of water possible, providing significant contributions to the sustainability of agricultural production and environmental conservation. Increasing water stress and the impacts of climate change have made the widespread adoption of these technologies a strategic necessity in the agricultural sector.

However, to achieve this transition, it is crucial to enhance farmers' access to these technologies, implement economic incentives, and develop policies tailored to local needs.

In countries like Turkey, which are limited in water resources and dependent on agricultural production, the adoption of precision irrigation technologies can ensure the preservation of water resources and the long-term sustainability of agricultural activities. The proper application of these technologies will contribute to creating a more resilient agricultural system that can address the global water crisis on a larger scale.

**LEGAL REFLECTIONS ON THE EUROPEAN ARREST WARRANT IN THE
CONTEXT OF CROSS – BORDER AND TRANSNATIONAL COOPERATION**

SUMMARY

The significant increase in the level of crime after the Second World War and the proliferation of organized crime on the territory of several countries, facilitated by the development of rapid means of transport and the intensification of international tourism, have led to a reaction of solidarity on the part of the States to combat this phenomenon.

It is the European Arrest Warrant that has been at the forefront of international criminal law for more than 20 years in order to combat cross-border crime and to maintain ongoing extensive cooperation. The European Arrest Warrant improves judicial cooperation between Member States and ensures the free circulation of judicial decisions. In particular, it was introduced to simplify the extradition system for the benefit of the members of the European Union.

We note a less welcome fact that the Republic of Moldova is not yet one of these 27 EU Member States.

Key-words: the European Arrest Warrant, extraditions, judicial cooperation, criminal liability, european criminal law.

Introduction. In recent times there has been an increasing need for more intense and effective international cooperation in order to establish an exemplified extradition procedure and to reduce the phenomenon of cross-border crime.

So, the most significant moment in the process of developing legal cooperation between the Member States of the European Union was the adoption of Framework Decision No 584/13.06.2002 on the European Arrest Warrant.

The main effect has been that all the framework extradition procedures hitherto governed by classical procedures under international treaties have been abolished.

In this context, the European Arrest Warrant is the basis for the extradition procedure exemplified above, representing a judicial method of cross-border surrender for the purposes of criminal prosecution, either for the execution of a sentence or a custodial detention order.

The mechanism of the European Arrest Warrant is based on the principle of mutual recognition of judgments and is operational in all 27 EU Member States.

Extremely important is the fact that the European Arrest Warrant is dealt with and executed as a matter of urgency.

The rationale behind the procedure is the need to ensure that offenders cannot evade justice.

Other authors state that the European Arrest Warrant (EAW) is an instrument for bringing a requested person before the justice of the issuing State for the purpose of criminal proceedings.

Against this background, in the following, we will discuss the importance of the EAW in more detail in the light of international law.

Methods and materials applied. Theoretical, normative and empirical materials were mainly used in this research. Also, the research of this topic was made possible by applying several methods of scientific research, including the logical method, the method of comparative analysis and others.

Results and discussions. Firstly, the European Arrest Warrant has replaced the traditional extradition system with a simpler and faster mechanism for surrendering wanted persons for the purpose of conducting criminal proceedings or executing a custodial sentence or detention order. The warrant is a request made by a judicial authority in one country of the European Union to arrest a person in another member country and surrender him or her for the purpose of prosecution or execution of a custodial sentence or detention order issued in the first country. [1]

The EAW has been operational since January 1, 2004.

The mechanism is based on the principle of mutual recognition of judgments and is operational in all EU countries. [2]

It works through direct contacts between judicial authorities. Crucially, when executing a European Arrest Warrant, the authorities must respect the procedural rights of persons suspected or accused of committing a crime.

These rights include: the right to information, applicable in EU countries since June, 2014, the right to interpretation and translation, applicable since October, 2015, the right to be assisted by a lawyer, applicable since November, 2016, the right to be presumed innocent and to be present at the trial, the right to legal assistance, as well as special guarantees for children suspected and accused in criminal proceedings when they are juvenile offenders.

When executing a European arrest warrant, the judge shall decide on the arrest and surrender of the requested person after first having verified the conditions relating to the issuing of the warrant, the identification of the requested person, the existence of double criminality of the criminal acts alleged against him or her or whether there are circumstances constituting grounds for refusal.

To do otherwise would be to violate the principle of mutual recognition and mutual trust, which underpins the execution of the European Arrest Warrant by the court.

The European Arrest Warrant must contain the identity and nationality of the requested person, the name, address, telephone and fax numbers and e-mail address of the issuing judicial authority, an indication of the existence of an enforceable judgment, an arrest warrant or any other enforceable judicial decision having the same effect, the nature and legal classification of the offense, in particular in compliance with Article 2, a description of the circumstances of the commission of the offence, including the time, place and degree of involvement of the requested person in the offence, the sentence imposed, if it is a final judgment, or the range of sentences prescribed for the offence under the law of the issuing Member State, as far as possible, other consequences of the offence. [3]

The EAW must be translated into the official language or one of the official languages of the executing Member State and executed as a matter of urgency.

If the requested person consents to the surrender, the final decision on the execution of the EAW shall be taken within 10 days from the date of consent.

² Decision No 584/13.06.2002 creating a European Arrest Warrant and surrender procedures between Member States. OJL 190 of 18.7.2002// www.eurowarrant.net.

³ *Handbook on the issuance and execution of a MEA.* Communication from the European Commission of 28.09.2017. Brussels.

In all other cases, the decision on execution of the EAW is taken within 60 days from the date of arrest of the requested person.

For 32 categories of offenses there is no verification of the criminalization of the act as a crime in both countries. The only requirement is that it carries a maximum penalty of at least 3 years imprisonment in the issuing country.

An EAW may be issued for the purpose of conducting a prosecution for acts punishable under national law by a custodial sentence or a detention order for a maximum period of at least 12 months (Article 2 (1) of the EAW Decision). An EAW may be issued for the purpose of enforcing a custodial sentence or detention order of at least four months (Article 2 (1) of the EA EAW Decision). However, in situations where only a short period of the sentence remains to be served, the competent judicial authorities are invited to consider whether issuing an EAW would be a proportionate measure. Decisions are taken exclusively by judicial authorities, without political implications.

Procedure for issuing a European Arrest Warrant

In the issuing Member State

Before issuing an EAW, the competent judicial authority is advised to check whether, in the issuing Member State, there are other criminal proceedings initiated or other EAW issued against the requested person.

If there are other pending criminal proceedings or enforceable custodial sentences against the requested person in the issuing Member State, it is advisable to communicate and, if possible, coordinate the next steps with other national authorities before issuing an EAW.

It is important to ensure that the EAW covers all offenses for which the requested person will be prosecuted or has been convicted in the issuing Member State. This is particularly desirable because of the principle of specialty which could prevent prosecution or conviction for offences other than those for which the person has been surrendered by the executing Member State. ***"As a general rule, a person who has been surrendered may not be prosecuted, convicted or deprived of liberty for an offense other than the one for which he or she was surrendered and which was committed prior to his or her surrender."***

This is the principle of specialty laid down in Article 27 of the EAW Framework Decision.^[4]

After surrender, the consent of the requested person or of the executing Member State for the prosecution or execution of the sentence in relation to these offenses may be required, so practice has shown that the process of obtaining such consent can be slow and cumbersome.

If possible, all offenses should be included in one EAW, as this makes the procedure in the executing Member State faster and more efficient. If there is an EAW previously issued in respect of the same person, this warrant could, whenever possible, be replaced by a new EAW covering both the offenses prior to the original warrant and the new offenses.

In another Member State

If in another Member State or other Member States there are indications of other pending criminal proceedings or enforceable custodial sentences against the requested person, it is unavoidable to contact the authorities of that State (s) before issuing an EAW.

In such cases, the authorities of the different Member States could consider which Member State should (first) issue the EAW and the possibility of transferring criminal proceedings to one or at least fewer Member States.

The competent authorities should check in the SIS (Schengen Information System) whether an alert for arrest has been issued on the same person by another Member State. Several Member States may issue an alert for arrest for the same person. In the event of an arrest, the

⁴ *Handbook on the issuance and execution of a MEA*. Communication of the European Commission of 28.09.2017. Brussels. p.27.

SIRENE (Supplementary Information Request at National Entry) office of the executing Member State will simultaneously inform each Member State concerned. It should be noted that where the executing Member State has received several warrants concerning the requested person, it must, in any event, decide whether the requested person should be surrendered first.

Therefore, before issuing multiple warrants, it would be more efficient for the issuing judicial authorities of the Member States to try to reach an agreement on the Member State to which the requested person should be surrendered.

Although the executing judicial authority is not bound by competing EAW agreements between issuing judicial authorities, these should be taken into account.

Delimitation of the European Arrest Warrant from the Institution of Extradition

With reference to the idea of the non-existence of the institution of extradition as a means of criminal law, we could mention as a result the diminished effectiveness of criminal law and the possibility of fighting crime would be considerably reduced.

At the same time, not extraditing offenders if they have left the territory of the State where the crime was committed would make it impossible to apply criminal law on the basis of the principles of territoriality, personality and the reality of criminal law.

It is the institution of extradition that plays an important role in the criminal legislation of states as a means of countering international crime.

We will delineate the procedural mechanisms of the MFA from the Extradition Institution in concrete steps below.

1. Strict deadlines

The country where the person has been arrested must take a final decision on the execution of the European Arrest Warrant within 60 days from the date of arrest. If the person consents to surrender, the decision must be taken within 10 days. The requested person must be surrendered as soon as possible, on a date agreed between the authorities involved, and at the latest within 10 days of the date of the final decision on the execution of the European Arrest Warrant.

2. Double criminality checks are no longer a requirement for 32 categories of offenses

For 32 categories of offences, there is no verification of the criminalization of the act as a crime in both countries. The only requirement is that it carries a maximum penalty of at least 3 years imprisonment in the issuing country.

For the other offences, surrender may be conditional on criminalization in the executing country.

3. Remove the political level from the procedure

Decisions are taken exclusively by judicial authorities, with no political implications.

4. Surrendering citizens

EU countries can no longer refuse to surrender their own nationals, unless they take over the obligations related to the execution of the wanted person's prison sentence.

5. Guarantees

The country executing the MEA may require certain safeguards, for example:

- after a certain period, the person will have the right to apply for a review of the sentence, if the sentence imposed is life imprisonment;

- the requested person can serve the remainder of the prison sentence in the executing country, if he or she is a citizen or resident of that country.

6. Limited number of grounds for refusal of enforcement

A country may only refuse to surrender the requested person if one of the mandatory or optional grounds for refusal applies.

Mandatory grounds can be:

- the person has already been tried for the same offense (ne bis in idem).
- the person is a minor (under the age of criminal responsibility in the executing country).
- amnesty (the executing country could have prosecuted the person, but the crime is subject to amnesty in that country).

Optional grounds:

- lack of double criminality for offenses other than those referred to in Article 2(2). (2) of the EAW Framework Decision.
- territorial jurisdiction.
- criminal proceedings pending in the executing country.
- limitation periods, etc.

Melloni case. The European Arrest Warrant and the supremacy of Union law

Mr. Melloni has been extradited from Spain to Italy to stand trial for fraudulent banking. He was sentenced to 10 years in prison.

He was sentenced in absentia because he had evaded trial, but was represented by elected lawyers.^[5]

In 2004, a European arrest warrant was issued in Italy for Mr. Melloni.

In 2008, Mr. Melloni was arrested by the Spanish police and, on the basis of the arrest warrant, he was handed over to the Italian authorities. Mr. Melloni opposed the surrender. Firstly, he argued that the representation by the lawyers was not lawful because, although he revoked the mandate granted to the lawyers, the authorities continued to carry out the proceedings with the lawyers. Second, Melloni argued that if he had surrendered to the Italian authorities, he would not have an appeal against the judgment rendered in default because Italian law did not provide for such a possibility. Therefore, Melloni considered that the execution of the arrest warrant could only be carried out under the condition that Italy guaranteed the possibility to appeal against the judgment convicting him.

The court rejected Melloni's arguments and ordered his surrender to the Italian authorities.

Mr. Melloni lodged a constitutional complaint before the Constitutional Court alleging infringement of the right to a fair trial under the Spanish Constitution.

Specifically, Mr. Melloni considered that if he were extradited to a State where he had no appeal against judgments rendered in absentia, his right to a fair trial would be violated in a manner which affected his human dignity. The CJEU has given several arguments in order to decide as indicated above. A first argument is that "by virtue of Article 1(2) of Framework Decision 2002/584, Member States are, in principle, obliged to execute a European arrest warrant" (para. 38), and according to the same decision, Member States may refuse to execute a warrant only in the cases indicated in the decision. In other words, in the CJEU's view, national law may not add new cases allowing non-execution of an arrest warrant. It follows indirectly from para. 37 that the CJEU wishes to emphasize that the inclusion of new cases of non-execution by national law could make judicial cooperation more difficult and could

⁵ *Melloni case. On the EA and the supremacy of Union law.* CJEU, Case C-399/11, Melloni, judgment of February 26, 2013. [CJUE. Cauza Melloni. Despre mandatul european de arestare și supremația dreptului Uniunii \(legalup.ro\).](#)

hinder the achievement of the Union's objective of becoming an area of freedom, security and justice based on the high degree of trust which must exist between Member States. According to the CJEU, in the event of a legal conflict between domestic constitutional law and Union law, Union law prevails by virtue of the principle of supremacy, even in situations where domestic constitutional law has more favorable provisions. In other words, in this case, the CJEU has given precedence to the supremacy of Union law even if that supremacy will ultimately lead to weaker protection of rights.

In concrete terms, if Mr. Melloni had served his sentence in Spain he would have been entitled to a right to review, but serving his sentence in Italy, he cannot benefit from a right to review because Italian criminal procedural law does not include such a right to review.

Art. (53) Level of protection

[Nothing in this Charter may be interpreted as restricting or adversely affecting human rights and fundamental freedoms as recognized, in their respective fields of application, by Union and international law and by the international conventions to which the Union or all the Member States are party, in particular the European Convention for the Protection of Human Rights and Fundamental Freedoms, and by the constitutions of the Member States.] [6]

Conclusions. In conclusion, the significant increase in the level of crime after the Second World War and the proliferation of forms of organized crime on the territory of several countries, facilitated by the development of rapid means of transport and the intensification of international tourism, have led to a reaction of solidarity on the part of the states to combat this phenomenon.

It is the European Arrest Warrant that has been at the forefront of international criminal law for more than 20 years in the fight against cross-border crime and the maintenance of continuous extensive cooperation.

The European Arrest Warrant improves judicial cooperation between Member States and ensures the free circulation of judicial decisions. In particular, it was introduced to simplify the extradition system for the benefit of the members of the European Union.

Finally, we note a less encouraging fact, which is that the Republic of Moldova is not yet one of these 27 EU Member States.

Thus, in the legislative framework of the Republic of Moldova, the very institution of extradition has its source in the Constitution, the Criminal Code, the Criminal Procedure Code and the law on international legal assistance (judicial cooperation) in criminal matters. These rules of domestic law are supplemented by international, bilateral or multilateral treaties and conventions and constitute the main sources of law in this area.

It is also important to note that the Constitution of the Republic of Moldova does not allow the extradition of its own citizens, this being possible only on the basis of international conventions, under conditions of reciprocity or on the basis of the judgment of the court. This principle is laid down by the European Convention on Extradition, adopted in Paris on December 13, 1957, and the Additional Protocols to that Convention of Strasbourg of October 15, 1975 and March 17, 1978.

POLITICAL INSTITUTIONS AND POLICY RESPONSE TO CLIMATE CHANGE

Gulshan Aliyeva Fazil

Baku State University

Baku, Azerbaijan

ABSTRACT

Climate change, as a pressing global issue, requires coordinated responses from political institutions. Governments and policymakers must create and enforce policies that mitigate the effects of climate change while fostering adaptation strategies. However, political institutions—defined as the rules, norms, and organizational structures within which policy is created and implemented—play a pivotal role in determining the success or failure of climate action. Climate change poses significant global challenges, demanding urgent policy responses. The effectiveness of these responses is largely influenced by the nature of political institutions, their design, and the interplay between governance levels. This article explores the role of political institutions in shaping climate policy, emphasizing their influence on policy frameworks, implementation mechanisms, and stakeholder participation. It examines how institutional structures impact decision-making and policy effectiveness, with a particular focus on comparative examples from various political systems.

Key words: *climate change, global issues, policy response, political institutions, policymakers, climate policy, policy frameworks.*

Introduction

Institutions traditionally serve as anchors of stability in political affairs, yet in a rapidly evolving world, they are increasingly called upon to adapt to emerging pressures and even foresee future challenges. Climate change exemplifies this dilemma, as domestic and global political institutions are not only crucial for guiding wise societal decision-making in the face of unprecedented and potentially existential threats but are also being destabilized by the very changes wrought by the climate crisis. These impacts, already reverberating through human societies, endanger lives, infrastructure, ecosystems, property rights, social cohesion, and trust in governance. Beyond climate change, institutional inadequacies lie at the heart of other global challenges, including migration, economic transformation, digitization, and aging populations. Collectively, these challenges expose the fragility and limitations of political systems that were neither designed for nor equipped to address the novel pressures of today. Consequently, the task of rethinking and reshaping political institutions—through reform, renewal, and reinvention—has become a critical and complex undertaking.

Climate change, as a pressing global issue, requires coordinated responses from political institutions. Governments and policymakers must create and enforce policies that mitigate the effects of climate change while fostering adaptation strategies. However, political institutions—defined as the rules, norms, and organizational structures within which policy is created and implemented—play a pivotal role in determining the success or failure of climate action.

Institutional Frameworks and Policy Formation

The structure of political institutions affects the formulation of climate policy. Democracies tend to emphasize public participation and accountability, which can result in more comprehensive climate policies. On the other hand, autocracies may have the advantage of implementing policies more swiftly, though often without robust stakeholder engagement. Institutional frameworks are the foundational structures within which policy is developed,

debated, and implemented. These frameworks encompass the formal rules, norms, and organizational entities that define the scope and mechanisms of governance. Their design and functionality significantly influence the nature, timing, and effectiveness of policy responses, particularly in addressing complex and cross-cutting issues such as climate change (Wlezien & Soroka, 2020).

The formation of policies within institutional frameworks involves several key dynamics: (Patterson, 2020).

1. **Rule-Making and Authority Distribution**

It is helpful to differentiate between three levels of rules that influence decision-making and the selection of development projects: operational rules, collective-choice rules, and constitutional-choice rules. *Operational rules* are embedded within collective-choice rules, which themselves are nested within constitutional-choice rules. Operational rules govern the day-to-day decisions of local stakeholders, such as villagers and local administrative officials, regarding development projects. These rules determine when, where, and how decisions are made, what information is shared or withheld, who participates in meetings, and how meetings are structured. *Collective-choice rules*, on the other hand, indirectly influence these operational decisions. They specify the roles and responsibilities of various actors in the policy-making process, such as village leaders, higher-ranking local officials, or external authorities. These rules shape the framework for development planning and provide the structure for decision-making at a broader level. Understanding how these rules function requires examining the influence of higher administrative bodies, which guide and oversee the work of local administrative organizations. *Constitutional-choice rules*, the broadest level, define who is eligible to establish the collective-choice rules. These rules have a significant impact on operational processes by determining the overarching framework within which policies are created. They are particularly relevant in understanding the political and economic dynamics of decentralized development planning, as well as how social and political challenges influence administrative and political processes (Bartolini, 2022). Institutions determine who holds the authority to propose, amend, and enforce policies. In democratic systems, this often involves a balance of power between executive, legislative, and judicial branches, allowing for checks and balances. In contrast, more centralized systems may concentrate authority, enabling quicker decision-making but potentially limiting broader stakeholder engagement.

2. **Stakeholder Participation**

Effective policy formation relies on the inclusion of diverse stakeholders, such as government agencies, civil society, businesses, and international organizations. Institutions play a pivotal role in facilitating dialogue, ensuring transparency, and mediating between competing interests to achieve consensus. Stakeholder participation refers to the active involvement of individuals, groups, organizations, and institutions that have a stake in or are affected by decision-making processes. In governance and development contexts, meaningful stakeholder participation ensures that policies and projects are inclusive, transparent, and responsive to the needs and concerns of the affected population (Foxon ve d., 2004).

Key dimensions of stakeholder participation is provided in Figure 1.

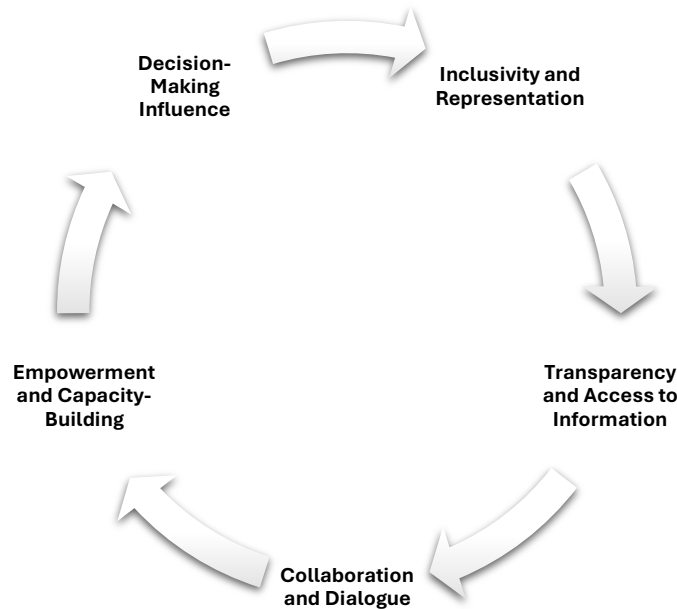

Figure 1: Main Dimensions of Stakeholder Participation (Author's own based on literature review analysis)

Participation is most effective when it includes diverse stakeholders, representing various social, economic, and cultural backgrounds. This helps ensure that policies address the needs of marginalized and underrepresented groups while fostering a sense of ownership and legitimacy. Stakeholders must have access to relevant, timely, and accurate information to engage effectively. Transparent processes build trust among participants and enhance the credibility of decisions. Successful stakeholder participation is based on open communication and dialogue. This includes creating forums where stakeholders can voice opinions, share expertise, and collaboratively develop solutions. Effective participation often requires empowering stakeholders by building their capacity to contribute meaningfully. This may involve training, education, or providing resources that enable them to understand and influence the process. Participation should not be symbolic or superficial. Stakeholders must have a genuine opportunity to influence decisions, ensuring their input shapes policies and projects in a substantive way (Beyene, 2015).

3. Policy Continuity and Flexibility

Robust institutional frameworks provide continuity in governance, which is essential for long-term policies like those addressing climate change. However, they must also incorporate mechanisms for flexibility and adaptability to respond to evolving challenges and uncertainties.

Policy continuity refers to the stability and consistency of policies over time. It ensures that initiatives are not abruptly changed or abandoned, allowing them to achieve their intended long-term outcomes. Continuity is particularly critical for addressing issues that require sustained effort and resource allocation, such as infrastructure development, environmental conservation, or social welfare programs (Bahmer, 2020).

Advantages of Policy Continuity are provided below:

- Provides a stable environment for investment and planning.
- Enhances public trust in governance by demonstrating commitment to long-term goals.
- Ensures cumulative progress in addressing complex issues that cannot

be resolved in short timeframes.

- Avoids the inefficiencies and disruptions caused by frequent policy reversals or shifts.

Challenges to Policy Continuity are as follows:

- Political changes, such as leadership transitions, can lead to policy discontinuity.
- Rigid adherence to outdated policies may fail to address emerging challenges.
- Lack of flexibility in continuous policies can lead to inefficiencies or public dissatisfaction.

Policy flexibility refers to the capacity of governance systems to adapt to changing circumstances, new information, or unforeseen challenges. It allows policymakers to revise, update, or replace policies in response to evolving needs and priorities (Bahmer, 2020).

Advantages of Policy Flexibility include:

- Promotes innovation by allowing experimentation and adaptation.
- Helps address uncertainties, such as economic shocks or environmental crises.
- Facilitates the incorporation of new technologies, methods, and knowledge.
- Enhances responsiveness to public demands and stakeholder feedback.

Challenges to Policy Flexibility are given below:

- Frequent changes can undermine public trust and investor confidence.
- Lack of continuity may result in fragmented or short-term solutions.
- Overemphasis on flexibility can lead to policy volatility and inefficiency.

An effective governance framework integrates both continuity and flexibility, ensuring that policies remain stable enough to achieve their long-term objectives while adaptable enough to respond to new challenges.

4. **Accountability and Transparency**

Institutional frameworks influence the degree to which policymakers are held accountable for their actions. Transparent processes enhance public trust and ensure that policies reflect societal priorities, while accountability mechanisms, such as elections or judicial reviews, provide checks against misuse of power. Accountability and transparency are fundamental principles of good governance, ensuring that policies and actions taken by institutions are responsible, ethical, and aligned with public interest. They are interconnected, with transparency serving as a mechanism to enable accountability by making information accessible and actions visible to stakeholders. *Accountability* refers to the obligation of institutions, policymakers, and public officials to explain and justify their actions and decisions to stakeholders, and to be held responsible for any shortcomings or misconduct. It ensures that power is exercised in a manner that respects the rights and needs of the governed. *Transparency* is the openness and accessibility of information related to governance processes, decision-making, and institutional operations. It ensures that stakeholders have the knowledge required to evaluate and influence policies effectively (Davis, 2023).

5. **Knowledge Integration and Evidence-Based Decision-Making**

Institutions serve as conduits for integrating scientific knowledge, expert advice, and public input into the policy-making process. This is particularly vital in addressing issues like climate change, where policies must be grounded in robust evidence and anticipate long-term impacts. Knowledge integration and evidence-based decision-making are critical for informed governance and effective policy development,

particularly in addressing complex challenges such as climate change, economic inequalities, and technological advancements. By leveraging diverse knowledge sources and applying scientific evidence, policymakers can craft strategies that are practical, impactful, and aligned with long-term objectives (Mecaskey ve d., 2023).

By shaping these dynamics, institutional frameworks profoundly affect the direction and quality of policy formation. Strengthening these frameworks to be more inclusive, adaptive, and responsive is critical for addressing the complex challenges of the modern world.

Political Institutions and Climate Policy

The structural characteristics of political institutions significantly affect their approach to climate policy. In democratic systems, public participation, accountability, and transparency often lead to policies that are comprehensive and reflective of societal priorities. However, such systems may face challenges in achieving swift policy implementation due to political deliberations and the need to balance competing interests. In contrast, more centralized systems, such as those found in autocratic regimes, may expedite decision-making processes and enact large-scale projects quickly, though often with limited public input and accountability (Hughes & Urpelainen, 2015).

Institutional arrangements at the domestic level, such as federalism and centralization, also impact climate policy. In federal systems, the distribution of power between national and subnational governments allows for localized approaches to climate action, enabling policies tailored to specific regional contexts. However, this can lead to fragmentation and inconsistency in climate initiatives across regions. Centralized systems, by contrast, provide a unified approach to climate policy, though they may overlook local needs and variations in climate impacts (Lachapelle & Paterson, 2018).

The interaction between domestic institutions and international frameworks is another mandatory factor. Institutions must align national policies with global climate agreements, such as the Paris Accord, while ensuring that these commitments are integrated into local contexts. This requires political institutions to act as intermediaries, fostering cooperation between government agencies, non-governmental organizations, the private sector, and international actors. Effective collaboration enhances the capacity of political institutions to meet global climate targets while addressing domestic challenges (Finnegan, 2022).

Institutional inertia, a common issue, often hampers timely responses to the rapidly evolving challenges posed by climate change. Bureaucratic resistance, entrenched interests, and the slow pace of institutional reform can delay necessary policy adjustments. To overcome these barriers, political institutions must adopt adaptive governance mechanisms that promote flexibility, innovation, and responsiveness to emerging climate realities.

Incorporating public opinion and stakeholder participation is essential for building trust and legitimacy in climate policies. However, short electoral cycles in democratic systems can pose a challenge to long-term climate planning, as political leaders may prioritize immediate concerns over sustainable strategies. Balancing short-term political pressures with the need for enduring climate commitments is a key task for political institutions.

Conclusions and Recommendations

The role of political institutions in addressing climate change is both mandatory and complex. As key players in the development, implementation, and enforcement of climate policy, these institutions shape how societies respond to one of the most pressing challenges of our time. However, their effectiveness is often constrained by structural limitations, bureaucratic inertia, and competing political priorities. Despite these challenges, political institutions remain indispensable for fostering coordinated, equitable, and sustainable climate action.

The conclusions of this analysis underscore several key insights. Political institutions that exhibit flexibility, inclusivity, and accountability are better equipped to respond to the multifaceted demands of climate change. Democratic systems, with their emphasis on public

participation and transparency, can create comprehensive and socially acceptable climate policies. However, they often face challenges in achieving swift and decisive action due to political fragmentation and short electoral cycles. Conversely, centralized systems can implement rapid responses but may neglect the inclusion of diverse perspectives and regional specificities, potentially leading to policies that lack local relevance or public support.

The interaction between domestic and international frameworks is another pivotal factor. Political institutions must effectively integrate global commitments, such as the Paris Agreement, with domestic policies to ensure cohesive and actionable strategies. This requires robust institutional mechanisms for cross-sectoral collaboration and multi-level governance. However, many institutions are hindered by outdated structures and insufficient capacity to navigate the complexities of aligning local, national, and global priorities.

Institutional inertia poses a significant barrier to effective climate governance. Resistance to change, entrenched power dynamics, and the slow pace of reform hinder the ability of political institutions to adapt to the rapidly evolving challenges posed by climate change. Moreover, the tendency to prioritize short-term political gains over long-term environmental sustainability undermines the effectiveness of climate policies and erodes public trust in governance systems. To address these challenges, several recommendations emerge. Political institutions must prioritize reform and capacity-building to enhance their adaptability and resilience. This includes developing governance structures that are flexible enough to respond to emerging climate realities while maintaining policy continuity. Integrating adaptive mechanisms, such as periodic policy reviews and contingency planning, can ensure that institutions remain responsive to changing circumstances.

Stakeholder engagement must be a central component of climate governance. Institutions should create inclusive platforms that enable the participation of diverse stakeholders, including marginalized groups, private sector actors, and civil society organizations. This not only enhances the legitimacy of climate policies but also ensures that they are grounded in a comprehensive understanding of societal needs and priorities.

International cooperation is vital for addressing the global nature of climate change. Political institutions should strengthen their capacity to align domestic policies with international frameworks and foster partnerships that leverage global expertise and resources. Mechanisms for knowledge sharing and best practices across countries and regions can enhance the effectiveness of climate policies.

Finally, political institutions must embrace evidence-based decision-making as a cornerstone of climate governance. Investing in data collection, research, and knowledge integration is essential for developing policies that are both effective and equitable. By grounding decisions in empirical evidence and fostering a culture of accountability and transparency, political institutions can rebuild public trust and drive transformative climate action.

ÖZET

Bu çalışma, blokzincir ve finansal teknoloji (FinTek) entegrasyonunun finansal sistemler üzerindeki rolünü incelemektedir. Blokzincir, merkeziyetsiz yapısı ve güvenlik özellikleri sayesinde finansal hizmetlerin aracısız, güvenilir ve erişilebilir hale gelmesine olanak tanımaktadır. Aracılara olan ihtiyacı ortadan kaldıran bu teknoloji, fonlara erişim sıkıntıları yaşayan küçük ve orta ölçekli işletmeler için önemli fırsatlar yaratmaktadır. Aynı zamanda blokzincir tabanlı çözümler, veri güvenliği ve şeffaflık sunarak finansal işlemlerde dolandırıcılık ve yolsuzluğun önlenmesine katkıda bulunmaktadır. Bunun yanı sıra FinTek, blokzincir gibi inovatif çözümlerle birlikte özellikle bankacılık ve finansal hizmetlerde dönüşüme hız kazandıran temel bir unsur haline gelmiştir. Bankacılık, kredi verme, yatırım ve ödeme sistemlerinde devrim yaratan FinTek, geleneksel finansal yapıları da dönüştürmüştür. Blokzincir teknolojisiyle birlikte FinTek, finansal hizmetlerde otomasyonu artırarak daha kapsayıcı ve erişilebilir çözümler sunmaktadır. Blokzincir ve FinTek entegrasyonunun bir sonucu olarak ortaya çıkan merkeziyetsiz finans (DeFi) sistemleri, kullanıcıların aracısız finansal işlemler yapabildiğini sağlamaktadır. DeFi, finansal araçlara olan ihtiyacı ortadan kaldırarak işletmelerin daha bağımsız hareket etmesine olanak tanımaktadır. Ancak bu teknolojilerin yaygınlaşmasında volatilité, yasal belirsizlik ve teknik zorluklar gibi engellerin aşılması önceliklidir. Finansal sistemlerde köklü bir dönüşümü temsil eden blokzincir ve FinTek entegrasyonu, gelecekte finansal hizmetlerin daha kapsayıcı ve verimli hale gelmesini sağlayacak potansiyele sahiptir. Ancak bu teknolojilerin sürdürülebilirliği için gerekli düzenleyici çerçevenin ve teknik altyapının geliştirilmesi kritik öneme sahiptir.

Anahtar Kelimeler: Dijital Dönüşüm, Blokzincir, Finansal Teknoloji, Merkeziyetsiz Finans.

THE ROLE OF BLOCKCHAIN AND FINTECH IN DIGITAL TRANSFORMATION

ABSTRACT

This study examines the role of blockchain and financial technology (FinTech) integration in financial systems. Blockchain enables financial services to be intermediary-free, reliable, and accessible as a result of its decentralized structure and security features. This technology, which eliminates the need for intermediaries, creates significant opportunities for small and medium-sized enterprises that have difficulty accessing funds. Meanwhile, blockchain-based solutions contribute to the prevention of fraud and corruption in financial transactions by providing data security and transparency. Besides, FinTech has become a key element in accelerating transformation, especially in banking and financial services, with innovative solutions such as blockchain. FinTech, which has revolutionized banking, lending, investment, and payment systems, has also transformed traditional financial structures. With blockchain technology, FinTech offers more inclusive and accessible solutions by increasing automation in financial services. Decentralized finance (DeFi) systems which have emerged due to the integration of blockchain and FinTech, allow users to make unmediated financial transactions. DeFi enables

companies to act more independently by eliminating the need for financial intermediaries. However, overcoming barriers such as volatility, legal uncertainty, and technical difficulties is a priority for the widespread adoption of these technologies. The integration of blockchain and FinTech, which represents a fundamental transformation of financial systems has the potential to make financial services more inclusive and efficient in the future. However, it is critical to develop the necessary regulatory framework and technical infrastructure for the sustainability of these technologies.

Keywords: Digital Transformation, Blockchain, Financial Technology, Decentralized Finance.

GİRİŞ

Dijitalleşme süreci, küresel finansal sistemlerin işleyişini ve dinamiklerini köklü bir şekilde dönüştürmektedir. Özellikle son yıllarda hızla gelişen blokzincir (blockchain) ve finansal teknoloji (FinTek) alanları, finansal hizmetlerin sunumu ve kullanımı üzerinde devrim niteliğinde yenilikler sunmaktadır. Bu teknolojiler, yalnızca finansal işlemleri güvenli hale getirmekle kalmayıp aynı zamanda finansal araçlara ödenen komisyonları ortadan kaldırarak maliyetleri düşürmekte ve böylelikle finansal kapsayıcılığı da artırmaktadır. Özellikle blokzincir teknolojisi, merkeziyetsiz yapısı sayesinde finansal süreçlerde köklü değişiklikler yaratmaktadır (Nakamoto, 2008; Tapscott ve Tapscott, 2016).

Blokzincir teknolojisi, 2008’de Bitcoin’in ortaya çıkışıyla birlikte büyük bir ivme kazanmış ve sadece kripto para piyasalarında değil, geniş çaplı finansal sistemlerde de önemli bir etkiye sahip olmuştur. Bitcoin, aracısız ve güvenli bir değer transferi sistemi sunarken; Ethereum gibi blokzincir platformları, akıllı sözleşmeler ve merkeziyetsiz uygulamalar (dApps) aracılığıyla finansal hizmetlerde yeni kullanım alanları yaratmıştır (Buterin, 2013). Blokzincir tabanlı sistemler, işlemlerin şeffaf bir şekilde kaydedilmesi ve izlenebilmesi sayesinde, dolandırıcılık ve yolsuzluk gibi sorunların önlenmesine de katkıda bulunmaktadır (Catalini ve Gans, 2016). Finansal teknolojiler (FinTek), blokzincir gibi yenilikçi çözümlerle birleşerek, bankacılık ve finansal hizmetlerde dönüşümü hızlandıran önemli bir unsura dönüşmüştür. FinTek, özellikle mobil ödeme sistemleri, dijital cüzdanlar, uçtan uca (peer-to-peer, P2P) kredi platformları ve robo-danışmanlar gibi alanlarda büyük bir ilerleme kaydetmiştir. Bu yenilikler, bireylerin ve işletmelerin finansal hizmetlere daha kolay, hızlı ve düşük maliyetlerle erişmesini sağlamaktadır (Arner vd., 2016). Geleneksel finansal sistemlere erişimde sıkıntı yaşayan kesimler için FinTek çözümleri, bankacılık hizmetlerine alternatif sunarak finansal kapsayıcılığı artırmaktadır (Zavolokina vd., 2017).

Blokzincir ve FinTek entegrasyonu, finansal hizmetlerin güvenli, şeffaf ve düşük maliyetli bir şekilde sunulmasına olanak tanımaktadır. Özellikle merkeziyetsiz finans (DeFi) ekosistemi, bu teknolojilerin sunduğu en önemli yeniliklerden biri olarak öne çıkmaktadır. DeFi, finansal araçlara duyulan ihtiyacı ortadan kaldırarak bireyler arasında doğrudan finansal işlemlerin gerçekleştirilmesini mümkün kılmaktadır. Akıllı sözleşmelerin kullanımı, işlemleri otomatikleştirerek güvenliği artırmakta ve işlem maliyetlerini düşürmektedir (Schär, 2021). Ancak söz konusu yeni teknolojilerin yaygınlaşmasıyla birlikte düzenleyici belirsizlikler, güvenlik açıkları ve sistemsel riskler de gündeme gelmektedir (Gomber vd., 2017).

1. Blokzincir Teknolojisi

Blokzincir teknolojisi, finansal yeniliklerin gelişiminde önemli bir rol oynamakta ve finansal hizmetlerin sunumunu köklü bir şekilde değiştirmektedir. Bu teknoloji, merkeziyetsiz yapısı sayesinde güvenli, şeffaf ve verimli bir değer transferi sağlamakta, bu da finansal hizmetlerin daha erişilebilir hale gelmesine olanak tanımaktadır. Blokzincir, özellikle kripto paraların temelini oluşturmasıyla dikkat çekmekte ve finansal inovasyonların hızla gelişmesine katkıda bulunmaktadır (Lytvyn vd., 2024; Agarwal vd., 2023).

Blokzincir teknolojisinin sunduğu en önemli avantajlardan biri, araçlara olan ihtiyacı azaltmasıdır. Geleneksel finansal sistemlerde, işlemler genellikle bankalar veya diğer finansal araçlar vasıtasıyla gerçekleştirilirken; blokzincir, bu süreci doğrudan kullanıcılar arasında gerçekleştirerek maliyetleri düşürmektedir. Bu durum, özellikle küçük işletmeler ve bireyler için finansal hizmetlere erişimi kolaylaştırmakta ve finansal kapsayıcılığı artırmaktadır (Bringas vd., 2020; Wang, 2024).

Finansal yenilikler açısından blokzincir, kripto varlıkların ortaya çıkmasına ve bu varlıkların finansman yöntemleri olarak kullanılmasına olanak tanımaktadır. Kripto varlıklar, blokzincir üzerinde aracısız olarak değer transferi yapılmasına imkân tanıyarak, yeni girişimlerin finansmanı için önemli bir kaynak haline gelmiştir (Agarwal vd., 2023).

Blokzincir teknolojisi, aynı zamanda finansal sistemlerin şeffaflığını artırarak dolandırıcılık ve yolsuzluk gibi sorunların önlenmesine yardımcı olmaktadır. Her işlem, blokzincir üzerinde kaydedildiği için geçmişe dönük izlenebilirlik sağlamak ve bu da kullanıcıların güvenini artırmaktadır (Mia vd., 2022). Bunun yanı sıra blokzincir tabanlı sistemler, veri güvenliğini artırarak kullanıcıların kişisel bilgilerini koruma konusunda daha fazla güvence sunmaktadır (Kunhibava vd., 2024).

Tüm bu yönleri ile blokzincir teknolojisi, finansal yeniliklerin önünü açarak finansal sistemlerin daha verimli, şeffaf ve erişilebilir hale gelmesine katkıda bulunmaktadır. Ancak bu teknolojinin benimsenmesiyle birlikte ortaya çıkan riskler ve zorluklar da dikkate alınmalıdır. Bununla birlikte gelecekte, blokzincir ve diğer finansal teknolojilerin entegrasyonunun, finansal sistemlerin dönüşümünde kritik bir rol oynamaya devam edeceği öngörülmektedir.

2. FinTek (Finansal Teknoloji)

FinTek yani finansal teknoloji, küresel finans sisteminde önemli bir dönüşüm yaratmış ve finansal hizmetlerin sunumunu ve erişimini yeniden şekillendirmiştir. FinTek uygulamaları; bankacılık, kredi verme ve yatırım gibi çeşitli alanları etkileyerek finansal kapsayıcılığı artırmakta ve sürdürülebilir uygulamaları teşvik etmektedir.

Gelişmekte olan ülkelerde, özellikle bankacılık hizmetlerine erişimin kısıtlı olduğu durumlarda FinTek çözümleri, finansman boşluklarını doldurarak önemli bir alternatif oluşturmaktadır. Bu durum, küçük ve orta ölçekli işletmelerin daha kolay finansman sağlamasına olanak tanımaktadır (Xu, 2023). Uçtan uca (P2P) kredi platformları, bankaların kredi verme süreçlerindeki katı kredi prosedürlerinin aksine, daha hızlı ve esnek finansman seçenekleri sunarak küçük ve orta ölçekli işletmelerin finansman ihtiyacını karşılamaktadır (Iqbal vd., 2021). Ekonomik kalkınma ve girişimcilik perspektifinden bakıldığında FinTek, finansman süreçlerini hızlandırarak küçük ve orta ölçekli işletmelerin ekonomik büyüme sürecinde daha etkin rol oynamasına yardımcı olur. Küçük ve orta ölçekli işletmelere sağlanan finansal destek, onların ekonomik olarak büyümelerini ve pazardaki rekabetçi pozisyonlarını güçlendirmelerini sağlar. FinTek platformlarının yanı sıra bu hizmetlerin kullanıcılarına sağladığı finansal okuryazarlık imkânları da küçük ve orta ölçekli işletmelerin daha iyi finansal kararlar almasını ve daha verimli bir şekilde yönetilmesini sağlamaktadır (Rahayu vd., 2023).

Sonuçta FinTek, özellikle finansal hizmetlere erişimi artırarak küçük ve orta ölçekli işletmelerin ekonomik faaliyetlerini desteklemekte ve bu sayede, gelişmekte olan ülkelerde girişimcilik ve ekonomik kalkınmayı teşvik etmektedir. Geleneksel bankacılık sistemlerinin dışında kalan bireyler ve işletmeler için FinTek, hızlı, esnek ve erişilebilir finansman çözümleri sunarak bu boşluğu doldurmaktadır.

3. Blokzincir ve FinTek Ekosistemi

FinTek girişimleri ve blokzincir teknolojisi, finansal hizmetler alanında önemli bir dönüşüm yaratmaktadır. Bu iki alanın birleşimi, finansal süreçlerin daha verimli, güvenli ve erişilebilir hale gelmesine olanak tanımaktadır. Blokzincir, merkeziyetsiz yapısı sayesinde işlemlerin

güvenli bir şekilde gerçekleştirilmesini sağlarken; FinTek girişimleri, söz konusu teknolojiyi kullanarak yenilikçi finansal çözümler sunmaktadır (Yu, 2024; Kalenyuk vd., 2024).

Blokcincir teknolojisi, finansal hizmetlerin temel yapı taşlarından biri haline gelmiştir. Özellikle kripto paraların yükselişiyle birlikte blokcincir, finansal işlemlerde güvenliği artırmakta ve dolandırıcılık gibi sorunları minimize etmektedir. Araştırmalar, Çin'deki birçok FinTek girişiminin blokcincir teknolojisini benimseyerek işlemlerini geliştirdiğini ve dolandırıcılığı azaltmaya çalıştığını göstermektedir. Bu bağlamda, Huobi, Bitmain ve Airwallex gibi FinTek girişimleri, blokcincir teknolojisini kullanarak finansal süreçlerini optimize etmektedir (Yu, 2024).

FinTek girişimlerinin sunduğu yenilikçi çözümler, geleneksel finansal hizmetlerin dönüşümüne katkıda bulunmaktadır. Örneğin, dijital ödemeler, akıllı sözleşmeler ve uçtan uca (P2P) kredi verme gibi uygulamalar, kullanıcıların finansal hizmetlere daha kolay erişimini sağlamaktadır. Bu tür uygulamalar hem bireyler hem de işletmeler için maliyetleri düşürmekte ve işlemleri hızlandırmaktadır (Kalenyuk vd., 2024; Karangara, 2023). Ayrıca FinTek girişimleri, kullanıcı odaklı çözümler sunmak ve müşteri deneyimini geliştirmek için yapay zekâ ve büyük veri gibi teknolojileri de entegre etmektedir (Bajpai ve Kanojia, 2024; Saini, 2023).

Blokcincir teknolojisi, FinTek girişimlerinin iş modellerini de dönüştürmektedir. Girişimler, blokcincir tabanlı çözümler geliştirerek finansal hizmetlerin daha şeffaf ve güvenilir hale gelmesini sağlamaktadır. Örneğin, blokcincir, her işlemin kaydedilmesini ve izlenebilirliğini sağlayarak kullanıcıların güvenini artırmaktadır (Alaassar vd., 2021; Welsch vd., 2020). Bu durum, FinTek girişimlerinin daha geniş bir müşteri tabanına ulaşmasına yardımcı olmaktadır. FinTek ekosisteminin dinamikleri, blokcincir teknolojisinin benimsenmesiyle daha da karmaşık hale gelmektedir. Girişimler, blokcincir tabanlı uygulamalar geliştirmek için özel destek altyapıları ve yenilikçi iş modelleri oluşturmaktadır. Bu tür destek yapıları, girişimlerin büyümesine ve gelişmesine katkıda bulunmakta, aynı zamanda finansal hizmetlerin çeşitlenmesine olanak tanımaktadır (Faour ve Al-Sowaidi, 2023; Singh ve Johri, 2024).

4. Kripto Paralar ve DeFi (Merkeziyetsiz Finans) Uygulamaları

4.1. Kripto Paralar: Avantajları ve Zorlukları

Kripto paraların ortaya çıkışı, finans alanında önemli bir dönüşüm yaratmış ve geleneksel finans sistemleri üzerinde hem avantajlar hem de zorluklar sunmuştur. Özellikle Bitcoin ve Ethereum gibi kripto paralar, alternatif yatırım araçları olarak dikkat çekmiş ve bireylerin ve kurumların finansal varlıklarla etkileşim biçimlerinde bir paradigma kaymasına yol açmıştır. Bu dönüşüm, kripto paraların merkeziyetsiz doğasıyla desteklenmektedir. Bu sayede aracılara ihtiyaç duymadan, bireyler arasında doğrudan işlem yapılabilir. Böylece işlem maliyetleri azaltılmakta ve finansal erişilebilirlik artırılmaktadır. (Pawar, 2024; Khan, 2023).

Bitcoin, 2008 küresel mali krizinin ardından, Satoshi Nakamoto tarafından finansal sistemlere alternatif olarak geliştirilmiş ilk kripto para birimidir. Bitcoin, merkezi olmayan yapısı ve herhangi bir hükümete ya da kuruma bağlı olmadan çalışabilmesi sayesinde dikkat çekmiştir. Blokcincir teknolojisi üzerine inşa edilen Bitcoin, altyapısını sağlayan blokcincir teknolojisi ile herhangi bir finansal kuruma ihtiyaç duymadan aracısız olarak, küresel çapta internet üzerinden para transferi işlemi gerçekleştirmeyi mümkün kılmaktadır. Ethereum yalnızca bir dijital para birimi olmanın ötesinde, akıllı sözleşmelerin ve merkeziyetsiz uygulamaların (dApps) geliştirilmesine olanak tanıyan bir platformdur. Ethereum'un bu özellikleri, onu Bitcoin'den ayıran temel unsurlardır ve geliştiricilere daha geniş bir uygulama yelpazesi sunmaktadır. Kripto paraların finansal işlemler üzerindeki en büyük etkilerinden biri, aracılara duyulan ihtiyacı ortadan kaldırarak işlemleri hızlandırması ve maliyetleri azaltmasıdır. Geleneksel bankacılık sistemlerinde, uluslararası para transferleri günler alabilirken kripto paralar bu süreyi dakikalara indirmektedir. Bununla birlikte şeffaflık, kripto paraların bir diğer önemli

avantajıdır. Blokzincir teknolojisi her işlemi kaydederek bu işlemleri herkese açık ve izlenebilir hale getirir. Bu durum, dolandırıcılık ve yolsuzluk gibi sorunların önüne geçilmesine yardımcı olurken finansal işlemlerde güveni artırır (Khan, 2023).

Kripto paralar, özellikle Bitcoin ve Ethereum gibi önde gelen dijital varlıklar, finansal işlemler üzerinde devrim niteliğinde değişiklikler yaratmıştır. Hız, maliyet ve şeffaflık açısından büyük avantajlar sunan bu teknolojiler, finansal sistemlerde merkeziyetsiz yapılarla aracılara olan ihtiyacı azaltmıştır. Ancak volatilité ve düzenleyici belirsizlikler gibi önemli zorluklar, kripto paraların geniş çapta benimsenmesinin önündeki en büyük engeller olarak öne çıkmaktadır.

Maliyetler açısından bakıldığında, kripto para işlemleri genellikle geleneksel bankacılık işlemlerine göre çok daha ucuzdur. Bankaların yüksek komisyon ve işlem ücretleri talep ettiği sınır ötesi ödemeler, kripto paralar sayesinde çok daha düşük maliyetlerle gerçekleştirilebilir. Örneğin, Ripple gibi blokzincir tabanlı ödeme ağları, uluslararası ödemelerde işlem maliyetlerini düşürmekte ve süreci hızlandırmaktadır. Kripto paralar, merkezi olmayan yapıları sayesinde bireylerin finansal işlemlerini aracısız bir şekilde gerçekleştirmesine olanak tanır. Bu durum, bankacılık hizmetlerine erişimi olmayan bireyler için büyük bir avantaj sağlamaktadır. Özellikle gelişmekte olan ülkelerde, kripto paralar finansal kapsayıcılığı artırarak milyonlarca insana bankacılık sistemine erişim fırsatı sunmaktadır. Örneğin, M-Pesa gibi mobil kripto platformları, banka hesabına erişimi olmayan bireyler için önemli bir finansal araç haline gelmiştir (Pawar, 2024).

Kripto paraların bir diğer avantajı, düşük işlem maliyetleridir. Geleneksel finansal sistemler, özellikle uluslararası ödemelerde yüksek maliyetli olabilirken kripto paralar, aracısız işlem yapma imkânı sunarak bu maliyetleri düşürmektedir. Ripple gibi blokzincir tabanlı ödeme sistemleri, düşük işlem maliyetleri ve hızlı işlem süreleri sunarak bu alanda devrim yaratmaktadır (Pawar, 2024). Ancak kripto paralar, volatilité gibi önemli bir zorlukla da karşı karşıyadır. Bitcoin ve diğer kripto para birimlerinin fiyatları zaman zaman büyük dalgalanmalar gösterebilmekte, bu da onları hem yatırımcılar hem de günlük kullanım için riskli hale getirmektedir. Kripto para piyasalarının aşırı oynak olması, bu varlıkların güvenilir bir değer saklama aracı olarak kullanılmasını zorlaştırmaktadır (Khan, 2023). Bunun yanı sıra kripto paraların düzenleyici belirsizliklerle karşı karşıya olduğu da bir gerçektir. Farklı ülkeler, kripto paralara yönelik farklı düzenlemeler uygulamakta ve bu durum küresel ölçekte belirsizlik yaratmaktadır. Bazı ülkeler kripto paraları yasaklarken diğerleri bu teknolojiyi kabul etmekte ya da düzenlemeye çalışmaktadır. Bu belirsizlikler, kripto paraların daha geniş çapta benimsenmesini engelleyen en büyük sorunlardan biridir (Pawar, 2024).

Kripto paraların geleneksel finansal piyasalara etkisi, hisse senedi fiyatları ve diğer makroekonomik değişkenlerle olan ortak trendleri ve ilişkileri üzerinden değerlendirilmektedir. Araştırmalar, kripto paraların fiyat hareketlerinin makroekonomik temeller, belirsizlik ve yatırımcı duyarlılığı gibi faktörlerle bağlantılı olduğunu ortaya koymaktadır. Bu durum, piyasa koşullarına bağlı olarak kripto paraların bir korunma aracı veya spekülâtif bir yatırım aracı olarak hizmet edebileceğini önermektedir (Jiang vd., 2022; Shi, 2023).

Kripto paraların finans alanındaki geleceği, belirsizliğini korumakta; uzun vadeli sürdürülebilirlikleri ve geleneksel para birimlerinin yerini alıp almayacakları konusunda devam eden tartışmalar da sürmektedir. Kripto paraların finans sektöründeki uzun vadeli sürdürülebilirliği ve geleneksel para birimlerinin yerini alıp almayacağına dair belirsizlikler devam ederken, Merkez Bankası Dijital Para Birimleri (CBDC'ler) giderek daha fazla araştırılmakta ve uygulanmaktadır. CBDC'ler, dijital paranın sunduğu faydaları hükümet destekli istikrarla birleştirerek finansal sistemin dayanıklılığını artırmayı ve yeni ödeme sistemlerine olan güveni sağlamayı amaçlamaktadır. CBDC'lerin tanıtımı, kripto paralarla birlikte finansal manzarayı yeniden şekillendirebilir; bu durum, merkezi olmayan varlıkların bazı risklerini hafifletme potansiyeline sahiptir (Şapkauskiené ve Prialgauskaité, 2023; Ehlke vd., 2024).

4.2. DeFi (Merkeziyetsiz Finans)

Merkeziyetsiz Finans (Decentralized Finance-DeFi), merkezi otoritelerden bağımsız olarak çalışan finansal hizmetlerin ve ürünlerin bir ekosistemidir. DeFi, blockchain teknolojisi üzerine inşa edilmiştir ve kullanıcıların finansal işlemlerini aracılara ihtiyaç duymadan gerçekleştirmelerine olanak tanır. Bu sistem, akıllı sözleşmeler aracılığıyla otomatikleştirilmiş işlemler sunarak finansal hizmetlerin daha erişilebilir ve şeffaf hale gelmesini sağlar (Schueffel, 2021; Singh, 2024).

DeFi, blokzincir teknolojisi üzerinde çalışan bir dizi protokol ve uygulama ile kullanıcıların doğrudan birbirleriyle etkileşim kurmasını sağlar. Bu sistemler, akıllı sözleşmeler aracılığıyla kredi verme, borç alma, ticaret yapma ve tasarruf etme gibi finansal işlemleri merkezi otoriteye ihtiyaç duymadan, tamamen otomatik ve güvenli bir şekilde gerçekleştirme imkanı sunar. DeFi platformları, genellikle Ethereum gibi akıllı sözleşme destekli blokzincirler üzerine inşa edilir. (Grassi vd., 2022; Qin vd., 2023).

DeFi ekosistemi, çeşitli finansal hizmetleri kapsayan birçok uygulama ve platformdan oluşur. Bu platformlar, kullanıcıların varlıklarını yönetmelerine, ticaret yapmalarına ve yatırım fırsatlarını değerlendirmelerine olanak tanır. DeFi, geleneksel finansal sistemlerin sunduğu hizmetlerin çoğunu, ancak daha düşük maliyetler ve daha fazla erişim ile sunar. Örneğin, kullanıcılar DeFi platformları aracılığıyla kredi alabilir, tasarruf hesapları açabilir veya varlıklarını takas edebilirler (Schueffel, 2021; Perdana vd., 2023).

4.2.1. DeFi ve Geleneksel Finans Sistemi Arasındaki Farklar

DeFi, geleneksel finans sistemlerinden önemli ölçüde farklıdır. Geleneksel finans, merkezi otoriteler ve düzenleyiciler tarafından kontrol edilirken; DeFi merkeziyetsiz bir yapıya sahiptir. Bu, kullanıcıların kendi varlıkları üzerinde tam kontrol sahibi olmalarını sağlar. Geleneksel finans sistemleri, genellikle yüksek işlem ücretleri ve uzun işlem süreleri ile karakterize edilirken; DeFi bu sorunları minimize eder (Muhammad, 2024; Grassi vd., 2022).

DeFi, geleneksel bankacılığın sunduğu birçok hizmeti daha düşük maliyetlerle ve daha hızlı bir şekilde sunar. Örneğin, DeFi platformları aracılığıyla yapılan uluslararası para transferleri, geleneksel bankalara göre çok daha hızlı ve ucuzdur. Ayrıca DeFi, finansal hizmetlere erişimi artırarak bankacılık hizmetlerine ulaşamayan bireyler için yeni fırsatlar sunar (Grassi vd., 2022; Gudgeon vd., 2020).

4.2.2. DeFi'nin Avantajları

DeFi'nin sunduğu avantajlar arasında düşük işlem maliyetleri, hızlı işlem süreleri ve daha fazla erişilebilirlik bulunmaktadır. Kullanıcılar, DeFi platformları aracılığıyla finansal hizmetlere 7/24 erişebilirler. Ayrıca DeFi, kullanıcıların kimliklerini gizli tutmalarına olanak tanıyarak dolandırıcılık ve kimlik hırsızlığı gibi riskleri azaltır (Schueffel, 2021; Perdana vd., 2023).

4.2.3. Akıllı Sözleşmeler ve DeFi Ekosisteminin Finans Sistemine Getirdiği Yenilikler

Akıllı sözleşmeler, DeFi ekosisteminin temel bileşenleridir. Bu sözleşmeler, belirli koşullar yerine getirildiğinde otomatik olarak yürütülen kod parçalarıdır. Akıllı sözleşmeler, kullanıcıların finansal işlemlerini güvenli bir şekilde gerçekleştirmelerine olanak tanıırken aynı zamanda işlem maliyetlerini de düşürür. DeFi platformları, akıllı sözleşmeleri kullanarak kredi verme, borç alma, ticaret yapma ve tasarruf etme gibi işlemleri otomatikleştirir. Örneğin, bir kullanıcı DeFi platformunda kredi almak istediğinde, akıllı sözleşme kullanıcının teminatını kontrol eder ve gerekli koşullar sağlandığında krediyi otomatik olarak verir (Babel vd., 2023; Qin vd., 2023).

DeFi ekosisteminde birçok akıllı sözleşmeye dayalı uygulama bulunmaktadır. Örneğin, MakerDAO, kullanıcıların teminat göstererek (örneğin Ethereum) stabil coin olan DAI'yi

oluşturmasına olanak tanır. Compound ise kullanıcıların kripto varlıklarını borç vererek faiz kazanmalarını sağlar. Bu tür uygulamalar, DeFi'nin sunduğu yenilikçi finansal hizmetlerin örnekleridir (Schueffel, 2021; Babel vd., 2023).

DeFi'nin finans sistemine getirdiği yenilikleri şu şekilde sıralamak mümkündür:

- DeFi, finansal sistemlerdeki aracılık ihtiyacını ortadan kaldırarak kullanıcıların doğrudan birbirleriyle işlem yapmalarını sağlar. Bu, işlem sürelerini kısaltır ve maliyetleri düşürür. Ayrıca DeFi, finansal hizmetlere erişimi artırarak daha kapsayıcı bir finansal ekosistem oluşturur (Muhammad, 2024; Grassi vd., 2022).

- Geleneksel finans sistemlerinde, bankalar ve diğer finansal kurumlar, işlemlerin güvenliğini sağlamak için araçlar olarak görev yapar. DeFi, akıllı sözleşmeler aracılığıyla bu aracılık ihtiyacını ortadan kaldırarak kullanıcıların doğrudan birbirleriyle işlem yapmalarına olanak tanır. Bu durum, işlem maliyetlerini önemli ölçüde azaltır (Grassi vd., 2022; Gudgeon vd., 2020).

- DeFi, finansal hizmetlere erişimi artırarak bankacılık hizmetlerine ulaşamayan bireyler için yeni fırsatlar sunar. Özellikle gelişmekte olan ülkelerde DeFi platformları, kullanıcıların finansal hizmetlere erişimini kolaylaştırarak ekonomik katılımı artırabilir (Gudgeon vd., 2020; Perdana vd., 2023).

- DeFi ile yatırımcılara yeni fırsatlar sunulur. Kullanıcılar, DeFi platformları aracılığıyla kripto varlıklarını borç vererek faiz kazanabilir veya likidite havuzlarına katılarak işlem ücretlerinden pay alabilirler. Bu tür fırsatlar, geleneksel finans sistemlerine göre daha yüksek getiri potansiyeli sunar (Grassi vd., 2022; Gudgeon vd., 2020).

- Kullanıcıların uçtan uca (P2P) kredi almalarına olanak tanır. Bu, geleneksel bankacılık sistemlerinde sıkça görülen yüksek faiz oranlarını ortadan kaldırarak daha uygun maliyetli kredi seçenekleri sunar. Kullanıcılar, DeFi platformları aracılığıyla istedikleri koşullarda kredi alabilirler (Gudgeon vd., 2020; Perdana vd., 2023).

- DeFi, merkeziyetsiz finansal hizmetler sunan birçok platform içerir. Bu platformlar, kullanıcıların kripto varlıklarını yönetmelerine, ticaret yapmalarına ve yatırım fırsatlarını değerlendirmelerine olanak tanır. DeFi, geleneksel finansal sistemlerin sunduğu hizmetlerin çoğunu, ancak daha düşük maliyetler ve daha fazla erişim ile sunar (Muhammad, 2024; Grassi vd., 2022).

- DeFi, finansal sistemlerde devrim niteliğinde bir değişim yaratmakta ve geleneksel finansal hizmetlerin yerine daha erişilebilir, şeffaf ve düşük maliyetli alternatifler sunmaktadır. Akıllı sözleşmelerin kullanımı, DeFi'nin temelini oluşturmakta ve kullanıcıların finansal işlemlerini güvenli bir şekilde gerçekleştirmelerine olanak tanımaktadır. DeFi'nin sunduğu fırsatlar, özellikle gelişmekte olan ülkelerde finansal kapsayıcılığı artırma potansiyeline sahiptir. Ancak DeFi'nin getirdiği yeniliklerin yanı sıra güvenlik ve düzenleyici belirsizlikler gibi zorluklar da bulunmaktadır. Bu nedenle DeFi'nin gelecekteki gelişimi, söz konusu zorlukların üstesinden gelinmesine bağlı olacaktır.

5. Blokzincir ve FinTek'in Gelecek Perspektifi

Finans sektöründe blokzincir teknolojisinin geleceği, finansal hizmetlerin daha güvenli, şeffaf ve hızlı bir şekilde sunulmasına olanak tanıyan önemli bir gelişim olarak öne çıkmaktadır. Blokzincir, merkezi otoritelerin rolünü azaltarak daha eşitlikçi ve erişilebilir bir finansal sistemin oluşmasına katkıda bulunur. Bu teknoloji, dolandırıcılık risklerini azaltarak kullanıcıların güvenini artırmakta ve finansal hizmetlere erişimi genişleterek kapsayıcılığı artırma potansiyeline sahiptir (Ololade, 2024).

FinTek sektörü, blokzincir teknolojisinin sunduğu yeniliklerden büyük ölçüde faydalanmaktadır. Blokzincir, finansal hizmetlerin otomatikleştirilmesi ve akıllı sözleşmelerin kullanılması gibi yenilikçi çözümler sunarak geleneksel finansal sistemlerin verimliliğini artırmaktadır. Bu durum, maliyetleri düşürmekte ve işlem sürelerini kısaltmaktadır. FinTek

şirketleri, blokzincir teknolojisini kullanarak daha hızlı ve güvenilir hizmetler sunmakta ve bu sayede rekabet avantajı elde etmektedir (Chen, 2024).

Blokzincir tabanlı finansal sistemler, gelecekte finansal hizmetlerin daha hızlı, güvenilir ve düşük maliyetli bir şekilde sunulmasına olanak tanıyacaktır. Bu sistemler, DeFi uygulamalarının yaygınlaşmasıyla birlikte geleneksel bankacılık sistemlerinin yerini alabilir. DeFi, kullanıcıların doğrudan birbirleriyle işlem yapmalarına olanak tanıırken finansal hizmetlerin daha erişilebilir hale gelmesini sağlamaktadır (Singh, 2024). Ayrıca blokzincir, merkezi otoritelerin kontrolünü azaltarak daha bağımsız ve şeffaf bir finansal sistemin oluşmasına katkıda bulunmaktadır.

Gelecekte DeFi ve FinTek alanındaki yeniliklerin artması beklenmektedir. Bu yenilikler, kullanıcıların finansal hizmetlere erişimini kolaylaştıracak ve daha fazla insanın finansal sistemlere katılımını sağlayacaktır. Ayrıca blokzincir tabanlı çözümler, finansal hizmetlerin daha hızlı, güvenilir ve düşük maliyetli bir şekilde sunulmasına olanak tanıyacaktır (Qiang, 2024). Bu durum, finansal sistemlerin daha kapsayıcı hale gelmesine ve daha geniş kitlelere ulaşmasına yardımcı olacaktır.

Blokzincir teknolojisinin küresel ekonomilere entegrasyonu, uluslararası ticaretin ve finansal işlemlerin daha verimli hale gelmesini sağlayacaktır. Blokzincir, sınır ötesi ödemelerin hızını artırmakta ve maliyetlerini düşürmektedir. Bu, özellikle gelişmekte olan ülkelerde finansal hizmetlere erişimi artırarak ekonomik büyümeyi destekleyecektir (Bhattacharjee vd., 2024). Ayrıca blokzincir tabanlı sistemler, uluslararası ticaretin güvenliğini artırarak dolandırıcılık ve sahtekarlık risklerini azaltmaktadır.

SONUÇ

Blokzincir teknolojisi, merkeziyetsiz yapısı ve işlemlerdeki güvenliği artıran özellikleri sayesinde, özellikle aracılarca duyulan ihtiyacı ortadan kaldırarak finansal işlemleri daha hızlı, daha güvenilir ve daha az maliyetli hale getirmiştir. Bu durum, bireyler ve küçük ve orta ölçekli işletmeler başta olmak üzere finansal hizmetlere erişimde zorluk çeken tüm kesimler için önemli fırsatlar sunmaktadır. Aynı zamanda blokzincir tabanlı finansal çözümler, veri güvenliği ve şeffaflığı artırarak dolandırıcılık ve yolsuzluk gibi sorunların önlenmesinde önemli bir rol oynamaktadır.

FinTek ise bankacılık, kredi verme, yatırım ve ödeme sistemleri gibi alanlarda devrim yaratmış ve finansal kapsayıcılığı artırmıştır. Özellikle gelişmekte olan ülkelerde, geleneksel bankacılık hizmetlerine erişimi sınırlı olan bireyler ve işletmeler için FinTek çözümleri, alternatif finansman kaynakları sağlamış ve bu sayede ekonomik kalkınmayı desteklemiştir. Doğrudan kredi sunan platformlar, dijital ödemeler ve yapay zekâ destekli finansal analizler gibi FinTek yenilikleri, hem bireyler hem de işletmeler için finansal hizmetlere erişimi hızlandırmış ve maliyetleri düşürmüştür.

Blokzincir ve FinTek teknolojilerinin entegrasyonu, finansal hizmetlerin otomasyonunu, şeffaflığını ve güvenliğini artırmış, finansal işlemlerin merkeziyetsiz bir yapıya kavuşmasına olanak tanımıştır. Kripto paralar ve DeFi uygulamaları, finansal süreçlerde geleneksel finansal araçların rolünü azaltarak bireylerin ve işletmelerin daha bağımsız hareket etmesini sağlamıştır. Bununla birlikte blokzincir ve kripto varlıkların sunduğu fırsatlar kadar, volatilité, düzenleyici belirsizlikler ve teknik altyapı sorunları gibi riskler de dikkate alınması gereken önemli unsurlardır. Bu nedenle hem bireysel kullanıcıların hem de finansal kurumların söz konusu teknolojileri benimserken bu riskleri yönetebilecek mekanizmalar geliştirmesi gerekmektedir.

Sonuçta blokzincir ve FinTek'in küresel finansal sistemler üzerindeki etkileri, kaçınılmaz bir dönüşüme işaret etmektedir. Bu teknolojilerin benimsenmesi, finansal sistemlerin daha kapsayıcı ve verimli hale gelmesini sağlayarak gelecekteki finansal hizmetlerin yapısını şekillendirecektir. Ancak bu dönüşümün sürdürülebilir ve kapsayıcı bir şekilde

gerçekleşebilmesi için düzenleyici çerçevenin ve teknik altyapının bu yeniliklere uygun olarak geliştirilmesi kritik bir gerekliliktir. Bu bakımdan blokzincir ve FinTek'in entegrasyonunun, sadece finansal hizmetlerin sunumunun değil, aynı zamanda küresel ticaretin ve ekonomik kalkınmanın da temelini oluşturacağı açıktır.

ÖZET

Dijitalleşme ve Endüstri 4.0'ın ele alındığı bu çalışmada, nesnelerin interneti (IoT), bulut bilişim, büyük veri, yapay zekâ (AI), blokzincir, kuantum bilişim, robotik ve 3D baskı teknolojileri incelenmektedir. Bu teknolojilerin entegrasyonu gerek özel gerekse kamu sektörlerinde önemli fırsatlar yaratmakta ve rekabeti de artırmaktadır. Karar alma süreçlerini hızlandıran ve üretim süreçlerini dönüştüren bu teknolojiler sayesinde, özellikle işletmelerin daha rekabetçi, çevik ve inovatif bir yapı kazandığı görülmektedir. Esasen dijital dönüşüm, söz konusu teknolojilerin işletme süreçleriyle bütünleşmesi ve bu süreçlerin yeniden yapılandırılmasını ifade etmektedir. Bu dönüşümün, yalnızca iş hayatı üzerinde değil hem ekonomik hem de sosyal yapı üzerinde önemli etkileri bulunmaktadır. Ayrıca çalışmada, söz konusu teknolojilerin benimsenmesiyle ilgili siber güvenlik riskleri ve iş gücü becerilerinin yeniden şekillendirilmesi gibi zorluklar tartışılmaktadır. Özellikle üretim ve lojistik sektörlerinde esaslı değişikliklere yol açan Endüstri 4.0, dijital dönüşüme de hız kazandırmaktadır. Esasen dijital dönüşüm, işletmelerin teknolojiden yararlanarak iş proseslerini, ürünlerini ve hizmetlerini yeniden yapılandırmasını ifade etmektedir. Bu kapsamda Endüstri 4.0, üretim proseslerine akıllı teknolojilerin entegrasyonunu kapsamaktadır. İnovatif teknolojilerin ekonomik büyümeyi harekete geçirme, rekabet dinamiklerini biçimlendirme ve yeni bir inovasyon çağına öncülük etmedeki kritik rolü dolayısıyla dijitalleşme ve Endüstri 4.0'ın derin ve dönüştürücü gücünü vurgulayan çalışma; özellikle dijital ekonomide sürdürülebilir rekabet için söz konusu teknolojilerin entegrasyonunun büyük önem taşıdığını ortaya koymaktadır.

Anahtar Kelimeler: Dijitalleşme, Dijital Dönüşüm, Endüstri 4.0, İnovasyon.

DIGITALIZATION AND INDUSTRY 4.0

ABSTRACT

In this study, which discusses digitalization and Industry 4.0, the internet of things (IoT), cloud computing, big data, artificial intelligence (AI), blockchain, quantum computing, robotics and 3D printing technologies are examined. The integration of these technologies creates significant opportunities and increases competition in both the private and public sectors. Thanks to these technologies, which accelerate decision-making processes and transform production processes, it is seen that businesses in particular have gained a more competitive, agile and innovative structure. Essentially, digital transformation refers to the integration of these technologies with business processes and the restructuring of these processes. This transformation has significant effects not only on business life but also on economic and social structure. The study also discusses challenges such as cybersecurity risks, workforce reskilling, and organizational adaptation related to the adoption of these technologies. Industry 4.0, which has led to fundamental changes particularly in manufacturing and logistics sectors, is also accelerating the

digital transformation. Essentially, digital transformation refers to the restructuring of an organization's business processes, products, and services by leveraging technology. In this context, Industry 4.0 involves the integration of smart technologies into production processes. Emphasising the transformative power of digitalisation and Industry 4.0 due to the critical role of innovative technologies in stimulating economic growth, shaping competitive dynamics and leading a new era of innovation; the study reveals that the integration of these technologies is of great importance for sustainable competition, especially in the digital economy.

Keywords: Digitalization, Digital Transformation, Industry 4.0, Innovation.

GİRİŞ

Dijitalleşme ve Endüstri 4.0, günümüz ekonomisinin temel itici güçleridir. Dijital ekonominin temelini, dijital teknolojilerin sunduğu imkânlar doğrultusunda ortaya çıkan dijital ürünler, hizmetler, süreçler ve rutinlerdeki yenilikler oluşturmaktadır (Kamble vd, 2020; Verhoef, vd., 2021). Dünya genelinde dijital ekonomiye geçiş trendine bakıldığında, piyasa değeri yüksek Apple, Microsoft, Amazon, Google gibi teknoloji devlerinin, dijital ekonomi üzerinde büyük bir etkiye sahip olduğu görülmektedir (Yaqub ve Alsabban, 2023). Bu şirketler, dijital teknolojilerle iş süreçlerini yöneten, kullanıcılarına dijital platformlar sunan, küresel ölçekte geniş kullanıcı verilerine sahip ve büyük bir pazar gücüne sahip lider firmalardır. Teknolojiye dayalı yenilikçi ürünler ve hizmetler geliştirerek geniş tüketici kitlelerine ulaşmakta ve iş modellerini sürekli olarak dönüştürmektedir. Veri odaklı yaklaşımları, tüketici davranışlarını anlamalarına ve kişiselleştirilmiş hizmetler sunmalarına olanak tanımaktadır. Topladıkları büyük miktarda veriyi analiz ederek hem mevcut pazar paylarını genişletmekte hem de gelecekteki teknolojik trendleri öngörerek yeni fırsatlar yaratmaktadır. Ayrıca bu şirketlerin çeşitli ürün ve hizmet ekosistemleri, tüketici ihtiyaçlarını geniş bir yelpazede karşılayabilme kapasitelerini artırmaktadır. Bu açıdan bakıldığında şirketlerin, rekabet ortamında varolmak ve yarıştan kopmamak için mevcut iş süreçlerini, teknolojilerini, pazarlarını dijital teknolojilere uyumlu hale getirmeleri gereklidir. Çevresel dinamizm ve karmaşık piyasa koşullarına karşı daha hızlı, verimli ve çevik bir yanıt verebilmek adına söz konusu teknolojilerin entegre edilmesi kritik bir önem taşımaktadır (Li vd., 2018).

Dijital dönüşüm, işletmelerin teknolojiyi kullanarak iş süreçlerini, ürünlerini ve hizmetlerini yeniden yapılandırmasını ifade eder. Bu bağlamda Endüstri 4.0, üretim süreçlerine akıllı teknolojilerin entegrasyonunu kapsar. Büyük veri analitiği, nesnelerin interneti (IoT), yapay zekâ (AI) ve otonom sistemler, Endüstri 4.0'ın kilit unsurlarıdır (Brisco, 2022). Endüstri 4.0, üretim ve lojistik sektörlerinde köklü değişikliklere neden olmuş ve dijital dönüşüme hız kazandırmıştır. Bu teknolojiler, üretim süreçlerini daha esnek ve verimli hale getirerek küresel ölçekte rekabet gücünü artırmaktadır. Ayrıca akıllı fabrikalar ve otonom sistemler gibi yenilikler, işletmelere operasyonel süreçlerde büyük esneklik kazandırmaktadır (Winter, 2023). Bu nedenle dijitalleşme ve Endüstri 4.0 arasındaki ilişki, sadece endüstriyel süreçlerde değil, aynı zamanda müşteri ilişkileri ve pazar dinamiklerinde de önemli dönüşümleri beraberinde getirmektedir.

1. Dijitalleşme ve Dijital Dönüşüm

Dijitalleşme, iş süreçlerinin dijital teknolojilerle otomatikleştirilmesi olarak tanımlanmıştır. Dijitalleşme, analog verilerin dijital formatlara dönüştürülmesi sonrası gelen bir aşamadır. Bu aşamada, mevcut iş süreçleri dijital araçlar kullanılarak daha verimli hale getirilir ve otomatikleştirilir (Savić, 2019).

Dijitalleşme süreci, işletmelerin vizyonlarında değişikliğe gitmelerini ve buna göre stratejilerini belirlemelerini, dolayısıyla yeniden yapılanma sürecine girmelerini gerektirmiştir. Dijital pazarlama araçlarının kullanımı da işletmelerin hedeflerine ulaşmasını hızlandırarak sağlıklı bir iletişim ağı oluşturma amacını taşımaktadır (Sert ve Sağlam, 2023). Bu bağlamda dijitalleşme,

sadece teknolojik bir dönüşüm olmayıp aynı zamanda işletmelerin iş yapma biçimlerini de köklü bir şekilde değiştiren bir süreci temsil etmiştir.

Dijitalleşmenin etkileri, sadece pazarlama alanında değil, aynı zamanda tüm iş süreçlerinde gözlemlenmektedir. Dijitalleşmenin birçok alanda gerekli hale geldiği; bireysel yaşamdan endüstriye kadar geniş bir etki alanına sahip olduğu vurgulamaktadır (Cihan, 2021). Bu durum, dijitalleşmenin sadece bir teknoloji meselesi değil, aynı zamanda sosyal ve ekonomik bir dönüşüm olduğunu göstermektedir. Ayrıca dijitalleşmenin, işletmelerin iş yapısını değiştirdiği ve her işletmenin artık bir teknoloji şirketi olarak konumlanması gerektiği ifade edilmektedir (Erdoğan, 2023). Bu değişim, dijitalleşmenin işletmelerin rekabet gücünü artırma potansiyelini de beraberinde getirmektedir.

Dijitalleşme süreci, aynı zamanda eğitim alanında da önemli değişikliklere yol açmıştır. Ancak dijital okuryazarlık üzerine odaklanıldığı ve dijitalleşmenin eğitimdeki okuryazarlık kavramını evrimsel bir dönüşüme tabi tuttuğu belirtilmektedir (Güven ve İbaçoğlu, 2023). Bu bağlamda dijital okuryazarlık, bireylerin dijital içerikleri anlama ve değerlendirme becerilerini geliştirmelerini sağlamaktadır. Dolayısıyla dijitalleşme, bireylerin bilgiye erişim biçimlerini ve söz konusu bilgiyi kullanma kabiliyetlerini de dönüştürmektedir.

Dijital dönüşüm ise dijital teknolojilerin işletme süreçlerine entegre edilmesi ve söz konusu süreçlerin yeniden yapılandırılması manasına gelmektedir. Yenilikçiliği, rekabet gücünü ve verimliliği artırarak ekonomik büyüme fırsatları sunan dijital dönüşüm (Türkyılmaz, 2024), işletmelerin sadece teknolojik altyapılarını değil, aynı zamanda iş modellerini ve organizasyonel struktürünü de değiştirmelerini gerektirmektedir. Dijital dönüşüm, işletmelerin daha çevik, yenilikçi ve müşteri odaklı hale gelmelerini sağlamaktadır. Kısaca dijitalleşme, bir işletmenin temel süreçlerini dönüştürürken; dijital dönüşüm de organizasyon kültürünü ve iş modelini köklü bir şekilde değiştirmektedir (Savić, 2019).

Dijital dönüşümün etkileri, Covid-19 pandemisi ile daha da belirgin hale gelmiştir. Söz konusu pandemi, dijital dönüşüm sürecini hızlandırmış ve birçok sektörde dijitalleşmenin kaçınılmaz hale geldiğini ortaya koymuştur (Cihan, 2021). Bu durum, işletmelerin dijital platformlara geçiş yapmalarını ve çevrimiçi hizmet sunma kabiliyetlerini geliştirmelerini zorunlu kılmıştır. Endüstri 4.0'ın, özellikle lojistik sektörüne etkilerini inceleyen çalışmalarda, dijital dönüşümün sektörel bazda nasıl bir değişim yarattığı ortaya konulmuştur (Mercimek ve Geçkil, 2021). Bu bağlamda dijital dönüşüm, yalnızca bir teknoloji entegrasyonu değil, aynı zamanda iş süreçlerinin yeniden tasarlanması anlamına gelmektedir.

Dijital dönüşüm, aynı zamanda organizasyonel inovasyonu da teşvik etmektedir. Dijital dönüşümün organizasyonel inovasyona etkileri analiz edildiğinde; bu sürecin işletmelerin yenilikçilik kapasitelerini artırdığı görülmektedir (Şahin, 2023). Bu durum, dijital dönüşümün kültürel ve organizasyonel bir dönüşüm olduğunu da ortaya koymakta ve dolayısıyla dijital dönüşüm sürecinde işletmeler, çalışanlarının yetkinliklerini artırmak ve yeni iş modelleri geliştirmek için çeşitli stratejiler benimsemektedir.

Sonuçta dijitalleşme ve dijital dönüşüm, günümüz iş dünyasında ve toplumsal yaşamda önemli kavramlar olarak öne çıkmaktadır. Söz konusu kavramlar, işletmelerin ve bireylerin bilgiye erişim biçimlerini, iş yapma yöntemlerini ve toplumsal etkileşimlerini köklü bir şekilde değiştirmektedir. Dijitalleşme, teknolojik bir dönüşüm süreci iken; dijital dönüşüm, bu teknolojilerin işletme süreçlerine entegrasyonu ve yeniden yapılandırılması anlamına gelmektedir. Her iki kavram da rekabet gücünü artırmak ve sürdürülebilir büyümeyi gerçekleştirmek için kritik önem taşımaktadır.

2. Endüstri 4.0

Klaus Schwab ile gündeme taşınan Endüstri 4.0 kavramı, ileri dijital, fiziksel ve biyolojik teknolojilerin entegrasyonu ile sanayi evriminde yeni bir aşamayı temsil etmekte ve bu da içinde bulunduğumuz dönemde endüstriler, ekonomiler ve toplum üzerinde dönüşümsel

değişimlere yol açmaktadır (Schwab, 2017). Yüksek düzeyde teknolojik gelişimi ve dönüşümü kapsamı sebebiyle de Endüstri 4.0, inovasyonla yakın ilişki içindedir (Doğan, 2022).

Schwab'a göre; nesnelerin interneti, büyük veri, yapay zekâ gibi bazı teknolojiler, Endüstri 4.0'ın ön saflarında yer alsa da tüm teknolojiler birbirini tamamlayan bir yapıda çalıştığı için hepsi aynı derecede önemli ve dönüşüm sürecinde birbirine bağlıdır. Endüstri 4.0, teknolojilerin tümünün bir araya gelmesiyle mümkün olur ve bu teknolojiler, iş yapış biçimlerinden günlük hayata kadar birçok alanı derinden dönüştürmeye adaydır. Schwab'ın perspektifinden bu dönüşümün yenilikçi teknolojileri şunlardır (Schwab, 2017):

- Nesnelerin İnterneti ve Bulut Bilişim: Schwab'a göre; Endüstri 4.0'ın temelini, altyapı teknolojileri oluşturur. Nesnelerin interneti, makinelerin ve cihazların birbirleriyle bağlantılı olduğu ve sürekli veri ürettiği bir ortam sağlar. Bulut bilişim ise söz konusu verilerin işlenmesi, saklanması ve paylaşılması için gerekli altyapıyı sunar. Bu teknolojiler, tüm dijital dönüşüm süreçlerinin üzerinde çalıştığı temeli oluşturur.

- Büyük Veri ve Yapay Zekâ: Schwab, büyük verinin ve yapay zekânın, Endüstri 4.0'ın kritik unsurları olduğunu vurgulamaktadır. Büyük veri, IoT cihazlarından ve diğer kaynaklardan toplanan verilerin anlamlandırılması için gereklidir. Yapay zekâ ise bu verileri analiz ederek karar alma süreçlerini hızlandırır, öngörüler sunar ve operasyonları optimize eder.

- Robotik ve 3D Baskı: Schwab, otomasyonun ve gelişmiş üretim tekniklerinin Endüstri 4.0'ın merkezinde olduğunu ifade etmektedir. Robotik sistemler, üretim süreçlerinde insan gücüne duyulan ihtiyacı azaltır ve verimliliği artırır. 3D baskı gibi yeni üretim teknolojileri ise ürünlerin kişiselleştirilmesini ve daha esnek üretim süreçlerini mümkün kılar.

- Blokzincir ve Siber Güvenlik: Schwab, dijitalleşmenin getirdiği güvenlik sorunlarına da dikkat çekmektedir. Blokzincir teknolojisi, özellikle veri güvenliği ve tedarik zincirlerinin izlenebilirliği açısından önemli bir rol oynarken; siber güvenlik, Endüstri 4.0'ın dijital altyapılarının korunmasını sağlamaktadır.

- Kuantum Bilişim: Schwab, kuantum bilişim gibi ileri teknolojilerin Endüstri 4.0'ın gelecekteki evriminde büyük bir etki yaratacağını ifade etmektedir. Bu teknoloji, karmaşık hesaplamaları çok daha hızlı ve etkili bir şekilde yapma potansiyeline sahiptir.

Endüstri 4.0, esasen inovasyon tabanlı bir ekonomiye doğru kaymayı da temsil etmektedir (Doğan, 2023). Söz konusu yaklaşım Endüstri 4.0 vizyonunda her teknolojinin birbirini nasıl desteklediğini ve dijitalleşme sürecini nasıl hızlandığını açık bir şekilde ortaya koymaktadır. Her bir teknoloji diğerini güçlendirmekte ve bu sayede daha verimli, esnek ve akıllı bir üretim ekosistemi yaratılmaktadır (Schwab, 2017).

2.1. Nesnelerin İnterneti (IoT)

Nesnelerin İnterneti (IoT), fiziksel ve dijital dünyaların bir araya geldiği devrim niteliğinde bir teknolojidir. IoT, çeşitli alanlarda (üretim, sağlık, enerji, otomotiv vb.) kullanılan cihazların çeşitlenmesi ile birlikte söz konusu cihazlardan gönderilen ve alınan verilerin analiz edilmesi ve işlenmesinin önem kazandığını göstermektedir. IoT cihazları, çevrimiçi ortamlarda güvenli bir şekilde depolanması gereken veriler toplamakta ve söz konusu veriler, bulut ortamlarında güvenli bir şekilde saklanmaktadır (Jeong, 2021).

IoT; insanların, hizmetlerin, sensörlerin ve nesnelerin yaygın bağlantısını sağlarken akıllı şebekelerden sağlık hizmetlerine kadar geniş bir uygulama yelpazesine sahiptir. Bu durum, IoT alanında büyük iş fırsatları yaratmakta ve akıllı cihazların sayısını artırarak, IoT ağlarında sunulan akıllı ve otonom hizmetlerin çeşitliliğini artırmaktadır (Conti vd., 2018). Bununla birlikte IoT cihazlarının güvenliği, artan saldırı yüzeyle nedeniyle önemli bir endişe kaynağı haline gelmiştir. Örneğin, 2017'de 10.3 milyon olan IoT kötü amaçlı yazılım saldırı sayısının 2018'de 32.7 milyona çıktığı ifade edilmiştir (Injadat vd., 2020).

IoT'nin başarısı, cihazların birbirleriyle etkileşim kurabilmesi için gerekli olan standartların ve protokollerin geliştirilmesine bağlıdır (Gill vd., 2017). Farklı IoT platformları, kendi cihaz

tanımlama sistemlerine dayanarak geliştirildiğinden, heterojen IoT platformları arasında cihaz tanımlamanın zor olduğu belirtilmektedir (Koo vd., 2019). Bu nedenle IoT uygulamalarının geliştirilmesi için cihazların tanımlanması ve entegrasyonu konularında yenilikçi çözümler gerekmektedir (Dawod vd., 2022).

Sonuçta IoT, fiziksel nesnelerin çevrimiçi olarak veri oluşturmasını, almasını ve değiş tokuş etmesini sağlayan bir iletişim devrimidir (Hassija vd., 2019). Ancak bu teknolojinin sunduğu fırsatların yanı sıra güvenlik ve veri kalitesiyle ilgili riskler de bulunmaktadır. Bu nedenle IoT'nin gelecekteki gelişimi için güvenli ve ölçeklenebilir bir altyapının oluşturulması kritik öneme sahiptir (Sicari vd., 2016).

2.2. Bulut Bilişim (Cloud Computing)

Bulut Bilişim, kullanıcılara internet üzerinden veri depolama, uygulama geliştirme ve işleme gücü gibi kaynakları sunan bir hizmet modelidir. Bu model, kullanıcıların fiziksel sunucu ve donanım altyapısı satın almak yerine, ihtiyaç duydukları kaynakları talep ettiklerinde kullanmalarına olanak tanır. Bulut Bilişim, üç ana hizmet modelinde sunulur. Bunlar: IaaS (Hizmet Olarak Altyapı), PaaS (Hizmet Olarak Platform) ve SaaS (Hizmet Olarak Yazılım). Bu esnek yapı, kullanıcıların iş yüküne bağlı olarak kaynakları artırıp azaltabilmelerini ve maliyet etkinliğini sağlamaktadır (William ve Mothukuri, 2023).

Bulut Bilişim modelinde, verilerin merkezi sunucularda depolanarak kullanıcılara internet üzerinden sağlanmasına ve şirketlerin büyük maliyetlerden kaçınarak daha esnek ve ölçeklenebilir çözümler kullanmasına olanak tanır. Özellikle büyük ölçekli verilerin işlenmesi ve paylaşılması gerektiğinde bulut bilişim, işletmelere esneklik, maliyet avantajı ve güvenli veri yönetimi sağlar. Bulut bilişimle işletmeler, pahalı donanımlara yatırım yapmak zorunda kalmadan, talep üzerine gereken işlem ve depolama gücünü kiralayabilir (Zhang, vd., 2014).

Bulut Bilişim, dijitalleşme sürecinde büyük bir dönüştürücü güç olarak tanımlanır. Şirketler, bulut bilişim sayesinde daha hızlı uygulama geliştirebilir, veri depolama maliyetlerini düşürebilir ve esnek bir çalışma ortamı yaratabilir. Aynı zamanda Bulut Bilişim, dijital dönüşümün temel unsurlarından biridir. Çünkü işletmelere veri yönetimi, güvenlik ve iş sürekliliği gibi alanlarda büyük avantajlar sağlar. Ayrıca Bulut Bilişim sayesinde şirketler, dünyanın her yerinden çalışanlarını bir araya getirip işbirliği yapabilir ve bu da iş süreçlerinin daha verimli hale gelmesini sağlar (William ve Mothukuri, 2023). Özellikle büyük veri ve dijital kütüphaneler gibi büyük veri kümelerinin yönetiminde, bulut bilişim daha hızlı ve daha güvenilir veri işleme imkânı sağlar. Dijital kütüphanelerde bulut bilişim, veri depolama ve yüksek performanslı işlem gücü sağlayarak kullanıcıların veriye oldukça kolay erişmesine olanak tanır (Zhang vd., 2014).

2.3. Büyük Veri (Big Data)

Büyük Veri, genellikle büyük hacimli çeşitli veri türlerinden oluşan ve geleneksel veri işleme yöntemleriyle analiz edilmesi zor olan veri kümelerini ifade eder. Büyük Veri'nin işlenmesi, veri analitiği ile mümkündür ve bu da özellikle hızla artan veri miktarları ile başa çıkmak için gereklidir. Büyük Veri Analitiği, şirketlere veri içgörülerini sağlayarak stratejik karar alma süreçlerini iyileştirir ve iş süreçlerini daha verimli hale getirir. Büyük Veri, sağlık, finans ve iş dünyası gibi birçok sektörde önemli uygulama alanları bulmuştur (Jawad ve Al-Bakry, 2023). Büyük Veri Analitiği, dijitalleşme sürecini hızlandırarak iş süreçlerinin daha verimli, doğru ve hızlı olmasını sağlamaktadır. Verilerden elde edilen içgörüler sayesinde işletmeler, daha bilinçli kararlar alabilmekte ve müşterilerine kişiselleştirilmiş hizmetler sunabilmektedir. Dijital ortamda üretilen verilerin yönetimi ve analizinin, iş dünyasında rekabet avantajı sağlaması nedeniyle de Büyük Veri, dijital dönüşümde önemli bir rol oynamaktadır.

2.4. Yapay Zekâ (AI)

Yapay Zekâ (AI), makineler ve özellikle bilgisayar sistemleri tarafından insan zekâsı süreçlerinin simülasyonunu ifade eder; bu da onların öğrenme, akıl yürütme ve problem çözme gibi tipik olarak insan bilişini gerektiren görevleri yerine getirmelerini sağlar (Veselovsky vd., 2021). Ekonomi ve teknoloji bağlamında AI, işletmelerde büyük miktarda veriyi analiz ederek ve karmaşık süreçleri otomatikleştirerek operasyonel verimliliği ve karar verme kabiliyetlerini artırır; böylece yeniliği ve ekonomik büyümeyi teşvik eder (Gomes vd., 2020).

AI, Endüstri 4.0 çerçevesinde, üretim süreçlerinin dijitalleşmesi ve otomasyonu için kritik bir rol oynamaktadır. Endüstri 4.0, nesnelerin interneti, büyük veri, bulut bilişim ve yapay zekâ gibi teknolojilerin entegrasyonunu içermekte ve bu entegrasyon, endüstriyel süreçlerin daha verimli hale gelmesini sağlamaktadır (Mungoli, 2023). AI, üretim süreçlerinde maliyetleri azaltma, niteliği artırma ve operasyonel verimliliği sağlama gibi avantajlar sunmaktadır (Hoffmann vd., 2021). Bu bağlamda AI'nın entegrasyonu, işletmelerin rekabetçiliklerini artırmalarına yardımcı olmaktadır (Li vd., 2021). Bununla birlikte yapay zekâ uygulamalarının başarılı bir şekilde hayata geçirilmesi için çalışanların yeni teknolojilere uyum sağlaması ve gerekli eğitimlerin verilmesi önemlidir (Hoffmann vd., 2021). Ayrıca yapay zekâ sistemlerinin etik kullanımı ve güvenliği de Endüstri 4.0'ın önemli bir parçasıdır (Li vd., 2021). Sonuçta yapay zekâ, Endüstri 4.0'ın temel bileşenlerinden biri olarak, üretim süreçlerini dönüştürmekte ve yeni iş modellerinin ortaya çıkmasına katkıda bulunmaktadır.

2.5. Robotik ve 3D Baskı

Robotik, esasen süreçleri otomatikleştirme ve çeşitli sektörlerde verimliliği artırma yoluyla operasyonel süreçlerin verimliliğinde ve maliyetleri düşürmede önemli iyileştirmeler sağlamaktadır. Robotik sistemlerin üretime entegrasyonu, üretimi kolaylaştırmanın yanı sıra yeniliği teşvik ederek şirketlerin hızla gelişen teknolojik ortamda rekabetçi kalmalarını sağlamaktadır (Bogue, 2014).

3D Baskı, dijital modellerden doğrudan karmaşık ve özelleştirilmiş ürünlerin hızlı bir şekilde üretilmesini sağlayan Endüstri 4.0 içindeki dönüştürücü bir teknolojidir. Bu teknoloji, üretimde esnekliği artırmakta, teslimat sürelerini kısaltmakta ve maliyetleri düşürmektedir. Böylece modern endüstriyel uygulamalarda yenilik ve verimlilik için temel bir bileşen haline gelmektedir (Liu, 2024).

Robotik sistemlerin otomasyon kabiliyetleri, üretim süreçlerini optimize etmekte ve iş gücü maliyetlerini düşürmektedir. Diğer taraftan 3D baskı teknolojisi, üretim süreçlerinde yenilikçi bir yaklaşım sunarak özelleştirilmiş ürünlerin hızlı ve maliyet etkin bir şekilde üretilmesine imkân tanımaktadır.

2.6. Blokzincir ve Siber Güvenlik

Blokzincir, merkezi olmayan bir kayıt defteridir ve bloklar halinde kaydedilen işlemler, blokların zincirleme bir şekilde bağlanmasıyla korunur. Blokzincir teknolojisi, özellikle güvenlik, şeffaflık, veri değişmezliği ve merkeziyetsiz yapı sunarak mevcut sistemlere alternatif çözümler sunar. Bu teknoloji, üçüncü taraf bir otoriteye ihtiyaç duymadan işlemlerin doğrulanmasını sağlayan bir sistem olarak, finans, tedarik zinciri yönetimi, sağlık hizmetleri ve bulut bilişim gibi birçok farklı alanda kullanılmaktadır (Sharma vd., 2021). Blokzincir teknolojisinin dijital dönüşüme etkisi, özellikle bu sistemin sunduğu güvenlik ve şeffaflık özellikleri sayesinde büyük ölçüde hissedilmektedir. Blokzincir, birçok endüstride araçlara olan ihtiyacı ortadan kaldırarak maliyetleri düşürmekte ve işlemleri hızlandırmaktadır. Örneğin, sağlık alanında hasta kayıtlarının güvenli bir şekilde saklanması ve paylaşılması; tedarik zinciri alanında ise ürünlerin izlenebilirliği ve doğrulanması sağlanmaktadır.

Blokzincir; güvenliği, şeffaflığı ve verimliliği çeşitli sektörlerde, özellikle Endüstri 4.0 bağlamında artıran dönüştürücü bir teknoloji olarak karşımıza çıkmaktadır. Kritik altyapılarda blokzincir uygulayarak organizasyonlar siber saldırılara karşı dayanıklılıklarını önemli ölçüde artırabilirken; operasyonel verimliliklerini ve şeffaflıklarını da artırabilirler (Govea, 2024). Ayrıca blokzincir teknolojisi, veri ihlalleri ve siber tehditler hususunda artan endişeleri ele almak için özellikle bulut platformlarında veri depolama ve güvenlik için bir çözüm olarak araştırılmaktadır (Mathew, 2019).

Siber güvenlik, hassas verileri korumak ve çeşitli uygulamalarda güvenlik önlemlerini artırmak için giderek daha fazla blokzincir teknolojisine bağımlı hale gelmektedir. Blokzincirin siber güvenlik altyapılarına entegrasyonu, siber saldırılara karşı sağlam bir koruma sağlamakta ve siber-fiziksel sistemlerde veri bütünlüğünü ve gizliliği garanti etmektedir (Deng vd., 2023). Ayrıca blokzincirin merkeziyetsiz yapısı, geleneksel merkezi sistemlere göre önemli avantajlar sunarak Endüstri 4.0 bağlamında siber tehditlere karşı devam eden mücadelede değerli bir varlık haline gelmektedir (Lee ve Kim, 2022).

2.7. Kuantum Bilişim

Kuantum Bilişim, klasik bilgisayarların çözemediği veya çok uzun sürede çözeceği karmaşık hesaplamaları gerçekleştirmek için kuantum mekaniğinin ilkelerini kullanır. Kuantum Bilişim, süperpozisyon ve dolanıklık gibi kuantum mekanik özellikler sayesinde aynı anda birçok hesaplamayı eşzamanlı olarak yapabilir. Bu teknolojinin, özellikle Endüstri 4.0 kapsamında üretim süreçlerinde verimliliği artırma, daha hızlı ve hassas ürün tasarımı, molekül ve materyal simülasyonu gibi uygulamalarda devrim yaratma potansiyeli olduğu belirtilmektedir. Endüstri 4.0 ve dijitalleşme bağlamında Kuantum Bilişim, tedarik zinciri yönetimi, kaynak tahsisi ve üretim süreçlerinin optimizasyonu gibi alanlarda önemli avantajlar sunmaktadır. Özellikle kuantum bilgisayarlar, üretimde daha az atık ve daha etkili kaynak kullanımı sağlayarak işletmelerin verimliliğini artırmaktadır. Ayrıca malzeme simülasyonları ile yeni ve geliştirilmiş malzemeler yaratılabilmektedir ve bu da endüstriyel ürünlerin performansını artırmaktadır. Bunun yanı sıra makine öğrenimi algoritmalarını iyileştirerek daha doğru tahminler ve daha iyi karar alma süreçleri sağlamaktadır (Umbrello, 2024).

SONUÇ

Endüstri 4.0 ve dijitalleşme üzerine yapılan analizler, dijital teknolojilerin modern ekonomiye yön vermede merkezi bir rol oynadığını ortaya koymaktadır. Dijitalleşme, şirketlerin iş süreçlerini optimize etmelerini, maliyetleri azaltmalarını ve müşteri taleplerine daha hızlı yanıt vermelerini sağlamaktadır. Diğer yandan Endüstri 4.0'ın ileri teknolojileri, bu süreçlerin daha verimli ve esnek hale gelmesini mümkün kılmaktadır. Söz konusu teknolojilerin entegrasyonu hem özel sektör hem de kamu sektöründe büyük fırsatlar yaratırken rekabeti de artırmaktadır. Büyük veri, yapay zekâ ve nesnelerin interneti gibi teknolojiler, karar alma süreçlerini hızlandırırken; robotik ve 3D baskı gibi otomasyon araçları, üretim süreçlerini dönüştürmektedir. Bu dijital araçların, işletmelere daha rekabetçi, çevik ve yenilikçi bir yapı kazandırdığı görülmektedir.

Söz konusu dönüşüm sadece iş dünyasını etkilemekle kalmamış, sosyal ve ekonomik yapılar üzerinde de büyük bir etki yaratmıştır. İş süreçlerinin dijitalleşmesi, iş gücünde yeni yetkinlikler gerektirmiş, bu da eğitim ve beceri geliştirme alanlarında önemli değişikliklere yol açmıştır. Dijitalleşmenin sosyal etkileri de göz önüne alındığında, gelecekte daha fazla işletmenin dijital dönüşüme uyum sağlayacağı ve bu sürecin hızlanacağı öngörülmektedir.

Sonuç olarak dijitalleşme ve Endüstri 4.0, küresel rekabet gücünü artıran, ekonomik büyümeyi hızlandıran ve iş dünyasının dinamiklerini dönüştüren kritik unsurlar haline gelmiştir. Bu teknolojilerin benimsenmesi hem özel sektörde hem de kamu sektöründe verimliliği artırmak ve inovasyonu teşvik etmek için hayati önem taşımaktadır.

ÖZET

Modern yaşamın vazgeçilmez bir parçası haline gelen dijital teknolojiler iletişim, eğitim, sağlık, ekonomi ve finans gibi birçok alanda iş süreçlerini dönüştürmüştür. Ancak günümüzde herkes dijital teknolojileri aynı seviyede kullanamamaktadır başka bir deyişle dijital eşitsizlikler bulunmaktadır. Birleşmiş Milletler'in bilgi ve iletişim teknolojileri (BİT) konusunda uzmanlaşmış bir kuruluşu olarak Uluslararası Telekomünikasyon Birliği (UTB) ülkeler arasındaki dijital uçurumu yok etmek amacıyla dijital teknolojilere erişimi iyileştirmek ve dijital bağlantıyı herkese ulaştırmak için çalışmaktadır. Bu doğrultuda bünyesindeki ülkere ait evrensel bağlanabilirlik ve anlamlı bağlanabilirlik göstergelerini dikkate alarak dijital gelişimin ölçülmesine yönelik bilgi ve iletişim teknolojileri gelişim endeksi verilerini raporlamaktadır. Bu çalışmada UTB tarafından yayınlanan 2024 yılına ait bilgi ve iletişim teknolojileri gelişim endeksi veri seti kullanılarak ülkelerin bölge ve gelir grubundaki kategorik değişkenlerinin bilgi ve iletişim teknolojileri gelişim endeksi düzeyine etkisi kategorik regresyon analizi kullanılarak incelenmiştir. BİT gelişim endeksini ölçmek için kurulan kategorik regresyon modelinin istatistiksel olarak anlamlı olduğu bulunmuştur. Bölge ve gelir grubundaki değişkenlerin BİT gelişim endeksi seviyesinin %66'sını ($R^2 = 0,664$) açıkladığı görülmüştür. Analiz sonucunda elde edilen sonuçlarda Afrika bölgesindeki ülkelerin BİT gelişim endeksi seviyelerinin negatif yönde -0,68 birim değer aldığı, Avrupa ülkelerinin ise pozitif yönde 0,41 birim değer aldığı tespit edilmiştir. Gelir grubunda ise yüksek gelir kategorisinin BİT gelişim endeksi seviyesini pozitif yönde 0,72 birim etkilediği bulunmuştur.

Anahtar Kelimeler: Dijital Gelişim, Bilgi ve İletişim Teknolojileri, Kategorik Regresyon Analizi

ABSTRACT

Digital technologies, which have become an essential part of modern life, have transformed business processes in many areas such as communication, education, health, economy and finance. However, today not everyone can use digital technologies at the same level, in other words, there are digital inequalities. As a specialized organization of the United Nations in information and communication technologies (ICT), the International Telecommunication Union (ITU) works to improve access to digital technologies to eliminate the digital divide between countries and bring digital connectivity to all. In this direction, it reports information and communication technologies development index data to measure digital development by taking into account the universal connectivity and meaningful connectivity indicators of the countries within its scope. In this study, the effect of categorical variables in the region and income group of countries on the level of information and communication technologies development index is analyzed using categorical regression analysis by using the information

and communication technologies development index data set for 2024 published by ITU. The categorical regression model established to measure the ICT development index was found to be statistically significant. It was observed that the variables in the region and income group explained 66% ($R^2 = 0.664$) of the ICT development index level. In the results obtained as a result of the analysis, it was determined that the ICT development index levels of the countries in the African region took a value of -0.68 units in the negatively, while European countries took a value of 0.41 units in the positively. In the income group, it was found that the high income category positively affected the level of ICT development index by 0.72 units.

Keywords: Digital Development, Information and Communication Technologies, Categorical Regression Analysis

GİRİŞ

İnternet teknolojisi, iletişim, eğlence veya iş süreçleri gibi birçok konuda farklı biçimleri beraberinde getirerek gündelik yaşamın vazgeçilmez bir parçası haline gelmiştir. Günümüzde küresel nüfusun üçte ikisi internet kullanıyor olsa da ülkeler arasında sosyal ve ekonomik eşitsizlikler devam etmektedir (ITU, 2023). Nitekim bu durumun bir yansıması olarak dijital eşitsizlik sorunu karşımıza gelmektedir.

Eşitsizlikler artık yalnızca ırk ve cinsiyet üzerinden değil gelişmiş teknolojilere erişim ve bu teknolojilere sahip olma bağlamında da ele alınmaktadır. Dijital eşitsizlik kavramı zengin ve fakir ülkeler arasındaki küresel çapta bilgiye erişim olanakları ve ekonomik fırsatlar açısından eşitsizliğin artmasıyla zamanla belirginleşen dijital uçurumun bir sonucu olarak gösterilebilir (Kalaycı, 2023: 44). Birleşmiş Milletler'in bilgi ve iletişim teknolojileri (BİT) konusunda uzmanlaşmış bir kuruluşu olarak Uluslararası Telekomünikasyon Birliği (UTB) ülkelerin evrensel ve anlamlı bağlanabilirlik göstergelerini merkeze alarak dijital gelişimin ölçülmesine yönelik BİT gelişim endeksi verilerini raporlamaktadır. Bu doğrultuda dijital eşitsizlikleri yok etmeye yönelik hamlelerin yapılmasını sağlayarak tüm bireylerin uygun bir maliyetle, güvenli, tatmin edici, zenginleştirici veya üretken bir biçimde çevrimiçi deneyime kavuşturmayı amaçlamaktadır (ITU, 2023). UTB tarafından yayınlanan 2024 yılına ait ülkelerin BİT gelişim endeksi raporundaki veriler bu araştırmanın veri setini oluşturmuştur. Ülkelerin bölge ve gelir grubundaki kategorik değişkenlerinin BİT gelişim endeksi düzeyinde ne derece etkili oldukları kategorik regresyon analizi yöntemiyle araştırılmıştır. Böylelikle, ülkelerin bölge ve gelir gruplarına göre dijitalleşme seviyesindeki farklılıklar tespit edilebilir ve dijitalleşme sürecinde geri kalmış olan bölge veya gelir gruplarının neden geride kaldığı üzerine çıkarımlar yapılabilir. Ayrıca, bu farklılıkların giderilmesine yönelik stratejiler geliştirilebilir ve dijitalleşme sürecinin daha kapsayıcı bir biçimde ilerlemesi sağlanabilir.

ARAŞTIRMA VE BULGULAR

Araştırmanın amacı, veri seti, yöntemi ve bulguları bu bölümde sunulmuştur.

Araştırmanın Amacı

Araştırmada UTB tarafından ülkelerin bilgi ve iletişim teknolojilerindeki gelişmişlik düzeyini ölçen bir endeks olarak yayınlanan 2024 yılına ait BİT gelişim endeksi veri seti kullanılarak ülkelerin bölge ve gelir grubundaki kategorik değişkenlerinin bu endeks düzeyine etkisini tespit etmek amaçlanmıştır.

Araştırmanın Veri Seti

Bu çalışmada UTB tarafından yayınlanan 2024 yılına ait bilgi ve iletişim teknolojileri gelişim endeksi veri seti kullanılmıştır. Veri setinde Birleşmiş Milletlere üye olan 170 ülke'ye ait bölge, gelir grubu ve BİT gelişim endeksi değişkenleri yer almaktadır. Bölge değişkeni içerisinde Afrika (Africa), Amerikalılar (Americas), Arap Ülkeleri (Arab States), Asya- Pasifik Bölgesi (Asia-Pacific), Bağımsız Devletler Topluluğu (Commonwealth of Independent States) ve Avrupa (Europe) olmak üzere altı tane kategori bulunmaktadır. Gelir grubu değişkeni içerisinde

ise düşük gelirli (low-income), alt-orta gelirli (lower-middle-income), üst- orta gelirli (upper-middle-income) ve yüksek gelirli (high-income) olmak üzere dört kategori bulunmaktadır. Ülkelerin BİT gelişim endeksi seviyesi evrensel bağlanabilirlik ve anlamlı bağlanabilirlik adı verilen göstergelerin ortalaması alınarak elde edilmiştir. Evrensel bağlanabilirlik göstergeleri, internet kullanan kişiler (%), evde internet erişimi olan haneler (%) ve her 100 kişi başına mobil genişbant aboneliğini ifade etmektedir ve bu göstergelerin ortalaması alınarak hesaplanmıştır. Anlamlı bağlanabilirlik göstergeleri ise 3G ve 4G/LTE (Long Term Evolution- Uzun Dönem Evrim) kapsama alanı, abonelik başına mobil genişbant internet trafiği (GB), abonelik başına sabit genişbant internet trafiği (GB), mobil veri ve ses yüksek tüketim sepeti fiyatı (kişi başına GSMH'nin %'si olarak), sabit genişbant internet sepet fiyatı (kişi başına GSMH'nin %'si olarak), cep telefonu sahibi olan bireyler (%)’i ifade etmektedir ve bu göstergelerin ortalaması alınarak hesaplanmıştır.

Araştırmanın Yöntemi

Çalışma kapsamında söz konusu seti kullanılarak ülkelerin bölge ve gelir grubundaki kategorik değişkenlerinin bilgi ve iletişim teknolojileri gelişim endeksi düzeyine etkisini tespit etmek için optimal ölçeklemeye dayalı kategorik regresyon analizi kullanılmıştır.

Temelleri 1973 yılında Andrews ve Messenger tarafından çok değişkenli nominal ölçek analizi çalışmasıyla atılan ve ilk olarak 1976 yılında Bemnordt ve Kinnear tarafından pazarlama araştırmaları çalışmasında kullanılan kategorik regresyon analizi nümerik değerlere sahip olan bağımlı değişken üzerinde kategorik değerlere sahip olan bağımsız değişkenlerin hangi düzeyde etkili olduğunu tespit etmek için kullanılan bir modeldir (Bacaksız, 2021: 25; Cengiz, 2008:193).

Kategorik regresyon modelleri, çok değişkenli kategorik veri analizi için optimal ölçekleme gibi gelişmiş istatistiksel teknikleri içeren nispeten karmaşık ve sofistike modeller olsa da, bu modeli kullanmak yordayıcı değişkenlerin normallik varsayımını esnetmesi veya her bir faktör seviyesi kombinasyonu için örneklem büyüklüğünün çok fazla olmasını gerektirmemesi gibi avantajlar sağlamaktadır (Shrestha, 2009: 206).

Yapılmak istenen analizde birçok belirleyici (bağımsız değişken) kategorik olduğunda sıradan doğrusal regresyon uygulanamamaktadır. Geleneksel doğrusal regresyonu uygulamak için genellikle kukla ikili değişkenlerin tasarlanması gerekmektedir, ancak bu durumda sonuçların yorumlanması zor olabilmektedir. Bu kategorik değişkenlere sayısal değerler atamak ve nihai regresyon formülünü elde etmek için kategorik regresyon analizi yaklaşımını kullanmak daha uygundur (Xu ve diğerleri, 2010).

Kategorik regresyon, nominal, sıralı ve sayısal değişkenleri eşzamanlı olarak ölçeklendirerek standart yaklaşımı genişletir. Bu yöntem kategorik değişkenleri sayısallaştırır böylece nicelikler orijinal kategorilerin özelliklerini yansıtır. Bir başka ifadeyle optimal ölçekleme yöntemini kullanarak kategorilere sayısal değerler atayan kategorik regresyon, kategorik verileri ölçek ve dönüştürülmüş değişkenler için optimal bir doğrusal regresyon denklemi oluşturur. Böylelikle değişkenlerin çeşitli düzeylerde analiz edilmesine imkân verir (Shrestha, 2009: 207).

Araştırma modelinin bağımlı değişkeni BİT gelişim endeksi seviyesi ile bağımsız değişkenleri bölge ve gelir grubu değişkenlerinin kategorileri de bu yöntemle sayısallaştırılmıştır.

Bulgular

Modelin bağımlı değişkeni BİT gelişim endeksi seviyesi ile bağımsız değişkenleri bölge ve gelir grubu değişkenleri arasındaki ilişkiler IBM SPSS Statistic (Versiyon 26) programındaki CATREG analizi kullanılarak incelenmiştir. 170 ülkeye ait veri seti üzerinde yapılan analiz sonucunda geçerli aktif gözlem sayısı (active cases) 163 olarak bulunmuştur hesaplamalar 163 ülke üzerinden yapılmıştır.

Kategorik Regresyon Modelinin İstatistiksel Anlamlılığının İncelenmesi

Analiz sonucunda elde edilen katsayılar yorumlanmadan önce kurulan modelin istatistiksel olarak anlamlı olup olmadığı ANOVA tablosu üzerinden incelenmelidir (Bacaksız, 2021:31).

Bu doğrultuda araştırma modelinin anlamlılığına yönelik ANOVA tablosundan elde edilen bulgular Tablo 1’de gösterilmiştir.

Tablo 1. Modelin İstatistiksel Anlamlılığı

ANOVA					
	Kareler Toplamı	Serbestlik Derecesi	Kareler Ortalaması	F	P
Regresyon	108,174	4	27,043	77,935	,000
Artıklar	54,826	158	,347		
Toplam	163,000	162			
Çoklu R = ,815 R²=,664 Düzeltmiş R²=,655					

Tablo 1’de yer alan ANOVA değerlerine bakıldığında modelin istatistiksel olarak anlamlı olduğu anlaşılmaktadır (F=77,935; p < 0,05). R²=,664 değeriyle bölge ve gelir grubu bağımsız değişkenlerinin %66 oranında BİT gelişim endeksi seviyesini açıkladığı görülmektedir. *Kategorik Regresyon Modeli Bağımsız Değişkenlerinin Katsayıları ve Anlamlılıkları* Araştırma modelinde yer alan bağımsız değişkenlere ilişkin katsayılar ve anlamlılıkları Tablo 2’de sunulmuştur.

Tablo 2. Bağımsız Değişkenlere İlişkin Katsayılar ve Anlamlılıkları

Bağımsız Değişken	Katsayı	Standart Hata	df	F	Sig.
Bölge	,420	,099	3	18,022	,000
Gelir Grubu	-,537	,151	1	12,579	,001

Bağımlı Değişken: BİT Gelişim Endeksi

Tablo 2 incelendiğinde bölge ve gelir grubu değişkenlerinin BİT gelişim endeksi seviyesini açıklamakta istatistiksel olarak anlamlı olduğu (Bölge, Sig.=0,000; Gelir Grubu, Sig.=0,001) görülmektedir.

Değişken Sayısallaştırmaları

Kategorik regresyon analizi yönteminde, değişkenler orijinal kategorilerin özelliklerini temsil edecek biçimde sayısallaştırılmakta ve bu değişkenler artık adeta birer nümerik değişken gibi regresyon modelinde bulunmaktadır (Kooij vd., 2006’dan akt. Güç, 2015: 27). Aşağıda sırasıyla çalışmanın değişkenlerine ait sayısallaştırmalar sunulmuştur.

Bağımlı Değişken

Tablo 3. BİT Gelişim Endeksi Seviyeleri için Sayısallaştırma

Kategori	Frekans	Sayısallaştırma
21,3 - 40,4	16	-1,473
43,1 - 55,9	17	-1,167
58,2 - 69,1	15	-,987
69,3 - 80,4	29	-,467
80,7 - 92,3	53	,416
92,4 - 100,0	33	1,507

Yukarıda yer alan Tablo 3'te BİT gelişim endeksi bağımlı değişkenine ilişkin kategori grupları, frekans değerleri ve sayısallaştırma değerleri verilmiştir.

Bağımsız Değişkenler

Tablo 4. Bölge için Sayısallaştırma

Kategori	Frekans	Sayısallaştırma
Afrika	37	-1,636
Amerikalar	28	-,390
Arap Ülkeleri	19	,234
Asya- Pasifik Bölgesi	29	,651
Bağımsız Devletler Topluluğu	7	,894
Avrupa	43	,974

Yukarıda yer alan Tablo 4'te Bölge bağımsız değişkenine ilişkin kategoriler, frekans değerleri ve sayısallaştırma değerleri verilmiştir.

Tablo 5. Gelir Grubu için Sayısallaştırma

Kategori	Frekans	Sayısallaştırma
Yüksek Gelirli	58	-1,345
Düşük Gelirli	18	,743
Alt Orta Gelirli	43	,743
Üst Orta Gelirli	44	,743

Yukarıda yer alan Tablo 5'te Gelir Grubu bağımsız değişkenine ilişkin kategoriler, frekans değerleri ve sayısallaştırma değerleri verilmiştir. Gelir grubu değişkeninin kategorileri sayısallaştırıldığında bazı kategorilerin aynı değerlere sahip olduğu görülmektedir. Böyle bir durum ile karşılaşıldığında aynı değeri alan kategoriler birleştirilerek analiz devam süreci devam ettirilmektedir (Güç, 2015: 48). Yukarıda yer alan düşük, alt orta ve üst orta gelirleri de birleştirilerek Tablo 6'da sunulmuştur.

Tablo 6. Birleştirilmiş Gelir Grubu için Sayısallaştırma

Kategori	Frekans	Sayısallaştırma
Yüksek Gelirli	58	-1,345
Üst Orta ve Altı Gelirli	105	,743

Devamında yapılan hesaplamalarda gelir grubu kategorisi bu iki grup üzerinden ele alınmıştır.

Değişken Kategorilerine İlişkin Etki Katsayıları

Kategorik regresyon analizi sonucunda hesaplanan değişken katsayıları ile optimal ölçekleme ile bulunan değişken kategorilerinin sayısallaştırılmış değerlerinin çarpılması ile etki katsayıları elde edilmektedir (Cengiz, 2028: 195'ten akt. Bacaksız, 2021:33). Etki katsayıları bağımsız değişkenlerin her bir kategorisinin bağımlı değişkenle olan ilişkilerini ve yönünü ifade etmektedir (Bacaksız, 2021: 33). Araştırmaya ilişkin bağımsız değişkenlerin kategori sayısallaştırmaları ve etki katsayıları Tablo 7'de sunulmuştur.

Tablo 7. Bağımsız Değişken Kategorilerine İlişkin Sayısallaştırmalar ve Etki Katsayıları

Değişken	Kategori	Frekans	Sayısallaştırma	Katsayı	Etki Katsayısı
Bölge	Afrika	37	-1,636	0,42	-0,687
	Amerikalar	28	-0,390		-0,164
	Arap Ülkeleri	19	0,234		0,098
	Asya- Pasifik Bölgesi	29	0,651		0,273
	Bağımsız Devletler Topluluğu	7	0,894		0,375
	Avrupa	43	0,974		0,409
Gelir Grubu	Yüksek Gelirli	58	-1,345	-0,537	0,722
	Üst Orta ve Altı Gelirli	105	0,743		-0,399

Tablo 7 incelendiğinde bölge ve gelir grubu bağımsız değişken kategorilerinin bağımlı değişken olan BİT gelişim endeksi seviyesi ile olan ilişkilerinin yönü ve niceliği hakkında bilgiler elde edilmektedir.

Bölge değişkeninin kategorileri ele alındığında Afrika ve Amerikalar kategorisindeki ülkelerin sırasıyla -0,687 ve -0,164 birim ile negatif yönde BİT gelişim endeksi seviyesini etkilediği anlaşılmaktadır. Arap Ülkeleri, Asya- Pasifik Bölgesi, Bağımsız Devletler Topluluğu ve Avrupa bölgesindeki ülkelerin ise sırasıyla 0,098, 0,273, 0,375 ve 0,409 birim ile pozitif yönde bağımlı değişkeni etkilediği tespit edilmektedir.

Gelir grubu kategorisi ele alındığında Yüksek gelirli ülkelerin BİT gelişim endeksi seviyesini pozitif yönde 0,72 birim etkilediği, üst orta ve altı gelirli kategoride bulunan ülkelerin negatif yönde -0,399 değer ile bağımlı değişkeni etkilediği saptanmıştır.

SONUÇ

Tüm dünyayı etkisi altına alan dijitalleşme süreci ne yazık ki her ülkede aynı şekilde gelişim göstermemekte ve kullanılamamaktadır. UTB'nin 2024 yılına ait BİT gelişim endeks raporu sonuçlarında birçok ülkenin (100 üzerinden) 21,3 gibi bir skor ile dijital gelişimin henüz başında olduğu anlaşılmaktadır. Dijital olarak bağlanabilirliğin zengin ve fakir ülkeler arasında derin uçurumları vurguladığı ve kalkınmayla yakından ilişkili olduğu söylenebilir (ITU, 2024).

Araştırma sonuçlarına bakıldığında da, BİT gelişim endeksinin bölge ve gelir kategorilerine göre anlamlı olarak farklılaştığı anlaşılmaktadır. Bununla birlikte bölge ve gelir seviyesinin de BİT gelişimi üzerindeki etkisi desteklenmiştir. Alınan bu sonuçlar dijital uçurumun nedenlerini anlamada önemli ipuçları verebilir. Öyle ki özellikle Afrika'daki ülkelerin negatif bir etki göstermesi, bu bölgede dijital altyapının yetersizliği sorunlarına işaret etmektedir. Amerikalar kategorisindeki ülkelerin negatif etkisi daha az olmakla birlikte BİT gelişim endeksi skorları (en düşük 51,7) daha iyi durumdadır. Avrupa bölgesindeki pozitif etkisi, güçlü dijital altyapıyla ilişkilendirilebilir öyle ki bu kategoride yer alan ülkelerin anlamlı ve evrensel bağlanabilirlik skorları genellikle 80 üzerindedir ve en düşük BİT gelişim endeksi seviyesi 78,6 skoruna sahiptir.

Gelir grubu üzerinden sonuçlar incelendiğinde yüksek gelirli ülkelerdeki pozitif etki, ekonomik gücün dijitalleşme sürecine olumlu yansıdığını ortaya koymaktadır. Üst-orta ve altı gelirli ülkelerdeki negatif etkiden teknolojik altyapı yetersizlikleri ve erişim sınırlılıkları olduğu anlaşılmaktadır. Bu durumun da dijital uçurumu derinleştirdiği söylenebilir.

Sonuç olarak, BİT gelişim endeksinin bölge ve gelir grubu ile doğrudan ilişkili olduğu ve yüksek gelirli ülkeler ile düşük gelirli ülkeler arasında dijital eşitsizliğin belirgin olduğu ortaya

konmuştur. Üst-orta ve altı gelirli ülkelerde anlamlı ve evrensel bağlanabilirlik göstergelerinin geliştirilmesine yönelik uluslararası destek mekanizmalarının uygulanması gibi küresel çabalar gösterilerek teknolojiye erişim imkânları geliştirilebilir. Böylelikle ülkeler arasındaki dijital uçurum kapanabilir. Yüksek gelirli ülkelerin iyi durumda olan bilgi ve iletişim teknolojileri gelişim seviyesinin sürdürülebilir olması da toplumsal refah ve dijital dönüşüm süreçlerinin devamlılığını açısından önem arz etmektedir.

ÖZET

Herbisit dayanıklılığı, yabancı ot popülasyonlarının, bir herbisit önerilen dozlarında hayatta kalma ve üreme yeteneği gösterme kabiliyeti olarak tanımlanır. Herbisit dayanıklılığı, modern tarımın en büyük zorluklarından biri haline gelmiş ve küresel ölçekte hem tarımsal üretim hem de ekosistem yönetimi üzerinde ciddi tehditler oluşturmuştur. Yabancı otların hızla herbisitlere direnç geliştirmesi, tarımsal sürdürülebilirlik ve ekonomik kalkınmayı tehlikeye atarken, biyolojik çeşitlilik üzerinde de olumsuz etkiler yaratmaktadır. Bugüne kadar dünya genelinde 72 ülkede, 273 yabancı ot türü ile 533 farklı herbisit dayanıklılık vakası rapor edilmiş olup, bu sayı giderek artmaya devam etmektedir. Bu durum, tarımda kullanılan kimyasalların etkinliğini sınırlandırmakta ve alternatif mücadele stratejilerinin geliştirilmesi gerekliliğini açıkça ortaya koymaktadır. Bu çalışmada, herbisit dayanıklılığı üzerine yapılan küresel araştırmalar bibliyometrik analiz yöntemiyle incelenmiştir. Araştırma, literatürdeki anahtar eğilimleri, işbirliği ağlarını ve bilimsel katkıları belirleyerek, bu alandaki bilimsel faaliyetin kapsamlı bir haritasını sunmaktadır. Bu konuda arama sonucunda 3.427 yayın elde edilmiştir. Analiz sonuçları, herbisit dayanıklılığı literatürde 1.349 kez anahtar kelime olarak kullanıldığını ve özellikle ABD'nin 1.296 yayın ile bu alandaki en fazla yayın yapan ülke olarak öne çıkmaktadır. Türkiye'nin ise bu alanda 45 yayın ile literatüre katkı sağladığı görülmektedir. Araştırmalar, özellikle moleküler biyoloji ve genetik alanında yoğunlaşmış, direnç mekanizmalarının anlaşılmasına yönelik çalışmalarda kayda değer bir artış göstermiştir. Sonuçlar, herbisit dayanıklılığına yönelik multidisipliner yaklaşımların önemini vurgulamakta ve bu sorunun çözümüne yönelik daha yenilikçi yöntemlerin geliştirilmesine katkı sağlamayı amaçlamaktadır.

Anahtar kelimeler; Herbisit dayanıklılığı, Bibliyometrik, Yabancı ot, VOSviewer

ABSTRACT

Herbicide resistance is defined as the ability of weed populations to survive and reproduce at recommended doses of a herbicide. Herbicide resistance has become one of the greatest challenges of modern agriculture and poses serious threats to both agricultural production and ecosystem management on a global scale. Rapid development of resistance by weeds to herbicides endangers agricultural sustainability and economic development, while also creating negative effects on biodiversity. To date, 533 different herbicide resistance cases have been reported in 72 countries worldwide with 273 weed species, and this number continues to increase. This situation limits the effectiveness of chemicals used in agriculture and clearly demonstrates the need to develop alternative control strategies. In this study, global research on herbicide resistance was examined using the bibliometric analysis method. The research provides a comprehensive map of scientific activity in this field by identifying key trends, collaboration networks and scientific contributions in the literature. The search on

this subject yielded 3.427 publications. The analysis results show that herbicide resistance was used as a keyword 1.349 times in the literature, and the USA stands out as the country with the most publications in this field with 1.296 publications. Turkey has contributed to the literature with 45 publications in this field. Research has focused especially on molecular biology and genetics, and has shown a significant increase in studies aimed at understanding resistance mechanisms. The results emphasize the importance of multidisciplinary approaches to herbicide resistance and aim to contribute to the development of more innovative methods for solving this problem.

Keywords; Herbicide resistance, Bibliometrics, Weed, VOSviewer

GİRİŞ

Günümüzde tarım alanlarında yabancı otların kontrolü, artan iş gücü ve maliyetler nedeniyle büyük önem kazanmıştır. Bu bağlamda, kimyasal mücadele yöntemi, düşük maliyetli olması, kolay uygulanabilirliği ve hızlı sonuç vermesi nedeniyle yaygın bir şekilde tercih edilmektedir (Kitiş, 2011). Yabancı otlara karşı kullanılan herbisitler, İkinci Dünya Savaşı'ndan sonra tarımda önemli bir yer edinmiş ve günümüzde dünya genelinde neredeyse her bölgede yaygın olarak uygulanmaktadır (Vats, 2015; FAO, 2024). Herbisitler, yabancı otların büyümesini kontrol etmek veya tamamen ortadan kaldırmak amacıyla kullanılan kimyasal maddelerdir. Bu maddeler, bitkilerin biyolojik süreçlerini bozma, fotosentezi etkileme, büyüme hormonlarını engelleme ya da besin alımına müdahale etme gibi mekanizmalarla etkili olmaktadır (Singh et al., 2020). Dünya genelinde kullanılan pestisitlerin yaklaşık yarısını (%51,93) herbisitler oluşturmaktadır ve herbisit kullanımı yıllar içinde sürekli artış göstermektedir. Özellikle Amerika kıtasında 2022 yılında toplamda %68,99'luk oranla 1.340.110,70 ton herbisit kullanılmıştır. Bu kıtayı, Asya (%15,47) ve Avrupa (%9,62) takip etmektedir. En fazla herbisit kullanımına sahip ülke ise 492.445 ton ile Brezilya'dır. Türkiye'de ise pestisit grupları arasında en fazla kullanılan tür fungisitler olmasına rağmen, 2018 yılından itibaren herbisitler en çok tercih edilen ikinci pestisit grubu olmuştur (TÜİK, 2024).

Herbisitlerin yabancı ot yönetimindeki başarısına rağmen, uzun süreli ve tekrarlı kullanımlar, yabancı otlarda herbisit dayanıklılığının gelişmesine yol açmaktadır. Herbisit dayanıklılığı, yabancı otların öldürücü dozlarda dahi hayatta kalabilmesi ve büyümeye devam etmesi olarak tanımlanır (Günçan, 2019). Bu durum, benzer etki mekanizmasına sahip herbisitlerin sürekli kullanımıyla, hassas biyotiplerin azalması ve dayanıklı biyotiplerin popülasyonda hakimiyet kazanması sonucu meydana gelir (Neve, 2007). Günümüzde herbisit dayanıklılığı, modern tarımın en büyük sorunlarından biri olarak kabul edilmektedir (Perotti et al., 2020). İlk kez 1957 yılında *Senecio vulgaris* L.'de rapor edilen dayanıklılık, özellikle 1980'li yıllarda hızla artmış ve günümüzde 532 benzersiz vaka ile dünya genelinde büyük bir sorun haline gelmiştir (Heap, 2024). Herbisit dayanıklılığı, dünya genelinde 72 ülke ve 101 üründe kayıt altına alınmış; yabancı otlar, bilinen 31 etki mekanizmasından 21'ine ve 168 aktif maddeye karşı dayanıklılık geliştirmiştir. Türkiye'de de 13 yabancı ot türünde herbisit dayanıklılığı rapor edilmiştir (Heap, 2024). Bu durum, yabancı ot yönetimini ve tarımsal sürdürülebilirliği zorlaştırmakta, daha etkili ve sürdürülebilir kontrol yöntemlerinin geliştirilmesini gerekli kılmaktadır. Bu bağlamda, herbisit dayanıklılığı ve bu soruna yönelik çözümler üzerine yapılan bilimsel çalışmaların kapsamını değerlendirmek, mevcut durumu daha iyi anlamak için bibliyometrik analiz önemli bir yöntem sunmaktadır. Bibliyometri, belirli bir araştırma alanındaki mevcut durumu özetlemek, yayımlanan literatürü niceliksel olarak analiz etmek ve grafiksel haritalar oluşturarak eğilimleri belirlemek amacıyla kullanılan bir yöntemdir (Peng ve ark., 2021; Oyewola ve Dada, 2022). Bu tür analizler, ilgili alandaki eserlerin yazar, konu,

atıf ve ülke gibi ölçütlere göre değerlendirilmesini sağlar ve alandaki eğilimlerin değişimini ortaya koyar (Farooq, 2023; Alptekin ve ark., 2023).

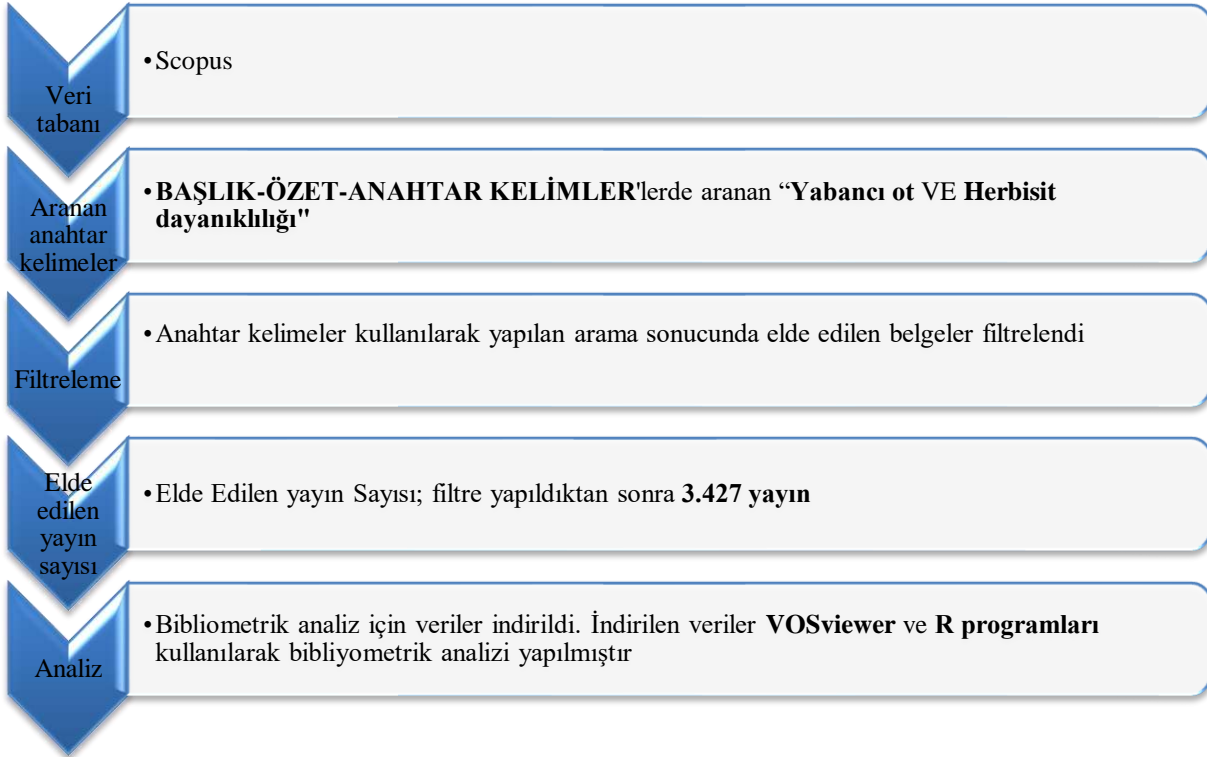

Bu çalışmanın amacı, herbisit dayanıklılığı üzerine yapılan bilimsel çalışmaların bibliyometrik analizini gerçekleştirmektir. Bibliyometrik analiz yöntemiyle, bu alandaki literatürün mevcut durumu, yıllar içerisindeki eğilimleri, en çok atıf alan çalışmalar, yazarlar, ülkeler ve konular belirlenerek, herbisit dayanıklılığı üzerine yapılan araştırmalara kapsamlı bir bakış sunulması hedeflenmektedir.

MATERYAL ve YÖNTEM

Araştırmada, herbisit dayanıklılığıyla ilgili yapılan çalışmaların bibliyometrik analizini gerçekleştirmek amacıyla, “Yabancı ot VE Herbisit dayanıklılığı” anahtar kelimeleriyle Scopus veri tabanında yapılan arama sonucunda elde edilen 3.427 yayın üzerinde VOSviewer ve R programları kullanılarak analiz yapılmıştır.

Yöntem

Herbisit dayanıklılığı ile ilgili bibliyometrik analiz, Scopus veri tabanında belirtilen anahtar kelimelerle yapılan arama sonucunda elde edilen 3.427 yayını içermektedir. Bu yayınlar kullanılarak kapsamlı bir bibliyometrik analiz gerçekleştirilmiştir. Analizde izlenen yöntem, Şekil 1'de şematize edilmiştir.

Şekil 1. Bibliyometrik analizi için veri indirme şeması

Bibliometrik analizi için kullanılan R ve VOSviewer programlarında farklı analizler yapılmıştır (Çizelge 1).

Çizelge 1. Çalışmada kullanılan R ve Vosviwer analiz çeşitleri

Program	Yapılan analizler
VOSviewer	Ülkelerin yayın analizi Dergiler yayın analizi Anahtar kelime analizleri
R	Yayımlar hakkında ana bilgiler Yayımların yıllara göre üretimi En fazla yayın yapan ülkeler Ülkelerin işbirliği En fazla yayın yapılan dergiler En fazla yayın yapan yazarlar Yazarların üretkenlik zamanları Anahtar kelimelerin tekrar durumları Anahtar kelimelerin trend olma zaman aralıkları Anahtar kelimelerin kavramsal yapı haritası Anahtar kelimelerin gruplama analizi

Veri Analizi

Ülke sıralamaları ve dergilerle ilgili betimsel analizler için Microsoft Excel kullanılmış, atıf ve anahtar kelime analizleri ile görselleştirmeler VOSviewer programı ile gerçekleştirilmiştir. Ayrıca, ülkeler arası iş birliği, en sık kullanılan terimler, anahtar kelimelerin trend durumları ve gruplama analizleri R programı üzerinden, bibliometrix paketinin web tabanlı arayüzü olan "biblioshiny" kullanılarak yapılmıştır.

BULGULAR

Herbisit dayanıklılığı üzerine yapılan çalışmalar, 1975 yılında başlamış ve zamanla önemli bir gelişim göstermiştir. Yayın sayısında, yıllara bağlı dalgalanmalar yaşanmış olsa da genel olarak artış trendi gözlenmiştir. Özellikle son yıllarda, herbisit dayanıklılığı konusundaki araştırmalara olan ilginin hızla arttığı ve bu alanda yayımlanan bilimsel çalışmaların sayısının giderek çoğaldığı belirlenmiştir. Bu artış, herbisit dayanıklılığının tarımsal sürdürülebilirlik ve yabancı ot yönetimi açısından giderek daha kritik bir konu haline geldiğini vurgulamaktadır. Herbisit dayanıklılığı ile ilgili yapılan yayınların ana bilgileri Çizelge 2’de verilmiştir.

Çizelge 2. Herbisit dayanıklılığı ile ilgili yapılan yayınların ana bilgileri

Açıklama	Sonuçlar

Kısa İnceleme	12

Çizelgedeki veriler, herbisit dayanıklılığı konusunda yapılan bibliyometrik analizden elde edilen temel bilgileri özetlemektedir. Bu analiz, konunun bilimsel literatürdeki kapsamını ve gelişimini ortaya koymaktadır. Araştırma kapsamına 1975-2024 yılları arasında yayımlanan 3.427 belge dahil edilmiş ve bu belgeler 605 farklı kaynaktan derlenmiştir. Çalışmaların yıllık büyüme oranı %10 olarak belirlenmiş, bu da herbisit dayanıklılığı konusundaki ilginin zamanla arttığını göstermektedir. Bu alandaki belgelerin ortalama yaşı 9,07 yıl olup, belge başına düşen ortalama atıf sayısı 30,88'dir. Bu durum, konuyla ilgili çalışmaların literatürde yüksek bir etki yarattığını göstermektedir. Araştırmalarda toplam 7.360 yazar yer almış, tek yazarlı belgelerin sayısı ise yalnızca 180'dir. Belge başına düşen ortalama ortak yazar sayısı 4,8 olup, uluslararası iş birlikleri %22,32 oranında gerçekleşmiştir. Bu veriler, disiplinler arası çalışmaların ve uluslararası iş birliklerinin konunun çözümüne yönelik önemini vurgulamaktadır. Belgelerin türlerine bakıldığında, çalışmaların büyük bir kısmını (%80'den fazlasını) 2.757 makale oluştururken, 343 derleme çalışması da dikkat çekmektedir. Kitap ve kitap bölümleri gibi teorik kaynakların sayısı ise sınırlıdır (11 kitap, 140 kitap bölümü). Ayrıca konferans bildirileri (143), editoryal yazılar (17) ve kısa incelemeler (12) gibi farklı belge türleri de yer almıştır (Çizelge 2). Yıllara göre yayın sayıları Şekil 2'de verilmiştir.

Şekil 2. Yıllara göre yayın sayısı

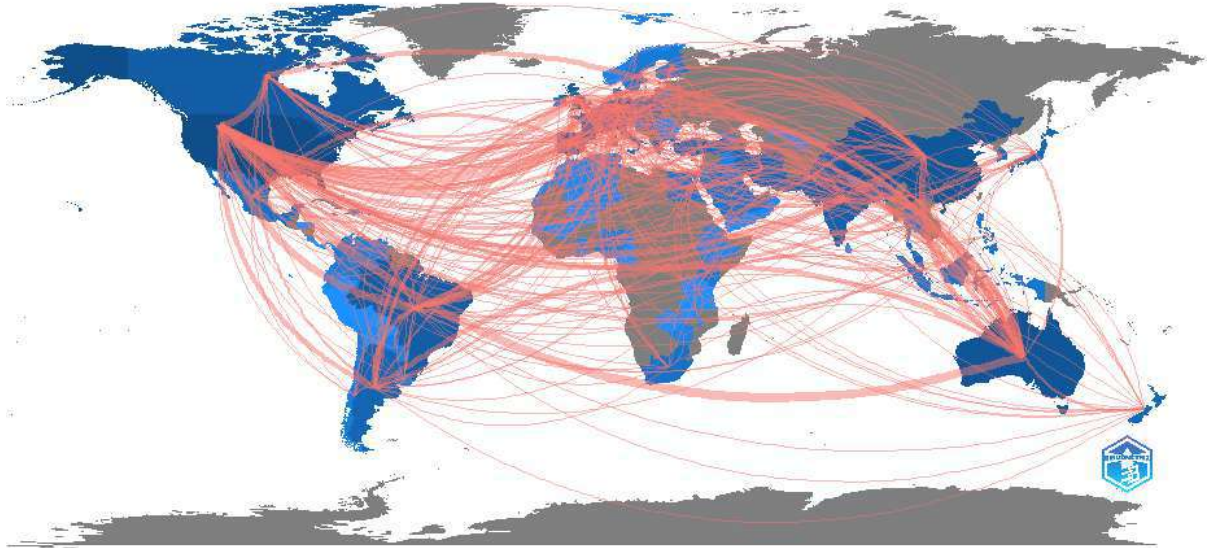

Herbisit dayanıklılığı konusundaki bilimsel yayınların yıllara göre dağılımı, bu alandaki akademik ilginin zaman içinde nasıl şekillendiğini ortaya koymaktadır. İlk yayınların görüldüğü 1975 yılı itibarıyla alandaki araştırmalar sınırlı bir düzeyde kalmış ve 1990'a kadar yayın sayıları oldukça düşük seyretmiştir. Bu dönem, herbisit dayanıklılığı konusunun yeni bir araştırma alanı olarak dikkat çekmeye başladığı, ancak henüz geniş bir ilgi görmediği bir süreci yansıtmaktadır. 1990'lı yılların ortalarından itibaren yayın sayılarında belirgin bir artış eğilimi görülmüştür. Özellikle 1996 yılında 20, 2000 yılında ise 37 makale yayımlanmıştır. Bu dönemdeki artış, herbisit dayanıklılığının tarım ve çevre yönetimi açısından önem kazanmaya başladığını göstermektedir. 2000'li yıllarda ise daha sistematik bir araştırma süreci başlamış, 2005 yılı itibarıyla yayın sayıları 67'ye, 2010 yılında ise 77'ye ulaşmıştır. Bu durum, alandaki araştırma kapasitesinin ve konunun bilimsel literatürdeki yerinin giderek güçlendiğine işaret etmektedir. 2011 yılı sonrası dönemde yayın sayılarındaki artış hızlanmış ve bu dönemde herbisit dayanıklılığı küresel tarım politikaları ve sürdürülebilirlik çalışmaları bağlamında daha yoğun bir şekilde ele alınmıştır. Özellikle 2020 yılında 216 makale ile bu dönemin en yüksek yayınına ulaşılmıştır. Bu artış, alandaki yenilikçi yöntemlerin ve teknolojilerin kullanımıyla paralel olarak, konunun hem teorik hem de uygulamalı yönlerden derinlemesine incelendiğini göstermektedir. 2021 yılında yayın sayısı 274 ile zirve yapmış, ancak sonraki yıllarda bu sayı hafif bir azalma göstermiştir. 2023 yılında 228 ve 2024 yılında 213 makale yayımlanmıştır. Bu düşüş, konunun bazı alt alanlarında doygunluğa ulaşılabileceğini veya yeni araştırma odaklarının ortaya çıktığını düşündürmektedir. Ancak genel olarak yüksek düzeyde bir yayın hacminin korunması, herbisit dayanıklılığı konusunun güncelliğini koruduğunu ve gelecekte de önemli bir araştırma alanı olmaya devam edeceğini ortaya koymaktadır. Yayın sayılarındaki bu artış, konuya yönelik farkındalığın ve araştırma faaliyetlerinin artarak devam ettiğini göstermektedir (Şekil 2). Herbisit dayanıklılığı ile ilgili En fazla yayın yapan ilk 10 ülke ve bu konuda yayın yapan ülkeler haritası Çizelge 3'te verilmiştir.

Çizelge 3. En fazla yayın yapan ilk 10 ülke ve bu konuda yayın yapan ülkeler haritası

Ülke	Belge Sayısı (adet)
ABD	1296
Avustralya	502
Çin	413
Kanada	217
İngiltere	216
Brezilya	199
Almanya	174
Hindistan	134
İspanya	128
Arjantin	93
Türkiye	45

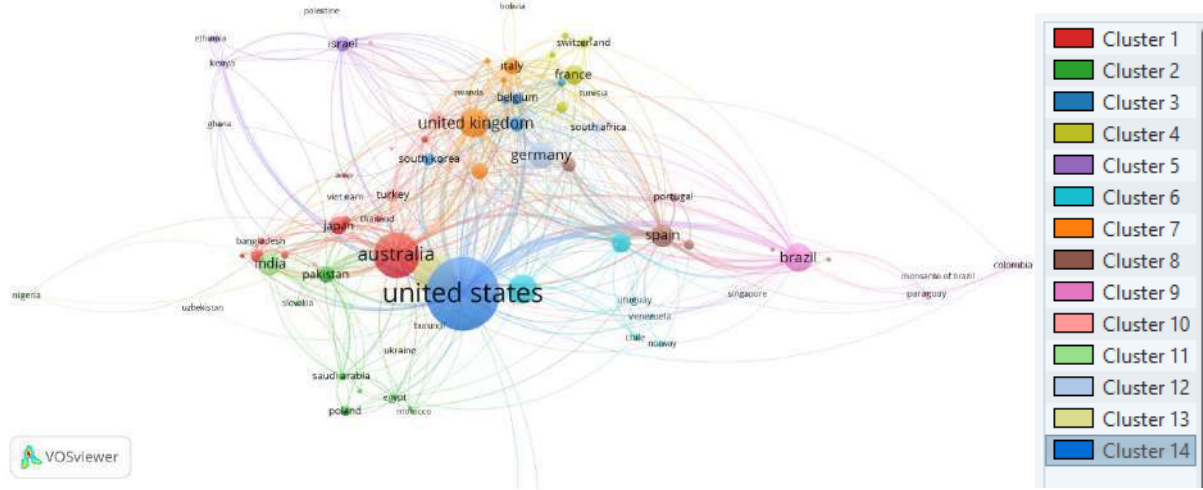

Herbisit dayanıklılığı konusunda 96 ülke yayın yapmıştır. En fazla yayın yapan ülkeler, Amerika Birleşik Devletleri (ABD), 1.296 belge ile açık ara en fazla araştırmaya sahip ülke konumundadır. Avustralya (502 belge) ve Çin (413 belge), sırasıyla ikinci ve üçüncü sırada yer alarak bu konuda önemli katkılarda bulunmuşlardır. Türkiye ise bu konuda en fazla yayın yapan ülkeler içerisinde 22. sırada yer alıp, 45 belge ile listedeki diğer ülkelere kıyasla daha düşük bir katkıya sahiptir (Çizelge 3). Ülkelerin ortak yayın haritası Şekil 4'te sunulmuştur.

**Şekil 4.** Ülkelerin ortak yayın haritası

Herbisit dayanıklılığı konusundaki bilimsel iş birlikleri, bu alandaki küresel akademik çabaların önemli bir göstergesidir. Veriler, özellikle ABD ile diğer ülkeler arasındaki güçlü iş birliklerini ve Türkiye'nin uluslararası ortaklıklar açısından konumunu ortaya koymaktadır. En fazla iş birliği yapan ülkeler arasında ilk sırada ABD ile Avustralya yer almaktadır. Bu iki ülke, birlikte 69 bilimsel yayın üretmiştir. İkinci sırada ABD ile Brezilya arasındaki iş birliği

yer almaktadır. ABD ve Brezilya, birlikte 63 bilimsel yayın üretmiştir. Üçüncü sırada ise ABD ile Kanada ve ABD ile Almanya arasındaki iş birlikleri yer almaktadır. Her iki ülke ile de ABD, 47 yayınlık ortak çalışmalara imza atmıştır. Türkiye'nin uluslararası iş birlikleri açısından durumu ise farklı bir perspektif sunmaktadır. Türkiye 24 ülke ile işbirliği içerisinde olmaktadır. En fazla iş birliğini ABD ve Avusturya ile yapmış olup, her iki ülke ile de 9'ar yayın üretmiştir. Türkiye'nin en fazla iş birliği yaptığı üçüncü ülke ise 8 yayınlık Pakistan'dır. Sonuç olarak, ABD, bu alanda en önemli iş birliği ortağı olarak öne çıkarken, Türkiye de sınırlı ancak belirli sayıda ortaklıklar ile literatüre katkıda bulunmaktadır (Şekil 4). Herbisit dayanıklılığı ile ilgili yayın yapan ülkelerin yayın ağ haritası Şekil 5'te gösterilmiştir.

Şekil 5. Ülkelerin yayın ağ haritası

Herbisit dayanıklılığı üzerine yapılan araştırmalar, ülkeler arasındaki iş birlikleri doğrultusunda kümeler halinde sınıflandırılabilir. Bu kümelerde, ABD, Avusturya ve Çin gibi ülkeler, buldukları gruplarda lider konumda yer almaktadır. Özellikle ABD, bu alandaki güçlü araştırma altyapısı ile ön planda iken, Çin güncel yayınlarıyla dikkat çekici bir şekilde öne çıkmaktadır. Türkiye ise Avusturya'nın öncülük ettiği kümede yer almakta olup, bu alandaki uluslararası iş birliği ve bilimsel katkı sağlamaktadır (Şekil 5). En fazla yayın yapılan dergiler Çizelge 3'te sunulmuştur.

Çizelge 3. En fazla yayın yapılan dergiler

Çizelge 4. En fazla yayın yapan yazarlar

Yazar	Yayın sayısı (adet)
Powles SB	126
Beckie HJ	90
Norsworthy JK	85
Tranel PJ	78
Preston C	71
Gaines TA	65
Wang J	60
De Prado R	58
Chauhan BS	55
Yu Q	53

Herbisit dayanıklılığı ile ilgili 7.360 yazar yayın yapmıştır. Bu konuda en fazla yayın yapan yazarlar arasında Powles SB 126 makale ile lider konumda yer almaktadır. Beckie HJ (90 makale) ve Norsworthy JK (85 makale) de bu alanda önemli katkılar sunmuş ve geniş bir araştırma geçmişine sahip yazarlar olarak öne çıkmaktadır. Diğer önemli yazarlar arasında Tranel PJ (78 makale), Preston C (71 makale) ve Gaines TA (65 makale) yer almaktadır. Bu isimler, herbisit dayanıklılığı konusunda kapsamlı çalışmalar yapmış ve konunun derinlemesine anlaşılmasına önemli katkılar sağlamışlardır. Bu yazarlar, geniş bir literatür birikimine sahip olup, alanın gelişmesine önemli ölçüde katkıda bulunmuşlardır (Çizelge 4). Yazarların üretkenlik zamanları Şekil 7’de gösterilmiştir.

**Şekil 7.** Yazarların üretkenlik zamanları

Herbisit dayanıklılığı üzerine yapılan araştırmalar, uzun süredir Powles SB ve Preston C gibi önde gelen yazarlar tarafından yürütülmektedir. Powles SB, özellikle 2008 yılından sonra yayın sayısında belirgin bir artış göstermiştir. Diğer yandan, Wang J ve Chauhan BS gibi

herbisite karşı direnç gelişiminin karmaşık doğasını vurgulamaktadır. Sonuç olarak, herbisit dayanıklılığına dair yapılan araştırmalarda, glifosat ve ALS/ACCase inhibitörlerine karşı direnç, yönetim stratejileri ve direnç yönetimi gibi konuların ön planda olduğunu söyleyebiliriz. Bu anahtar kelimeler, herbisit dayanıklılığıyla mücadeledeki temel odakları ve araştırma eğilimlerini yansıtmaktadır (Şekil 8). Anahtar kelimelerin trend durumları Şekil 9'da gösterilmiştir.

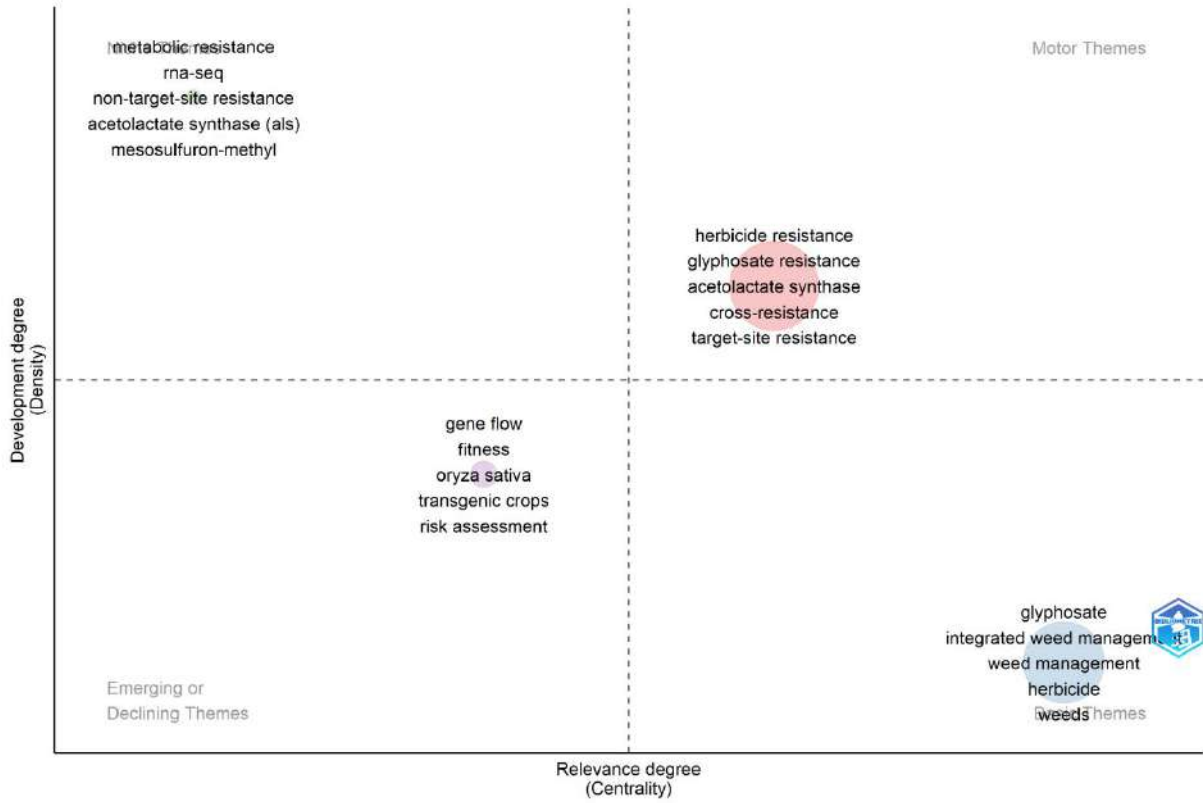

Şekil 9. Anahtar kelimelerin trend durumları

Herbisit dayanıklılığı ile ilgili yapılan çalışmalarda kullanılan anahtar kelimelerin zaman içindeki yoğunluğuna bakıldığında, "herbicide resistance" (herbisit dayanıklılığı) teriminin özellikle 2007 sonrası araştırmalarda daha fazla tercih edilmeye başlandığı görülmektedir. Özellikle 2015 yılından itibaren bu anahtar kelimenin kullanımı oldukça artmış ve herbisit dayanıklılığına yönelik yapılan çalışmaların hızla yayıldığı bir dönemi işaret etmektedir. Son yıllarda, herbisit dayanıklılığı konusundaki araştırmaların daha derinleştiği ve moleküler düzeye indiği gözlemlenmektedir. Bu bağlamda, moleküler düzeyde kullanılan bazı terimler de dikkat çekici bir şekilde öne çıkmaktadır. "Molecular docking" (moleküler docking) ve "synthetic auxin" (sentetik oksin) gibi anahtar kelimeler, son zamanlarda yapılan araştırmalarda yoğun şekilde kullanılmaktadır. Moleküler docking, herbisitlerin hedeflerine nasıl bağlandığını inceleyen bir teknik olup, yeni ilaçların ve herbisitlerin daha etkili formülasyonlarını geliştirmeye yönelik önemli bilgiler sunmaktadır. Sentetik oksinler ise özellikle bitki büyümesi üzerinde etkili olan kimyasallar olup, herbisitlerin bitkilere zarar verme mekanizmalarını anlamada ve yeni herbisit tasarımlarında önemli bir yer tutmaktadır. Araştırmalar artık moleküler düzeyde direnç mekanizmalarını, genetik faktörleri ve bitkiler ile herbisitler arasındaki etkileşimleri detaylı bir şekilde incelemeye odaklanmaktadır (Şekil 9). Anahtar kelimelerin kavramsal yapı haritası Şekil 10'da verilmiştir.

Şekil 10. Anahtar kelimelerin kavramsal yapı haritası

Herbisit dayanıklılığı ile ilgili yapılan çalışmalarda kullanılan anahtar kelimelerin kümelenmesi incelendiğinde, bu terimlerin belirli temalar etrafında gruplandığı dikkat çekmektedir. Bu gruplamalar, araştırmaların odaklandığı farklı alanları ve konuları açıkça ortaya koymaktadır. İlk kümede, araştırmalarda anahtar kelime olarak sıkça kullanılan kültür bitkileri yer almaktadır. Bu kümede "soybean" (soya fasulyesi) ve "cotton" (pamuk) gibi tarımsal açıdan önemli bitkiler öne çıkmaktadır. İkinci bir kümede, herbisitlerin etki mekanizmalarıyla ilgili terimler bir araya gelmiştir. Bu grupta "mutation" (mutasyon), "ACCase" ve "acetolactate synthase" (ALS) gibi moleküler ve biyokimyasal düzeyde kullanılan terimler dikkat çekmektedir. Son olarak, herbisit dayanıklılığı ve yabancı ot mücadelesiyle doğrudan ilişkili terimler başka bir büyük küme oluşturmuştur. Bu grupta "herbicide resistance" (herbisit dayanıklılığı), "weed management" (yabancı ot yönetimi), "weeds" (yabancı otlar), "resistance management" (direnç yönetimi) ve "herbicide resistance management" (herbisit dayanıklılığı yönetimi) gibi terimler yer almaktadır. Bu terimlerin oluşturduğu küme, herbisit dayanıklılığı konusundaki çalışmaların temel amacının, dayanıklılığın etkilerini azaltmak ve daha etkili yönetim stratejileri geliştirmek olduğunu göstermektedir (Şekil 10). Anahtar kelimelerin gruplama analizi Şekil 11'de sunulmuştur.

Şekil 11. Anahtar kelimelerin gruplama analizi

Herbisit dayanıklılığı çalışmalarında kullanılan anahtar kelimeler arasında farklı kategorilere ayrılan terimler bulunmaktadır. Motor terimler, alanın temelini oluşturan ve araştırmaların ana temasını belirleyen kelimelerdir. Bu gruba, herbisit direnci, glifosat direnci, acetolactate synthase (ALS), çapraz direnç ve hedef bölge direnci gibi sıkça kullanılan ve alanı şekillendiren terimler dahildir. Bunun yanında, basit terimler, daha genel veya yüzeysel bir bağlamda kullanılan, ancak literatürde önemli bir yer tutan ifadelerdir. Bu gruba, glifosat, entegre yabancı ot yönetimi, yabancı ot yönetimi, herbisit ve yabancı otlar gibi daha geniş anlamda kullanılan terimler örnek gösterilebilir. Son olarak, emerging veya declining (yükselen ya da azalan) terimler, daha az sıklıkta kullanılmakla birlikte, genellikle gelişmekte olan veya popülerliğini yitiren araştırma konularını yansıtır. Bu kategoriye ise gen akışı (gene flow), transgenik bitkiler ve risk değerlendirmesi gibi kavramlar girmektedir. Bu terimler, gelecekteki araştırma trendlerini anlamak açısından önem taşır (Şekil 11).

SONUÇ

Herbisit dayanıklılığı konusundaki bibliyometrik analiz, bu alandaki bilimsel literatürün kapsamını ve gelişimini detaylı bir şekilde ortaya koymuştur. Herbisit dayanıklılığı üzerine yapılan bibliyometrik analiz, bu konudaki akademik ilginin yıllar içinde nasıl geliştiğini ve geniş bir uluslararası iş birliği ağı oluşturduğunu göstermektedir. 1975-2024 yılları arasında yayımlanan toplam 3.427 belge, bu alandaki bilimsel üretkenliğin önemli bir kanıtıdır. Yıllık %10'luk büyüme oranı, herbisit dayanıklılığı konusundaki çalışmaların giderek artan bir hızla yayımlandığını ortaya koymuştur. Herbisit dayanıklılığı literatürünün dağılımı da anlamlı bir trend sergilemektedir. 1990'lara kadar sınırlı sayıda yayımlanan çalışmalar, bu tarihten sonra hızla artmış ve 2011'den itibaren kayda değer bir ivme kazanmıştır. Bu artış, herbisit dayanıklılığının tarımsal üretimdeki zorluklara yanıt arayışında giderek daha fazla öncelik kazandığını göstermektedir. Çalışmaların %80'inden fazlasını makaleler oluştururken, derleme makaleler ve konferans bildirileri de önemli bir yere sahiptir. Sonuç olarak, bibliyometrik analiz, herbisit dayanıklılığı çalışmalarının bilimsel alanda güçlü bir yer

edindiğini ve iş birliğine dayalı yaklaşımlar sayesinde hızla geliştiğini göstermektedir. Bu bulgular, alandaki gelecekteki araştırmalar için önemli bir temel sunmaktadır.

ÖZET

Entegre Yabancı Ot Yönetimi (EYY), yabancı ot kontrolünde sürdürülebilirlik ilkesi çerçevesinde kültürel, mekanik, biyolojik ve kimyasal yöntemlerin bir arada ve stratejik bir şekilde uygulanmasını esas alan bütüncül bir yaklaşımdır. Bu yöntem, tarımsal üretimde yabancı otların etkin kontrolünü sağlarken, çevresel zararları ve ekonomik maliyetleri en aza indirmeyi hedefler. EYY, özellikle artan herbisit dayanıklılığı vakaları ve çevresel etkiler göz önüne alındığında, modern tarımda kritik bir role sahiptir. Bu çalışmada, EYY ile ilgili küresel literatür, bibliyometrik analiz yöntemiyle incelenmiş ve alandaki son eğilimler ile gelecekteki araştırma yönleri belirlenmiştir. Scopus veri tabanında yapılan analizler sonucunda, EYY ile ilgili 2130 yayının bulunduğu tespit edilmiştir. Bu yayınlarda en sık kullanılan anahtar kelime 983 kez ile "Entegre yabancı ot yönetimi" olmuş, bunu 157 tekrar ile "herbisit dayanıklılığı" izlemiştir. Yayın dağılımında, 678 çalışmayla ABD en fazla katkıyı sağlayan ülke olarak öne çıkarken, Türkiye'den 41 yayın elde edilmiştir. Çalışmanın bulguları, özellikle teknolojik yeniliklerin EYY uygulamalarındaki rolünün giderek arttığını ortaya koymaktadır. Sensör tabanlı sistemler, hassas tarım uygulamaları ve yapay zeka gibi teknolojiler, yabancı ot kontrolünün etkinliğini artırmada ön plana çıkmaktadır. Aynı zamanda, geleneksel EYY uygulamalarının bu yeni teknolojilerle entegre edilmesi, sürdürülebilir bir tarımsal üretim için hayati bir önem taşımaktadır. Çalışma, etkili ve sürdürülebilir yabancı ot kontrolünün sağlanmasında teknolojik gelişmelerin ve multidisipliner yaklaşımların önemini vurgulamaktadır.

Anahtar kelimeler: Bibliyometrik, Entegre ot yönetimi, Hassas tarım, VOSviewer, Sürdürülebilir tarım

ABSTRACT

Integrated Weed Management (IWM) is a holistic approach based on the strategic application of cultural, mechanical, biological and chemical methods together within the framework of sustainability in weed control. This method aims to provide effective control of weeds in agricultural production while minimizing environmental damage and economic costs. IWM has a critical role in modern agriculture, especially considering the increasing cases of herbicide resistance and environmental impacts. In this study, global literature on IWM was examined by bibliometric analysis method and recent trends and future research directions in the field were determined. As a result of the analyses conducted in Scopus database, it was determined that there were 2130 publications on IWM. The most frequently used keyword in these publications was "Integrated weed management" with 983 times, followed by "herbicide resistance" with 157 times. In the distribution of publications, USA stood out as the country that contributed the most with 678 studies, while 41 publications were obtained from Turkey.

The findings of the study reveal that the role of technological innovations in IWM applications is increasing. Technologies such as sensor-based systems, precision agriculture applications and artificial intelligence are at the forefront in increasing the effectiveness of weed control. At the same time, the integration of traditional IWM applications with these new technologies is of vital importance for sustainable agricultural production. The study emphasizes the importance of technological developments and multidisciplinary approaches in ensuring effective and sustainable weed control.

Keywords: Bibliometrics, Integrated weed management, Precision agriculture, VOSviewer, Sustainable agriculture

GİRİŞ

Hızla artan dünya nüfusu, tarımsal ürünlere olan talebi artırmaktadır. Bu artışı karşılamak amacıyla küresel ürün üretiminin 2050 yılına kadar iki katına çıkması gerekmektedir (Ray et al., 2013). Gıda üretimi için yeni tarım arazileri açmak yerine, sürdürülebilir yöntemlerle ürün verimini artırmak öncelikli hedef olmalıdır (Hulme et al., 2013; Ray et al., 2013; Gerten et al., 2020). Ancak, bu hedefe ulaşmada yabancı otlar ciddi bir engel teşkil etmektedir (Chhokar et al., 2012). Yabancı otlar, su, besin maddeleri ve ışık gibi kaynaklar için rekabet ederek verimi doğrudan etkiler (Oerke, 2006; Merino et al., 2019; Ateş ve Üremiş, 2022). Yabancı ot mücadelesinin yoğunluğu ve süresi, verim kayıplarının boyutunu belirleyen kritik faktörlerdir (Swanton et al., 2015). Bu nedenle, yabancı ot rekabeti bitkisel üretimde önemli bir engel teşkil etmektedir (Chhokar et al., 2012). Kültür bitkilerinde verim kayıplarını önlemek için yabancı otları erken kontrol etmek önem taşımaktadır (Su, 2020). Ancak bu şartlar altında verimin beklenen düzeye ulaşması beklenmektedir (Kazankıran, 2019). Bu durum, yabancı ot mücadelesinde zorunlu hale getirmektedir. Geleneksel yabancı ot kontrol yöntemleri, özellikle yabancı otları kontrol etmek için yoğun olarak kullanılan herbisitler (Kitiş, 2011; Bo et al., 2017; Su, 2020), hatalı ve sık sık olarak kullanıldıklarından ötürü ,insan sağlığı olumsuz etkilemekte (Jabłońska-Trypuć et al., 2019), ciddi çevresel ve ekolojik sorunlara yol açmaktadırlar (Sardana et al., 2017). Ayrıca dayanıklı yabancı ot popülasyonlarının ortaya çıkmasına neden olmuştur. Buda minimum çevresel etkiye sahip daha sürdürülebilir ürün yönetim yaklaşımlarının geliştirilmesini zorunlu kılmaktadır (Godfray et al., 2010; Lopes et al., 2011).

Entegre Yabancı Ot Yönetimi (EYY), kimyasal kontrolün yanı sıra biyolojik, mekanik ve kültürel yöntemleri de içeren, çevre dostu ve sürdürülebilir bir yaklaşımdır (Scavo and Mauromicale, 2020; Hussain, et al., 2021; Riemens et al., 2022). EYY'nin etkinliğini artırmak için modern teknolojilerin entegrasyonu büyük bir fırsat sunmaktadır. Uzaktan algılama sistemleri, drone teknolojileri, yapay zeka destekli veri analitiği, akıllı tarım makineleri ve GPS tabanlı uygulamalar gibi teknolojiler, yabancı otların tespiti ve kontrolünde yenilikçi çözümler sunmaktadır. Bu teknolojiler, tarımın daha hassas, daha az maliyetli ve çevre dostu bir şekilde yönetilmesine olanak tanımaktadır (Hussain, et al., 2021).

EYY, kimyasal, biyolojik, mekanik ve kültürel kontrol yöntemlerini bir arada kullanarak sürdürülebilir bir yabancı ot yönetimi sağlamayı amaçlamaktadır (Barberi 2002; Colas et al., 2020; Hussain, et al., 2021). Son yıllarda, teknolojinin entegre yabancı ot yönetimindeki rolü üzerine yapılan bilimsel çalışmaların sayısında belirgin bir artış gözlenmiştir. Bu artış, konuya yönelik küresel ilginin ve bilgi birikiminin hızla büyüdüğünü göstermektedir. Ancak, bu büyümenin kapsamını ve yönelimini anlamak için sistematik bir analiz gerekmektedir. Bibliyometrik analiz, bu tür bir değerlendirme için güçlü bir araç sunmaktadır. Literatür taraması ve analizleri, belirli bir alandaki yayın eğilimlerini, iş birliği ağlarını ve anahtar temaları ortaya koyarak araştırmacılara yol gösterici bilgiler sunmaktadır.

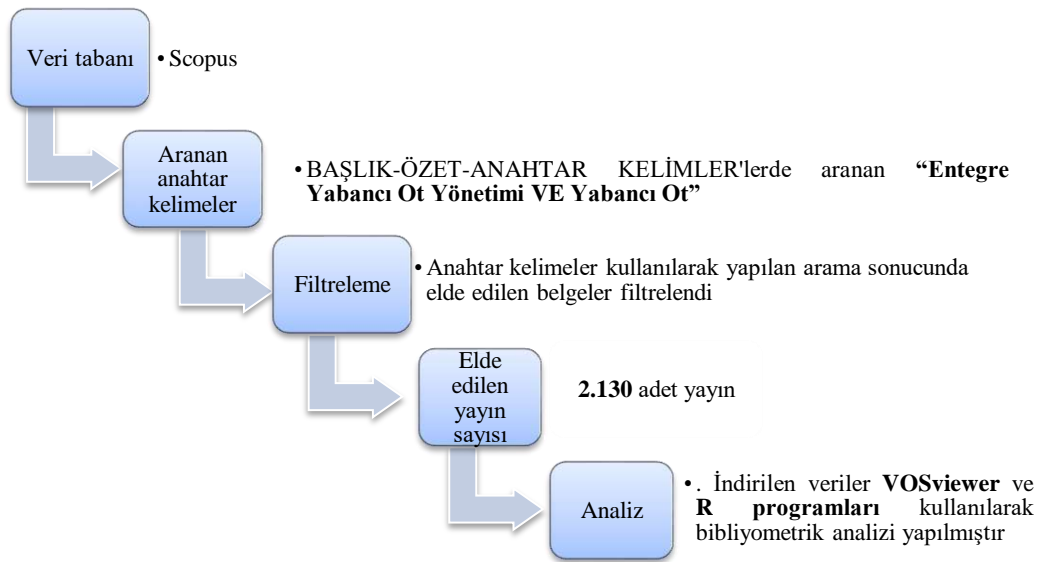

Bu çalışma, entegre yabancı ot yönetimi ile ilgili yapılan çalışmaların bibliyometrik analiz gerçekleştirmektedir. Amaç, bu alandaki araştırma eğilimlerini, en etkili çalışmaları ve iş birliği ağlarını ortaya koymak, böylece gelecekteki araştırmalara ışık tutmaktır.

MATERYAL ve YÖNTEM

Araştırmada entegre yabancı ot yönetimi üzerine etkisi ile ilgili yapılan çalışmaların bibliyometrik analizini yapmak için, “Entegre Yabancı Ot Yönetimi VE Yabancı Ot” anahtar kelimeleri Scopus veri tabanında arama yapıldığında elde edilen 3.130 yayın üzerinde VOSviewer ve R programları kullanılarak bibliyometrik analizi yapılmıştır.

Yöntem

Bibliyometrik analiz için Scopus veri tabanında yapılan arama sonucunda elde edilen 3.130 yayın kullanılarak bibliyometrik analiz yapılmıştır. Bibliyometrik analiz için kullanılan yöntem Şekil 1’de şematize edilmiştir.

Şekil 1. Bibliyometrik analizi için veri indirme şeması

Bibliyometrik analizi için kullanılan R ve VOSviewer programlarında farklı analizler yapılmıştır (Çizelge 1).

Çizelge 1. Çalışmada kullanılan R ve Vosviwer analiz çeşitleri

VOSviewer	R
Anahtar kelime analizleri	Yayınlar hakkında ana bilgiler Yayınların yıllara göre dağılımı En fazla yayın yapan ülkeler Ülkelerin işbirliği En fazla yayın yayınlayan dergiler En fazla çalışma yapan yazarlar Yazarların üretkenlik zamanları Anahtar kelimelerin tekrar durumları Anahtar kelimelerin gruplama analizi Kavramsal yapı haritası

Veri Analizi

Ülke sıralaması, dergiler vb. ile ilgili betimsel analiz için Microsoft Excel, atıf ve anahtar kelime analizi ve görselleştirmeleri için VOSviewer ve ülkelerin işbirliği en sık kullanılan terimler, anahtar kelimelerin trend durumları ve anahtar kelimelerin gruplama analizi R programı üzerinden, bibliometrix'in web tabanlı arayüzü olan "biblioshiny" kullanılmıştır.

BULGULAR

Entegre yabancı ot yönetimi üzerine yapılan çalışmalar, 1983 yılında başlamış ve zamanla önemli bir gelişim göstermiştir. Yayın sayısında, yıllara bağlı dalgalanmalar yaşanmış olsa da genel olarak artış trendi gözlenmiştir. Özellikle son yıllarda, entegre yabancı ot yönetimi konusundaki araştırmalara olan ilginin hızla arttığı ve bu alanda yayımlanan bilimsel çalışmaların sayısının giderek çoğaldığı belirlenmiştir. Bu artış, entegre yabancı ot yönetiminin tarımsal sürdürülebilirlik ve yabancı ot yönetimi açısından giderek daha kritik bir konu haline geldiğini vurgulamaktadır. Entegre yabancı ot yönetimi ile ilgili yapılan yayınların ana bilgileri Çizelge 2'de verilmiştir.

Çizelge 2. Entegre yabancı ot yönetimi ile ilgili yapılan yayınların ana bilgileri

Entegre yabancı ot yönetimi alanında yapılan çalışmaları detaylı bir şekilde değerlendirmiştir. 1983-2025 yılları arasını kapsayan zaman aralığında, toplamda 441 farklı kaynaktan yayımlanmış 2.130 doküman, bu alandaki araştırma faaliyetlerinin yoğunluğunu ortaya koymaktadır. Bununla birlikte, doküman başına düşen ortalama 21,91 atıf sayısı, EYY çalışmalarının bilimsel etkisinin yüksek olduğunu işaret etmektedir. Yazar profiline bakıldığında, alanda toplam 5.185 yazarın katkıda bulunduğu görülmektedir. Doküman türleri incelendiğinde, 1704 makale ile EYY alanında en yaygın yayın türünün makaleler olduğu belirlenmiştir. Derlemeler (203 adet), kitap bölümleri (113 adet) ve konferans bildirileri (87 adet) de önemli bir yer tutmaktadır. Ayrıca yıllık büyüme oranındaki düşüş, bu alandaki çalışmaların sürdürülebilirliği ve yeni araştırma fırsatlarının değerlendirilmesi gerektiğine işaret etmektedir (Çizelge 2). Yıllara göre yayın sayıları Şekil 2’de verilmiştir.

Şekil 2. Yıllara göre yayın sayıları

EYY üzerine yapılan bilimsel yayınların yıllara göre dağılımını incelediğimizde, bu alandaki araştırmaların zaman içinde belirgin bir artış göstermektedir. İlk yayının 1983 yılında yapıldığı, ancak 1984 ve 1988 gibi yıllarda yayın olmadığı gözlemlenmektedir. Ancak 1990'larda bir miktar artış göstermiştir, ancak bu dönemde yayın sayısı genel olarak düşük kalmıştır. 1990-1999 yılları arasında yayın sayısındaki artış yavaş ancak sürekli bir şekilde gerçekleşmiştir. 1990'larda, 3 ile 7 arasında değişen yayın sayıları görülmekte, bu yıllarda entegre yabancı ot yönetimi konusunun daha çok araştırılmaya başlandığı söylenebilir. 2000'li yıllarla birlikte bu alandaki araştırmalar hız kazanmış, özellikle 2004-2006 yılları arasında yayın sayıları 50'yi aşmıştır. 2006 yılında 58 yayına ulaşılması, bu dönemde entegre yabancı ot yönetimi üzerine yapılan çalışmalarda artışın bir göstergesidir. 2010'lardan sonra yayın sayısı çok daha belirgin bir şekilde artmıştır. Özellikle 2019-2021 yılları arasında, 100'ü aşan yayın sayıları dikkat çekmektedir. 2020 yılında 135 yayınlı zirve yapmış ve 2021'de 158 yayına ulaşılmıştır. Bu artış, entegre yabancı ot yönetiminin giderek daha fazla önem kazandığını, bu konuda yapılan bilimsel çalışmaların arttığını ve alandaki yeniliklerin hızla

yayıldığını göstermektedir. 2023 yılı ise 130 yayınlı önceki yıllara yakın bir düzeyde kalmıştır. 2024'te ise 144 yayınlı, bu alandaki ilginin artmaya devam edeceğini göstermektedir (Şekil 2). Entegre yabancı ot mücadelesi ile ilgili En fazla yayınlı yapan ilk 10 ülke ve bu konuda yayınlı yapan ülkeler haritası Şekil 3'te verilmiştir.

Şekil 3. Entegre yabancı ot mücadelesi ile ilgili En fazla yayınlı yapan ilk 10 ülke ve bu konuda yayınlı yapan ülkeler haritası

Entegre yabancı ot mücadelesi üzerine 90 ÜLKE yayınlı yapmıştır bu ülkeler içerisinde en fazla yayınlı, Amerika Birleşik Devletleri (678 yayınlı) bu alandaki lider ülke olarak öne çıkmaktadır. Hindistan (302 yayınlı) ve Avustralya (273 yayınlı), ikinci ve üçüncü sıralarda yer almaktadır. Kanada (194 yayınlı) ve Brezilya (102 yayınlı), bu alandaki önemli katkılara sahip diğer ülkeler arasındadır. Avrupa ülkeleri arasında İtalya, Almanya, İspanya ve Fransa gibi ülkeler, özellikle organik tarım ve kimyasal olmayan mücadele yöntemlerine yönelik yapılan araştırmalarla dikkat çekmektedir. Türkiye ile bu konuda en fazla yayınlı yapan ülkeler içerisinde 41 yayınlı ile 17. sırada yer almaktadır (Şekil 3). Ülkelerin ortak yayınlı haritası Şekil 4'te sunulmuştur.

Şekil 4. Ülkelerin ortak yayınlı haritası

Entegre yabancı ot yönetimi konusunda yapılan bilimsel çalışmaların uluslararası işbirliği boyutunda dikkate değer bir tablo ortaya çıkmaktadır. Verilere göre, bu alanda en fazla ortak yayın yapan ülkeler arasında Hindistan ve Avustralya öne çıkmaktadır ve bu ülkeler arasında 36 ortak yayın gerçekleştirilmiştir. Bunu ABD ve Avustralya (28 yayın) ile ABD ve Kanada (26 yayın) arasındaki işbirlikleri takip etmektedir. Özellikle Avustralya'nın, Hindistan, ABD, Pakistan ve Türkiye gibi farklı kıtalarla güçlü bir işbirliği ağı kurduğu dikkat çekmektedir. Türkiye'nin bu alandaki uluslararası işbirlikleri de kayda değer bir yer tutmaktadır. Türkiye, toplamda 17 ülke ile ortak yayın gerçekleştirmiştir ve bu, Türkiye'nin entegre yabancı ot yönetimi konusundaki araştırmalara uluslararası düzeyde katkı sağladığını göstermektedir. En fazla işbirliği yapılan ülkeler arasında ABD (14 yayın) ve Avustralya (7 yayın) yer almaktadır. Bunun yanı sıra, Pakistan ile 4 yayın ve Tayland ile yine 4 yayın gerçekleştirilmesi, Türkiye'nin Asya ülkeleriyle de işbirliğini sürdürdüğünü ortaya koymaktadır (Şekil 4). En fazla yayın yapılan dergiler Şekil 5'te sunulmuştur.

Şekil 5. En fazla yayın yapılan dergiler

Entegre yabancı ot yönetimi konusunda 441 kaynakta yayın yapılmıştır. bu konuda en fazla yayın yapan dergiler, bu alandaki bilimsel katkıları yönlendiren önemli bilgi kaynaklarıdır. Verilere göre, bu alanda öne çıkan dergiler, hem yabancı ot mücadelesiyle doğrudan ilgili konuları hem de tarım ve bitki koruma bilimlerini kapsayan disiplinleri içermektedir. Weed Science, 279 makale ile listenin başında yer alarak bu konu üzerine en fazla katkıyı sağlayan dergi olarak öne çıkmaktadır. Onu 196 makale ile Weed Technology takip etmektedir. Diğer öne çıkan dergiler arasında Crop Protection (99 makale) ve Weed Research (97 makale) bulunmaktadır (Şekil 5). Entegre yabancı ot yönetimi ile ilgili en fazla yayın yapan yazarlar Çizelge 3'te verilmiştir.

Çizelge 3. En fazla yayın yapan yazarlar

Yazar	Yayın (adet)
Chauhan BS	93
Blackshaw RE	41
Harker KN	36
Swanton CJ	34
Beckie HJ	32
Knezevic SZ	32
Norsworthy JK	32
Mahajan G	26
Gerhards R	24
Leon RG	22
Davis AS	21
O'donovan JT	21

Entegre yabancı ot yönetimi konusunda 5.185 yazar yayın yapmıştır. Bu konuda en fazla yayın yapan yazarlar, bu alandaki bilimsel literatüre önemli katkılar sağlamış ve alanın gelişimine yön vermiştir. Listenin başında yer alan Chauhan B.S., 93 makale ile en üretken yazar olarak dikkat çekmektedir. Blackshaw R.E. (41 makale) ve Harker K.N. (36 makale) gibi diğer isimler, tarımsal ekosistemlerde yabancı otların kontrolü ve çevresel sürdürülebilirlik üzerine yoğunlaşmışlardır. Swanton C.J. (34 makale) ve Beckie H.J., Knezevic S.Z., ve Norsworthy J.K. (32'şer makale) gibi yazarlar, hem teorik hem de uygulamalı düzeyde geniş bir yelpazede çalışmalar yapmışlardır. Sonuç olarak EYY alanında üretkenliğin belirli araştırmacılar arasında yoğunlaştığını ve bu yazarların, yabancı ot mücadelesinin farklı boyutlarına odaklanarak alanın genişlemesine ve derinleşmesine önemli katkılar sunduğunu göstermektedir (Çizelge 3). Yazarların üretkenlik zamanları Şekil 6'da gösterilmiştir.

Şekil 6. Yazarların üretkenlik zamanları

Entegre yabancı ot yönetimi konusunda en fazla yayın yapan yazarların üretkenlikleri incelendiğinde, Blackshaw R.E., Harker K.N. ve Swanton C.J. gibi isimlerin uzun yıllardır bu

oluşturmuşlardır. Özellikle "herbisit" ve "herbisit dayanıklılığı" anahtar kelimeleri, kimyasal kontrol yöntemlerinin ve bu yöntemlere karşı geliştirilen direnç mekanizmalarının ön planda olduğunu göstermektedir (Şekil 8). En fazla kullanılan anahtar kelimeler Şekil 9'da gösterilmiştir.

Şekil 9. En fazla kullanılan anahtar kelimeler

Entegre yabancı ot yönetimi alanında gerçekleştirilen çalışmalarda toplamda 4528 farklı anahtar kelime kullanılmıştır. Entegre yabancı ot yönetimi alanında yapılan çalışmalarda kullanılan anahtar kelimeler, bu disiplinin temel odak noktalarını ve araştırma eğilimlerini yansıtmaktadır. Bu bağlamda, en sık kullanılan anahtar kelime "entegre yabancı ot yönetimi" (integrated weed management) olmuştur ve 983 kez tekrar edilerek alanın ana konsepti olduğunu açıkça göstermektedir. "Herbicide resistance" (herbisit dayanıklılığı) 157 kez kullanılarak, yabancı otların herbisitlere karşı geliştirdiği direnç mekanizmalarının, entegre yabancı ot yönetimi araştırmalarında önemli bir yer tuttuğunu göstermektedir. Benzer şekilde, "weed control" (yabancı ot kontrolü) ve "herbicides" (herbisitler) sırasıyla 122 ve 112 kez tekrarlanmış olup, kimyasal ve fiziksel kontrol yöntemlerinin bu alanın vazgeçilmez unsurları olduğunu ortaya koymaktadır. "Allelopathy" (allelopati) 74 kez anılarak, bitkiler arası kimyasal etkileşimlerin yabancı ot kontrolünde önemli bir araç olarak ele alındığını göstermektedir. "Weeds" (yabancı otlar), "competition" (rekabet) ve "crop rotation" (ürün rotasyonu) gibi anahtar kelimeler ise sırasıyla 67, 60 ve 60 kez kullanılarak, bitki rekabeti, yabancı ot baskılama stratejileri ve tarımsal çeşitlendirmenin entegre yabancı ot yönetimi stratejilerindeki rolünü vurgulamaktadır. "Biological control" (biyolojik kontrol) ve "glyphosate" (glifosat) anahtar kelimeleri sırasıyla 52 ve 51 kez kullanılarak, biyolojik yöntemlerin ve yaygın olarak kullanılan bir herbisit olan glifosatın bu alandaki önemini göstermektedir. "Weed suppression" (yabancı ot baskılama) ve "cover crops" (örtü bitkileri) gibi kelimeler ise sırasıyla 44 ve 43 kez tekrarlanarak, yabancı otların baskılanmasında örtü bitkilerinin etkili bir yöntem olduğunu ortaya koymaktadır. Diğer dikkat çeken anahtar kelimeler arasında "weed competition" (yabancı ot rekabeti), "weed ecology" (yabancı ot ekolojisi) ve "economics" (ekonomi) bulunmaktadır. Bu terimler, entegre yabancı ot yönetimi çalışmalarında yabancı otların ekolojik etkileri, rekabet dinamikleri ve ekonomik

değerlendirmelerin önemini vurgulamaktadır. Sonuç olarak, Özellikle kimyasal, biyolojik ve kültürel kontrol yöntemleri ile ekonomik ve ekolojik değerlendirmeler, bu alandaki araştırmaların ana eksenini oluşturmaktadır (Şekil 9). Anahtar kelimelerin kavramsal yapı haritası Şekil 10'da verilmiştir.

Şekil 10. Anahtar kelimelerin kavramsal yapı haritası

Entegre yabancı ot yönetimi ile ilgili kullanılan anahtar kelimelerin kümelenmesi, araştırmaların tematik yapısını ve odak noktalarını açık bir şekilde ortaya koymaktadır. İlk kümede, "yabancı ot ağırlığı" (weed biomass) ve "yabancı ot yoğunluğu" (weed density) gibi anahtar kelimeler yer almış, bu da araştırmaların yabancı ot popülasyon dinamikleri ve bu faktörlerin tarımsal sistemlerdeki etkilerine odaklandığını göstermektedir. İkinci kümede, "verim kaybı" (yield loss) anahtar kelimesinin tek başına yer alması, tarımsal üretim üzerindeki olumsuz etkilerin bağımsız bir araştırma konusu olarak ele alındığını göstermektedir. Üçüncü kümede, "yabancı ot" (weed), "rekabet" (competition) ve "yabancı ot rekabeti" (weed competition) gibi anahtar kelimeler bulunmuştur. Bu terimler, bitkiler arası rekabet dinamiklerinin ve bu rekabetin tarımsal üretim üzerindeki etkilerinin araştırıldığı bir alanı işaret etmektedir. Dördüncü kümede ise herbisit isimleri, kültür bitkileri isimleri ve "iklim değişikliği" (climate change) gibi çeşitli anahtar kelimeler yer almıştır. Bu grup, yabancı ot yönetiminde kullanılan kimyasal yöntemler, hedef alınan kültür bitkileri ve iklim değişikliğinin bu süreçlere olan etkisi gibi geniş bir yelpazede çalışmaları kapsamaktadır. Son ve en büyük kümede, "entegre yabancı ot yönetimi" (integrated weed management), "yabancı ot mücadelesi" (weed control), "agroekoloji" (agroecology), "biyolojik kontrol" (biological control), "kimyasal kontrol" (chemical control), "herbisit dayanıklılığı" (herbicide resistance) ve "herbisit" (herbicide) gibi temel anahtar kelimeler yer almıştır. Bu küme, entegre yabancı ot yönetiminin temel kavramlarını ve uygulamalarını içermektedir. Hem biyolojik hem de kimyasal yöntemler ile agroekolojik yaklaşımları bir araya getiren bu küme, alanın çok disiplinli yapısını ve sürdürülebilir tarım için entegre yaklaşımların önemini yansıtmaktadır (Şekil 9).

SONUÇ

Entegre yabancı ot yönetimi ile ilgili yapılan çalışmaların bibliyometrik analizini incelediğimiz çalışmamızda, EYY üzerine yapılan araştırmaların son yıllarda önemli bir artış gösterdiği tespit edilmiştir. 1983-2025 yılları arasında yayımlanan toplam 2.130 doküman, bu alandaki araştırma yoğunluğunu ortaya koymaktadır. EYY konusundaki yayınların yıllara göre dağılımı incelendiğinde, özellikle 2000'li yıllarda belirgin bir artış gözlemlenmiştir. Uluslararası düzeyde, ABD bu alanda lider konumda bulunurken, Türkiye 41 yayımla dünya sıralamasında 17. sırada yer almakta ve uluslararası işbirliklerinde önemli bir rol oynamaktadır. Anahtar kelimeler arasındaki kümelenme analizi, EYY çalışmalarında kimyasal, biyolojik ve kültürel kontrol yöntemlerinin yanı sıra ekonomik ve ekolojik değerlendirmelerin de ön plana çıktığını göstermektedir. Sonuç olarak, EYY alanındaki bilimsel çalışmalar geniş bir coğrafi dağılım ve tematik çeşitlilik sunmaktadır. Özellikle kimyasal ve biyolojik kontrol yöntemleri, sürdürülebilir tarımsal uygulamaların geliştirilmesi açısından büyük önem taşımaktadır.

***Cistus laurifolius* L. BİTKİSİNİN (MDA-MB231; Meme kanseri Epiteli), BAZI BİYOLOJİK VE FİTOKİMYASAL ÖZELLİKLERİN ARAŞTIRILMASI**

Doç.Dr, Hasan Basri Karayel

Kütahya Dumlupınar Üniversitesi, Gediz Meslek Yüksekokulu Tıbbi Hizmetler ve Teknikler Bölümü, Kütahya, Türkiye

ÖZET

Bu çalışmada, *Cistus laurifolius* L.'nin meyve, dal ve yaprak kısımlarının ekstraktları hekzan, metilen klorür ve etanol çözücülerini kullanılarak hazırlanmıştır. Hazırlanan ekstraktların DNA, sitotoksik ve antioksidan özellikleri araştırılmıştır. Ekstraktların sitotoksik özellikleri MDA-MB231 (Meme kanseri Epiteli), hücre hatları araştırılmıştır. Hazırlanan tüm ekstraktlar arasında T4 (t-metilen klorür) ekstraktı, diğer ekstraktlara kıyasla daha fazla kanser hücre hattı üzerinde sitotoksik etkiler göstermiştir. Antioksidan testleri DPPH (2,2-difenil-1-pikrilhidrazil) radikal süpürme ve Folin-Ciocalteu yöntemleri kullanılarak yapılmıştır. Her iki testte de T7 (t-etanol) ekstraktının güçlü bir antioksidan etkiye sahip olduğu belirlendi (DPPH yöntemi için IC50 = 0,000015 µg/ml). DNA parçalama çalışmalarında elde edilen sonuçlar, metanolik bitki ekstraktlarının varlığında DNA'nın hidroksil radikal hasarından korunmasını doğrulamaktadır. Sonuç olarak, bazı *Cistus laurifolius* L. ekstraktlarının önemli biyolojik özelliklere sahip olduğu belirlenmiştir.

Anahtar kelimeler: *Cistus laurifolius* L., sitotoksik etki, antioksidan, DNA temizleme, anti-kanser

INVESTIGATION OF SOME BIOLOGICAL AND PHYTOCHEMICAL PROPERTIES OF *CISTUS LAURIFOLIUS* L. HERB (MDA-MB231; Breast Cancer Epithelium)

ABSTRACT

In this article, extracts of *Cistus laurifolius* L.'s fruits, branches, and leaves were exposed to hexane, methylene chloride, and ethanol as solvents. Then, the produced extracts' DNA cleaving, cytotoxic, and antioxidant activities were examined. In the following cell lines: MDA-MB231 the extracts' cytotoxic potential was examined. T4 (seed-methylene chloride) extract from all generated extracts show cytotoxic effects on a greater number of cancer cell lines than other extracts. By using the DPPH (2,2-diphenyl-1-picrylhydrazil) radical scavenging and Folin-Ciocalteu techniques, antioxidant tests were conducted. T7 (seed-ethanol) extract was found to have a very potent antioxidant activity in both experiments (IC50 for the DPPH technique = 0,000015 µg/ml). The outcomes of DNA cleavage experiments support the idea that plant extracts in methanol protect DNA against hydroxyl radical damage. As a result, it was discovered that some of the *Cistus laurifolius* L. extracts have significant biological effects on the cell lines under investigation.

Keywords: *Cistus laurifolius* L., cytotoxic effect, antioxidant, DNA cleavage, anti-cancer

1.GİRİŞ

Bu çalışmada ele alınan tür, *Cistus laurifolius* türünün Türkiye'de 'defneyapraklı laden' adı ile bilinen, *Cistaceae* familyasına ait bir bitkidir. Yapraklarının ve çiçeklerinin dekoksionunun antihiperlipidemik (şeker düşürücü) olarak kullanıldığı bilinmektedir (Gulcin, 2020). Urla

yöresinden toplanan antioksidan kapasite ve antimikrobiyal aktiviteye sahip ekstrakt hazırlamak için *Cistus* sp. yaprakları kullanılmıştır. *Cistus* özü antibiyotikler kadar etkiliymiş. Bu sonuçlar, *Cistus* yapraklarının ekstraktının doğal antibakteriyel unsur olarak kullanılmasının umut verici olabileceğini ortaya koymuştur. Bu sonuçlarla *Cistus* sp. uçucu yağı; sakız, rezinoit ve ekstrakt dahil olmak üzere farklı türde ürünlerin üretimi için doğal bir antimikrobiyal kaynak özelliği taşıyabilir (Köse ve ark., 2017). Türkiye, birçok endemiği de içeren çeşitli sayıda bitki nedeniyle Avrupa'nın en büyük floralarından birine sahiptir. *Cistus* sp.yapraklarından hazırlanan ekstraktların antioksidan ve antimikrobiyal aktivitelerini belirlemek, Antioksidan kapasitesi ve meyveler, sebzeler, şarap, çaylar gibi çeşitli bitki materyallerinin kalitesini karakterize etmek ve belirlemek için en önemli ve yaygın olarak kullanılan parametreler olduğunu belirtmiştir (Cetin ve ark., 2006). *Cistus laurifolius* L.'nin çiçekleri ve çiçek tomurcukları peptik ülser tedavisinde kullanılır. Çeşitli *Cistus* türlerinin yaprak ve dallarından elde edilen özler, dünya çapında romatizma ve böbrek iltihabı gibi çeşitli iltihaplı rahatsızlıkların tedavisinde halk ilacı olarak kullanılmaktadır. *Cistus laurifolius*'un Türk geleneksel tıbbında kullanımını açıkça desteklemektedir (Yeşilada ve ark., 1997). *Cistus creticus* ve *Cistus laurifolius* bitkilerinde toplam fenolik madde miktarını belirlemek için Folin-Ciocalteu yöntemi kullanılmıştır. Bitkilerin toprak üstü kısımlarının sıvı ekstraktlarının fenolik içeriği %3,9 ile %22,4 arasındadır. Toplam flavonoid içeriği, alüminyum klorür kolorimetrik yöntemle belirlendi. Bitkilerin toprak üstü kısımlarının sıvı ekstraktlarının flavonoid içeriği %0,3 ila %14,6 olarak belirlenmiştir (Erdügan, 2021). Doğal olarak oluşan bileşikler, sentetik antibiyotiklerin kullanımına terapötik bir alternatif olarak kabul edilmiştir (Rios ve ark., 2005). Türk halk hekimliğinde *Cistus laurifolius* L.'nin çeşitli kısımları peptik ülser ve romatizmal, sırt ağrısı gibi çeşitli ağrıların tedavisinde kullanılmaktadır. Halk hekimliğinde mide ağrısı ve mide ülseri tedavisinde kullanılmaktadır. Dioscorides zamanından beri, yani Anadolu'da en az 2000 yıldır yapraklarından hazırlanan çay, diyabet hipoglisemik semptomlarını azaltmak için kullanılmıştır (Sezik ve ark., 1991; Yesilada ve ark., 1995). Kanser tedavisinde yaygın olarak kullanılan stratejiler cerrahi, radyoterapi ve kemoterapiymiş (Gürdere ve ark., 2020). Türk halk hekimliğinde mide ülseri ve çeşitli ağrıların tedavisinde *Cistus laurifolius* L.'nin çeşitli kısımları kullanılmaktadır. Ayrıca yapraklarından hazırlanan çay diyabet semptomlarını azaltmak için kullanılmıştır (Orhan ve ark., 2013). *Cistus laurifolius* L.'nin tohum, yaprak ve dallarından elde edilen dokuz farklı ekstrenin sitotoksik ve antioksidan özelliklerini in vitro olarak araştırdık. Ayrıca, çeşitli hücre dizilerindeki etki biçimlerini daha iyi anlamak için bu ekstraktların DNA bölünme özellikleri de araştırılmıştır.

Malzemeler ve Yöntemler

***Cistus laurifolius* L. Ekstraktlarının Hazırlanması**

Tohum ve yapraklardan toplam dokuz farklı ekstrakt hazırlanmıştır. *Cistus laurifolius* L. bitkisinin dalları hekzan (Sigma Aldrich) kullanılarak, metilen klorür (Sigma Aldrich) ve etanol (Merck) çözücülerini. Bunlar ekstraktları t-hekzan (T1), y-Hekzan (T2), d-hekzan (T3), t-metilen klorür (T4), y-metilen klorür (T5), d-metilen klorür (T6), t-etanol (T7), y-etanol (T8) ve d-etanol (T9). *Cistus laurifolius* L. bitki örnekleri toplandı Kütahya, Türkiye'deki Murat Dağı'ndan 100 g kurutulmuş bitki 500 mL haxane, metilen klorür veya etanol çözeltileri ile karıştırılır ayrı ayrı öğütüldükten sonra manyetik karıştırıcı ile 48 saat boyunca karıştırılmıştır. Ardından, çözücülerdeki bitki partikülleri filtre kağıdı ile süzülmüştür ve çözücüler evaporatörde uzaklaştırıldı (Heidolph Laborota 4001) (Özbek ve ark.,2020; Özbek ve ark.,2022). Daha sonra, dokuz farklı biyolojik özellik viskoz formdaki ekstraktlar aşağıda detaylandırıldığı şekilde test edilmiştir.

Tablo 1. *Cistus laurifolius* L. ekstraktlarının sitotoksik etkileri ve IC₅₀ değerleri

Kanser hücresi	T1 T-Hekzan	T2 Y-Hekzan	T3 D-Hekzan	T4 T-Metilen Klorür	T5 Y-Metilen Klorür	T6 D-Metilen Klorür	T7 T-Etanol	T8 Y-Etanol	T9 D-Etanol	5-FU
MDA-MB231	5.2 ± 1.2	13.8 ± 1.5	38.9 ± 11.2	1.4 ± 0.3	97.7 ± 34.3	73.2±25.4	22.9 ± 2.5	103.6±35.4	16.8 ± 1.2	13.5 ± 2.3

Hücre Kültürü

Meme kanseri (MDA-MB231), hücre hatları elde edildi orijinal olarak ATCC'den alınmıştır. Tüm hücre hatları RPMI 1640 (Sigma Aldrich) veya DMEM/F-12 kültür ortamı (Sigma Aldrich), takviye edilmiş 10 fetal sığır serumu (FBS) (Sigma Aldrich) ve penisilin ile (100 U/mL)/streptomisin (100 mg/mL). Hücreler 37 °C'de inkübe edildi 5 CO₂, %95 hava ile nemlendirilmiş bir atmosferde tutulmuştur. Hücreler tedavi edildi tüm ekstrakt çözeltilerinin artan konsantrasyonları ile (0, 2.5, 5, 10, 25, 50, 100 ve 200 µg/ml) ve 37 °C sıcaklıktaki bir inkübatörde kültürlendi 48 saat boyunca.

MTT Yöntemi

Ekstraktların sitotoksik etkilerini tespit etmek için MTT yöntemi kullanılmıştır hücreler üzerinde. Bu yöntemde, sarı renkli 3-(4,5-dimetil-2-tiyazolil)-2,5-difenil-2H-terazolyum bromür (MTT), canlı hücrelerin mitokondrilerindeki dehidrojenaz enzimleri tarafından tetrazolyum halkasının kırılması sonucu mor formazan kristallerine dönüşür. Oluşan renk Oluşan formazan kristallerinin DMSO'da çözünmesini takiben ortamda spektrofotometrik yöntemle ölçülür ve ölçülen absorbans değeri canlı hücre sayısı ile pozitif orantılıdır mevcut. Absorbans değerleri 570 nm dalga boyunda belirlenmiştir. Bu değerler yüzde inhibisyon değeri aşağıdaki formül kullanılarak hesaplanmıştır:

$$\% \text{ hücre inhibisyonu} = 100 - [(Ae - Ab) / (Ac - Ab)] \times 100$$

Burada, A = absorbans, e = ekstrakt, b = boş ve c = kontrol.

Son olarak, ekstraktların etkileri IC₅₀ değerleri ile ifade edilmiştir (IC₅₀ seviyesine kadar hücrelerin büyümesini engelleyen ekstrakt konsantrasyonu kontrolün %50'si). MTT deneyi üç kopya halinde gerçekleştirilen üç bağımsız deneyde gerçekleştirilmiştir.

Antioksidan Aktivite Deneyi

DPPH Radikal Süpürme Yeteneği

Hazırlanan ekstraktların DPPH (2,2-difenil-1-pikrilhidrazil) radikal süpürme aktivitesi spektrofotometrik olarak belirlenmiştir DPPH'nin bir etanol çözeltisinin indirgenmesine dayanan yöntem. 2, 5, 10, Her bir ekstraktın 20 µL 1 mM stok çözeltisi 40 µL'ye tamamlandı DMSO (Sigma Aldrich) ile karıştırılmış ve 160 µL 0.1 mM DPPH serbest radikal çözeltisi. Karışım 30 dakika bekletildi. Karanlıkta tutuldu ve absorbans 515 nm'de (Lokal ve ark.,2020; Akocak ve ark., 2019). Serbest radikal DPPH inhibisyonu yüzde (%I) olarak şöyledir, aşağıda verilen formül ile hesaplanır:

$$I \% = (A_{\text{control}} - A_{\text{sample}}) / A_{\text{control}} \times 100$$

Toplam Fenolik İçerik

Bitki ekstraktlarında toplam fenolik bileşikler belirlendi. Folin-Ciocalteu reaktifi. 4,5 mL damıtılmış su, 0,1 mL bitki ekstraktı ve 0,1 mL Folin-Ciocalteu reaktifi karıştırıldı ve 5 dakika süreyle inkübe edildi oda sıcaklığında. Daha sonra 0,3 mL %2'lik sodyum karbonat (Sigma Aldrich) çözeltisi eklendi. Çözümler karıştırıldı ve izin verildi 2 saat oda sıcaklığında bekletilir. Ekstraktların absorbansları spektrofotometre ile ölçüldü. (Thermo Helios Aquamate, Spektrofotometre) 760 nm'de. Butillenmiş hidroksitoluen (BHT) (Merck) standart olarak kullanıldı.

Plazmid DNA Bölünme Çalışmaları

DNA korumasını belirlemek için DNA çentikleme deneyi yapıldı Her bir bitkinin metanol ekstraktlarının pET21a'yı koruma yeteneği üretilen hidroksil radikallerinin zararlı etkilerinden plazmid DNA'sı Fenton reaktifi ile (Wang ve ark., 2020). Plazmid DNA GeneJET kullanılarak izole edildi Üreticinin talimatlarına göre Plazmid Miniprep Kiti (Thermo Scientific). Reaksiyon karışımı 5 µL plazmid DNA içeriyordu (30 ng/µL), 10 µL Fenton reaktifi (30 mM hidrojen peroksit, 100 µM ferrik klorür ve 100 µM askorbik asit), bitki özütü (30 µg/mL) ve reaksiyonun son hacmi 20 µL'ye ayarlanmıştır. ddH₂O. Reaksiyon 37 °C'de 30 dakika inkübe edildi 6X yükleme boyası (Thermo Scientific) reaksiyona eklenmiş ve %0,8 agaroz jele yüklenmiştir. agaroz jel üzerine yüklendi. Elektroforez 1 saat boyunca 90 V'ta gerçekleştirildi ve ardından etidyum bromür (EtBr) boyaması. Jel Quantum ile görselleştirildi ST5 Jel Dokümantasyon sistemi.

TARTIŞMA VE SONUÇ

Cistus laurifolius L. bitki ekstraktlarının meme kanseri (MDA-MB-231), hücre hatlarına karşı sitotoksik etkisi Tablo 1 ve Şekil 1'de verilmiştir. 5-Fluorourasil (5-FU) çalışmada standart olarak kullanılmıştır. Ekstraktlar içerisinde meme kanseri (MDA-MB-231) hücresi üzerinde en güçlü sitotoksik etkiyi T4 ekstraktının gösterdiği tespit edildi (IC₅₀:1,41). Meme normal hücrelerinde ise IC₅₀ değeri, meme kanseri hücresine göre yaklaşık 3 kat daha yüksek olduğu bulundu (IC₅₀:3,2). Bu da T4 Ekstraktının meme kanserinde güçlü bir sitotoksik etki gösterdiğini açıklamıştır. Ayrıca T3, T6 ve T8 ekstraktları kanserli olmayan CRL-4010 hücre dizisinde kanser hücre dizilerine kıyasla en yüksek IC₅₀ değerine sahiptir; bu nedenle, belirli konsantrasyonlarda, T3, T6 ve T8 ekstraktları, normal/sağlıklı hücrelerde değil, spesifik olarak kanser hücrelerinde hücre ölümüne yol açabilir. Hazırlanan tüm ekstraktlar arasında T4 ekstraktı, diğer ekstraktlara kıyasla daha fazla kanser hücre hattı üzerinde sitotoksik etkiler gösterdiğinden, anti-kanser ajanı olarak potansiyel bir aday olabilir.

Yapraklar, uçucu yağ için hidrodamıtıldı ve antioksidan aktivitesi (DPPH, FRAP) test edilmiş (Kilic ve ark.,2019). Bilinen labdan tipi diterpenler, yapraklardan izole edildi ve sıçanlarda anti-enflamatuar aktiviteye (cilt bariyeri bozulma modeli) sahip olduğunu belirtmiştir (Lahcen ve ark.,2020). Hava kısımları sulu ekstrakt antioksidan (ABTS, CUPRAC) aktiviteye sahipmiş (Demetzos ve ark.,2001). Hava kısımları su ile ekstrakte edildi ve ekstrakt antioksidan aktiviteye (FRAP) sahipmiştir (Vasiliki ve ark.,2019). Hava kısımları ayrı ayrı su ve %80 sulu metanol ile ekstre edildi. Her iki ekstrakt da kayda değer antioksidan kapasiteye (DPPH) sahip olduğu belirtilmiştir (Carev ve ark.,2020). Çiçek esansiyel yağı hazırlandı ve analiz edildi ve antioksidan kapasitesi test edilmiştir (DPPH, ABTS) (Alsheikh ve ark., 2016). Tıbbi bitkiler, onlarca yıldır farmakolojik araştırma çalışmalarında ve ilaç gerçekleştirilmelerinde önemli bir rol oynamıştır. Bitkiler, büyük çoğunluğu ikincil metabolizmadan türetilen birçok aktif bileşik içerir. Bu bileşenler terapötik ajanlar, ilaç sentezi için hammaddeler veya farmakolojik olarak aktif bileşikler için modeller olarak kullanılmıştır (Gurib-Fakim, 2006). Bitkisel drogların makroskobik ve mikroskobik yapısı, kimyasal yapılarının belirlenmesi ve ticareti farmakognozinin kapsamına girmektedir. Bu sebepten yola çıkarak topladığımız bitkinin çeşitli kısımlarında elde edilecek ekstraktları kullanarak antikanser etkinin belirtilmesi ile farklı kanser türlerinin umut verici ilaç aday moleküllerinin elde edilmesi hedeflenmiştir. *Cistus laurifolius* L. yapraklarından elde edilen ekstraktın insan servikal adenokarsinom hücreleri (Hep2C), insan kas rabdomyosarkom hücreleri (RD), fare fibrosarkom hücreleri (Wehi 164) gibi farklı kanser hücre tipleri üzerindeki antiproliferatif aktivitesi belirlenmeye çalışılmıştır (Soydam ve ark., 2021). Bitki özlemleri ve fraksiyonları, çeşitli önceki çalışmalarda (Kumar, 2013; Akhter, 2013) oksidatif hasara karşı DNA koruması için kullanılmıştır.

Tıbbi ve aromatik bitkilerin tedavi edici özelliklerinden dolayı üzerinde birçok çalışma yapılmış halde yapılmaktadır. Tıbbi bitkilerde çok önemli antioksidanlar flavonoid, karatenoid ve

fenolik bileşikler bulunmaktadır. Antioksidan tayini için toplam antioksidan aktivite tayini, toplam indirgeme kapasitesi, DPPH., β -karoten ve CUPRAC yöntemi, toplam flavonoid madde tayini ve buna benzer yöntemler sıklıkla kullanılmaktadır.

Antioksidan Aktivite

Bir maddenin antioksidan etkisi, ortamda bulunan serbest radikalleri temizleme yeteneğine bağlıdır. *Cistus laurifolius* L.'nin antioksidan etkinlik taraması, ekstrat DPPH radikal süpürme tahlili ve Folin-Ciocalteu yöntemi ile belirlendi. Ortamdaki serbest radikallerin neden olduğu sarı-yeşil karışımın renginin açılmasına dayanan bileşenlerin absorbans değişimleri 515 nm'de ölçülmüştür. DPPH yöntemine göre yapılan radikal süpürme deneylerinde ölçülen absorbans değerlerine bağlı olarak DPPH kalibrasyon grafiği kullanılarak IC₅₀ değerleri hesaplanmıştır. DPPH yöntemine göre hesaplanan IC₅₀ değerleri Tablo 2'de verilmiştir. IC₅₀ değeri ne kadar küçükse antioksidan aktivite o kadar yüksektir. Diğer bir deyişle, en düşük konsantrasyonda aynı miktarda serbest radikali süpürebilen maddeler daha güçlü antioksidan aktivite gösterirler. Tablo 2'de görüldüğü gibi, en düşük antioksidan temizleme aktivitesine sahip ekstraktın T7 (IC₅₀ = 0.000015 μ g/ml) ve en yüksek antioksidan temizleme aktivitesine sahip ekstraktın T3 (IC₅₀ = 0.1407 μ g/ml) olduğu açıktır.

Tablo 2. *Cistus laurifolius* L. ekstraktlarının antioksidan aktiviteleri

Bitkiler	IC ₅₀
T1	0,0695
T2	0,00155
T3	0,1407
T4	0,000105
T5	0,001132
T6	0,00433
T7	0,000015
T8	0,00063
T9	0,003821

Ayrıca, DPPH radikal süpürücü aktivite testlerinde *Cistus laurifolius* L. ekstraktlarının değişen konsantrasyonlarda (6, 3, 1.5, 0.75 ve 0.375 \times 10⁻⁴ μ g/mL) % inhibisyonları Şekil 1'de verilmiştir. Şekil 1 değerlendirildiğinde, konsantrasyon azaldıkça bazı ekstraktların (T2, T4, T7, T8 ve T9) % inhibisyon değerlerinde önemli bir değişiklik olmazken, bazı ekstraktlarda

(T1, T3, T5 ve T6) düşüş gözlenmektedir. Folin ve Ciocalteu (F-C) (Folin ve ark., 1927) tarafından önerilen yöntem izlenerek *Cistus laurifolius* L. ekstraktları için toplam polifenol içeriği elde edilmiştir. Bu çalışmada, T7 özütü, F-C reaktifini azaltmak için standart olarak kullanılan gallik asitten (GA) daha güçlü bir F-C kompleksi indirgemesi sergiledi. Sonuçlar, g numune başına mg GA eşdeğeri olarak verildi. Ayrıca T7 özütü, sentetik bir antioksidan olan BHT'den daha iyi antioksidan aktivite sergilemiştir (Tablo 2 ve Şekil 3). Sonuç olarak her iki test de T7 ekstraktının çok güçlü bir antioksidan etkiye sahip olduğunu gösterdi.

Plazmit DNA Bölünme Çalışmaları

Fenton'un reaksiyonu hidroksil radikalleri üretir. Hidroksil radikallerinin DNA hasarına neden olduğu ve hücre hasarına neden olduğu ve kanser gibi çeşitli insan hastalıklarına katkıda bulunduğu bilinmektedir (Wang ve ark., 2020). DNA çentikleme deneyleri, DNA'ya zarar veren radikallerin üretimini belirlemek için in vitro model olarak kullanılır. Deneysel verilerimize dayanarak, tüm ekstraktlar, Fenton'un reaksiyonu tarafından oluşturulan DNA hasarına karşı değişen derecelerde oksidatif hasar koruyucu aktivite gösterdi. Fenton reaktifine tabi tutulan DNA bandı yoktur. Tüm metanol özleri, oksidatif stresi etkili bir şekilde azalttı ve DNA'yı Fenton reaksiyonu tarafından üretilen hidroksil radikallerinin zarar görmesinden korudu. Fenton reaktifine maruz kalan DNA'ya metanolik ekstraktların eklendiği şerit 3 ve 9 arasında, doğal süper sarmallı DNA'nın hasarına karşı önemli koruma gözlemlendi. Daha önceki çeşitli çalışmalarda oksidatif hasara karşı DNA koruması için bitki özleri ve fraksiyonları kullanılmıştır (Kumar ve ark.,2013; Akhter ve ark., 2013). Bu sonuçlar, bu çalışmada kullanılan metanolik bitki özütlerinin varlığında DNA'nın hidroksil radikal hasarından korunmasını doğrulamaktadır.

MDA-MB-231/CRL-4010 Hücre Hatlarına Uygulanan Ekstraktların IC₅₀ Sonuçları

Şekil 1. MDA-MB-231/CRL-4010 Hücre Hatlarının IC₅₀ değerleri

Ekstraktlar içerisinde meme kanseri (MDA-MB-231) hücresi üzerinde en güçlü sitotoksik etkiyi T4 ekstraktının gösterdiği tespit edildi (IC₅₀:1,41). Meme normal hücrelerinde ise IC₅₀ değeri, meme kanseri hücresine göre yaklaşık 3 kat daha yüksek olduğu bulundu (IC₅₀:3,2). Bu da T4 Ekstraktının meme kanserinde güçlü bir sitotoksik etki gösterdiğini açıklamıştır. T1, T2, T3, T5, T6, T7, T8, T9 Ekstraktlarının MDA-MB-231 (Meme Kanseri Epitel) ve CRL-4010 (Meme Normal Epitel) hücreler üzerindeki etkisine bakıldığında sitotoksik bir etki göstermediği tespit edildi. Kemoterapik madde olan 5-Fluorouracil maddesini kontrol olarak kullandık ve sitotoksik etki gösterdiğini tespit edildi.

SONUÇ

Bu çalışmada literatürdeki bitki bazlı çalışmaların başarısını göz önünde bulundurarak *Cistus laurifolius* L. bitkisinin çeşitli kısımlarını kullanarak ekstraktlar hazırladık. Bu ekstraktların sitotoksik, antioksidan ve DNA bölünmesi gibi biyolojik özelliklerini araştırdık. Hazırlanan ekstraktlardan bazıları in vitro olarak iyi sitotoksik etkiler göstermiştir. Ekstraktlardan biri ise standartların çok üzerinde antioksidan özellikler göstermiştir. Bu ön sonuçlar çok umut vericidir ve *Cistus laurifolius* L. bitkisinin daha ileri in vivo ve klinik araştırmaların ardından bir antikanser ve antioksidan ajan olarak kullanılma potansiyeline sahip olabileceğini göstermektedir. Çalışmamızdaki en önemli bulgulardan biri olarak özellikle metanol ile hazırlanan ekstraktların DNA'nın hidroksil radikal hasarından korunmasını sağlamasıdır.

KÜTAHYA VE ÇEVRESİNDE KORONAVİRÜS PANDEMİSİNDE KULLANILAN TIBBİ DEĞERİ OLAN BİTKİLER

Doç. Dr, Hasan Basri Karayel

Kütahya Dumlupınar Üniversitesi Gediz Meslek Yüksekokulu, Sağlık Hizmetleri ve Teknikleri Bölümü, Kütahya 43600, Türkiye

ÖZET

Bu çalışma Kütahya ili ve çevresinde immün sistemini güçlendirmek için, hastalıklarla mücadelede tedavi edici olarak geleneksel kullanıma sahip olan bazı bitkiler; kekik, adaçayı, zencefil, zerdeçal, hatmi çiçeği, ebegümeci, zeytin yaprağı olarak bu bitki türleri koronavirüs enfeksiyonları ile mücadelede bitkisel kaynaklı doğal terapötikler olarak kullanılma potansiyelleri belirlenmiştir. Korona virüs tedavisinde konvansiyonel tedavinin yanında fitoterapi ve aroma terapinin kullanılmasının yararlı olacağı halk tarafında düşünülmüş ve kullanılmıştır.

Bazı hastalıkları tedavi edici, bazı rahatsızlıkları giderici ve önleyici özelliği olan bitkilere tıbbi bitkiler veya şifalı bitkiler adı verilmektedir. Bu bitkilerin bir kısmından birçok ilaçların hazırlanmasında kullanılan ham maddeler de elde edilmekte. Tıbbi bitkilere son yıllarda duyulan ilginin artmasında bir takım sebepler vardır. Bu sebepler şöyle sıralanabilir; birincisi ekonomik sebepler halkın rahat bir şekilde ulaşarak tedavi olması, ikincisi sentetik ilaçların yan etkilerin olması, üçüncüsü ümit var olması bazı ağır hastalıklarda modern tıbbin tedavisinde netice alınmadığında, son bir ümit olarak yakın çevrelerinden veya basından öğrendikleri bitkilerden şifa beklmeleri.

Anahtar kelime: Etnobotanik, Tıbbi ve Aromatik Bitkiler, Korona virüs

HERBS OF MEDICINAL VALUE USED IN THE CORONAVIRUS PANDEMIC IN KÜTAHYA AND ITS SURROUNDINGS

ABSTRACT

In this study, in order to strengthen the immune system in and around Kütahya province, some plants that have traditional use as therapeutic in the fight against diseases; thyme, sage, ginger, turmeric, marshmallow flower, hibiscus, olive leaf as these plant species, their potential to be used as herbal natural therapeutics in the fight against coronavirus infections were determined. The use of phytotherapy and aroma therapy in addition to conventional treatment in the treatment of coronavirus has been thought and used by the public.

Plants that have the ability to treat some diseases, relieve and prevent some ailments are called medicinal plants or medicinal plants. Raw materials used in the preparation of many medicines are also obtained from some of these plants. There are a number of reasons for the increasing interest in medicinal plants in recent years. These reasons can be listed as follows; firstly, economic reasons, the public can be treated by reaching easily, secondly, the side effects of synthetic drugs, thirdly, there is hope, in some severe diseases, when there is no result in the treatment of modern medicine, as a last hope, they expect healing from the plants they learn from their close environment or the press.

Keyword: Ethnobotany, Medicinal and Aromatic Plants, Corona virus

1. GİRİŞ

Tıbbın tarihi, şifalı bitki kullanımları, hastalıklara karşı uygulanan teşhis ve tedavilerle doludur. Dine ve büyüye dayalıdır. Halk hekimliği adı verilen bu çalışma alanı ağızdan ağıza, nesilden

nesile aktarılır. Halk, belki de her zamankinden daha fazla, koronavirüs (Covid-19) salgını sürecinde, içinde modern tıbbın henüz çare bulamadığı, ilaç ve aşı çalışmalarının devam ettiği bir dönem de, virüse karşı korunmak için tüm dünyada olduğu gibi ülkemizde de insanların “alternatif” yollar, yöntemler aradığı ve kullandığı bir döneme rastlanılmıştır (Kaplan, 2020). Küresel salgın nedeniyle, dünya ölçeğinde bilimsel araştırmalar ve akademik yazılar, internet ve basında çıkan haberler ülkemizdeki neden-sonuç ilişkilerinin kurgusunu bireysel, toplumsal algıyı da etkilemektedir. Bu bakış açısıyla, Covid-19 salgınında halkta uygulanan geleneksel tedavi yöntemleri araştırılırken, öncelikle toplumun pandeminin nedenine yüklediği anlam olan “sosyal teşhise odaklanmak gerekiyor. Yerel kültürel tedavi sistemlerini oluşturan bu birikim, virüse karşı alınan önlemleri de etkilemektedir. Bu kapsamda tüm uygulamalar, koruyucu tedavi için geleneksel tedaviler, şifalı bitkilerin kullanımı, din büyümesine dayalı uygulamalar bu araştırma kapsamında ele alınmıştır (Kaplan, 2020). COVID-19 pandemisinde kullanımı ile ilgili birçok yayın veya açıklama bulunmaktadır. Bitkisel ürünler bilimsel temele dayalı olsun ya da olmasın. Bu derlemede sosyal medya da taramalar yapılarak COVID-19 tedavisinde bitkisel ürünlerin kullanımı, bitkilerin farmakolojik aktiviteleri, özellikle antiviral aktivite ve etkinliği bitkilerden izole edilmiş bitki türevli bileşikler ve ekstratlar ve bunların moleküler modelleme çalışmalarını gösteren prelinik çalışmaları tartışılmıştır (Ekici ve ark.,2021). Dünya Sağlık Örgütü (WHO), 2019 yılında Covid-19 pandemisini ilan etti. Yüksek ölüm oranı. Korona virüsüne karşı birçok aşı ve ilaç geliştirme çalışmaları halen devam etmektedir. Bitkileri geleneksel olarak halk ilacı ve gıda olarak kullanmışlardır. Yüzyıllardır tıp Antiviral aktivite çalışmaları ayrıca bazı bitki özleri veya bunların aktif maddeleri üzerinde de çalışmalar yürütmektedir. Bu incelemenin ikinci adımını oluşturan; Ankara ilinin Altındağ-Bağlum Kılıçlar, Beypazarı-Ayaş-Güdül, Çamlıdere, Çubuk Çayı-Tatlar, Güdül, Haymana, Polatlı ve Yenimahalle-Kazan gibi Ankara ilinin farklı ilçelerinde yapılan etnobotanik çalışmalar, yayınlanmış bitkiler taranmıştır. Daha sonra, bu türlerin kullanımları Covid-19 semptomları ile uyumlu olanlar tespit edilmeye çalışılmıştır (Akıllıgöz ve ark.,2021). Viral enfeksiyonlar her yıl milyonlarca insanı etkiler ve ciddi ölümlere neden olur. Antiviral ilaçlar sınırlı etkinliğe sahiptir ve ciddi toksik etkilere neden olabilir ve bu sebeple daha etkili yeni antiviral ilaçlara ihtiyaç vardır. Antik çağlardan beri şifalı bitkiler tedavi amaçlı kullanılmıştır. Antiviral özellikli doğal bitkiler, viral hastalıkların tedavisi için etkili bir seçenek. Doğal bitkisel ürünlerin antiviral aktivitesi için yapılan, çalışmalar göstermiştir ki doğal ürünlerin bazıları viral proteinlerle etkileşime girebilir. Antiviral içerikli birçok doğal ürün aktiviteyi artırmak için bazı salgın hastalıklarda kullanılabilir alternatif gıda takviyelerinin ana bileşenlerini oluşturur (Ege ve ark.,2020). Eczacı ve doktorların kontrolünde hazırlanan ekstratlar ile hazırlanan belli kalite standartlarını sağlayan bitkisel ürünler ile yapılan uygulamalar bilim ışığı altında rasyonel fitoterapi ile tedavide başarı elde edilir. Rastgele kullanılan bitkisel ürünlerin yarardan çok zarar vereceği, unutulmamalıdır (Miray ve ark., 2020). Yerli halk tarafından kullanılan bazı yenilebilir bitkilerin ve baharatların çeşitli virüslere karşı güçlü antiviral aktivite gösterdikleri, dahası bunlardan bazılarının farklı tür koronavirüs kaynaklı hastalıklarda da kullanılma potansiyeline sahip oldukları, daha önce yapılan anti-mikrobiyal ve ilişkili rahatsızlıklar üzerinde yapılan çalışmalarda ortaya konulmuştur (Şekeroğlu ve ark., 2020).Türkiye’de son yıllarda bitki ile tedaviye ilgi arttıkça yazılı ve görsel medyada bitkilerle tedavi konusu, uzun yıllar hekimlerin bitkisel ilaçları tamamen dışlaması sonucunda, bu konuda eğitimi olmayan kişiler tarafından gündeme getirilmektedir. Konu ile ilgili olarak konunun uzman olmayan kişiler tarafından çeşitli kitaplar yazılarak halkın kendi kendine teşhis koymasına ve kendi kendini tedavi etmesine teşvik edilmektedir. Bu amaca hizmet için bitkisel ürünler Türkiye’ye ithal edildikten sonra gıda izni veren Tarım Bakanlığınca gıda desteği izni ile piyasaya sunulmakta, ya da distribütörler aracılığı ile konu hakkında eğitimi olmayan kişiler tarafından tedavi edici etkileri anlatılarak elden satış gerçekleştirilmektedir. Sonuçta halk sağlığı ciddi bir tehdit ile karşı karşıya kalmıştır. Oysa bitkiler insanoğlunun doğuşundan itibaren tedavi amacıyla

kullanılmaktadır, ilerleyen teknoloji ve bilimsel araştırma olanakları ile bitkilerin etkinliği, güvenilirliği ve kalitesi ile ilgili çalışmalar yapılmaktadır (Demirezer ve ark, 2007). Kütahya ili ve çevresinde öne çıkan Covid-19 semptomlarına karşı tedavi edici potansiyeli olması sebebiyle kullanılan bazı bitkiler kekik, adaçayı, zencefil, zerdeçal, hatmi çiçeği, ebegümeci, zeytin yaprağı olarak belirlenmiştir. Korona virüs tedavisinde konvansiyonel tedavinin yanında fitoterapi ve aroma terapinin integratif bir tedavi olarak kullanılmasının yararlı olacağı düşünülmektedir.

2. MATERYAL VE METOT

Bu çalışma da Kütahya ve çevresinde COVID-19 hastalıklarında potansiyeli olan bazı bitki örnekleri ele alınmıştır. Çalışmaya temel olan veriler aşamalı olarak elde edilmiştir. İlk olarak COVID-19 hastalıklarına ilişkin çalışmalar incelenmiştir. Ayrıca bölgedeki basın yayındaki haberlerden elde edilen bilgilerde değerlendirilmiş, daha sonrada çalışmamız için izlenecek yol haritası belirlenmiştir.

Kütahya merkez, Simav, Gediz, Tavşanlı ilçelerinde yaşayan 20'si bayan, 20'si erkek toplam 40 kişi ile görüşülmüştür. Ayrıca Kütahya ili Gediz, Simav ve Tavşanlı ilçelerinde bulunan 8 Aktarında görüşleri görüşme formları kullanılarak, karşılıklı görüşmeler yapılmıştır. Bulgular kısmında önce Türkçe adı, familyası, Latince adı, Bitkinin özellikleri, Tıbbi etkileri, Kullanımı belirtilmiştir.

3. BULGULAR -TARTIŞMA VE SONUÇ

Doğal bitkiler doğal yollarla elde edilen bitkilerin uçucu yağ, yaprak, gövde, kök, çiçek, tohum, filiz gibi kısımları çeşitli yöntemlerle çeşitli hastalıkların tedavisinde her bölgede değişik amaçlarla ve yöntemlerle kullanılarak tüketilmektedir. Bu kullanımlar; bitki drogların su ile kaynatılarak yapılan çaya (dekoksasyon) , kaynamış su ile yapılan demleme (infüzyon), zeytinyağı, susam yağı, haşhaş yağı içinde bekletilerek, lapa haline getirilerek, tohum öğütülerek balla karıştırılarak kullanılmaktadır. Gıda olarak kullanılan bitkiler; taze olarak, kaynatıp veya haşlayıp süzildükten sonra içine bulgur, pirinç katılarak, yumurtalı veya yumurtsız ya da sarımsaklı yoğurt ilave edilerek vb. şeklinde kullanılmaktadır. Doğal olarak tüketilen droglar, baharat veya çay olarak kullanılmaktadır. Tıbbi tedavilerde ve gıda olarak kullanılan bitkilerin kullanılması, toksisite değerlendirmesi bakımından araştırılmasında önem arz etmektedir. Bu özellik daha ileri çalışmalarda bitkinin toksikolojisine veya güvenilirliğinin değerlendirilebilmesi bakımından önemlidir (Şimşek ve ark., 2002). Bölge halkının ekonomik düzeyinin yetersiz olması, köylerin şehirlerden uzakta olması, ilaçların yan tesirlerin etkilerinin görülmesi doğal bitki kullanımına yönelmeyi artırmış, bitkilerin daha sık kullanılmasına yol açmıştır. Eskiden “kocakarı ilaçları” olarak bilinen bitkisel ilaçlar, bitkilerin etkilerinin ortaya çıkarılması ile herkes tarafından ilgi görmüş ve kullanılmaya başlanmıştır (Koç, 1999). Ancak, halk toplulukları arasında hekim olarak görülen aktarların, bu aktarların çoğunluğu ticari amaçlarla değişik uygulamalara gitmeleri, dikkat edilmesi gereken önemli bir konudur. Geçmişten günümüze dek ulaşan bu önemli bilgilerin doğru bir şekilde kullanılması ve modern tıp gerçeğinin de göz ardı ve ihmal edilmemesi gerekmektedir. Türkiye’de değişik bölgelerde birçok etnobotanik üzerinde çalışmalar yapılmıştır (Başaran, 2003; Kahraman, Tatlı, 2004) bu alanda yapılan, araştırmaların yeterli olmadığı görülmüştür. Günümüzde tıbbi ve aromatik bitkilerin sayısında son yıllarda görülen bu hızlı artış, modern tıbbın, yapay ilaçlar yerine doğal bitkisel kaynakların kullanılmasının faydalarının kabullenmesinden sonra önem ve değeri artmıştır (Baytop, 1984). Bugün gerek dünyada ve gerekse Türkiye’de tıbbi ve aromatik bitkilerin, çoğunluğu doğal floradan toplanarak kullanılmakta ve pazara sunulmaktadır. Bilinçsizce toplanan bitkilerin doğal floradaki, bitkilerin neslinin giderek yok olduğunu ve çoğu bitkinin nesli gün geçtikçe kaybolmaktadır. Özellikle tıbbi ve aromatik bitkilerin kök, rizom, yumru veya çiçekleri kullanılan bitkilerde durum kendini daha bariz bir şekilde göstermektedir. Tıbbi ve aromatik bitkiler ya tamamen kökten sökülerek yok edilmekte ya da tohum

döneminden önce toplandıkları için bitkilerin nesilleri böylece yok ediliyor. Bu durum gelişmiş ülkelerde erken fark edilmiş bu konuda bitki toplayıcılarına eğitici bilgi verilmiştir (Koç, 1999). Araştırma bölgesinde yapılan çalışmalar sonucunda yoğun olarak salgında yedi bitkinin kullanıldığı tespit edilmiştir. Bu bitkilerin, Kütahya'nın merkez, ilçe ve köylerdeki insanlar tarafından yaygın bir şekilde kullanıldığı gözlemlenmiştir. Kütahya ili ve çevresinde ekonomik değeri olan bazı bitkilerin salgın hastalığında (Covid-19) kullanım şekli;

1- **Türkçe adı:** Tıbbi Adaçayı

Familyası: Labiatae

Latince adı: *Salvia officinalis* L.

Bitkinin Özellikleri: Tıbbi adaçayının çiçek açma zamanında yaprakları toplanıp kurutulmaktadır. 50–100 cm boylarında, çiçekleri morumsu-mavi çok yıllık çalimsı bir bitkidir. Avrupa'nın orta kesiminde ve Batı Balkanlarda yabani olarak bulunur.

Tıbbi Etkileri: Yörede gaz söktürücü, antiseptik, kuvvet verici olarak dâhilen ve haricen kullanılır.

Kullanımı: İnfüzyon (%1-5) dâhilen veya gargara halinde (Baytop, 1984).

2- **Türkçe adı:** Kekik türleri

Familyası: Labiatae

Latince adı: *Thymus, Origanum, Thymbra*

Bitkinin Özellikleri: Kekik türlerinin kurutulmuş çiçekli ve yapraklı herbalarıdır. Kekik türleri beyaz ve pembe çiçekli, ufak yapraklı, kuvvetli etkileyici kokulu, çok yıllık bitkilerdir.

Tıbbi Etkileri: Mideyi yatıştırıcı, antiseptik, kurt düşürücü, kan dolaşımını uyarıcı etkileri vardır. Günümüzde daha çok baharat olarak kullanılmaktadır.

Kullanımı: İnfüzyon veya toz olarak (%1-1.5) dâhilen veya gargara halinde kullanılır (Baytop, 1984).

3- **Türkçe adı:** Hatmi çiçeği

Familyası: Malvaceae

Latince adı: *Althaea officinalis* L.

Bitkinin Özellikleri: Bu tür 2 m kadar boylanan, yumuşak tüyleri olan, çok yıllık otsu bitkilerdir. Yapraklar tam veya üç loplu. Çiçekleri beyaz ve pembedir.

Tıbbi Etkileri: Göğüs yumuşatıcı ve tahrişleri giderici etkilere sahiptir. Mideyi sakinleştiren, antiseptik, parazit düşürücü, kan dolaşımını uyarıcı etkileri vardır. Günümüzde daha çok baharat olarak kullanılmaktadır.

Kullanımı: İnfüzyon olarak (%5), bal ile tat verildikten sonra içilir veya gargara yapılır (Baytop, 1984).

4- **Türkçe adı:** Ebegümece

Familyası: Malvaceae

Latince adı: *Malva sylvestris* L.

Bitkinin Özellikleri: Ebegümece yükselici gövdesi olan 20-50 cm boyunda, çok yıllık, tüylü bir bitkidir. Yaprığı el şeklinde, uzun saplı ve tüylüdür. Lamina rotunda, 3-7 loplu olup kenarları dişlidir. Yaz boyunca açık mor renkli çiçekler açar (Kalafatçılar, 2005).

Tıbbi Etkileri: İnfüzyonu öksürük, bronşit ve ses kısıklığında yumuşatıcı, %5'lik dekoksasyonu gargara olarak boğaz ağrısı, diş apseleri tedavisinde kullanılır. Taze yapraklar, lapa formunda çıbanları yumuşatır. Romatizma ve gut hastalığında ağrıları hafifletir. Leke ve sivilcelere karşı da etkilidir (Kalafatçılar, 2005).

Kullanımı: İnfüzyon veya dekoksasyon olarak kullanılır.

5- **Türkçe adı:** Zeytin yaprağı

Familyası: Oleaceae

Latince adı: *Olea europea* L.

Bitkinin Özellikleri: Aşılı zeytin, 20-30 m kadar boylanır dalları dikensiz, meyvası uzunca ve büyük, beyaz çiçekli bir ağaçtır. Akdeniz ikliminin hakim olduğu bölgenin bitkisidir.

Tıbbi Etkileri: Yaprak ve gövde kabuğu, infüzyon halinde (%5) iştah açıcı, idrar verici, kabız, ateş düşürücü etkilere sahiptir. Şeker hastalığının dada kullanılır. Haricen cerahatli yaraların temizlenmesinde kullanılır.

Kullanımı: İnfüzyon halinde (%5) olarak kullanılır.

6- **Türkçe adı:** Zerdeçal

Familyası: Zingiberaceae

Latince adı: *Curcuma longa* L.

Bitkinin Özellikleri: Zerdeçal türü kurutulmuş rizomların kaynatılmasıdır. Bu tür tropikal ülkelerde yetiştirilmekte. Sarıçiçekle, büyük yapraklı, rizumlu ve çok yıllık bir türdür.

Tıbbi Etkileri: Midevi, gaz söktürücü, safra arttırıcı etkilere sahiptir.

Kullanımı: Toz (0.25-0.50 gr) günde birkaç defa alınır. Dekoksiyon (%2-5) günde 2-3 bardak içilir (Baytop, 1984).

7- **Türkçe adı:** Zencefil

Familyası: Zingiberaceae

Latince adı: *Zingiber officinale* Roscoe.

Bitkinin Özellikleri: 100 cm kadar boylanır vegetatif aksamı kamyş görünüşünde çok yıllık, otsu bir bitkidir. Yapraklar mızrak biçiminde, sivri uçlu, tarçın kokulu. Çiçekleri sarı renkli, tropikal ülkelerde yetişir.

Tıbbi Etkileri: Yatıştırıcı ve gaz söktürücü etkilere sahiptir. Soğuk algınlığı ve gripte, migren ağrılarında romatizma ve kas ağrılarında kullanılır.

Kullanımı: Toz günde (0.25-1 gr) infüzyon (%1) günde 1-2 bardak içilir (Baytop, 1984).

Tedaviye yeni sunulan birçok ilaç, insanlarda uzun süre test edilemeden piyasaya verilmektedir. Bunların bazı tehlikeli yan etkileri yıllar sonra görülmekte ve bazen de giderilmesi imkânsız zararlar ortaya çıkabilmektedir. Oysa uzun asırlar kullanılmakta olan bitkilerin yan etkileri, dozları bilinmekte ve buna göre tedbirli davranılmaktadır. Bazı ağır hastalarda, tıbbi tedavi ve ilaçlardan netice alamayan kimselerin, son bir ümit olarak yakın çevrelerinden veya basından öğrendikleri bitkilerden şifa beklmeleri gün geçtikçe artmaktadır. Tıbbi bitkilerin tesirleri geç başlar, fakat genel olarak yan etki göstermezler (Kalafatçılar, 2005). Çeşitli hastalıkların tedavisinde halk tarafından kullanılan ve olumlu etkileri göz ardı edilemez olan tıbbi bitkilerin bilinçli olarak tüketilmesi daha da yararlı olacaktır. Tıbbi bitkiler üzerinde yapılan çalışmaların analizi yapılmış etkin içeriği belli olan güvenilirliği kanıtlanmış bitki türlerinin hastalıkların alternatif tedavisinde kullanılması toplum sağlığı açısından daha da yararlı olacaktır. Dünyada salgın hastalıklar tarihine bakıldığında hep önlemler alınmış, günümüzde de Covid-19 küresel salgınında, tüm toplumlar çeşitli şekillerde salgından korunmaya çalışmıştır. Bu çalışmanın temel konusu, salgın boyunca insan toplulukları geleneksel ve tamamlayıcı tedavilerle önlemler almaya çalışılmıştır.

ÖZET

Ülkemizde ve dünyada planlama konusunda yapılan çalışmalar çok büyük önem arz etmektedir. Planlama, yöneticilerin doğru ve etkili kararlar verebilmesi için gerekli olan ön hazırlıktır. Bu çalışma, planlama konusunda görülen eksik hususların az da olsa giderilmesi adına yapılan çalışmaları içermektedir. İstanbul 112 Acil Çağrı Merkezi Müdürlüğünde yapılan bu çalışmaya istinaden kurumdaki çağrı karşılayıcı personele gelen çağrı adetleri 1 aylık veri kullanılarak 1 haftalık olarak tahmin edilmiştir. Kurulan GAMS modelleri ile işgücü optimizasyonu çalışmaları yapılmıştır. Bu modeller, maliyet ve zaman faktörleri göz önünde bulundurularak oluşturulmuştur. Bu çalışmanın amacı, kurumdaki verimliliği artırarak çağrı karşılayıcı personelin üzerine binen yükü azaltmaktır. Önerdiğimiz modeller 133 çağrı karşılayıcı kapasiteli kurumda bulundurulması doğru olan çağrı karşılayıcı personel sayısını ilgili faktörlere bağlı kısıtlar dahilinde minimize etmektedir. Makine öğrenmesi ile çağrı sayılarının tahmin edilmesinden önce önemli bir istatistiksel model olan ARIMA modeli kullanılmıştır. Tahminlerin daha doğru olması için makine öğrenmesi yöntemleri kullanılacaktır. GAMS programında ise kurulacak olan zaman minimizasyonu modeli ile zaman hedeflerini odağımıza alarak işgücü optimizasyon çalışmasını gerçekleştirmek hedeflenmektedir. Bu çalışma, İstanbul 112 Acil Çağrı Merkezi'nin etkinliğini artırmaya yönelik bir adım olup, diğer büyük şehirlerdeki acil çağrı merkezlerinin iş gücü yönetiminde de uygulanabilir sonuçlar doğurabilecektir. Gelecekteki araştırmalar, makine öğrenmesi ve optimizasyon modellerinin daha da geliştirilerek daha dinamik ve esnek çağrı merkezi yönetim sistemlerinin oluşturulmasına olanak tanıyacaktır.

Anahtar Kelimeler: Acil çağrı merkezi, optimizasyon, işgücü optimizasyonu

ABSTRACT

Studies on planning in our country and in the world are of great importance. Planning is the preliminary preparation necessary for managers to make correct and effective decisions. This study includes the studies carried out in order to eliminate the missing issues seen in planning, even if a little. Based on this study conducted at Istanbul 112 Emergency Call Center Directorate, the number of calls received by the call answering personnel in the institution was estimated for 1 week using 1-month data. Workforce optimization studies were carried out with the established GAMS models. These models were created by considering cost and

time factors. The aim of this study is to reduce the burden on the call answering staff by increasing the efficiency in the organization. The models we propose minimize the number of call answering personnel that should be kept in an organization with 133 call answering capacity within the constraints of the relevant factors. Before predicting the number of calls with machine learning, ARIMA model, which is an important statistical model, is used. Machine learning methods will be used for more accurate forecasts. With the time minimization model to be established in GAMS program, it is aimed to perform the workforce optimization study by focusing on time targets. This study is a step towards improving the efficiency of the Istanbul 112 Emergency Call Center, and is an important step towards improving the workforce management of emergency call centers in other major cities.

Keywords: Emergency call center, optimization, workforce optimization

GİRİŞ

112 Acil Çağrı Merkezleri (AÇM), 81 ilde faaliyet göstermektedir. 112 AÇM, 7 adet kurumla ilgili ihbarlar almaktadır. Bu kurumlar; Emniyet, Sağlık, Jandarma, İtfaiye, Orman, Sahil Güvenlik ve AFAD' tır. Bu 7 adet kurumla ilgili ihbarlar 112 numarasını telefonunuzdan aradığımızda çağrı olarak 112 AÇM bünyesinde çalışan personele çağrı olarak düşmektedir. Günümüzde, bu ihbarlar, kurum sayısının fazlalığı ve çeşitli faktörler göz önüne alındığında sayı bakımından değişiklik göstermektedir. 112 AÇM çalışanları bu ihbarlarla gerek fiziksel gerekse psikolojik olarak ödün vererek baş etmeye çalışmaktadırlar. Dolayısıyla, bu çalışmanın yapılması ihtiyacı, kurumun çalışanlarının verimliliğinin artırılması ihtiyacından doğmuştur.

Bu çalışma, İstanbul 112 Acil Çağrı Merkezi Müdürlüğü'nde mevcut bulunan büyük veriyi inceleyip analiz ederek diğer 80 ile de örnek olması açısından kurumun verimlilik çalışmalarına yardımcı olması adına yapılmıştır.

Çalışma için gerekli veriler, İstanbul 112 Acil Çağrı Merkezi Müdürlüğü'nden istenmiştir. Bu veriler ışığında çalışmamızı şekillendirdik. Geçmiş yılların çağrı sayıları ile ilgili veriler baz alınarak makine öğrenmesi yöntemi ile önümüzdeki yılın çağrı sayısı tahmin edilecektir. Yine edinilmiş verileri göz önünde bulundurarak işgücü en iyilemesi yapılacaktır.

Yapılan araştırmalarda bu konu başlığı özelinde araştırma sayısının düşüklüğü görülmüştür. Makine öğrenmesi yöntemi ile çağrı sayısı tahmini çok az sayıda incelenmiştir. Acil çağrı merkezi özelinde de aynı gözlemler yapılmıştır. Makine öğrenmesi günümüzde popüler bir yöntem olarak literatürde yapılan birçok araştırmada göze çarpmaktadır. Yine literatürde, acil çağrı merkezi, optimizasyon, işgücü optimizasyonu anahtar kelimeleri ile araştırmalar yaptığımızda acil çağrı merkezi ile ilgili araştırmaların genelde sağlık ile ilgili konuları içerdiği görülmüştür. Bu da 112 acil çağrı merkezlerinin kapsamına giren alanların 112 kurumuna yeni dahil edilmesinden kaynaklı bir durumdur. Optimizasyon anahtar kelimesi çok sayıda araştırmaya konu olmuştur. Hedef programlama ile ilgili olanlar daha az sayıdadır. Fakat, acil çağrı merkezleri özelinde, bu konu bazı çalışmalara konu olmuş olsa da son derece az sayıda çalışma vardır. Dolayısıyla bu konu nezdinde daha fazla çalışma yapılabilir.

İşgücü optimizasyonu ise endüstri mühendisliğinde yer alan birçok yöntemle entegre bir şekilde incelenmiş, farklı sektörlerde işgücü optimizasyonu üzerine çalışmalar yapılmıştır.

Bu çalışma, İstanbul 112 Acil Çağrı Merkezi özelinde yapılmış olmasına rağmen diğer 80 ildeki 112 Acil Çağrı Merkezlerine örnek teşkil etmesi bakımından önem arz etmektedir. Yapılan çalışma gelecek çağrı sayısının tahminini çok yaklaşık olarak hesaplamayı amaçlamaktadır. Bu sayı tahmin edilirse kurumda çalışacak personel sayısı da bu veriler ışığında belirlenebilir ve dolayısıyla 112 acil çağrı merkezi içerisinde yer alan önemli bir sorun çözüme kavuşur.

ARAŞTIRMA VE BULGULAR

Veri ve Materyaller: Bu çalışma kapsamında öncelikle veriler analiz edilmek üzere İstanbul 112 Acil Çağrı Merkezi Müdürlüğü'nden istenmiştir. Daha sonra alınan bu veriler incelenerek aşağıdaki özet tablolar oluşturulmuştur.

Tablo 1 01/10/2024 ile 31/10/2024 tarihler arası - Reaksiyon ve Görüşme Süreleri Raporu

	Çağrı Karşılıyıcı	Çağrı Karşılıyıcı	Çağrı Karşılıyıcı	Çağrı Karşılıyıcı	Çağrı Yönlendirici	Çağrı Yönlendirici	Çağrı Yönlendirici	Çağrı Yönlendirici
İl Adı	Görüşme Süresi Toplam	Cevaplanan Çağrı Ortalama Görüşme Süresi(sn)	Reaksiyon Süresi Toplam	Cevaplanan Çağrı Ortalama Reaksiyon Süresi(sn)	Görüşme Süresi Toplam	Cevaplanan Çağrı Ortalama Görüşme Süresi(sn)	Reaksiyon Süresi Toplam	Cevaplanan Çağrı Ortalama Reaksiyon Süresi(sn)
İSTANBUL	317 gün 08:21:29	36,65	14 gün 00:11:47	1,60	424 gün 00:27:59	72,70	16 gün 11:10:13	2,36
Genel Toplam	317 gün 08:21:29	36,65	14 gün 00:11:46	1,60	424 gün 00:27:59	72,70	16 gün 11:10:12	2,36

Tablo 1.'de dikkat edilmesi gereken veriler cevaplanan çağrı ortalama görüşme süresi ve reaksiyon süresidir.

Tablo 2 01/10/2024 00:00:00 ile 31/10/2024 23:59:59 tarihler arası çağrı adetleri

Toplam Gelen Çağrı Adedi	Vakaya Dönüşen Çağrı Adedi	Vakaya Dönüşmeyen Çağrı Adedi	Vakaya Dönüşen Çağrı Oranı	Vakaya Dönüşmeyen Çağrı Oranı
1.433.622	489.523	944.099	%34	%66

Tablo 2.'de dikkat edilmesi gereken veri, toplam gelen çağrı adedi verisidir.

Tablo 3 01/10/2024 00:00:00 ile 31/10/2024 23:59:59 tarihler arası Çağruların Kurumsal Dağılım Raporu

İl Adı	Kurum	Toplam Gelen Çağrı Adedi	Cevaplanan Çağrı Adedi	Cevaplanmayan Çağrı Adedi	Kuyrukta Kapanan Çağrı Adedi
İSTANBUL	CAGRI_KARSILAYICI	774.549	754.929	18.462	1.158

Tablo 3.' Te toplam gelen çağrı adedi verisine dikkat edilmelidir. Zira, bu sayı çağrı karşılayıcıların 2024 yılının Ekim ayı içerisinde aldıkları çağrı sayısını göstermektedir. Alınan 1 aylık veriye istinaden oluşturulan Şekil.1 zaman serisi grafiğini göstermektedir. Bu grafik, Minitab programı ile oluşturulmuştur.

Şekil 1 Çağrı adetlerinin zaman serileri grafiği

Yöntem: Makine öğrenmesi yöntemleri çok fazla sayıdadır. Bunlardan hangisini yöntem olarak seçmemiz gerektiği konusu çalışmamızın önemli bir kısmını oluşturmaktadır. Bu konuya istinaden yapılan araştırmalar devam etmektedir. Bu yöntem, tahmin yapacağımız veriler birçok faktörden etkilendiği koşullarda daha kaliteli bir tahmin sayısı üretme konusunda bize yardımcı olmuştur. ARIMA (0,1,0) ile tahmin ettiğimiz çağrı sayısı tahmini değerini en iyileme modelinde kullanılmıştır.

Bulgular: Optimizasyon modelimizi zaman faktörüne bağlı olarak modelledik. Bu model, tüm çağrı karşılayıcıların ortalama çağrı cevaplama süresi ile ilgilidir.

Zaman faktörlü model

İndisler

v : Vardiyalar için indis ($v = \text{day, night}$)

Parametreler

C_v : Günlük toplam çağrı sayısı

T_v : Vardiya çalışma süresi (saniye)

M : Maksimum personel sayısı

α : Ortalama çağrı cevaplama süresi (saniye)

β : Ortalama reaksiyon süresi (saniye)

Karar Değişkenleri

X_v : Vardiya başına çağrı alıcı sayısı

Z : Toplam çağrı cevaplama süresi

Pozitif Değişkenler

X

Amaç Fonksiyonu

Min Z : $X_v * \alpha$

Kısıtlar

* Gündüz vardiyası çağrı yeterlilik kısıtı

$$X_{\text{day}} * T_{\text{day}} / (\alpha + \beta) \geq C_{\text{day}} \quad (1)$$

* Gece vardiyası çağrı yeterlilik kısıtı

$$X_{\text{night}} * T_{\text{night}} / (\alpha + \beta) \geq C_{\text{night}} \quad (2)$$

* Gündüz vardiyası maksimum personel kısıtı

$$X_{\text{day}} \leq M; \quad (3)$$

* Gece vardiyası maksimum personel kısıtı

$$X_{\text{night}} \leq M; \quad (4)$$

* Sıfırdan büyük olma kısıtı

$$X_v, C_v, T_v, M, \alpha, \beta \geq 0 \quad (5)$$

Zaman kriteri göz önünde bulundurularak oluşturulan bu modelde toplam çağrı cevaplama süresi 1270.72 saniyedir. Gündüz 20, gece ise 15 çağrı karşılayıcı personel çalışması gerektiği bulunmuştur.

SONUÇ

Bu çalışmada kullanılan makine öğrenmesi yöntemi ile 2025 yılında İstanbul Acil Çağrı Merkezi'nde çağrı karşılama personellerinin karşılayacağı çağrı sayısı tahmin edilmiştir. Bununla beraber gündüz ve gece vardiyasında çalışması gereken çağrı karşılama personeli sayısı uygulanan en iyileme yöntemiyle bulunmuştur.

Çağrı sayısının tahmini yapıldı. ARIMA (0,1,0) modeli, 3 farklı tahmini %95 güvenilirlikle yaptı. Bu tahmin değerleri aşağıdaki gibidir. Şekil 2, Minitab programında en uygun ARIMA modeli kullanılarak oluşturulmuştur.

Şekil 2 Bir aylık verinin kullanılarak bir haftalık tahmini çağrı adetleri

Forecasts from Time Period 31					
Time Period	Forecast	SE	95% Limits		Actual
			Forecast	Lower	
32	23426,2		1360,11	20759,9	26092,6
33	23393,5		1923,48	19622,7	27164,2
34	23360,7		2355,77	18742,5	27978,9
35	23327,9		2720,21	17995,2	28660,6
36	23295,2		3041,29	17333,0	29257,3
37	23262,4		3331,56	16731,2	29793,6
38	23229,6		3598,50	16175,2	30284,1

Literatürde makine öğrenmesi yöntemleri ile ilgili birçok makale ve tez çalışması bulunmaktadır. Bu çalışma özelinde yapılan araştırmalar gösterdi ki, acil çağrı merkezi için yapılan verimlilik çalışmaları çok sınırlı sayıdadır. Bu konu acil çağrı merkezi planlaması için çok önemlidir. Çağrı sayısı tahmini ve buna bağlı işgücü optimizasyonu çalışmalarının sayısı artmalıdır.

Yapmış olduğumuz literatür taraması çalışmaları bize bu alanlarda eksikliğin göze çarptığını göstermiştir. Dolayısıyla, istatistiksel bir model olan ARIMA modeli ile çağrı sayısını tahmin edip zamansal olarak kurguladığımız optimizasyon modeli ile çalışabileceğimiz öngörülmüştür.

ÖZET

Psikoloji, sosyoloji, pazarlama vb. birçok alanın temelinde insan unsuru yer almaktadır. Bu nedenle araştırmacılar insanların çeşitli davranışlarını anlamak ve tanımlamak için farklı disiplinlerde ve farklı yöntemlerle araştırmalar yapmaktadırlar. Kompulsif satın alma davranışı da insan davranışları konularında yapılan araştırmalardan biridir. İlk olarak psikiyatrik açıdan incelenen kompulsif satın alma davranışı zamanla pazarlama ve ekonomi alanlarında da araştırma konusu olmaya başlamıştır. Psikiyatrik açıdan tanımlanan kompulsif satın alma davranışı aşırı tüketim isteği anlamına gelen “oniomania” ve her şeye sahip olma isteği anlamına gelen “affluenza” bozuklukları ile birlikte görülmektedir. Psikoloji alanında Türkçe telaffuzu kompulsif olarak adlandırılmakta ve engellenemez, istem dışı, kontrolsüz ve önüne geçilemez anlamlarına gelmektedir. Bu çalışmanın amacı kompulsif satın alma davranışı üzerinde yapılmış olan tez çalışmalarını ele alarak incelemektir. Bu bağlamda ulusal tez merkezi olan Yök Tez’den konu ile yapılmış olan toplamda 42 adet tez çalışması bilim dalları ve türleri de dikkate alınarak incelenmiştir. Tez çalışmalarından bir tanesi yazar tarafından erişime izin verilmediği için inceleme dışı bırakılmıştır. Çalışmaların net bir şekilde görülebilmesi amacıyla türleri, yılları ve bilim dalları dahil olacak şekilde tablolastırılmıştır. Tez çalışmalarında incelenen noktalar çalışmanın konusu ve elde edilen sonuçlardır. Bu incelemeler ışığında konu ile ilgili literatürdeki boşluğun tespit edilebilmesi, gelecek çalışmalara araştırılması gereken konular hakkında fikir olması ve genel olarak tüketicileri kompulsif satın alma davranışına iten nedenlerin neler olduğunun açıklayıcı bir şekilde ortaya konulması beklenmektedir. Tezlerin incelenmesi sonucunda kompulsif satın alma davranışının genel olarak psikoloji ve işletme bilim dallarında çeşitli açılardan ele alınarak incelendiği görülmüştür. Tüketicilerin kompulsif satın alma davranışlarının altında yatan nedenler ise şu şekilde sıralanabilir; materyalizm, moda tutkunluğu, gösterişçi tüketim, statü eğilimi, işletmelerin uyguladığı psikolojik faktörler (indirimler, hatırlatıcı, bilgilendirici mesajlar), internet ve sosyal medya bağımlılığı, gelişmeleri kaçırma korkusu, yaşam doyumu, kaygı düzeyi, aile ve sosyal hayat, kredi kartı kullanımı, psikolojik faktörler ve çeşitli kişilik özellikleridir.

Anahtar Kelimeler: Tüketici, Satın Alma Davranışı, Kompulsif Satın Alma Davranışı

ABSTRACT

Many fields such as psychology, sociology, marketing etc. are based on the human element. For this reason, researchers conduct research in different disciplines and with different methods to understand and define various behaviours of people. Compulsive buying behaviour is one of the researches on human behaviour. Compulsive buying behaviour, which was first examined from a psychiatric perspective, has started to be the subject of research in

the fields of marketing and economics. Compulsive buying behaviour, which is defined from a psychiatric perspective, is seen together with ‘oniomania’, which means the desire for excessive consumption, and ‘affluenza’, which means the desire to have everything. In the field of psychology, its Turkish pronunciation is called compulsive and it means unstoppable, involuntary, uncontrolled and unavoidable. The aim of this study is to examine the thesis studies on compulsive buying behaviour. In this context, a total of 42 thesis studies on the subject from Yök Thesis, the national thesis centre, were examined by taking into account the branches and types of science. One of the thesis studies was excluded from the examination because access was not allowed by the author. In order to see the studies clearly, they were tabulated including their types, years and branches of science. The points examined in thesis studies are the subject of the study and the results obtained. In the light of these examinations, it is expected that the gap in the literature on the subject can be identified, future studies will have an idea about the issues that need to be researched, and in general, the reasons that push consumers to compulsive buying behaviour are expected to be revealed in an explanatory manner. As a result of the examination of the theses, it has been seen that compulsive buying behaviour has been examined from various perspectives in the fields of psychology and business administration. The reasons underlying the compulsive buying behaviour of consumers can be listed as follows; materialism, fashion passion, ostentatious consumption, status tendency, psychological factors applied by businesses (discounts, reminder, informative messages), internet and social media addiction, fear of missing developments, life satisfaction, anxiety level, family and social life, credit card use, psychological factors and various personality traits.

Keywords: Consumer, Purchase Behaviour, Compulsive Purchase Behaviour

GİRİŞ

Psikoloji, sosyoloji, pazarlama vb. birçok alanın temelinde insan unsuru yer almaktadır. Bu nedenle araştırmacılar insanların çeşitli davranışlarını anlamak ve tanımlamak için farklı disiplinlerde ve farklı yöntemlerle araştırmalar yapmaktadırlar. Kompulsif satın alma davranışı da insan davranışları konularında yapılan araştırmalardan biridir. İlk olarak psikiyatrik açıdan incelenen kompulsif satın alma davranışı zamanla pazarlama ve ekonomi alanlarında da konu edinilmeye başlanmıştır.

Psikiyatrik açıdan tanımlanan kompulsif satın alma davranışı aşırı tüketim isteği anlamına gelen “oniomania” ve her şeye sahip olma isteği anlamına gelen “affluenza” bozuklukları ile birlikte görülmektedir (Workman, 2010). Psikoloji alanında Türkçe telaffuzu kompulsif olarak adlandırılmakta ve engellenemez, istem dışı, kontrolsüz ve önüne geçilemez anlamlarına gelmektedir (Cambridge Dictionary, 2023). Kompulsif satın almanın temelinde güçlü bir dürtü yer almaktadır ve duygu durum, obsesif kompulsif bozukluklarına ve bağımlılık sendromuna benzemektedir (Tamam, Diler, & Özpoyraz, 1998). Dürtü kontrol veya obsesif satın alma bozukluğunun bir hastalığı olarak tanımlanmaktadır. Bunun nedeni tüketicilerin düşüncelerinde sürekli olarak satın alma eyleminin yer almasıdır. Tüketiciler yaşadıkları endişeleri ve kaygıları azaltmak için tekrarlayan satın alma davranışları gerçekleştirmektedirler (Ridgway, Kukar Kinney, & Monroe, 2008). Tekrarlayan bu davranışların bağımlılık haline gelmesi ve patolojik sonuçlar ortaya çıkarması kompulsif satın alma davranışdır (Pandey, 2016).

Kompulsif satın alma davranışı bir rahatsızlık ve bir bozukluk olarak tanımlanmaktadır. Bu davranışa sahip bireyler ciddi psikolojik ve maddi sorunlarla karşılaşabilmektedir. Stres ve bazı olumsuz durumlar nedeniyle planlanmayarak gerçekleştirilen davranışlar finansal borçlanmalara neden olabilir. Bununla birlikte kişinin günlük hayatında anksiyete ve depresyon gibi psikolojik sorunlara, bireyin kendisini hayattan soyutlamasına, kontrol edilemeyen davranışlardan dolayı ailelerini veya karşısındaki alıcı/satıcıyı da zor durumda bırakma gibi istenmeyen sonuçlara da sebep olabilmektedir (Edwards, 1993).

Bu çalışmanın amacı kompulsif satın alma davranışı üzerinde yapılmış olan tez çalışmalarını incelemek, hangi bilim dallarında, hangi konularda araştırmalar yapıldığını analiz ederek literatürdeki boşluğu tespit edebilmektir. Bu nedenle konu üzerine yapılmış olan tezler Ulusal Tez Merkezi'nden elde edilmiştir. Elde edilen çalışmalar bilim dallarına (işletme, ekonomi, psikoloji vb.) ve türüne (tez ve makale) göre sınıflandırılarak kolay anlaşılabilmesi için tablolaştırılmıştır.

KOMPULSİF SATIN ALMA DAVRANIŞI

Kompulsif satın alma davranışı kompulsif tüketimin bir türüdür (O'Guinn & Faber, 1989). Kompulsif tüketim çeşitli tanımlamaları olmakla birlikte geniş anlamda “Düşünmeden tüketime meyilli olan kişilerin açık bir şekilde yaşamlarını bozan, tipik olarak aşırı ve uygun olmayan bir tüketici davranışı” olarak tanımlanmaktadır (Faber, O'Guinn, & Krych, 1987).

Kompulsif satın alma ilk olarak Kraepelin (Kraepelin, 1915) ve Bleuler (Bleuler, 1924) tarafından dikkate alınarak ve oniomania anlamına gelen psikiyatrik bir bozukluk olarak adlandırılana kadar birçok araştırmacı tarafından göz ardı edilmiştir. İlerleyen zamanlarda psikiyatrislerin de dikkatini çekerek üzerine araştırmalar yapılmış ve isteyerek yangın çıkarma hastalığı olan piromani, kleptomani vb. birçok hastalık gruplarına dahil edilmiştir (Bleuler, 1924).

Kompulsif satın alma birçok araştırmacı tarafından çeşitli şekillerle ele alınarak tanımlanmıştır. En yaygın tanımı “Olumsuz olaylar ve duygulara birincil bir cevap olan kronik, tekrarlı bir satın alma”dır (O'Guinn & Faber, 1989). Dittmar (Dittmar, 2005)'a göre “Kontrol edilemeyen ve zararlı sonuçları olan davranışsal bir bozukluktur”. Tanımdan da anlaşılacağı gibi kompulsif satın alma ilk bakışta zararsız gibi görünse de kontrol edilemeyen davranışlardan dolayı kötü sonuçlar doğurmaktadır. Bireysel satın alma davranışlarından sonra sosyal, psikolojik veya ekonomik nedenlere bağlı olarak satın alma davranışlarından pişmanlık duymaktadırlar (O'Guinn & Faber, 1989).

Kompulsif satın alma davranışlarında bulunan bireyler normal tüketicilere oranla daha fazla alışveriş yapma isteğine sahiptirler ve davranışlarının altında yatan neden düşük iradeye sahip olmalarıdır. Bu kişiler ihtiyaçlarından ziyade hatta maddi olarak bir şeyi elde etmenin verdiği hazzın da ötesinde heyecan duygularının artması veya anksiyete gibi olumsuz duygu durumlarını azaltmak için satın almaktadırlar (Edwards, 1993). Sheth vd. tarafından yapılan tanım bu durumu kanıtlar niteliktedir: “Bir kişinin ihtiyaçları ve kaynakları aşacak derecede ürünleri kronik olarak satın alma eğilimi” (Sheth, Mittal, & Newman, 1999).

Kompulsif tüketiciler her zaman yalnızca kendileri için satın almazlar. Yaşadıkları duygu durumlarından ve dürtülerden kurtulmak için bazen yakınları için de satın alma

davranışlarında bulunurlar (Faber, O'Guinn, & Krych, 1987). Bununla birlikte kendileri için satın aldıkları şeylerden de çoğu zaman mutlu olmazlar ve onları birilerinin bulamalarından endişe duyarak saklarlar, kullanmazlar (O'Guinn & Faber, 1989).

Pazarlama açısından incelendiğinde kompulsif satın alma davranışı “Bireyin dürtüsel olarak satın alma güdüsü hissetmesi ve bunu denetleyememesi sonucunda ortaya çıkan ve maddi zorluklara da sebep olan bir rahatsızlık” olarak tanımlandığı görülmektedir (Korur & Kimzan, 2016). Tüketicilerin satın alma davranışlarının altında yatan nedenlerin incelendiği birçok çalışma sonucunda kişilerin ihtiyaç ve isteklerini giderme, haz alma, eğlenme vb. nedenlerle satın alma eylemi gerçekleştirdikleri görülmektedir. Günümüzde ise satın alma her gün gerçekleştirilen ve hayatın sıradan davranışı haline gelmiştir. Bununla birlikte çeşitli tetikleyicilere bağlı olarak bazı tüketiciler plansız, ani, aşırı, gereksiz ve tekrarlayan satın alımlarda bulunmaktadır (Ridgway, Kukar Kinney, & Monroe, 2008). Bu tür tüketicilerin ileri düzeyde depresyon, anksiyete, obsesyon, stres, düşük benlik algısı, yüksek hayal gücü gibi bazı problemler yaşadıkları görülmektedir (Gupta, 2013). Tüketiciler, yaşadıkları bu problemleri, kaygıları veya gerginlikleri ortadan kaldırmak amacıyla kontrol edilemeyen bir satın alma eylemi gerçekleştirmektedirler (Kukar Kinney, Schainbaum, & Schaeffers, 2016). Satın aldıkları ürünlerin kendilerine sağlayacağı faydayla değil, satın alma sırasında yaşadıkları memnuniyet ve rahatlama hissi ile ilgilenirler (Karakuş Başlar & Bozbay, 2019).

Teknolojinin ilerlemesi, istek ve ihtiyaçların karşılanmasında yaşanan gelişmeler, çeşitli satın alma kanalları tüketicileri hızlı ve güvenilir bir şekilde satın almaya itmektedir (Yüce & Kerse, 2018). Online veya çevrimiçi ortamlarda oluşturulan sanal mağazalar bunlardan biridir. Tüketiciler bu ortamlarda alışverişlerini fiziki mağazalara göre daha hızlı ve kolaylıkta yapmaktadırlar. Tüketicilerin online ortamlarda plansız ve anlık olarak gerçekleştirdikleri satın alma davranışları sanal/online (çevrimiçi) kompulsif satın alma olarak adlandırılmaktadır. “Dürtüsel olarak kontrol edilemeyen ve üst üste tekrarlanan kompulsif satın alma davranışının internet siteleri aracılığıyla gerçekleştirilmesi” online kompulsif satın alma davranışdır (Zeren & Gökdağlı, 2017). İçinde bulunduğumuz çağın tüketicilere sağlamış olduğu kolaylıklar tüketim alışkanlıklarının değişmesine sebep olmakla birlikte kompulsif satın alma davranışlarına da zemin hazırlamaktadır. Online kompulsif satın alma davranışına sahip bireyler sanal mağazaları fiziki mağazalara tercih etmekte, zamanının çoğunu internette alışveriş yapmayı düşünerek geçirmekte ve buna takıntılı bir şekilde tutkulu olarak bağlı olmaktadır (Wang, He, & Yin, 2016). Satın alma eylemlerinin altında yatan başlıca nedenler; anlık pozitif duygular, hayal kurmak, her zaman her yerde satın alabilmek, sosyal iletişimden kaçınma, olaylara duygusal tepki verme olarak görülmektedir (He, Kukar Kinney, & Ridgway, 2018). Bu kişilerin satın alma için harcadıkları zaman 2,5 saatten fazla ve harcadıkları bütçe ise aylık kazandıklarının dörtte biri kadardır (Duroy, Gorse, & Jeyoyeux, 2014).

Bireyleri kompulsif satın alma davranışına iten nedenleri çeşitli açılardan ele alan birçok çalışma mevcuttur. Spesifik bir sınıflandırma olmamakla birlikte literatür incelendiğinde bu nedenler daha çok psikolojik, çevresel, kişilik özellikleri vb. olarak yer almaktadır.

Konu üzerine yapılan ilk çalışmalara bakıldığında daha çok bireylerin demografik özelliklerinin kompulsif satın alma üzerindeki etkilerinin dikkate alındığı görülmektedir.

Araştırma sonuçlarına göre kadınlar erkeklere, genç bireyler de olgun bireylere oranla daha fazla kompulsif satın alma davranışında bulunmaktadır (Kwak, Zinkhan, & Dominick, 2002). Araştırma sonucunu destekler nitelikte olan diğer çalışmaların da literatürde mevcut olduğu görülmektedir (Dittmar, 2005; Black, 2001). Ancak cinsiyet ve kompulsif satın alma davranışını inceleyen ve kadın ile erkeklerin kompulsif satın alma düzeylerinde bir farklılık olmadığını ortaya koyan çalışmalar da mevcuttur (Lee & Workman, 2018). Cinsiyete bağlı olarak Y ve Z kuşaklarının kompulsif satın alma düzeylerini inceleyen çalışma sonucunda kompulsif satın alma düzeylerinin Y kuşağında cinsiyete bağlı olarak değiştiği gözlemlenirken Z kuşağında değişmediği gözlemlenmiştir (Yiğit & Yiğit, 2020).

Cinsiyete bağlı olarak aşırı yemek yeme durumunun kompulsif satın alma davranışına etkisi Kanada'da yer alan bir üniversite öğrencileri üzerinde inceleyen çalışmanın sonucunda kadınların erkeklere oranla hem aşırı yemek yeme durumlarının hem de kompulsif satın alma davranışlarının daha yüksek olduğu görülmüştür (MacLaren & Best, 2010).

Kompulsif satın alma davranışını demografik özelliklerden cinsiyet, ırk, gelir düzeyi ve medeni hal olarak daha geniş kapsamda ele alan çalışma sonucunda sadece gelir düzeyinin ve yaşın kompulsif satın alma üzerinde etkili olduğu görülmüştür. Kompulsif bireylerin gelir düzeylerinin 50 bin doların altında olduğu ve gelir düzeyi düştükçe daha fazla kompulsif davranışlarda buldukları ortaya konulmuştur. Buna ek olarak kompulsif davranışlarda bulunan tüketiciler kredi kartı kullanmamaktadırlar (Koran, Faber, Aboujaoude, Large, & Serpe, 2006). Kredi kartı kullanımı ve kompulsif satın alma davranışı arasındaki ilişkiyi inceleyen bir diğer çalışma sonucunda bu durum tam tersi olduğu görülmektedir. Terzi ve Bayrakdaroğlu (2022) yaptıkları çalışmada kompulsif satın almayı gösterişçi tüketim, kişilik ve internet bağımlılığı değişkenleri ile incelemiştir. Araştırma sonucunda tüm değişkenlerin kompulsif satın alma üzerinde etkili olduğu görülmüştür. Ayrıca buna ek olarak kredi kartına sahip tüketicilerin kredi kartına sahip olmayan tüketicilere oranla daha yüksek düzeyde kompulsif satın alma davranışlarında buldukları ortaya konulmuştur.

Kompulsif satın alma davranışını bireylerin moda algıları ile inceleyen çalışmalar da vardır. Yapılan çalışmalar giyim, takı, ayakkabı vb. ürünlerde modayı sıklıkla takip eden ve moda ile ilgili olan bireylerin kompulsif satın alma davranışlarında bulduklarını ortaya koymaktadır (Dittmar, 2005; Johnson & Attman, 2009; Park & Burns, 2005).

Bireyleri kompulsif satın almaya iten nedenlerden bir diğeri de araştırma sonuçlarında görüldüğü üzere gösterişçi tüketimdir (Terzi & Bayrakdaroğlu, 2022). Gösterişçi tüketime ek olarak kompulsif satın alma üzerinde etkili olan bir diğer tüketim türü de hedonik tüketimdir. Süzer (2022) yaptığı araştırma sonucunda her iki tüketim türünün de kompulsif satın alma davranışı üzerinde etkili olduğunu ortaya koymaktadır.

KOMPULSİF SATIN ALMA DAVRANIŞI ÜZERİNE LİTERATÜR İNCELEMESİ

Bu çalışmanın amacı kompulsif satın alma davranışı üzerinde yapılmış olan tez çalışmalarını ele alarak incelemektir. Bu bağlamda ulusal tez merkezi olan Yök Tez'den konu ile yapılmış olan toplamda 42 adet tez çalışması bilim dalları ve türleri de dikkate alınarak incelenmiştir. Tez çalışmalarından bir tanesi yazar tarafından erişime izin verilmediği için inceleme dışı bırakılmıştır. Çalışmaların net bir şekilde görülebilmesi amacıyla türleri, yılları ve bilim

dalları dahil olacak şekilde tablolaştırılmıştır. Tez çalışmalarında incelenen noktalar çalışmanın konusu ve elde edilen sonuçlardır. Bu incelemeler ışığında konu ile ilgili literatürdeki boşluğun tespit edilebilmesi, gelecek çalışmalara araştırılması gereken konular hakkında fikir olması ve genel olarak tüketicileri kompulsif satın alma davranışına iten nedenlerin neler olduğunun açıklayıcı bir şekilde ortaya konulması beklenmektedir.

Kompulsif satın alma ile birlikte sık sık ele alınan araştırma konuları arasında materyalizm, moda eğilimi, statü tüketimi ve gösterişçi tüketim eğilimi yer almaktadır. Yapılan araştırmaların sonuçlarında moda eğiliminin genel olarak kompulsif satın alma davranışında etkili olduğu, modaya ilgi duyan tüketicilerin daha sık kompulsif davranışlarda bulunduğu tespit edilmiştir (Bilgen, 2014; Ulusoy, 2019; Gözüm Kabakçı, 2022; Aksoy, 2024; Eroğlu, 2015). Materyalizmin kompulsif satın alma davranışı üzerindeki etkisini inceleyen birçok araştırma sonucunda da materyalizmin kompulsif satın alma üzerinde etkili olduğu görülmüştür (Arıcılık, 2023; Akçalı, 2021). Materyalizm eğilimini başarı, mutluluk ve merkezîyet boyutları ile ele alan çalışmada yalnızca başarı boyutunun kompulsif satın alma davranışında etkili olduğu tespit edilmiştir (Ulusoy, 2019). Kompulsif satın alma davranışını boşanmış bireylerin öz saygıları ve materyalistik ilişkisi ile inceleyen çalışmada boşanmış aile yapısına sahip bireylerin öz saygılarının oldukça düşük olduğu gözlemlenmiştir. Buna karşılık bu bireylerin materyalistik ve kompulsif satın alma eğilimleri de yüksektir (Devrimağa, 2018). Yapılan bir diğer çalışmada da genç tüketici gruplarında materyalistik eğilimlerin kompulsif satın alma davranışlarına neden olduğu gözlemlenmiştir (Kalay, 2022). Kompulsif satın alma davranışına neden olan bir diğer neden de araştırma sonuçlarıyla ortaya konan ve bir tüketim türü olan gösterişçi tüketimdir (Aksoy, 2024; Terzi, 2021; Akçalı, 2021; Eroğlu, 2015).

Kredi kartı kullanımı kompulsif satın alma ile birlikte en çok araştırılan konular arasındadır. Yapılan bu araştırmalar sonucunda kontrolsüz bir şekilde kredi kullanımının kompulsif satın almaya sebep olduğu ortaya konulmuştur (Yılmaz Kuşçuoğlu, 2018; Gültekin, 2019; Khalaf, 2020). Tüketicilerin kompulsif satın alma davranışlarının ardından bu davranışlar nedeniyle pişmanlık duydukları yapılan araştırmalarla kanıtlanmıştır. Kompulsif tüketicilerin kontrolsüz kredi kartı kullanımı sonrası pişmanlıklarını inceleyen araştırma da bu sonuçları destekler niteliktedir (Korur, 2015; Arslan, 2021). Benzer bir çalışmada da kompulsif satın alma davranışından dolayı duyulan pişmanlıklar ve tekrar satın alma niyeti incelenmiştir. Araştırma sonucunda tüketicilerin bu davranıştan dolayı pişmanlık yaşadıkları ancak buna rağmen tekrar satın alma davranışlarından da kaçınmadıkları tespit edilmiştir (Uçar, 2024).

Kişilik özellikleri çeşitli alt boyutları ile birlikte kompulsif satın alma davranışı üzerinde etkili olduğu düşünülerek incelenen konudur. Yapılan bir araştırmada kişisel faktörler depresyon, stres veya kaygı gibi nedenlere bağlı olarak oluşan psikolojik rahatsızlar ele alınmış ve tümünün kompulsif satın alma davranışında etkili olduğu gözlemlenmiştir (Eroğlu, 2015). Tüketici gruplarını yalnızca Z kuşağı olarak ele alan çalışmada tüketicilerin narsistik özellikleri incelenmiştir. İnceleme sonucunda narsist Z kuşağı tüketicilerinin sıklıkla kompulsif satın alma davranışlarında buldukları gözlemlenmiştir (Çelebi, 2023). Kişilik özelliklerinden öz saygı boyutunu ele alan çalışmada düşük öz saygıya ve olumsuz duygulara sahip bireylerin kompulsif satın alma davranışına daha fazla meyilli olduğu gözlemlenirken, olumlu duyguların kompulsif satın alma davranışında etkili olmadığı gözlemlenmiştir (Karlı,

2024). Online alışverişlerde kişilik özelliklerini inceleyen çalışmada kararsız, marka ve marka odaklı, deneyime açıklık, haz odaklı, uyumluluk ve dürtüsel, alışkanlık özelliklerine sahip tüketicilerin daha sık kompulsif satın alma davranışlarında buldukları görülmüştür (Altınkan, 2023). Kişilik özelliklerini çeşitli alt boyutları (dışa dönüklülük, deneyime açıklık, yumuşak başlılık, özdenetimlilik ve nörotiklik) ile inceleyen çalışmada diğer çalışmaların aksine kişilik özelliklerinin kompulsif satın alma ile bir ilişkisi olmadığı tespit edilmiştir (Yılmaz Kuşçuoğlu, 2018).

Karanlık üçlü psikolojide bireylerin olumsuz olarak adlandırılan kişilik özellikleridir. Bunlar narsizim, Makyavelizm ve psikopatidir. Bu üç kişilik özelliğinin kompulsif satın alma davranışı üzerindeki etkisi materyalizmin aracılık yönü ile incelenmiştir. Araştırma sonucunda bu üç kişilik özelliklerinden yalnızca psikopatının doğrudan kompulsif satın alma davranışında etkili olduğu görülmüştür (Çal, 2024).

Kompulsif satın alma davranışı ilk olarak psikiyatrisler tarafından ele alınan bir konudur. Zamanla teknolojinin ilerlemesi vb. birçok etmene bağlı olarak pazarlama gibi çeşitli alanlara da konu olmuştur. Bir psikoloji konusu olan bilişsel faktörler kompulsif satın alma davranışı ile sıkça ele alınan konudur. Bilişsel faktörlerden yüksek standartların, kredi kartı borcunun, duygu düzenleme güçlüklerinin ve nesneye bağlanmanın kompulsif satın alma davranışlarında etkili olduğu kanıtlanmıştır (Akyüz, 2016). Benzer bir çalışmada da bilişsel duygu düzenleme davranışsal inhibisyon ve davranışsal aktivite sistemleri ile incelenmiştir. İnceleme sonucunda kompulsif satın alma davranışına etki eden nedenler ürünün indirimde veya moda bir ürün olması, ürünü indirimden aldığı takdir edileceğini düşünmek, ödüle duyarlılık ve alışverişe ayrılan haftalık süre olarak belirlenmiştir (Beziroğlu, 2018). Bilişsel duygu düzenleme boyutlarından olan kendini suçlama, kabul etmeme, düşünceye odaklanma, pozitif tekrar odaklanma ve yıkım boyutlarının kompulsif satın almada etkili olduğu tespit edilmiştir. Bununla birlikte sosyal görünüş kaygısı da bu davranışına neden olmaktadır (Bölenler, 2023). Sıklıkla kompulsif satın alma davranışlarında bulunan tüketicilerin duygu durum bozukluğu yaşadığı da tespit edilmiştir (Koç, 2016). Duygu durumları mevsimlere göre yüksek ve şiddetli olarak değişen bireylerin kompulsif satın alma eğilimleri de yüksektir (Taşkıran, 2019).

Kompulsif satın alma her ne kadar psikolojik bir rahatsız olarak görülse de içerisinde tüketiciyi ve satın alma eylemini barındırdığı için pazarlama bilimine de birçok açıdan konu olmuştur. Literatür incelemesi doğrultusunda internet bağımlılığı, sosyal medya, sosyal medya fenomenleri vb. konuların da kompulsif satın alma üzerindeki etkileri incelenmektedir. İncelemeler sonucunda genel olarak sosyal medya kullanım sıklığının, internet ve sosyal medya bağımlılığının, sosyal medya fenomenlerine olan bağlılığın, teknolojik bağımlılığının ve gelişmeleri kaçırma korkusunun kompulsif satın alma üzerinde etkili olduğu tespit edilmiştir (Akçalı, 2021; Terzi, 2021; Arcagök, 2022; İpek, 2022; Çinar, 2022; Arıcılık, 2023; Mert, 2023; Vagıflı, 2024; Karlı, 2024).

Tüketicileri kompulsif satın alma davranışına iten nedenlerden biri de alışveriş sitelerinin tüketiciler üzerinde uyguladığı psikolojik baskılardır. Tüketicilere gönderdikleri çeşitli hatırlatıcı, bilgilendirici vb. e-postalar, SMS'ler tüketicileri harekete geçirmektedir. Konuyla ilgili alışveriş siteleri üzerinde yapılan çalışmada tüketicileri kompulsif satın alma davranışına

iten nedenlerin sepeti boşaltma, indirim haberleri, kuponlar ve çapraz satışlar, sepette tutma veya unutmada olduğu belirlenmiştir (Çerçi, 2014). Benzer bir çalışmada da tüketicilerin mağaza atmosferlerinden, durumsal faktörlerden etkilenerek kompulsif satın alma davranışında buldukları gözlemlenmiştir (Baltacı, 2019).

Demografik değişkenleri kompulsif satın alma davranışı bazında inceleyen birçok araştırmanın var olması ile birlikte genel olarak kadınların erkeklere oranla daha fazla bu davranışta buldukları söylenebilir. Bir çalışmada da yalnızca kadınların marka sloganları doğrultusunda kompulsif satın alma davranışlarında bulunup bulunmadıkları incelenmiştir. Araştırma sonucunda kadınların marka sloganlarının varlığından, yokluğundan ve türlerinden etkilenerek kompulsif satın alma davranışında buldukları gözlemlenmiştir (Yiğit & Yiğit, 2020). Sonucu destekler nitelikte olan bir başka çalışmada da marka bağımlılığının kompulsif satın alma davranışına neden olduğu gözlemlenmiştir (Polat, 2023). Konuyla bağlantılı olarak benzer bir çalışmanın sonucunda spesifik ürün takıntılı tüketicilerin de kompulsif satın alma davranışlarında buldukları tespit edilmiştir (Bilici, 2023).

Tüketicileri kompulsif satın alma davranışına neden iten nedenler arasında onların ruhsal sağlıkları da yer almaktadır. Bunlar; sosyal dışlanma ve sosyal kaygılar, depresyon, stres, obsesyon, kaygı düzeyleri, yaşam doyumu ve yaşam perspektifi, aile ve sosyal hayatta yaşanan sorunlardır (Özçelik, 2022; Öztürk, 2022; Özbek, 2022; Karayılan, 2023).

SONUÇ

Bu çalışmanın amacı kompulsif satın alma üzerine yapılmış olan tez araştırmalarının incelenerek araştırma sonuçlarına, en çok hangi alanlarda çalışmaların yapıldığına yer vererek literatürdeki boşluğu tespit etmek ve gelecek çalışmalara bu doğrultuda kolaylık sağlamaktır. Bu bağlamda ulusal tez merkezi olan YökTez'den toplamda 42 adet tez çalışması ele alınmıştır. Ancak bir çalışmanın yazar tarafından kısıtlanması üzerine inceleme dışı bırakılmıştır.

Tezlerin incelenmesi sonucunda kompulsif satın alma davranışının genel olarak psikoloji ve işletme bilim dallarında çeşitli açılardan ele alınarak incelendiği görülmüştür. Tüketicilerin kompulsif satın alma davranışlarının altında yatan nedenler ise şu şekilde sıralanabilir; materyalizm, moda tutkunluğu, gösterişçi tüketim, statü eğilimi, işletmelerin uyguladığı psikolojik faktörler (indirimler, hatırlatıcı, bilgilendirici mesajlar), internet ve sosyal medya bağımlılığı, gelişmeleri kaçırma korkusu, yaşam doyumu, kaygı düzeyi, aile ve sosyal hayat, kredi kartı kullanımı, psikolojik faktörler ve çeşitli kişilik özellikleridir.

IMPACT OF EMERGING TECHNOLOGIES ON SERVICE-LEARNING EXPERIENCES FOR PRESERVICE UNDERGRADUATE TEACHERS AT SOKOTO STATE UNIVERSITY

^{1&3}HASSAN ALIYU, ²ASSOC. PROF. DR. CORRIENNA ABDUL TALIB & BILAL ABDULLAHI USMAN

^{1&3}Department of Science Education, Faculty of Education, Sokoto State University, Sokoto, Nigeria.

²Department of Innovative Science and Mathematics, Faculty of Educational Science and Technology (FEST), University Teknologi Malaysia (UTM), Johor, Malaysia.

ABSTRACT

This research investigates the impact of emerging technologies on the service-learning experiences of preservice undergraduate teachers at Sokoto State University, Nigeria. Utilizing a cross-sectional survey design, the study collected quantitative data from 150 preservice teachers to assess their perceptions of technology integration in service learning, the challenges faced, and the potential benefits for pedagogical skill development. Findings indicate that preservice teachers generally perceive emerging technologies as effective tools for enhancing their educational and community engagement experiences. However, significant barriers, including limited access to reliable internet, inadequate technological resources, and cultural factors, hinder the effective use of these technologies. The study highlights the need for improved infrastructure and targeted training programs to equip preservice teachers with the necessary skills to leverage technology in their service-learning projects. By addressing these challenges, educational institutions can better prepare future educators for the demands of modern teaching environments. The insights gained from this research contribute to the understanding of how emerging technologies can transform service learning in teacher education, particularly in developing regions, and provide a foundation for future studies in this area.

Keywords: Emerging Technologies, Service Learning, Preservice Teachers, Educational Engagement, Challenges and Barriers

INTRODUCTION

In today's information-rich era, the freedom to access and utilize information is both a necessity and a significant intellectual and moral responsibility. Emerging technologies offer a promising avenue to address this challenge, particularly within the context of social service learning and problem-solving approaches. These technologies enable students to explore real-world issues through simulation and experimentation, fostering critical thinking and decision-making skills when information systems and data modeling tools are utilized (Zaragoza-García et al., 2021).

Traditional academic settings may prove inadequate in the information age, not due to outdated learning goals, but rather because emerging technologies provide unprecedented opportunities for teaching and learning. The integration of technology can enhance the educational process by fostering a dynamic interplay between the cognitive development of learners and innovative teaching methods (Iberahim et al., 2023).

While service-learning can be a valuable tool for engaging students, the broader potential of information technology lies in its ability to facilitate a wide range of new participatory forms. When teachers delve in introducing new technologies and approaches, service learning can

contribute to expanding participation in economic, political, and social life. Strong communities, knowledge sharing, and active participation are essential for meaningful and predictable engagement (Reames et al., 2020).

Similarly, according to Stefaniak (2020), when integrating technology into service-learning courses, it is crucial to align technology choices with the specific course objectives, community needs, existing infrastructure, and any relevant local initiatives. This strategic approach ensures that technology is used effectively to enhance learning outcomes and community impact.

PROBLEM STATEMENT

The integration of emerging technologies into educational practices is transforming the way teaching and learning are conducted globally, yet the specific impact on service learning for preservice teachers at Sokoto State University remains underexplored. Service learning is a pedagogical approach that combines community service with academic learning, allowing students to apply theoretical knowledge to practical, real-world challenges. However, the rapid development and widespread adoption of technologies such as virtual reality (VR), artificial intelligence (AI), and online collaborative tools have the potential to reshape service-learning experiences in profound ways. For preservice teachers at Sokoto State University, a public university in a developing region of Nigeria, the shift towards digital platforms for service learning may present both opportunities and challenges. While technology offers new opportunities for access to resources, global collaboration, and innovative teaching methods, there are concerns about the infrastructure and digital divide that may limit the effective use of these tools.

The socio-economic context of Sokoto State, characterized by limited technological infrastructure and lower internet penetration, complicates the integration of emerging technologies into educational practices. Despite these challenges, there is an increasing emphasis on incorporating digital tools in teacher education programs worldwide. Preservice teachers are expected to develop skills not only in traditional teaching methods but also in the use of modern technologies to enhance learning outcomes. The question remains as to whether these technologies, when integrated into service learning, enhance or hinder the educational experiences of preservice teachers in this context. Service learning, which requires students to engage directly with communities, often in rural or underserved areas, may be impacted by both the limitations and the possibilities of technology. Therefore, understanding how emerging technologies affect service learning in teacher education is crucial for developing effective strategies for preparing future educators.

In addition to the infrastructural and socio-economic barriers, there are pedagogical considerations regarding how technology can enhance the learning outcomes of preservice teachers. Emerging technologies may offer new methods of reflection, collaboration, and assessment that could enrich service-learning experiences. However, it is also necessary to explore whether these technologies distract from or diminish the experiential and reflective components of service learning, which are critical for teacher development. This research will also address how preservice teachers perceive the value of these technologies in relation to their community engagement and their own professional growth. Given the rapidly changing landscape of educational technology, the findings of this study will provide valuable insights into the potential role of emerging technologies in service learning and teacher education, particularly in the context of Nigerian higher education.

RESEARCH OBJECTIVES

These objectives guide the study in understanding both the practical and theoretical implications of using emerging technologies to enhance service learning in the teacher education context at Sokoto State University

1. To assess the extent to which emerging technologies are being integrated into the service-learning experiences of preservice undergraduate teachers at Sokoto State University.
2. To explore the perceptions of preservice teachers regarding the impact of emerging technologies on their learning and community engagement during service-learning experiences.
3. To identify the challenges and barriers faced by preservice teachers in utilizing emerging technologies for service learning in Sokoto State.
4. To investigate the potential benefits of emerging technologies for enhancing the pedagogical skills of preservice teachers through service-learning experiences.

RESEARCH QUESTIONS

The research questions of the study include:

1. To what extent are emerging technologies being used in service-learning projects by preservice teachers at Sokoto State University?
2. How do preservice teachers perceive the impact of emerging technologies on their service learning experiences in terms of academic learning and community engagement?
3. What challenges and barriers do preservice teachers encounter in using emerging technologies for service learning at Sokoto State University?
4. How do emerging technologies contribute to the development of key pedagogical skills (e.g., communication, collaboration, critical thinking) among preservice teachers engaged in service learning?

METHODOLOGY

A cross-sectional survey design was employed to collect quantitative data, using Likert scale items, from pre-service undergraduate teachers at Sokoto State University at a single point in time. This design is suitable for exploring current patterns of technology use, teacher perceptions, and challenges associated with the integration of emerging technologies into service learning.

A stratified random sampling technique was employed to select a representative sample of 150 pre-service teachers from various departments at the Faculty of Education, Sokoto State University. This approach ensures adequate representation of different student groups, including those from varying years of study and fields of teaching (e.g., Science, Foundation, Curriculum studies). This sample size was determined to balance diversity and manageable data collection within the population of 4820 students.

Data was collected using a self-administered survey questionnaire titled "Integration and Impact of Emerging Technologies in Service Learning: Experiences, Perceptions, Challenges, and Benefits for Preservice Teachers" (IIETSLEPCBPT). This instrument comprised six sections:

- Demographic Information: Collected basic demographic data of respondents.
- Service Learning Experiences of Preservice Undergraduate Teachers Scale (SLEPUTS): Assessed the extent of emerging technology use in service learning projects using a 4-point Likert scale.
- Perceptions of Preservice Teachers on the Impact of Emerging Technologies Service Learning Experiences Scale (PPTIETSLES): Evaluated the perceived impact of emerging technologies on academic learning and community engagement using a 4-point Likert scale.
- Challenges and Barriers Faced by Preservice Teachers in Utilizing Emerging Technologies for Service Learning (CBPTETSL): Assessed the challenges and barriers encountered in using emerging technologies for service learning using a 4-point Likert scale.

- Perceived Benefits for Pedagogical Skills Development through Service Learning Experiences (PBPSDSL): Evaluated the contribution of emerging technologies to the development of pedagogical skills (e.g., communication, collaboration, critical thinking) using a 4-point Likert scale.

Descriptive statistics, including frequencies, means, and standard deviations, were employed to assess the extent of emerging technology integration in service learning (Objective 1). Inferential statistical tests, such as ANOVA, were utilised to examine differences in responses based on factors like year of study or department. Additionally, correlation analysis was employed to explore the relationship between perceived technology effectiveness and the development of pedagogical skills (Objective 4).

The instrument's internal consistency was determined by Cronbach's alpha, yielding a reliability coefficient of .076. This indicates a high level of reliability. Furthermore, content validity was established through expert review by individuals with expertise in pedagogy, educational technology, and curriculum design and development.

RESULT

Figure 1: Level of education of the respondents

As depicted in Figure 1, the study involved 50 undergraduate Level 1 students, 40 Level 2 students, and 30 students each from Levels 3 and 4. This indicates that Level 1 had the highest representation, followed by Level 2, while Levels 3 and 4 had equal representation.

Figure 2: Students representing different department of the Faculty of Education

Figure 2 indicates that approximately 36% of respondents offer courses from the Department of Educational Foundations, whereas 32% each offer courses from the Departments of Curriculum Studies and Science Education. This suggests a higher representation from the Department of Educational Foundations, potentially due to its larger population size. Research Question one:

Table 1: Service Learning Experiences of Preservice Undergraduate Teachers

SN	Items	Mean	St. Dev.
1	I have used digital platforms (e.g., online discussion forums, learning management systems) to collaborate with my peers during service learning projects	1.72	0.58
2	Emerging technologies such as virtual reality (VR), artificial intelligence (AI), or educational apps have been incorporated into the service learning projects I am involved in.	1.76	0.46
3	I have received adequate training or guidance on how to use technology effectively in my service learning projects.	1.90	0.57
4	I frequently use the internet and online resources to research and support the community service activities in my service learning projects.	2.08	0.34
5	I feel that the use of emerging technologies enhances the quality of my service learning experience and contributes to my academic learning.	3.03	0.57

These items assess both the frequency of technology usage and its perceived effectiveness in enhancing service learning experiences. They also explore the preparedness and training pre-service teachers receive to integrate technology into their service learning activities. As shown in Table 1, the mean values for items 1, 2, 3, and 4 are below the decision mean of 2.5, indicating that emerging technologies are not adequately utilized in service learning projects by pre-service teachers at the university. However, the mean value for item 5 exceeds 2.5, suggesting that respondents believe that emerging technologies enhance the quality of their service learning experiences and contribute to their academic learning. These perceptions may vary across different levels of study (undergraduate levels 1, 2, 3, and 4), as indicated by the ANOVA analysis presented in Table 2.

Table 2: ANOVA test for the perception of Preservice Undergraduate Teachers on their Service Learning Experiences and level of studies (UG1, UG2, UG3, & UG4)

SN			Sum of Squares	df	Mean Square	F	Sig.
1	I have used digital platforms (e.g., online discussion forums, learning management systems) to collaborate with my peers during service learning projects	Between Groups	0.832	3	0.277	0.794	0.499
		Within Groups	50.962	146	0.349		
		Total	51.793	149			
2	Emerging technologies such as virtual reality (VR), artificial intelligence (AI), or educational apps have been incorporated into the service learning projects I am involved in	Between Groups	1.620	3	0.540	2.526	0.060
		Within Groups	31.213	146	0.214		
		Total	32.833	149			
3	I have received adequate training or guidance on how to use technology effectively in my service learning projects	Between Groups	7.298	3	2.433	8.580	0.000
		Within Groups	41.395	146	0.284		
		Total	48.693	149			
4	I frequently use the internet and online resources to research and support the community service activities in my service learning projects	Between Groups	7.485	3	2.495	35.065	0.000
		Within Groups	10.388	146	0.071		
		Total	17.873	149			
5	I feel that the use of emerging technologies enhances the quality of my service learning experience and contributes to my academic learning	Between Groups	6.125	3	2.042	6.980	0.000
		Within Groups	42.708	146	0.293		
		Total	48.833	149			

As shown in Table 2, the p-values for items 1 and 2 (0.499 and 0.060, respectively) are greater than the significance level of 0.05, indicating no significant difference in undergraduate pre-service teachers' perceptions regarding the extent of emerging technology use in service learning projects for these items. However, a significant difference was found for items 3, 4, and 5. This suggests that while pre-service teachers hold similar perceptions for items 1 and 2, their perceptions diverge for items 3, 4, and 5. To further explore this variation, an additional ANOVA test was conducted on respondent departments, as shown in Table 3.

Table 3: ANOVA test for the perception of Preservice Undergraduate Teachers on their Service Learning Experiences and various departments (educational foundations, curriculum studies and science education)

SN			Sum of Squares	df	Mean Square	F	Sig.
1	I have used digital platforms (e.g., online discussion forums, learning management systems) to collaborate with my peers during service learning projects	Between Groups	1.502	2	0.751	2.195	0.115
		Within Groups	50.292	147	0.342		
		Total	51.793	149			
2	Emerging technologies such as virtual reality (VR), artificial intelligence (AI), or educational apps	Between Groups	0.567	2	0.284	1.292	0.278
		Within Groups	32.266	147	0.219		
		Total	32.833	149			

	have been incorporated into the service learning projects I am involved in	Total	32.833	149			
3	I have received adequate training or guidance on how to use technology effectively in my service learning projects	Between Groups	0.214	2	0.107	0.325	0.723
		Within Groups	48.479	147	0.330		
		Total	48.693	149			
4	I frequently use the internet and online resources to research and support the community service activities in my service learning projects	Between Groups	0.144	2	0.072	0.598	0.551
		Within Groups	17.729	147	0.121		
		Total	17.873	149			
5	I feel that the use of emerging technologies enhances the quality of my service learning experience and contributes to my academic learning	Between Groups	0.104	2	0.052	0.157	0.855
		Within Groups	48.729	147	0.331		
		Total	48.833	149			

As revealed in Table 3, the p-values for all items are greater than the 0.05 significance level, indicating no statistically significant difference in the perceived extent of emerging technology use in service learning projects among respondents from different departments. This suggests that, irrespective of specialization, respondents perceive that emerging technologies are not adequately utilized in service learning projects at the university.

Table 4: Perceptions of Preservice Teachers on the Impact of Emerging Technologies Service Learning Experiences Scale

SN	Items	Mean	St. Dev.
1	Emerging technologies have helped me better understand the academic concepts related to my service learning projects.	3.17	0.66
2	The use of technology has improved my ability to communicate and collaborate with community members during service learning activities.	2.87	0.39
3	Emerging technologies have provided me with new ways to reflect on and analyze my service learning experiences.	2.93	0.47
4	I feel that using digital tools (e.g., online surveys, virtual meetings, multimedia presentations) has made my service learning projects more effective in addressing community needs.	3.02	0.56
5	The integration of emerging technologies has enhanced my engagement with the community, making the service learning experience more meaningful.	3.04	0.58

These items focus on the perceived academic and community engagement outcomes of using emerging technologies in service learning, providing insights into how pre-service teachers view the effectiveness and value of these tools in their educational and community-based experiences. As shown in Table 4, the mean values for all items exceed 2.5, indicating that pre-service teachers agree that emerging technologies are effective in enhancing their educational and community-based experiences. Furthermore, the relatively low standard deviations for these items suggest a high degree of agreement among respondents. This result reveals that emerging technologies have a positive impact on the service learning experiences of pre-service teachers.

Table 5: Challenges and Barriers faced by Preservice Teachers in utilizing Emerging Technologies for Service Learning

SN	Items	Mean	St. Dev.
1	Limited access to reliable internet connection has hindered my ability to effectively use emerging technologies in my service learning projects.	3.06	0.59
2	The lack of adequate technological resources (e.g., computers, software, devices) at Sokoto State University has been a barrier to incorporating emerging	3.01	0.55

	technologies into my service learning activities.		
3	I have encountered difficulties in learning how to use the emerging technologies required for my service learning projects due to a lack of training or support.	2.91	0.45
4	Cultural or community-based factors (e.g., reluctance to use technology) have made it challenging to engage with community members through emerging technologies in my service learning projects.	2.95	0.50
5	The digital divide between urban and rural areas in Sokoto State has made it difficult to implement technology-driven service learning projects that involve rural communities.	2.96	0.50

These items explore a variety of potential barriers, including technological, infrastructural, and cultural challenges, to gain a comprehensive understanding of the obstacles pre-service teachers encounter when integrating emerging technologies into their service learning experiences. As shown in Table 5, the mean values for these items exceed 2.5, indicating that pre-service teachers agree that technological, infrastructural, and cultural factors pose significant challenges to technology integration in service learning. Furthermore, the relatively low standard deviations for these items suggest a high degree of agreement among respondents.

Table 6: Benefits of Emerging Technologies for enhancing the Pedagogical Skills of Preservice Teachers through Service Learning experiences

SN	Items	Mean	St. Dev.
1	Using emerging technologies has improved my ability to communicate effectively with peers, instructors, and community members during service learning activities.	2.93	0.46
2	Emerging technologies have facilitated better collaboration with my fellow preservice teachers on service learning projects.	2.97	0.52
3	The use of digital tools has enhanced my critical thinking skills by encouraging me to analyze and solve real-world problems during service learning.	2.88	0.40
4	Emerging technologies have helped me develop new teaching strategies that I can apply in future classroom settings	2.87	0.39
5	Through service learning projects that integrate technology, I have gained greater confidence in using digital tools to support my teaching practice.	2.93	0.46

These items aim to assess the impact of technology on crucial pedagogical skills, including communication, collaboration, problem-solving, and innovative teaching methods, which are essential for pre-service teachers. They explore both direct and indirect ways in which technology influences teachers' professional development during service learning experiences. As shown in Table 6, the mean values for these items exceed 2.5, indicating strong agreement among respondents that emerging technologies positively impact these critical pedagogical skills.

Table 7: Pearson Correlation coefficients relationship between perceived effectiveness of technology and the development of pedagogical skills

		Perceived effectiveness of emerging technology on Service learning	Impact of emerging technology on development of pedagogical skills
Perceived effectiveness of emerging technologies on service learning	Pearson Correlation	1	.916**
	Sig. (2-tailed)		0.000
	N	150	150

Impact of emerging technology on development of pedagogical skills	Pearson Correlation	.916**	1
	Sig. (2-tailed)	0.000	
	N	150	150

Table 7 reveals a statistically significant relationship ($p < 0.05$) between perceived effectiveness of emerging technologies on service learning and their impact on the development of pedagogical skills. This suggests that as emerging technologies enhance undergraduate pre-service teachers' service learning experiences, they also contribute to the development of key pedagogical skills such as communication, collaboration, problem-solving, and innovative teaching methods.

DISCUSSION

The research presented in the document investigates the impact of emerging technologies on the service-learning experiences of preservice undergraduate teachers. The study involved a diverse group of students from various levels of education and departments within the Faculty of Education. The findings reveal significant insights into how these technologies are perceived and utilized in service-learning projects, highlighting both the potential benefits and the limitations faced by the respondents.

One of the key findings is the representation of students across different levels of education, with Level 1 students showing the highest participation. This demographic distribution suggests that early-stage undergraduate students may be more engaged in service-learning activities, possibly due to their enthusiasm and the foundational nature of their coursework. Additionally, the study indicates a higher representation from the Department of Educational Foundations, which may reflect its larger student population compared to other departments. This demographic insight is crucial for understanding the context in which the research was conducted and the varying experiences of students based on their academic standing and departmental affiliation.

The research also delves into the use of digital platforms and emerging technologies in service-learning projects. The results indicate that while students recognize the importance of these technologies, their actual utilization remains limited. For instance, the mean scores for items related to the use of digital platforms and emerging technologies were relatively low, suggesting that many preservice teachers do not frequently incorporate these tools into their projects. The ANOVA tests further revealed no statistically significant differences in the perceived extent of technology use among students from different departments, indicating a widespread consensus on the underutilization of these resources across the board.

Moreover, the study highlights the perceptions of preservice teachers regarding the impact of emerging technologies on their learning experiences. While some respondents acknowledged that technologies like virtual reality and educational apps could enhance their understanding and engagement, the overall sentiment was that these tools were not adequately integrated into their service-learning activities. This gap between potential and actual use underscores the need for better training and support for preservice teachers to effectively leverage technology in their educational practices. The findings suggest that enhancing technological integration could lead to improved communication, collaboration, and reflection among students during their service-learning experiences. This result aligns with the finding of research on the teacher technology integration experience: practice and reflection in the classroom, carried out by Ruggiero & J. Mong, (2015) to explore what technology teachers use and how they utilize that technology to facilitate student learning in primary, middle, and secondary classrooms. Both studies emphasize the need for effective technology use to enhance learning opportunities and teacher preparedness.

Similarly, the findings of the study conducted by Kilgo et al. (2015), highlight the mixed effects of high-impact practices, such as service learning, on student outcomes, suggesting that while some practices may have positive impacts, others like service learning can be negative predictors for certain educational outcomes. This relates to the current research on by indicating that the effectiveness of service learning experiences may depend on how they are facilitated and administered, potentially influenced by technology.

Moreover, the result of current study also aligned with the focal area of a research carried out by (Darling-Hammond, 2017) which emphasise the integration of technology in teacher education and the emphasis on practical, community-based learning experiences. Both studies focus on enhancing teacher preparation through innovative practices and the importance of connecting theory with practice, which is a recurring theme in effective teacher education systems.

In conclusion, the research underscores the critical role that emerging technologies can play in enriching service-learning experiences for preservice teachers. However, it also reveals significant barriers to their effective implementation, including a lack of training and insufficient integration into existing curricula. The study calls for a reevaluation of how technology is incorporated into teacher education programs, emphasizing the need for targeted professional development and resources that empower future educators to harness the full potential of these tools. By addressing these challenges, educational institutions can better prepare preservice teachers to engage with their communities and enhance their professional growth through meaningful service-learning experiences.

CONCLUSION

The research conducted on the impact of emerging technologies on service-learning experiences for preservice undergraduate teachers at Sokoto State University reveals both promising opportunities and significant challenges. The findings indicate that while preservice teachers recognize the potential of technologies such as virtual reality and online collaborative tools to enhance their learning and community engagement, their actual integration into service-learning projects remains limited. This gap highlights the necessity for educational institutions to prioritize the incorporation of technology into teacher education programs, ensuring that future educators are equipped with the skills and knowledge to effectively utilize these tools.

Moreover, the study underscores the importance of addressing infrastructural and socio-economic barriers that may hinder the effective use of technology in educational settings, particularly in developing regions like Sokoto State. By providing adequate training and resources, institutions can empower preservice teachers to leverage emerging technologies to foster critical thinking, collaboration, and innovative teaching strategies. The positive correlation found between the perceived effectiveness of technology and the development of pedagogical skills further emphasizes the need for a strategic approach to integrating technology into service learning.

In conclusion, the research highlights the transformative potential of emerging technologies in enhancing service-learning experiences for preservice teachers. However, it also calls for a concerted effort to overcome existing challenges and barriers. By fostering an environment that encourages the effective use of technology, educational institutions can better prepare preservice teachers for their future roles, ultimately leading to improved educational outcomes and community engagement. The insights gained from this study provide a valuable foundation for future research and practice in the field of teacher education, particularly in the context of integrating technology into service learning.

LIMITATIONS OF THE STUDY

The study on the impact of emerging technologies on service-learning experiences for preservice undergraduate teachers at Sokoto State University acknowledges several limitations that may affect the generalizability and applicability of its findings.

1. The study primarily focused on students from the Faculty of Education, which may not fully represent the experiences of preservice teachers in other faculties or institutions.
2. Longitudinal studies would provide deeper insights into how preservice teachers' experiences and attitudes towards technology evolve throughout their education.
3. The study relied on self-reported data from participants, which may introduce biases such as social desirability or inaccurate self-assessment. Respondents may overstate their use of technology or its perceived benefits, leading to skewed results.
4. The socio-economic context of Sokoto State, characterized by limited technological infrastructure and lower internet penetration, may influence the findings. The challenges faced by preservice teachers in utilizing emerging technologies may not be representative of other regions with better technological resources.
5. The study primarily explored the perceptions of preservice teachers regarding technology use in service learning. While perceptions are important, the research did not delve deeply into the actual outcomes or effectiveness of technology integration in enhancing learning experiences, which could provide a more comprehensive understanding of the impact of emerging technologies.

RECOMMENDATIONS

Based on the limitations identified in the study regarding the impact of emerging technologies on service-learning experiences for preservice undergraduate teachers at Sokoto State University, several recommendations can be made to enhance future research and practice:

1. Future studies should aim to include a larger and more diverse sample of preservice teachers from various faculties and institutions. This would enhance the generalizability of the findings and provide a more comprehensive understanding of how emerging technologies are perceived and utilized across different educational contexts.
2. Implementing a longitudinal research design would allow researchers to track changes in preservice teachers' perceptions and technology use over time. This approach could provide valuable insights into the long-term effects of technology integration in service learning and how it influences pedagogical skills and community engagement.
3. Employing a mixed-methods approach that combines quantitative surveys with qualitative interviews or focus groups could enrich the data collected. This would allow for a deeper exploration of preservice teachers' experiences and the contextual factors influencing their use of technology, providing a more nuanced understanding of the challenges and benefits.
4. Future research should not only assess perceptions but also evaluate the actual outcomes of technology integration in service-learning experiences. This could involve measuring specific learning outcomes, engagement levels, and the effectiveness of different technologies in enhancing educational experiences.
5. Educational institutions should prioritize the development of training programs that equip preservice teachers with the necessary skills to effectively integrate emerging technologies into their teaching practices. Workshops, seminars, and hands-on training sessions can help build confidence and competence in using digital tools for service learning.

6. Addressing infrastructural challenges is crucial for the effective use of technology in education. Institutions and policymakers should work towards improving technological infrastructure, such as internet access and availability of digital resources, particularly in underserved regions. This would create a more conducive environment for integrating technology into service learning.
7. Institutions should consider collaborating with technology experts and educational technologists to develop tailored resources and support systems that facilitate the integration of emerging technologies into service-learning projects. This collaboration can help ensure that preservice teachers have access to the latest tools and best practices in technology use.

Abstract

Industries and farm processing houses are established to fulfil the demand of the ever-increasing world population, Nigeria inclusive. This could be the main reason why industrialization and agriculture are regarded as the cornerstone of modern developmental strategies. However, despite the significant contribution to economic and human welfare, a lot of waste products are generated in all forms which often leads to the creation of hazards, especially microbial contaminations. This study examines the effect of industrial and agricultural effluents on the water quality of some water bodies within and around the Federal Capital Territory (FCT), Nigeria. To achieve this, a total of eight (8) water samples were collected during the raining season and analyzed for the microbial characteristics. The results showed that during the period under study, the Total Coliform and *E. coli* values were found to be higher than NESREA standards. This is not an acceptable phenomenon and therefore call for attention in view of the populace that depends on these water source for their domestic and recreational activities. There is need to provide modern water treatment system for the people around the communities to prevent outbreak of water-related illnesses. Basic treatment knowledge is also required for the recipient communities.

Keywords: Industrial, Wastes, Contamination, Quality, Water and effluents

Introduction

Industries and farm processing houses are established to fulfil the demand of the ever-increasing world population, Nigeria inclusive. This could be the main reason why industrialization and agriculture are regarded as the cornerstone of modern developmental strategies. Water has been reported to be one of the most important and a necessary utility of life which humans and animals need to survive the increasing population is responsible for the increasing volume of wastewater produced annually in the world, Africa inclusive (Sothorn *et al.*, 2022).

Fig. I: Typical Water Usage

In order to meet up with the increasing demand of clean water globally, it is necessary to reduce the rate of pollution and increase re-use policy. Also, understanding the mode of water contamination as well as sources of the contaminants become necessary in order to control them. In Nigeria, most of the sources of water both for domestic, agricultural and industrial uses are not often properly managed. Therefore, this untreated water gets to the water bodies causing environmental problems and affecting the aquatic animals, especially microbial contaminations which cause diseases. Consequently, this leads to unhealthy practice which is responsible for several water borne related diseases, In several developed countries of the world, wastewater is collected, treated, and reused for different purposes including irrigation, domestic use, laundry services, recreational parks, aquatic farming, industrial purposes, and drinking

Statement of Research Problem

It is a known fact that every human being and animal needs water to survive both for physiological and daily needs. Despite the significant contribution of industrialization and agricultural expansion to the economic and human welfare, a lot of harmful waste products are generated in many forms. Unfortunately, due to lack of proper handling systems, these wastes end up in domestic and other water ways around, which often leads to the creation of hazards, especially associated with microbial contaminations.

Justification for the Research

Proper water monitoring scheme involves understanding the microbial load present in our water ways that are eventually becoming the source of water uses. Coliform have been used as typical water pollution monitoring organisms (indicator organisms). Good quality of water source can greatly influence the available water for the residence of FCT, Abuja

Aim and Objective

Therefore, the aim of this study was to examine the effect of industrial and agricultural effluents on the water quality of some water bodies within and around the Federal Capital Territory (FCT), Nigeria.

Materials and Method

To achieve this, water samples were collected during the raining season and analyzed for the microbial characteristics. The protocol involved standard microbiological steps which serial dilution of the collected water, plating of aliquot (0.1ml) on selective media such as McConkey Agar, Salmonella-Shigella Agar, EMB agar as well as general purpose Nutrient agar using pour plate method. After the incubation at 35⁰C, for 24 hours, the respective discrete colonies were enumerated, sub-cultured and identified using the conventional biochemical characterization compared with data on in the Bergey's Manual.

Results and Discussion

The results of the microbial examination of the various water samples in this study is as shown on Table 1.

Table 1: The distribution of bacteria contaminants in the studied water samples

Sample site	No. of samples	TC	TFC	TE. c
I	30	86	52	23
II	60	97	45	ND
III	78	76	23	16
IV	84	126	58	20
V	23	29	21	14

Key: TC= Total coliform; TFC= Total fecal coliform; TE. C= Total E. coli

The results showed that during the period under study, the Total Coliform, fecal coliform and *E. coli* values were found to be high. This is not an acceptable phenomenon and therefore call for attention in view of the populace that depends on these water source for their domestic and recreational activities (Chew *et al.*, 2016). The use water sources that are readily available to the citizenry have always been the norms. While some are high in microbial loads, others have chemical substances like heavy metals. In any respect, the kinds of bacteria found in the studied sites could be responsible for several diseases and outbreaks with varying catastrophes.

Conclusion and Recommendations

There is need to provide modern water treatment system for the people around the communities to prevent outbreak of water-related illnesses. Basic treatment knowledge is also required for the recipient communities.

Government can provide loans to farmer to purchase mechanized equipment that can help in rapid harvesting of farm products before they begin to perish which are then carelessly dumped in nearby water drainages. To effectively put this waste into use that will enhance the Nigeria economy, it is necessary for several steps to be taken to ensure successful conversion, treatment, recycling, or reuse of the waste produced from food, water, and agriculture.

Government should reward citizens or companies who develop technologies that can handle waste management. Transforming waste from food, water, and agriculture into value-added products will decrease greenhouse gas emissions while offering inexpensive, efficient, and environmentally and economically friendly products.

ÖZET

Modern yaşamın yaygın sorunları arasında yer alan obezite ve internet bağımlılığı günümüzde hızla yayılan ve toplum sağlığını tehdit eden önemli iki sorundur. Bu iki durum, bireylerin yaşam kalitesini olumsuz etkileyen ve birbirini pekiştiren faktörler olarak giderek daha fazla dikkat çekmektedir. Obezite, vücutta aşırı yağ birikimi olarak tanımlanmakta ve sağlıklı beslenme, fiziksel aktivite eksikliği, genetik yatkınlık, stres gibi faktörlerle ilişkilendirilmektedir. İnternet bağımlılığı ise bireylerin internet kullanımını kontrol edememesi ve günlük yaşamlarını olumsuz etkilemesi şeklinde tanımlanır. Bu bağımlılık, özellikle gençler ve üniversite öğrencileri arasında yaygınlaşarak bireylerin fiziksel aktivite düzeyini azaltmakta ve sağlıklı beslenme alışkanlıklarını teşvik etmektedir.

Araştırmalar, internet bağımlılığı ile fiziksel aktivite düzeyi arasında ters bir ilişki olduğunu göstermektedir. İnternet bağımlılığı, bireylerin hareketsiz bir yaşam tarzı benimsemesine ve bu durumun zamanla obezite riskini artırmasına neden olmaktadır. Aynı zamanda hem obezite hem de internet bağımlılığı depresyon, anksiyete ve sosyal izolasyon gibi mental sağlık sorunlarına katkıda bulunmakta, bu da bireylerin yaşam kalitesini olumsuz etkilemektedir. Bu bağlamda, halk sağlığı hemşirelerinin bu iki sağlık sorunu ile mücadelede eğitim, farkındalık artırma ve bireylerin sağlıklı yaşam alışkanlıkları kazanmasına destek sağlama konularında önemli roller üstlenebileceği öne sürülmektedir.

Sonuç olarak, obezite ve internet bağımlılığı arasındaki bu etkileşim, bireylerin fiziksel ve mental sağlığı üzerinde önemli etkiler yaratmaktadır. Sağlıklı yaşam tarzının teşviki ve internet bağımlılığını azaltmaya yönelik önleyici eğitim programları ve farkındalık çalışmaları, toplum sağlığını korumak ve bireylerin yaşam kalitesini artırmada önemli rol oynayabilir.

Anahtar Kelimeler: Obezite, İnternet Bağımlılığı, Halk Sağlığı, Fiziksel Aktivite, Mental Sağlık, Halk Sağlığı Hemşireliği

ABSTRACT

Obesity and internet addiction, which are among the common problems of modern life, are two important problems that spread rapidly and threaten public health. These two conditions are attracting more and more attention as factors that negatively affect the quality of life of individuals and reinforce each other. Obesity is defined as excessive fat accumulation in the body and is associated with factors such as unhealthy diet, lack of physical activity, genetic predisposition and stress. Internet addiction is defined as individuals' inability to control their internet use and its negative impact on their daily lives. This addiction is especially prevalent among young people and university students, reducing physical activity levels and encouraging unhealthy eating habits.

Studies show that there is an inverse relationship between internet addiction and physical activity level. Internet addiction causes individuals to adopt a sedentary lifestyle, which

increases the risk of obesity over time. At the same time, both obesity and internet addiction contribute to mental health problems such as depression, anxiety and social isolation, which negatively affect the quality of life of individuals. In this context, it is suggested that public health nurses can play important roles in combating these two health problems by providing education, raising awareness and supporting individuals to gain healthy living habits.

In conclusion, this interaction between obesity and internet addiction has significant effects on the physical and mental health of individuals. Preventive education programs and awareness-raising efforts to promote healthy lifestyles and reduce internet addiction can play an important role in protecting public health and improving the quality of life of individuals.

1. OBEZİTENİN TANIMI VE YAYGINLIĞI

1.1. Obezite Nedir?

Obezite, vücutta aşırı miktarda yağ birikmesi ile karakterize edilen ve dünya genelinde önemli bir sağlık sorunu olarak kabul edilen bir durumdur. Vücut kitle indeksi (VKİ), obezite tanısı için en önemli endekstir. Dünya Sağlık Örgütü (DSÖ) tarafından obezite, VKİ 30 veya daha fazla olması olarak tanımlanmaktadır (WHO, 2024). Obezitenin en belirgin özelliği, vücutta yağ dokusu oranının artmasıdır. Erkeklerde vücut yağ oranının %25'in, kadınlarda ise %30'un üzerinde olması, obezite varlığını gösterir. İdeal kilodaki bir yetişkinin vücudunda yaklaşık 25 milyar yağ hücresi bulunmaktadır ve bu hücreler, vücut yağ dokusunu oluşturmak için bir araya gelmektedirler. Ancak, yağ dokusunun hücre sayısı ve büyüklüğü yaşam boyunca sabit kalmaz, beslenme ve enerji tüketimine bağlı olarak yağ dokusu büyüyebilir veya küçülebilir. Eğer alınan enerji, harcanan enerjiden fazla olursa, biriken yağ hücreleri bölünerek sayılarını hızla artırır ve bu durum obeziteye yol açar (Özçelik ve ark., 2014).

1.2. Global ve Yerel Obezite İstatistikleri

Obezite, birçok ülkede salgın boyutunda denilecek küresel bir sorun haline gelmiştir (Berberoğlu ve Hocaoglu, 2021). DSÖ'nün son rakamlarına göre küresel ölçekte 2 milyar'dan fazla kilolu birey bulunmaktadır (WHO,2024). Bu da dünya nüfusunun yaklaşık %30'unu oluşturmaktadır (Ali, 2023). Güney Kore'de yapılan bir çalışmada, yerel obezite oranlarının mekansal bağımlılığı incelenmiş ve benzer obezite oranlarına sahip yerleşim yerlerinin mekansal olarak kümelenmediği bulunmuştur (Jun ve Namgung, 2018). Bu durum, obezitenin yerel düzeyde eşit dağılım göstermediğini ve bazı bölgelerde daha yüksek prevalansa sahip olduğunu göstermektedir. Ayrıca, Etiyopya'da yapılan bir araştırmada, obezite ve fazla kilonun mekansal dağılımı incelenmiş ve belirli bölgelerde yoğunlaşma olduğu tespit edilmiştir (Enyew ve ark., 2022). Çocukluk çağı obezitesi de önemli bir sorun olarak öne çıkmaktadır. Tayland'da yapılan bir çalışmada, çocukluk obezitesi ile sosyoekonomik faktörler arasındaki ilişki incelenmiş ve belirli bölgelerde yüksek obezite oranlarının gözlemlendiği bulunmuştur (Sritart ve ark., 2022). Bu tür çalışmalar, yerel düzeyde obezite ile mücadelede hangi stratejilerin daha etkili olabileceğini anlamak için kritik öneme sahiptir.

Yerel düzeyde obezite oranları, coğrafi ve sosyoekonomik faktörlere bağlı olarak değişiklik göstermektedir (Hatunoğlu ve Başar, 2023). Türkiye Obezite Araştırma Derneği (TOAD) tarafından yapılan "Türkiye Obezite Profili" adlı çalışma, Türkiye'deki insanların yaklaşık %31'inin normal VKİ'ye sahip olduğunu, %29,5'inin obez, %40'ının ise hafif kilolu olduğunu ifade etmektedir (Şengönül ve ark.,2019). Ayrıca yapılan bir başka çalışmada Türkiye'de son 12 yılda obezite artışı kadınlarda %34 oranında iken erkeklerde ise bu oran %107 olarak tespit

edilmiştir (Can ve Şahin, 2018). Obezite, yalnızca estetik bir sorun değil, aynı zamanda birçok ciddi sağlık probleminin de tetikleyicisi olarak kabul edilmektedir. Örneğin obezite, tip 2 diyabet, hipertansiyon, kardiyovasküler hastalıklar ve bazı kanser türleri gibi hastalıklarla doğrudan ilişkilidir (Akıncı ve ark., 2022; Altun ve Çapar, 2022). Obezite, bireylerin sağlığı ile birlikte toplumların sağlık sistemlerini de olumsuz etkilemektedir. Örneğin, obezite ile ilişkili hastalıklar, sağlık harcamalarını artırmakta ve yaşam kalitesini düşürmektedir (Mesned ve ark., 2019).

1.3. Obezitenin Nedenleri ve Risk Faktörleri

Obezitenin nedenleri ve risk faktörleri; genetik, psikolojik, çevresel ve yaşam tarzı gibi çeşitli faktörlerin karmaşık etkileşimleri sonucunda ortaya çıkmaktadır.

Genetik faktörler, obezite gelişiminde önemli bir rol oynamaktadır. Araştırmalar, bazı bireylerin genetik yapılarının kilo alma eğilimlerini etkileyebileceğini göstermektedir. Örneğin, insülin direnci ve metabolik sendrom gibi durumlar genetik yatkınlıkla ilişkilidir (Koç ve ark., 2021). Bunun yanı sıra, hormonal faktörler de obezite üzerinde etkili olabilir; hormonal dengesizlikler, iştah ve yağ depolama süreçlerini etkileyerek obezite riskini artırabilir (Alpcan ve Arıkan Durmaz, 2015).

Psikolojik faktörler de obezite ile ilişkilidir. Stres, anksiyete ve depresyon gibi durumlar, bireylerin aşırı yeme davranışlarına yönelmesine neden olabilir (Yanikkerem, 2017). Ayrıca, olumsuz çocukluk deneyimleri, bireylerin ilerleyen yaşlarda obezite geliştirme riskini artırabilir (Solak Arabacı ve Demircioğlu, 2023).

Çevresel faktörler, obezitenin yaygınlığını artıran bir diğer önemli etkidir. Modern yaşam tarzı, sağlıksız beslenme alışkanlıkları ve fiziksel aktivite eksikliği obezite riskini artırmaktadır. Özellikle yüksek kalorili, düşük besin değeri olan gıdaların kolay erişilebilirliği, bireylerin bu tür besinleri tercih etmesine yol açmakta ve bu durum obeziteyi tetiklemektedir (Berberoğlu ve Hocaoğlu, 2021; Büyükdere ve Akyol Mutlu, 2023). Ekonomik kalkınma ve kentleşme, bu tür gıdalara erişimi kolaylaştırarak obezite riskini artırmaktadır (Aydoğdu ve Köksal, 2022). Günümüzde hızla artan teknolojik gelişmeler ve bunun beraberinde getirdiği önemli değişikliklerden birkaçı olan; fiziksel aktivite eksikliği, hareketsiz yaşam, internet bağımlılığı ve sanal aylıklık obezite yaygınlığını etkileyen bir diğer önemli risk faktörleridir (Coşkuntürk ve ark., 2023).

Bu durum, psikolojik sağlık ile fiziksel sağlık arasındaki bağlantıyı ortaya koymaktadır. Obezitenin nedenleri ve risk faktörleri, çok boyutlu bir yapıya sahip olup, bu faktörlerin bir bütün olarak değerlendirilmesi gerekmektedir (Li, 2023). Obezite ile mücadelede, bireylerin sağlıklı yaşam tarzlarını benimsemeleri için çeşitli stratejilerin uygulanması önemlidir.

2. İNTERNET BAĞIMLILIĞININ TANIMI VE YAYGINLIĞI

2.1. İnternet Bağımlılığı

İnternet bağımlılığı, bireylerin internet kullanımını kontrol edememesi ve bu durumun günlük yaşamlarını olumsuz etkilemesi olarak tanımlanmaktadır. Özellikle dijital çağda doğup büyüyen çocuklar ve gençler arasında bu durum yaygın bir sorun haline gelmiştir (Güzel ve ark., 2018). İnternet bağımlılığı, bireylerin sosyal ilişkilerini, akademik başarılarını ve genel yaşam kalitelerini olumsuz etkileyebilir. Araştırmalar, internet bağımlılığının ruhsal sağlık sorunlarıyla, özellikle anksiyete ve depresyon ile ilişkili olduğunu göstermektedir (Siste ve ark., 2021).

2.2. Hangi Demografik Gruplar Daha Çok Etkilenir?

İnternet bağımlılığı, belirli demografik gruplar üzerinde farklı etkiler yaratabilmektedir. Araştırmalar, özellikle gençler ve üniversite öğrencileri arasında internet bağımlılığının daha yaygın olduğunu göstermektedir. Bu gruplar, internetin yoğun kullanımına ve sosyal

etkileşimlerin dijital platformlara kaymasına bağlı olarak daha fazla risk altındadır (Kocaay ve ark., 2022).

Gençler, özellikle ergenlik döneminde, kimlik arayışı ve sosyal kabul ihtiyacı nedeniyle interneti yoğun bir şekilde kullanma eğilimindedirler. Bu durum, internet bağımlılığına yol açan önemli bir faktördür. Örneğin bir çalışmada, ergenlerin internet bağımlılığı ile saldırganlık arasında bir ilişki olduğu bulunmuştur (Şahin, 2014). Ayrıca, ergenlik dönemindeki bireylerin sosyal medya ve çevrimiçi oyunlar gibi platformlarda daha fazla zaman geçirdikleri ve bu durumun bağımlılık riskini artırdığı belirtilmiştir (Filazoğlu Çokluk ve Pekel, 2023; Kaval ve Siyez, 2022).

Üniversite öğrencileri de internet bağımlılığı açısından yüksek risk taşıyan bir diğer demografik gruptur. Yapılan araştırmalar, üniversite öğrencilerinin internet bağımlılığı düzeyinin, akademik erteleme ve psikolojik sorunlarla ilişkili olduğunu ortaya koymaktadır (Biçer ve Yurdakoş, 2019; Uğraş ve ark., 2023). Özellikle üniversite öğrencileri arasında sosyal medya bağımlılığı ve siber zorbalık gibi olumsuz etkilerin de yaygın olduğu gözlemlenmiştir (Demircan ve ark., 2022). Bu durum, genç yetişkinlerin sosyal etkileşimlerini dijital platformlara kaydırması ve yüz yüze iletişimin azalması ile ilişkilidir (Çelik ve Akkoyun, 2022; Kocaay ve ark., 2022)

Cinsiyet de internet bağımlılığı üzerinde etkili bir faktördür. Araştırmalar, erkeklerin genellikle internet oyunları ve çevrimiçi platformlarda daha fazla zaman geçirdiğini, dolayısıyla internet bağımlılığına daha yatkın olduklarını göstermektedir (Yavuz, 2018). Ayrıca yaş ve eğitim durumu gibi diğer demografik değişkenler de internet bağımlılığı düzeylerini etkileyebilmektedir (Uygun ve ark., 2022).

2.3. İnternet Bağımlılığının Yaygınlığı ve Eğilimleri

İnternet bağımlılığı, özellikle son yıllarda küresel çapta bir sorun haline gelmiştir. Yapılan bir çalışmada, Hindistan'daki tıp öğrencileri arasında internet bağımlılığı prevalansının %42,7 olarak belirlendiği, bunun %35'inin hafif, %7,4'ünün orta düzey ve %0,3'ünün ise şiddetli bağımlılık olarak sınıflandırıldığı ifade edilmiştir (Chaudhari ve ark., 2015). Ayrıca başka bir araştırmada, Türkiye'deki ergenlerde internet bağımlılığı oranının %11,6 olduğu bulunmuştur (Epecik Büyükbaş ve ark., 2019). Bu veriler, genç yetişkinlerin ve öğrencilerin internet bağımlılığına daha yatkın olduğunu göstermektedir.

Demografik faktörlerden yaş ve meslek gibi değişkenlerin internet bağımlılığı davranışını etkilediği saptanmıştır. 39 yaş üstü ve 21 yaş altındaki bireylerin genellikle daha az bağımlı olduğu, bununla birlikte 21-39 yaş arasındaki bireylerin daha yüksek bağımlılık oranlarına sahip olduğu gözlemlenmiştir (Ainin ve ark., 2017).

COVID-19 pandemisi sırasında yapılan bir çalışmada, internet bağımlılığı oranının genel nüfusta %36,7 olduğu, bunun %39'unun orta düzey bağımlılık ve %2,8'inin ise şiddetli bağımlılık olarak sınıflandırıldığı bildirilmiştir (Li ve ark., 2021). Bu durum ise pandeminin sosyal mesafe gereklilikleri ve evde kalma zorunluluğu gibi faktörlerle ilişkilendirilmiştir.

3. OBEZİTE VE İNTERNET BAĞIMLILIĞI ARASINDAKİ İLİŞKİ

3.1. İnternet Bağımlılığının Fiziksel Aktivite Üzerindeki Etkileri

İnternet bağımlılığı, bireylerin internet kullanımını kontrol edememesi ve bu durumun günlük yaşamlarını olumsuz etkilemesiyle karakterize edilen bir durumdur. Bu bağımlılık, fiziksel aktivite üzerinde önemli olumsuz etkilere yol açmaktadır. Araştırmalar, internet bağımlılığı ile fiziksel aktivite düzeyi arasında ters bir ilişki olduğunu göstermektedir. İnternet bağımlılığı olan bireyler, genellikle hareketsiz bir yaşam tarzı benimsemekte ve bununla birlikte fiziksel sağlıkları olumsuz yönde etkilenmektedir (Özarıcı ve Cangöl Söğüt, 2022). Özellikle gençler arasında, internet kullanımının artmasıyla birlikte fiziksel aktivite düzeyinin düştüğü

gözlemlenmiştir. Bu durum, gençlerin sosyal etkileşimlerini dijital platformlara kaydırması ve yüz yüze iletişimin azalması ile ilişkilidir (Khan ve ark., 2017).

Fiziksel aktivite eksikliği, çeşitli sağlık sorunlarına da yol açabilmektedir. Araştırmalar, düzenli fiziksel aktivite yapmayan bireylerin çeşitli metabolik rahatsızlıklarla daha fazla karşılaştığını göstermektedir (Makino ve ark., 2015). Ayrıca, internet bağımlılığı olan bireylerin uyku düzenlerinin bozulması ve stres seviyelerinin artması gibi psikolojik sorunlarla da karşılaşma olasılıkları yüksektir (Guo ve ark., 2018). Bu durum, fiziksel aktivite eksikliği ile birleştiğinde, bireylerin genel sağlık durumunu daha da kötüleştirebilir.

3.2. Sedanter Yaşam Tarzının Obezite Üzerindeki Etkileri

Sedanter yaşam tarzı, bireylerin fiziksel aktivite düzeyinin düşük olduğu, uzun süre hareketsiz kaldıkları bir yaşam biçimini ifade eder. Hareketsiz yaşam tarzıyla beraber endüstriyel gıda tüketiminde önemli artışlar gözlemlenmiştir. Bu durum ulaşılabilirliği kolay olan hazır gıdaların tüketiminin artışıyla birlikte bireylerin beslenme alışkanlıklarının değişmesine neden olmuştur. Bu yaşam tarzı, obezite gelişiminde önemli bir risk faktörü olarak kabul edilmektedir (İşler ve ark., 2020). Araştırmalar, fiziksel aktivite eksikliğinin, enerji dengesizliği ve aşırı kalori alımı ile birleştiğinde obeziteye yol açtığını göstermektedir (Szostak ve Laurant, 2011).

Fiziksel aktivite, enerji harcamasını artırarak vücut ağırlığını kontrol etmeye yardımcı olur. Ancak hareketsiz bir yaşam tarzı benimseyen bireyler, genellikle daha az kalori yakar ve bu durum, zamanla kilo alımına yol açar (Heianza ve Qi, 2017). Örneğin, yapılan bir çalışmada, fiziksel aktivite eksikliğinin obezite ile güçlü bir şekilde ilişkili olduğunu bu durumun, özellikle çocuklar ve gençler arasında daha yaygın olduğunu göstermiştir (Szostak ve Laurant, 2011). Yaşam tarzının obezite üzerindeki etkileri, metabolik sağlık üzerinde de olumsuz sonuçlar doğurabilmektedir. Yapılan bir çalışma da fiziksel aktivite eksikliğinin insülin direnci, yüksek kan şekeri seviyeleri ve lipid profili bozuklukları gibi metabolik sorunların oluşumuna katkıda bulunabileceği belirtilmiştir (Alshaiikh ve ark., 2016). Bu durum, obezite ile ilişkili diğer sağlık sorunlarının, örneğin tip 2 diyabet ve kardiyovasküler hastalıkların riskini de artırmaktadır (Mabry ve ark., 2010).

Ayrıca, sedanter yaşam tarzı, psikolojik sağlık üzerinde de olumsuz etkiler yaratabilir. Araştırmalar, fiziksel aktivite eksikliği ile depresyon ve anksiyete gibi ruhsal bozukluklar arasında bir ilişki olduğunu göstermiştir (Cerimele ve Katon, 2013). Bu psikolojik durumlar, bireylerin fiziksel aktiviteye katılımını daha da azaltabilir ve bu döngü, obezite riskini artıran bir kısır döngüye dönüşebilir (Cerimele ve Katon, 2013).

3.3. İnternet Bağımlılığı ve Sağlıksız Beslenme Alışkanlıkları Arasındaki İlişki

İnternet bağımlılığı, bireylerin internet kullanımını kontrol edememesi ve bu durumun günlük yaşamlarını olumsuz etkilemesi olarak tanımlanırken, sağlıksız beslenme alışkanlıkları, genellikle yüksek kalorili, düşük besin değeri olan gıdaların aşırı tüketimi ile karakterize edilir. Bu tür yeme davranışları, sağlıksız beslenme alışkanlıklarının gelişmesine ve obezite riskinin artmasına neden olabilir. İnternet bağımlılığı ve sağlıksız beslenme alışkanlıkları arasındaki ilişki, aynı zamanda sosyal etkileşimlerin azalması ile de ilişkilidir ve bu durum çeşitli araştırmalarla desteklenmektedir (Persil Özkan ve ark., 2024). Araştırmalar, internet bağımlılığı olan bireylerin genellikle daha fazla atıştırmalık tükettiğini ve sağlıksız gıdalara yöneldiğini göstermektedir (Özarıcı ve Cangöl Sögüt, 2022). COVID-19 pandemisi sırasında yapılan bir çalışmada, bireylerin evde kalma zorunluluğu nedeniyle sağlıksız gıdalara olan talebinin arttığını ve bunun sonucunda kilo alımının gözlemlendiğini belirtilmiştir (González-Monroy ve ark., 2021). Özellikle gençler arasında, sosyal medya etkisiyle sağlıksız gıdaların tüketimi artmakta ve bu durum obezite riskini artırmaktadır (Gebremariam ve ark., 2018). Bu

durum, internet bağımlılığı ve sağlıksız beslenme alışkanlıkları arasındaki bağlantıyı güçlendirmektedir.

4. PSİKOSOSYAL ETKİLER VE HALK SAĞLIĞI BOYUTU

4.1. Obezite ve İnternet Bağımlılığının Mental Sağlık Üzerindeki Etkileri

Obezite ve internet bağımlılığı, bireylerin mental sağlığı üzerinde de önemli etkilere sahip olan iki yaygın sorundur. Her iki durum da psikolojik, sosyal ve fiziksel sağlık üzerinde olumsuz sonuçlar doğurabilir (Kuss ve Griffiths, 2011). Özellikle, internet bağımlılığı, bireylerin sosyal ilişkilerini zayıflatabilir ve psikolojik sorunlara yol açabilir, bu da obezite ile ilişkili risk faktörlerini artırabilir (Kawabe ve ark., 2016). Araştırmalar, internet bağımlılığı olan bireylerin genellikle daha az fiziksel aktivite yaptığını ve sağlıksız beslenme alışkanlıklarına yöneldiğini göstermektedir (Langarizadeh ve ark., 2018). Bu durum, bireylerin genel yaşam kalitesini etkileyebilir. Örneğin, internet bağımlılığı, bireylerin yaşam memnuniyetini ve özsaygısını olumsuz yönde etkileyerek, obezite riskini artırabilir (Özarıcı ve Söğüt, 2021). Ayrıca, internet bağımlılığı ile obezite arasındaki ilişki, bireylerin psikolojik durumlarıyla da bağlantılıdır; stres ve yalnızlık gibi duygusal durumlar, internet kullanımını artırarak sağlıksız beslenme alışkanlıklarına yol açabilir (Özaykan ve ark., 2021; Azizi ve ark., 2022). Özetle, obezite ve internet bağımlılığı arasındaki etkileşim, bireylerin genel yaşam kalitesini olumsuz yönde etkileyebilir ve bu durum hem fiziksel hem de mental sağlık açısından önemli sonuçlar doğurabilir (Mathew ve ark., 2019; Shehata ve Abdeldaim, 2021).

4.1.1. Obezitenin mental sağlık üzerindeki etkileri

Obezite, bireylerde depresyon, anksiyete ve düşük özsaygı gibi mental sağlık sorunlarının gelişiminde önemli bir risk faktörü olarak kabul edilmektedir. Araştırmalar, obez bireylerin, normal kilolu bireylere göre daha yüksek depresyon ve anksiyete seviyelerine sahip olduğunu göstermektedir (Avila ve ark., 2015). Obezite, bireylerin sosyal ilişkilerini olumsuz etkileyebilir ve bu durum, sosyal izolasyon hissini artırabilir (Avila ve ark., 2015). Ayrıca, obezite ile ilişkili fiziksel sağlık sorunları, bireylerin mental sağlık durumunu daha da kötüleştirebilir (Avila ve ark., 2015). Obezite ile ilgili diğer bir önemli konu, bireylerin sağlıksız beslenme alışkanlıklarıdır. Sağlıksız beslenme, obeziteyi tetikleyebileceği gibi, aynı zamanda mental sağlık sorunlarını da artırabilir. Örneğin, yüksek şeker ve yağ içeren gıdaların aşırı tüketimi, depresyon ve anksiyete gibi durumlarla ilişkilendirilmiştir (Levy ve Kokotailo, 2011). Bu durum, bireylerin ruh halini etkileyerek, sağlıksız bir döngü oluşturabilir.

4.1.2. İnternet bağımlılığının mental sağlık üzerindeki etkileri

İnternet bağımlılığı, bireylerin internet kullanımını kontrol edememesi ve bu durumun günlük yaşamlarını olumsuz etkilemesi ile karakterizedir. İnternet bağımlılığı, depresyon, anksiyete ve sosyal izolasyon gibi mental sağlık sorunları ile sıkı bir şekilde ilişkilidir (Ko ve ark., 2012; Kuss ve Griffiths, 2011). Gençler arasında, internet bağımlılığı, sosyal etkileşimlerin azalmasına ve yalnızlık hissini artmasına yol açabilir (Ko ve ark., 2012; Kuss ve Griffiths, 2011). Bu durum, bireylerin mental sağlıklarını olumsuz etkileyerek, ruhsal bozuklukların gelişimine zemin hazırlayabilir. Ayrıca, internet bağımlılığı olan bireylerin, genellikle sağlıksız yaşam tarzı alışkanlıklarına sahip oldukları gözlemlenmiştir. Uzun süreli oturumlar, fiziksel aktivite eksikliği ve düzensiz beslenme, internet bağımlılığı ile ilişkili yaygın sorunlardır (Lam, 2014). Bu durumlar, bireylerin mental sağlık durumunu daha da kötüleştirebilir.

5. HALK SAĞLIĞI HEMŞİRELİĞİ PERSPEKTİFİNDEN DEĞERLENDİRME

5.1. Halk Sağlığı Hemşirelerinin Obezite ve İnternet Bağımlılığı ile Mücadeledeki Rolü

Halk sağlığı hemşireleri, obezite ve internet bağımlılığı ile mücadelede kritik bir rol oynamaktadır. Bu iki sağlık sorunu, bireylerin fiziksel ve mental sağlıklarını olumsuz etkileyerek, toplum sağlığı üzerinde önemli yükler oluşturmaktadır. Hemşireler, bu sorunların önlenmesi ve yönetilmesi için çeşitli stratejiler geliştirebilir ve uygulayabilirler (Li ve ark., 2021).

Halk sağlığı hemşireleri, obezite ile mücadelede eğitim, farkındalık ve bireysel destek sağlama konularında önemli bir rol oynamaktadır. Hemşireler, bireylere sağlıklı beslenme alışkanlıkları ve fiziksel aktivite konusunda rehberlik ederek, obezite riskini azaltmaya yardımcı olabilirler (Şahiner, 2020). Ayrıca, hemşireler, obezite ile ilişkili sağlık sorunları hakkında toplumu bilgilendirme görevini üstlenerek, bu sorunların ciddiyetini vurgulayabilirler. Bu değerlendirmeler, bireylerin ihtiyaçlarına yönelik kişiselleştirilmiş müdahale planlarının geliştirilmesine yardımcı olabilir (Altıntaş ve Fırat, 2013). Ayrıca, hemşireler, bireylerin motivasyonlarını artırmak ve sağlıklı yaşam tarzı değişikliklerini benimsemeleri için destek sağlayarak, obezite ile mücadelede etkili bir rol oynayabilirler.

İnternet bağımlılığı, bireylerin mental sağlıklarını olumsuz etkileyen bir durumdur ve halk sağlığı hemşireleri, bu sorunun yönetiminde de önemli bir rol oynamaktadır. Hemşireler, internet bağımlılığı ile ilişkili risk faktörlerini belirleyerek, bireylerin bu durumu yönetmelerine yardımcı olabilirler (İnan ve Ustun, 2014). Ayrıca, hemşireler, bireylere internet kullanım alışkanlıklarını değerlendirme ve sağlıklı sınırlar koyma konusunda rehberlik ederek; toplumsal farkındalığın artmasına destek verebilirler. Eğitim programları ve seminerler düzenleyerek, bireyleri internet bağımlılığı hakkında bilgilendirebilir ve bu durumun etkilerini vurgulayabilirler. Bütün bunlara ek olarak bireylerin sosyal destek sistemlerini güçlendirmeye yönelik stratejiler geliştirebilir ve bireylerin sosyal etkileşimlerini artırmalarına yardımcı olabilirler (Altıntaş ve Fırat, 2013).

Hemşireler, bireylere eğitim ve destek sağlayarak, bu sağlık sorunlarının önlenmesi ve yönetilmesi konusunda etkili stratejiler geliştirebilirler. Bu nedenle, hemşirelerin bu konulardaki bilgi ve becerilerinin artırılması, toplum sağlığını iyileştirmek için kritik öneme sahiptir.

5.2. Hasta Eğitimi ve Farkındalık Yaratma

Hasta eğitimi, bireylerin sağlık durumları hakkında bilgi sahibi olmalarını sağlamakta ve bu bilgiyi kullanarak sağlıklarını yönetmelerine yardımcı olmaktadır. Eğitim, bireylerin sağlıklı ilgili kararlar alırken daha bilinçli olmalarını sağlar ve tedavi süreçlerine uyumlarını artırır. Örneğin, baş ağrısı tedavisinde hasta ve ailesinin bilgilendirilmesi, tedaviye uyum oranlarını artırmakta ve başarıyı olumlu yönde etkilemektedir (Kocasoy ve Baykan, 2013). Bu tür eğitimler, hastaların tedavi sürecinde aktif bir rol oynamalarını sağlar.

Farkındalık yaratma, bireylerin sağlık sorunları hakkında bilgi sahibi olmalarını ve bu sorunların önlenmesi veya yönetilmesi konusunda bilinçlenmelerini sağlamaktadır. Örneğin, obezite ve internet bağımlılığı gibi sağlık sorunları hakkında farkındalık yaratmak, bireylerin bu durumları tanımalarına ve gerekli önlemleri almalarına yardımcı olabilir. Sağlık eğitimi, bireylerin sağlıklı yaşam tarzı seçimlerini benimsemeleri ve risk faktörlerini azaltmaları için kritik bir araçtır. Hasta eğitimi ve farkındalık yaratma, multidisipliner bir yaklaşım gerektirmektedir. Hemşireler, doktorlar, diyetisyenler ve diğer sağlık profesyonelleri, bireylerin sağlık durumlarını değerlendirmek ve uygun eğitim programları geliştirmek için birlikte çalışmalıdır. Örneğin, kanser hastalarının palyatif bakımında, hasta ve aile eğitimi, ağrı yönetimi ve beslenme seçenekleri gibi konuların ele alınması, bireylerin yaşam

kalitelerini artırabilir (Ozcelik ve ark., 2014). Bu tür multidisipliner yaklaşımlar, sağlık hizmetlerinin etkinliğini artırmakta ve bireylerin sağlıklarını daha iyi yönetmelerine yardımcı olmaktadır.

5.3. İnternet Bağımlılığı Olan Bireylerle Çalışma Stratejileri

İnternet bağımlılığı olan bireylerle çalışma stratejileri, bu sorunun yönetilmesi ve bireylerin sağlıklı yaşam tarzlarına yönlendirilmesi açısından kritik öneme sahiptir. Bu stratejiler, bireylerin internet kullanımını kontrol etmelerine yardımcı olmayı, sağlıklı alışkanlıklar kazandırmayı ve psikolojik destek sağlamayı amaçlamaktadır (Solmaz, 2022). Eğitim ve bilgilendirme, davranışsal terapiler, sosyal destek sistemlerini artırma, alternatif aktivitelerin teşvik edilmesi, psiko-eğitim programları internet bağımlılığı ile mücadelede etkili olabilecek bazı stratejiler sunulmaktadır.

6. ÖNLEME VE MÜDAHALE STRATEJİLERİ

6.1. Sağlık Okuryazarlığını Artırma Yöntemleri

Sağlık okuryazarlığını artırma yöntemleri, bireylerin sağlık bilgilerini anlamalarını, değerlendirmelerini ve bu bilgileri sağlık kararları almak için kullanmalarını sağlamayı amaçlamaktadır. Sağlık okuryazarlığı, bireylerin sağlık hizmetlerine erişimlerini, tedavi süreçlerine uyumlarını ve genel sağlık durumlarını iyileştirmeleri açısından kritik bir öneme sahiptir (Okutucu ve Tokgozolu, 2010).

6.2. Fiziksel Aktiviteyi Teşvik Eden Programlar

Fiziksel aktiviteyi teşvik eden programlar, bireylerin sağlıklı yaşam tarzlarını benimsemelerine yardımcı olmak için tasarlanmış çeşitli stratejileri içermektedir. Bu programlar hem bireysel hem de toplumsal düzeyde fiziksel aktiviteyi artırmayı hedeflemekte ve sağlık üzerinde olumlu etkiler yaratmaktadır.

6.3. İnternet Bağımlılığını Önlemeye Yönelik Eğitimler

İnternet bağımlılığını önlemeye yönelik eğitimler, bireylerin sağlıklı internet kullanımı alışkanlıklarını geliştirmelerine yardımcı olmayı amaçlamaktadır. Bu eğitimler, bireylerin internet bağımlılığının belirtilerini tanımalarına, risk faktörlerini anlamalarına ve sağlıklı yaşam tarzı seçimleri yapmalarına yönelik stratejiler içermektedir.

Eğitim programlarının ilk adımı, bireylere internet bağımlılığı hakkında bilgi vermek ve bu durumun olumsuz etkilerini anlatmaktır. Bilgilendirme, internet bağımlılığının belirtileri, risk faktörleri ve olası sonuçları hakkında farkındalık yaratmayı hedeflemektedir. Bu tür eğitimler, bireylerin internet kullanım alışkanlıklarını sorgulamalarına ve gerektiğinde değişiklik yapmalarına yardımcı olabilir (Ozcelik ve ark., 2014).

Bir sonraki adım olan sağlıklı internet kullanım alışkanlıklarının kazandırılabilmesi için eğitimlerin verilmesi olup, bu eğitimin temel amaçları internet kullanım sürelerinin sınırlandırılması, belirli zaman dilimlerinde internetten uzak durma ve alternatif aktiviteler bulma gibi stratejilerden oluşmaktadır. Ayrıca, bireylerin internet kullanımını planlamaları ve belirli hedefler koymaları teşvik edilmelidir. Bu tür stratejiler, bireylerin internet bağımlılığı riskini azaltmalarına yardımcı olabilir (Ozcelik ve ark., 2014).

Ek olarak psiko-eğitim programları, bireylerin internet bağımlılığı ile başa çıkmalarına yardımcı olmak için tasarlanmış eğitim ve destek programlarıdır. Bu programlar, bireylerin internet bağımlılığının etkilerini anlamalarına ve sağlıklı yaşam tarzı seçimleri yapmalarına yardımcı olabilir. Hemşireler ve diğer sağlık profesyonelleri, bu tür programların geliştirilmesi ve uygulanmasında önemli bir rol oynamaktadır (Ozcelik ve ark., 2014). Eğitimler ile bireylerin internet kullanımını azaltabilmek için alternatif aktiviteler

önerilmektedir. Fiziksel aktivite, hobi edinme ve sosyal etkinliklere katılma gibi alternatifler, bireylerin internet bağımlılığını azaltmalarına yardımcı olabilir. Eğitim programları, bireylerin bu tür aktiviteleri benimsemelerini teşvik edebilir ve bu süreçte rehberlik edebilir (Ozcelik ve ark., 2014).

Destek grupları, internet bağımlılığı ile mücadelede önemli bir kaynak olabilir. Eğitim programları, bireyleri destek gruplarına yönlendirebilir ve sosyal etkileşimlerini artırmalarına yardımcı olabilir. Bu tür gruplar, bireylerin deneyimlerini paylaşmalarına ve birbirlerine destek olmalarına olanak tanır. Sosyal destek, bireylerin internet bağımlılığı ile başa çıkmalarında önemli bir rol oynamaktadır (Ozcelik ve ark., 2014).
